1.0 INTRODUCTION

Farallon Consulting, L.L.C. (Farallon) has prepared this Environmental Evaluation for David J. Powers & Associates, Inc. (Powers) for the North Bayshore area in the City of Mountain View, California (herein referred to as the Plan Area) (Figure 1). The Environmental Evaluation is intended to define appropriate mitigations for environmental impacts identified for the Plan Area in advance of planned redevelopment activities.

1.1 SITE LOCATION

The Plan Area consists of 42 tax parcels (herein referred to individually as Sites) in the City of Mountain View, Santa Clara County, California, which total approximately 130 acres (Figures 2A and 2B). Because many of the Sites have multiple addresses, the Sites are identified in this report by Santa Clara County Assessor Parcel Number (APN). Table 1 provides a listing of the APN and associated addresses for the Sites. Collectively, these Sites are part of the larger, approximately 650-acre North Bayshore Precise Plan (NBPP) area.

1.2 BACKGROUND

Precise plans are a tool the City of Mountain View (City) uses to coordinate future public and private improvements on specific properties. The NBPP was adopted by the City in 2014 and amended in 2017, 2018, 2019, and 2020. The NBPP includes the development of “complete neighborhoods” that have been envisioned to have a mix of land uses, amenities, and services. The proposed *North Bayshore Framework Master Plan* dated March 2022, prepared by Google and lendlease (Master Plan) will implement the NBPP vision by providing the framework of new development in the Southeast Plan Area, including general building locations, uses, and forms; transportation improvements (including parking); utilities; and public spaces, with phased implementation for a period of up to 30 years as part of a Development Agreement.

The *Draft Subsequent Environmental Impact Report, North Bayshore Precise Plan, Stage Clearinghouse #2013082088* dated March 2017, prepared by the City in consultation Powers (SEIR) evaluated the environmental impacts of proposed redevelopment within the NBPP area by documenting existing environmental hazards and hazardous materials conditions, and identifying mitigation measures to reduce those impacts to a less than significant level. According to the SEIR, a “significant” environmental impact is defined as a “substantial, or potentially substantial, adverse change on the environment”. Fifteen mitigation measures were developed for hazardous materials impacts to identify mitigation that will be required for future development under the NBPP.

2.0 EVALUATION OBJECTIVES

Farallon conducted three tasks as part of the NBPP environmental evaluation. The scope of each task is summarized below.

2.1 ENVIRONMENTAL EVALUATION OF PLAN AREA

The objective for this task was to review existing environmental assessment reports and environmental databases to evaluate the findings relative to 15 mitigation measures identified in the SEIR. The 15 mitigation measures were developed in the SEIR to address hazardous materials impacts identified during environmental assessment of the Sites. The identified mitigation measures for each Site can be used to focus additional evaluation on Sites within the Plan Area that may have significant data gaps or to prepare work plans for ongoing environmental conditions warranting mitigation measures prior to or during construction.

The environmental evaluation process and findings are provided in Section 4.

2.2 PRELIMINARY ENVIRONMENTAL OPINION ON LOCAL UTILITY OPERATION

The objective for this task was to review summary and plan documents related to development of local utility services, particularly geothermal energy generation, to provide a preliminary opinion as to whether proposed utilities could impact the environmental conditions identified in the Plan Area. The review does not include an engineering analysis.

Farallon's preliminary opinion on the proposed local utility operations is provided in Section 5.

3.0 REGIONAL SETTING

This section includes a summary and discussion of regional environmental conditions, including a description of regional geology and hydrogeology, a summary of known regional groundwater volatile organic compound (VOC) plumes in the vicinity of the Plan Area, and known soil quality issues associated with the Plan.

3.1 GEOLOGY AND HYDROGEOLOGY

Geology and hydrogeology information presented in this section was primarily sourced from the draft *Revised Focused Feasibility Study, Former Spectra-Physics Lasers, Inc. and Former Teledyne Semiconductor Sites, Mountain View, California* dated March 9, 2017, prepared by Arcadis, U.S., Inc. (Arcadis). The information has been adapted for this report.

The Plan Area is situated in the northern portion of the Santa Clara Valley along the edge of San Francisco Bay. The Santa Clara Valley is a gently northward sloping alluvial plain, flanked by the Diablo Range to the east-southeast and the Santa Cruz Mountains to the west-southwest. The Plan Area is located within the Santa Clara Valley Groundwater Basin and the northern portion of the Santa Clara subbasin. The water-bearing formations of the Santa Clara subbasin include the Santa Clara Formation and the overlying younger alluvium, which together are greater than 1,500 feet thick. The alluvium is an important water bearing unit in the Santa Clara subbasin and is comprised of unconsolidated gravel, sand, silt, and clay formed by a series of convergent alluvial fans. A confined zone is present within the alluvium in the northern portion of the subbasin (and in the vicinity of the Plan Area) due to the presence of a low permeability clay layer.

Interbedded alluvial sediments composed of sand, gravel, silt, and clay underlie the Plan Area. The uppermost 5 to 10 feet of the subsurface consist of clay, gravelly clay, sand, and gravel. Soil underlying this interval predominantly consists of clay, silty clay, and sandy clay, with variable amounts of sand and gravel. The clays encountered in area soil borings contained beds and lenses of sand ranging in thickness from several inches to approximately 5 feet. The interbedded nature of the subsurface is a result of the fluvial and alluvial sedimentation processes that resulted in coarser-grained basal layers and fine-grained upper layer. The coarser-grained layers identified in the Plan Area are considered the primary transport zones, although groundwater is present in the lower permeability interbedded zones. Higher permeability subsurface groundwater intervals in the vicinity of the Plan Area have been divided into the following four water-yielding intervals:

- Shallow zone extending from approximately 20 to 35 feet below ground surface (bgs);
- Upper-intermediate zone extending from approximately 35 to 55 feet bgs;
- Lower-intermediate zone extending from approximately 55 to 70 feet bgs; and
- Deeper zone extending from approximately 100 to 300 feet bgs.

Arcadis noted that the shallow and upper-intermediate zones were laterally continuous with sand intervals found in the vicinity of the Teledyne Semiconductor (Teledyne) and Spectra-Physics,

Inc. (Spectra-Physics) facilities (see Section 3.2.1), and the lower-intermediate zone was laterally discontinuous. The deeper zone was identified as a drinking water aquifer that is separated from the overlying zones by a stiff, impermeable clay layer. Arcadis further noted a strong upward hydraulic gradient between the deeper zone and the lower-intermediate zone.

3.2 AREA-WIDE GROUNDWATER PLUMES

Due to the industrial land use history of the Plan Area and vicinity, several dozen facilities have reported releases of volatile organic compounds (VOCs) to groundwater in the South Bay area of metropolitan San Francisco, resulting in groundwater plumes underlying the Plan Area. To provide context for the environmental evaluations, relevant groundwater plumes are summarized in this section. These groundwater plumes are generally named for the facility or operator of the facility at which they originated. The approximate extent of each plume is shown on Figure 3.

3.2.1 Teledyne and Spectra-Physics Sites

Teledyne has operated semiconductor manufacturing facility south of the Plan Area since 1962. In 1982, Teledyne reported to the San Francisco Bay Regional Water Quality Control Board (Water Board) that soil and groundwater were impacted by solvents released from an underground solvent storage tank. The Water Board inspected the site and found that impacts had migrated north of the Teledyne Site and affected approximately 50 private domestic wells.

The 11.5-acre Spectra-Physics, Inc. Site has operated an electronics and gas laser manufacturing facility south of the Plan Area since 1961. These activities and several on-site wastewater sumps released VOCs to soil and groundwater.

The two groundwater plumes have commingled, and the two firms are conducting a joint cleanup effort. Additional vapor intrusion assessments are ongoing to determine whether indoor air pathways are complete. The joint plume also has been called the North Bayshore Area Plume. For the purposes of this environmental evaluation, the Teledyne-Spectra Physics groundwater plume is called the TSP Plume.

The approximate TSP Plume area that poses vapor intrusion risk relative to trichloroethene (TCE) concentrations as of 2016 is shown on Figure 3. Additional information for Teledyne¹ and Spectra-Physics² can be found on the Water Board's online data and document repository, GeoTracker.

3.2.2 Montwood Site

The Montwood Site is also called the Plymouth Street Site; the cleanup file is listed under Montwood in GeoTracker, and will be referred to herein as the Montwood Site. The Montwood Site consists of the buildings and surrounding parking and storage areas at 1555, 1615, and 1625 Plymouth Street (APN 116-11-030) in Mountain View, California, which is within the Plan Area

¹ https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL721281224

² https://geotracker.waterboards.ca.gov/profile_report?global_id=SL721201221

(Figure 2A). Historical operations at the Montwood Site have reportedly included storage and use of TCE, the primary VOC impacting underlying groundwater.

Possible releases of TCE to the subsurface at the Montwood Site were inferred on the basis of down-gradient increases of TCE concentrations and/or its degradation products in groundwater. Following investigation, groundwater extraction reduced on-property and nearby chlorinated VOCs in groundwater to asymptotic levels. However, the chlorinated VOC plume extends off-property through and beyond a downgradient site at 1600 Plymouth Street. The off-property characterization of the chlorinated VOC groundwater plume has been completed with grab groundwater samples and additional wells. Off-property, the chlorinated VOC groundwater plume has attenuated naturally.

The Montwood groundwater plume is contained within the TSP plume shown on Figure 3. Additional information for the Montwood Site can be found in GeoTracker.³

3.2.3 1625 North Shoreline Boulevard Plume

TCE, tetrachloroethene (PCE), and cis-1,2-dichloroethene (cis-1,2-DCE) impacts to groundwater were identified at 1625 North Shoreline Boulevard, which is not included in the Plan Area. TCE, PCE, 1,2-dichloroethane, and/or cis-1,2-DCE were detected at concentrations exceeding the Water Board's residential environmental screening levels (ESLs) in 39 of 40 groundwater samples collected in 2016. In addition, TCE and PCE were detected at concentrations exceeding residential ESLs in one-third of the soil vapor samples collected at 1625 North Shoreline Boulevard. The source of impacts to the 1625 North Shoreline Boulevard property has not been identified.

The North Shoreline Boulevard groundwater plume is present on the eastern edge of the TSP Plume as shown on Figure 3. Additional information for the 1625 North Shoreline Boulevard Plume can be found in GeoTracker.⁴

3.2.4 Middlefield-Ellis-Whisman Superfund Study Area

The Middlefield-Ellis-Whisman (MEW) Superfund Study Area (or MEW Site) is comprised of three Superfund sites: Fairchild Semiconductor Corp. (Mountain View Plant); Raytheon Corp., Intel Corp. (Mountain View Plant), and portions of the former Moffett Naval Air Station (NAS); and several other facilities.

During the 1960s to 1980s, the MEW Site was home to several manufacturing and industrial facilities, including semiconductor and other electronics manufacturing facilities and metal finishing facilities. While in operation, these former facilities required the storage, handling, and use of a variety of chemicals, particularly VOCs. VOCs are used in cleaning and degreasing solvents. The primary chemical of concern at the MEW Site is TCE. During operations, some of the chemicals leaked or were otherwise released to the ground, impacting soil and groundwater. In

³ https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL18253674

⁴ https://geotracker.waterboards.ca.gov/profile_report?global_id=T10000007090

1981 and 1982, investigations in the area of these facilities indicated that significant levels of VOCs had been released to the soil and groundwater.

With oversight by the U.S. Environmental Protection Agency (EPA), the MEW Companies, the U.S. Navy, and the National Aeronautics and Space Administration have implemented groundwater cleanup technologies to address the MEW Site-wide groundwater impacts. In 2010, EPA amended the groundwater and soil remedy in the MEW Record of Decision Amendment for the Vapor Intrusion Pathway. EPA selected a vapor intrusion remedy that addresses potential long-term exposure of TCE and other Site VOCs at unacceptable levels, for existing and new residential and non-residential and/or commercial buildings through the vapor intrusion pathway.

The approximate groundwater plume area that poses vapor intrusion risk relative to TCE concentrations as of 2013 is shown on Figure 3. This plume is not expected to be a significant risk to the Plan Area; however, it is a significant contributor to regional groundwater impacts and is included for reference. Additional information for the MEW Site can be found on the EPA's website.⁵

3.2.5 Other Sites

Regulatory agency database reports requested from Environmental Data Resources, Inc. (EDR) identified numerous other facilities located on Sites within the Plan Area that used chlorinated VOCs in their operations. Although not shown on Figure 3, these facilities may have contributed to the area-wide groundwater quality issues with chlorinated VOCs.

3.3 REGIONAL SOIL QUALITY

Based on regional historical Plan Area use or geologic setting, two soil quality issues may be associated with Sites within the Plan Area.

3.3.1 Residual Pesticides

The Plan Area historically was used agricultural operations, including orchards, and residual pesticides have been detected in Plan Area soil. Farallon evaluated the potential presence of residual pesticides in the provided environmental assessment reports by Powers that included relevant sampling data. Pesticide residues in shallow soil can migrate through windblown dust, soil tracked by vehicles, and overspray of applied pesticides. Given the potential for migration and the widespread agricultural use across the Plan Area, pesticide residues may be present in most shallow soil in the Plan Area.

3.3.2 Arsenic

Arsenic is a naturally occurring element that is present in rocks and soil formed from weathering of rocks; arsenic may be present in soil also as a byproduct of human activities. Background arsenic

⁵ <https://cumulis.epa.gov/supercpad/cursites/csinfo.cfm?id=0904966>

from naturally occurring sources is often detected in soil at concentrations considered unsafe for human health; as a result, environmental investigations often dismiss detections of arsenic at concentrations exceeding a regulatory screening level if no known or suspected human-related uses of arsenic have been identified in the operating history of the facility or site. For the purposes of the Environmental Evaluation, Farallon relied on the professional opinion of the consultant preparing the assessment report as to whether arsenic was considered a contaminant of interest or was likely naturally occurring.

4.0 ENVIRONMENTAL EVALUATION—SOUTHEAST, NORTH, AND NORTHWEST PLAN AREAS

This section provides a summary and discussion of the Environmental Evaluation completed for the Plan Area. Substantial investigation was completed previously by other consultants and stakeholders for the NBPP area, which includes the Plan Area, as documented in the SEIR. This Environmental Evaluation was based on review of environmental assessment reports previously prepared by other consultants for Sites within the Plan Area and review of regulatory agency databases. The focus of this Environmental Evaluation was to maximize use of existing data to evaluate the findings relative to the 15 mitigation measures identified in the SEIR, rather than duplicate completed work. Where relevant, Farallon identified Sites that may have significant data gaps or ongoing environmental conditions.

4.1 ENVIRONMENTAL EVALUATION PROCESS

The environmental evaluation consisted of review of the following resources:

- Environmental assessment reports provided by Powers;
- Regulatory agency database reports requested from and prepared by EDR;
 - *The EDR Radius Map Report, North Bayshore - North Parcel, Multiple Addresses, Mountain View, CA 94043* dated December 7, 2021 (2021 North EDR Report);
 - *The EDR Radius Map Report, North Bayshore - Northwest Parcels, Multiple Addresses, Mountain View, CA 94043* dated December 7, 2021 (2021 Northwest EDR Report);
 - *The EDR Radius Map Report, North Bayshore - Southeast Parcels, Multiple Addresses, Mountain View, CA 94043* dated December 7, 2021 (2021 Southeast EDR Report); and
- GeoTracker and EnviroStor, the online data and document repositories of the Water Board and Department of Toxic Substances Control, respectively.

During this review, Farallon considered the following items:

- Environmental conditions identified in the resources for each property;
- Status of the environmental conditions as of the date of the reviewed resource;
- Preliminary analysis of environmental media sampling data provided in the resources against applicable human health screening levels; and
- Appropriate mitigation measures for identified environmental conditions.

Farallon identified adjacent or nearby facilities that appear likely to have significantly impacted the Plan Area based on inferred groundwater flow direction, proximity, and/or readily available information.

Using information obtained about each Site from the reviewed resources, Farallon identified which of the 15 mitigation measures may be applicable to that Site. Farallon documented the information obtained from the resources and the identified mitigation measures in a Site Summary Form.

4.2 FINDINGS

Site Summary Forms for the 42 Sites are provided in Appendix A, ordered by APN. Mitigation Measure HAZ-4.3 was revised in a subsequent version of the SEIR to provide clarity. The revised mitigation measure is not substantially different from the mitigation measure outlined in the SEIR and would address impacts to a less than significant level. A list of the 15 mitigation measures, the revised text for Mitigation Measure HAZ-4.3, and further information about the environmental evaluation process are provided in Appendix A.

The Site Summary Forms summarize significant environmental issues or concerns identified through Farallon's review of available resources. Groundwater across the Plan Area is expected to be impacted by chlorinated VOCs. The area-wide chlorinated VOC groundwater plume has impacted soil vapor due to off-gassing from shallow groundwater. Impacted soil vapor has the potential to affect the quality of indoor air via vapor intrusion.

Given the light industrial and manufacturing activities that historically occurred in many of the Plan Area buildings, shallow unsaturated soil may be impacted at certain Sites. Some consultants indicated that off-gassing of chlorinated VOCs from shallow groundwater may have impacted unsaturated soil. **The source documents listed on the Site Summary Forms should be reviewed for an individual Site prior to making planning or construction-period decisions for that Site.**

Each Site Summary Form identifies the mitigation measures applicable to that Site. Table 2 summarizes the mitigation measures that Farallon identified as relevant to each of the 42 Sites. Due to the widespread chlorinated VOC impacts in groundwater and soil vapor across the Plan Area, along with the long-time agricultural use of the Plan Area, most of the mitigation measures are applicable to many of the Sites.

5.0 PRELIMINARY ENVIRONMENTAL OPINION ON LOCAL UTILITY OPERATION

This section provides an overview of Farallon’s review of documents related to development of local utility services and preliminary opinion as to whether proposed utilities could impact the environmental conditions identified in the Plan Area. For this review, Farallon was provided with the letter regarding Geothermal Pile Environmental Memo for the North Bayshore Master Plan Development dated December 10, 2021, from John McLaughlin of Elevate Environmental Consultants Inc. to Ash Puri of Lendlease [*sic*] at Google (2021 Geothermal Memo). No other details related to subgrade utilities were provided to Farallon.

5.1 GEOTHERMAL PILES

The 2021 Geothermal Memo describes Google’s plans to redevelop approximately 121 acres with new construction that will incorporate geothermal piles as part of a district-wide geothermal system. The local groundwater formations are noted as an “upper” and an “intermediate-zone” aquifer in the upper 80 feet underlain by an aquitard (low permeability unit) approximately 70 feet thick. Underlying the aquitard is an artesian aquifer encountered at approximately 150 feet bgs.

The geothermal piles may be installed to depths of up to 100 feet bgs. Farallon notes that given the known VOC impacts in shallow groundwater, the potential for shallow impacts to migrate downward during drilling is a valid concern. The 2021 Geothermal Memo indicates that cross-contamination will be minimized by advancing casing for the installation of geothermal system components to at least 5 feet below each water-bearing zone. Once the geothermal system components are installed in the boring, the borehole would be grouted from bottom to top within 24 hours of reaching the maximum depth of drilling, limiting the amount of time that the borehole would be a vertical conduit for contaminant migration.

Farallon recommends confirming the following additional information:

- The casing will be extended continuously to at least 5 feet below the deepest water-bearing zone in each borehole; and
- If the casing will be removed, it will remain in place until grouting occurs and will be removed as the grout is placed.

Additionally, Farallon recommends that the geothermal pile installation plan be reviewed and approved by the Water Board.

5.2 OTHER SUBGRADE UTILITIES

Given the large area proposed for redevelopment, including revision of street alignments and other area features, Farallon assumes that changes to subgrade utilities, such as water, storm sewer, sanitary sewer, electrical, natural gas, and telecommunications, may occur. Moderate to substantial concentrations of chlorinated VOCs are expected to be encountered in groundwater as shallow as

3 to 5 feet bgs across most of the Plan Area. Additionally, individual Sites may have unsaturated soil impacts from historical operations or releases of hazardous substances.

At Sites where environmental impacts are known or suspected, Farallon recommends construction work be conducted under site management plans that include the following minimum elements:

- Characterization, handling, and disposal of excavated soil;
- Characterization, handling, and disposal of extracted groundwater; and
- Worker safety training and protocols.

Additionally, new utility designs should incorporate vapor migration mitigation features, such as vapor barriers in trenches, grout plugs, or other design elements that will minimize the potential for vapor to travel through utility corridors into future occupied spaces.

7.0 LIMITATIONS

7.1 GENERAL LIMITATIONS

The conclusions contained in this report/assessment are based on professional opinions with regard to the subject matter. These opinions have been arrived at in accordance with currently accepted hydrogeologic and engineering standards and practices applicable to this location. The conclusions contained herein are subject to the following inherent limitation:

- **Accuracy of Information.** Farallon obtained, reviewed, and evaluated certain information used in this report/assessment from sources that were believed to be reliable. Farallon's conclusions, opinions, and recommendations are based in part on such information. Farallon's services did not include verification of its accuracy or authenticity. Should the information upon which Farallon relied prove to be inaccurate or unreliable, Farallon reserves the right to amend or revise its conclusions, opinions, and/or recommendations.

For the foregoing reasons, Farallon cannot and does not warrant or guarantee that the Site is free of hazardous or potentially hazardous substances or conditions, or that latent or undiscovered conditions will not become evident in the future. Farallon's observations, findings, and opinions can be considered valid only as of the date of the report.

This report/assessment has been prepared in accordance with the contract for services between Farallon and David J. Powers & Associates, Inc., and currently accepted industry standards. No other warranties, representations, or certifications are made.

7.2 LIMITATION ON RELIANCE BY THIRD PARTIES

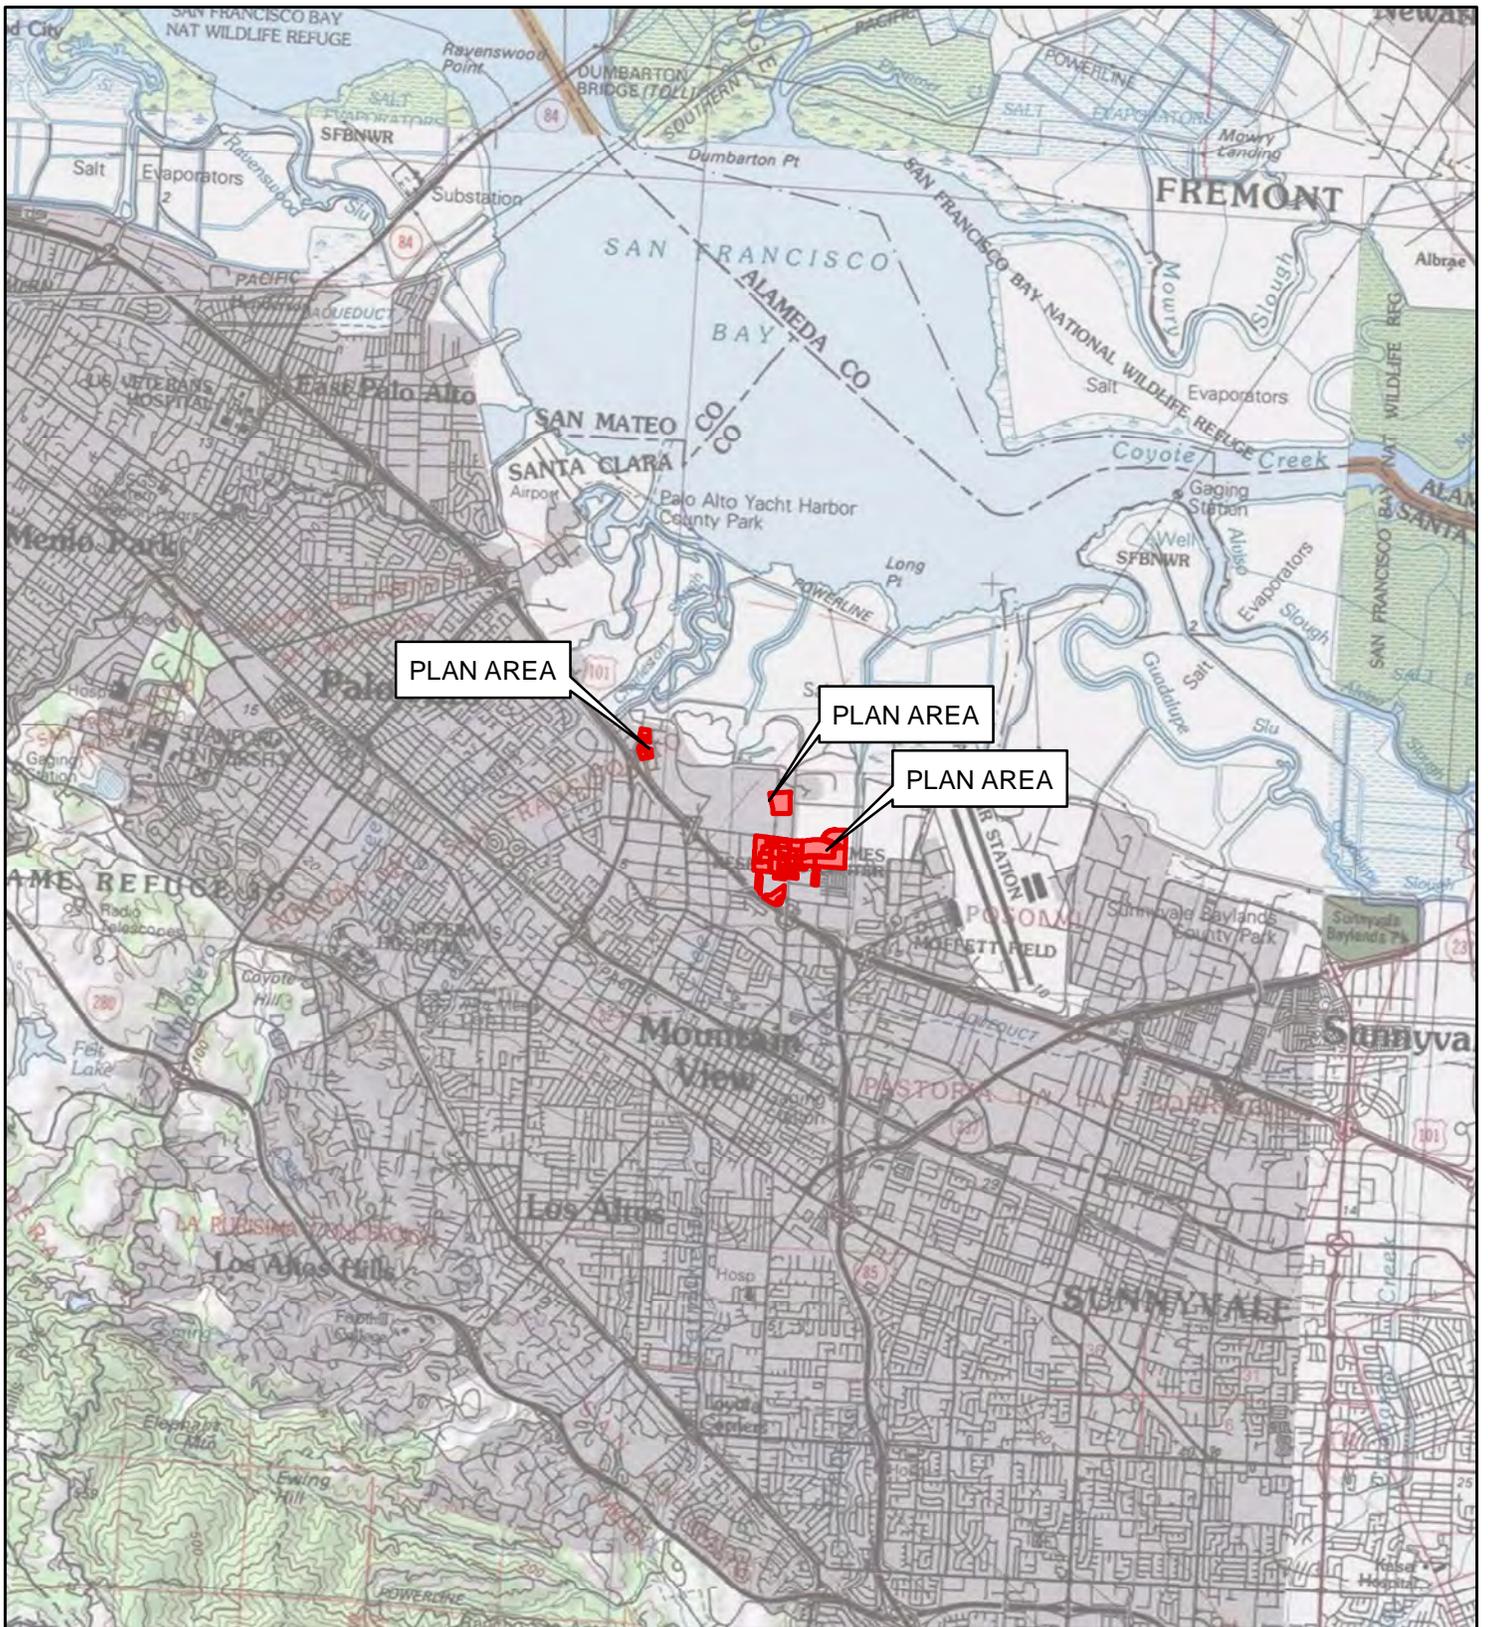

Reliance by third parties is prohibited. This report/assessment has been prepared for the exclusive use of David J. Powers & Associates, Inc. to address the unique needs of David J. Powers & Associates, Inc. at a specific point in time. The City of Mountain View is recognized as an intended user of this report/assessment, subject to the same limitations as David J. Powers & Associates, Inc.

