Executive Summary

Palatine Capital Partners Management, LLC (Palatine, the User) retained Roux Associates, Inc. (Roux) to perform a Phase I Environmental Site Assessment (ESA) of the property located at 18618 Oxnard Street, Tarzana, California, Assessor's Parcel Number (APN) 2156-006-018 (the Site). Roux performed this Phase I ESA in general accordance with the American Society for Testing Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13) in an effort to identify, to the extent feasible, the presence of recognized environmental conditions (RECs) with respect to the Site as defined in ASTM E1527-13. Exceptions to, or deletions from, this practice are described in Section [9.1] of this report.

The Site is a rectangularly shaped real property located in the Tarzana neighborhood of Los Angeles, California (Figure 1). Currently, the 1.51-acre parcel is developed with an approximately 46,128 square foot irregular shaped building that is occupied by Columbia College Hollywood, which is a trade school for film/movie production. The building is located in the northern half of the Site and the southern half is asphalt paved parking lot. The building was originally constructed in 1975 and was first occupied by Panavision, Inc., a movie camera manufacture. Following Panavision, the Site has been occupied by the film school operations, primarily Columbia College Hollywood. The Site is equipped with an active sub-slab depressurization system (SSDS) which was installed in 2011/2012 in an effort to mitigate vapor intrusion from sub-surface contamination resulting from the adjacent property to the east. Figure 2 shows the SSDS system layout and Figure 3 shows the site details.

On June 1, 2021, Roux visually assessed the Site during the site reconnaissance for potential RECs, including, but not limited to, potential underground storage tanks (USTs), aboveground storage tanks (ASTs), polychlorinated biphenyl (PCB)-containing equipment, hazardous materials storage or handling areas, containerized or bulk wastes, and visual indications of impacted soil.

Roux also performed a records review in an effort to identify RECs in connection with the Site. This records review addressed the Site and surrounding properties. Roux reviewed commercially available records associated with the Site and nearby properties to assess potential concerns associated with the migration of hazardous substances. The records review also included reasonably ascertainable historical data, which can be helpful in identifying the past uses of the Site and surrounding areas, as it may relate to the environmental condition of the Site.

Roux performed interviews and/or file reviews with various government agencies and other parties with possible knowledge of the Site and surrounding properties in an effort to identify current and past uses of the Site and surrounding areas, as they may relate to the environmental condition of the Site.

ASTM E 1527-13 defines a Recognized Environmental Condition (REC) as:

"The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."

A Controlled Recognized Environmental Condition (cREC) as:

"A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain

in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

And a Historical Recognized Environmental Condition (hREC) as:

"A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition."

The term recognized environmental condition is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

This Executive Summary provides a brief overview of the findings of this Phase I ESA. Although the Executive Summary is an integral part of a report, it does not substitute for reading the entire report or the appended or referenced documents in order to fully understand the findings and potential environmental concerns associated with the Site.

Based on the information obtained through the performance of this ESA, Roux identified the following RECs in connection with the current and historical operations at the Site or adjacent properties. To avoid confusion, all RECs, cRECs, hRECs, and OEFs are numbered sequentially.

Identified RECs

Roux did not identify known or suspected RECs in connection with the current and historical operations at the Site.

Identified cRECs

Roux identified the following cRECs in connection with the current and historical operations at the Site or adjacent properties.

CREC #1- Sub-Slab Depressurization System (SSDS)

Vapor extraction points, air inlet points, and vapor monitoring points are located throughout the building as part of a sub-slab depressurization system (SSDS). The SSDS is for on-going vapor extraction that is being conducted to keep subsurface soil vapors from migrating into building indoor air. Vapor extraction points and air inlet points are located in the building walls and vapor monitoring points are located in the floors beneath removable linoleum floor tiles. The on-going sub-slab depressurization at the Site is a result of investigations conducted at the adjacent property to the east, formerly occupied by Bodycote Thermal Processing West, Inc. (Bodycote). The remedial effort associated with the SSDS has been ongoing since 2010 and has received regulatory review each year.

In addition, a July 25, 2019 document issued by Juli Propes, Unit Chief, Site Mitigation & Restoration Program provides the current approval of the remedial system on the Site. In the document, the Department of Toxic

Substances Control (DTSC) confirms a review of the "Revised First Five-Year Review and 2018 Annual Sub-Slab Depressurization System Operation, Maintenance, and Monitoring Report" (Report) (Geosyntec, June 2019), for the Former Bodycote Thermal Processing Facility located at 18600 Oxnard Street, Tarzana, California (Site). The Report details the operation, maintenance and monitoring of the Sub-Slab Depressurization System (SSDS) installed at the Site.

DTSC states the system operation is in compliance with the approved remedy as selected in the Interim Removal Action Workplan (IRAW) approved by DTSC on March 13, 2012. The submittal of this Report is in accordance with The Removal Action Implementation Report that was approved by DTSC on June 4, 2013. The DTSC letter confirms the effectiveness and performance of the remedy selected and that it meets the objectives of protecting the indoor air from vapor intrusion of Perchloroethylene (PCE) from the subsurface. 0 The DTSC indicates the operation of the SSDS at the Site will continue until remediation of PCE in soil vapor, using the soil vapor extraction system currently in operation at the Site next door, is complete and the post remediation cumulative health risk of PCE in indoor air does not pose a threat to the students, staff and faculty of the Site.

Currently no violations and deficiencies are noted by responsible agencies. Due to the nature of the approved remediation this issue is considered a Controlled Recognized Environmental Condition.

CREC #2 – Agency Evaluation of Past Chemical Usage

A directive letter was issued by the DTSC dated June 26, 2017 regarding legal matters of the former Panavision, Inc. at the Site. In the letter the DTSC discusses their oversight on the former Bodycote property to the east of the Site, and the results of soil and groundwater investigations in which concentrations of TCE and PCE in soil were found to increase with depth. According to the DTSC ,results of sampling close to the Site's eastern boundary indicated a possible secondary source of contamination located at the former Panavision property (Site), and evaluation of the SSDS operational effectiveness indicates a source on the CCH property. The DTSC references a Phase I ESA conducted in 1996 (PHASE ONE, Inc., 1996) in which full and/empty drums of TCE were documented to be on-Site during an inspection, and that a Panavision representative confirmed solvent use at the facility for cleaning parts. Based on the information the DTSC identified Panavision as a responsible party required to investigate and cleanup the Site, and asked Panavision to contact the DTSC to discuss the matter (DTSC, 2017).

However, in an email thread (Subject: Panavision : Scoping Meeting) dated September to November 2017 between Lynn Goldman and Manjul Bose of the DTSC and Martin J. "Kelly" McTigue of O'Melveny & Myers LLP (apparently a lawyer for Panavision). A discussion regarding the 1996 Phase I ESA and the use of TCE is pursued. As per the email thread, it was clarified that the 1996 Phase I ESA referenced trichloroethane (TCA) and not TCE. As a result of the discussion, the DTSC stated that "You may consider this matter closed."

In 2016, an additional soil, soil vapor, and groundwater investigation was conducted by SLR, which included the installation of soil vapor probes and groundwater monitoring wells at the former Bodycote property and the Site property (SLR, 2016). On-Site soil vapor probe SSV-10 and groundwater monitoring well MW-6 were installed as part of this investigation.

PCE and TCE were detected at maximum concentrations of 0.712 micrograms per liter (ug/l) and 0.015 ug/l, respectively, in soil vapor samples collected from SSV-10. VOCs were not detected in any of the soil samples collected and analyzed from SSV-10. Groundwater grab samples collected from SSV-10 and groundwater samples collected from MW-6 contained PCE and TCE at maximum concentrations of 2.8 ug/l and 11 ug/l, respectively (SLR, 2016).

In February 2011, a work plan was submitted by AMEC Geomatrix (AMEC) to conduct a pilot test to determine the operational parameters for a full-scale sub slab depressurization system(SSDS) and to evaluate the effectiveness of an SSDS in preventing vapor intrusion at the former Bodycote building as well as the Site building (AMEC, 2011b). The DTSC approved the workplan and stated that the system was anticipated to run for approximately five years, and that a land use covenant would be recorded to prohibit residential use or construction “below utilities.” The remedial effort associated with the SSDS has been ongoing since 2010 and has received regulatory review each year. Currently, no violations and deficiencies are noted by responsible agencies. Due to the nature of the approved remediation (also reviewed above in CREC #1), this issue is considered a Controlled Recognized Environmental Condition.

Identified hRECs

Roux did not identify hRECs in connection with the current and historical operations at the Site or adjacent properties.

Business Environmental Risks (BERs)

Roux has identified the following Business Environmental Risks (BERs) in connection with the Subject Property:

The building is designed for the current use, if future plans include changing use the SSDS system may need to be modified. Additional usage of the undeveloped portion of the property would need to evaluate and potentially install a SSDS.

1. Introduction

Roux Associates, Inc. (Roux) completed this Phase I Environmental Site Assessment (ESA) of the commercial property located at 18618 Oxnard Street, Tarzana, California 91356 (the Site). The Site location is shown in Figure 1. Roux performed this Phase I ESA in compliance with the scope and limitations of American Society for Testing Materials (ASTM) E1527-13 and the terms and conditions of Roux' proposal dated May 25, 2021. Roux conducted this Phase I ESA for the benefit of Palatine Capital Partners Management, LLC (Palatine, the User).

The following sections of this report present our Phase I ESA findings and conclusions. A glossary containing terms and definitions presented in ASTM E1527-13 is included in Appendix A – Glossary of Terms. Other appendices presented at the end of the report include historical topographic maps, historical aerial photographs, regulatory records review documentation, applicable historical records, and personnel qualifications.

1.1 Purpose

The purpose of this Phase I ESA is to identify and report, to the extent feasible, recognized environmental conditions (RECs) with respect to the Site. Performing a Phase I ESA in general compliance with ASTM E 1527-13 may enable a User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) liability. That is, the practice that constitutes one of the requirements for “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice” as defined in 42 USC Section 9601(35) (B).

1.2 Scope of Services

The scope of services for this Phase I ESA included, but was not limited to, the activities listed below.

- A review of reasonably ascertainable and practicably reviewable topographic maps, historical aerial photographs, and city directories, if available, to investigate past Site conditions;
- A review of specific government lists pursuant to ASTM Standard E 1527-13 regarding environmental activities for the Site and local area properties;
- A review of recorded land title records, building, assessors, and fire department records, for permits, citations, and reports connected to the Site that were reasonably ascertainable, practicably reviewable, and publicly available within reasonable time and cost;
- An inspection by an environmental professional to investigate the current use of the Site and to identify environmental concerns including but not limited to, the presence of hazardous substances or petroleum products, wastes, underground storage tanks (USTs), aboveground storage tanks (ASTs), or other environmental concerns;
- Interviews with available representatives of the owner of the Site, occupants, and local government officials by an environmental professional; and
- Preparation of this Phase I ESA report.

Roux initiated this Phase I ESA pursuant to receipt of written authorization to proceed on May 25, 2021.

1.3 Standard of Care

Roux conducted this Phase I ESA using a defined scope of services considered appropriate and agreed upon by all parties on the date the service was authorized, unless the scope of services or the methods used were later modified, in writing, and accepted by all parties prior to performance. Roux conducted this Phase I ESA in accordance with generally accepted practices in a manner consistent with that level of care exercised by other members of our profession in the same locality and under similar conditions of time and accessibility of improvements and information. No other representations, expressed or implied, and no warranty or guarantee is included or intended to be part of this Phase I ESA.

Please note that the scope of services performed in execution of this assessment may not be appropriate to satisfy the needs of other parties. We, therefore, are not responsible for independent conclusions, opinions, or recommendations of others based on our assessment. Furthermore, this Phase I ESA relates to the environmental conditions of the Site and does not address issues raised in transactions such as business risk, purchase of business entities, or interests therein, or of their assets, that may well involve environmental liabilities pertaining to properties previously owned or operated or other offsite liabilities.

Additionally, the findings of this Phase I ESA are based on Roux' observations, inquiries, and historical research using reasonably ascertainable and practically reviewable information obtained within reasonable time and cost constraints. Roux does not represent that this Phase I ESA is an exhaustive investigation that reflects the findings of all of the information available for the Site, nor is it representative of future Site conditions. If additional information is generated from the Site, it should be provided to Roux so that we may evaluate its impact on our conclusions. As such, activities or episodes that transpire subsequent to this Phase I ESA are not considered in this assessment. It is not intended that a Phase I ESA in accordance with ASTM E1527-13 be an exhaustive assessment of a property nor can it wholly eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with a property.

