Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Notes: Site polishes/lapps various metal parts. Optical operations have ceased. Parts are polished using an alumina compound with excess compound to sinks which then centralize and collect in a transfer tank. Transfer tank is batch introduced to treatment vessel where metals and alumina are precipitated through pH adjustment and addition of flocculant. --Incoming solution was tested in 2014, and found to be below regulatory levels of metals. Treatment does not require a permit from HMCD, but is the point of generation of waste sludge which is regulated as HW. Sludge from flocculation is captured in cloth socks, drained/liquid removed and placed in transfer container which is then placed in shallow bin for drying. Drying is ambient temperature, but is currently facilitated by addition of dry sorb. --Needs "lid" or cover. Strongly suggest finding tarp of other covering that will limit migration of sludge if bin is upended. Dried sludge is then placed in 55 gallon drums for [Truncated]

Eval Notes: Site polishes/lapps various metal parts. Optical operations have ceased. Parts are polished using an alumina compound with excess compound to sinks which then centralize and collect in a transfer tank. Transfer tank is batch introduced to treatment vessel where metals and alumina are precipitated through pH adjustment and addition of flocculant. --Incoming solution was tested in 2014, and found to be below regulatory levels of metals. Treatment does not require a permit from HMCD, but is the point of generation of waste sludge which is regulated as HW. Sludge from flocculation is captured in cloth socks, drained/liquid removed and placed in transfer container which is then placed in shallow bin for drying. Drying is ambient temperature, but is currently facilitated by addition of dry sorb. --Needs "lid" or cover. Strongly suggest finding tarp or other covering that will limit migration of sludge if bin is upended. Dried sludge is then placed in 55 gallon drums for [Truncated]

Site History: Site History: The Site is currently owned by Far Western Land and Investment, Inc., which leased the property from 1959 to 1990 to the former Ford Aerospace Corporation (FAC). FAC operated a research and development facility. Loral Aerospace Holdings, Inc. purchased the assets of Ford Aerospace Corporation in 1990 and was renamed Space Systems/Loral. Site; they are called Buildings 7 and 8. Operations included the use of chlorinated solvents in and around Buildings 7 and 8. Discharges to soil, affecting both soil and groundwater likely occurred through spills of chlorinated solvents. Space Systems/Loral currently uses the property for research and development of communication equipment. Named Dischargers: The former Ford Aerospace Corporation is named as a discharger because of substantial evidence that it discharged pollutants to soil and groundwater at the Site, including its use of chlorinated solvents, primarily tetrachloroethene (PCE). Space Systems/Loral is named as a discharger because it is the current operator at the Site, and because it acquired FAC. Far Western Land and Investment, Inc. is named as a discharger because it owned the property during and after the time of the activity that resulted in the discharge, had knowledge of the discharge or the activities that caused the discharge, and had the legal ability to prevent the discharge. Far Western Land and Investment, Inc. will be responsible for compliance only if the Board or Executive Officer finds that other named dischargers have failed to comply with the requirements of this Order. If additional information is submitted indicating that other parties caused or permitted any waste to be discharged on the Site where it entered or could have entered waters of the state, the Board will consider adding that party's name to this Order. By private agreement, Ford Motor Company assumed responsibility from Loral Aerospace Holdings, Inc. for compliance with an earlier order (Order No. 89-137). This was described in a letter to the Board from Loral Aerospace Holdings, Inc. dated April 22, 1991. Since April 1991, Ford Motor Company has been the sole entity communicating with Board staff on behalf of Space Systems/Loral on matters related to site investigation and cleanup at the Site and to off-site affected properties. Regulatory Status: This site has been subject to the following Board orders: o Site Cleanup Requirements (Order No. 89-137) adopted August 16, 1989. o Waste Discharge Requirements, NPDES Permit (Order No. 90-109) adopted August 15, 1990. o Amendment to Site Cleanup Requirements (Order No. 93-091) adopted August 18, 1993. o Site Cleanup Requirements (Order No. 96-023) adopted February 28, 1996. o Revised Site Cleanup Requirements (Order No. 99-043) adopted June 16, 1999. o Amendment to Site Cleanup Requirements (Order No. R2-2003-0071) issued August 8, 2003. o Final Site Cleanup Requirements and Recission for Order No. 99-043 and Order No. R2-2003-0071