This is not a general grant of reliance. No one other than David J. Powers & Associates, Inc. may rely on this report unless Farallon agrees in advance to such reliance in writing. Any unauthorized use, interpretation, or reliance on this report/assessment is at the sole risk of that party and Farallon will have no liability for such unauthorized use, interpretation, or reliance.

APPENDIX A
SITE SUMMARY FORMS

ENVIRONMENTAL EVALUATION
North Bayshore Master Plan SEIR
Mountain View, California

Farallon PN: 2481-003

APPENDIX A – SITE SUMMARY FORMS

This appendix contains Site Summary Forms completed for the 42 Sites included in the Plan Area. The Site Summary Forms summarize the results of Farallon’s review of environmental assessment resources provided to Farallon by David J. Powers and Associates.

Section 4.0 of the report, *Environmental Evaluation, North Bayshore Master Plan SEIR, Mountain View, California* dated April 22, 2022, prepared by Farallon describes the overall process for this review. This section provides additional details on how Farallon conducted its review:

- Farallon relied on each consultant’s report without verifying the accuracy of the consultant’s data or findings. In limited instances, Farallon noted apparent data gaps or outstanding questions related to findings in a specific consultant’s report.
- Three separate environmental database reports were ordered to provide sufficient coverage for the Plan Area. The reports were ordered for six tax parcels in the northwest area, one tax parcel in the north area, and 37 tax parcels in the southeast area. These reports are provided in Appendix C.
- Environmental databases are identified by their acronyms on the Site Summary Forms. The definitions of the environmental databases are included in each of the three environmental database reports obtained from Environmental Data Resources, Inc. for the environmental evaluation. These reports are provided in Appendix C.
- When evaluating sampling data provided by consultants, Farallon compared the data to the current environmental screening levels (ESL) suitable for residential receptors established by California regulatory agencies. For the sake of brevity, the term ESL used within site summaries indicates the residential receptor ESL available for that analyte.

The terms chlorinated volatile organic compounds (VOCs) and halogenated VOCs are used interchangeably depending on the original source document. These terms are equivalent to each other for the purposes of Farallon’s environmental evaluation.

- A description of the 15 mitigation measures from the *Draft Subsequent Environmental Impact Report, North Bayshore Precise Plan, Stage Clearinghouse #2013082088* dated March 2017, prepared by The City of Mountain View in consultation with David J. Powers & Associates, Inc. and used in Farallon’s environmental evaluation is provided following this section.
- To maintain brevity in the Site Summary Forms, acronyms, abbreviations, and terms used in the site summaries are provided in a list at the end of this section.

MITIGATION MEASURES FOR HAZARDOUS MATERIALS IMPACTS

The *Draft Subsequent Environmental Impact Report, North Bayshore Precise Plan, Stage Clearinghouse #2013082088* dated March 2017, prepared by The City of Mountain View in consultation with David J. Powers & Associates, Inc. (2017 SEIR), provided a set of 15 mitigation measures that would be used to identify actions to be taken based on hazardous materials impacts identified at properties within the North Bayshore Precise Plan area. The following mitigations measures were extracted verbatim from Section 4.8.3.4 of the 2017 SEIR. This summary of the measures can be used for reference when reviewing the site summaries for the 42 Sites within the Plan Area.

MM HAZ-4.1: If a future project is located in an area for which an overseeing regulatory agency (e.g., US EPA, California Department of Toxic Substances Control [DTSC]), San Francisco Bay Regional Water Quality Control Board (Water Board) or Santa Clara County Department of Environmental Health (DEH) has determined that mitigation or other site management measures are required prior to future development, the project applicant shall coordinate development activities with the overseeing regulatory agency and adhere to the project-specific development requirements.

MM HAZ-4.2: If a future project is not located in such areas as described in MM HAZ-4.1 and as part of the building permit application process, project applicants shall prepare the following reports:

Phase I Environmental Site Assessment (ESA)

Phase II Investigation

- Remedial Action Plan

MM HAZ-4.3: Prior to the start of any construction activity on properties with known COC exceeding the lower of the then-current DTSC, Water Board or US EPA residential screening levels¹, the project applicant shall submit the following plans and controls to a regulatory agency for review and approval:

Air Monitoring Plan,

Vapor Intrusion Mitigation Plan,

Long-Term Operations, Maintenance, and Monitoring Plan,

Institutional Controls Implementation Plan,

Financial Assurance,

- The project applicant shall provide the oversight agency's written approval of the above plans to the City.

MM HAZ-4.4: Prior to the start of any construction activity on properties with known COC exceeding the lower of the then-current DTSC, Water Board or US EPA residential screening levels, the project applicant shall coordinate work activities with the oversight agency and

Responsible Parties (as designated by the oversight agency), including identifying conditions that could affect the implementation and monitoring of the approved remedy.

MM HAZ-4.5: At future project sites identified as being impacted or potentially impacted during the property-specific Phase I ESA or subsequent studies, a Site Management Plan (SMP) shall be prepared prior to development activities to establish management practices for handling contaminated soil, soil vapor, or other materials during construction. The SMP shall be prepared by an Environmental Professional and be submitted to the overseeing regulatory agency for review and approval prior to construction.

MM HAZ-4.6: Leaving contaminated soil with COC above residential screening levels in place or re-using it on future project sites shall require an oversight agency's written approval; the written approval shall be provided to the City. At a minimum, if contaminated soil is left in-place, a deed restriction or land use covenant shall detail the location of these soils. This document shall include a surveyed map of these impacted soils; shall restrict future excavation in these areas; and shall require future excavation be conducted in these areas only upon written approval by an oversight agency.

MM HAZ-4.7: Any soil, soil vapor and/or ground water remediation of a future project site during development activities shall require written approval by an oversight agency and shall meet all applicable federal, state and local laws, regulations and requirements.

MM HAZ-4.8: Due to the North Bayshore Precise Plan area's proximity to US 101, soil sampling and analytical testing on a future site adjacent to US 101 for lead shall be performed (due to historical leaded gasoline use). If lead is detected above the lower of the then-current DTSC, Water Board or US EPA residential screening levels, it should appropriately be mitigated under regulatory agency oversight.

MM HAZ-4.9: Unless the Phase I ESA documents that a specific project site was historically not used for agricultural purposes, soil sampling and laboratory analyses shall be performed to evaluate the residual pesticide concentrations, if any, and potential health risks to future occupants and construction workers.

MM HAZ-4.10: Soil exported from future project sites within the Precise Plan area shall be analyzed for COCs amongst other chemicals as required by the receiving facility.

MM HAZ-4.11: The project applicant shall require the construction General Contractor to prepare a Health and Safety Plan (HSP) establishing appropriate protocols for working at the property.

MM HAZ-4.12: Groundwater monitoring wells and remediation system components located on future project sites within the Precise Plan area shall be protected during construction. Upon written approval from the overseeing regulatory agency, the wells could be destroyed under permit from the Santa Clara Water District prior to mass grading activities. Relocation of the wells may be required. The locations of future ground water monitoring wells and other remediation infrastructure, if any, shall be incorporated into the development plans.

MM HAZ-4.13: If future project sites are under active regulatory agency oversight, the project applicant and subsequent owners and occupants shall provide access to the sites, including ongoing access to monitoring wells for monitoring and sampling purposes, and cooperate with the oversight agency and Responsible Parties during implementation of any subsequent investigation or remediation, if required. In addition, if vapor intrusion poses a human health risk, the project applicant and subsequent property owners and occupants shall provide access for future indoor air

Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review

vapor monitoring activities and shall not interfere with the implementation of remedies required by the oversight agency.

MM HAZ-4.14: For future sites that are subject to activity and use limitations (AULs), such as institutional (legal or regulatory restrictions on a property's use such as deed restrictions) and engineering (physical mechanisms that restrict property access or use) controls, compliance will be maintained.

MM HAZ-4.15: At future sites where hazardous materials are used or stored, a permit may be required for facility closure (i.e., demolition, removal, or abandonment) of any facility or portion of a facility. The project applicant shall contact the Mountain View Fire Department and County Department of Environmental Health to determine facility closure requirements prior to building demolition or change in property use.

MITIGATION MEASURES FOR HAZARDOUS MATERIALS IMPACTS

Mitigation Measure HAZ-4.3 was revised in a subsequent version of the SEIR to provide clarity. The revised mitigation measure is not substantially different from the mitigation measure outlined in the SEIR and would address impacts to a less than significant level.

MM HAZ-4.3: Prior to the start of any construction activity on properties with known contaminants of concern (COC) exceeding the lower of the then-current DTSC, Water Board or US EPA residential vapor intrusion screening levels, the project applicant shall submit a Vapor Intrusion Control Evaluation to the City and the designated regulatory oversight agency for review and approval which consists of the following:

- An Air Monitoring Plan, which would assess the exposure of future on-site construction workers and neighboring occupants adjoining the site to COCs; this plan shall specify measures to be implemented if COC concentrations exceed threshold values.
- A determination as to whether or not vapor intrusion controls are required to be designed and implemented into the project's construction. If vapor intrusion controls are required, the Vapor Intrusion Controls Evaluation shall detail the specific proposed controls, which shall comprise of project components designed specifically for vapor intrusion control (e.g., a sub-slab vapor barrier and/or ventilation system) and/or project components designed primarily for other purposes, which may also mitigate potential vapor intrusion (e.g., waterproofing systems or parking level ventilation). The Vapor Intrusion Controls Evaluation shall also summarize any anticipated operations and maintenance requirements for the planned vapor intrusion controls, if applicable, as well as a summary of planned activities to evaluate the performance of the planned vapor intrusion controls, such as post-construction indoor air sampling.

If required by the regulatory agency, specific evaluation documents, including but not limited to the following, shall be submitted to the City and the oversight agency for review and approval:

- Vapor Intrusion Control Completion Report documenting installation of the vapor control measures identified in the Vapor Intrusion Control Evaluation, including plans and specifications, and shall include results of post-construction indoor air sampling and system commissioning, where applicable.

Long-Term Operations, Maintenance, and Monitoring Plan, which shall describe actions to be taken following construction to maintain and monitor selected remedial measures.

Site Use Summaries	
Current Site Use	Commercial office space
Historical Site Use	<p>“The Subject Property was undeveloped baylands until the mid 1900s. The Subject Property and surrounding area were developed in the mid to late 1960s to early 1970s. According to the Owner, the current buildings were constructed in 1973. Activity is present on the Subject Property in a 1965 aerial photo; it appears that the property is being used for storage of construction equipment or something similar.” “A city directory listing from 1986 lists 1161 San Antonio Road as ‘Bedinger Welding Works’... The property was filled and graded between 1956 and 1965, during the Bedingers’ ownership of the property. The current buildings were presumably built by Primaura Properties, in 1973. Perkin-Elmer occupied the northern portion of the San Antonio Road building from approximately 1983 through 1988. Lightwave Electronics Corporation occupied both of the Subject Property buildings from approximately 1989 through 1998. Both of these tenants are known to have had onsite manufacturing facilities and chemical use.” (2013 Phase I Report).</p>

Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review

Santa Clara County Assessor Parcel No.: 116-02-037 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>The 2013 Phase I Report summarized a 2013 investigation focused on evaluating the presence of TCE and molybdenum in on-Site groundwater. Samples collected from three locations contained concentrations of TCE ranging from 79.9 to 384 µg/l, exceeding the ESL for groundwater. Molybdenum was detected in two shallow groundwater samples at concentrations ranging from 230 to 280 µg/l exceeding the ESL for groundwater. The results indicate a possible release of hazardous substances including TCE and molybdenum may have occurred at or near the Site building at 1161 San Antonio Road. EKI also collected five subslab soil gas samples from beneath the building at 1161 San Antonio Road to evaluate potential for vapor intrusion into the Site building. PCE, TCE, chloroform, and benzene were each detected at concentrations exceeding ESLs in at least one subslab soil vapor sample.</p> <p>The 2013 Phase I Report noted that serpentine rocks known to contain asbestos and elevated concentrations of chromium and nickel were encountered in “shallow baserock.” Additionally, the Site was undeveloped baylands through the 1950s when the property was filled and graded. The material used to fill the property is unknown but may have included construction debris and potentially could be impacted by metals, TPH, pesticides, or PAHs. Representative samples of the fill material were collected by EKI and submitted for laboratory analysis for TPH, PAHs, pesticides, and metals; all detections of the analytes were at concentrations less than applicable screening criteria. EKI recommended additional soil sampling to further characterize the fill material prior to redevelopment.</p> <p>The 2021 Northwest EDR Report listed the Site in the HAZNET database in connection with the disposal of “other inorganic solid waste” in 1989.</p> <p>The 2021 Northwest EDR Report indicated that asbestos-containing waste was removed from the Site in 2019.</p> <p>According to the 2021 Northwest EDR Report, Lightwave Electronics Corp, a former tenant at the Site, disposed of hazardous waste from at least 1991 through at least 1997. The waste included halogenated solvents and “liquids with halogenated organic compounds > 1,000 mg/l.” The reported quantities of hazardous waste did not exceed 55 gallons per year.</p> <p>The 2021 Northwest EDR Report associated two additional addresses with the Site: 1135 and 1137 San Antonio Road. These addresses were listed as “chemical storage facilities.” Inspections conducted in 2018 found no violations at the facility.</p> <p>According to the 2022 Elevate Report, a total of three discrete soil samples were collected from two locations on the Site in January 2022. The samples were analyzed for a typical analytical scope necessary to evaluate Site soils for future removal from the Site from an environmental perspective, and for evaluation of the suitability of the Site for future use.</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-02-037 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	Two pesticides, Aldrin and Dieldrin, were detected at concentrations exceeding ESLs in a soil sample collected near the northern boundary of the Site. Cobalt was detected at concentrations exceeding the ESL in two soil samples; the maximum concentration detected was 27 mg/kg. Barium was detected at a concentration of 450 mg/kg, which exceeded the ESL, in one sample. Arsenic, nickel, and vanadium were detected at concentrations exceeding the ESLs, but the concentrations were all within the upper estimates of regional ambient (background) concentrations.
Cleanup or Mitigation Actions Proposed or Completed	“EKI recommends that indoor air sampling be performed to evaluate potential indoor air quality issues, if the 1161 San Antonio Road building will continue to be occupied.” (2013 Phase I Report). Farallon notes it is not clear if the asbestos waste removed in 2019 came from the underlying serpentine rock or from asbestos abatement at a facility on the Site.
Redevelopment Media Management Recommendations	The 2013 Phase I Report noted that additional assessment of fill material may be warranted, and soil may require management during redevelopment activities.
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The 2013 Phase I Report noted the following potential off-Site Sources:</p> <ul style="list-style-type: none"> • The facility at 2690 Casey Avenue, north-adjacent to the Site: chlorinated VOCs present in groundwater in multiple areas of the property. Releases of chlorinated VOCs from the Site may have contributed to groundwater impacts at the 2690 Casey Avenue facility. • The facility at 2673 Coast Avenue, approximately 300 feet to the southeast and potentially up-gradient of the Site, had documented releases of chlorinated VOCs to the storm drain system that resulted in groundwater impacts that may have migrated to and impacted the Site. • The facility at 2637 Marine Way, approximately 850 feet south and potentially up-gradient of the Site, had documented releases of chlorinated VOCs to soil and groundwater with reported detections of TCE up to 5,100 µg/l in groundwater. Groundwater remediation occurred between 1999 and 2005. The 2013 Phase I Report noted that VOCs from 2637 Marine Way may have migrated to the Site but noted that impacts would be expected to be minimal. <p>Groundwater and soil vapor samples were collected from two locations on the Site in January 2022 and analyzed for VOCs. In groundwater, TCE was detected at a concentration exceeding the ESL in a sample collected from the southern portion of the Site and vinyl chloride at a concentration exceeding the ESL in the sample collected on the northern portion of the</p>

Mountain View, California

Environmental Conditions from Off-Site Source(s)	
	Site. Benzene was detected at a concentration exceeding the ESL in the soil vapor sample collected from the southern portion of the Site.
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	“Vapor intrusion controls, such as those commonly used to address potential vapor intrusion from regional groundwater concentrations of VOCs, could be installed in future buildings in the impacted areas of the Site to manage concentrations of VOCs” (2022 Elevate Report).
Data Gaps Identified	Farallon notes that the current cleanup status of the two potentially up-gradient facilities with releases of chlorinated VOCs should be confirmed.

Program-Level Mitigation Measure(s)		
Mitigation Measure No.	Applicability	Notes
MM HAZ-4.1	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on the known TCE and PCE concentrations exceeding ESLs in groundwater from on-Site and nearby up-gradient sources.
MM HAZ-4.2	<input checked="" type="checkbox"/> Does not apply <input type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site within an area covered by MM HAZ-4.1. Phase I completed. Limited Phase II completed.
MM HAZ-4.3	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on documented chlorinated VOCs present in groundwater and soil gas.
MM HAZ-4.4	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on documented chlorinated VOCs present in groundwater and soil gas.
MM HAZ-4.5	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on findings of limited subsurface investigation.
MM HAZ-4.6	<input type="checkbox"/> Does not apply <input type="checkbox"/> Likely applies <input checked="" type="checkbox"/> Could not determine	Additional fill material evaluation may be warranted.
MM HAZ-4.7	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on documented chlorinated VOCs present in groundwater and soil gas.
MM HAZ-4.8	<input checked="" type="checkbox"/> Does not apply <input type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site is not adjacent to U.S. 101.
MM HAZ-4.9	<input checked="" type="checkbox"/> Does not apply <input type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site was historically marshland/bayland prior to being filled and graded for development.
MM HAZ-4.10	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site is located within the North Bayshore Precise Plan area.
MM HAZ-4.11	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Applies to all Sites.

Site Use Summaries	
Current Site Use	Commercial office space
Historical Site Use	The Site is one of three tax parcels assessed in the 2012 EKI Report. The three tax parcels are identified collectively as the Bayside Business Plaza. The 2012 EKI Report notes that the Site was undeveloped and used for agricultural purposes in the early to mid-1900s through at the early 1950s. The Site was developed with the current commercial office buildings before 1974 (2021 EKI Report).

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>“The Subject Property was a rural residential area from the early to mid-1900s. Agricultural chemicals such as pesticides may have been applied to the Subject Property, and may be present in shallow soils at residual concentrations. Given that nearly the majority of the Subject Property is covered by the current building and pavement, direct exposure to soils potentially containing agricultural chemicals by typical office users is low. However, utility maintenance, construction, or landscape workers could be exposed to soil potentially containing agricultural chemicals.” (2012 EKI Report).</p> <p>Asbestos-containing materials have been identified in Site buildings (2012 EKI Report).</p>

Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review

Santa Clara County Assessor Parcel No.: 116-02-054 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>Staining observed on the asphalt beneath a pole-mounted transformer in the northern section of the Site was sampled and analyzed for PCBs and transformer oil. PCBs were not detected at concentrations exceeding laboratory reporting limits. Petroleum hydrocarbons were detected at concentrations less than applicable screening criteria (2012 EKI Report).</p> <p>The 2022 Elevate Report noted that two soil samples were collected from the eastern portion of the Site in January 2022. The soil samples were collected at approximate depths of 3 and 7 feet bgs and submitted for laboratory analysis of VOCs, SVOCs, TPH, pesticides, metals, and PCBs. VOCs and PCBs were not detected at concentrations exceeding laboratory reporting limits in the soil samples. Organic pesticides and SVOCs were detected at concentrations exceeding laboratory reporting limits and less than ESLs. Arsenic, nickel, and vanadium were detected at concentrations exceeding ESLs in the samples. Farallon notes that the arsenic and nickel concentrations were within the upper estimate of regional ambient (background) concentrations. Vanadium was detected at a concentration of 130 mg/kg, which exceeds the background concentration, in the sample collected from 3 feet bgs.</p>
Cleanup or Mitigation Actions Proposed or Completed	Abatement of asbestos-containing building materials (2012 EKI Report).
Redevelopment Media Management Recommendations	Soil sampling to screen for potential presence of agricultural chemicals and/or pesticides (2012 EKI Report).
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The 2012 EKI Report noted these nearby sites with groundwater contamination:</p> <ul style="list-style-type: none"> • Southeast-adjacent facility at Building 1100 (2665 Marine Way) formerly had a diesel UST and a waste oil AST. EKI conducted a subsurface investigation that detected petroleum hydrocarbons in soil in the vicinity of both tanks. Groundwater sample results indicated that releases of petroleum and associated compounds were likely limited to soil and of limited extent. EKI did not identify UST decommissioning documentation. <p>The facility formerly was used for a laboratory and research and development. Chemicals used in that facility were primarily petroleum-based compounds and non-chlorinated solvents in relatively small bench-top quantities. EKI conducted a subslab soil gas sampling investigation in buildings on the southern boundary of the Bayside Business Plaza and concluded that VOCs in subslab soil gas did not pose a significant risk to building occupants through the vapor intrusion pathway.</p>

Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review
Santa Clara County Assessor Parcel No.: 116-02-054 (Site)
Mountain View, California

Environmental Conditions from Off-Site Source(s)	
	<ul style="list-style-type: none"> The facility at 2637 Marine Way, approximately south-adjacent to and up-gradient of the Site, had documented releases of chlorinated VOCs to soil and groundwater. EKI conducted a subsurface investigation to evaluate groundwater and concluded that the chlorinated VOCs had likely migrated to the Site from the facility at 2637 Marine Way. <p>The 2022 Elevate Report noted that one grab groundwater sample and one soil vapor sample were collected from the eastern portion of the Site in January 2022 to evaluate potential on-Site migration of contamination from other facilities. The groundwater sample was submitted for laboratory analysis for VOCs and TPH. Vinyl chloride (0.047 µg/l) was the only analyte detected at a concentration exceeding ESLs in the groundwater sample. A soil vapor sample collected at approximately 5 feet bgs was analyzed for VOCs. No VOCs were detected at concentrations exceeding ESLs in the soil vapor sample.</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	Based on the detections of VOCs in on-Site groundwater at concentrations exceeding ESLs, and the presence of the local plumes near the Site, future buildings in this area of the Site could be designed and constructed with appropriate vapor intrusion controls in consideration of the planned future Site use, where necessary (2022 Elevate Report).
Data Gaps Identified	None identified.

Program-Level Mitigation Measure(s)		
Mitigation Measure No.	Applicability	Notes
MM HAZ-4.1	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on the known VOC concentrations exceeding ESLs in groundwater.
MM HAZ-4.2	<input checked="" type="checkbox"/> Does not apply <input type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site within an area covered by MM HAZ-4.1. Phase I completed. Limited Phase IIs completed.
MM HAZ-4.3	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on the known VOC concentrations exceeding ESLs in groundwater.

Site Use Summaries	
Current Site Use	Commercial office and warehouse space
Historical Site Use	<p>The Site was evaluated in the 2010 Phase I Report with the east-adjacent property at 2751 Marine Way. “The site was first developed for industrial/commercial uses in the late 1950s for construction equipment storage and shop operations. The existing two buildings were constructed in the late 1960s and have been occupied by a variety of industrial and commercial tenants since that time. The building at 1157 San Antonio Road and half of the building at 2751 Marine Way are currently being leased by DirectBuy, while the other half of the building at 2751 Marine Way is currently vacant. The area surrounding the facility was undeveloped or used for agricultural purposes prior to its development for commercial and industrial purposes primarily beginning in the 1960s.” (2010 Phase I Report).</p>

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>The 2010 Phase I Report did not identify on-Site environmental conditions.</p> <p>Hazardous materials and/or chemicals stored on the Site in 2010 consisted of minor amounts of cleaning supplies stored in janitorial closets; paint, paint thinner, and associated building maintenance products stored in containers with capacities of 5 gallons or less; and light bulbs. No evidence of significant releases was noted in chemical storage areas during</p>

Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review

Santa Clara County Assessor Parcel No.: 116-02-083 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>the Site visit (2010 Phase I Report).</p> <p>According to the 2021 Northwest EDR Report, the CERs database identified “Google LLC – 1157,” located at the Site, as a “Chemical Storage Facility.” A compliance inspection conducted by MVFD in April 2021 identified no violations at the facility.</p> <p>According to the 2022 Elevate Report, a total of eight discrete soil samples were collected from five locations on the Site in January 2022. A group of the collected samples were analyzed only for VOCs and moisture, while others were analyzed for a typical analytical scope necessary to evaluate Site soils for future removal from the Site from an environmental perspective, and for evaluation of the suitability of the Site for future use. cis-1,2-DCE, vanadium, and TCE were detected at concentrations exceeding ESLs in samples collected from two locations on the Site. Arsenic, antimony, and nickel were detected at concentrations exceeding ESLs, but all concentrations were within the upper estimates of regional ambient (background) concentrations.</p>
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	<p>None proposed.</p> <p>Farallon notes that nearby sites have identified contamination in fill material. Soil characterization may be warranted prior to redevelopment.</p>
Data Gaps Identified	Additional research into the CERS database listing identifying the Site as a “chemical storage facility” may be warranted to evaluate the types of chemicals are stored on the Site.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The 2010 Phase I Report noted this information for the east-adjacent property at 2751 Marine Way: “According to the historical records reviewed, the subject site has a long industrial history dating back to the 1960s. No detailed information was readily available regarding former site operations and chemical handling practices by the prior industrial occupants, except that chlorinated solvents (in particular, 1,1,1-trichloroethane) were used on-site by at least one past operator (Teledyne) in its maintenance /print [<i>sic</i>] shop operations. No subsurface characterization activities are known to have been conducted at the site. As such, ENVIRON cannot rule out the possibility that past chemical usage by prior site occupants has adversely impacted the subsurface conditions at the site.”</p> <p>The 2010 Phase I Report noted these nearby sites with groundwater contamination:</p> <ul style="list-style-type: none"> • The facility at 2673 Coast Avenue, east-southeast and cross-to-upgradient of the Site, had documented releases of chlorinated VOCs

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-02-083 (Site)
Mountain View, California

Environmental Conditions from Off-Site Source(s)	
	<p>to the storm drain system that resulted in groundwater impacts.</p> <ul style="list-style-type: none"> • The facility at 2750 Marine Way, east-adjacent to and cross-gradient of the Site, had documented releases of gasoline petroleum compounds to groundwater. The facility received regulatory closure in 1999. • The facility at 2637 Marine Way, approximately 1/8 mile south and potentially upgradient of the Site, had documented releases of chlorinated VOCs to soil and groundwater. The facility received regulatory closure. • 2690 Casey Avenue, one block north of the Site in a down-gradient location, chlorinated VOCs present in groundwater in multiple areas of the property. <p>Groundwater and soil vapor samples were collected from five locations on the Site in January 2022 and analyzed for VOCs. In groundwater, cis-1,2-DCE and TCE were detected at concentrations exceeding ESLs. Benzene was detected at concentrations exceeding the ESL in four of the five soil vapor sample locations. ESLs have not been promulgated for Freon 113 in groundwater and soil vapor; therefore, Elevate derived a soil vapor screening level from the EPA regional screening levels. Freon 113 was detected at elevated concentrations in groundwater and at concentrations exceeding the derived screening level in two soil vapor samples.</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	<p>“Vapor intrusion controls, such as those commonly used to address potential vapor intrusion from regional groundwater concentrations of VOCs, could be installed in future buildings in the impacted areas of the Site to manage concentrations of VOCs documented herein, including detected concentrations of TCE, cis-1,2-DCE, benzene, Freon 113, and other VOCs in groundwater and soil vapor at some locations at the Site, and to account for the potential for off-Site VOC impacts to further migrate onto the Site in the future.” (2022 Elevate Report).</p>
Data Gaps Identified	<p>The 2021 Northwest EDR Report identified the east-adjacent property at 2751 Marine Way in several databases. Teledyne MEC was listed in the HAZNET database for disposal of hazardous wastes including “Unspecified aqueous solution” and “contaminated soil from site clean-up.” No database listings regarding spills, releases, or cleanups for the adjacent property were in the 2021 Northwest EDR Report. Farallon was unable to find information for the west-adjacent property in the GeoTracker and EnviroStor databases. Additional research may be warranted to evaluate where the contaminated soil was located relative to the Site.</p>

Environmental Conditions from On-Site Source(s)	
	<p>Report. Farallon was unable to find information for the west-adjacent property in the GeoTracker and EnviroStor databases. Additional research is needed to determine whether the contaminated soil originated from a release on the Site or at another location.</p> <p>Hazardous materials and/or chemicals stored on the Site in 2010 consisted of minor amounts of cleaning supplies stored in janitorial closets; paint, paint thinner, and associated building maintenance products stored in containers with capacities of 5 gallons or less; and light bulbs. No evidence of significant releases was noted in chemical storage areas during the Site visit (2010 Phase I Report).</p> <p>“According to the historical records reviewed, the subject site has a long industrial history dating back to the 1960s. No detailed information was readily available regarding former site operations and chemical handling practices by the prior industrial occupants, except that chlorinated solvents (in particular, 1,1,1-trichloroethane) were used on-site by at least one past operator (Teledyne) in its maintenance /print [<i>sic</i>] shop operations. No subsurface characterization activities are known to have been conducted at the site. As such, ENVIRON cannot rule out the possibility that past chemical usage by prior site occupants has adversely impacted the subsurface conditions at the site.” (2010 Phase I Report).</p> <p>According to the 2022 Elevate Report, two discrete soil samples were collected from a single location on the western portion of the Site in January 2022. The samples were analyzed for a typical analytical scope necessary to evaluate Site soils for future removal from the Site from an environmental perspective, and for evaluation of the suitability of the Site for future use. Arsenic, nickel, and vanadium were detected at concentrations exceeding ESLs, but all concentrations were within the upper estimates of regional ambient (background) concentrations.</p>
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	<p>“Vapor intrusion controls, such as those commonly used to address potential vapor intrusion from regional groundwater concentrations of VOCs, could be installed in future buildings in the impacted areas of the Site to manage concentrations of VOCs” (2022 Elevate Report).</p> <p>Farallon notes that nearby sites have identified contamination in fill material. Soil characterization may be warranted prior to redevelopment.</p>
Data Gaps Identified	Additional research is needed to determine if the listings regarding “contaminated soil from on-Site cleanup” and various hazardous waste listings were in connection with a release on the Site.

Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review
Santa Clara County Assessor Parcel No.: 116-02-084 (Site)
Mountain View, California

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The 2010 Phase I Report noted these nearby sites with groundwater contamination:</p> <ul style="list-style-type: none"> • The facility at 2673 Coast Avenue, east-southeast and cross-to-upgradient of the Site, had documented releases of chlorinated VOCs to the storm drain system that resulted in groundwater impacts. • The facility at 2750 Marine Way, east-adjacent and cross-gradient of the Site, had documented releases of gasoline petroleum compounds to groundwater. The facility received regulatory closure in 1999. • The facility at 2637 Marine Way, approximately 1/8th mile south and potentially upgradient of the Site, had documented releases of chlorinated VOCs to soil and groundwater. The facility received regulatory closure. • 2690 Casey Avenue, one block north of the Site in a downgradient location: chlorinated VOCs present in groundwater in multiple areas of that facility's property.
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	A grab groundwater sample was collected from a location on the western portion of the Site in January 2022 and analyzed for VOCs. TCE was detected in the sample at a concentration of 2.0 µg/l, exceeding the ESL for groundwater.
Data Gaps Identified	None identified.

Program-Level Mitigation Measure(s)		
Mitigation Measure No.	Applicability	Notes
MM HAZ-4.1	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on the known TCE and PCE concentrations exceeding ESLs in groundwater from nearby up-gradient sources and TCE concentrations exceeding ESLs in groundwater on the Site.
MM HAZ-4.2	<input checked="" type="checkbox"/> Does not apply <input type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site within an area covered by MM HAZ-4.1. Phase I completed. Limited Phase II investigation conducted in January 2022.
MM HAZ-4.3	<input type="checkbox"/> Does not apply <input type="checkbox"/> Likely applies <input checked="" type="checkbox"/> Could not determine	No subsurface investigations were identified for the Site. Based on nearby subsurface investigations, one of more of the plans may be warranted.
MM HAZ-4.4	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on documented TCE present in groundwater.
MM HAZ-4.5	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on findings of limited subsurface investigation.
MM HAZ-4.6	<input type="checkbox"/> Does not apply <input type="checkbox"/> Likely applies <input checked="" type="checkbox"/> Could not determine	Nearby sites have identified contamination in fill material. Soil characterization may be warranted prior to redevelopment.

Site Use Summaries	
Current Site Use	Commercial office space
Historical Site Use	The Site is one of three tax parcels assessed in the 2012 EKI Report. The three tax parcels are identified collectively as the Bayside Business Plaza. The 2012 EKI Report notes that the Site was undeveloped and used for agricultural purposes in the early to mid-1900s through at the early 1950s. The Site was developed with the current commercial office buildings between 1966 and 1982 (2012 EKI Report).

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>“The Subject Property was a rural residential area from the early to mid-1900s. Agricultural chemicals such as pesticides may have been applied to the Subject Property, and may be present in shallow soils at residual concentrations. Given that nearly the majority of the Subject Property is covered by the current building and pavement, direct exposure to soils potentially containing agricultural chemicals by typical office users is low. However, utility maintenance, construction, or landscape workers could be exposed to soil potentially containing agricultural chemicals.” (2012 EKI Report).</p> <p>Asbestos-containing materials have been identified in Site buildings (2012 EKI Report).</p>

Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review

Santa Clara County Assessor Parcel No.: 116-02-088 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>Building department records indicated that a diesel UST and a waste oil AST historically were located near the northern edge of the southern Site building. The property owner interviewed by EKI indicated that the UST was removed in 1980; however, no documentation of its removal was identified. A ground-penetrating radar survey found no evidence of buried objects such as tanks or piping on the Site, but did show patterns that were consistent with disturbed soil or backfill. Petroleum hydrocarbons, primarily in the diesel range, were detected in soil samples collected the vicinity of the former UST and pump island at a maximum concentration of 1,330 mg/kg, exceeding ESLs. Petroleum hydrocarbons were not detected in groundwater samples collected from the vicinity of the former tanks, indicating that the impacts from the release are likely limited to soil (2012 EKI Report).</p> <p>The 2021 Northwest EDR Report identified the Site in several databases regarding the disposal of hazardous wastes. Hazardous wastes associated with the Site included “Liquids with halogenated organic compounds,” oxygenated solvents, unspecified solvent mixture, waste oil, and mixed oil.</p> <p>The 2022 Elevate Report noted that a soil sample was collected from the southern portion of the Site in January 2022. The soil sample was collected at an approximate depth of 9 feet bgs and submitted for laboratory analysis of VOCs, SVOCs, TPH, pesticides, metals, and PCBs. VOCs and PCBs were not detected at concentrations exceeding laboratory reporting limits in the soil sample. Organic pesticides and SVOCs were detected at concentrations exceeding laboratory reporting limits and less than ESLs. Arsenic, nickel, and vanadium were detected at concentrations exceeding ESLs in the sample. Farallon notes that the detected concentrations of metals were within the upper estimate of regional ambient (background) concentrations.</p> <p>As part of the January 2022 subsurface investigation, groundwater samples were collected to evaluate the potential for off-Site contamination to migrate on to the Site (discussed in off-Site conditions below). Petroleum compounds were detected in the groundwater sample collected at the Site, which potentially could be from the on-Site UST release (2022 Elevate Report).</p>
Cleanup or Mitigation Actions Proposed or Completed	Abatement of asbestos-containing building materials (2012 EKI Report).
Redevelopment Media Management Recommendations	<p>Soil sampling to screen for potential presence of agricultural chemicals and/or pesticides (2012 EKI Report).</p> <p>Petroleum-contaminated soil near the former UST and AST may require further investigation and should be managed appropriately (2012 EKI Report).</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-02-088 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>If dewatering is required for future redevelopment of the Site, petroleum compounds in groundwater from the on-Site former UST may require additional characterization.</p> <p>A former water supply well may still be in place west of Building 1300 on the Site. The well should be properly decommissioned if encountered (2012 EKI Report).</p>
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The 2012 EKI Report noted this adjacent site with groundwater contamination:</p> <ul style="list-style-type: none"> The facility at 2637 Marine Way, approximately south-adjacent to and upgradient of the Site, had documented releases of chlorinated VOCs to soil and groundwater. EKI conducted a subsurface investigation to evaluate groundwater and concluded that the chlorinated VOCs had likely migrated to the Site from the facility at 2637 Marine Way. To evaluate vapor migration from impacted groundwater, EKI conducted a sub-slab soil gas sampling investigation in buildings on the southern boundary of the Bayside Business Plaza, including sub-slab soil gas samples from Building 1100 on the Site. Detected analytes included PCE, 1,1,1-TCA, toluene, xylenes, trimethylbenzenes, and methylene chloride at concentrations less than ESLs. <p>The 2022 Elevate Report noted that one grab groundwater sample and one soil vapor sample were collected from the southern portion of the Site to evaluate potential on-Site migration of contamination from other facilities. The groundwater sample was submitted for laboratory analysis for VOCs and TPHs. Benzene (0.43 µg/l), TCE (9.9 µg/l), vinyl chloride (0.13 µg/l), and diesel (680 µg/l) were detected at concentrations exceeding ESLs for groundwater in the sample. A soil vapor sample collected at approximately 5 feet bgs was analyzed for VOCs. No VOCs were detected at concentrations exceeding ESLs in the soil vapor sample.</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	<p>Based on the detections of VOCs in on-Site groundwater at concentrations exceeding ESLs, and the presence of the local plumes near the Site, future buildings in this area of the Site could be designed and constructed with appropriate vapor intrusion controls in consideration of the planned future Site use, where necessary (2022 Elevate Report).</p> <p>If dewatering is required for future redevelopment of the Site, VOC-impacted groundwater should be managed appropriately (2012 EKI Report).</p>
Data Gaps Identified	None identified.

Site Use Summaries	
Current Site Use	Commercial office space
Historical Site Use	The Site appeared to have been used for residential and agricultural purposes from at least 1951 through at least 1980. By 1990, the Site appeared similar to the present. Building department records indicated that the Site building was constructed in 1983 (2004 Phase I Report).

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>Potential soil impacts from possible pesticide use associated with suspected historical agricultural operations on the Site. (2004 Phase I Report).</p> <p>Regional groundwater impacts associated with the TSP groundwater plume extend beneath the Site. Groundwater monitoring wells near the Site exhibit low to moderate concentrations of solvents (2004 Phase I Report).</p> <p>The 2021 Southeast EDR Report confirmed that Google LLC, located on the Site, is a handler of hazardous waste. No violations or evaluations were identified.</p> <p>The 2021 Joaquin Report indicated that a soil sample from the Site, collected at approximately 2 feet bgs in March 2021, was analyzed for</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-10-077 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	pesticides and metals. No organic pesticides were detected at concentrations exceeding laboratory reporting limits. The following analytes were detected at concentrations exceeding ESLs in the sample: arsenic (2.4 mg/kg); barium (1,200 mg/kg); nickel (86 mg/kg); and vanadium (47 (mg/kg). Farallon notes that the concentrations of arsenic, nickel, and vanadium were within the upper estimate of regional ambient (background) concentrations and the barium concentration exceeded the upper estimate of its regional background concentration.
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	The 2021 Joaquin Report noted that from an environmental standpoint, soil from the Site may be acceptable for disposal at a site with acceptance requirements based on unrestricted residential land use criteria. Additional characterization, such as deeper soil sampling of the specific excavation extents anticipated, may be needed to obtain receiving facility approvals.
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The TSP groundwater plume extends beneath the Site from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE.</p> <p>Groundwater in the vicinity of the Site is characterized by the existing monitoring wells that are routinely sampled by the PRPs to the TSP plume. Based on monitoring well sampling conducted in December 2020, TCE is expected to be present in groundwater in the vicinity of the Site at concentrations up to 200 µg/l (2021 Joaquin Report).</p> <p>cis-1,2-DCE, TCE, vinyl chloride, and other VOCs were detected at concentrations exceeding ESLs in soil vapor in the Site vicinity. Soil vapor sampling was not conducted on the Site (2021 Joaquin Report).</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	Vapor intrusion controls for future buildings as needed (2021 Joaquin Report).
Data Gaps Identified	None identified.

Site Use Summaries	
Current Site Use	Vacant land
Historical Site Use	<p>“The Site appears to have been developed as early as 1899, though the exact nature of the development could not be discerned from the USGS topographical map for Palo Alto. In a 1939 aerial photograph, a residential structure is visible surrounded by agricultural fields. By 1956, the surrounded parcels of land were developed into residences...” “...The configuration of the Site remained the same until at least 1991, when the last aerial photograph showing the residence was taken. According to Mr. Chavez, the owner and resident of the Site from 1956-1996, the house caught fire and burned down in 1996, and the Site was then cleared. The following aerial photograph from 1998 shows the plot of land much as it appears today, with the house demolished and dirt and vegetation covering the Site.” (2011 Phase I Report).</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-10-078 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
Known or Suspected	None identified by the 2011 Phase I Report. Farallon notes that hazardous building materials from the former residence that burned down could be present in shallow soil.
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	The 2021 Joaquin Report noted that from an environmental standpoint, soil from the Site may be acceptable for disposal at a site with acceptance requirements based on unrestricted residential land use criteria. Additional characterization, such as deeper soil sampling of the specific excavation extents anticipated, may be needed to obtain receiving facility approvals. Farallon recommends that a soil management plan for the Site include proper management of residual hazardous building materials, if encountered.
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	The TSP groundwater plume extends beneath the Site from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE. Groundwater in the vicinity of the Site is characterized by the existing monitoring wells that are routinely sampled by the PRPs to the TSP groundwater plume. Based on monitoring well sampling conducted in December 2020, TCE is expected to be present in groundwater in the vicinity of the Site at concentrations up to 200 µg/l (2021 Joaquin Report). cis-1,2-DCE, TCE, vinyl chloride, and other VOCs were detected at concentrations exceeding ESLs in soil vapor in the Site vicinity. Soil vapor sampling was not conducted on the Site (2021 Joaquin Report).
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	Vapor intrusion controls for buildings as needed (2021 Joaquin Report).
Data Gaps Identified	None identified.

Program-Level Mitigation Measure(s)		
Mitigation Measure No.	Applicability	Notes
MM HAZ-4.1	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on the known TCE concentrations exceeding ESLs in groundwater from the TSP associated groundwater plume.
MM HAZ-4.2	<input checked="" type="checkbox"/> Does not apply <input type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site within an area covered by MM HAZ-4.1. Phase I completed. Limited Phase II completed.

Site Use Summaries	
Current Site Use	Commercial office space
Historical Site Use	<p>“The Subject Property was vacant and used as cropland in the early to mid 1900s. Small structures, possibly a house and/or storage, were present on the property from the 1960s through 1999. An agricultural water supply well was located on the site, and destroyed under permit by SCVWD in 1986. According to records obtained from the Mountain View Community Development Department Building Division, an 800-square foot house with an asbestos-containing roof was demolished on the site from [sic] 2000. In 2000-2001, an approximately 4,400 square-foot, two story office building was constructed and has since been occupied by Feeltel Corporation and until recently, Viewtel Corporation. Both companies are computer hardware manufacturers but only used the Subject Property building for office work.” (2012 Phase I Report).</p>

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>“The Subject Property was a rural residential area from the early to mid-1900s. Agricultural chemicals such as pesticides may have been applied to the Subject Property, and may be present in shallow soils at residual concentrations. Given that nearly the entirety of the Subject Property is covered by the current office building and pavement, direct exposure to soils potentially containing agricultural chemicals by typical office users is</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-10-079 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>low. However, utility maintenance, construction, or landscape workers could be exposed to soil potentially containing agricultural chemicals. Soil sampling would be required to screen for the potential presence of agricultural chemicals.” (2012 Phase I Report).</p> <p>“Several structures were present on the Subject Property from the 1960s through the 1980s; possibly including a residence and out-building. Given the age of these structures, it is possible that exterior paint on the structures may have contained lead. If the paint flaked from these structures over time, which is likely, it is possible that lead paint may have been introduced to shallow soil. However, given the regrading that would have occurred as part of development of the Subject Property as a commercial facility, residual impact from lead paint in soil is not likely to be significant. Soil sampling, however, would be required to screen for the potential presence of elevated lead in soil.” (2012 Phase I Report).</p> <p>“Roofing mastic on the Subject Property building was found to contain asbestos. Because destructive sampling was not performed, the roof field is conservatively assumed to contain asbestos. Ceramic tiles, which also could not be sampled, are assumed to contain lead and possibly asbestos.” (2012 Phase I Report).</p> <p>The 2021 Southeast EDR Report identified Google Inc. located on the Site in several databases regarding the disposal of hazardous wastes including “liquids with halogenated [sic] organic compounds > 1000 mg/l,” “other organic solids,” halogenated solvents, and “off-specification, aged, or surplus organics.” No evidence of spills, releases, or violations in connection with the Site was identified in the 2021 Southeast EDR Report.</p>
Cleanup or Mitigation Actions Proposed or Completed	None identified.
Redevelopment Media Management Recommendations	<p>The 2021 Joaquin Report noted that from an environmental standpoint, soil from the Site may be acceptable for disposal at a site with acceptance requirements based on unrestricted residential land use criteria. Additional characterization, such as deeper soil sampling of the specific excavation extents anticipated, may be needed to obtain receiving facility approvals.</p> <p>Site soils should be screened for lead impacts from historical Site buildings. A full asbestos survey should be conducted prior to demolition of the Site building. Asbestos-containing materials should be removed and disposed of by a Cal-OSHA registered asbestos contractor (2012 Phase I Report).</p>
Data Gaps Identified	None identified.

Site Use Summaries	
Current Site Use	<p>The Site is part of a larger multi-tax parcel property. Site address 1708 Shoreline Boulevard contained Building M5 used by Alza for pharmaceutical research and development purposes. The building had high-bay storage areas and sampling and dispensing rooms (2008 Phase I Report).</p> <p>The other address associated with the Site, 1742 Shoreline Boulevard, maps to the same building. Farallon notes that the current use of the Site may be for Google offices.</p>
Historical Site Use	<p>Building M5 was relocated from 1058 Huff Avenue to 1708 North Shoreline Boulevard in the early 1990s. An existing warehouse at 1708 North Shoreline Boulevard was demolished prior to relocation of Building M5.</p> <p>An on-site cogeneration plant that housed cogeneration combustion engines was located west of Building M5. The cogeneration plant received fuel (landfill gas) from a local municipal landfill.</p> <p>A 50-gallon diesel AST for a backup generator was located west of Building M5.</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-10-080 (Site)
Mountain View, California

Site Use Summaries	
	Facility personnel did not have knowledge of historical operations at the warehouse that was demolished. The Site formerly was used for agricultural purposes including orchards (2008 Phase I Report).
Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>Buildings associated with Alza Corporation operations, identified by other addresses, were noted as having a gasoline release from a UST and an acetone release from business operations. Both releases were noted as cleaned up with regulatory closure (2008 Phase I Report).</p> <p>Five monitoring wells were installed at the larger Site, including one associated with Building M5, to evaluate groundwater conditions. The 2008 Phase I Report does not provide details as to the release prompting the groundwater investigation, but Farallon assumes the source is the gasoline release from the UST. The groundwater monitoring results confirmed the presence of TCE in groundwater from the area-wide groundwater plume. The well at Building M5 was decommissioned prior to relocating the building at the Site (2008 Phase I Report).</p> <p>The 2021 Southeast EDR Report identified the Google Inc. facility, located on the Site, in several regulatory databases. The listings were associated with the storage of diesel fuel in ASTs in connection with the operation of diesel fuel generators on the Site. The 2021 Southeast EDR Report indicated that the facility maintains a diesel generator with a 2,039-gallon self-contained diesel AST, a diesel generator with a 427-gallon self-contained diesel AST, and 55-gallon container of “new oil”. The generators are reportedly situated within secondary containment. In 2015, the facility received a citation for failing to keep records verifying visual inspection of tanks and containers. A second violation in November 2018 indicated that the facility failed to routinely inspect the 55-gallon container of oil and only routinely inspected the ASTs. Records indicate that the Site was returned to compliance in December 2018 (2021 Southeast EDR Report).</p> <p>A total of 11 USTs are located on the southern portion of the Site. All 11 USTs are 17,500-gallon “fire water” USTs (2021 Joaquin Report).</p>
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	<p>The 2021 Joaquin Report noted that from an environmental standpoint, soil from the Site may be acceptable for disposal at a site with acceptance requirements based on unrestricted residential land use criteria. Additional characterization, such as deeper soil sampling of the specific excavation extents anticipated, may be needed to obtain receiving facility approvals.</p> <p>Farallon notes that based on historical documented releases, diesel AST presence, and chemical use at the Site, soil should be characterized prior to construction activities.</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-10-080 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The TSP groundwater plume extends beneath the Site from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE.</p> <p>Groundwater in the vicinity of the Site is characterized by the existing monitoring wells that are routinely sampled by the PRPs to the TSP groundwater plume. Based on monitoring well sampling conducted in December 2020, TCE is expected to be present in groundwater in the vicinity of the Site at concentrations up to 200 µg/l (2021 Joaquin Report).</p> <p>cis-1,2-DCE, TCE, vinyl chloride, and other VOCs were detected in soil vapor in the Site vicinity exceeding ESLs. Soil vapor sampling was not conducted on the Site (2021 Joaquin Report).</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	Vapor intrusion controls for buildings as needed. (2021 Joaquin Report).
Data Gaps Identified	None identified.

Site Use Summaries	
Current Site Use	Commercial office space that shares parking and parking lot entrances with the south-adjacent parcel at 1842 Shoreline Boulevard.
Historical Site Use	By 1939 and through at least 1950, the Site appeared to be developed with residential or agricultural buildings with remaining portions being used as agricultural land. A commercial structure was apparent on the Site from at least 1963 through at least 1974. The structure was removed by 1982 and the Site appeared to be used for storage or parking. The current Site building was apparent by 1983 and the Site appeared largely unchanged through the present (2019 Phase I ESA).

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>“Based on aerial photographs reviewed, portions of the Site have historically been developed with agricultural use between at least 1939 through 1950. Although not documented at the Site, activities commonly associated with agricultural uses include the use and storage of hazardous materials and petroleum products (<i>e.g.</i>, agricultural chemicals). Information was not available as to the potential historical usage of pesticides, fertilizers or insecticides. Based on our experience, these residual concentrations, if present, are not typically at concentrations that would require cleanup by a regulatory agency or pose a significant human health risk to commercial or industrial site users. There is potential that the</p>

Environmental Conditions from On-Site Source(s)	
	near surface soils contain residual agricultural chemicals that may affect disposal costs if soil off-haul is required as part of future redevelopment.” (2019 Phase I Report).
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	The 2021 Joaquin Report noted that from an environmental standpoint, soil from the Site may be acceptable for disposal at a site with acceptance requirements based on unrestricted residential land use criteria. Additional characterization, such as deeper soil sampling of the specific excavation extents anticipated, may be needed to obtain receiving facility approvals.
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>According to the 2019 Phase I Report, a gasoline UST and dispensing pump historically was located on the eastern portion of the south-adjacent parcel (1842 Shoreline Boulevard). The UST is believed to have been removed during the construction of the current Site building; however, there is no evidence that the UST was evaluated for potential releases. There is potential that the UST has impacted the subsurface of the south-adjacent property. Based on the regional groundwater flow direction to the north, the Site is believed to be hydrologically down-gradient of this property.</p> <p>The TSP groundwater plume extends beneath the Site from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE.</p> <p>Groundwater in the vicinity of the Site is characterized by the existing monitoring wells that are routinely sampled by the PRPs to the area-wide plume. Based on monitoring well sampling conducted in December 2020, TCE is expected to be present in groundwater in the vicinity of the Site at concentrations up to 200 µg/l (2021 Joaquin Report).</p> <p>The 2021 Southeast EDR reported listed a 500-gallon diesel UST in the intersection northeast of the Site. The UST is listed with City of Mountain View Public Works Department – Shoreline Pump Station as the owner. This facility is located near the corner of Charleston Road and Shorebird Way, which is approximately 0.37 mile east of the Site. No releases were listed for this UST.</p>

Site Use Summaries	
Current Site Use	Commercial offices (Google)
Historical Site Use	<p>“The Site was undeveloped in 1899. By 1939, the Site appears to have been developed with driveways leading from Stierlin Road (now North Shoreline Boulevard) and cleared gravel areas which appear to have been for accessing the surrounding agricultural lands which appear to be a mix of crops and orchards. In 1947, small shed-like structures appear around the perimeter of the gravel lot areas. By 1965, a residential structure appears on the Site near the Stierlin Road entrance. Smaller shed buildings were also present at this time. According to the 1994 Phase I report, the current building was constructed circa 1980. The residential structure appears to have been demolished and the Site appears to have undergone grading in the 1982 aerial photograph. By 1993, the current commercial structure was apparent in aerial photographs. No significant changes to the Site buildings have occurred since this time and a mix of commercial tenants similar to those presently on-Site appear to have occupied the Site building since its development.” (2011 Phase I Report).</p> <p>From 1980 through 2011, Site operations consisted of office use, a delicatessen, and dentistry. (2011 Phase I Report).</p> <p>Farallon notes that the current structure appears unchanged from the 2011 Phase I Report figure, based on Google Earth imagery.</p>

North Bayshore Master Plan Supplemental Environmental Impact Review

Santa Clara County Assessor Parcel No.: 116-10-085 (Site)
Mountain View, California

Site Use Summaries	
Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>The 2021 Southeast EDR Report identified the Site in several regulatory databases. The listings appeared to be associated with hazardous waste generated in connection with historical dentistry operations on the Site. No evidence of violations or spills was identified in the 2021 Southeast EDR Report.</p> <p>According to the 2011 Phase I Report, the Site was historically developed with “driveways” and “gravel lot areas” used to access adjacent agricultural land, including orchards. Residual impacts from historical pesticide use may be present in on-Site soils.</p> <p>The 2021 Joaquin Report noted that a soil sample collected at a depth of 4 feet bgs from the Site on March 1, 2021 was analyzed for an analytical suite typical for off-haul evaluation, including asbestos. Analysis of the soil sample collected from the Site indicated concentrations of the following analytes exceeding ESLs in the sample: arsenic (3.8 mg/kg); chromium (69 mg/kg); nickel (87 mg/kg); and vanadium (48 mg/kg). Farallon notes that the detected concentrations of these four metals were within the upper estimate of regional ambient (background) concentrations.</p>
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	The 2021 Joaquin Report noted that from an environmental standpoint, soil from the Site may be acceptable for disposal at a site with acceptance requirements based on unrestricted residential land use criteria. Additional characterization, such as deeper soil sampling of the specific excavation extents anticipated, may be needed to obtain receiving facility approvals.
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The TSP groundwater plume extends beneath the Site from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE.</p> <p>Groundwater in the vicinity of the Site is characterized by the existing monitoring wells that are routinely sampled by the PRPs to the area-wide groundwater plume. Based on monitoring well sampling conducted in December 2020, TCE is expected to be present in groundwater in the vicinity of the Site at concentrations up to 200 µg/l (2021 Joaquin Report).</p> <p>The 2021 Joaquin Report noted that the north-adjacent parcel at 1742 North Shoreline Boulevard contains eleven 17,500-gallon fire water USTs. The west-adjacent parcel at 1015 Joaquin Road contained two 4,000-gallon acetone USTs, one 6,000-gallon caustic UST that contained sodium hydroxide, one 4,000-gallon wastewater management UST, and two 5,000-gallon fire water USTs. One 4,000-gallon acetone UST and the 6,000-</p>

Site Use Summaries	
Current Site Use	Restaurant space
Historical Site Use	<p>“A residence was located on-Site as early as 1939. An addition to the residence is evident in the 1950s. The Site appears in its current configuration in the early 1980s. According to the Site owner, the Site had been a former residence that was converted into a bar and grill. The exact time frame in which the conversion occurred is unknown. The Site has appeared in its current configuration since the 1980s.” (2016 Phase I Report).</p>

Environmental Conditions from On-Site Source(s)	
Known or Suspected	None identified.
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	<p>The 2021 Gateway Reported noted that soil from the Site may be acceptable from an environmental standpoint for disposal at a site with acceptance requirements based on unrestricted residential land use criteria; however, it may not be acceptable at sites that use stricter acceptance criteria standards for pesticide or metal concentrations, such as criteria commonly applied to wetlands projects.</p>

Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review
Santa Clara County Assessor Parcel No.: 116-10-088 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	The TSP groundwater plume extends beneath the Site from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE. TCE was detected at concentrations of 170 µg/l (2010), 160 µg/l (2014), and 140 µg/l (2017), which exceed the ESL of 1.2 µg/l, in groundwater samples collected from an extraction well located northwest of the Site (2021 Gateway Report).
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	Vapor intrusion controls for buildings (2021 Gateway Report).
Data Gaps Identified	None identified.