1.4 Assumptions

This Phase I ESA Report, including the exhibits attached hereto, describes the results of Roux' investigation to identify the presence of *recognized environmental conditions* connected with the Site in accordance with ASTM E1527-13, as allowed by and consistent with the regulatory requirements of the All Appropriate Inquiry Rule, 40 CFR Part 312, Amendment to Standards and Practices for All Appropriate Inquiries Under CERCLA, Final Rule, published December 30, 2013 (AAI Rule). Specifically, the preamble to the amended AAI Rule states:

The Environmental Protection Agency (EPA) today is taking final action to amend the standards and practices for conducting all appropriate inquiries under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) to reference a standard practice recently made available by ASTM International, a widely recognized standards development organization. Specifically, this final rule amends the "All Appropriate Inquiries Rule" at 40 CFR Part 312 to reference ASTM International's E1527-13 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" and make clear that persons conducting all appropriate inquiries may use the procedures included in this standard to comply with the All Appropriate Inquiries Rule¹.

¹ Federal Register: December 30, 2013 (Volume 78, Number 250) Page 79319.

One of the requirements that a person acquiring real property must meet in order to qualify for either the innocent landowner, contiguous owner, or bona fide prospective purchaser (collectively hereinafter “Prospective Purchaser”) defense to liability under the federal Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended by the Superfund Amendments and Reauthorization Act of 1986, and the Small Business Liability Relief and Brownfields’ Revitalization Act of 2002, 42 U.S.C. 9601-9675 (collectively referred to hereafter as “CERCLA”) is that person must conduct all appropriate inquiries into the previous ownership and uses of the property in conformance with the AAI Rule (or the ASTM E1527-13) prior to acquisition of the property. The User has acknowledged that, under the AAI Rule, Roux’ performance of this Phase I ESA in accordance with ASTM E1527-13 will not alone result in the User satisfying all requirements of the AAI Rule and will not in itself provide a defense to CERCLA liability. The User has acknowledged that the AAI Rule also requires that the Prospective Purchaser undertake certain additional inquiries and post-acquisition activities to satisfy the CERCLA AAI requirements. Accordingly, Roux makes no guarantees or warranties, expressed or implied, regarding this Phase I ESA, including without limitation, that this Phase I ESA will qualify the User for a defense to CERCLA liability.

Roux has performed this Phase I ESA in a professional manner using that degree of skill and care exercised for similar projects under similar conditions by reputable and competent environmental consultants. Professional judgments expressed herein are based on the facts currently available to Roux.

The AAI Rule requires, and the conclusions and recommendations stated herein represent, the application of a variety of engineering and technical disciplines to material facts and conditions associated with the Site. As such, these conclusions and recommendations are based on subjective interpretations and the exercise of discretion based on the facts available to Roux and conditions at the time of the performance of this Phase I ESA. Many of these facts and conditions are subject to change over time. Accordingly, the conclusions and recommendations must be considered within this context.

The User has agreed that Roux shall not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time this Phase I ESA was performed. To the extent practicable, Roux has identified data gaps, and has evaluated the potential significance of such data gaps. Recommendations to address those data gaps are presented herein and are based on the data available at the time of the performance of this Phase I ESA. Implementation of the recommendations may not fully address the data gaps, and the information obtained from execution of those recommendations may alter and/or modify the interpretation of the Site conditions and conclusions, herein. This Phase I ESA does not include consideration of matters specifically excluded by ASTM E1527-13, including but not limited to, asbestos-containing building materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, and mold unless specifically identified herein.

Roux has not collected any soil and/or groundwater samples on the Site for Phase I purposes, and is relying on information presented by others, often in preliminary, draft, or verbal form. By referencing this information, Roux does not accept responsibility for the accuracy of the underlying data, sampling methods, laboratory analysis, or documentation.

This Phase I ESA Report should not be considered a legal interpretation of existing environmental laws and regulations. This Phase I ESA was conducted with a reasonable degree of inquiry to identify *recognized environmental conditions*, but uncertainty is not eliminated. No Phase I ESA can wholly eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with a property.

The Phase I ESA process is intended to reduce, but not eliminate, the uncertainty involved with identifying *recognized environmental conditions*.

This Phase I ESA Report is not an appraisal or value judgment of the Site. The User has agreed that Roux shall not be liable for any use of this Phase I ESA Report as an appraisal or value judgment of the Site.

This Phase I ESA Report has been prepared for the exclusive use of the User for specific application to the Site covered by this Phase I ESA Report. The User has agreed that any third-party use of this Phase I ESA Report, upon disclosure by the User, is the sole responsibility and at the sole liability of the User.

1.5 User Reliance

No additional parties may use the information contained in this report without obtaining the written permission of Roux or the User. Roux' duties and obligations extend to the User and to no other party. Roux' duties and obligations to the User are not transferable to persons, corporations, or organizations without the express written consent of the User and Roux. The User may rely upon the information provided in this Phase I ESA report for a period of 180 days from the date of issue. After 180 days, this Phase I ESA should be updated in accordance with ASTM guidance. Roux will not be liable for any consequential damages arising from the use of this report for other than its intended purpose, for use of this report beyond 180 days of its issue date, or from unauthorized use by third parties.

This Phase I ESA report must be read and interpreted as a whole and can only be considered representative of the conditions of the Site as of the date of our site reconnaissance described herein. Roux makes no representation whatsoever concerning the condition of the Site beyond the date of our site reconnaissance described herein. Individual sections and appendices of this report are dependent on the balance of this report, and on the terms, conditions, and stipulations contained in the proposal and written amendments accepted by Roux.

2. Site Description

2.1 Site Location and Description

Site Information	
Site Name	Oxnard Street
Street Address(es)	18618 Oxnard Street
City	City of Tarzana
County	Los Angeles
State	California
Location	South of Oxnard Street, between Baird Avenue to the west and Yolanda Avenue to the east
Assessor's Parcel Number (APN)	2156-006-018
Site Acreage (per Los Angeles County Assessor Website)	1.50 acres
Site Occupant(s)	Columbia College Hollywood
Onsite Operations	Film school
Description of Onsite Structures	Two-story building occupied by the film school and includes offices, classrooms, television studio, sound/recording studios, theaters, library, computer labs, common areas and more.
Site Paving	Primarily paved asphalt to the west and south of the structure. Many portions of the asphalt were observed to be in poor condition with significant cracking.
Site Grading	Graded to drain at a gentle slope roughly oriented south to north
Site Vicinity	Mixed commercial and residential / industrial

Refer to Section 5 for a detailed description of the current condition of the Site and operations.

2.2 Vicinity General Characteristics

The facilities and improvements which are located immediately adjacent to the Site are provided in the following table.

Direction from Site	Improvements / Use (Addresses)
North	Oxnard Street followed by Red Barn Feed and Pet Store (18601 Oxnard Street) and parking lot for the Reseda Station Park/Ride parking lot.
East	Former Bodycote property not a vacant asphalt-paved lot (18600 Oxnard Street). The vapor extraction system (VES) enclosure and SSDS equipment are present along with a shed and storage containers utilized by CCH to store furniture, props and other miscellaneous items. Further east is the LADPW Bureau of Sanitation Reseda Sewer Maintenance Yard (18560 Oxnard Street).
South	Multi-tenant apartment complexes followed by Hatteras Street
West	Large building for Tarzana Treatment Center, Inc., a healthcare provider (18646 Oxnard Street)

2.3 Past Use of the Site

Roux performed a review of historical sources including topographic maps (Appendix B), aerial photographs (Appendix B), fire insurance Sanborn maps (Appendix B), and city directories (Appendix B) obtained from Environmental Data Resources, Inc. (EDR).

Based on this review, the Site was initially vacant land prior the initial development of rural residential structures which were first observed in 1928. The Site appears to have been occupied by the residential structures onto the 1960s, but is observed to be vacant by 1967. The present-day commercial building was reportedly constructed in 1972 and is visible in the 1977 aerial photograph. Historical tenants at the Site include Panavision Inc. (1975 to 1995), which was reportedly a manufacturing operation of movie cameras. Between 1995 to present-day, the tenants have been the film school under the name Columbia College Television or Columbia College Hollywood.

2.4 Physical Setting

Roux obtained and reviewed published, reasonably ascertainable information concerning the physical setting of the Site. The following is a summary of the information reviewed from those physical setting sources.

Physical Setting Summary	
United States Geological Survey (USGS) Topographic Map	Canoga Park, California Quadrangle
Approximate Site Elevation/ Source	755 feet above mean sea level (msl) / Canoga Park, California (2012) 7.5-minute quadrangle topographic map published by the USGS
Nearest Surface Water Features/ Approximate Distance	Concrete-lined Los Angeles River located 3,800 feet north and the concrete-lined Cabello Creek, located 2,800 feet east of the Site.
Regional Geology / Source	Site is located within the San Fernando Valley area, with the Los Angeles Basin region. The Site vicinity is underlain by undivided, Quaternary-aged alluvium, underlain by Pliocene-to Pleistocene-aged, non-sedimentary rocks.
Site Topography / Source	Generally flat with a gradual slope to the north / Site observation and USGS topographic map.
Hydrogeological Region / Source	Located along the eastern edge (Crestal portion) of the Santa Monica Subbasin within the Coastal Plain of Los Angeles Groundwater Basin/ <i>California Department of Water Resources Bulletin 118, Update 2003 and Interim Update 2016.</i>
Depth to Groundwater / Source	Approximately 60-75 feet bgs / Groundwater monitoring data from investigation in 2016 and 2009 on the adjacent property east.
Groundwater Gradient Direction/ Source	Variable from the northeast to southeast / Groundwater monitoring data from investigation in 2016 and 2009 on the adjacent property east.
Onsite Soil	Mainly sand and silt with lenses and discontinuous beds of gravel and clay from the ground surface to approximately 100 feet bgs (FREY, 2021).

3. Sources of Information

Sources of information utilized in preparing this Phase I ESA report included historical topographic maps; historical aerial photographs; a walkover survey of the Site and adjoining properties; in-person discussions with User and tenant personnel; a review of records available at selected local and state regulatory agencies; a review of databases maintained by local, state, and federal government agencies; and other records available from commercial and online sources.

3.1 Historical Sources

To help understand the history of the Site and past land uses, historical sources were obtained from Environmental Data Resources, Inc. (EDR), of Shelton, Connecticut. The sources and locations within the Appendices are provided in the table below. Roux was provided by the User a recent Phase I conducted in May 2021 that included recently acquired reports from EDR. These previously obtained EDR reports, with the exception of the EDR Radius Report, were reviewed by Roux and are included in the appendices. Roux ordered a new EDR Radius Report for this investigation.

EDR Historical Sources		
Historical Range	Source	Appendix
1903 - 2012	U.S. Geological Survey Topographic Maps	B
1928 - 2016	EDR Aerial Photographs "Decade Package"	B
No Available Coverage	EDR "Certified Sanborn® Map Report"	B
1920 - 2014	EDR "City Directory Image Report"	B

Note: Due to copyright restrictions, the aerial photographs and topographic maps reviewed on Google Earth were not included in the appendices.

3.2 Site Reconnaissance

On June 1, 2021, Roux personnel conducted a reconnaissance of the Site, including the interiors of all of the buildings. During the Site reconnaissance, Roux interacted with Mr. Patrick Olmstead, current Vice President of Operations for the college. Mr. Olmstead provided limited information regarding recent operation of the Site, which is referenced, as appropriate, throughout the remainder of this Phase I ESA report and granted permission for Roux to document the Site reconnaissance with photographs (Appendix C).

3.3 Regulatory Agencies

Roux contacted governmental agencies for reasonably ascertainable information concerning environmental conditions at the Site. Roux contacted or reviewed information from the agencies provided in the following table. Refer to Appendix D – Regulatory Records Documentation for copies of the records reviewed. A summary of the information gathered from the regulatory agencies is provided in the table and details regarding the records were incorporated into applicable sections as noted.

Agency	Date Requested / Accessed	Response Date	Description of Records	Section Discussed
Federal				
U.S. Environmental Protection Agency (EPA) – FOIAonline	6/4/2021	6/8/2021	A response has not been received as of this report date.	N/A
U.S. EPA MyProperty Database	6/4/2021	N/A	No records were associated with the Site.	N/A

3.3.1 DTSC HWTS Online Database

There were two listings for the Site address, 18618 Oxnard Street, Tarzana. The first listing is an inactive generator ID (CAD08379406) for the facility *Panavision International LP*. Available information for this listing shows the facility generated hazardous waste between the years 1993 to 2003. Non-RCRA hazardous waste generated included 0.25 tons of halogenated solvents in 1993; 7.7 tons of unspecified solvent mixture between 1993-2003; 4.6 tons of oil/water separate sludge in 1994; 2.3 tons of unspecified oil-containing waste in 1994, and 0.06 tons of photochemical/processing waste in 1998.