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Description: Failure to determine if the waste generated is a hazardous waste.
Violation Notes: In Room 122 and the attached rooms, there is one solvent-based washing machine and one aqueous-based washing machine that are used to clean and remove metal dust and solder residue (e.g. lead and copper fines, solder flux) from assembled circuit boards. The solvent-based washing machine uses three large and two small Evoqua resin media cylinders to filter and remove the metals, solder waste residuals, and flux contaminants from the solvent solutions prior to the solvent solutionG s re-use (i.e. G closed-loop systemG). The aqueous-based washing machine uses two large Evoqua resin media cylinders, one 10 micron filter, one 20 micron, and one approximately 30 micron filter (view of the filterG s label was obstructed) to filter and decontaminate the wastewater prior to POTW discharge. Per facility employees who use the machine, around 10 gallons of wastewater is discharged per day (1-5 gallons per machine use). Approximately once per year, the resin media cylinders [Truncated]

Eval Notes:	UNRESOLVED ISSUE: The scrubber system for the plating shop areas began to malfunction just prior to the start of this inspection (EHS notified around 6:30am on 4/13/2017) and all rooms and areas that were affected by the malfunctioning scrubber system had to be evacuated. No release of hazardous material or hazardous waste is expected to have occurred at this time. In the interest of health and safety, a walk through of the plating shop areas and paint spray booth areas was not conducted during this inspection and will occur once the scrubber system has been repaired. Any violations and all observations associated with the areas unable to be inspected during this inspection will be documented in a follow-up inspection report. On-site to conduct a routine hazardous waste inspection. The facility designs and builds custom satellites and space systems for private customers and government entities. This facility operates as a contiguous campus with the EPA ID Number [Truncated]

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Site is a metal milling and shaping facility that consists of three contiguous addresses (4045A, 4047 and 4051 Transport) Site routinely generates only one waste, spend oil/coolant from machining of metals. Generally work with aluminum, although do occasional stainless steel and single-job titanium or molybdenum. Use launderable rags for wiping (service by Cintas), including spot cleaning with Isopropal alcohol for spot cleaning. Noted machines with absorbent on the floor around the base of the machine. --Currently using the absorbent until lightly contaminated, and then disposing of in trash. Advised that would be better to use until saturated and then dispose of as hazardous waste. Have storage capacity for 5x55 drums of oil as needed. Labels are neat, in sleeves, affixed to drums with magnets. Training is done July/August of each year. Inspections done weekly. Noted that logs were kept until December 2014 then abandoned. Reviewed manifests for 2013, 2014, [Truncated]

Eval Notes: On-site to conduct a routine hazardous waste inspection. The facility specializes in gold and electroless nickel plating for small to medium sized metal products made of aluminum, copper, stainless steel, and other metals. Wastes generated include waste plating solutions, waste rinse baths and spray rinse water (e.g. wet floors), filter cake from hazardous waste treatment unit, solvent-contaminated wipes, contaminated personal protective equipment, and universal wastes from general building maintenance and upkeep. Metal plating solutions, filter cake, and waste hydrofluoric acid are collected and managed as hazardous waste. Rinse water baths are re-used until spent and then treated on-site. Spray rinses directed over the plating baths to minimize waste generation are also used. Plating Area: Main plating area consists of two rooms with grated wet floors. The waste acid and alkaline cleaners are stored in one of the twelve 55 gallon Nalgene containers in the bermed container containment pad. Per facility staff, the acid and alkaline cleaners are stored for anywhere between one week and three months before being pH neutralized and the metals allowed to precipitate out of solution. The sludge is stored in a metal holding tank where it gravitationally separates from the liquid fraction. After a measurable amount of sludge accumulates, it is manually pumped to the filter press in Unit 1 for further treatment. The liquid fraction is pumped to the pH Control of Unit 1 for further treatment. The following documents were reviewed: - Waste Analysis Plan - Inspection Schedule and Logs - Tank [Truncated]

