STATE CLEARINGHOUSE

NOTICE OF PREPARATION FOR AN ENVIRONMENTAL IMPACT REPORT AND PUBLIC SCOPING MEETING FOR THE TRUCKEE 2040 GENERAL PLAN AND DOWNTOWN PLAN UPDATE– DATED MARCH 2022 (STATE CLEARINGHOUSE NUMBER: 2022030190)

Dear Ms. Jenna Gatto:

The Department of Toxic Substances Control (DTSC) received a Notice of Preparation of an Environmental Impact Report (EIR) for the Truckee 2040 General Plan and Downtown Plan Update (Project). The Lead Agency is receiving this notice from DTSC because the Project includes one or more of the following: groundbreaking activities, work in close proximity to a roadway, work in close proximity to mining or suspected mining or former mining activities, presence of site buildings that may require demolition or modifications, importation of backfill soil, and/or work on or in close proximity to an agricultural or former agricultural site, as described below.

The [Former Truckee Dump Site](#) is a DTSC Site with incomplete documentation of cleanup activities and which DTSC recommends be evaluated in the Hazards and Hazardous Materials section of the EIR. The Site is a former burn dump comprising approximately 73 acres and is located on Federal land under the jurisdiction of the U.S. Forest Service. A portion of this Site was used by residents of Truckee for trash disposal between approximately 1860-1930. Areas of debris have previously been identified including broken glass, ceramic debris, metal, and wood. Previous investigations have detected concentrations of lead above California hazardous waste levels. Other substances detected at the Site include arsenic, petroleum hydrocarbons, and polynuclear aromatic hydrocarbons (PAHs). DTSC records indicate DTSC's most

recent involvement with this Site was a May 20, 2009 Participating Agreement between DTSC and the U.S. Forest Service which authorized DTSC to provide technical assistance for Site cleanup activities which were planned to be conducted by the U.S. Forest Service prior to transference of a portion of this Site to the Town of Truckee. DTSC records do not contain documentation of completion of the cleanup activities.

DTSC recommends that the following issues be evaluated in the Hazards and Hazardous Materials section of the EIR:

1. The EIR should acknowledge the potential for historic or future activities on or near the project site to result in the release of hazardous wastes/substances on the project site. In instances in which releases have occurred or may occur, further studies should be carried out to delineate the nature and extent of the contamination, and the potential threat to public health and/or the environment should be evaluated. The EIR should also identify the mechanism(s) to initiate any required investigation and/or remediation and the government agency who will be responsible for providing appropriate regulatory oversight.
2. Refiners in the United States started adding lead compounds to gasoline in the 1920s in order to boost octane levels and improve engine performance. This practice did not officially end until 1992 when lead was banned as a fuel additive in California. Tailpipe emissions from automobiles using leaded gasoline contained lead and resulted in aerially deposited lead (ADL) being deposited in and along roadways throughout the state. ADL-contaminated soils still exist along roadsides and medians and can also be found underneath some existing road surfaces due to past construction activities. Due to the potential for ADL-contaminated soil DTSC, recommends collecting soil samples for lead analysis prior to performing any intrusive activities for the project described in the EIR.
3. If any sites within the project area or sites located within the vicinity of the project have been used or are suspected of having been used for mining activities, proper investigation for mine waste should be discussed in the EIR. DTSC recommends that any project sites with current and/or former mining operations onsite or in the project site area should be evaluated for mine waste according to DTSC's 1998 [Abandoned Mine Land Mines Preliminary Assessment Handbook](#).
4. If buildings or other structures are to be demolished on any project sites included in the proposed project, surveys should be conducted for the presence of lead-based paints or products, mercury, asbestos containing materials, and polychlorinated biphenyl caulk. Removal, demolition and disposal of any of the above-mentioned chemicals should be conducted in compliance with California environmental regulations and policies. In addition, sampling near current and/or

former buildings should be conducted in accordance with DTSC's 2006 [Interim Guidance Evaluation of School Sites with Potential Contamination from Lead Based Paint, Termiticides, and Electrical Transformers.](#)

5. If any projects initiated as part of the proposed project require the importation of soil to backfill any excavated areas, proper sampling should be conducted to ensure that the imported soil is free of contamination. DTSC recommends the imported materials be characterized according to DTSC's 2001 [Information Advisory Clean Imported Fill Material.](#)
6. If any sites included as part of the proposed project have been used for agricultural, weed abatement or related activities, proper investigation for organochlorinated pesticides should be discussed in the EIR. DTSC recommends the current and former agricultural lands be evaluated in accordance with DTSC's 2008 [Interim Guidance for Sampling Agricultural Properties \(Third Revision\).](#)

DTSC appreciates the opportunity to comment on the EIR. Should you need any assistance with an environmental investigation, please visit DTSC's [Site Mitigation and Restoration Program](#) page to apply for lead agency oversight. Additional information regarding voluntary agreements with DTSC can be found at [DTSC's Brownfield website.](#)

If you have any questions, please contact me at (916) 255-3582 or via email at [Brian.McAloon@dtsc.ca.gov.](mailto:Brian.McAloon@dtsc.ca.gov)

Sincerely,

Brian McAloon