FREY correctly notes in their 2021 Phase I ESA that manifest listings from 1997 through 2003 for Panavision are likely an error since Panavision had relocated to Woodland Hills by that time. This error could be attributed to Panavision's address not being update or CCH was still generating and manifesting hazardous waste. Regardless, this HWTS listing corroborates the usage of solvents at the former camera manufacture.

The second listing is an inactive generator ID (CAL000351211) for the facility *Columbia College Hollywood*. Available information for this listing shows the facility generated 0.0075 tons of off-spec, aged or surplus organics in 2010.

3.3.2 DTSC EnviroStor

Roux researched environmental cleanup sites and hazardous waste permitted facilities using the DTSC EnviroStor website (DTSC, 2021). Roux reviewed information for the Site and the AOC to assess potential on-Site and off-Site sources of chemicals of concern in soil and groundwater beneath the Site. The DTSC EnviroStor website shows two cases within a one-mile radius of the Site. A voluntary cleanup facility named Columbia College of Hollywood (Former Bodycote Facility) is listed as active as of November 30, 2009 (ID # 60001214), and a corrective action cleanup facility named Former Bodycote Thermal Processing West Inc. is listed active as of August 31, 2015 (ID # 60002255). Both cases are listed for 18600 Oxnard Street (adjacent to the east of the Site) but include information for environmental work conducted at the Site (18618 Oxnard Street). Details of the information from the facility listings in chronological order are below.

In 1996, a Phase I ESA was conducted by PHASE ONE Inc. at the Site which was unoccupied at the time (PHASE ONE Inc., 1996). Panavision, noted as a designer and distributor of motion picture cameras, reportedly occupied the Site for 24 years leading up to the Phase I ESA (since 1972). According to a representative of Panavision, the company was manufacturing and leasing motion picture cameras. Observations made during the Site visit that corroborate the Site was being used for manufacturing included the following: a room that appeared to have been an assembly area; a hazardous material storage room with a 55-gallon drum of trichloroethane (TCA) and other containers 1- to 5-gallon in size containing gas, methanol, developer, vacuum pump oil, and waste oil; a hazardous materials storage area outside the building with three empty drums labeled TCA and one unlabeled full 55-gallon drum; and a room with a fume hood, pressure gages, and staining on the floor. A representative of Panavision reportedly confirmed that the Site had several rooms with vent hoods, and solvents were used for parts cleaning by Panavision. A compressor with two empty 1-gallon containers of compressor oil and an above ground storage tank were observed outside the building, and the Panavision representative said they were unaware of the purpose of them and that they had never been used since Panavision took control of the building (however, it should be noted that Panavision was the first occupant of the building). It was recommended in the report that subsurface sampling be conducted since there was the possibility that solvents were spilled or leaked in the course of 24 years of manufacturing operations (PHASE ONE Inc., 1996).

In 2006, a Phase I ESA was conducted by LFR, Inc. at the Bodycote property (SLR, 2016). The property at 18600 Oxnard Street was occupied by National Heat Treating from 1967 through 1995 and Hinderliter from 1995 through 2000 for the thermal processing of metals that included heat treating / processing of hardened steel parts and fasteners. Bodycote purchased the property in 2000 and conducted operations similar to Hinderliter from 2000 until 2006. The document noted that a clarifier was located on site since the 1970s. Notable observations included surface oil staining around 275-gallon totes of quench oil and oil stains around drums in the southwestern corner of the warehouse and in the equipment storage area.

The previous tenants (National Heat Treating) were noted to have used waste oil and mixed oil. A UST was possibly located at the property, but no physical evidence of the UST was found. No information regarding previous investigations was available and no off-site properties that may have impacted the Site were identified (SLR, 2016).

In 2007, an additional Phase I ESA was conducted by ENVIRON International Corp. for the Bodycote property which was purchased by CCH in 2007 (AE, 2009a). Additional information identified included: information concerning a UST for chemical storage and an abandoned clarifier, PCE was stored in quantities up to 225 gallons at a time, and heat treated salt waste containing copper and cyanide was dumped on the Bodycote property (AE, 2009a).

In 2008, soil vapor sampling was conducted by ENVIRON International Corp. on the former Bodycote property in the building and in other areas of concern outside the building (AE, 2009a). The results revealed concentrations of PCE, TCE and benzene in soil vapor above the respective California EPA Human Health Screening Levels (CHHSLs) (AE, 2009a).

In 2009, a soil and groundwater investigation was completed by Anderson Environmental (AE) on the former Bodycote property which included the installation of nested groundwater monitoring/vapor extraction wells (AE, 2009a). A backhoe investigation was also conducted of geophysical anomalies that were identified based on the most likely subsurface targets in an effort to determine if a UST existed on the property. Soil samples results identified solvent based VOCs such as PCE, TCE, 1,1,1,2-trichloroethane (1,1,1,2-TCA), cis-1,2-dichloroethene (cis-1,2-DCE), 1,2-dichlorobenzene (1,2-DCB), chloroform, and methyl ethyl ketone (MEK). Groundwater samples contained concentrations of PCE, TCE, 1,1-dichloroethene (1,1-DCE), cis-1,2-DCE, and chloroform with the highest detected values of VOCs being PCE and TCE.

As a result, a remedial action feasibility study and conceptual remedial action plan (RAP) was written in 2009 (AE, 2009b). In April 2010, indoor air samples were collected by CEC in the former Bodycote warehouse as at the time CCH had planned to remodel a portion of the interior of the building for school based use (CEC, 2010). Based on results the DTSC directed additional indoor and outdoor air sampling, delineation of the subsurface plume, and soil vapor monitoring (CEC, 2010).

In 2010, an indoor air quality assessment that included two rounds of indoor and ambient air sampling was conducted by AMEC at the Site (AMEC, 2011a). PCE and TCE were detected in most of the samples, and PCE was detected in concentrations above CHHSLs in most of the indoor samples. Subsequently in 2011, an interim removal action work plan (IRAP) that included SSDS pilot test data and results and concluded that SSDS for the former Bodycote property would not be cost effective but would be for vapor mitigating into the Site/CCH building (AMEC, 2011a).

In February 2011, a work plan was submitted by AMEC Geomatrix (AMEC) to conduct a pilot test to determine the operational parameters for a full-scale sub slab depressurization system (SSDS) and to evaluate the effectiveness of an SSDS in preventing vapor intrusion at the former Bodycote building as well as the Site building (AMEC, 2011b). The DTSC conditionally approved the workplan and stated that the system was anticipated to run for approximately 5 years, that the property at 18600 Oxnard Street was listed as the source of VOC-contaminated soil vapor, and that a land use covenant would be recorded to prohibit residential use or construction “below utilities.”

Between December 2011 and May 2012, a SSDS was installed by Geosyntec at the Site consisting of nineteen vapor extraction points (EPs), seven air inlet points (APs), conveyance pipes, twelve performance monitoring points (PMPs), and a vapor extraction and treatment system (Geosyntec, 2013). The SSDS was tested in June 2012 and standard O&M at the Site was initiated in October 2012. A figure depicting the SSDS layout at the Site is included in Figure 2..

In 2016, an additional soil, soil vapor, and groundwater investigation was conducted by SLR which included the installation of soil vapor probes and groundwater monitoring wells at the former Bodycote property and the Site property (SLR, 2016). On-Site soil vapor probe SSV-10 and groundwater monitoring well MW-6 were installed as part of this investigation. PCE and TCE were detected at maximum concentrations of 0.712 micrograms per liter (ug/l) and 0.015 ug/l, respectively, in soil vapor samples collected from SSV-10. VOCs were not detected in any of the soil samples collected and analyzed from SSV-10. Groundwater grab samples collected from SSV-10 and groundwater samples collected from MW6 contained PCE and TCE at maximum concentrations of 2.8 ug/l and 11 ug/l, respectively (SLR, 2016).

In 2017, an additional soil, soil vapor, and groundwater investigation was conducted by SLR which included the installation of soil vapor extraction wells and additional soil vapor probes at the Bodycote property (SLR, 2017). In response to the results of the investigation the DTSC concurred that the vertical extent of contamination was delineated, that an additional groundwater monitoring well should be installed, and that workplan for soil vapor extraction (SVE) testing should be prepared. Subsequently in 2017, an SVE test workplan was prepared, and SVE pilot testing was completed at the former Bodycote property (SLR, 2018). In 2018, the former Bodycote building was demolished. Subsequently, a SVE remedial system was installed by Jacobs with conveyance piping to existing vapor extraction wells and three groundwater wells which are now dry due to a drop in groundwater elevations beneath the property (Jacobs, 2019a). The SVE system was operated on a test basis following system installation and shut down in February 2019 pending DTSC review (Jacobs, 2019a). In April 2019, standard O&M of the SVE at the former Bodycote property was commenced (Jacobs, 2019b).

The most recent O&M report for the SSDS operating at the Site available to review on the EnviroStor website is dated June 12, 2019, and documents work conducted in 2018 (Geosyntec 2019). According to the report a total 105.2 pounds of VOCs are estimated to have been removed from the subsurface of the Site via the SSDS since its operation was initiated at the Site in 2012 (Geosyntec 2019).

3.3.3 SCAQMD and SCAQMD Online FINDS Database

Available documents for the Site address were provided by the SCAQMD upon a file request and at the online FINDS database. The following bullets outline reviewed documents:

- 1986 Facility Equipment List Report for Panavision, Inc. (Facility ID 6826) for a “spray booth paint and solvent” (Permit No. D02963). The location of this former spray paint booth is unknown.

- 1988 Permit to Operate for the spray booth operated by Panavision, Inc.
- 2012 Permit to Operate for Columbia College Hollywood (Facility ID 169745) for SSDS installed at the Site building. The permit number for this equipment is G18759 and is currently active.
- 2008 Violation issued to Argus Contracting Inc. (ID 133181) related to asbestos debris or asbestos containing material. This document contains limited information and does not detail if significant ACM was removed from the Site.
- June 2008 *Notification of Demolition or Asbestos Removal* form that indicates that 800 square feet of ACM in roofing material.
- September 2016 Rule 1403 Form for *Notification of Demolition or Asbestos Removal* that indicates 2,640 square feet of mastic and floor tiles were removed from Classroom H of the Site building.
- August 2016 Rule 1403 Form for *Notification of Demolition or Asbestos Removal* that indicates 1,800 square feet of mastic and floor tiles were removed from Classroom H of the Site building.

3.3.4 Los Angeles Fire Department

The Site address was identified in the LAFD online inventory list for in-active hazardous materials facilities as Panavision (Facility ID F0002197). Roux requested records for this listing but has not yet received a response.

3.3.5 LADBS Online Permits

Roux reviewed available online permits from the LADBS for the Site address 18618 Oxnard Street, as well as for the Site APN. Not all permits documented online included an image of the actual permit documentation, but nearly all permit records in the LADBS online-system did contain brief descriptions of the permit purpose. Roux did not request to review permits without online images in-person as available details were generic in nature and did not suggest an environmental concern (i.e. installation of a UST). The majority of permits reviewed were related to typical electrical or plumbing work and tenant improvements such as changes in interior walls, new signs, and HVAC installations. Notable permits reviewed included:

- 1972 grading and building permits for new construction of the commercial structure;
- 1972 application to add a “18.8’ x 9.4’ electrical transformer room on 1st fl. (ground floor) – within bldg.”. Refer to Section 5.0 for a discussion on this electrical transformer located within the building.
- A June 1972 permit that references Panavision, Inc., indicating that they were the occupant from the building’s initial construction.

3.4 Government Databases

To document potential sources of contamination at or near the Site, a government records search was conducted by EDR. The search included local, state, and federal records for the Site and for other properties within ASTM-standard distances of the Site. The records search is summarized in Section 8.0 and a copy of “The EDR Radius Map™ Report with GeoCheck®,” dated June 7, 2021, is included in its entirety as Appendix E. As recommended by ASTM, all but a few of the databases searched were “current,” i.e., had been updated within 90 days prior to the search date.

3.5 User Provided Information

ASTM E1527-13 provides that the User perform certain tasks. The purpose of this section is to present select User-provided information that can assist in identifying possible *recognized environmental conditions* in connection with the Site. According to ASTM E1527-13, these tasks do not require the technical expertise

of an environmental professional and the environmental professional generally does not perform these tasks. Roux administered a questionnaire to the User at the beginning of this Phase I ESA to assist them with these tasks. The following sections outline the parts of the questionnaire that the User completed.

3.5.1 Environmental Liens or Activity and Use Limitations

The User indicated that they have no knowledge regarding environmental liens or activity and use limitations (engineering/institutional controls) with respect to the Site.

