

## SEWERS AND PUMPING PLANTS

The City operates more than 6,700 miles of public sewers that convey about 400 million gallons per day (MGD) of flow from residences and businesses to the City's four wastewater treatment and water reclamation plants. More information on how the City manages its vast sewer system may be obtained here in the [Sewer System Management Plan \(SSMP\)](#)

The City's wastewater system - sewers and treatment plants - operates 24 hours a day, 365 days a year to serve the needs of more than four million customers in Los Angeles, plus 29 contracting cities and agencies. There are ongoing construction projects to ensure service remains available to all of the residents in the City of Los Angeles.

## SEWER PROJECTS

LA Sanitation is always improving and working to insure our sewer system is up to date and fulfilling the needs of the City. In order to maintain the system we must consistently be investing in construction and improvement projects.

## SPILLS AND BACKWATER VALVES

spills in the City has significantly decreased over the last five years as a result of these efforts. The State of California requires that all owned sanitary sewer systems to have a written Sewer System Management Plan that includes measures to control and mitigate sewer spills, and the plan must be made available to the public.