Program-Level Mitigation Measure(s)		
Mitigation Measure No.	Applicability	Notes
MM HAZ-4.1	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on the known TCE concentrations exceeding ESLs in groundwater from the TSP associated groundwater plume.
MM HAZ-4.2	<input checked="" type="checkbox"/> Does not apply <input type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site within an area covered by MM HAZ-4.1. Phase I completed. Limited Phase II completed.
MM HAZ-4.3	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site likely bundled with other properties impacted by the area-wide groundwater solvent plume.
MM HAZ-4.4	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site likely bundled with other properties impacted by the area-wide groundwater solvent plume.
MM HAZ-4.5	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site likely bundled with other properties impacted by the area-wide groundwater solvent plume.
MM HAZ-4.6	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site does not have confirmed historical agricultural use. However, pesticide residues may be present from historical agricultural use on adjacent properties.
MM HAZ-4.7	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site likely bundled with other properties impacted by the area-wide groundwater solvent plume.
MM HAZ-4.8	<input checked="" type="checkbox"/> Does not apply <input type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site is not adjacent to U.S. 101.
MM HAZ-4.9	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site does not have confirmed historical agricultural use. Adjacent properties have known agricultural use and confirmed pesticide residues.

Site Use Summaries	
Current Site Use	Commercial office space that shares parking and parking lot entrances with the north-adjacent parcel at 1890 Shoreline Boulevard.
Historical Site Use	By 1939 and through at least 1950, the Site appeared to be developed with residential or agricultural buildings with remaining portions being used as agricultural land. Residential structures were apparent on the Site from at least 1963 through at least 1974. The residential structures were largely removed by 1982 and the Site appeared to be used for storage or parking. The Site building was apparent by 1985 and the Site appeared largely unchanged through the present. The Site building has been occupied by Google Inc since 2014 (2019 Phase I ESA).

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>“Based on aerial photographs reviewed, portions of the Site have historically been developed with agricultural use between at least 1939 through 1950. Although not documented at the Site, activities commonly associated with agricultural uses include the use and storage of hazardous materials and petroleum products (<i>e.g.</i>, agricultural chemicals). Information was not available as to the potential historical usage of pesticides, fertilizers or insecticides. Based on our experience, these residual concentrations, if present, are not typically at concentrations that would require cleanup by a regulatory agency or pose a significant human</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-100-89 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>health risk to commercial or industrial site users. There is potential that the near surface soils contain residual agricultural chemicals that may affect disposal costs if soil off-haul is required as part of future redevelopment.”</p> <p>One hydraulic elevator is located within the Site building. No significant quantities of hazardous materials were observed within this building during the Phase I Site reconnaissance (2019 Phase I Report).</p> <p>According to the 2019 Phase I Report, a gasoline UST and dispensing pump was historically located on the eastern portion of the Site. The UST is believed to have been removed during the construction of the current Site building; however, there is no evidence that the UST was evaluated for potential releases. There is potential that the UST has impacted the subsurface of the Site (2019 Phase I Report).</p> <p>The 2021 Joaquin Report noted that a soil sample collected at a depth of 4 feet bgs from the Site on March 1, 2021 was analyzed for an analytical suite typical for off-haul evaluation, including asbestos. Analysis of the soil sample collected from the Site indicated concentrations the following analytes exceeding ESLs in the sample: arsenic (5.5 mg/kg); chromium (81 mg/kg); nickel (88 mg/kg); and vanadium (77 mg/kg). Farallon notes that the detected concentrations of these four metals were within the upper estimate of regional ambient (background) concentrations.</p>
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	The 2021 Joaquin Report noted that from an environmental standpoint, soil from the Site may be acceptable for disposal at a site with acceptance requirements based on unrestricted residential land use criteria. Additional characterization, such as deeper soil sampling for petroleum compounds and metals of the specific excavation extents anticipated, may be needed to obtain receiving facility approvals.
Data Gaps Identified	Farallon notes that the lack of documentation for the decommissioning status of the suspected UST at the Site is a data gap.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The TSP groundwater plume extends beneath the Site from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE.</p> <p>Groundwater in the vicinity of the Site is characterized by the existing monitoring wells that are routinely sampled by the PRPs to the area-wide plume. Based on monitoring well sampling conducted in December 2020, TCE is expected to be present in groundwater in the vicinity of the Site at concentrations up to 200 µg/l (2021 Joaquin Report).</p>

Site Use Summaries	
Current Site Use	Commercial office space, Google, LLC occupies two buildings on the Site identified as PLY1 and PLY2.
Historical Site Use	“Historical maps indicate that the Subject Property was agricultural land and associated residences from the 1890s through the 1960s. From the late 1960s through the early 1980s, agricultural areas were no longer present at the Subject Property and the Site was developed with a small storage yard and various small residences. The Subject Property was first developed with the current buildings in 1989, and was occupied by various commercial clients until Google acquired the property in 2005 and 2006. With the exception of small exterior changes to the parking lot and landscaping, the Subject Property has remained in the same general configuration since 2009.” (2019 Phase I Report).

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>The Site was historically occupied by agriculturally developed land between the 1890s and the 1960s. Pesticides and/or herbicides may have been applied to the Site over that timeframe, and residual pesticides and/or herbicides (and the chemicals that they contain) may still be present in Site soils (2019 Phase I Report).</p> <p>“Hazardous materials associated with Site operations include diesel fuel and small quantities of maintenance and cleaning chemicals. The diesel</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-10-095 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>fuel is stored in one aboveground storage tank (AST) located in a belly tank of an emergency generator.” (2019 Phase I Report),</p> <p>Google, LLC – PLY1 was listed in the EMI, CERS, and FINDS databases. According to the database listings, the facility was cited for a violation in 2016. The citation was issued for failure to electronically update the facility’s business plan with the Mountain View Fire Department. The violation was corrected, and the facility was returned to compliance that same month. The facility is also included in the EPA Air Emission Inventory System (2021 Southeast EDR Report).</p> <p>The 2021 Joaquin Report noted that in March 2021, two soil samples were collected on the southeastern and western portions of the Site in connection with a larger environmental evaluation of the Joaquin Neighborhood. The soil samples were analyzed for VOCs, TPH, SVOCs, pesticides, PCBs, metals, and/or asbestos. Organic pesticides were detected at concentrations exceeding laboratory reporting limits in one sample. TCE was detected at a concentration exceeding the laboratory method detection limit in one sample, but was not detected at the laboratory reporting limit in one sample. Arsenic was detected at concentrations of 1.7 and 3.2 mg/kg exceeding the ESL. Vanadium was detected at concentrations of 34 and 44 mg/kg, exceeding the ESL. Farallon notes that the detected concentrations of these metals were within the upper estimate of regional ambient (background) concentrations.</p>
Cleanup or Mitigation Actions Proposed or Completed	Farallon notes that on-Site detections of petroleum compounds in soil vapor on the western side of the Site do not have an apparent source. Vapor mitigation measures proposed due to the area-wide groundwater solvent plume would typically mitigate petroleum vapors.
Redevelopment Media Management Recommendations	The 2021 Joaquin Report noted that from an environmental standpoint, soil from the Site may be acceptable for disposal at a site with acceptance requirements based on unrestricted residential land use criteria. Additional characterization, such as deeper soil sampling of the specific excavation extents anticipated, may be needed to obtain receiving facility approvals.
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The TSP groundwater plume extends beneath the Site from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE.</p> <p>Groundwater in the vicinity of the Site is characterized by the existing monitoring wells that are routinely sampled by the PRPs to the area-wide groundwater plume. Based on monitoring well sampling conducted in December 2020, TCE is expected to be present in groundwater in the vicinity of the Site at concentrations up to 200 µg/l (2021 Joaquin Report).</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-10-095 (Site)
Mountain View, California

Environmental Conditions from Off-Site Source(s)	
	<p>The GeoTracker database indicated that a monitoring well associated with the Montwood Site (which is comingled with the TSP groundwater plume) is located on the southwestern portion of the Site. The most recent reported sampling results in the database, dated February 17, 2021, indicated concentrations of PCE (0.372 µg/l), TCE (40.3 µg/l), cis-1,2-DCE (6.78 µg/l), and trans-1,2-DCE (0.223 µg/l).</p> <p>The 2021 Joaquin Report noted that in March 2021, a soil vapor sample was collected from a location on the western portion of the Site and analyzed for VOCs. The following analytes were detected at concentrations exceeding ESLs in the soil vapor sample: benzene (190 µg/m³), chloroform (22 µg/m³) and ethylbenzene (52 µg/m³).</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	<p>Vapor intrusion controls for Site buildings as needed (2021 Joaquin Report).</p> <p>Farallon notes that the source area for the petroleum compounds detected in soil vapor is unknown and may be encountered during redevelopment activities. A soil management plan may be warranted to ensure proper handling and disposal of on-Site soil.</p>
Data Gaps Identified	None identified.

Program-Level Mitigation Measure(s)		
Mitigation Measure No.	Applicability	Notes
MM HAZ-4.1	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on the known TCE concentrations exceeding ESLs in groundwater from the TSP associated groundwater plume and the contaminant detections in an on-Site monitoring well installed for the Montwood plume monitoring.

Site Use Summaries	
Current Site Use	<p>The parcel addressed as 1015 Joaquin Road contained Building M1 used by Alza Corporation for pharmaceutical research and development purposes. Building M1 was used as pilot process suites (2008 Phase I Report).</p> <p>Farallon notes that the current use of the Site may be for Google offices.</p>
Historical Site Use	<p>According to available historical sources, the Site was developed for agricultural purposes including orchards from at least 1939 through at least 1956. Building permit records indicated that the Site was also historically used for residential purposes. In 1986, the residences were reportedly demolished and the current Site building was constructed (2008 Phase I Report).</p>

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>Six USTs were present on the Site when the 2008 Phase I Report was published. The 2008 Phase I Report listed two acetone USTs, one caustic UST, one wastewater discrimination UST, and two firewater containment USTs. MVFD records indicated that the acetone, caustic, and wastewater USTs were or are equipped with corrosion protection, spill and overflow</p>

Environmental Conditions from On-Site Source(s)	
	<p>protection, double-walled piping, and piping leak detection. Personnel indicated that the acetone and caustic USTs had been emptied, cleaned, and were scheduled to be removed from the Site as of 2008 (2008 Phase I Report).</p> <p>“Records on file for this address were dated between 1989 and 2008 and related to the Alza facility. Records included Environmental Compliance Plans (ECPs), Hazardous Materials and Waste Storage (HMWS) permits, Fire and Life Safety (FLS) permits, hazardous materials inspection reports, an industrial waste discharge permit application and Periodic Reports of Continued Compliance (PRCCs), and correspondence records. The FLS permits indicate that uses for Building M1 have included a flammable/combustible liquid mixing/dispensing room, general office space, laboratories, and a lunch room and that the building maintains a diesel tank for an emergency generator. According to the ECPs, hazardous materials stored on-site have included compressed gases, corrosive liquids, combustible liquids, flammable liquids, acids, bases, flammable solvents, and lubricants. In addition small amounts of chloroform (approximately two gallons) were stored on-site. Waste chloroform, mixed with other solvents, is stored in drums with capacities ranging between 25 and 55 gallons. Minor violations noted in the inspection reports had been corrected.</p> <p>The ECPs also indicate that the two 4,000-gallon acetone USTs at Building M1 have also been used to store methanol, ethanol, and methylene chloride. According to facility personnel and MVFD correspondence dated October 30, 2002, one of the acetone tanks has never been used since installation in 1989.” (2008 Phase I Report).</p> <p>The 2008 Phase I Report reviewed two NOVs in association with a wastewater discharge permit for the Site building. One NOV, dated October 21, 1994, was related to a Single Toxic Organic result of 3.4 mg/l, exceeding the discharge requirement of 0.75 mg/l. The second NOV, dated December 21, 1989, was related to incomplete data provided by the Site operator in an end of permit period report.</p> <p>Fire department records for the Site “included incident reports for an accidental chloroform discharge to the sanitary sewer, an acetone spill at one of the acetone USTs, and a release from the caustic UST. On September 16, 1993, 825 gallons of process wastewater that may have contained chloroform (between 1 and 3 mg/l) were discharged directly to the sanitary sewer due to a valve being left open. The letter indicates that automatic valves would be installed to ensure an accidental discharge would not occur again. On December 15, 2002, approximately four gallons of acetone were released to the floor of a scale pit and to exposed soil. The impacted soil was excavated to remove all soil with acetone levels above the cleanup goal of 210 ppb. Thirty drums of soil were disposed of offsite. On March 4, 2002, a pump used to transfer caustic from the caustic UST was discovered to be leaking caustic. The leak was contained with the</p>

Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>UST secondary containment system. The leaked material was removed from the secondary containment and the pump was re-set and reinstalled.” (2008 Phase I Report).</p> <p>A 250-gallon double-walled diesel AST associated with emergency generator operation is located on a utility pad on the Site (2008 Phase I Report).</p> <p>The 2021 Southeast EDR Report identified the Site in several regulatory databases. Alza Corporation, formerly located on the Site, was identified in connection with the disposal of hazardous wastes including “other inorganic solid waste.” The 2021 Southeast EDR Report included an additional listing for Alza Corporation which identified the facility as an active “Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.” (2021 Southeast EDR Report).</p> <p>The 2021 Joaquin Report noted that a soil sample from the Site collected at approximately 3 feet bgs in March 2021 was analyzed for pesticides and metals. Multiple organic pesticides were detected at concentrations exceeding laboratory reporting limits, including a detection of dieldrin at a concentration exceeding the ESL. The following metals were detected at concentrations exceeding ESLs in the sample: arsenic (4.4 mg/kg); barium (1,200 mg/kg); nickel (86 mg/kg); and vanadium (59 (mg/kg). Farallon notes that the detected concentrations of these metals were within the upper estimate of regional ambient (background) concentrations, with the exception of barium.</p>
Cleanup or Mitigation Actions Proposed or Completed	<p>On December 15, 2002, approximately four gallons of acetone were released to the floor of a scale pit and to exposed soil at the Site. The impacted soil was excavated to remove all soil with acetone levels above established cleanup goal of 210 ppb. Thirty drums of soil were disposed of offsite (2008 Phase I Report).</p>
Redevelopment Media Management Recommendations	<p>The 2021 Joaquin Report noted that from an environmental standpoint, soil from the Site may be acceptable for disposal at a site with acceptance requirements based on unrestricted residential land use criteria. Additional characterization, such as deeper soil sampling of the specific excavation extents anticipated, may be needed to obtain receiving facility approvals.</p> <p>Farallon notes that the historical Alza Corporation operations and UST use may have resulted in minor spills or releases of hazardous materials to the sanitary sewer or surface soil. Soil sample analytical results from 2021 indicate that residual pesticides are present in on-Site soil. A soil management plan may be warranted to ensure proper handling and disposal of on-Site soil.</p>
Data Gaps Identified	<p>The 2008 Phase I Report indicates that one 4,000-gallon acetone UST and the 6,000-gallon caustic UST were scheduled for removal and</p>

Mountain View, California

Environmental Conditions from On-Site Source(s)	
	subsequently emptied and cleaned. However, no information regarding the removal of the two USTs was found during the 2008 assessment. No information regarding the status of the other USTs at the Site was found during this assessment either (2008 Phase I Report).

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The TSP groundwater plume extends beneath the Site from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE.</p> <p>Groundwater in the vicinity of the Site is characterized by the existing monitoring wells that are routinely sampled by the responsible parties of the TSP plume. Based on monitoring well sampling conducted in December 2020, TCE is expected to be present in groundwater in the vicinity of the Site at concentrations up to 200 µg/l (2021 Joaquin Report).</p> <p>cis-1,2-DCE, TCE, vinyl chloride, and other VOCs were detected in soil vapor in the Site vicinity exceeding ESLs. Soil vapor sampling was not conducted on the Site (2021 Joaquin Report).</p> <p>According to a 2008 Groundwater Monitoring Report referenced in the 2008 Phase I Report, a monitoring well was installed on the Site between 1987 and 1990 as part of a regional monitoring well network. Groundwater samples collected from the Site or nearby properties have been analyzed for VOCs, BTEX, MTBE, metals, gasoline, alcohols, and ethylene dibromide. Compounds that have been detected to date in on-site wells include 1,1-DCA, 1,1-DCE, cis-1,2-DCE, trans-1,2-DCE, chloromethane, PCE, 1,1-TCA, TCE, Freon 11, MTBE, benzene, arsenic, chromium, copper, lead, selenium, and zinc. VOC concentrations in the monitoring wells were consistent with those of the regional groundwater plume in this general vicinity (2008 Phase I Report).</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	Vapor intrusion controls for buildings as needed (2021 Joaquin Report).
Data Gaps Identified	None identified.

Site Use Summaries	
Current Site Use	Multi-tenant restaurant space As of 2015, tenants were identified as Subway (1995-Present), Hon Sushi (2010-Present), and Sunny Bowl (2010-Present) (2015 Phase I Report).
Historical Site Use	According to available historical sources, the Site was developed agriculturally as early as 1939, developed with an addition of a residence in approximately 1948, and developed with the current structure in 1975. The residence was demolished in 1989. Historical tenants on the Site included Mainline Tool Engineer (1979-1980), Vander Bend Sheet-Metal (1985); Bueno Bueno (1995-2005); Chef Lee 1 Chinese (1995); Café X (1995-2005); New Mas Restaurant (2000-2005); Pakindia Restaurant (2000); Da Kitchen (2005) (2015 Phase I Report).

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>No recognized environmental conditions were identified for the on-Site sources described below (2015 Phase I Report).</p> <p>Site addresses 1477 and 1479 Plymouth Street are listed in the SPILLS database as the “Accent on Offset Property” with an active spills status from 1989. The listing indicates the spill is not related to a leaking UST</p>

North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-10-101 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>and is not an NPL site. No further information could be identified for this listing (2021 Southeast EDR Report). Farallon notes that 1989 is the same year the residence was demolished.</p> <p>A soil sample from the Site collected at approximately 4 feet bgs in March 2021 was analyzed for VOCs, TPH, SVOCs, pesticides, PCBs, metals, and asbestos. The following analytes were detected at concentrations exceeding ESLs in the sample: phenol (0.36 mg/kg); arsenic (3.2 mg/kg); and vanadium (58 mg/kg). The detected concentrations of arsenic and vanadium are within the upper estimate of regional ambient (background) concentrations. The concentration of phenol detected in the soil sample exceeds the ESL (2021 Gateway Report).</p>
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	The 2021 Gateway Reported noted that soil from the Site may be acceptable from an environmental standpoint for disposal at a site with acceptance requirements based on unrestricted residential land use criteria; however, it may not be acceptable at sites that use stricter acceptance criteria standards for pesticide or metal concentrations, such as criteria commonly applied to wetlands projects.
Data Gaps Identified	Farallon notes that additional research into the SPILLS database listing for the “Accent on Offset Property” may be warranted to evaluate why it remains listed as an active file.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The TSP groundwater plume extends beneath the Site from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE.</p> <p>TCE was detected at concentrations of 170 µg/l (2010), 160 µg/l (2014), and 140 µg/l (2017), which exceed the ESL of 1.2 µg/l, in groundwater samples collected from an extraction well located directly north of the Site (2021 Gateway Report).</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	Vapor intrusion controls for buildings (2021 Gateway Report).
Data Gaps Identified	None identified.

Site Use Summaries	
Current Site Use	Commercial office space – multiple buildings occupied by Google.
Historical Site Use	From 1939 through 1982 the Site appeared to be developed with numerous residences, outbuildings, and areas of agricultural land use. The Site was developed with the current buildings and paved parking lots beginning in the late 1980s and completed by 1994 (2010 Phase I Report).

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>MVFD records for the Site indicated that four USTs were located on the Site: three at the historical address of 1587 Charleston Place and one at the historical address of 1067 Huff Avenue. A laboratory report included as an appendix to the 2010 Phase I Report indicated that the USTs at 1587 Charleston Place likely contained gasoline. Two soil samples were collected from each of the UST pits at 1587 Charleston Place. Petroleum hydrocarbons were not detected, except for one detection of gasoline-range hydrocarbons at a concentration of 7.5 ppm. All USTs appeared to have been removed by 1987. No sampling was conducted in connection with the UST at 1067 Huff Avenue (2010 Phase I Report).</p> <p>Nine groundwater wells and two septic tanks formerly were located on the</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-10-102 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>Site and were removed or abandoned in place during construction of the current structures (approximately 1985) (2010 Phase Report).</p> <p>“Based on review of the regulatory database report, the Project is listed on the HAZNET database as a hazardous waste generating site. On site evaluation and review of available information identified that the HAZNET listing is due to two former tenants of the Project that operated self-contained photo-processing operations, generating alkaline (metal sludge) solutions and photo-processing wastes. No regulatory violations were identified in connection with these former activities, and no evidence of any release of hazardous substances was observed. No further action or investigation is recommended regarding the HAZNET listing.” (2010 Phase I Report).</p> <p>The Site addresses were identified in multiple regulatory databases. Adobe Systems Inc. was listed at both Site addresses in connection with the disposal of hazardous waste including photochemicals and/or photoprocessing waste and metal sludge. No records of violations were identified in the database listings (2021 Southeast EDR Report).</p> <p>The 2021 Joaquin Report noted that three soil samples were collected from the Site in March 2021. A discrete soil sample collected near the northwestern corner of the Site at an approximate depth of 2 feet bgs and a discrete soil sample collected on the central portion of the Site at an approximate depth of 2 feet bgs were analyzed for pesticides and metals. Organic pesticides were detected at concentrations exceeding laboratory reporting limits and less than ESLs in both soil samples. The following analytes were detected in the northwestern sample at concentrations exceeding ESLs: arsenic (47 mg/kg); nickel (91 mg/kg); and vanadium (59 mg/kg). The following analytes were detected in the central sample at concentrations exceeding ESLs: arsenic (4.7 mg/kg); lead (37 mg/kg); and vanadium (60 mg/kg). A third discrete soil sample was collected in the parking area on the southern portion of the Site. The southern sample was analyzed for VOCs, TPH, SVOCs, pesticides, PCBs, and metals with the following analytes detected at concentrations exceeding ESLs in the sample: arsenic (4.2 mg/kg); barium (420 mg/kg); and vanadium (54 mg/kg). Organic pesticides were detected at concentrations exceeding laboratory reporting limits and less than ESLs. Farallon notes that the detected concentrations of metals in soils exceeding ESLs were within the upper estimate of regional ambient (background) concentrations.</p>
Cleanup or Mitigation Actions Proposed or Completed	Removal of four USTs as discussed above.
Redevelopment Media Management Recommendations	The 2021 Joaquin Report noted that from an environmental standpoint, soil from the Site may be acceptable for disposal at a site with acceptance requirements based on unrestricted residential land use criteria. Additional characterization, such as deeper soil sampling of the specific excavation extents anticipated, may be needed to obtain receiving facility approvals.

Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review

Santa Clara County Assessor Parcel No.: 116-10-102 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	Farallon notes that the source area for the petroleum compounds detected in soil vapor may be encountered during redevelopment activities and there is a lack of documentation for the status of the UST at 1067 Huff Avenue. These two issues may warrant preparation of a soil management plan including UST contingencies.
Data Gaps Identified	The location of the former USTs was not documented in the reports reviewed, and no sampling was conducted in connection with the former UST at 1067 Huff Avenue.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>“Numerous sites upgradient from the Project, most notably the Teledyne/Spectra-Physics NPL Site, have impacted groundwater in the vicinity of the Project with volatile organic compounds (VOCs). Investigation and cleanup activities related to this NPL Site have been ongoing since the mid-1980s. EMG reviewed the <i>January 2009 LFR Quarterly Groundwater Monitoring Report</i> and the <i>Interim Report Monitored Natural Attenuation Study at the North Bayshore and Spring Street Extraction Systems Report</i>, dated February 6, 2006, by LFR, and well data from 2005. These documents indicate TCE concentrations in shallow groundwater beneath the Project likely range from 10 ug/L to 200 ug/L. Cis-1,2-DCE is likely present in similar concentrations. Other VOCs, including PCE, are generally present at much lower concentrations. The reports also indicate that several wells are located on, or directly adjacent to the Project, including an extraction well in the Joaquin Road right of way, directly east of the Project. TCE and cis-1,2-DCE are also present in deeper groundwater zones.” “The responsible parties have installed groundwater extraction wells (including one directly adjacent to the Project) to pump and treat the contaminated groundwater. According to quarterly groundwater monitoring event results, contaminant levels in groundwater have been steadily decreasing.” (2010 Phase I Report).</p> <p>The TSP groundwater plume extends beneath the Site from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE.</p> <p>Groundwater in the vicinity of the Site is characterized by the existing monitoring wells that are routinely sampled by the PRPs to the area-wide groundwater plume. Based on monitoring well sampling conducted in December 2020, TCE is expected to be present in groundwater in the vicinity of the Site at concentrations up to 200 µg/l (2021 Joaquin Report).</p> <p>The 2021 Joaquin Report noted that a soil vapor sample was collected from the Site in March 2021. The following analytes were detected at concentrations exceeding ESLs in the soil vapor sample: benzene (190 µg/m³), chloroform (14 µg/m³), ethylbenzene (110 µg/m³), and vinyl chloride (16 µg/m³).</p>
Cleanup or Mitigation	Vapor intrusion controls for buildings as needed (2021 Joaquin Report).

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-10-102 (Site)
Mountain View, California

Environmental Conditions from Off-Site Source(s)	
Actions Proposed or Completed Pertaining to Site	Farallon notes that the source area for the petroleum compounds detected in soil vapor is unknown and may be encountered during redevelopment activities. A soil management plan may be warranted to ensure proper handling and disposal of on-Site soil.
Data Gaps Identified	None identified.

Program-Level Mitigation Measure(s)		
Mitigation Measure No.	Applicability	Notes
MM HAZ-4.1	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on the known TCE concentrations exceeding ESLs in groundwater from the TSP associated groundwater plume and the contaminant detections in an on-Site monitoring well installed for the TSP plume monitoring.