3.5.2 Specialized Knowledge

The User did not report any specialized knowledge related to the Site. The User provided facility plans for the Site from early 1968 that were superseded prior to construction as confirmed by as-built drawings and historical sources.

3.5.3 Valuation Reduction for Environmental Issues

The User indicated that they have no knowledge regarding valuation reduction for environmental issues.

3.5.4 Commonly Known or Reasonably Ascertainable Information

The User did not have any knowledge regarding commonly known or reasonable ascertainable information about the Site not otherwise addressed.

3.5.5 Obvious Indicators of the Presence or Likely Presence of Contamination of the Site

The User did not have any knowledge regarding obvious indicators of the presence or likely presence of contamination of the Site not otherwise addressed.

4. Site History

This section documents the history of the Site and describes current conditions and existing or former environmental features.

4.1 Site History

The history of the Site and, to a lesser extent, the surrounding area, including previous land use, has been compiled based on information from the exhaustive list of sources provided in Section 3.

Summary of Historical Sources				
Decade	Year	Source	Site Description	Vicinity Description
Predevelopment History				
Pre-1900			No available information	
1900s	1903	Historical Topographic Map: Calabasas (15-minute)	The Site appears undeveloped and is immediately south of an east-west trending branch of the Pacific Electric Railroad, apparently labeled the Chatsworth Park Branch.	The Site vicinity appears largely undeveloped.
Initial Site Development				
1910s			No available information	
1920s	1928	Historical Topographic Map: Reseda (7.5-minute)	The Site location is distinguishable based on newly mapped streets, including the present-day Oxnard Street, and there appears to be a structure marked in the northern portion of the Site.	The east-west trending railroad branch is still present just north of the Site, now identified as the Southern Pacific. The Los Angeles River and the east-west trending Pacific Electrical railroad line are present to the north.
		EDR Aerial Photograph	The Site is developed with several small structures in the northern half, likely rural residences and sheds/barns supporting the surrounding agricultural operations. The southern half of the Site appears vacant and may possible be used for agricultural purposes.	The railroad line just of present-day Oxnard Street is present. The majority of development in the Site vicinity appear to be rural residential and light agricultural.
1930s	1938	EDR Aerial Photograph	Same as previous aerial photograph description.	Same as previous aerial photograph description.
1940s	1944	Historical Topographic Map: Calabasas (15-minute)	Same as previous topographic map description.	Same as previous topographic map description.

Summary of Historical Sources				
Decade	Year	Source	Site Description	Vicinity Description
	1947	Historical Topographic Map: Calabasas (15-minute)	Same as previous topographic map description.	Same as previous topographic map description.
		EDR Aerial Photograph	Previously described structures located in the northern half appear to be present, however, there are now several large trees throughout the Site that obstruct the view.	Same as previous aerial photograph description.
1950s	1952	Historical Topographic Map: Canoga Park (7.5-minute)	Same as previous topographic map description.	There is a moderate increase in development in the Site vicinity, primarily residential neighborhoods.
		EDR Aerial Photograph	Same as previous aerial photograph description.	There is a moderate increase in development in the Site vicinity, primarily residential neighborhoods.
Commercial Redevelopment				
1960s	1964	EDR Aerial Photographs	Same as previous aerial photograph description.	There is increased commercial development along Oxnard Street, including the large commercial building on the immediately adjacent parcel west.
	1967	EDR Aerial Photographs	The Site is cleared of previous structures and vegetation and is vacant.	The parcel immediately east is now developed with the rectangular building that was utilized by the former thermal metal processing operations.
		Historical Topographic Map: Canoga Park (7.5-minute)	The Site location appears to be marked with a small structure.	Same as previous topographic map description.
1970s	1970	EDR Aerial Photographs	Same as previous aerial photograph description.	Same as previous aerial photograph description.
	1977	EDR Aerial Photographs	The present day "U-shaped" structure is present in the northern half of the Site. The southern half is parking lot.	Same as previous aerial photograph description.
1980s	1983	EDR Aerial Photographs	Same as previous aerial photograph description.	Same as previous aerial photograph description.
	1989	EDR Aerial Photographs	Same as previous aerial photograph description.	Same as previous aerial photograph description.

Summary of Historical Sources				
Decade	Year	Source	Site Description	Vicinity Description
1990s	1995	EDR Aerial Photographs	The Site appears generally unchanged, although there is an addition to the southeast corner of the building, which during the current Site visit was utilized as a sound studio.	Same as previous aerial photograph description.
2000s	2002	EDR Aerial Photographs	Same as previous aerial photograph description.	Same as previous aerial photograph description.
	2005	EDR Aerial Photographs	Same as previous aerial photograph description.	Same as previous aerial photograph description.
	2009	EDR Aerial Photographs	Same as previous aerial photograph description.	Same as previous aerial photograph description.
2010s	2012	Historical Topographic Map: Canoga Park (7.5-minute)	Same as previous topographic map description.	Same as previous topographic map description.
	2012	EDR Aerial Photographs	Same as previous aerial photograph description.	Same as previous aerial photograph description.
	2018	Google Earth	An August 2018 aerial shows the Site in the same condition as previously described with the “U”-shaped structure in the northern portion and parking lot in the southern portion.	The former warehouse building immediately adjacent east has been demolished. The enclosure containing the SSDS and SVE systems is present along the eastern boundary of the Site building.
2020s	2021	Google Earth	Same as previous aerial photograph description.	Same as previous aerial photograph description.

5. Current Site Conditions

A Roux representative conducted a reconnaissance of the Site and surrounding areas on June 1, 2021. During the Site visit, Roux representative Mr. Justin Allen met with Mr. Patrick Olmstead, the current Vice President of Operations. Roux also visually and/or physically observed adjoining properties from reasonably accessible locations on the Site and public thoroughfares. During the Site reconnaissance, the weather was clear and the temperature was approximately 75° Fahrenheit. The following sections summarize observations during the inspection.

5.1 Site Reconnaissance

At the time of the Site reconnaissance, the Site was occupied by Columbia College Hollywood, the film production school. The Site is accessed on the north side from a gated driveway along Oxnard Street. The building on Site is a two-story structure that includes offices, classrooms, a library, conference rooms, filming stages, two sound recording studios, two theaters, common dining areas with kitchen appliances, maintenance and equipment storage areas, electrical rooms, and sewer rooms. In the northeast corner of the building is a loading dock area. This room was observed to store miscellaneous chemicals such as propane canisters, paint, stains, and standard cleaning supplies.

There were two elevators observed on Site. A small equipment elevator was located in the northern portion of the structure near the equipment room and the second a standard passenger elevator is located in the southern portion near the lobby. Flooring throughout the building varied from vinyl tiling, tile, carpet, and exposed concrete.

Observed throughout the building were components of the SSDS including piping, vapor extraction points, air inlet points, and vapor monitoring points which were located in the concrete slab.

Outside of the building, the Site is primarily paved with asphalt for limited parking west of the structure and then additional parking to the south. Asphalt was observed to be in moderate to poor condition, particularly in the southern area, with significant cracks and deterioration. Roux also observed multiple irregular asphalt/concrete patches

Roux observed two well covers that were associated with the previous investigations for the adjacent property. In the southernmost portion of the Site were storage sheds and trash enclosures. At the time of this reconnaissance, Roux observed 15-18 55-gallon steel drums that apparently contained investigation derived waste from recent investigations conducted on either the Site or the adjacent property east, according to Mr. Olmstead.

While not technically within the Site boundary, Roux did observe the adjacent east property which is accessible via driveways from the parking lot on the Site. Bordering the east side of the Site structure is the enclosure that contains the SSDS and SVE equipment servicing the Site and the former Bodycote property, respectively. Roux observed several well boxes for current and former borings and monitoring locations.

5.2 Phase I ESA Observations

During Site reconnaissance, Roux personnel attempt to identify any environmental features that may be relevant in the context of the Phase I ESA. The features identified are summarized in the table below. Any such features are discussed in the following subsections.

Feature	Observed on the Site	Observed on an Adjacent Property
Areas of stressed vegetation		
Areas which receive flood or storm water from potentially contaminated areas		
Air Compressor Vent Discharges		
Drainage Swales and Culverts		
Discharge Areas		
Discolored or Spill Areas		
Drums (55 Gallons or Larger)	X	
Electrical Transformers	X	
Former Agricultural Applied Pesticide Area		
Hydraulic Lifts	X	
Incinerators		
Landfills or Landfarms		
Loading and Unloading Areas	X	
Non-Contact Cooling Water Discharge		
Oil-Water Separator(s)		
Open Areas Away from Production Areas		
Process Area Sinks and Piping		
Rail Cars/Railroad Spurs		
Septic Systems Leach Fields or Seepage Pits		
Silos		
Sprayfields		
Storm Sewer and Spill Containment Collection System		
Storm Water Detention Pond		
SSDS Enclosure		X

Feature	Observed on the Site	Observed on an Adjacent Property
Surface Impoundments and Lagoons		
Underground / Aboveground Storage Tanks and Associated Piping		
Waste Piles		

5.2.1 Drums

At the time of this reconnaissance, approximately 15-18 55-gallon steel drums were being stored along the southern wall of the Site next to the garbage enclosure. These drums reportedly contained investigation derived waste (IDW), presumably soil, from recent investigations conducted on the adjacent property east, according to Mr. Olmstead. Roux is not aware of the scope of recent investigations that produced this IDW and whether or not the soil is classified as hazardous or non-hazardous.

Located in the SSDS enclosure on the east side of the building were several 55-gallon drums that presumably contain IDW from subsurface investigations or possibly spent activated charcoal from the SSDS and SVE systems.

5.2.2 Electrical Transformers

Located in the northern portion of the Site building is an electrical transformer identified as *Transformer Station CS419*. The door to this room was locked and Mr. Olmstead stated that he does not have a key to access it. Signage on the door (see photo G-8) indicates that this electrical transformer is property of the Department of Water and Power. A 1972 permit chronicles the installation of an electrical transformer room on the first floor, which is very likely this same LADWP electrical transformer. Because of the age of this feature, transformer oil containing PCBs was likely utilized. Since Roux was not able to access this room containing the transformer, the condition of the equipment and the pavement underneath were not observed. Based on the age of the feature, this electrical transformer is considered an OEF in the context of this Report.

A second small transformer was observed in the northern portion of the building, located just north of the Main Bldg. Switch Room (see Photo G-X). Labels on this transformer state it is a 112.5 kilo-volt-ampere (KVA) three phase dry-type transformer. According to Mr. Olmstead, this small transformer supports the SSDS operation. This has not been confirmed. Based on the condition and type of this transformer, it is not considered an environmental concern.

5.2.3 Hydraulic Lifts and Elevator

Located in the northern portion of the Site next to the Network & Systems Administrator office is an equipment elevator (see Photo G-13). Mr. Olmstead stated that this equipment elevator was previously used by the Panavision, Inc. tenant to transfer equipment from the first floor to the second floor. Roux did not view a mechanical room for this elevator. It is unknown when this elevator was installed. Hydraulic oil used in elevators and similar applications prior to 1979 was sometimes found to contain PCBs. The condition of visible portions of the elevator indicated that the equipment was in good operating condition and it is unlikely that this hydraulic elevator would be a significant source of PCBs resulting from hydraulic oil. This elevator is not considered to be an environmental concern in the context of this Report.

Located in the southern portion of the Site, next to the reception area, is a standard personnel elevator. Roux observed the elevator mechanical room and the machinery appeared to be dated, but in good condition with no visible staining on the concrete pavement. This elevator is not considered to be an environmental concern in the context of this Report.

5.2.4 Loading and Unloading Area

Located at the northern most portion of the Site building is a loading dock within the building. This area is currently being utilized as storage for miscellaneous equipment and is accessed by a roll-up garage door that faces Oxnard Street. Roux did not observe any drains at the base of this loading dock.

5.2.5 Chemicals on Site

Roux observed the storage of miscellaneous cleaning chemicals such as paint cans, propane canisters, sanitizers, bleach, and kitchen cleaning supplies. Observed chemicals were typically in household and commercial size containers, ranging from quart-sized to 5-gallon buckets, and were generally being stored with proper housekeeping protocols (i.e. closed lids, off the ground, not stacked). These observed chemicals are not considered to be an environmental concern.

5.3 Vapor Intrusion

Vapor extraction points, air inlet points, and vapor monitoring points are located throughout the building as part of a sub-slab depressurization system (SSDS). The SSDS is for on-going vapor extraction that is being conducted to keep subsurface soil vapors from migrating into building indoor air. Vapor extraction points and air inlet points are located in the building walls and vapor monitoring points are located in the floors beneath removable linoleum floor tiles. The on-going sub-slab depressurization at the Site is a result of investigations conducted at the adjacent property to the east, formerly occupied by Bodycote Thermal Processing West, Inc. (Bodycote).

