Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affected: Indoor Air, Soil Vapor
Potential Contaminants of Concern: Trichloroethylene (TCE)
Site History: Electro Magnetic Testing Labs (EMT) business has operated at the address for approximately 20 years. The business is an engineering laboratory providing EMC compliance testing services to local manufacturers of consumer electronics. EMT will be expanding their operations and building a new lab building with limited staff occupancy. The site is within the footprint of the Teledyne and Spectra-Physics plume of volatile organic compound (VOC)-affected groundwater. In 2016, trichloroethene was detected at 190 micrograms per liter in groundwater samples collected near the site. Indoor air sampling is conducted by Teledyne Spectra Physics inside the existing building and TCE is not detected above any screening levels. The VOC-affected groundwater creates a vapor intrusion concern at the proposed development and should be fully evaluated and mitigated to protect the health of future building occupants. Based on groundwater monitoring data from nearby sites, groundwater flow direction is north-northwest and shallow groundwater is between approximately 5 and 20 feet below grade (Montwood site). The new lab building requires a vapor intrusion mitigation system. The Regional Water Board approved the design in April 2019. An operation and maintenance plan is pending submittal. Construction will begin once the City approves the permit.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: "Failure to prepare an SPCC Plan which fulfills all basic requirements that include: 1. The SPCC Plan must be prepared in accordance with good engineering practices. 2. Have full approval of management at a level of authority to commit the necessary resources to fully implement the SPCC Plan. 3. Prepare the SPCC Plan in writing. 4. Follow the sequence of the SPCC rule or include a cross-reference. 5. If the SPCC Plan calls for additional procedures, methods, or equipment not yet fully operational, discuss the items in separate paragraphs."

Violation Notes: Returned to compliance on 03/25/2019. Cross-reference is not complete. Procedures for routine handling and spill prevention are discussed on page 13 but are not cross-referenced to CFR 112.7(a)(ii). Appendix A discusses spill response equipment but is not linked to 112.7(a)(3)(iii).

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: Failure to include in the SPCC Plan: 1. Information and procedures that would enable a person reporting an oil discharge to relate all information as described in 40 CFR 112.7(a)(4), unless facility submitted a Facility Response Plan.

Violation Notes: Returned to compliance on 03/25/2019. - Spill notification form in SPCC plan has an incorrect contact number for one of the facility contacts. - Reporting form does not instruct employees to record the quantity of material released to navigable waters as described in CFR 112.1(b). - Reporting form does not direct employees to report the source or cause of the discharge, actions taken to stop, remove, or mitigate the effects of the discharge, and whether and evacuation was needed.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: Failure to discuss in the SPCC Plan procedures to test or inspect each aboveground container for integrity in accordance with industry standards: 1. On a regular schedule. 2. After material repairs are made. 3. By qualified personnel. 4. The frequency and type of testing and inspections based on container size, configuration, and design.

Violation Notes: Returned to compliance on 03/25/2019. Plan states that facility is not subject to tank integrity testing, citing a March 2004 EPA settlement. If facility intends to declare monthly inspections as environmentally equivalent to tank integrity testing, this must be explicitly stated in the plan. Plan states that tanks are inspected according to tank standard STI SP001. This standard requires, at a minimum, that tanks be visually inspected monthly and annually, as well as being subjects to formal external integrity inspections every 20 years. Revise plan to adequately address tank integrity testing according to industry standards, or make a claim of environmental equivalence that is certified by a professional engineer.

Keep written procedures and records of inspections and integrity tests for at least three years. 3. Keep comparison records.

Violation Notes: Returned to compliance on 03/25/2019. -Monthly inspection forms used on-site are different than those included in SPCC plan. -Monthly inspection forms used on-site do not meet minimum standards for STI SP001 tank inspections. Forms have a check box under the section G SPCC/leak checkG with no comments included. -No monthly inspections were observed for November or December of 2017. -No monthly inspection forms denote the approximately 1 square foot exposed and corroded section of metal on the belly of the 10,000 gallon diesel tank or the chips in coating and subsequent corrosion along the sides of the tank.

Violation Notes: Returned to compliance on 03/25/2019. Tanks have high and low liquid level alarms as well as a clock gage on the 10,000 gallon tank and a dial gage on the generator belly tanks. Violation Notes: Returned to compliance on 03/25/2019. Facility submitted their Hazardous Materials Business Plan via CERS on 4/27/2017. This plan is insufficient to serve as an annual tank facility statement for the following reasons: - Facility information and owner information must be updated since facility was bought by Wave. - Facility must identify the G total storage capacity of the tank facilityG but has not identified the 110 gallons of oil inside crank cases of emergency generators. This must be identified for the facility to identify the G total storage capacityG as required by California Health and Safety Code 25270.6. Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RB Case Number: 43S1173
File Location: Regional Board
Potential Media Affected: Soil, Soil Vapor
Potential Contaminants of Concern: Trichloroethylene (TCE)
Site History: The project is a redevelopment property within the

Teledyne-Spectraphysics (T-S) plume with underlying groundwater probably impacted by the upgradient T-S source properties. Soil vapor levels exceed ESLs and the developer planned to construct the building with a vapor intrusion mitigation system (VIMS) and water barrier. Indoor air testing has been conducted to verify that the VIMS is working as designed and the Regional Water Board approved a VIMS O&M Plan to verify that the VIMS continues to function as designed.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Comments: DTSC performed a site screening to determine whether any releases of hazardous substances or wastes have occurred at the site that require DTSC to pursue corrective actions. Arrowhead Development Company operated an amusement park equipment manufacturing facility from 1960 through 1980 on an 8-acre project that included the site. TCE was reportedly used at the facility for vapor degreasing. There were subsequent changes in the site ownership. Sanmina purchased the property in 1999 and operated four hazardous waste treatment units under permit-by-rule, including two Memtek wastewater treatment units, a batch treatment unit, and ion-exchange unit. The site is part of the Plymouth Street Site where the Regional Water Quality Control Board has been overseeing the investigation and remediation.

Site History: Trichloroethylene (TCE)
The Montwood plume is within a much larger plume extending from the Teledyne/Spectra-Physics Superfund site. Groundwater extraction reduced on-property and nearby chlorinated VOCs (CVOCs) in groundwater to asymptotic levels. However, the CVOC plume extends off-property through and beyond the downgradient site at 1600 Plymouth Street, - presently owned by Peery/Arrillaga (P/A). The off-property characterization of the groundwater-CVOC plume has been completed with grab groundwater samples and additional wells. Off-property groundwater-CVOC extent has attenuated with natural attenuation. Responding to persistent Regional Water Board suggestions to re-characterize the site with high-resolution technology, the Responsible Party (UP) used MIP data plus three other data layers to successfully locate on-site CVOC source areas. Based on the data, the consultant selected enhanced reductive dechlorination (ERD) as the final remedy that is now in process at the on-property area. ERD has significantly decreased the on-property groundwater-CVOC levels with TCE now below MCLs. UP is about to conduct the first off-property ERD remedial task after extended access negotiations with Google.

Description: Caller states this release began a few years ago, the water was found to be bubbling up from the ground on UP property. Remediation is on going. A storm drain is impacted with an unknown amount of contaminated water. Per a report, the water is contaminated with TCE, unknown what that stands for. The release stops for awhile and starts again periodically. A CalOES Hazardous Materials report had been made for this release years ago but no one has that report number.