Site Use Summaries	
Current Site Use	<p>The parcel addressed as 1010 Joaquin Road contained Building M4 used by Alza Corporation for pharmaceutical research and development purposes. Building M4 was used primarily for office space; however, the southeastern portion of the building housed laboratory space. (2008 Phase I Report).</p> <p>Farallon notes that the current use of the Site may be for the Google Wellness Center – Building 48.</p>
Historical Site Use	<p>According to available historical sources, the Site was developed for agricultural purposes including orchards from at least 1939 through at least 1956. The current Site building was constructed in 1991 and occupied by Alza Corporation through at least 2008 (2008 Phase I Report).</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-10-104 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>Various building permit records were reviewed during the 2008 Phase I ESA. According to the files reviewed, hazardous materials stored at the Site have included combustible, corrosive, flammable, and poisonous material liquids; flammable, corrosive, and poisonous material solids; cryogen; and nonflammable gas. Records indicate that small quantities of chloroform and methylene chloride (less than 2 gallons) have been stored at the Site (2008 Phase I Report).</p> <p>A liquid waste discharge NOV dated October 19, 1995 and related correspondence was included in fire department records. According to the correspondence, methylene chloride was detected in wastewater at the Site at a concentration of 2.0 mg/l. The violation resulted from emptying the reservoir of a freeze dryer, used to dry samples containing small quantities of methylene chloride, into a laboratory sink. According to the correspondence, liquid collected from the freeze dryer would be placed in chlorinated solvent containers for disposal in the future (2008 Phase I Report).</p> <p>A process wastewater UST was installed on the Site in 1991. The tank was removed in 2007. Soil samples were collected from the sidewalls of the tank excavation and analyzed for VOCs and metals. Groundwater that entered the excavation was sampled and analyzed for VOCs and metals. No VOCs were detected in the soil samples and metals were detected at levels below applicable regulatory screening criteria. VOC concentrations in the groundwater sample appeared to be consistent with those of the regional groundwater plume (2008 Phase I Report).</p> <p>A 400-gallon double-walled diesel AST was installed to the south of the Site building in 2007. The fuel was stored in connection with the operation of emergency generators at the Site (2008 Phase I Report).</p> <p>The Site address of 1010 Joaquin Road was identified in several regulatory databases in connection with the disposal of hazardous wastes including mercury, chloroform, and spent halogenated solvents. One Medical Group, Inc., located on the Site, was identified as a “chemical storage facility”; however, details regarding the classification and/or quantities of chemicals was not provided (2021 Southeast EDR Report).</p> <p>The 2021 Joaquin Report noted that two soil samples from the Site collected at approximately 2 and 4 feet bgs in March 2021 were analyzed for pesticides and metals. Multiple organic pesticides were detected at concentrations exceeding laboratory reporting limits. The following metals were detected at concentrations exceeding ESLs in the sample: arsenic (3.8 mg/kg); barium (570 mg/kg); and vanadium (52 mg/kg). Farallon notes that the detected concentrations of these metals were within the upper estimate of regional ambient (background) concentrations, with the exception of barium.</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-10-104 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
Cleanup or Mitigation Actions Proposed or Completed	Removal of process wastewater UST and associated soil and groundwater sampling in 2007 (2008 Phase I Report).
Redevelopment Media Management Recommendations	<p>The 2021 Joaquin Report noted that from an environmental standpoint, soil from the Site may be acceptable for disposal at a site with acceptance requirements based on unrestricted residential land use criteria. Additional characterization, such as deeper soil sampling of the specific excavation extents anticipated, may be needed to obtain receiving facility approvals.</p> <p>Farallon notes that the historical Alza Corporation operations and UST use may have resulted in minor spills or releases of hazardous materials to the sanitary sewer or surface soil. Soil sample analytical results from 2021 indicate that residual pesticides are present in on-Site soil. A soil management plan may be warranted to ensure proper handling and disposal of on-Site soil.</p>
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The TSP groundwater plume extends beneath the Site from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE.</p> <p>Groundwater in the vicinity of the Site is characterized by the existing monitoring wells that are routinely sampled by the PRPs to the area-wide groundwater plume. Based on monitoring well sampling conducted in December 2020, TCE is expected to be present in groundwater in the vicinity of the Site at concentrations up to 200 µg/l (2021 Joaquin Report).</p> <p>According to a 2008 Groundwater Monitoring Report referenced in the 2008 Phase I Report, a monitoring well was installed on the Site between 1987 and 1990 as part of a regional monitoring well network. Groundwater samples collected from the Site or nearby properties have been analyzed for VOCs, BTEX, MTBE, metals, gasoline, alcohols, and ethylene dibromide. Compounds that have been detected to date in on-site wells include 1,1-DCA, 1,1-DCE, cis-1,2-DCE, trans-1,2-DCE, chloromethane, PCE, 1,1-TCA, TCE, Freon 11, MTBE, benzene, arsenic, chromium, copper, lead, selenium, and zinc. VOC concentrations in the monitoring wells were consistent with those of the regional groundwater plume in this general vicinity (2008 Phase I Report).</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	Vapor intrusion controls for buildings as needed (2021 Joaquin Report).
Data Gaps Identified	None identified.

Site Use Summaries	
Current Site Use	Commercial office space with paved parking and carports.
Historical Site Use	From 1939 through 1982 the Site appeared to be developed with numerous residences, outbuildings, and areas of agricultural land use. The Site was developed with the current buildings and paved parking lots by 1994 (2010 Phase I Report).

Environmental Conditions from On-Site Source(s)	
Known or Suspected	The 2021 Southeast EDR Report plotted a listing in the RGA LUST database on the Site. The listing was associated with a tank located at the Moffett Federal Airfield which is located approximately 1.4 miles east of the Site. The listing appears to be incorrectly plotted with no association to the Site. The 2021 Joaquin Report noted that a discrete soil sample was collected from the Site in March 2021. The soil sample was collected at an approximate depth of 2 feet bgs and was analyzed for VOCs, TPH, SVOCs, pesticides, PCBs, metals, and asbestos. The sample contained organic pesticides at concentrations exceeding laboratory reporting limits and less than ESLs. The following analytes were detected at concentrations exceeding ESLs in the soil sample: arsenic (3.8 mg/kg) and vanadium (38 mg/kg). Farallon notes that the detected concentrations of

	metals were within the upper estimate of regional ambient (background) concentrations.
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	The 2021 Joaquin Report noted that from an environmental standpoint, soil from the Site may be acceptable for disposal at a site with acceptance requirements based on unrestricted residential land use criteria. Additional characterization, such as deeper soil sampling of the specific excavation extents anticipated, may be needed to obtain receiving facility approvals.
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>“Numerous sites upgradient from the Project, most notably the Teledyne/Spectra-Physics NPL Site, have impacted groundwater in the vicinity of the Project with volatile organic compounds (VOCs). Investigation and cleanup activities related to this NPL Site have been ongoing since the mid-1980s. EMG reviewed the <i>January 2009 LFR Quarterly Groundwater Monitoring Report</i> and the <i>Interim Report Monitored Natural Attenuation Study at the North Bayshore and Spring Street Extraction Systems Report</i>, dated February 6, 2006, by LFR, and well data from 2005. These documents indicate TCE concentrations in shallow groundwater beneath the Project likely range from 10 ug/L to 200 ug/L. Cis-1,2-DCE is likely present in similar concentrations. Other VOCs, including PCE, are generally present at much lower concentrations. The reports also indicate that several wells are located on, or directly adjacent to the Project, including an extraction well in the Joaquin Road right of way, directly east of the Project. TCE and cis-1,2-DCE are also present in deeper groundwater zones.” “The responsible parties have installed groundwater extraction wells (including one directly adjacent to the Project) to pump and treat the contaminated groundwater. According to quarterly groundwater monitoring event results, contaminant levels in groundwater have been steadily decreasing.” (2010 Phase I Report).</p> <p>The TSP groundwater plume extends beneath the Site from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE.</p> <p>Groundwater in the vicinity of the Site is characterized by the existing monitoring wells that are routinely sampled by the PRPs to the area-wide groundwater plume. Site Use Summaries	
Current Site Use	Commercial office space
Historical Site Use	<p>“Based on a review of historical documentation and information provided by the property owners, the Site appeared to be developed with what appear to be residential or agriculture-related structures on the northern portion and agricultural land on the southern portion as early as 1939. By 1950, the southern portion appeared to be utilized for exterior storage. Between 1974 and 1982, the previous structures were demolished and a commercial building was constructed on the southern portion of the Site. In 2007, this commercial building was demolished and the current commercial office building was constructed.” (2019 Phase I Report).</p>

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>“Based on aerial photographs reviewed, the Site has historically been developed with agricultural use between at least 1939 through 1950. Although not documented at the Site, activities commonly associated with agricultural uses include the use and storage of hazardous materials and petroleum products (e.g., agricultural chemicals). Information was not</p>

Environmental Conditions from On-Site Source(s)	
	<p>available as to the potential historical usage of pesticides, fertilizers or insecticides. Based on our experience, these residual concentrations, if present, are not typically at concentrations that would require cleanup by a regulatory agency or pose a significant human health risk to commercial or industrial site users. There is potential that the near surface soils contain residual agricultural chemicals that may affect disposal costs if soil off-haul is required as part of future redevelopment.” (2019 Phase I Report).</p> <p>The 2021 Joaquin Report noted that a discrete soil sample collected on the northeastern portion of the Site in March 2021 at an approximate depth of 3 feet bgs was analyzed for pesticides and metals. Arsenic (5 mg/kg), nickel (87 mg/kg), and vanadium (72 mg/kg) were detected at concentrations exceeding ESLs in the sample. Farallon notes that the detected concentrations of these metals were within the upper estimate of regional ambient (background) concentrations.</p>
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	The 2021 Joaquin Report noted that from an environmental standpoint, soil from the Site may be acceptable for disposal at a site with acceptance requirements based on unrestricted residential land use criteria. Additional characterization, such as deeper soil sampling of the specific excavation extents anticipated, may be needed to obtain receiving facility approvals.
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The historical address of 1125 Joaquin Road, southwest-adjacent to the Site, was listed in several regulatory databases regarding a fuel UST. The UST was reportedly installed in 1979 and stored leaded motor vehicle fuel. The following information regarding the UST was extracted from the 2019 Adjacent Site Report, prepared for the southwest-adjacent property: “an inspection of the UST by the City of Mountain View in 1987 indicated that the tank was uncapped and potentially abandoned. In February 1988, this UST was removed and two soil samples were collected from beneath each end of the former UST. Soil analytical results indicated that total petroleum hydrocarbon (TPH) was measured at concentrations between 2 and 24 parts per million (ppm), while benzene, toluene, and xylenes were not detected above laboratory method detection limits (MDLs). According to a memorandum dated February 29, 1988, the City of Mountain View was in receipt of the soil analytical results, but there was no indication whether the results were sufficient for closure or that additional sampling would be necessary. The Mountain View Fire Department documentation (all from 1987-1988 during the UST removal activities) describes this UST as 550 gallons and 1,000 gallons in size. No records of other USTs were available in our research; therefore, it is assumed that the different sizes of USTs listed are one and the same. It should be noted that groundwater was</p>

Site Use Summaries	
Current Site Use	Commercial office space
Historical Site Use	<p>“Based on a review of topographic maps, aerial photos, and previous reports, the Site was agricultural land as early as 1939 through 1943. Beginning in 1948, the Site appears to be increasingly developed with what appear to be residential structures. By 1963 through at least 1982, the Site also appeared to be developed with commercial structures on the northern and central portions with exterior storage. In 1988-1990, the Site was redeveloped into the current commercial office building and parking areas. Former and current commercial occupants include Wentz Construction (1962), Construction & CGen II Labor Union (1975), All Seasons Construction (1985), Rusch Brothers Landscaping (1985), Saviano Company (1985), Courtesy Electric Inc. (1986), Daleo Inc. (1986), CATV Construction (1986), EZ Bobcat Service (1985-1987), Sjoberg Industries (1991-1992), IBM Corporation (1991-2002), Iconix Inc. (2005-2006), CPP Inc. (2010-2015), Kims Cafeteria (2010-2014), Google Inc. (2005-current).” (2019 Phase I Report).</p>

Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review

Santa Clara County Assessor Parcel No.: 116-10-108 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>According to the 2019 Phase I Report, a 2016 report indicated that the northern and central portions of the Site were potentially used as an auto salvage yard and drum storage area in the 1970s and 1980s. The 2016 report indicated that this historical use may have resulted in chlorinated solvent impacts at the Site. Farallon reviewed the GeoTracker database which included the 2017 EKI Report that evaluated potential on-site solvent impacts. According to the 2017 EKI Report, the results of the investigation identified no areas of elevated concentrations of VOCs that would indicate an on-Site source. Grab groundwater sample results were within the range of regional concentrations associated with the area-wide groundwater solvent plume. EKI concluded that the concentrations detected on the Site originate from an upgradient offsite source. The 2019 Phase I Report indicated that the EKI investigation was mandated by RWQCB, the EKI investigation data has been submitted to RWQCB, and RWQCB had not responded to the data submittal.</p> <p>The historical address of 1125 Joaquin Road, on the western portion of the Site, was listed in several regulatory databases regarding a fuel UST. The UST was reportedly installed in 1979 and stored leaded motor vehicle fuel. The following information regarding the UST was extracted from the 2019 Phase I Report:</p> <p style="padding-left: 40px;">...an inspection of the UST by the City of Mountain View in 1987 indicated that the tank was uncapped and potentially abandoned. In February 1988, this UST was removed and two soil samples were collected from beneath each end of the former UST. Soil analytical results indicated that total petroleum hydrocarbon (TPH) was measured at concentrations between 2 and 24 parts per million (ppm), while benzene, toluene, and xylenes were not detected above laboratory method detection limits (MDLs). According to a memorandum dated February 29, 1988, the City of Mountain View was in receipt of the soil analytical results, but there was no indication whether the results were sufficient for closure or that additional sampling would be necessary. The Mountain View Fire Department documentation (all from 1987-1988 during the UST removal activities) describes this UST as 550 gallons and 1,000 gallons in size. No records of other USTs were available in our research; therefore, it is assumed that the different sizes of USTs listed are one and the same. It should be noted that groundwater was not sampled during this investigation. Based on the residual impacted soil which remain on-site, there is a potential that the former UST impacted the subsurface at the Site.</p> <p>A diagram included as an appendix to the report indicated that the tank was located approximately 23 feet east of Joaquin Road, but the exact location was not disclosed.</p> <p>“Based on aerial photographs reviewed, portions of the Site have historically been developed with agricultural use between at least 1939 through 1943. Although not documented at the Site, activities commonly</p>

Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review

Santa Clara County Assessor Parcel No.: 116-10-108 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>associated with agricultural uses include the use and storage of hazardous materials and petroleum products (<i>e.g.</i>, agricultural chemicals). Information was not available as to the potential historical usage of pesticides, fertilizers or insecticides. Based on our experience, these residual concentrations, if present, are not typically at concentrations that would require cleanup by a regulatory agency or pose a significant human health risk to commercial or industrial site users. There is potential that the near surface soils contain residual agricultural chemicals that may affect disposal costs if soil off-haul is required as part of the future development.” (2019 Phase I Report).</p> <p>The 2021 Joaquin Report noted that two discrete soil samples collected along the eastern Site boundary at depths of 3 and 5 feet bgs in March 2021 were analyzed for VOCs, TPH, SVOCs, pesticides, PCBs, and metals. Organic pesticides were not detected at concentrations exceeding laboratory reporting limits. The following analytes were detected at concentrations exceeding ESLs in the soil samples: arsenic (4.9 and 8.3 mg/kg); barium (400 mg/kg); nickel (99 and 89 mg/kg); and vanadium (73 mg/kg). Farallon notes that the detected concentrations of metals were within the upper estimate of regional ambient (background) concentrations.</p>
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	<p>The 2021 Joaquin Report noted that from an environmental standpoint, soil from the Site may be acceptable for disposal at a site with acceptance requirements based on unrestricted residential land use criteria. Additional characterization, such as deeper soil sampling of the specific excavation extents anticipated, may be needed to obtain receiving facility approvals.</p> <p>Farallon notes that the historical auto salvage and drum storage uses may have resulted in spills or releases of hazardous materials to soil. A soil management plan may be warranted to ensure proper handling and disposal of on-Site soil.</p>
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The TSP groundwater plume extends beneath the Site from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE.</p> <p>Groundwater in the vicinity of the Site is characterized by the existing monitoring wells that are routinely sampled by the PRPs to the area-wide groundwater plume. Based on monitoring well sampling conducted in December 2020, TCE is expected to be present in groundwater in the vicinity of the Site at concentrations up to 200 µg/l (2021 Joaquin Report).</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-10-108 (Site)
Mountain View, California

Environmental Conditions from Off-Site Source(s)	
	The 2021 Joaquin Report noted that soil vapor samples were collected from two locations along the eastern boundary of the Site during the March 2021 investigation. Two samples were collected from each location. Samples at the northernmost location were collected at depths of 4.5 and 7.5 feet bgs and indicated concentrations of the following analytes in exceedance of ESLs: benzene (63 and 123 µg/m ³), ethylbenzene (40 µg/m ³), TCE (52 and 61 µg/m ³). Samples at the southernmost location were collected at depths of 4.5 and 7.5 feet bgs and indicated concentrations of the following analytes in exceedance of ESLs: benzene (92 and 17 µg/m ³), chloroform (4.2 µg/m ³), cis-1,2-DCE (960 µg/m ³), and vinyl chloride (1.8 µg/m ³).
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	Vapor intrusion controls for buildings as needed (2021 Joaquin Report). Farallon notes that the source area for the petroleum compounds detected in soil vapor is unknown and may be encountered during redevelopment activities. A soil management plan may be warranted to ensure proper handling and disposal of on-Site soil.
Data Gaps Identified	None identified.

Program-Level Mitigation Measure(s)		
Mitigation Measure No.	Applicability	Notes
MM HAZ-4.1	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on the known TCE concentrations exceeding ESLs in groundwater from the TSP associated groundwater plume and the contaminant detections in an on-Site monitoring well installed for the TSP plume monitoring.
MM HAZ-4.2	<input checked="" type="checkbox"/> Does not apply <input type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site within an area covered by MM HAZ-4.1. Phase I completed. Chloroethene-focused investigation completed in 2017. Limited Phase II completed in 2021.
MM HAZ-4.3	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site likely bundled with other properties impacted by the area-wide groundwater solvent plume.

Site Use Summaries	
Current Site Use	Commercial office space and general operations (Google)
Historical Site Use	The 2020 ERM Report noted that “The earliest available topographic maps, beginning in the late 1890s, show no buildings or other development of the Site. In the earliest available aerial photograph, from the late 1930s, the Site appears to be agricultural land. Agricultural use of the Site, and the surrounding properties, continued through the mid-1970s. The Site buildings are present in their current configuration beginning in the early 1980s. Based on historical city directory listings, notable prior occupants of the Site buildings include a paper product manufacturer’s office in the early to mid-1980s (at Building 1200) and an ultrasound manufacturer between the early 2000s and the mid-2010s (at Building 1220).” Google purchased the Site in 2005.

Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review

Santa Clara County Assessor Parcel No.: 116-11-012 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>“The Site was historically occupied by agriculturally developed land between at least the 1930s and 1960s. Pesticides and/or herbicides may have been applied to the Site over that timeframe, and residual pesticides/herbicides (and the chemicals that they contain) may still be present in Site soils. Based on the significant redevelopment of the Site with the current building, pavement, and the passage of time, it is not anticipated that residual impact from historical site use, if any, would require regulatory action or pose a risk to human health of building occupants. However, if excess soils are generated as part of future maintenance or construction activities on the Site, the soil should be characterized prior to off-site disposal.” (2020 ERM Report).</p> <p>The 2021 Southeast EDR Report noted the following listings related to prior tenants and the current occupant:</p> <ul style="list-style-type: none"> • 1200 Charleston Road was listed in the NPDES, CIWQS, HWTS, and HAZNET databases. The listings were associated with stormwater permitting and construction of stormwater infrastructure on the Site and with the disposal of hazardous waste. According to the 2021 Southeast EDR Report, hazardous waste associated with the address included minor amounts of laboratory waste and “other organic solids.” The 2020 ERM Report noted that a stormwater retention pond was constructed between 1998 and 2002 and was terminated by 2017. • Surface Science Laboratories, a tenant at 1206 Charleston Road in the 1990s, was identified in databases regarding disposal of hazardous wastes from the facility. Hazardous wastes removed from the Site include waste oil, inorganic solid waste, and laboratory waste. • The Site address of 1210 Charleston Road was listed in the FINDS, ECHO, RCRA NONGEN / NLR, HWTS, and HAZNET databases. According to the 2021 Southeast EDR Report, hazardous waste was generated at the address by Google, included oil-containing waste, aged or surplus organics, asbestos-containing waste. • The Site address of 1220 Charleston Road was listed in the FINDS, CUPA LISTINGS, FTTS, HIST FTTS, RCRA NONGEN / NLR, ECHO, HWTS, and HAZNET databases. According to the 2021 Southeast EDR Report, Acuson Corp was permitted to generate less than 5 tons of hazardous waste per year. The facility was identified as a surgical and medical instrument manufacturer and had no recorded violations. Hazardous waste generated by Acuson Corp included aqueous solution with metals, unspecified oil-containing waste, unspecified organic liquid mixture, and liquids with halogenated organic compounds exceeding 1,000 mg/l. • The Site address of 1230 Charleston Road was listed in the HWTS and HAZNET databases. According to the 2021 Southeast EDR Report, Google and Acuson Corp have generated hazardous waste at the Site address including waste oil and mixed oil, unspecified organic liquid

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-11-012 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>mixture, and photochemicals and/or processing waste.</p> <p>The 2020 ERM Report noted similar listings, did not identify violations associated with the listings, and concluded that the listings were not of concern to the Site.</p> <p>The 2021 Shorebird Report noted that soil samples were collected from 4 locations on the Site in March 2021. Two discrete soil samples collected on the southern portion of the Site were analyzed for VOCs, TPH, SVOCs, pesticides, PCBs, and metals. Two discrete soil samples collected from the northern portion of the Site were analyzed for pesticides and metals. Dieldrin, 4,4-DDE, and 4,4-DDT were detected at concentrations exceeding ESLs. Arsenic, barium, and vanadium were detected at concentrations exceeding ESLs in one soil sample. Farallon notes that the detected concentrations of arsenic and vanadium in soils exceeding ESLs were within the upper estimate of regional ambient (background) concentrations. Barium concentrations were at or slightly exceeding regional background concentrations in one sample.</p>
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	The 2021 Shorebird Report noted that shallow on-Site soils may be characterized as nonhazardous for potential future off-haul purposes and may be acceptable for on-Site reuse or receipt by a site with acceptance criteria based on unrestricted residential land use screening criteria.
Data Gaps Identified	Missing Phase I ESA.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The Site is located approximately 1,100 feet east of the eastern boundary of the TSP Plume. The 2020 ERM Report noted that a groundwater extraction system at a facility north-northwest of the Site may influence groundwater flow direction such that the Site is unlikely to be impacted by the TSP Plume.</p> <p>The 2020 ERM Report noted that the Shoreline Regional Park Class III Disposal Facility is a closed landfill converted to a regional park located 1,400 feet northwest of the Site. A groundwater sump located within the landfill is expected to control groundwater flow such that the Site is unlikely to be impacted by landfill contamination. Farallon further notes that regional groundwater flow direction is generally to the north; therefore, the landfill is unlikely to serve as a source of contamination to the Site.</p> <p>The 2021 Shorebird Report noted that one soil vapor sample and two grab groundwater samples were collected at the Site in March 2021 to evaluate the potential for on-Site migration of upgradient contamination. The groundwater samples were analyzed for VOCs and TPH with no detections exceeding laboratory reporting limits except for an estimated detection of</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-11-012 (Site)
Mountain View, California

Environmental Conditions from Off-Site Source(s)	
	cis-1,2-DCE at 0.14 µg/l. The soil vapor sample was analyzed for VOCs. Benzene (24 µg/m ³), bromodichloromethane (6.3 µg/m ³), and chloroform (10 µg/m ³) were detected at concentrations exceeding ESLs in the soil vapor sample. Numerous other VOCs were detected at concentrations exceeding the laboratory reporting limit and less than ESLs, including PCE and TCE.
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	Vapor intrusion controls for buildings as needed (2021 Shorebird Report). Farallon notes that the presence of chlorinated solvents and petroleum compounds in soil gas without a corresponding detection in underlying groundwater suggests that on-Site releases could be a source of the soil gas detections. Redevelopment activities should include preparation of a soil management plan.
Data Gaps Identified	None identified.

Site Use Summaries	
Current Site Use	Commercial office space (Google)
Historical Site Use	The 2017 Phase I Report evaluated 15 tax parcels including the Site, and Site-specific details regarding historical use were limited. The 2017 Phase I Report indicated that the Site was developed for agricultural use from the 1930s through the 1960s with small residences and/or agricultural buildings on the Site. The Site was developed with the current Site building by 1982 and the Site appeared largely unchanged through the present.

Environmental Conditions from On-Site Source(s)	
Known or Suspected	“Based on aerial photographs reviewed, the Site has historically been developed with agricultural use between at least 1939 to the 1970s. Although not documented at the Site, activities commonly associated with agriculture include the use and storage of hazardous materials and petroleum products (e.g., agricultural chemicals). Information was not available as to the potential historical usage of pesticides, fertilizers or insecticides. Based on our experience, these residual concentrations, if present, are not typically at concentrations that would require cleanup by a regulatory agency or pose a significant human health risk to commercial or

Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>industrial site users. There is potential that the near surface soils contain residual agricultural chemicals that may affect disposal costs in the event redevelopment is planned.” (2017 Phase I Report).</p> <p>“MVFD records indicate that Acuson, a former tenant of the Site building in 2002 had Hazardous Material and Waste Storage Permits for the storage of hazardous liquid. The permits indicate that hazardous wastes were not generated. A Hazardous Materials Facility Closure dated February 12, 2003 noted that the MVFD inspector conducted a final walk through and all materials had been removed and there was no observable contamination.” (2017 Phase I Report).</p> <p>“A degreaser was permitted at 1393 Shorebird Way in 1989. No other details on types or volume of solvents used or stored were reviewed. No records of spills or releases were found in the records reviewed.” The permittee was identified as Evans & Sutherland (2017 Phase I Report).</p> <p>Acuson and Evans & Sutherland Computer DI, former tenants of the Site, were identified in regulatory databases in connection with the disposal of hazardous waste in the 1980s. Waste generated by these historical tenants included unspecified solvent mixture, laboratory waste chemicals, hydrocarbon solvents, and halogenated solvents (2021 Southeast EDR Report).</p> <p>The 2021 Shorebird Report noted that soil samples were collected on the northwestern and southeastern portions of the Site in March 2021. Soil samples were analyzed for VOCs, TPH, SVOCs, pesticides, PCBs, and metals. 4,4-DDE was detected at a concentration exceeding the laboratory reporting limit but less than the ESL in the northwestern sample. The following analytes were detected at concentrations exceeding ESLs in the soil sample collected on the northwestern portion of the Site at an approximate depth of 3 feet bgs: arsenic (9.1 mg/kg); nickel (93 mg/kg); and vanadium (86 mg/kg). The following analytes were detected at concentrations exceeding ESLs in the soil sample collected on the southeastern portion of the Site an approximate depth of 5 feet bgs: arsenic (4.3 mg/kg) and vanadium (47 mg/kg). The northwestern sample was also analyzed for asbestos which was not detected at a concentration exceeding the laboratory reporting limit. Farallon notes that the detected concentrations of metals were within the upper estimate of regional ambient (background) concentrations.</p>
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	The 2021 Shorebird Report noted that shallow on-Site soils may be characterized as nonhazardous for potential future off-haul purposes and may be acceptable for on-Site reuse or receipt by a site with acceptance criteria based on unrestricted residential land use screening criteria.
Data Gaps Identified	None identified.

Mountain View, California

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The Site is located on the eastern boundary of the TSP Plume and the associated 1625 NSB Plume. The 2021 Shorebird Report noted that TCE is present in on-Site groundwater and soil vapor, likely associated with the area-wide groundwater plumes.</p> <p>Google conducted indoor air testing in the Site building in 2017. Samples were collected from four locations in the building for approximately 8 hours. The samples were analyzed for seven VOCs (vinyl chloride; 1,1-DCE; trans-1,2-DCE; DCA; cis-1,2-DCE; TCE; and PCE). 1,1-DCE was detected at a concentration of 0.17 µg/m³, which is less than the ESL for indoor air. The remaining VOCs were not detected in the samples (2017 Phase I Report).</p> <p>The 2021 Shorebird Report noted that groundwater and soil vapor samples were collected from two locations (northwestern and southeastern corners) on the Site in March 2021. The groundwater samples were analyzed for VOCs and TPH. The following analytes were detected at concentrations exceeding ESLs in the northwestern groundwater sample, collected at an approximate depth of 8 feet bgs: cis-1,2-DCE (110 µg/l); TCE (200 µg/l); and vinyl chloride (1.3 µg/l). The following analytes were detected at concentrations exceeding ESLs in the southeastern groundwater sample, collected at an approximate depth of 10 feet bgs: 1,2-DCA (0.82 µg/l); TCE (14 µg/l); and vinyl chloride (0.31 µg/l).</p> <p>The soil vapor samples were analyzed for VOCs. The following analytes were detected at concentrations exceeding ESLs in the soil vapor sample collected at an approximate depth of 4.5 feet bgs from the northwestern portion of the Site: cis-1,2-DCE (430 µg/m³); PCE (270 µg/m³); and TCE (4900 µg/m³). The following analytes were detected at concentrations exceeding ESLs in the soil vapor sample collected at an approximate depth of 5 feet bgs from the southeastern portion of the Site: benzene (38 µg/m³); chloroform (20 µg/m³); and TCE (920 µg/m³). The following analyte was detected at a concentration exceeding the ESL in the soil vapor sample collected at an approximate depth of 8 feet bgs from the southeast portion of the Site: benzene (37 µg/m³).</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	Vapor intrusion controls for buildings as needed (2021 Shorebird Report).
Data Gaps Identified	None identified.

Environmental Conditions from On-Site Source(s)

residual agricultural chemicals that may affect disposal costs in the event redevelopment is planned.” (2017 Phase I Report).