6. Adjoining and Nearby Properties

The facilities and improvements which are located immediately adjacent to the Site are provided in the following table. Selected adjoining and nearby properties are shown in Figure 2. Adjoining and nearby properties with potential environmental concerns are described in subsections below as needed.

Direction from Site	Improvements / Use (Addresses)	Environmental Concerns Identified
North	The Site is bound to the north by Oxnard Street followed by the Red Barn Feed & Pet store property and the Reseda Station Park/Ride parking lot.	None
East	The Site is bound by 18600 Oxnard Street, formerly occupied by Bodycote. Access CCH provided access to 18600 Oxnard by CCH personnel to inspect it. The former Bodycote property is mostly paved and vacant with exception of a vapor extraction remedial system (VES) enclosure and a shed located adjacent to the Site building and two storage containers located along the southern property line. The shed and storage containers are currently used by CCH to store old set props, furniture, and files. Various groundwater monitoring wells, soil vapor remediation wells and soil vapor monitoring wells were observed throughout the property and a clarifier is located in the northeast corner of the property.	Vapor issues
South	The Site is bound to the south by apartment complexes followed by Hatteras Street.	None
West	The Site is bound on the west by Tarzana Treatment Center, Inc. followed by two industrial/commercial properties.	None

The property to the east of the Site (former Bodycote - 18600 Oxnard Street) is an CREC.

The AST located on the LADPW property east of the Site is a concern. In review of regulatory database information for the property (identified as 6015 North Baird Avenue), this LADPW facility has been inspected by the LAFD for hazardous materials storage. The facility operated a UST fueling system until approximately 2019. Regulatory information regarding chemical storage in an AST at this property was not identified with exception of a CERS Tanks listing for above ground petroleum storage. Based on additional information on this facility presented herein, it appears unlikely that former and on-going activities at the LADPW property have negatively impacted soil and groundwater beneath the Site.

No other RECs were identified on the properties in the Immediate Site Vicinity.

7. Summary of Key Previous Investigations

The following sections provide a summary of previous environmental investigations at the Site, particularly in regard to sub-slab depressurization system (SSDS) on Site..

7.1 2019 Annual SSDS OM&M Report (Geosyntec, 2020)

The most recent O&M report for the SSDS operating at the Site available to review on the EnviroStor website is dated June 12, 2019, and documents work conducted in 2018 (Geosyntec 2019). According to the report a total 105.2 pounds of VOCs are estimated to have been removed from the subsurface of the Site via the SSDS since its operation was initiated at the Site in 2012 (Geosyntec 2019).

7.2 Phase I ESA (CEC, 2017)

Roux reviewed a Phase I ESA, prepared by Certified Environmental Consultants, Inc. (CEC) and dated March 23, 2017. This report was prepared for Columbia College Hollywood. In this report, CEC stated that they had previously prepared a Phase I ESA report for the Site in 2010, which followed two earlier Phase I ESAs prepared by others in 2004 and 2007.

In this 2017 report, CEC acknowledge that the Site is undergoing active depressurization/remediation as a result from subsurface contamination originating on the adjacent-east property. CEC noted that the “reviewed monitoring data indicated the depressurization/remediation system’s contaminant-recovery values had significantly declined since initial operation of the system, which began in 2012, and near asymptotic declines were reported for the more-recent data” (CEC, 2017). CEC did not specifically identify any RECs or significant data gaps and concluded that the Site was “satisfactorily screened for potential environmental concerns” and “no additional site assessment or remediation activities presently are deemed necessary or recommended” (CEC, 2017). It is unclear if this statement is recommending that the active SSDS be turned off.

7.3 Operation and Maintenance of a Remedial System

Volatile organic compounds (VOCs), particularly tetrachloroethylene (PCE) and trichloroethylene (TCE), have been encountered in soil and groundwater beneath the Site during investigations of the property to the adjacent east of the Site at 18600 Oxnard Street (DTSC, 2012) and subsequently an SSDS was installed. Bodycote Thermal Processing West, Inc. (Bodycote) formerly operated at the 18600 Oxnard Street property, which came into the ownership of CCH in 2007 and was sold sometime after 2007. Copies of documents related to the SSDS operation and maintenance include:

- A copy of an SCAQMD permit for the Site dated June 26, 2012, is for Columbia College of Hollywood (ID # 169745) to operate a sub-slab vapor extraction system.
- A revised budget request from Geosyntec Consultants, Inc. (Geosyntec) dated January 7, 2020 for continued SSDS O&M coordination and reporting for the Site.
- An estimate from Wayne Perry Inc. dated January 5, 2021 to perform monthly environmental sampling visits (12 visits) for the operation and maintenance of (2) soil vapor extraction units including vapor sampling and lab drop off but excluding laboratory analytical.

7.4 Correspondence Regarding Hazardous Materials Use at the Site

A directive letter was issued by the DTSC dated June 26, 2017 regarding legal matters of the former Panavision, Inc. at the Site. In the letter the DTSC discusses their oversight on the former Bodycote property to the east of the Site, and the results of soil and groundwater investigations in which concentrations of TCE and PCE in soil were found to increase with depth. According to the DTSC, results of sampling close to the Site's eastern boundary indicated a possible secondary source of contamination located at the former Panavision property (Site), and evaluation of the SSDS operational effectiveness indicates a source on the CCH property. The DTSC references a Phase I ESA conducted in 1996 (PHASE ONE, Inc., 1996) in which full and/empty drums of TCE were documented to be on-Site during an inspection, and that a Panavision representative confirmed solvent use at the facility for cleaning parts. Based on the information the DTSC identified Panavision as a responsible party required to investigate and cleanup the Site, and asked Panavision to contact the DTSC to discuss the matter (DTSC, 2017).

However, in an email thread (Subject: Panavision : Scoping Meeting) dated September to November 2017 between Lynn Goldman and Manjul Bose of the DTSC and Martin J. "Kelly" McTigue of O'Melveny & Myers LLP (apparently a lawyer for Panavision). A discussion regarding the 1996 Phase I ESA and the use of TCE is pursued. As per the email thread, it was clarified that the 1996 Phase I ESA referenced trichloroethane (TCA) and not TCE. As a result of the discussion, the DTSC stated that "You may consider this matter closed."

8. Database Records Review

8.1 Standard Environmental Record Sources

According to ASTM Standard E1527-13, the purpose of reviewing regulatory records is to obtain and review records that will help identify *recognized environmental conditions* in connection with the Site. In addition, some records to be reviewed pertain not only to the Site, but also to properties within an additional “approximate minimum search distance” in order to help assess the likelihood of problems from migrating hazardous substances or petroleum products. The basis of the “approximate minimum search distance” is the Site boundary.

Roux retained EDR of Shelton, Connecticut to provide an ASTM Radius Map Report (EDR Report) for this Site. This report is a computerized search of select state and federal environmental databases that identify various properties with a record of environmental activity. Roux reviewed the report and summarized the relevant findings in the following sections. A copy of the compiled EDR Report has been included as Appendix E. The EDR report includes a detailed description of each of the databases searched, providing a summary of the type of information provided by each. A summary of Roux’ review of the EDR Report listings is provided in Table 1.

The following section describes the findings of the database search. Roux used professional judgement in determining which EDR-listed sites to include in the narrative of this report. Facilities adjoining the Site were included due to their proximity to the Site and the potential for surface water discharges (e.g., storm water runoff, surface water effluent discharges) to enter the Site or through the migration of groundwater. Sites with listings indicative of a release (e.g., SHWS, LUST, RELEASE) are likewise discussed below. Nonadjacent facilities with database listings not necessarily indicative of a release (hazardous waste generator, FINDS, ECHO, NPDES, HAZNET, AST, or UST) will not be discussed unless considered potentially relevant in context of the Phase I ESA.

8.1.1 Site (Target Property)

The Site is identified as Columbia College Hollywood in the HAZNET and HWTS databases for the generation of off-specification, aged, or surplus organics in 2010. The Site was also identified as Panavision Inc. in the RCRA-SQG, FINDS, ECHO, EMI, HAZMAT, HAZNET, and HWTS databases. Information derived for this facility in the listings is as follows:

- The Resource Conservation and Recovery Act (RCRA) listing for the facility as a small quantity hazardous material generator was created in 1996 and was last reported in 2000.
- The EMI database listing is regarding the SCAQMD permit.
- The HAZMAT listing is regarding the LAFD hazardous material inactive facility listing. No additional pertinent information is provided in the EDR Radius Map Report for this listing.
- The HAZNET database for the facility has one or more entries every year from 1987 through 2003 for hazardous waste manifests received by the DTSC. According to the entries unspecified solvent mixture wastes was generated at quantities ranging from 54 to 800 gallons per manifest. Halogenated solvents (such as chloroform methyl chloride, PCE, etc.) were manifested 10 times from 1986 to 1993 at quantities ranging from 0.23 tons to 1.8 tons.

Additional wastes identified in the manifest listings include photo chemicals/photo processing waste, oil/water separation sludge, unspecified oil-containing waste, and off-specification, aged, or surplus organics. Manifest

listings from 1997 through 2003 for Panavision appear in error since Panavision had relocated to Woodland Hills by that time. This error may be that Panavision's newer address was not updated in the tracking system until later, or that hazardous waste was still being generated and manifested by CCH as part of film developing.

According to the information presented in the HAZNET database, significant quantities of solvents were handled on the Site from at least 1987 through 2003. Based on the use of the Site by Panavision since the early 1970s, the potential for the handling of significant quantities of solvent by Panavision prior to mandated government tracking of appropriate disposal of hazardous materials in the 1980s cannot be ruled out.

Adjoining and Nearby Properties

Discussions of adjoining and nearby properties of potential environmental concern are provided below.

- 6015 North Baird Avenue/ 18560 Oxnard Street (east of the Site) – Reseda District Maintenance Yard/ City of LA – PW – Street Services is identified in the SWF/LS, CERS, CERS TANKS, LUST, SWEEPS UST, CA FID UST, CORTESE, Hist CORTESE, and HAZMAT databases.. The facility is reported to be a limited volume transfer/processing operation for mixed municipal solid waste.

As noted previously, it appears unlikely that activities conducted at this facility would have negatively impacted soil and groundwater beneath the Site and the facility is not considered a REC.

With the exception of 18600 Oxnard Street (adjacent east of the Site) – National Heat-Treating Co Inc. and/or Bodycote Thermal Processing, no other facilities identified within a one-mile radius of the Site appear likely to have negatively impacted the Site based on the information reviewed, the distance from the Site, and the hydrogeologic setting.

8.1.2 Orphan Sites

The EDR Report includes a section addressing "Orphan Sites." Orphan sites are sites, which, due to incomplete geographic location data, incomplete address information or incorrect address information, cannot be plotted correctly. The database report identified no unmapped facility.

9. Findings

Roux has performed this Phase I ESA in general compliance with the scope and limitations of ASTM Standard Practice E1527-13. Roux separated the findings of this assessment into the following four categories: *recognized environmental conditions, controlled recognized environmental conditions, historical recognized environmental conditions and other environmental features.*

9.1 Data Gaps

During conduct of this ESA, the following data gaps, as defined in ASTM Standard E1527-13 were identified:

- The timing of the report did not allow for all contacted agencies to respond to the records requests issued. This data gap is not considered significant due to sufficient information available from previous environmental reports, the EDR report, and city, county, and state websites.
- Previous Site owners/operators were not available for an interview. This data gap is not considered significant due to sufficient information regarding Site history available from EDR historical documents and FOIA requests.

9.2 Recognized Environmental Conditions

Roux did not identify known or suspected RECs in connection with the current and historical operations at the Site.

9.3 Controlled Recognized Environmental Conditions

Roux identified the following CRECs in connection with the current and historical operations at the Site or adjacent properties.

CREC #1- Sub-slab depressurization system (SSDS)

Vapor extraction points, air inlet points, and vapor monitoring points are located throughout the building as part of a sub-slab depressurization system (SSDS). The SSDS is for on-going vapor extraction that is being conducted to keep subsurface soil vapors from migrating into building indoor air. Vapor extraction points and air inlet points are located in the building walls and vapor monitoring points are located in the floors beneath removable linoleum floor tiles. The on-going sub-slab depressurization at the Site is a result of investigations conducted at the adjacent property to the east, formerly occupied by Bodycote Thermal Processing West, Inc. (Bodycote). The remedial effort associated with the SSDS has been ongoing since 2010 and has received regulatory review each year. Currently no violations and deficiencies are noted by responsible agencies. Due to the nature of the approved remediation this issue is considered a Controlled Recognized Environmental Condition.