Onsite with Michelle Santos, HMSII and Max Potter, City of Palo Alto Public Works. Observed change to process of treating zincate cyanide rinses. Wastes no longer treated in tank within the electroless nickel room, but now transferred to a series of nalgene containers on the building's exterior. Process as described by site personnel is that zincate rinses are moved daily to the "old" batch treat tank. From there, waters are moved as needed to nalgene drums in the bermed covered area exterior the building. Bleach is added, and solution is stirred with approximately 8 hour retention time. Site then uses a colorimetric indicator vial to measure the bleach content of the solution, under the assumption that if excess bleach is noted, all cyanide will be [Truncated]

On February 1, Palo Alto Regional Water Quality Control Senior Industrial Waste Inspector James Stuart shared information obtained through sampling showing that cyanide was being found commingled with acidic nickel containing wastestreams. Data provided by Mr. Stuart showed the presence of cyanide in the the plating area transfer sump as well as in the first stage of the treatment system AFTER cyanide treatment. On Feb 2, I met with Hammon Plating to discuss the possible sources of contamination. Hamman has undertaken the following potential remedies: -Replacement of cyanide management area containment pan piping to larger piping to better facilitate removal of standing liquids and prevent overflow and spill to non-cyanide areas. -Isolation and repair of piping from containment sump trench to lift stations. Potential Media Affected: Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor

Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Freon

Site History: Site History: The Site is currently owned by the Taube-Koret Campus for Jewish Life (TKCJL or the discharger), which purchased the property from Sun Mierosystems in June 2002. The Site was once part of a much larger site owned by Ford Aerospace Corporation from 1959 to 1990. Sun Microsystems purchased the Site from Ford Aerospace COlvoration in 1988. Loral Aerospace Holdings, Inc. purchased the assets of Ford Aerospace Corporation in 1990 and was renamed Space Systems/Loral. On June 27, 2003, a final parcel map was recorded with the County of Santa Clara that subdivided the former 12.162 acre site owned by TKCJL into two smaller parcels: a 4-acre parcel (Parcel 1) and an 8.162 acre parcel (Parcel 2). On March 14, 2007, the Water Board adopted Site Cleanup Requirements Order No. R2-2007-0023 for Parcel 2. Remedial Investigation: Starting in 1987, several investigations and groundwater monitoring events have takcn place at the Site and adjacent properties. The discharger has also conducted remcdial investigations as part of a risk assessment. The highest tetraehloroethene (PCE) concentrations in groundwater were reported in samples collected beneath the Site, immediately adjacent to the western Site property boundary (Figure I). PCE affected soil and groundwater beneath the Site have been associated with historieal discharges of PCE from the 3963/3977 Fabian Way Site. The results of the groundwater samples from on-site wells have been reported to contain PCE concentrations as high as 31,000 micrograms per liter (~1g/l) in Well GCW-14 (forth quarter 2005); for reference, the MCL for PCE is 5 ug/l. TCE has been documented in groundwater beneath

much of the Site. TCE concentrations as high as 72,000 ~lg/l (CPT A-4, 39.5-40.0 feet, March 2004) have been reported; for reference, the MCL for TCE is 5 ug/l. Monitoring wells installed by TKCJL in June 2006 confirmed the off-site TCE Plume(s) as reported in samples from monitoring well MWOIB3 (34,000 ug/l) at the Site's southern boundary. To date, the full extent of TCE in groundwater has not been determined. Another offsite TCE source(s) has impacted the northwest area of the Site. This source(s) is associated with detections of Freon 113, also from an upgradient source.