A 4,000-gallon diesel fuel UST that was associated with an emergency generator was removed from the 1380 Shorebird Way property in 1996. The UST was in good condition with no holes noted. Two confirmation samples were collected from the walls of the UST excavation at 10 feet bgs and two composite soil stockpile samples were collected and analyzed for TPH-d and BTEX. TPH-d and BTEX were not detected at concentrations exceeding laboratory reporting limits in the two excavation samples. TPH-d was detected in the stockpile samples at concentrations of 13 and 9 mg/kg. The stockpiled soil (40 tons) was transported off the Site for disposal. A sample of groundwater collected from the bottom of the excavation contained TPH-d at a concentration of 870 µg/L and did not contain detectable BTEX concentrations. Approximately 9,500 gallons of water was pumped from the excavation over 2 days and a second sample did not contain detectable TPH-d or BTEX. The UST excavation was backfilled with clean fill and SCVWD issued a case closure letter on August 15, 1997 (2017 Phase I Report).

“Storage Permits dated after 1996 indicate that between 12 and 120 gallons of corrosive liquid (a sulfuric acid battery electrolyte) were stored on-Site. A Hazardous Materials Facility Closure dated October 11, 1996 notes that the MVFD inspector conducted a final walk through and all hazardous materials had been removed with the exception of batteries for the Uninterruptible Power Supply...” “MVFD records indicate that Google was a tenant in the building in 2016 and had several fire code and reporting violations.” (2017 Phase I Report).

The 2017 Phase I Report noted that former Site tenant Ardian Inc. is associated with off-Site disposal of contaminated soil from a cleanup in 2014. No further information was provided. Ardian also conducted a Hazardous Materials Facility Closure in 2014.

The Site was listed as a closed LUST cleanup Site on the GeoTracker database.

The 2021 Southeast EDR report identified the Site address in several regulatory databases. The listings were primarily in connection with a release from a former diesel UST located on the Site and hazardous waste reporting from current and former Site occupants. The listings indicated that the LUST was reported in 1991 and was granted closure in 1997. Hazardous waste generated at the Site included “aged or surplus inorganics,” “off-specification, aged, or surplus organics,” unspecified oil-containing waste, and contaminated soil from site cleanup.

A groundwater monitoring well was installed on the Site in 1990. Samples were analyzed for TPH-g, TPH-d, and VOCs. The findings indicated that groundwater at the Site was impacted by the area-wide groundwater solvent plume and TPH-d was detected at concentrations that indicated a

Site Use Summaries	
Current Site Use	Commercial office space (Google)
Historical Site Use	The 2017 Phase I Report evaluated 15 tax parcels including the Site, and Site-specific details regarding historical use were limited. The 2017 Phase I Report indicated that the Site was developed for agricultural use from the 1930s through the 1960s with small residences and/or agricultural buildings on the Site. The Site was developed with the current Site building by 1982 and the Site appeared largely unchanged through the present.

Environmental Conditions from On-Site Source(s)	
Known or Suspected	“Based on aerial photographs reviewed, the Site has historically been developed with agricultural use between at least 1939 to the 1970s. Although not documented at the Site, activities commonly associated with agriculture include the use and storage of hazardous materials and petroleum products (e.g., agricultural chemicals). Information was not available as to the potential historical usage of pesticides, fertilizers or insecticides. Based on our experience, these residual concentrations, if present, are not typically at concentrations that would require cleanup by a regulatory agency or pose a significant human health risk to commercial or industrial site users. There is potential that the near surface soils contain

Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>residual agricultural chemicals that may affect disposal costs in the event redevelopment is planned.” (2017 Phase I Report).</p> <p>The 2021 Southeast EDR Report identified the Site address in several regulatory databases. According to EDR, Google, Inc. generates less than 10 gallons of hazardous waste per year. Compliance inspections at the Site found no violations.</p> <p>The 2021 Shorebird Report noted that soil samples were collected from the southwestern portion of the Site in March 2021. Soil samples were analyzed for VOCs, TPH, SVOCs, pesticides, PCBs, and metals. Organic pesticides were not detected at concentrations exceeding laboratory report limits. The following analytes were detected at concentrations exceeding ESLs in the soil sample collected at an approximate depth of 4 feet bgs: arsenic (4.0 mg/kg); nickel (90 mg/kg); and vanadium (85 mg/kg). Farallon notes that the detected concentrations of metals were within the upper estimate of regional ambient (background) concentrations.</p>
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	The 2021 Shorebird Report noted that shallow on-Site soils may be characterized as nonhazardous for potential future off-haul purposes and may be acceptable for on-Site reuse or receipt by a site with acceptance criteria based on unrestricted residential land use screening criteria.
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The Site is located on the eastern boundary of the TSP Plume that extends from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE. Additional groundwater contamination has been detected to the south of the Site across Space Park Way at 1625 North Shoreline Boulevard (1625 NSB Plume).</p> <p>Google conducted indoor air testing in the Site building in 2017. Samples were collected from four locations in the building for approximately eight hours. The samples were analyzed for seven VOCs (vinyl chloride; 1,1-DCE; trans-1,2-DCE; DCA; cis-1,2-DCE; TCE; and PCE. trans-1,2-DCE was detected at a concentration of 0.1 µg/m³ and PCE was detected at a concentration of 0.09 µg/m³, which are less than the ESLs (2017 Phase I Report).</p> <p>The 2021 Shorebird Report noted that groundwater and soil vapor samples were collected from the southwestern corner of the Site in March 2021. A grab groundwater sample collected at approximately 6.5 feet bgs was analyzed for VOCs and TPHs. TCE (1.9 µg/l) and diesel (160 µg/l) were detected at concentrations exceeding ESLs in the groundwater sample. A soil vapor sample collected at approximately 5.0 feet bgs was analyzed for</p>

Mountain View, California

Environmental Conditions from Off-Site Source(s)	
	VOCs. Benzene (5.0 µg/m ³) and TCE (170 µg/m ³) were detected at concentrations exceeding ESLs in the soil vapor sample.
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	Vapor intrusion controls for buildings as needed (2021 Shorebird Report). Farallon notes that the source area for the petroleum compounds detected in soil vapor is unknown and may be encountered during redevelopment activities. A soil management plan may be warranted to ensure proper handling and disposal of on-Site soil.
Data Gaps Identified	None identified.

Program-Level Mitigation Measure(s)		
Mitigation Measure No.	Applicability	Notes

Environmental Conditions from On-Site Source(s)	
	<p>industrial site users. There is potential that the near surface soils contain residual agricultural chemicals that may affect disposal costs in the event redevelopment is planned.” (2017 Phase I Report).</p> <p>MVFD records indicate that Google was a tenant in the building at 1371 and 1375 Shorebird Way in 2017 and had several fire code and reporting violations that were subsequently corrected. MVFD Records for 1375 Shorebird Way indicated that that NeuroPace, Inc., a medical equipment research and development company, was a tenant in the building in 2003 to 2012. NeuroPace, Inc. had Hazardous Material and Waste Storage Permits for the storage of hazardous liquids, solids, and gases. The permits indicate that approximately 950 pounds of hazardous wastes were generated annually. Inspections conducted identified fire code and other violations that were promptly corrected and did not identify spills or releases. A Hazardous Materials Facility Closure dated March 4, 2012 notes that NeuroPace, Inc. stored 2-propanol and acetone in the building. Manifests for removal of hazardous materials from the building were attached to the closure document (2017 Phase I Report).</p> <p>A vapor degreaser was reportedly permitted for Behrig Diagnostics at 1375 Shorebird way in 1989 and 1990 (2017 Phase I Report).</p> <p>Former tenants stored chlorinated solvents and records indicated that 0.005 tons of chlorinated solvent waste was generated in 1995 at 1375 Shorebird Way (2017 Phase I Report).</p> <p>The Site addresses were identified in several regulatory databases in connection with the disposal of hazardous waste including waste oil and mixed oil, asbestos-containing waste, unspecified solvent mixture, and “unspecified organic liquid mixture” (2017 Phase I Report).</p> <p>The 2021 Shorebird Report noted that soil samples were collected from two locations on the Site in March 2021. A discrete soil sample on the southern property boundary collected from a depth of approximately 4 feet bgs was analyzed for VOCs, TPH, SVOCs, pesticides, PCBs, asbestos, and metals. A discrete sample on the eastern property boundary collected from a depth of approximately 3 feet bgs was analyzed for VOCs, TPH, SVOCs, pesticides, PCBs, and metals. Organic pesticides were not detected at concentrations exceeding laboratory reporting limits. Arsenic (5.3 and 7.6 mg/kg), nickel (97 mg/kg), and vanadium (50 and 79 mg/kg) were detected at concentrations exceeding ESLs in the soil sample. Farallon notes that the detected concentrations of metals were within the upper estimate of regional ambient (background) concentrations.</p>
Cleanup or Mitigation Actions Proposed or Completed	An approximate total of 0.88 tons of asbestos-containing waste was removed from the Site in 2002 and 2015 (2017 Phase I Report).

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-11-028 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
Redevelopment Media Management Recommendations	The 2021 Shorebird Report noted that shallow on-Site soils may be characterized as nonhazardous for potential future off-haul purposes and may be acceptable for on-Site reuse or receipt by a site with acceptance criteria based on unrestricted residential land use screening criteria.
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The Site is located east of the eastern boundary of the TSP Plume and the associated 1625 NSB Plume. The 2021 Shorebird Report noted that concentrations of TCE are present in groundwater and soil vapor in southwestern and western areas of the Shorebird Neighborhood Properties.</p> <p>Google conducted indoor air testing in the Site buildings in 2017. Samples were collected from four locations in the 1371 Shorebird Way building and from four locations in the 1375 Shorebird Way building for approximately 8 hours. The samples were analyzed for seven VOCs (vinyl chloride; 1,1-DCE; trans-1,2-DCE; DCA; cis-1,2-DCE; TCE; and PCE). trans-1,2-DCE was detected at a concentration of 0.08 µg/m³ and TCE was detected at a concentration of 0.14 µg/m³ in the samples collected from 1371 Shorebird Way. The remaining VOCs were not detected. TCE was detected at 0.15 µg/ m³ and PCE was detected at a concentration of 0.31 µg/ m³ in the samples collected from 1375 Shorebird Way. The remaining VOCs were not detected. All detections were less than the ESLs (2017 Phase I Report).</p> <p>The 2021 Shorebird Report noted that groundwater and soil vapor samples were collected from a location near the Site’s southern boundary. A grab groundwater sample collected at approximately 7.0 feet bgs was analyzed for VOCs and TPH. 1,2-DCA (1.1 µg/l), vinyl chloride (0.14 µg/l), and diesel (210 µg/l) were detected at concentrations exceeding ESLs in the groundwater sample. A soil vapor sample collected at approximately 5.0 feet bgs was analyzed for VOCs. Benzene (75 µg/m³) and chloroform (7.9 µg/m³) were detected at concentrations exceeding ESLs in the soil vapor sample.</p> <p>According to the 2021 Southeast EDR Report and the GeoTracker database, in the 1980s a release from a 1,000-gallon gasoline UST at 1300 Space Park Way, south-adjacent to the Site, which resulted in the removal of 100 cubic yards of contaminated soil. The site was granted regulatory closure in 1996. Farallon notes that this release may be the source of benzene in soil vapor and diesel (weathered gasoline) in groundwater detected in on-Site samples.</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	Vapor intrusion controls for buildings as needed (2021 Shorebird Report).

Santa Clara County Assessor Parcel No.: 116-11-030 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>“Based on aerial photographs reviewed, the Site has historically been developed with agricultural use between at least 1939 to the 1970s. Although not documented at the Site, activities commonly associated with agriculture include the use and storage of hazardous materials and petroleum products (e.g., agricultural chemicals). Information was not available as to the potential historical usage of pesticides, fertilizers or insecticides. Based on our experience, these residual concentrations, if present, are not typically at concentrations that would require cleanup by a regulatory agency or pose a significant human health risk to commercial or industrial site users. There is potential that the near surface soils contain residual agricultural chemicals that may affect disposal costs in the event redevelopment is planned.” (2017 Phase I Report).</p> <p>Most of the Site buildings were identified in databases regarding the disposal of hazardous waste, but no evidence of spills or releases was identified in connection with listings. Information provided in the 2017 Phase I Report for specific uses of chlorinated solvents or large quantities of other hazardous materials is summarized below. The 2017 Phase I Report should be reviewed in its entirety for a thorough understanding of the history of hazardous materials use and hazardous waste generation at the Site as well as the history of subsurface investigations that have been conducted.</p> <p>MVFD records for 1215 and 1245 Charleston Road indicated that Siemens Ultrasound Division, a medical equipment research and development company, was a tenant of the Site building between 2001 and 2012 (Acuson Corporation was purchased by Siemens in 2000 and previously occupied the same location). Siemens reportedly stored hazardous liquids, gases, and solids. Additionally, the facility stored diesel fuel in an AST in connection with an emergency generator on the Site. Siemens reportedly generated approximately 15,000 pounds of hazardous wastes annually. Siemens maintained wastewater discharge permits for the wastewater treatment system at the Site and conducted self-monitoring as required. Inspection records indicate that the treatment system at 1215 Charleston Road was no longer in use as of 2008 after elevated zinc was detected in the wastewater discharge from the facility (2017 Phase I Report).</p> <p>“Siemens vacated the building prior to the end of their lease in May 2012 and submitted a Closure Report to the MVFD on August 24, 2012. The Closure Report indicates that a shallow soil investigation was conducted at the Site in May 2010 to assess conditions related to known releases identified during a 2010 Phase I ESA that included spills and leaks of a metal-containing working fluid both inside and on the utility pad. The investigation also assessed areas associated with current and former chemical use, chemical transfer, wastewater treatment, and drum storage. Eighteen indoor and outdoor locations were sampled at depths of 0.5 to 1.0 feet and 4.5 to 5.0 feet bgs. The Closure Report states that ‘Detections in the soil samples were well below applicable standards, or associated with known naturally occurring materials (i.e., arsenic in soils in California),’</p>

North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-11-030 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)

and no further evaluation was recommended. The Closure Report also states that a previous investigation by McLaren Hart found no evidence of soil or groundwater impacts attributable to Acuson's or Siemen's operations. MVFD approved the facility closure for Siemen's operations in a letter dated October 25, 2012." The 1245 Charleston Road address is listed in the EnviroStor database as having a RCRA status that is inactive and needs evaluation (2017 Phase I Report).

"MVFD records indicate that Google had Hazardous Material and Waste Storage Permits for the 1215 Charleston address in 2012 and 2013 for the storage of 24 gallons of combustible liquids and Fire and Life Safety Permits that included diesel fuel in an emergency generator. The permits indicate that no hazardous wastes were generated. A 2013 inspections [sic] did not note violations at the Site. A 2013 email included in MVFD files indicates that the emergency generator was removed from the Site in 2013." (2017 Phase I Report).

An emergency generator was observed along the south side of the 1225 Charleston Road building during the site reconnaissance (2017 Phase I Report).

Vapor degreasers were permitted for use at 1225 Charleston Road and 1230 Shorebird Way in 1989. Acuson Corporation and Kodak were listed as tenants in the 1990s with operations that including photo processing. A paint booth was also permitted for the 1230 Shorebird Way address in 1995 (2017 Phase I Report).

MVFD records indicate that Sytek Inc. was a tenant at 1230 Shorebird Way between 1984 and 1989. Sytek Inc. reportedly stored several chemicals in the building including PCE. No violations were noted in the MVFD records (2017 Phase I Report).

MVFD records identified Acuson Corporation, a medical equipment manufacturer, as a tenant at 1310 Shorebird Way in from 1992 to 1994. Acuson Corporation was reportedly permitted to store 150 to 180 gallons of hazardous liquids and generated 0.52 ton of hazardous waste annually. The facility reportedly used a cleaning solvent and a spray adhesive that contained 1,1,1-TCA. The cleaning solvent and spray adhesive were stored in quantities of 1 gallon or less.(2017 Phase I Report).

A groundwater monitoring well formerly was located on the Site, north-adjacent to the building at 1225 Charleston Road (2017 Phase I Report).

Siemens Ultrasound Division occupied the building at 1350 Shorebird Way from 1997 through 2011. Siemens held hazardous material and waste storage permits for the storage of hazardous liquids and solids between 1997 and 2008. The facility also stored 500 gallons of diesel fuel in an AST within an emergency generator. The facility reportedly generated 90 pounds of hazardous waste annually. 1350 Shorebird was included in a Phase II investigation conducted in 1992 that included evaluation of potential impacts from a fuel leak that reportedly occurred at the adjacent

Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>facility, 1380 Shorebird Way. Soil and groundwater samples were collected and analyzed for VOCs and TPH-d. TPH-d was not detected in the soil or groundwater samples and VOCs were not detected in the soil samples. 1,2-DCA was detected in groundwater at a concentration of 2 µg/l. The detection of 1,2-DCA was attributed to regional known regional groundwater contamination originating off-Site (2017 Phase I Report).</p> <p>MVFD records were not identified for the 1295 Charleston address (2017 Phase I Report).</p> <p>A spill of approximately 50 gallons “grindsafe solution” occurred in the parking lot at 1215 Charleston Road in 1995. The substance spilled from a vacuum pump on the roof of the building and flowed down a spout to a storm drain which may flow to Stevens Creek. No solution was recovered from the storm drain; however, some solution was recovered from the roof (2021 Southeast EDR Report).</p> <p>The 2021 Shorebird Report noted that soil samples were collected from eight locations across the Site. Six soil samples were analyzed for VOCs, TPH, SVOCs, pesticides, PCBs, and metals; two of the six soil samples also were analyzed for asbestos. Two additional samples were analyzed for pesticides and metals only. Organic pesticides were detected in all eight samples at concentrations exceeding laboratory reporting limits and less than ESLs. Phenol was detected in one sample at a concentration of 2.2 mg/kg exceeding the ESL of 1.6 mg/kg. Several metals, including arsenic and vanadium, were detected at concentrations exceeding ESLs. Farallon notes that the detected concentrations of metals were within the upper estimate of regional ambient (background) concentrations.</p>
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	<p>The 2021 Shorebird Report noted that shallow on-Site soils may be characterized as nonhazardous for potential future off-haul purposes and may be acceptable for on-Site reuse or receipt by a site with acceptance criteria based on unrestricted residential land use screening criteria.</p> <p>Farallon notes that the history of 1) high volume use and storage of hazardous materials, 2) generation of hazardous waste, and 3) historical and current use of emergency generators with diesel fuel ASTs at the Site suggests that a soil management plan is appropriate in the event that impacted soil is encountered during redevelopment activities.</p>
Data Gaps Identified	None identified.

North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-11-030 (Site)
Mountain View, California

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The Site is located east of the eastern boundary of the TSP Plume and the associated 1625 NSB Plume. The 2021 Shorebird Report noted that concentrations of TCE are present in groundwater and soil vapor in southwestern and western areas of the Shorebird Neighborhood Properties.</p> <p>The 2021 Shorebird Report noted that groundwater and soil vapor samples were collected from three locations on the southern boundary of the Site. The following analytes were detected at concentrations exceeding ESLs in groundwater: 1,2-DCA in two samples with a maximum concentration of 1.6 µg/l; vinyl chloride in two samples with a maximum concentration of 0.069 µg/l; and TCE in one sample at a concentration of 1.2 µg/l. The following analytes were detected at concentrations exceeding ESLs in soil vapor: benzene in all samples with a maximum concentration of 46 µg/m³; chloroform in all samples with a maximum concentration of 11 µg/m³; bromodichloromethane in one sample at a concentration of 17 µg/m³; and 1,2-DCA in one sample at a concentration of 5.7 µg/m³.</p> <p>Google conducted indoor air testing in all seven of the Site buildings in 2017. Samples were collected from four locations in the buildings for approximately 8 hours. The samples were analyzed for seven VOCs (vinyl chloride; 1,1-DCE; trans-1,2-DCE; DCA; cis-1,2-DCE; TCE; and PCE). VOCs were not detected at concentrations exceeding laboratory reporting limits in the 1215 Charleston Road and 1310 Shorebird Way buildings. In the remaining five buildings, one or more of TCE, PCE, 1,1-DCE, trans-1,2-DCE, or vinyl chloride were detected at concentrations exceeding laboratory reporting limits and less than ESLs (2017 Phase I Report).</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	Vapor intrusion controls for buildings as needed (2021 Shorebird Report).
Data Gaps Identified	None identified.

Program-Level Mitigation Measure(s)		
Mitigation Measure No.	Applicability	Notes
MM HAZ-4.1	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	The Site is within proximity of the TSP groundwater plume that may be the source of chlorinated solvents in soil vapor and indoor air. The historical use of chlorinated solvents at on-Site facilities may have resulted in releases to shallow soil that could exacerbate soil vapor conditions from the area-wide solvent plume.
MM HAZ-4.2	<input checked="" type="checkbox"/> Does not apply <input type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site within an area covered by MM HAZ-4.1. Phase I completed. Limited Phase II and indoor air sampling completed.

Site Use Summaries	
Current Site Use	Commercial office space (Google)
Historical Site Use	The 2017 Phase I Report evaluated 15 tax parcels including the Site, and Site-specific details regarding historical use were limited. The 2017 Phase I Report indicated that the Site was developed for agricultural use from the 1930s through the 1960s with small residences and/or agricultural buildings on the Site. The Site was developed with the current Site buildings by 1982 and the Site appeared largely unchanged through the present.

Environmental Conditions from On-Site Source(s)	
Known or Suspected	“Based on aerial photographs reviewed, the Site has historically been developed with agricultural use between at least 1939 to the 1970s. Although not documented at the Site, activities commonly associated with agriculture include the use and storage of hazardous materials and petroleum products (e.g., agricultural chemicals). Information was not available as to the potential historical usage of pesticides, fertilizers or insecticides. Based on our experience, these residual concentrations, if

Mountain View, California

Environmental Conditions from On-Site Source(s)

present, are not typically at concentrations that would require cleanup by a regulatory agency or pose a significant human health risk to commercial or industrial site users. There is potential that the near surface soils contain residual agricultural chemicals that may affect disposal costs in the event redevelopment is planned.” (2017 Phase I Report).

MVFD records indicate that Acuson was a tenant of the building at 1345 Shorebird Way in 1992. Acuson was permitted to store less than 100 gallons of combustible liquids. (2017 Phase I Report, 2021 Southeast EDR Report).

MVFD records indicate that Ford Aerospace & Communications Corporation was a tenant at 1355 Shorebird Way between 1984 and 1988. The facility held permits to store hazardous materials including trichlorotrifluoroethane (Freon 113), isopropyl alcohol, acetone, methyl ethyl ketone, and miscellaneous paints and thinners (2017 Phase I Report, 2021 Southeast EDR Report).

MVFD records indicate that Siemens Ultrasound Division was a tenant of the building at 1365 Shorebird Way in 2006. The facility held permits to store hazardous liquids, solids, and gases. The permit records indicated that approximately 130 pounds of hazardous wastes were generated annually at the facility. All hazardous materials were reportedly removed from the facility in 2007 (2017 Phase I Report, 2021 Southeast EDR Report).

MVFD records indicate that Ford Aerospace & Communications Corporation was a tenant of the building at 1201 Charleston Road in 1986. The facility had a permit to store hazardous materials. Omnicell, a medical manufacturing company, was a tenant in the building between 2004 and 2013. Omnicell reportedly stored hazardous substances including “combustible liquids.” Omnicell also stored diesel fuel within an emergency generator. The emergency generator was reportedly removed in 2013 (2017 Phase I Report, 2021 Southeast EDR Report).

Loral Western Development Labs reportedly generated 7.1668 tons of hazardous waste at 1201 Charleston Road in 1993. Hazardous Wastes generated at the facility included unspecified solvent mixtures, hydrocarbon solvents, halogenated solvents, and metal sludge (2017 Phase I Report, 2021 Southeast EDR Report).

The 2021 Shorebird Report noted that soil samples were collected from various locations across the Site boundary. Nine soil samples were analyzed for VOCs, TPH, SVOCs, pesticides, PCBs, metals, and asbestos. Organic pesticides were detected at concentrations exceeding laboratory reporting limits and less than ESLs. Arsenic, nickel, and vanadium were detected at concentrations exceeding ESLs in the soil samples. Barium and selenium were detected at concentrations exceeding ESLs in a sample collected along the northern edge of 1355 Shorebird Way. Farallon notes that the detected concentrations of metals were within the upper estimate

	of regional ambient (background) concentrations.
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	The 2021 Shorebird Report noted that shallow on-Site soils may be characterized as nonhazardous for potential future off-haul purposes and may be acceptable for on-Site reuse or receipt by a site with acceptance criteria based on unrestricted residential land use screening criteria.
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The Site is located east of the eastern boundary of the TSP Plume and the associated 1625 NSB Plume. The 2021 Shorebird Report noted that concentrations of TCE are present in groundwater and soil vapor in southwestern and western areas of the Shorebird Neighborhood Properties.</p> <p>Google conducted indoor air testing in the Site buildings in 2017. Samples were collected from four locations in the building for approximately 8 hours. The samples were analyzed for seven SVOCs (vinyl chloride; 1,1-DCE; trans-1,2-DCE; DCA; cis-1,2-DCE; TCE; and PCE). None of the constituents analyzed were detected at concentrations exceeding ESLs in the Site buildings (2017 Phase I Report).</p> <p>The 2021 Shorebird Report noted that groundwater and soil vapor samples were collected from three locations on the southern boundary of the Site. The groundwater samples were analyzed for VOCs and TPH. All detected analyte concentrations were less than ESLs in groundwater, except for diesel which was detected at a concentration of 160 µg/l in the sample collected to the south of the building at 1355 Shorebird Way. Two soil vapor samples were analyzed for VOCs. Benzene and chloroform were detected at concentrations exceeding ESLs in both soil vapor samples.</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	<p>Vapor intrusion controls for buildings as needed (2021 Shorebird Report).</p> <p>Farallon notes that the source area for the petroleum compounds detected in groundwater and soil vapor is unknown and may be encountered during redevelopment activities. A soil management plan may be warranted to ensure proper handling and disposal of on-Site soil.</p>
Data Gaps Identified	None identified.

	<p>hours. The samples were analyzed for seven VOCs (vinyl chloride; 1,1-DCE; trans-1,2-DCE; DCA; cis-1,2-DCE; TCE; and PCE). The following analytes were detected: vinyl chloride (0.09 µg/m³); 1,1-DCE (0.09 µg/m³); and PCE (0.2 µg/m³). The detected concentration of vinyl chloride exceeds the ESL of 0.0095 µg/m³ (2017 Phase I Report).</p> <p>The 2021 Shorebird Report noted that groundwater and soil vapor samples were collected from two locations on the Site in March 2021. The groundwater samples were analyzed for VOCs and TPH. The following analytes were detected at concentrations exceeding ESLs in the groundwater sample collected along the western boundary of the Site: 1,2-DCA (0.57 µg/l); TCE (3.5 µg/l); and vinyl chloride (0.088 µg/l). TPH-d was detected at a concentration of 180 µg/l, exceeding the ESL, in the groundwater sample collected near the northern Site boundary. Two soil vapor samples were collected from depths ranging from 4.5 to 8 feet bgs and analyzed for VOCs. Benzene was detected at concentrations exceeding the ESL in both soil vapor samples, with a maximum concentration of 97 µg/m³. Chloroform was detected at concentrations exceeding the ESL in both soil vapor samples; with a maximum concentration of 16 µg/m³. Ethylbenzene was detected at a concentration of 54 µg/m³, which exceeded the ESL, in the northern soil vapor sample and TCE was detected at a concentration of 440 µg/m³, which exceeded the ESL, in the western sample location.</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	<p>Vapor intrusion controls for buildings as needed (2021 Shorebird Report).</p> <p>Farallon notes that the source area for the petroleum compounds detected in groundwater and soil vapor is unknown and may be encountered during redevelopment activities. A soil management plan may be warranted to ensure proper handling and disposal of on-Site soil.</p>
Data Gaps Identified	None identified.

Program-Level Mitigation Measure(s)		
Mitigation Measure No.	Applicability	Notes
MM HAZ-4.1	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on the known TCE concentrations exceeding ESLs in groundwater from the TSP Plume and 1625 NSB Plume.
MM HAZ-4.2	<input checked="" type="checkbox"/> Does not apply <input type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site within an area covered by MM HAZ-4.1. Phase I completed. Limited Phase II and indoor air sampling completed.
MM HAZ-4.3	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site likely bundled with other properties impacted by the area-wide groundwater solvent plume.
MM HAZ-4.4	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Site likely bundled with other properties impacted by the area-wide groundwater solvent plume.