In addition, a July 25, 2019 document issued by Juli Propes, Unit Chief, Site Mitigation & Restoration Program provides the current approval of the remedial system on the Site. In the document, the Department of Toxic Substances Control (DTSC) confirms a review of the "Revised First Five-Year Review and 2018 Annual Sub-Slab Depressurization System Operation, Maintenance, and Monitoring Report" (Report) (Geosyntec, June 2019), for the Former Bodycote Thermal Processing Facility located at 18600 Oxnard Street, Tarzana, California (Site). The Report details the operation, maintenance and monitoring of the Sub-Slab Depressurization System (SSDS) installed at the Site.

DTSC states the system operation is in compliance with the approved remedy as selected in the Interim Removal Action Workplan (IRAW) approved by DTSC on March 13, 2012. The submittal of this Report is in accordance with The Removal Action Implementation Report that was approved by DTSC on June 4, 2013. The DTSC letter confirms the effectiveness and performance of the remedy selected and that it meets the objectives of protecting the indoor air from vapor intrusion of Perchloroethylene (PCE) from the subsurface. The DTSC indicates the operation of the SSDS at the Site will continue until remediation of PCE in soil vapor, using the soil vapor extraction system currently in operation at the Site next door, is complete and the post remediation cumulative health risk of PCE in indoor air does not pose a threat to the students, staff and faculty of the Site.

Currently no violations and deficiencies are noted by responsible agencies. Due to the nature of the approved remediation this issue is considered a Controlled Recognized Environmental Condition.

CREC #2 – Agency Evaluation of Past Chemical Usage

A directive letter was issued by the DTSC dated June 26, 2017 regarding legal matters of the former Panavision, Inc. at the Site. In the letter the DTSC discusses their oversight on the former Bodycote property to the east of the Site, and the results of soil and groundwater investigations in which concentrations of TCE and PCE in soil were found to increase with depth. According to the DTSC, results of sampling close to the Site's eastern boundary indicated a possible secondary source of contamination located at the former Panavision property (Site), and evaluation of the SSDS operational effectiveness indicates a source on the CCH property. The DTSC references a Phase I ESA conducted in 1996 (PHASE ONE, Inc., 1996) in which full and/empty drums of TCE were documented to be on-Site during an inspection, and that a Panavision representative confirmed solvent use at the facility for cleaning parts. Based on the information the DTSC identified Panavision as a responsible party required to investigate and cleanup the Site, and asked Panavision to contact the DTSC to discuss the matter (DTSC, 2017).

However, in an email thread (Subject: Panavision : Scoping Meeting) dated September to November 2017 between Lynn Goldman and Manjul Bose of the DTSC and Martin J. "Kelly" McTigue of O'Melveny & Myers LLP (apparently a lawyer for Panavision). A discussion regarding the 1996 Phase I ESA and the use of TCE is pursued. As per the email thread, it was clarified that the 1996 Phase I ESA referenced trichloroethane (TCA) and not TCE. As a result of the discussion, the DTSC stated that "You may consider this matter closed."

In 2016, an additional soil, soil vapor, and groundwater investigation was conducted by SLR, which included the installation of soil vapor probes and groundwater monitoring wells at the former Bodycote property and the Site property (SLR, 2016). On-Site soil vapor probe SSV-10 and groundwater monitoring well MW-6 were installed as part of this investigation. PCE and TCE were detected at maximum concentrations of 0.712 micrograms per liter (ug/l) and 0.015 ug/l, respectively, in soil vapor samples collected from SSV-10. VOCs were not detected in any of the soil samples collected and analyzed from SSV-10. Groundwater grab samples collected from SSV-10 and groundwater samples collected from MW-6 contained PCE and TCE at maximum concentrations of 2.8 ug/l and 11 ug/l, respectively (SLR, 2016).

In February 2011, a work plan was submitted by AMEC Geomatrix (AMEC) to conduct a pilot test to determine the operational parameters for a full-scale sub slab depressurization system(SSDS) and to evaluate the effectiveness of an SSDS in preventing vapor intrusion at the former Bodycote building as well as the Site building (AMEC, 2011b). The DTSC approved the workplan and stated that the system was anticipated to run for approximately 5 years, and that a land use covenant would be recorded to prohibit residential use or construction "below utilities." The remedial effort associated with the SSDS has been ongoing since 2010

and has received regulatory review each year. Currently, no violations and deficiencies are noted by responsible agencies. Due to the nature of the approved remediation(also reviewed above in CREC #1), this issue is considered a Controlled Recognized Environmental Condition.

9.4 Historical Recognized Environmental Conditions

Roux did not identify known or suspected hRECs in connection with the current and historical operations at the Site or adjacent properties.

9.5 Other Environmental Features

Roux has identified the following Business Environmental Risks (BERs) in connection with the Subject Property:

- The building is designed for the current use, if future plans include changing use the SSDS system may need to be modified. Additional usage of the undeveloped portion of the property would need to evaluate and potentially install a SSDS.

11. Signature of Environmental Professional

Roux performed this assessment in accordance with the generally accepted practices for environmental assessments at the time of implementation. Roux made a reasonable effort to ensure that the information presented in this report is materially complete and accurate.

Roux completed a Phase I ESA in general compliance with the scope and limitations of ASTM Practice E1527-13 of the commercial property located at 18618 Oxnard Street, Tarzana, Los Angeles County, California.

“We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312” and,

“We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.”

Roux performed this Phase I ESA by, or under direct supervision of, the undersigned environmental professionals.

Respectfully Submitted,

ROUX ASSOCIATES, INC.

Mark Elmendorf
Principal Scientist

Glossary of Terms

GLOSSARY OF KEY TERMS

This appendix provides definitions, description of terms, and a list of acronyms for many of the words used in ASTM E 1527-13. These terms are an integral part of ASTM E 1527-13 and are critical to understanding ASTM E 1527-13 and its use.

DEFINITIONS:

Abandoned Property – *property* that can be presumed to be deserted, or an intent to relinquish possession or control can be inferred from the general disrepair or lack of activity thereon such that a reasonable person could believe that there was an intent on the part of the current *owner* to surrender rights to the *property*.

Activity and Use Limitations – Legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to *hazardous substances* or *petroleum products* in the soil, soil vapor, groundwater, and/or surface water on the *property*, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or *engineering controls*, are intended to prevent adverse impacts to individuals or populations that may be exposed to *hazardous substances* and *petroleum products* in the soil, soil vapor, groundwater, and/or surface water on the *property*.

Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) – The list of sites compiled by EPA that EPA has investigated, or is currently investigating, for potential hazardous substance contamination for possible inclusion on the National Priorities List.

Construction debris – Concrete, brick, asphalt, and other such building materials discarded in the construction of a building or other improvement to property.

Contaminated public wells – Public wells used for drinking water that have been designated by a government entity as contaminated by toxic substances (for example, chlorinated solvents), or as having water unsafe to drink without treatment.

Contiguous Property Owner Liability Protection – a person may qualify for the *contiguous property owner liability protection* if, among other requirements, such person owns real *property* that is contiguous to, and that is or may be contaminated by *hazardous substances* from other real *property* that is not owned by that person. Furthermore, such person conducted *all appropriate inquiries* at the time of acquisition of the *property* and did not know or have reason to know that the *property* was or could be contaminated by a *release* or threatened *release* from the contiguous *property*. The *all appropriate inquiries* must not result in knowledge of contamination. If it does, then such person did “know” or “had reason to know” of contamination and would not be eligible for the *contiguous property owner liability protection*.

Controlled Recognized Environmental Condition – a *recognized environmental condition* resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property* use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*).

CORRACTS list – a list maintained by EPA of *hazardous waste* treatment, storage, or disposal facilities and other RCRA-regulated facilities (due to past interim status or storage of *hazardous waste* beyond 90 days)

that have been notified by the U.S. Environmental Protection Agency to undertake corrective action under RCRA. The *CORRACTS list* is a subset of the EPA database that manages RCRA data.

Demolition debris – Concrete, brick, asphalt, and other such building materials discarded in the demolition of a building or other improvement to property.

Drum – A container (typically, but not necessarily, holding 55 gal (208 L) of liquid) that may be used to store *hazardous substances* or *petroleum products*.

Dry wells – Underground areas where soil have been removed and replaced with pea gravel, coarse sand, or large rocks. Dry wells are used for drainage, to control storm runoff, for the collection of spilled liquids (intentional and non-intentional), and wastewater disposal (often illegal).

Dwelling – Structure of portion thereof used for residential habitation.

Engineering controls – Physical modifications to a site or facility (for example, capping, slurry walls, or point of use water treatment) to reduce or eliminate the potential for exposure to contaminants in the soil or groundwater on the property.

Environmental lien – A charge, security, or encumbrance upon title to a *property* to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of *hazardous substances* or *petroleum products* upon a *property*, including (but not limited to) liens imposed pursuant to CERCLA 42 USC § 9607(1) and similar state or local laws.

ERNS list – EPA's emergency response notification system list of reported CERCLA hazardous substance releases or spills in quantities greater than the reportable quantity, as maintained at the National Response Center. Notification requirements for such releases or spills are codified in 40 CFR parts 302 and 355.

Federal Register (FR) – Publication of the United States government published daily (except for federal holidays and weekends) containing all proposed and final regulations and some other activities of the federal government. When regulations become final, they are included in the Code of Federal Regulations (CFR), as well as published in the Federal Register.

Fire insurance maps – Maps produced for private fire insurance map companies that indicate uses of properties at specified dates and that encompass the property. These maps are often available in local libraries, historical societies, private resellers, or from the map companies who produced them. See Question 23 of the transaction screen process in Practice E 1528 and 7.3.4.2 of this practice.

Hazardous substance – A substance defined as hazardous pursuant to CERCLA 42 USC § 9601(14), as interpreted by EPA regulations and the courts: “(A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title, (C) any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Soil Waste Disposal Act (42 USC § 6921) (but not including any waste the regulation of which under the Solid Waste Disposal Act (42 USC § 6901 *et seq.*) has been suspended by Act of Congress), (D) any toxic pollutant listed under section 1317(a) of Title 33, (E) any hazardous air pollutant listed under section 112 of the Clean Air Act (42 USC § 7412), and (F) any imminently hazardous chemical substance or mixture with respect to which the Administrator (of EPA) has taken action pursuant to section 2606 of Title 15. The term does not include petroleum, including crude oil or any fraction thereof, which is not otherwise specifically listed or designated as a hazardous substance under subparagraphs (A)

through (F) of this paragraph; the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).”

Hazardous waste – Any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Solid Waste Disposal Act (42 USC § 6921) (but not including any waste the regulation of which under the Solid Waste Disposal Act (42 USC § 6901 *et seq.*) has been suspended by Act of Congress). The Solid Waste Disposal Act of 1980 amended RCRA. RCRA defines hazardous waste, in 42 USC § 6903, as: “a solid waste, or combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may – (A) cause, or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness; or (B) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed.”

Institutional control – A legal or administrative restriction (e.g., deed restriction, restrictive zoning) on the use of, or access to, a site or facility to reduce or eliminate potential exposure to contaminants in the soil or groundwater on the property.

Landfill – A place, location, tract of land, area, or premises used for the disposal of solid wastes as defined by state solid waste regulations. The term is synonymous with the term *solid waste disposal site* and is also known as a garbage dump, trash dump, or similar term.

Local street directories – Directories published by private (or sometimes government) sources that show ownership, occupancy, and/or use of sites by reference to street addresses. Often, local street directories are available at libraries of local governments, colleges or universities, or historical societies.

Material safety data sheet (MSDS) – Written or printed material concerning a hazardous substance which is prepared by chemical manufacturers, importers, and employers for hazardous chemicals pursuant to OSHA’s Hazard Communication Standard, 29, CFR 1910.1200.

National Contingency Plan (NCP) – The National Oil and Hazardous Substances Pollution Contingency Plan, found at 40 CFR § 300, that is the EPA’s blueprint on how hazardous substances are to be cleaned up pursuant to CERCLA.

National Priorities List (NPL) – List compiled by the EPA, pursuant to CERCLA 42 USC § 9605(a)(8)(B), of properties with the highest priority for cleanup pursuant to EPA’s Hazard Ranking System. See 40 CFR Part 300.

Occupants – Those tenants, subtenants, or other persons or entities using the *property* or a portion of the *property*.

Owner – Generally the fee owner of record for the *property*.

Petroleum exclusion – The exclusion from CERCLA liability provided in 42 USC § 9601(14), as interpreted by the courts and EPA: “The term (hazardous substance) does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under subparagraphs (A) through (F) of this paragraph, and the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).”

