

Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: Bacon Island Levee Rehabilitation Project

Lead Agency: Reclamation District No. 2028

Contact Name: Brian Janowiak

Email: janowiak@mbkengineers.com

Phone Number: 916-456-4400

Project Location: Stockton, CA

City

San Joaquin

County

Project Description (Proposed actions, location, and/or consequences).

Reclamation District No. 2028 plans to rehabilitate the north and south sides of Bacon Island's levee system, approximately 3.5 miles in length, to sustainably achieve the minimum requirements of Bulletin 192-82 standard. The sections of levee along Connection Slough and Santa Fe Cut on Bacon Island are generally narrow with over-steepened slopes, susceptible to erosion, seepage, and slope instability. To meet these minimum levee design standards and to improve emergency access and levee performance, the levees will be widened and raised, a toe berm constructed, revetments installed on waterside slopes, and a landside stability berm installed. Bacon Island is located in the central Sacramento-San Joaquin River Delta, approximately halfway between the city of Antioch to the west and Stockton to the east, in San Joaquin County, California. It is situated south of Mandeville Island, west of Mildred Island and Lower Jones Tract, north of Woodward Island, and east of Holland Tract.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The Project will not substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory. The Project will not have environmental effects that are individually limited, but cumulatively considerable. The Project will not have environmental effects which would cause substantial adverse effects on human beings, either directly or indirectly. No substantial evidence exists that the Project will have a negative or adverse effect on the environment.

Mitigation measures have been added to the Project to reduce potential effects on biological and cultural resources to a less-than-significant level. Pre-construction surveys will be conducted for each year of Project implementation, if applicable. Borrow sites and any ditches and ponds within 100 feet of the project area will be surveyed for special-status species, including giant garter snakes prior to dewatering, and within the appropriate time frames for ea

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.