 INTRODUCTION, 1.1 Background The Charleston Business Park property, located at 2513/2525 East Charleston Road, Mountain View, California (Site), is an operating office complex, which includes two, two-story office buildings with tenants, parking and landscaping. Groundwater monitoring is performed at the Site under a voluntary cleanup agreement pursuant to the California Regional Water Quality Control Board (RWQCB) San Francisco Bay Regions Spills, Leaks, Investigations, and Cleanup (SLIC) Program. The objective of the

MAP FINDINGS

voluntary cleanup program is to remediate trichloroethylene (TCE) and other related halogenated volatile organic compounds (HVOCs) currently present in the Sites subsurface. Site background information, including Site characterization conducted by Brown and Caldwell and others, is summarized in two documents issued by Brown and Caldwell: the Interim Remedial Measures Work Plan for HRC Injection (IRM Work Plan), dated November 7, 2005, and the Interim Remedial Measures and Quarterly Groundwater Monitoring Report (IRM Report), dated August 31, 2006. These two reports document the results of the remedial activities conducted in 2005 by Brown and Caldwell, including a membrane interface probe (MIP) subsurface characterization, a 90-day soil vapor extraction/dual-phase extraction pilot test, and injection of the Regenes hydrogen releasing compound (HRC). The initial environmental subsurface investigations of the Site were conducted beginning in 2003. These investigations have encountered soils composed of primarily silty sands, with a few thin sand lenses. A less permeable, discontinuous layer of silty clay was observed at between approximately 15 and 25 feet below ground surface (bgs), while a second silty clay layer was encountered beginning at approximately 28 feet bgs. Groundwater has been encountered at approximately 6 to 8 feet bgs and determined to flow in a general northerly direction (i.e., towards San Francisco Bay) TCE has been identified as the Sites release constituent of concern, with detected concentrations ranging up to 1,300 micrograms per liter ("g/L). The highest TCE concentrations have been detected in the southeastern corner of Building 2513, which is the suspected source area of the Sites historic release. In the vicinity of the suspected source area, the elevated TCE concentrations have been observed in the upper zone of the Sites shallow groundwater aquifer (i.e., less than approximately 17 feet bgs), while the elevated TCE concentrations detected downgradient of the suspected source area have been observed in the lower zone of the Sites shallow groundwater aquifer (i.e., between approximately 20 and 30 feet bgs). The noted downward concentration gradient is expected for TCE as this chlorinated solvent is characterized as a dense nonaqueous phase liquid (DNAPL).

 Completed Document Type: Site Screening
 Completed Date: 07/01/1991
 Comments: Site Screening done. This 1/3 acre site was leased by Fairchild Semiconductor Corporation from its owners, Edward & Gladys Schlaager in 1957. Fairchild's operation through 1967 involved use of small quantities of trichlorethylene (TCE) and acetone. Advalloy leased the property in 1968 and purchased it in 1971. Advalloy manufactured lead mounting frames for printed circuit boards at this facility until closure of operation in December 1989. Currently, Advalloy is in bankruptcy and the site is unoccupied. Prompted by discovery of volatile organic compounds in groundwater at a downgradient site, RWQCB advised groundwater investigation at Advalloy site. Shallow monitoring well samples showed the presence of 1,1 dichloroethane, 1,1 dichloroethene, trans-1,2 dichloroethene, trichloroethylene, and ethylbenzene in groundwater. In view of the use of the various solvents at the site and a history of spillages and violations,

Advalloy was determined to be a source of groundwater contamination. However, the impacted shallow aquifer has no beneficial use and is not locally interconnected with the deeper aquifer. Despite some potential, release of hazardous chemicals is not evident through routes of surface water, air, or soil.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.