Petroleum products – Those substances included within the meaning of the *petroleum exclusion* to CERCLA, 42 USC § 9601(14), as interpreted by the courts and EPA, that is: petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under Subparagraphs (A) through (F) of 42 USC § 9601(14), natural gas, natural gas liquids, liquefied natural gas, and synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas). (The word fraction refers to certain distillates of crude oil, including gasoline, kerosene, diesel oil, jet fuels, and fuel oil, pursuant to *Standard Definitions of Petroleum Statistics*¹.)

Phase I Environmental Site Assessment – The process described in this practice.

Pits, ponds, or lagoons – Man-made or natural depressions in the ground surface that are likely to hold liquids or sludge containing *hazardous substances* or *petroleum products*. The likelihood of such liquids or sludge being present is determined by evidence of factors associated with the pit, pond, or lagoon, including, but not limited to, discolored water, distressed vegetation, or the presence of an obvious wastewater discharge.

Property – The real property that is the subject of the *environmental site assessment* described in this practice. Real property includes buildings and other fixtures and improvement located on the property and affixed to the land.

Property tax files – The files kept for property tax purposes by the local jurisdiction where the property is located and includes records of past ownership, appraisals, maps, sketches, photos, or other information that is reasonable ascertainable and pertaining to the property.

RCRA generators – Those persons or entities that generate hazardous waste, as defined and regulated by RCRA.

RCRA generators list – List kept by the EPA of those persons or entities that generate hazardous wastes as defined and regulated by RCRA.

RCRA TSD facilities – Those facilities at which treatment, storage, and/or disposal of hazardous wastes takes place, as defined and regulated by RCRA.

RCRA TSD facilities list – List kept by the EPA of those facilities at which treatment, storage, and/or disposal of hazardous wastes takes place, as defined and regulated by RCRA.

Recorded land title records – Records of fee ownership, leases, land contracts, easements, liens, and other encumbrances on or of the property recorded in the place where land title records are, by law or custom, recorded for the local jurisdiction in which the *property* is located. (Often such records are kept by a municipal or county recorder or clerk.) Such records may be obtained from title companies or directly from the local government agency. Information about the title to the property that is recorded in a U.S. district court or any place other than where land title records are, by law or custom, recorded for the local jurisdiction in which the property is located, are not considered part of recorded land title records.

Records of emergency release notifications (SARA § 304) – Section 304 of EPCRA or Title III of SARA requires operators of facilities to notify their local emergency planning committee (as defined in EPCRA) and the state emergency response commission (as defined in EPCRA) of any release beyond the facility's boundary of any reportable quantity of any extremely hazardous substance. Often the local fire department is the local emergency planning committee. Records of such notifications are "Records of Emergency Release Notifications" (SARA§ 304).

Report – The written record of a transaction screen process as required by Practice E 1528 or the written report prepared by the environmental professional and constituting part of a “Phase I Environmental Site Assessment,” as required by this practice.

Solid waste disposal site – A place, location, tract of land, area, or premises used for the disposal of solid wastes as defined by state solid waste regulations. The term is synonymous with the term *landfill* and is also known as a garbage dump, trash dump, or similar term.

Solvent – A chemical compound that is capable of dissolving another substance and may itself be a *hazardous substance*, used in a number of manufacturing/industrial processes including, but not limited to, the manufacture of paints and coatings for industrial and household purposes, equipment clean-up, and surface degreasing in metal fabricating industries.

State registered USTs – State lists of underground storage tanks required to be registered under Subtitle I, Section 9002 of RCRA.

Sump – A pit, cistern, cesspool, or similar receptacle where liquids drain, collect, or are stored.

TSD facility – Treatment, storage, or disposal facility (*see RCRA TSD facilities*).

Underground storage tank (UST) - Any tank, including underground piping connected to the tank, that is or has been used to contain *hazardous substances* or *petroleum products* and the volume of which is 10% or more beneath the surface of the ground.

USGS 7.5 Minute Topographic Map – The map (if any) available from or produced by the United States Geological Survey, entitled “USGS 7.5 Minute Topographic Map,” and showing the property.

Wastewater – Water that (1) is or has been used in an industrial or manufacturing process, (2) conveys or has conveyed sewage, or (3) is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant. Wastewater does not include water originating on or passing through or adjacent to a site, such as storm water flows, that has not been used in industrial or manufacturing processes, has not been combined with sewage, or is not directly related to manufacturing, processing, or raw materials storage areas at an industrial plant.

Zoning/land use records – Those records of the local government in which the *property* is located, indicating the uses permitted by the local government in particular zones within its jurisdiction. The records may consist of maps and/or written records. They are often located in the planning department of a municipality or county.

DEFINITIONS SPECIFIC TO ASTM E 1527-13:

Actual knowledge – The knowledge actually possessed by an individual who is a real person, rather than an entity. Actual knowledge is to be distinguished from constructive knowledge that is knowledge imputed to an individual or entity.

Adjoining properties – Any real property or properties the border of which is contiguous or partially contiguous with that of the property, or that would be contiguous or partially contiguous with that of the property but for a street, road, or other public thoroughfare separating them.

Aerial photographs – Photographs taken from an airplane or helicopter (from a low enough altitude to allow identification of development and activities) of areas encompassing the property. Aerial photographs are often available from government agencies or private collections unique to a local area.

Appropriate inquiry – That inquiry constituting “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice” as defined in CERCLA, 42 USC § 9601(35)(B), that will give a party to a *commercial real estate* transaction the *innocent landowner defense* to the CERCLA liability (42 USC § 9601(A) and (B) and § 9607(b)(3)), assuming compliance with other elements of the defense. See Appendix X1.

Approximate minimum search distance – The area for which records must be obtained and reviewed pursuant to Section 7 subject to the limitations provided in that section. This may include areas outside the *property* and shall be measured from the nearest *property* boundary. This term is used in lieu of radius to include irregularly-shaped properties.

Building department records – Those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property. Often, building department records are located in the building department of a municipality or county.

Business environmental risk – A risk which can have a material environmental or environmentally-driven financial impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of *business environmental risk* issues may necessitate that an *environmental professional* address one or more non-scope considerations, some of which are identified in Section 12.

Commercial real estate – Any real property except a dwelling or property with no more than four dwelling units exclusively for residential use (except that a dwelling or property with no more than four dwelling units exclusively for residential use is included in this term when it has a commercial function, as in the building of such dwellings for profit). This term includes, but is not limited to, undeveloped real property and real property used for industrial, retail, office, agricultural, other commercial, medical, or educational purposes; property used for residential purposes that has more than four residential dwelling units; and any property with no more than four dwelling units for residential use when it has a commercial function, as in the building of such dwellings for profit.

Commercial real estate transaction – A transfer of title to or possession of real property or receipt of a security interest in real property, except that it does not include transfer of title to or possession of real property or the receipt of a security interest in real property with respect to an individual dwelling or building containing fewer than five dwelling units, nor does it include the purchase of a lot or lots to construct a dwelling for occupancy by a purchaser, but a commercial real estate transaction does include real property purchased or leased by persons or entities in the business of building or developing dwelling units.

Controlled Recognized Environmental Condition – a *recognized environmental condition* resulting from a past *release of hazardous substances or petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances or petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property use restrictions, activity and use limitations, institutional controls, or engineering controls*).

Due diligence – The process of inquiring into the environmental characteristics of a parcel of *commercial real estate* or other conditions, usually in connection with a commercial real estate transaction. The degree and kind of due diligence vary for different properties and differing purposes.

Environmental audit – The investigative process to determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations. This term should not be used to describe Practice E 1528 or this practice, although an environmental audit may include an *environmental site assessment* or, if prior audits are available, may be part of an environmental site assessment.

Environmental professional – A person possessing sufficient training and experience necessary to conduct a *site reconnaissance*, *interviews*, and other activities in accordance with this practice, and from the information generated by such activities, having the ability to develop opinions and conclusions regarding *recognized environmental conditions* in connection with the *property* in question. An individual's status as an environmental professional may be limited to the type of assessment to be performed or to specific segments of the assessment for which the professional is responsible. The person may be an independent contractor or an employee of the *user*.

Environmental site assessment (ESA) – The process by which a person or entity seeks to determine if a particular parcel of real *property* (including improvements) is subject to *recognized environmental conditions*. At the option of the *user*, an environmental site assessment may include more inquiry than that constituting *appropriate inquiry* or, if the user is not concerned about qualifying for the *innocent landowner defense*, less inquiry than that constituting *appropriate inquiry*. An environmental site assessment is both different from and less rigorous than an *environmental audit*.

Fill dirt – Dirt, soil, sand, or other earth, obtained off-site, that is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation of real property. It does not include material that is used in limited quantities for normal landscaping activities.

Hazardous waste/contaminated sites – Sites on which a release has occurred, or is suspected to have occurred, of any *hazardous substance*, *hazardous waste*, or *petroleum products*, and that release or suspected release has been reported to a government entity.

Historical Recognized Environmental Condition – a past *release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls (for example, *property* use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*). Before calling the past *release* a *historical recognized environmental condition*, the *environmental professional* must determine whether the past *release* is a *recognized environmental condition* at the time the *Phase I Environmental Site Assessment* is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past *release* to be a *recognized environmental condition* at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a *recognized environmental condition*.

Innocent landowner defense – That defense to CERCLA liability provided in 42 USC § 9601(35) and § 9607(b)(3). One of the requirements to qualify for this defense is that the party make “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice.” There are additional requirements to qualify for this defense.

Interviews – Those portions of this practice that are contained in Section 9 and 10 thereof and address questions to be asked of *owners* and *occupants* of the *property* and questions to be asked of local government officials.

Key site manager – The person identified by the *owner* of a *property* as having good knowledge of the uses and physical characteristics of the property.

Local government agencies – Those agencies of municipal or county government having jurisdiction over the *property*. Municipal and county government agencies include, but are not limited to, cities, parishes, townships, and similar entities.

LUST sites – State lists of leaking underground storage tank sites. Section 9003 (h) of Subtitle I of RCRA gives EPA and states, under cooperative agreements with EPA, authority to clean up releases from UST systems or require owners and operators to do so.

Major occupants – Those tenants, subtenants, or other persons or entities each of which uses at least 40% of the leasable area of the *property* or any anchor tenant when the *property* is a shopping center.

Material threat – A physically observable or obvious threat which is reasonable likely to lead to a release that, in the opinion of the *environmental professional*, is threatening and might result in impact to human health and the environment. An example might include an aboveground storage tank that contains a hazardous substance and which shows evidence of damage. The damage would represent a material threat if it is deemed serious enough that it may cause or contribute to tank integrity failure with a release of contents to the environment.

Obvious – That which is plain or evident; a condition or fact that could not be ignored or overlooked by a reasonable observer while *visually* or *physically observing the property*.

Other historical sources – Any source or sources other than those designated in 7.3.4.1-7.3.4.8 that are credible to a reasonable person and that identify past uses of the property. The term includes, but is not limited to, miscellaneous maps, newspaper archives, and records in the files and/or personal knowledge of the *property owner* and/or *occupants*.

Physical setting sources – sources that provide information about the geologic, hydrogeologic, hydrologic, or topographic characteristics of a *property*.

Practically reviewable – Information that is practically reviewable means that the information is provided by the source in a manner and in a form that, upon examination, yields information relevant to the *property* without the need for extraordinary analysis of irrelevant data. The form of the information shall be such that the user can review the records for a limited geographic area. Records that cannot be feasibly retrieved by reference to the location of the *property* or a geographic area in which the *property* is located are not generally *practically reviewable*. Most databases of public records are *practically reviewable* if they can be obtained from the source agency by the county, city, zip code, or other geographic area of the facilities listed in the record system. Records that are sorted, filed, organized, or maintained by the source agency only chronologically are not generally practically reviewable. Listings in publicly available records which do not have adequate address information to be located geographically are not generally considered practically reviewable. For large databases with numerous facility records (such as RCRA hazardous waste generators and registered underground storage tanks), the records are not *practically reviewable* unless they can be obtained from the source agency in the smaller geographic area of zip codes. Even when information is provided by zip code for some large databases, it is common for an unmanageable number of sites to be

identified within a given zip code. In these cases, it is not necessary to review the impact of all of the sites that are likely to be listed in any given zip code because that information would not be *practically reviewable*. In other words, then so much data is generated that it cannot be feasibly reviewed for its impact on the *property*, it is not *practically reviewable*.

Preparer – The person preparing the *transaction screen questionnaire* pursuant to Practice E 1528, who may be either the user or the person to whom the user has delegated the preparation of the *transaction screen questionnaire*.

Publicly available – Information that is publicly available means that the source of the information allows access to the information by anyone upon request.