Site Use Summaries	
Current Site Use	<p>At the time of the 2018 Phase I Report, the Site was used as a data center operated by Wave Business. The building also includes office space.</p> <p>A room is used to store absorbed gas mat batteries, which are lead-acid rechargeable batteries stored in 20 sealed cabinets in the room and used as a power source for the data center. Two emergency generators are located in a concrete block enclosure on the south side of the building. A 10,000-gallon diesel AST also is located in the enclosure (2018 Phase I Report).</p>
Historical Site Use	<p>The Site was historically used for agricultural purposes and a residence prior to the 1960s. According to city directories, the Site was occupied by Harry H. Hilton from at least 1950 to 1968. Between 1960 and 1980, Arrow Development Company used the Site and the adjacent properties to the west (1615 and 1625 Plymouth Street) to manufacture amusement park rides. The subsequent owner of the amusement park manufacturing facility formed Montwood as a holding company and operated at the Site and adjacent properties. The current Site building was reportedly constructed in the late 1970s. The Site building has been occupied Silicon Graphics</p>

North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-13-027 (Site)
Mountain View, California

Site Use Summaries	
	Inc. (1988 to 1992), MML and AMEX Square Inc. (2003), Layer42 Networks (2013), and Wave Business (2016)- (2018 Phase I Report).

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>The 2021 Southeast EDR Report identified the Site in the following regulatory databases: AST, CERS, CERS TANKS, CIWQS, CUPA LISTINGS, ECHO, EMI, FINDS, HAZNET, HWTS, and RCRA-SQG.</p> <p>Between 1960 and 1980 the Site and adjacent properties to the west (1615 and 1625 Plymouth Street), which are collectively referred to as the “Montwood Site,” were used to manufacture amusement park rides. Operations used chlorinated solvents including TCE for vapor degreasing in the manufacturing process. The Montwood Site was found to be a source area contributing to regional VOC impacts (2018 Phase I Report).</p> <p>A fire department inspection in 1982 identified “two tanks in an underground vault about ¼ full of odorous, greenish material with the piping and appurtenances coated with dry material.” The features were interchangeably identified as “tanks” and “sumps.” The tanks were reportedly hydroblasted in in 1983 prior to being backfilled and closed in place. The rinse liquid was reportedly transported off the Site for proper disposal. Analytical data related to the contents of the tanks were not provided. If these features are encountered during future redevelopment, they should be handled and disposed of in accordance with local and state regulations (2018 Phase I Report).</p> <p>The Site is considered to be a former contributing source to the TSP groundwater plume. As a contributing source, RWQCB provides environmental oversight to the property. RWQCB may have additional requirements depending on the future intended use of the property. “The soil at 1555 Plymouth Street may require further evaluation and regulatory concurrence prior to re-use on-Site and may not be acceptable for receipt by a site with acceptance criteria based on unrestricted residential land use screening criteria due to the detected concentrations of VOCs.” (2018 Phase I Report).</p> <p>Two soil samples were collected on the Site in 2021 for pesticide analysis. Multiple organic pesticides were detected at concentrations less than hazardous waste screening levels provided in the 2021 Gateway Report.</p>
Cleanup or Mitigation Actions Proposed or Completed	<p>Investigation and remediation of the Montwood Site is being conducted by Union Pacific Railroad under RWQCB Order Number 01-010. ISCR was implemented at the on-Site source area and four other off-Site areas on the Montwood Site in 2013. In an email dated September 10, 2015, Roger Papler of RWQCB stated that ISCR remediation was successful in the on-Site source area, as evidenced by the results of groundwater sampling of an on-Site focused monitoring well. TCE levels in the on-Site well decreased by over 99.5 percent from a concentration of 280 µg/l in July</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-13-027 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	2012 to a concentration of 1.3 µg/l in June 2015 (2018 Phase I Report, 2021 Phase I Letter Report).
Redevelopment Media Management Recommendations	<p>RWQCB requested an RMP for the Montwood Site properties in 2016; however, the Site owner indicated in 2018 that an RMP had not been prepared for the Site (1555 Plymouth Street). An RMP for the adjacent properties that comprise the remainder of the Montwood Site was submitted and approved by RWQCB in 2017. The RMP for the adjacent Montwood Site properties included preparation of a deed restriction including prohibiting the use of shallow groundwater beneath the Site for drinking water until MCLs are met, prohibiting sensitive uses of the Site such as residences and daycare centers, and vapor intrusion mitigation plans for proposed occupied buildings (2018 Phase I Report).</p> <p>The 2021 Gateway Reported noted that the soil at 1555 Plymouth Street may require further evaluation and regulatory concurrence prior to reuse on the Site and may not be acceptable for receipt by a site with acceptance criteria based on unrestricted residential land use screening criteria, due to the detected concentrations of VOCs.</p>
Data Gaps Identified	Farallon notes that the environmental reports reviewed contain contradicting information regarding two sumps and/or USTs on the Site. The reports indicate that the tanks have been removed, then indicates that they were backfilled and capped. Closure documents should be reviewed to determine location and condition of the tanks.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The 2018 Phase I Report identified the regional groundwater impacts from upgradient sources as recognized environmental condition in connection with the Site.</p> <p>The TSP groundwater plume extends beneath the Site from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE.</p> <p>Four soil vapor samples were collected from the northern and southern areas of the Site in 2021. TCE was detected at concentrations ranging from 47 µg/m³ to 13,000 µg/m³, exceeding the ESL of 15.94 µg/m³; vinyl chloride was detected at concentrations up to 1,900 µg/m³, exceeding the ESL of 0.32 µg/m³; and cis-1,2-DCE was detected at concentrations up to 4,600 µg/m³, exceeding the ESL of 278 µg/m³.</p> <p>Soil samples were collected from the Site in 2021. TCE was detected at a concentration of 1.9 mg/kg at an approximate depth of 5 ft bgs, which exceeds the ESL of 0.08 mg/kg. cis-1,2-DCE was detected at a concentration that exceeded the ESL in one sample location, and vinyl chloride was detected at concentrations exceeding the ESL in two samples (2021 Gateway Report).</p>

Site Use Summaries	
Current Site Use	As of 2014, four concrete tilt-up buildings on the Site were occupied by a dance instruction studio and medical product development, flooring retail sales, offices, solar panel research and development, children's entertainment, restaurant and exercise facilities. MMR Technologies, Broncus Medical, and Thin Solar (also called Thin Silicon in 2014 Phase I Report) used hazardous materials as part of their business operations (2014 Phase I Report).
Historical Site Use	The Site was undeveloped as early as 1899; developed with two structures and agricultural land between 1946 and 1948; consisted of vacant land

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-13-034 (Site)
Mountain View, California

Site Use Summaries	
	<p>from 1953 to at least 1968, and developed with the current structures in 1972 to 1973.</p> <p>Tenants in the four buildings have consisted of a variety of retail, commercial, and light industrial, technology, and research and development focused businesses (2014 Phase I Report).</p>

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>No recognized environmental conditions were identified for on-Site sources (2014 Phase I Report).</p> <p>Thin Silicon, Inc. in Suite B-3 was reported to have an on-Site water treatment system that connected to the sanitary sewer system. The system was reported to treat wastewater to adjust the pH. (2014 Phase I Report)</p> <p>Three ASTs used for nitrogen storage were present on the north side of Building B (2014 Phase I Report).</p> <p>The 2021 Southeast EDR Report confirmed the use of hazardous materials at the Site and the generation of hazardous waste. No violations or evaluations were identified.</p> <p>Pesticides were detected in shallow soil at this property, with concentrations of some pesticides exceeding ESLs, and one sample out of 12 samples collected exceeding the TTLIC hazardous waste threshold for total DDT. This sample that detected hazardous concentrations of total DDT was located in the northeast portion of the property. (2020 Cornerstone Report).</p>
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	The 2021 Gateway Reported noted that soil from the Site may be acceptable from an environmental standpoint for disposal at a site with acceptance requirements based on unrestricted residential land use criteria; however, it may not be acceptable at sites that use stricter acceptance criteria standards for pesticide or metals concentrations such as criteria commonly applied to wetlands projects.
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The TSP groundwater plume extends beneath the Site from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE.</p> <p>Soil, soil vapor, and groundwater sampling was performed at the 1400 North Shoreline Boulevard property in 2018 (2020 Cornerstone Report). TCE was detected in groundwater and soil vapor at maximum</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-13-034 (Site)
Mountain View, California

Environmental Conditions from Off-Site Source(s)	
	<p>concentrations of 240 µg/l and 23,000 µg/m³, respectively, which exceed the ESLs of 1.2 µg/l and 16 µg/m³. Other chlorinated VOCs also were detected in groundwater and soil vapor during this investigation.</p> <p>Based on the groundwater data, no potential on-Site sources of contamination were readily identified that could have significantly contributed to the VOC-impacted groundwater that has migrated beneath the Site with the natural flow of groundwater from the former Teledyne Semiconductor and/or Spectra-Physics facilities. The VOC-impacted groundwater near the source areas at Teledyne Semiconductor and/or Spectra-Physics Lasers, Inc may also have been intercepted by permeable sewer trench backfill creating a preferential migration pathway along the sanitary sewer system to downstream properties including the Site. (2021 Gateway Report)</p> <p>In 2015, the Water Board issued letters to apparent Site responsible parties that indicated the following:</p> <p style="padding-left: 40px;">Based on information currently available to Regional Water Board staff, we conclude that groundwater pollution detected beneath the subject property is likely the result of the migration of pollutants in groundwater from upgradient Teledyne-SpectraPhysics sites. In general, the Regional Water Board does not pursue enforcement action against a property owner whose land overlies contaminated groundwater if that contamination is solely the result of the migration of groundwater contaminants from an offsite source or sources.</p> <p style="padding-left: 40px;">Accordingly, the Regional Water Board will not name current and future owners of the subject property as dischargers with respect to groundwater pollution from offsite sources (2015 Syfuy Letter and 2015 Wizardly Letter).</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	Vapor intrusion controls for buildings proposed (2021 Gateway Report).
Data Gaps Identified	None identified.

Site Use Summaries	
Current Site Use	One of two tax parcels that consists of vacant land adjacent to U.S. 101 (Site is APN 116-13-038; other parcel is APN 116-13-037).
Historical Site Use	According to the 2016 Phase I Report, the Site was used for agricultural purposes with several small sheds or residences apparent as early as 1939 and through at least 1950. By 1968, the Site was redeveloped with an on-ramp for US 101. By 2006, the on-ramp was reconfigured and moved off of the Site. The Site has been vacant and landscaped since 2006.

Environmental Conditions from On-Site Source(s)

Site Use Summaries	
Current Site Use	<p>Commercial office buildings (2022 Pear Report).</p> <p>Tenants in 2008 included Chris Conroy Photography, Moffett Janitorial Supply, Center of Balance, Rathbun Associates, Discount Glass, and a theater (2008 Phase I Report).</p>
Historical Site Use	<p>According to historical records reviewed and interviews conducted by ENVIRON International Corporation (ENVIRON), the Site was undeveloped and/or used as rural residential land until 1976 or 1977, when the property was purchased and developed with the current Site building. The Site building has reportedly been used for commercial, light industrial, and recreational purposes (2008 Phase I Report).</p>

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>Hazardous materials observed by ENVIRON during a 2008 Phase I ESA Site visit included “retail-sized” quantities of adhesives, motor oil, power steering fluid, cleaning products, degreasers, antifreeze, and paints (2008 Phase I Report).</p> <p>According to the MVFD records reviewed by ENVIRON, MVFD responded to a potential propane leak in 1997 at the tenant space formerly occupied by Carpet Savers and discovered significant staining on the pavement leading from the area where Carpet Savers staged its vehicles to a storm drain. Approximately 100 gallons of “oily, black liquid” was observed in the stormwater pumping pit on the southern end of the</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-14-028 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>property. Motor oil also was observed floating on the surface of a discrete water sample taken from a storm drain on the Site. The liquid was reportedly pumped out and disposed of off the Site, but no information regarding investigations or remedial activities was identified by ENVIRON. According to ENVIRON, the former Site owner had communicated with Bob Charlop, the owner of Carpet Savers, on multiple occasions regarding improper waste disposal and possibly dumping liquid waste directly into storm drains. ENVIRON indicated that Bob Charlop was arrested for an unspecified crime that may have been related to the release described above. Carpet Savers vacated its tenant space in 1997 and all hazardous materials were reportedly removed (2008 Phase I Report).</p> <p>L&L Landscape Services was a historical tenant of the Site in the 1980s. Chemical inventories on file indicated that the facility stored up to 250 pounds of verdisol (a pesticide); 3.5 gallons of hydrochloric acid; and retail quantities of pesticides, herbicides, degreasers, and pH buffers. A furniture business, St. Angelo Furniture Service, also occupied the Site in the 1990s. A 1996 chemical inventory indicated that the facility stored lacquer, thinner, sealer, and varnish remover in quantities of 5 gallons or less and maintained a paint booth. St. Angelo Furniture Service reportedly vacated the Site in 1997 (2008 Phase I Report).</p> <p>EDR identified the Site address in regulatory databases regarding the disposal of hazardous waste. According to EDR, “Gary Gohloff” was the listed party in connection with the disposal of 0.76 tons of waste oil from the Site in 1997. The listing may be associated with the release to a storm drain described above (2021 Southeast EDR Report).</p> <p>According to the 2022 Pear Report, three discrete soil samples collected from the Site in January 2022 were analyzed for VOCs, TPH, SVOCs, pesticides, PCBs, and metals. VOCs, TPH, SVOCs, and organic pesticides were detected at concentrations exceeding laboratory reporting limits and less than ESLs. PCBs were not detected at concentrations exceeding laboratory reporting limits. Arsenic, barium, and vanadium were detected at concentrations exceeding ESLs in the samples. The detected concentrations of arsenic and vanadium are within the upper estimate of regional ambient (background) concentrations. Barium was detected in one sample at a concentration of 430 mg/kg, which exceeds the upper estimate of regional ambient (background) concentration for barium of 410 mg/kg.</p>
Cleanup or Mitigation Actions Proposed or Completed	None proposed.

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-14-028 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
Redevelopment Media Management Recommendations	On-Site soil may be acceptable from an environmental standpoint for disposal at a site with acceptance requirements based on unrestricted residential land use criteria. Additional characterization, such as deeper soil sampling and greater sampling frequency from the specific excavation extents anticipated, may be needed in the future to obtain receiving facility approvals (2022 Pear Report).
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>According to the 2022 Pear Report, soil vapor and groundwater samples were collected from three locations on the Site in January 2022 and analyzed for TPH and VOCs. In groundwater, the following analytes were detected at concentrations that exceeded the ESLs:</p> <ul style="list-style-type: none"> • 1,2-DCA was detected at concentrations of 0.54 and 0.69 µg/l in two groundwater samples; • TPH-d was detected at concentrations ranging from 120 to 340 µg/l in three groundwater samples; • Benzene was detected at a concentration of 0.61 µg/l in one groundwater sample; • TCE was detected at a concentration of 1.7 µg/l in one sample; • Vinyl chloride was detected at concentrations of 0.028 and 0.14 µg/l in two samples. <p>In soil vapor, benzene was detected at a concentration that exceeded the ESL in two of seven soil vapor samples.</p> <p>According to Elevate, results of this investigation suggest that low concentrations of VOCs are present in groundwater at the Site, but VOCs are not impacting soil vapor at the Site. Elevate attributed the concentrations of VOCs detected in groundwater to off-Site sources.</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	None identified.
Data Gaps Identified	None identified.

Site Use Summaries	
Current Site Use	Light industrial, vehicle and motor bike storage
Historical Site Use	Site appears to have been used primarily for agricultural purposes (orchards) from at least the late-1930s until the 1960s. A small agricultural structure (e.g. a shed or greenhouse) may have been on the Site from the 1940s to 1960s. A Site representative indicated that the current Site buildings were constructed in the 1960s. Tenants and operations in 2015 consisted of CrystaComm Inc. (CrystaComm), a semiconductor manufacturer, and storage for storage for vehicles including racing vehicles and approximately 80 motorcycles and dirt bikes. CrystaComm reportedly operated at the facility since 1985. Other historical tenants included a lawn maintenance company and a construction company.

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>“Tetrachloroethene (PCE) may have been released on-Site. Historic operations have included solvent use and PCE has been detected in on-Site soils. Additionally, PCE is present in groundwater on the northern portion of the Site above the Maximum Contaminant Level (MCL) of 5 micrograms per liter (µg/L).” (2015 Phase I Report).</p> <p>“Based on aerial photographs reviewed, the Site has historically been developed with agricultural use between at least 1939 to the 1960s. Although not documented at the Site, activities commonly associated with agriculture include the use and storage of hazardous materials and</p>

Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review

Santa Clara County Assessor Parcel No.: 116-14-058 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)

petroleum products (e.g., agricultural chemicals). Information was not available as to the potential historical usage of pesticides, fertilizers or insecticides. Based on our experience, these residual concentrations, if present, are not typically at concentrations that would require cleanup by a regulatory agency or pose a significant human health risk to commercial or industrial site users. There is potential that the near surface soils contain residual agricultural chemicals that may affect disposal costs in the event redevelopment is planned.” (2015 Phase I Report).

Hazardous materials noted on the Site during the 2015 Phase I ESA included acids, solvents, five 5-gallon cans of C12 racing fuel, an approximately 30-gallon portable oil container, and retail quantities of motor oil, gear oil, kerosene, and carburetor cleaner (2015 Phase I Report).

Based on MVFD documents, CrystaComm previously used 1,1,1-TCA for dewaxing crystal wafers. CrystaComm stopped using 1,1,1-TCA in 1992 at the request of large customers and switched to Axarel for dewaxing operations. According to a 2013 EDR report for the Site, CrystaComm was listed under RCRA as a small quantity generator of hazardous waste in 1986 (2015 Phase I Report, 2021 Southeast EDR Report).

According to the 2015 Phase I Report, subsurface investigations were conducted in 1994 by PES Environmental, Inc. and in 2006 by URS. TCE and PCE were detected in groundwater at concentrations exceeding laboratory reporting limits in two northern locations in the PES 1994 investigation. PCE was detected in soil at a northern location at concentrations exceeding the laboratory reporting limit and less than the ESL. “URS concluded that the investigation did not identify evidence that the Site is a source or contributor to VOC impacted groundwater.”

According to the 2020 Shoreline Report, Elevate Environmental Consultants Inc. (Elevate) conducted a limited Phase II subsurface investigation at the Site in August 2020 to assess impacts from on- and off-site sources. Soil, groundwater, soil vapor, and sewer gas samples were collected from 14 locations across the Site and analyzed for VOCs. PCE was detected in soil at concentrations exceeding ESLs. PCE and TCE were detected in groundwater at concentrations exceeding ESLs. In soil vapor, PCE and TCE were detected at concentrations exceeding human health risk screening levels. Elevate concluded that “The results of this investigation suggest that concentrations of TCE in on-Site soil, groundwater, and soil vapor are associated with off-Site upgradient sources, while concentrations of PCE in on-Site media may be due to contributions from both on-Site impacts and off-Site, upgradient sources.”

“One pesticide, 4,4’-DDT, was detected above the Tier 1 Soil ESL of 0.0011 mg/kg at one location at a concentration of 0.0062 mg/kg. This detected concentration is below the Leaching to Groundwater and Residential Direct Contact ESLs” (2020 Shoreline Report).

Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review

Santa Clara County Assessor Parcel No.: 116-14-058 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>“Three metals exceeded Tier 1 Soil ESLs but are attributable to background concentrations. Specifically, arsenic, nickel, and vanadium were detected above their Tier 1 ESLs, but were within the range of regional background concentrations.” (2020 Shoreline Report).</p> <p>The 2021 Southeast EDR Report identified the Site in several regulatory databases. Antypas, located on the Site, was listed as a closed cleanup program site in the CPS-SLIC database. According to information obtained through the Geotracker database, the results of a previous subsurface investigation conducted at the Site in 2006 suggested that PCE concentrations detected in soil and groundwater on the northern portion of the Site may have originated from a hazardous materials storage shed on the north-adjacent property.</p>
Cleanup or Mitigation Actions Proposed or Completed	“Future buildings at the Site should be designed and constructed with appropriate vapor intrusion controls in consideration of the planned future Site use.” (2020 Shoreline Report).
Redevelopment Media Management Recommendations	“Soil sampling results also support that on-Site soils can be characterized as non-hazardous for potential future off-haul purposes, and may be acceptable from an environmental standpoint for on-Site re-use or disposal at a site with acceptance requirements based on unrestricted land use criteria.” (2020 Shoreline Report).
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>“Trichloroethene (TCE) is likely present in groundwater across the western portion of the Site above the MCL of 5 µg/L, likely as a result of the upgradient regional Teledyne Spectra-Physics (TSP) groundwater plume.” (2015 Phase I Report).</p> <p>As noted previously, the 2020 Shoreline Report summarizes the results of a subsurface investigation to evaluate both potential on- and off-site sources for chlorinated VOCs. The report concluded that both on- and off-site sources may have contributed to detected concentrations in soil, soil vapor, and groundwater.</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	“Future buildings at the Site should be designed and constructed with appropriate vapor intrusion controls in consideration of the planned future Site use.” (2020 Shoreline Report)
Data Gaps Identified	None identified.

Site Use Summaries	
Current Site Use	Consists of two buildings with commercial office space occupied by Google. The Site building at 1675 Shoreline Boulevard is used for storage of furniture and a bike repair shop operated by Google (2017 Phase I Report).
Historical Site Use	The 2017 Phase I Report evaluated 15 tax parcels including the Site, and Site-specific details regarding historical use were limited. According to available historical sources, the Site was developed for agricultural use from the 1930s through the 1960s with small residences and/or agricultural buildings on the Site. The Site was developed with the current Site buildings by 1982 and the Site appeared largely unchanged through the present.

Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review

Santa Clara County Assessor Parcel No.: 116-14-066 (Site)
Mountain View, California

Site Use Summaries	
	The 2011 Phase I Report indicated that a residential structure and two apparent agricultural storage buildings were present at the Site in a 1939 aerial photograph. The current building at 1675 Shoreline Boulevard was visible in an aerial photograph from 1965 and the 1340 Space Park Way building was constructed by 1974.

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>“Based on aerial photographs reviewed, the Site has historically been developed with agricultural use between at least 1939 to the 1970s. Although not documented at the Site, activities commonly associated with agriculture include the use and storage of hazardous materials and petroleum products (<i>e.g.</i>, agricultural chemicals). Information was not available as to the potential historical usage of pesticides, fertilizers or insecticides. Based on our experience, these residual concentrations, if present, are not typically at concentrations that would require cleanup by a regulatory agency or pose a significant human health risk to commercial or industrial site users. There is potential that the near surface soils contain residual agricultural chemicals that may affect disposal costs in the event redevelopment is planned.” (2017 Phase I Report).</p> <p>A groundwater monitoring well is located on the Site to monitor the TSP groundwater plume (2017 Phase I Report).</p> <p>The 2011 Phase I Report indicated that two 550-gallon USTs containing fuel previously were located on-Site and removed on September 10, 1987. Total Extractable Hydrocarbons as Diesel was detected in two soil samples collected from the fill ends of the two tanks, with a maximum concentration of 10 mg/kg. Benzene, toluene, xylenes, and ethylbenzene were not detected concentrations exceeding the laboratory reporting limits in an additional sample collected on March 23, 1988. A June 6, 1988 letter from the City of Mountain View Fire Department stated, “This is to confirm that the tank closure at TCI 1675 Stierlin, Mountain View, was completed on March 23, 1988 according to current guidelines established by the City of Mountain View Building and Fire Departments.”</p> <p>The 2021 Shorebird Report noted that two soil samples were collected from the Site in March 2021. Both samples were analyzed for VOCs, TPH, SVOCs, pesticides, PCBs, and metals. The sample collected on the southeastern portion of the Site also was analyzed for asbestos. Organic pesticides were detected at concentrations exceeding laboratory report limits and less than ESLs. The following analytes were detected at concentrations exceeding ESLs in both samples: arsenic (7.8 and 7.9 mg/kg); nickel (86 and 93 mg/kg); and vanadium (77 and 70 mg/kg). Farallon notes that the detected concentrations of metals were within the upper estimate of regional ambient (background) concentrations.</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-14-066 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	<p>The 2021 Shorebird Report noted that shallow on-Site soils may be characterized as nonhazardous for potential future off-haul purposes and may be acceptable for on-Site reuse or receipt by a site with acceptance criteria based on unrestricted residential land use screening criteria.</p> <p>Farallon notes that minor petroleum-impacted soil may be present in the vicinity of the former fuel USTs removed in 1987.</p>
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>A groundwater monitoring well is located on the Site to monitor the TSP groundwater plume. The well is reported to be sampled regularly (2017 Phase I Report).</p> <p>The Site is located on the eastern boundary of the TSP Plume that extends from up-gradient sources to the south. The plume is contaminated primarily with chlorinated solvents including TCE. Additional groundwater contamination has been detected to the south of the Site across Space Park Way at 1625 North Shoreline Boulevard. TCE; PCE; 1,2-DCA; and/or cis-1,2-DCE were detected at concentrations up to 150 µg/l and exceeding ESLs in 39 out of 40 groundwater samples collected from the property in 2016. While the source of impacts to the 1625 North Shoreline Boulevard property is unclear, it is likely that the soil vapor and groundwater plumes present at 1625 North Shoreline Boulevard have migrated on to the Site (2017 Phase I Report).</p> <p>Google conducted indoor air testing in the Site buildings in 2017. Samples were collected from four locations in the building for approximately 8 hours. The samples were analyzed for seven VOCs (vinyl chloride; 1,1-DCE; trans-1,2-DCE; DCA; cis-1,2-DCE; TCE; and PCE). In the samples collected from 1675 North Shoreline Boulevard, trans-1,2-DCE (0.09 µg/m³), TCE (0.34 µg/m³), and PCE (0.32 µg/m³) were detected at concentrations less than ESLs. In the samples collected from 1340 Space Park Way, TCE (0.33 µg/m³) and PCE (0.16 µg/m³) were detected at concentrations less than the ESLs (2017 Phase I Report).</p> <p>The 2021 Shorebird Report noted that groundwater and soil vapor samples were collected from two locations (northwestern and southeastern corners) on the Site in March 2021. One grab groundwater sample was collected near the northwestern corner of the Site from an approximate depth of 11.8 feet bgs and another was collected near the southeastern corner of the Site at an approximate depth of 11 feet bgs. cis-1,2-DCE (110 µg/l); PCE (4.7 µg/l); TCE (25 µg/l); and vinyl chloride (2.5 µg/l) were detected at concentrations exceeding ESLs in the northwestern groundwater sample.</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-14-066 (Site)
Mountain View, California

Environmental Conditions from Off-Site Source(s)	
	Soil vapor samples were collected from each location and analyzed for VOCs. Maximum concentrations of benzene (23 µg/m ³), chloroform (36 µg/m ³), PCE (110 µg/m ³), and TCE (84 µg/m ³) exceeded ESLs in the sample collected from the northwestern portion of the Site. Benzene (86 µg/m ³); chloroform (47 µg/m ³); 1,2-DCA (3.6 µg/m ³); and PCE (24 µg/m ³) were detected at concentrations exceeding ESLs in one soil vapor sample collected from the southeastern portion of the Site.
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	Vapor intrusion controls for buildings as needed (2021 Shorebird Report).
Data Gaps Identified	The source of the VOC groundwater plume extending from the property at 1625 North Shoreline Boulevard onto the Site appears to be unknown.

Program-Level Mitigation Measure(s)		
Mitigation Measure No.	Applicability	Notes
MM HAZ-4.1	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on the known TCE concentrations exceeding ESLs in groundwater from the TSP Plume and 1625 NSB Plume.

	<p>regulatory agency or pose a significant human health risk to commercial or industrial site users. There is potential that the near surface soils contain residual agricultural chemicals that may affect disposal costs in the event redevelopment is planned.” (2017 Phase I Report).</p> <p>A 1,000-gallon gasoline UST was removed from the Site in 1987. The UST was reported to be in poor condition with holes noted in the tank and staining noted in the surrounding soil. Confirmation soil samples collected from depths of 10 and 13 feet bgs contained TPH-g at concentrations of 1,600 and 360 mg/kg respectively. Approximately 110 cubic yards of impacted soil was excavated and disposed of off-Site. One groundwater monitoring well was installed on the Site in 1987 and subsequent sampling indicated that TPH-g and benzene were detected at concentrations exceeding ESLs for groundwater and the concentrations of all chemicals detected were less than ESLs for vapor intrusion from shallow groundwater in a commercial/industrial setting. A second monitoring well was installed in 1994 and three soil samples were collected from borings near the wells. The soil samples were analyzed for TPH-g and BTEX, which were not detected. Both wells were sampled in May, August, and December 1994 and analyzed for TPH-g and BTEX, which were not detected at concentrations exceeding laboratory reporting limits in any of the sampling events. SCVWD and RWQCB issued case closure for the release in February 1996 (2017 Phase I Report, GeoTracker database, 2021 Southeast EDR Report).</p> <p>MVFD records indicated that former tenants of the Site used and stored hazardous substances on the Site including acids, methyl alcohol, and “flammable gases”. MVFD records indicate that Google was a tenant in the building from 2012 to 2016 and had several fire code and reporting violations that were subsequently corrected. Historical hazardous waste generation included halogenated organic compounds (2017 Phase I Report).</p> <p>The 2021 Shorebird Report noted that a soil sample was collected from the northeastern boundary of the Site in March 2021. A discrete soil sample collected from at approximately 4 feet bgs was analyzed for VOCs, TPHs, SVOCs, pesticides, PCBs, asbestos, and metals. No organic pesticides were detected at concentrations exceeding laboratory reporting limits. Arsenic (5.3 mg/kg) and vanadium (50 mg/kg) were detected at concentrations exceeding ESLs. Farallon notes that the detected concentrations of metals were within the upper estimate of regional ambient (background) concentrations.</p>
<p>Cleanup or Mitigation Actions Proposed or Completed</p>	<p>Removal of gasoline UST and associated contaminated soil in 1987.</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-14-072 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
Redevelopment Media Management Recommendations	The 2021 Shorebird Report noted that shallow on-Site soils may be characterized as nonhazardous for potential future off-haul purposes and may be acceptable for on-Site reuse or receipt by a site with acceptance criteria based on unrestricted residential land use screening criteria.
Data Gaps Identified	“The status of two groundwater monitoring wells installed on the 1300 Space Park Way property is unknown as no records of well decommissioning were found for this property.” (2017 Phase I Report).

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>The Site is located east of the eastern boundary of the TSP Plume and the associated 1625 NSB Plume. The 2021 Shorebird Report noted that concentrations of TCE are present in groundwater and soil vapor in southwestern and western areas of the Shorebird Neighborhood Properties.</p> <p>Google conducted indoor air testing in the Site building in 2017. Samples were collected from four locations in the building for approximately 8 hours. The samples were analyzed for seven VOCs (vinyl chloride; 1,1-DCE; trans-1,2-DCE; DCA; cis-1,2-DCE; TCE; and PCE). TCE was detected at a concentration of 0.84 µg/m³ and PCE which was detected at a concentration of 0.09 µg/m³. The maximum detected concentration of TCE exceeds the ESL of 0.48 ug/m³. The remaining VOCs were not detected in the samples (2017 Phase I Report).</p> <p>The 2021 Shorebird Report noted that groundwater and soil vapor samples were collected from the northeastern boundary of the Site in March 2021. A grab groundwater sample collected at approximately 7.0 feet bgs was analyzed for VOCs and TPH. 1,2-DCA (1.1 µg/l), vinyl chloride (0.14 µg/l), and diesel (210 µg/l) were detected at concentrations exceeding ESLs in the groundwater sample. A soil vapor sample collected at approximately 5.0 feet bgs was analyzed for VOCs. Benzene (75 µg/m³) and chloroform (7.9 µg/m³) were detected at concentrations exceeding ESLs in the soil vapor sample.</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	<p>Vapor intrusion controls for buildings as needed (2021 Shorebird Report).</p> <p>Farallon notes that the source area for the petroleum compound detected in soil vapor is unknown and may be encountered during redevelopment activities. A soil management plan may be warranted to ensure proper handling and disposal of on-Site soil.</p>
Data Gaps Identified	Source of diesel and benzene concentrations in groundwater and soil vapor along the northeastern boundary of the Site has not been determined (identified by Farallon).

Site Use Summaries	
Current Site Use	Commercial and light industrial space
Historical Site Use	According to records reviewed by ENVIRON International Corporation (ENVIRON), the Site appeared to consist of orchards and a building from at least the 1930s through at least the 1960s. The existing buildings were constructed in the 1970s. According to ENVIRON, the Site has been occupied historically by several long-term tenants including an electrical contractor, construction contractor a machine shop, an automotive restoration business, a plumbing service, and a sheet metal shop (2007 Phase I Report).

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>No recognized environmental conditions were identified for the on-Site sources described below (2007 Phase I Report).</p> <p>“SCCDEH provided records for two Property tenants, Herlinger and Triple A. A hazardous waste generator permit application submitted by Herlinger to SCCDEH in November 1998 indicates annual generation of eight gallons of solvent and 20 gallons of waste oil. Following a November 1998 inspection, Herlinger was asked to label an oil collection drum. An inspection report dated July 2000 indicates that the only hazardous waste generated by Herlinger, which at the time had ceased performing oil changes, was spent parts cleaner solvent maintained by Safety-Kleen. A hazardous waste generator permit application submitted by Triple A to</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-14-095 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>SCCDEH in November 1998 indicates annual generation of 200 gallons of waste oil. Violations noted at Triple A in a November 1998 inspection included failure to label waste oil drums, failure to keep used oil filter drums closed, and the presence of spilled oil on top of waste oil drums. The inspector also noted that spent absorbent and carburetor cleaner needed to be disposed as hazardous waste. Similar violations were noted at Triple A during a July 2000 inspection. Following an April 2006 inspection by SCCDEH, Triple A was asked to dispose of seven gallons of an unspecified material as hazardous waste. The inspector noted that the facility was no longer generating hazardous waste, as it was now contracting out vehicle maintenance activities.” (2007 Phase I Report).</p> <p>MVFD records indicated that other hazardous substances historically used and/or stored on the Site include cutting oil, hydraulic oil, lubricating oil, mineral-based parts cleaner solvent, retail quantities of motor oil, waste automotive batteries, and an unspecified solvent (2007 Phase I Report).</p> <p>According to the 2022 Pear Report, one discreet soil samples collected from the Site in January 2022 was analyzed for VOCs, TPH, SVOCs, pesticides, PCBs, and metals. SVOCs and organic pesticides were detected at concentrations exceeding the laboratory reporting limits and less than ESLs. PCBs, TPH, and VOCs were not detected at concentrations exceeding laboratory reporting limits. Arsenic, barium, nickel, and vanadium were detected at concentrations exceeding the ESLs in the samples. The detected concentrations of arsenic, nickel, and vanadium are within the upper estimate of regional ambient (background) concentrations. Barium was detected in one sample at a concentration of 430 mg/kg, which exceeds the upper estimate of regional ambient (background) concentration for barium of 410 mg/kg.</p>
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	On-Site soil may be acceptable from an environmental standpoint for disposal at a site with acceptance requirements based on unrestricted residential land use criteria. Additional characterization, such as deeper soil sampling and greater sampling frequency from the specific excavation extents anticipated, may be needed in the future to obtain receiving facility approvals (2022 Pear Report).
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	According to the 2022 Pear Report, two soil vapor samples and one grab groundwater sample were collected from a central location on the Site in January 2022 and analyzed for TPH and VOCs. In groundwater, the following analytes were detected at concentrations that exceeded the ESLs:

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-14-095 (Site)
Mountain View, California

Environmental Conditions from Off-Site Source(s)	
	<ul style="list-style-type: none"> • 1,2-DCA was detected at a concentration of 0.54 µg/l; • TPH-d was detected at a concentration of 180 µg/l; and • Vinyl chloride was detected at a concentration of 0.14 µg/l. <p>Benzene was detected at a concentration exceeding the ESL in one of two soil vapor samples.</p> <p>According to Elevate, results of this investigation suggest that low concentrations of VOCs are present in groundwater at the Site, but VOCs are not impacting soil vapor at the Site. Elevate attributed the concentrations of VOCs detected in groundwater to off-Site sources.</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	None identified.
Data Gaps Identified	None identified.

Program-Level Mitigation Measure(s)		
Mitigation Measure No.	Applicability	Notes
MM HAZ-4.1	<input type="checkbox"/> Does not apply <input checked="" type="checkbox"/> Likely applies <input type="checkbox"/> Could not determine	Based on the known VOC concentrations exceeding ESLs in groundwater from the TSP associated groundwater plume.

Site Use Summaries	
Current Site Use	“The Site consists of a parking lot, utility conduits, lighting, landscaping, electric vehicle parking areas and charging stations, stairs, escalators, and an elevator.” (2022 Phase I Report).
Historical Site Use	According to the 2022 Phase I Report, the Site was used for agriculture and residential purposes from the 1930s through the 1960s. A large industrial building was apparent on the southeastern corner of the Site by 1963. Additional properties with parking lots and storage areas were apparent on the Site by 1974, and by 1982, many of the residences appeared to have been removed. By 1991, the Site was developed with the current parking lots.

Environmental Conditions from On-Site Source(s)	
Known or Suspected	<p>In the 2022 Phase I Report, Elevate identified the presence of a subsurface slurry wall surrounding the majority of the Site as a historical recognized environmental condition in connection with the Site. According to Elevate, the underground clay slurry wall restricts groundwater movement and is intended to restrict groundwater impacted by landfill contaminants from migrating onto the Site.</p> <p>“Based on aerial photographs reviewed, the Site had historically been developed for agricultural use until the mid-1960s. Although not documented at the Site, activities commonly associated with agricultural uses include the use and storage of hazardous materials and petroleum products (e.g., agricultural chemicals). Information was unavailable as to the potential historical usage of pesticides, fertilizers or insecticides. Based on past experience, these residual concentrations, if present, are not typically at concentrations that would require cleanup by a regulatory agency or pose a significant human health risk to commercial or industrial site users. There is potential that the near surface soils contain residual</p>

North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-20-043 (Site)
Mountain View, California

Environmental Conditions from On-Site Source(s)	
	<p>agricultural chemicals at concentrations that would require disposal as California (non-RCRA) hazardous waste, which may affect disposal costs in the event redevelopment is planned.” (2022 Phase I Report).</p> <p>“According to the Santa Clara Valley Water District (SCVWD), five historic water production wells were abandoned, nine historic wells were destroyed (five monitoring wells, three water production wells, and one well without a specified type), and there are currently four active monitoring wells that may potentially be located within the Site’s boundary.” (2022 Phase I Report).</p>
Cleanup or Mitigation Actions Proposed or Completed	None proposed.
Redevelopment Media Management Recommendations	“Prior to future on-Site redevelopment, if planned, the active monitoring wells should be located and properly abandoned, if needed, under SCVWD permit.” (2022 Phase I Report).
Data Gaps Identified	None identified.

Environmental Conditions from Off-Site Source(s)	
Known or Suspected	<p>“The Site was historically within the boundaries of the Mountain View Shoreline Landfill, now a closed Class III (i.e. non-hazardous) solid waste landfill. The Site is located within the extent of the Mountain View Shoreline Landfill, also known as the ‘Shoreline Regional Sanitary Landfill’, and near an area of the landfill that was identified as the ‘Vista Landfill’ (to the west of the Site), which was operated by the City of Mountain View between 1981 and 1993. A portion of the Mountain View Shoreline Landfill was leased to Shoreline Amphitheatre Partners in 1986 for the development of the Shoreline Amphitheatre, including the Site (Shoreline Amphitheatre parking lot). Based on available documentation, it appears that the Site is located outside Vista Landfill’s limits of refuse; therefore it is unlikely that waste was placed within the Site boundary as part of historical landfill operations. A second landfill associated with the Mountain View Shoreline Landfill, known as the ‘Crittenden Landfill,’ is located to the east of the Site. The Site also appears to be located outside of the Crittenden Landfill limits of refuse.</p> <p>“Landfills are known to generate methane gas under pressure, due to microorganism activity within the landfill. Although it is unlikely that waste was placed on-Site, it is possible that methane may be encroaching on-Site due to the proximity of the Vista Landfill where waste was placed during landfill operations. In addition to the risk from methane itself, methane from landfills can act as a carrier gas for other contaminants that may pose risk to human health. Accordingly, if present, construction workers may potentially be exposed to these contaminants during property improvement work.</p>

**Site Summary Environmental Evaluation
North Bayshore Master Plan Supplemental Environmental Impact Review**

Santa Clara County Assessor Parcel No.: 116-20-043 (Site)
Mountain View, California

Environmental Conditions from Off-Site Source(s)	
	<p>“Santa Clara County Department of Environmental Health (SCCDEH) is the local enforcement authority for the landfill, and may have requirements for redevelopment and use of the property. The City of Mountain view operates a gas collection and control system (GCCS) under a Bay Area Air Quality Management District (BAAQMD) Title V Permit to regularly monitor methane gas generated by the landfill. Shoreline Amphitheatre Partners operates a separate GCCS for its portion of leased land, under a separate Title V Permit. According to RPS’ <i>Summary of Environmental Data Collected at the Shoreline Amphitheatre Parking Lot Site in Mountain View, California</i>, dated October 13, 2017, Kleinfelder consultants collected two soil gas samples from the southern region of the Site on April 21, 2017; both samples yielded methane results below the reporting limit of 6.54 milligrams per cubic meter (mg/m³). Availability of other soil vapor sampling results from the Shoreline Amphitheatre Partners monitoring network is limited; therefore, our ability to evaluate the extent of potential on-Site methane contamination is limited.</p> <p>“A methane and vapor intrusion mitigation system currently exists at the Site. A vapor membrane and methane sensing system was installed at the on-Site elevator to control vapor intrusion of volatile organic compounds (VOCs) and monitor for methane concentrations within the structure, respectively (Elevate, 2020). The vapor membrane covers the underside of the elevator pit as well as the portion of the elevator sidewalls which are below grade. Additionally, two methane sensors were installed on the inside of the elevator structure; one within the elevator pit, and one at the top of the elevator shaft.” (2022 Phase I Report).</p> <p>According to the 2022 Phase I Report, the Site is located just north and down-gradient of the estimated northern extent of the TSP groundwater VOC plume. An environmental sampling field program was implemented in January 2018. Grab groundwater samples were collected at six locations, with soil samples collected from two of the locations. TCE was detected at a concentration exceeding the ESL in one of the groundwater samples. TCE and cis-1,2-DCE were detected at concentrations less than the ESLs in the five remaining samples. According to Elevate, the presence of low-level concentrations of TCE and cis-1,2-DCE suggest the TSP groundwater plume has encroached onto the southern Site boundary. Other compounds detected in groundwater at concentrations exceeding the ESLs include TPH-d in two samples, nitrite in one sample, and vanadium in all analyzed samples.</p>
Cleanup or Mitigation Actions Proposed or Completed Pertaining to Site	<p>Vapor intrusion controls for future Site buildings (proposed by Farallon).</p> <p>“Santa Clara County Department of Environmental Health (SCCDEH) is the local enforcement authority for the landfill, and may have requirements for redevelopment and use of the property.” (2022 Phase I Report).</p>
Data Gaps Identified	None identified.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

Proposed NPL..... Proposed National Priority List Sites
NPL LIENS..... Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL..... National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY..... Federal Facility Site Information listing

Lists of Federal RCRA TSD facilities

RCRA-TSDF..... RCRA - Treatment, Storage and Disposal

Federal institutional controls / engineering controls registries

LUCIS..... Land Use Control Information System

Federal ERNS list

ERNS..... Emergency Response Notification System

Lists of state and tribal leaking storage tanks

INDIAN LUST..... Leaking Underground Storage Tanks on Indian Land

Lists of state and tribal registered storage tanks

FEMA UST..... Underground Storage Tank Listing
INDIAN UST..... Underground Storage Tanks on Indian Land

Lists of state and tribal voluntary cleanup sites

INDIAN VCP..... Voluntary Cleanup Priority Listing

EXECUTIVE SUMMARY

Lists of state and tribal brownfield sites

CA BROWNFIELDS..... Considered Brownfields Sites Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS..... A Listing of Brownfields Sites

Local Lists of Landfill / Solid Waste Disposal Sites

CA WMUDS/SWAT..... Waste Management Unit Database
CA HAULERS..... Registered Waste Tire Haulers Listing
INDIAN ODI..... Report on the Status of Open Dumps on Indian Lands
DEBRIS REGION 9..... Torres Martinez Reservation Illegal Dump Site Locations
ODI..... Open Dump Inventory
IHS OPEN DUMPS..... Open Dumps on Indian Land

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL..... Delisted National Clandestine Laboratory Register
CA SCH..... School Property Evaluation Program
CA CDL..... Clandestine Drug Labs
CA Toxic Pits..... Toxic Pits Cleanup Act Sites
US CDL..... National Clandestine Laboratory Register
CA AQUEOUS FOAM..... Former Fire Training Facility Assessments Listing
CA PFAS..... PFAS Contamination Site Location Listing

Local Land Records

CA LIENS..... Environmental Liens Listing
LIENS 2..... CERCLA Lien Information

Records of Emergency Release Reports

CA LDS..... Land Disposal Sites Listing
CA MCS..... Military Cleanup Sites Listing

Other Ascertainable Records

SCRD DRYCLEANERS..... State Coalition for Remediation of Drycleaners Listing
US FIN ASSUR..... Financial Assurance Information
EPA WATCH LIST..... EPA WATCH LIST
2020 COR ACTION..... 2020 Corrective Action Program List
TSCA..... Toxic Substances Control Act
TRIS..... Toxic Chemical Release Inventory System
SSTS..... Section 7 Tracking Systems
RMP..... Risk Management Plans
RAATS..... RCRA Administrative Action Tracking System
PADS..... PCB Activity Database System
MLTS..... Material Licensing Tracking System
COAL ASH DOE..... Steam-Electric Plant Operation Data

EXECUTIVE SUMMARY

COAL ASH EPA.....	Coal Combustion Residues Surface Impoundments List
PCB TRANSFORMER.....	PCB Transformer Registration Database
RADINFO.....	Radiation Information Database
DOT OPS.....	Incident and Accident Data
INDIAN RESERV.....	Indian Reservations
FUSRAP.....	Formerly Utilized Sites Remedial Action Program
UMTRA.....	Uranium Mill Tailings Sites
LEAD SMELTERS.....	Lead Smelter Sites
US AIRS.....	Aerometric Information Retrieval System Facility Subsystem
US MINES.....	Mines Master Index File
ABANDONED MINES.....	Abandoned Mines
DOCKET HWC.....	Hazardous Waste Compliance Docket Listing
UXO.....	Unexploded Ordnance Sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 10/20/2021 has revealed that there are 5 NPL sites within approximately 1 mile of the target property.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 10/20/2021 has revealed that there are 3

EXECUTIVE SUMMARY

SEMS sites within approximately 0.5 miles of the target property.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/20/2021 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2021 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 7 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 25 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 08/23/2021 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

LGM MANUFACTURING Database: RESPONSE, Date of Government Version: 07/22/2021 Status: Certified Facility Id: 43390003	723 STIERLIN ROAD	S 1/2 - 1 (0.605 mi.)	540	2602

Lists of state- and tribal hazardous waste facilities

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 07/22/2021 has revealed that there are 19 CA ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

CA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the CA SWF/LF list, as provided by EDR, has revealed that there is 1 CA SWF/LF site within approximately 0.5 miles of the target property.

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 35 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 4 CA UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 13 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 56 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FTTS: FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act) over the previous five years. To maintain currency, EDR contacts the Agency on a quarterly basis.

A review of the FTTS list, as provided by EDR, has revealed that there are 2 FTTS sites within approximately 0.001 miles of the target property.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, has revealed that there are 2 HIST FTTS sites within approximately 0.001 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 05/05/2021 has revealed that there are 73 FINDS sites within approximately 0.001 miles of the target property.

CA CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CA CUPA Listings list, as provided by EDR, has revealed that there are 83 CA CUPA Listings sites within approximately 0.25 miles of the target property.

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2019 has revealed that there are 92 CA HAZNET sites within approximately 0.001 miles of the target property.

CA HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSTITES]. This listing is no longer updated by the state agency.

A review of the CA HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 38 CA HIST CORTESE sites within approximately 0.5 miles of the target property.

CA CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CA CERS list, as provided by EDR, and dated 07/15/2021 has revealed that there are 47 CA CERS sites within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

CA RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the CA RGA LUST list, as provided by EDR, has revealed that there are 11 CA RGA LUST sites within approximately 0.001 miles of the target property.

Summary Details:

Conditions at proposal April 10, 1985): Moffett Naval Air Station covers 8,700 acres in Sunnyvale, Santa Clara County, California. In the past, various solvents and sludges were disposed on-site into ponds and landfills and onto the ground. As a result, soil and ground water on-site are contaminated. The major contaminants in ground water are volatile organic compounds. About 272,000 people depend on wells within 3 miles of the station as a source of drinking water. Moffett Naval Air Station is participating in the Installation Restoration Program (IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from hazardous materials. The Navy has completed Phase I (records search) of the program and is beginning Phase II (remedial investigation). Moffett Naval Air Station is in the South Bay Area of San Francisco. In October 1984, 19 non-Federal sites in the area were proposed for the NPL. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take site-specific action as necessary. Status July 22, 1987): In May 1985, the California Regional Water Quality Control Board adopted Waste Discharge Requirements for Moffett Naval Air Station. The requirements outline specific tasks and compliance dates Moffett must follow to define the full extent of contamination in soils and ground water. In April 1986, the Navy released the final report for the verification step of Phase II. Moffett is revising the quality assurance project plan and sample plan for the characterization step of Phase II. Within the boundaries of this Federal facility, including this specific site, there are no areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act. Therefore, this Federal facility site is being placed on the Federal section of the NPL.

Summary Details:

Conditions at proposal October 15, 1984): Intel Corp. manufactured semiconductors at a plant in Mountain View, Santa Clara County, California, between 1968 and 1981. At that time, the facility occupied 2 acres and was surrounded by residential areas, office buildings, and other semiconductor-manufacturing plants. Monitoring wells on the site are contaminated with trichloroethylene, xylene, vinyl chloride, and 1,1- and trans-1,2-dichloroethylene, according to analyses conducted by a consultant to Intel. Contamination is believed to have resulted from leaking underground solvent tanks. About 270,000 people depend on wells within 3 miles of the site as a source of drinking water. Since early 1982, Intel has been pumping ground water and treating it by carbon adsorption. The company intends to implement additional cleanup activities, including the installation of a system to pump and treat contaminated ground water and excavation of soil beneath the underground storage tanks, which were previously removed. The company is working with the California Regional Water Quality Control Board (CRWQCB) to determine the full extent of the contamination. This is one of 19 sites in the SouthBay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites

are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status June 10, 1986): Intel has removed approximately 4,600 cubic yards of contaminated soil and has installed four wells to pump and treat contaminated ground water. CRWQCB has issued Waste Discharge Requirements to the company. The requirements are the board's legal mechanism for regulating activities at facilities under its jurisdiction. On August 15, 1985, EPA issued a CERCLA Administrative Order on Consent to Intel Corp.'s Mountain View Plant, as well as to Fairchild Camera's and Raytheon Corp.'s Mountain View Plants. The order calls for the three companies to conduct a joint remedial investigation/feasibility study of the area to determine the type and extent of contamination and identify alternatives for remedial action.

Environmental Interest/Information System:

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

SUPERFUND NPL

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at proposal October 15, 1984): Teledyne Semiconductor has manufactured semiconductors on a 1-acre site in Mountain View, Santa Clara County, California, since 1962. In December 1982, Teledyne reported to the California Regional Water Quality Control Board (CRWQCB) that soil and ground water near an underground storage tank were contaminated with solvents, including trichloroethylene. An investigation in June 1984 revealed that the contaminants had migrated to the north and affected approximately 50 private domestic wells. Local agencies and the company have provided alternative sources of drinking water for the affected residences. About 116,000 people depend on wells within 3 miles of the site as a source of drinking water. The company is working with CRWQCB to determine the extent of the contamination and to develop interim hydraulic controls to prevent further migration of the contaminants. The facility received Interim Status under Subtitle C of the Resource Conservation and Recovery Act (RCRA) when the company filed Part A of a permit application. This is one of 19 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status February 1986): CRWQCB, in conjunction with EPA and the California Department of Health Services, is considering various response actions at the site. This site remains in

proposed status until EPA implements the appropriate elements of its final policy for placing RCRA-related sites on the NPL and then applies the policy to this site. Status July 22, 1987): Subsequent investigation revealed that this site is not subject to the Subtitle C permitting requirements of RCRA. Its score on the Hazard Ranking System, which EPA uses to evaluate sites for the NPL, is above the cutoff point of 28.50, and EPA received no information that prevents placing the site on the NPL. Therefore, it is being placed on the NPL. Teledyne is planning on pumping the contaminated ground water in the upper aquifer to the surface for subsequent treatment.

Summary Details:

Conditions at proposal June 24, 1988): Spectra-Physics, Inc. SP) has manufactured electronic equipment and gas lasers on Terra Bella Boulevard and Middlefield Roads in Mountain View, Santa Clara County, California, since 1961. The 11.5-acre site consists of nine buildings in a light industrial complex. SP uses a variety of cleansers, degreasers, and lubricants in its manufacturing processes, including isopropyl alcohol, acetone, methyl alcohol, trichloroethylene TCE), Freon, 1,1,1-trichloroethane TCA), and Solvasol Solvent 360. In an inspection conducted in 1981, the California Regional Water Quality Control Board CRWQCB) found that areas where hazardous wastes were stored had no dikes or systems to collect leachate; rusty barrels were also found on-site. Ground water investigations began at the SP facility in September 1984 after tests at Teledyne Semiconductor adjacent and downgradient of SP) indicated possible upgradient sources of contamination. The Teledyne site was placed on the NPL in July 1987.) Soil and ground water collected at SP contained TCE, TCA, and 1,2-dichloroethylene. SP's plume of contaminated ground water has merged with Teledyne's and migrated off-site. More than 200 private drinking water wells had been drilled into the 1-square-mile plume. Most wells have been closed; 47 were found contaminated above State Action Levels. The owners now obtain water from municipal water supplies. An estimated 189,000 people obtain drinking water from public and private wells within 3 miles of the site. Teledyne is operating two extraction wells on-site -- one in the shallow one and one in the intermediate one. The wells pump the water to the surface and discharge it to the sanitary sewer; the ground water is not treated before discharge. SP will evaluate the effectiveness of this system in preventing its on-site plume from migrating off-site. Both companies are jointly designing an off-site extraction system. San Francisco Bay 2.5 miles downstream of the site) is used for recreational activities. Permanente Creek is tidally influenced within 1 mile of the site. Several species of birds designated as endangered species by the U.S. Fish and Wildlife Service are found within the area of tidal influence. Status February 11, 1991): In February 1990, SP installed a vapor extraction system to reduce concentrations of contaminants in soil. Under an order issued by CRWQCB, SP conducted a remedial investigation/feasibility study RI/FS) to determine the type and extent of contamination at the site and identify alternatives for remedial action. The RI/FS was completed in December 1990. In February 1991, CRWQCB will adopt a final cleanup and abatement order requiring SP to implement the best remedial alternative evaluated in the RI/FS. This alternative will include expanding the existing soil vapor extraction system and the ground water extraction system. In April 1991, EPA will complete a Record of Decision describing the selected remedy.

Scoring: 2

Summary Details:

Conditions at proposal June 24, 1988): CTS Printex, Inc., manufactured printed circuit boards on 5.6 acres in Mountain View, Santa Clara County, California, during 1966-85. Printex was incorporated in 1966 and acquired by CTS Corp. in 1981. In the wet-floor building at 1911 Plymouth Street, acid waste water containing copper, lead, and organic wastes containing trichloroethylene (TCE) and other solvents drained to the floor, collected in a sump where they were neutralized with ammonia, and discharged to the Mountain View sanitary sewer. Early in 1985, a consultant to CTS Corp. found high levels of copper and lead in soil near the wet-floor building and high levels of TCE, 1,1,1-trichloroethane, and 1,1-dichloroethylene in monitoring wells downgradient of the site. An estimated 189,000 people obtain drinking water from municipal wells within 3 miles of the site. Permanente Creek borders the site. Surface water drainage eventually discharges to San Francisco Bay 2.5 miles to the north. Late in 1985, the company excavated the sump area and filled it in, decontaminated the building, and transported waste materials to a hazardous waste facility regulated under Subtitle C of the Resource Conservation and Recovery Act (RCRA). In October 1986, the California Department of Health Services certified closure of the facility. In an attempt to stop migration of contaminated ground water off-site, the company is pumping the water and discharging it to Mountain View's sanitary sewer system under a city permit. The company continues to monitor to define the plume of contaminated ground water. In March 1987, the California Regional Water Quality Control Board (CRWQCB) issued a Cleanup and Abatement Order requiring the company to be more expeditious and thorough in its cleanup and set a schedule for various on- and off-site tasks. Status February 21, 1990): CTS Printex is conducting a remedial investigation/feasibility study (RI/FS) to determine the type and extent of contamination at the site and identify alternatives for remedial action. In November 1989, CRWQCB received the first draft of the RI/FS for review. The final draft is scheduled to be submitted in late 1990.

Environmental Interest/Information System:

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

SUPERFUND NPL

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HAZARDOUS AIR POLLUTANT MAJOR RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

facilities.
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