Reasonably ascertainable – For purposes of both this practice and Practice E 1528, information that is (1) *publicly available*, (2) obtainable from its source within reasonable time and cost constraints, and (3) *practically reviewable*.

Recognized Environmental Conditions – the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (1) due to release to the environment; (2) under conditions indicative of a *release* to the *environment*; or (3) under conditions that pose a *material threat* of a future *release* to the *environment*. *De minimis conditions* are not *recognized environmental conditions*.

Records review – That part that is contained in Section 7 of this practice addresses which records shall or may be reviewed.

Site reconnaissance – That part that is contained in Section 8 of this practice and addresses what should be done in connection with the *site visit*. The site reconnaissance includes, but is not limited to, the *site visit* done in connection with such a Phase I Environmental Site Assessment.

Site visit – The visit to the property during which observations are made constituting the *site reconnaissance* section of this practice and the *site visit* requirement of Practice E 1528.

Standard environmental record sources – Those records specified in 7.2.1.1.

Standard historical sources – Those sources of information about the history of uses of the property specified in 7.3.4.

Standard physical setting source – A current USGS 7.5-minute topographic map (if any) showing the area on which the property is located.

Standard practice(s) – The activities set forth in either and both this practice and Practice E 1528.

Standard sources – Sources of environmental, physical setting, or historical records specified in Section 7 of this practice.

Transaction screen process – The process described in Practice E 1528.

Transaction screen questionnaire – The questionnaire provided in Section 6 of Practice E 1528.

User – The party seeking to use Practice E 1528 to perform an *environmental site assessment* of the *property*. A user may include, without limitation, a purchaser of *property*, a potential tenant of *property*, an owner of *property*, a lender, or a property manager.

Visually and/or physically observed – During a *site visit* pursuant to Practice E 1528, or pursuant to this practice, this term means observations made by vision while walking through a *property* and the structures located on it and observations made by the sense of smell, particularly observations of noxious or foul odors. The term “walking through” is not meant to imply that disabled persons who cannot physically walk may not conduct a *site visit*; they may do so by the means at their disposal for moving through the *property* and the structures located on it.

ACRONYMS:

CERCLA – Comprehensive Environmental Response, Compensation and Liability Act of 1980 (as amended, 42 USC § 9601 *et seq.*)

CERCLIS – Comprehensive Environmental Response, Compensation and Liability Information System (maintained by EPA)

CFR – Code of Federal Regulations

CORRACTS – Facilities subject to corrective action under RCRA

EPA – United States Environmental Protection Agency

EPCRA – Emergency Planning and Community Right to Know Act (also known as SARA Title III), 42 USC § 11001 *et seq.*)

ERNS – Emergency response notification system

ESA – Environmental site assessment (different than an *environmental audit*)

FOIA – U.S. Freedom of Information Act (5 USC 552 *et seq.*)

FR – Federal Register

LUST – Leaking underground storage tank

MSDS – Material safety data sheet

NCP – National Contingency Plan

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR Environmental Lien and AUL Search

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The EDR Property Tax Map Report

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Frey Environmental were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

APPROVAL OF REVISED FIVE-YEAR REVIEW AND 2018 ANNUAL SUB- SLAB
DEPRESSURIZATION SYSTEM OPERATION, MAINTENANCE, AND MONITORING
REPORT FOR FORMER BODYCOTE THERMAL PROCESSING FACILITY (SITE
CODE: 301481)

Dear Mr. Crowe:

The Department of Toxic Substances Control (DTSC) has reviewed the "*Revised First Five-Year Review and 2018 Annual Sub-Slab Depressurization System Operation, Maintenance, and Monitoring Report*" (Report) (Geosyntec, June 2019), for the Former Bodycote Thermal Processing Facility located at 18600 Oxnard Street, Tarzana, California (Site). The Report details the operation, maintenance and monitoring of the Sub-Slab Depressurization System (SSDS) installed at the Columbia College of Hollywood Campus located at 18618 Oxnard Street, Tarzana, California (CCoH).

All comments have been addressed and the system operation is in compliance with the approved remedy as selected in the *Interim Removal Action Workplan* (IRAW) approved by DTSC on March 13, 2012. The submittal of this Report is in accordance with *The Removal Action Implementation Report* that was approved by DTSC on June 4, 2013. The Report confirms the effectiveness and performance of the remedy selected and that it meets the objectives of protecting the indoor air from vapor intrusion of Perchloroethylene (PCE) from the subsurface. The operation of the SSDS at CCoH will continue until remediation of PCE in soil vapor, using the soil vapor extraction system currently in operation at the Site next door, is complete and the post remediation cumulative health risk of PCE in indoor air does not pose a threat to the students, staff and faculty of CCoH.

Mr. Crowe
July 25, 2019

President

CEC Project Number 17-1870
March 23, 2017

EXECUTIVE SUMMARY

Certified Environmental Consultants, Inc. (CEC) recently completed a Phase I Environmental Site Assessment (Phase I) for commercial property located at 18618 Oxnard Street, within the community of Tarzana, in the City of Los Angeles, Los Angeles County, California. This Phase I report summarizes the procedures that were followed, and describes the findings of CEC's environmental-screening investigation. The county-assigned assessor's parcel number for the site is 2156-006-018.

Based on CEC's described reviews and research findings, the site and general area appear to have been vacant land prior to initial development with residential structures, which occurred sometime prior to 1928. The former residences had been removed and the site area was vacant, graded land at the time of 1964 and 1967 aerial photographs. The site's present-day building and associated improvements have been present at the subject property since initial construction, which is reported to have occurred during 1972.

As described in various report sections, no indications of former usage for heavy industry, or on-site disposal or treatment of hazardous wastes, were identified for the site. Only operating-type permits for the site's former and current occupants were encountered in the regulatory listings. Permit-derived listings unto themselves do not indicate an unauthorized release has occurred, or other form of environmental concern exists.

Similarly, directory-based historical references are not unto themselves indicative of an environmental condition. Additionally, the existence of such permits suggests operations are/were being conducted under regulatory oversight. Also, it would be unlikely significant and/or migratory contamination would be present at a closed-case property.

As described in Section 4.5, the subject site is undergoing active depressurization/remediation of the subsurface materials/environment, as related to previously reported solvent impacts on the adjacent-east property. The reviewed monitoring data indicated the depressurization/remediation system's contaminant-recovery values had significantly declined since initial operation of the system, which began in 2012, and near asymptotic declines were reported for the more-recent data. Inasmuch, additional assessment and/or remediation of the site's subsurface and/or above-ground conditions is deemed unlikely.

No other agency-listed sites were found to be situated adjacent to the site and/or in an up-gradient position with respect to the reported direction of ground-water flow. Based on distance from the site, relative location with respect to hydraulic gradient, nature of listing(s) and/or status, it is deemed unlikely the listed properties in the general area have resulted in presently unknown reportable conditions at the subject site.

No "significant" data gaps deemed likely to adversely affect the findings of this investigation were identified. CEC therefore concludes the site has been satisfactorily screened for potential environmental concerns. Given these findings, no additional site assessment or remediation activities presently are deemed necessary or recommended.

1.0 INTRODUCTION

Certified Environmental Consultants, Inc. (CEC) recently completed a Phase I Environmental Site Assessment (Phase I) for commercial property located at 18618 Oxnard Street, within the community of Tarzana, in the City of Los Angeles, Los Angeles County, California. This Phase I report summarizes the procedures that were followed, and describes the findings of CEC's environmental-screening investigation. The county-assigned assessor's parcel number for the site is 2156-006-018.

1.1 Purpose

The purpose of the assessment was to identify and assess apparent and recognizable site characteristics that likely would be of environmental concern, if present, and conversely, to ascertain and describe the apparent lack of recognized environmental conditions (RECs). Specifically, this investigation is intended for the sole purpose of providing the client with an "innocent landowner defense" under Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), also known as "Superfund", environmental-type liabilities.

Typical areas of potential environmental concern include present/past activities related to the treatment, storage and/or disposal (TSD) of regulated/hazardous materials, which could have adversely impacted the site, or other environmental hazards that likely would affect the property's value and/or future land use.

RECs do not include de minimis conditions at the subject site that generally do not appear to present a material risk of harm to public health or the environment, and that generally would not be deemed likely to become the subject of an enforcement action if brought to the attention of local-agency personnel. Small, isolated staining of the pavement surface in a vehicle-parking area would be an example of a de minimis condition.

A current REC would involve the presence or likely presence of hazardous substances or petroleum products in, on, or at a property due to release to the environment, under conditions indicative of a release to the environment, and/or under observable conditions that would pose a material threat of future release.

An historical REC (HREC) would be one that pertains to an older environmental release, wherein site assessment and/or remediation activities were completed to the satisfaction of an overseeing regulatory agency, and status as a "closed case" has been granted, with no on-going land- or activity-use restrictions having been imposed.

A controlled REC (CREC) also would involve an older release, wherein regulatory site closure had been issued. However, CRECs have not been remediated to cleanup levels that provide for unrestricted future land and/or activity use(s), such as physical barriers or other engineering controls that must remain in place.

1.2 Involved Parties

This report was prepared for submittal to Rabobank, N.A., in care of Ms. Joy Lagomarsino, on behalf of Columbia College, Incorporated, dba Columbia College Hollywood (CCH), in general accordance with the terms and conditions agreed upon through a series of telephone and electronic communications with, and as authorized and approved by, CCH's Mr. Richard Crowe.

1.3 Scope of Work

The Scope of Work for the Phase I was based on current, published and widely accepted guidelines (American Society for Testing and Materials Guideline E1527-13), and experiences with similar environmental-screening projects.

Specifically, the following tasks were completed: performing a reconnaissance of the site and nearby properties; reviewing readily available local regulatory agency listings; reviewing a database-derived printout of federal, state, regional and local regulatory lists; reviewing various site-history/land-usage information sources, such as previous reports, historical photographs, and maps; reviewing the state's Well Finder, Geotracker and EnviroStor websites; performing a preliminary vapor-encroachment screening; and reviewing questionnaires that had been completed by, and conducting personal interviews with, individuals that are knowledgeable about the site and general area.

Portions of the reviewed historical materials for this project were provided by Environmental Record Search (ERS). The historical records, maps, and other data that were derived from vendor-provided references are indicated in the respective report sections.

CEC's Phase I services culminated with preparation of this written report of project-related findings and conclusions. Data acquisition for this report commenced on March 10, 2017. Data acquisition and evaluation for this report ended on March 24, 2017.

2.0 GENERAL SITE CHARACTERISTICS

2.1 Site Location

The subject site consists of a rectangle-shaped parcel that is located along the southern side of Oxnard Street, in the Community of Tarzana, City of Los Angeles, California, on land situated roughly 800 feet west of Reseda Boulevard and 2,000 feet north of Highway 101.

The general site location is shown on Figure 1 - Site Location Map. The site location, and relationship of the subject parcel to adjacent and nearby roadways, has been delineated on Figure 2 - Assessor's Parcel Map. Figure 2 also denotes the dimensions/area of the subject site.

2.2 Adjacent Properties

The subject site is located in an area of relatively dense, mixed-use, commercial and residential land usage. To the north, the property is bounded by Oxnard Street, with a tack and feed store and a mass-transit railway easement beyond. A former thermal-treating business (presently vacant building) lies to the east of the site, with a Public Works yard and commercial properties beyond.

To the south, the site is bordered by a series of residential properties, with Highway 101 beyond. A health-care and physical-treatment center bounds the subject property to the west, with additional commercial properties beyond.

Several of the adjacent and nearby properties can be seen in recent photographs of the site that are provided in Appendix A. An aerial view of the site and adjacent and nearby properties also can be seen on Figure 3 - Recent Aerial Photograph.

2.3 Site Description and Current Site Uses/Operations

The site consists of a rectangle-shaped commercial parcel, with roughly 142 feet of street frontage along the south side of Oxnard Street, and a total area of approximately 1.5 acres. A private driveway along the western edge of the site provides access to on-site parking areas.

The site is occupied by a two-story, U-shaped commercial building that consists of concrete-panel construction and exhibited a concrete, slab-on-grade foundation and flooring system. The site building, which has a street address of 18618 Oxnard Street, Tarzana, California 91356, was found to be occupied by a privately owned, film-making college. Only administrative and classroom activities were observed at the time of CEC's site visit.

Additionally observed site improvements included asphalt-paved parking and driveway areas, a small, yard-type storage shed, landscaping, and features indicative of the presence of municipal services and regional-vendor utility connections. Recent photographs of the site are provided in Appendix A. The site layout is depicted on Figure 3.

3.0 ENVIRONMENTAL SETTING

3.1 Regional Physiographic Conditions

The site is located within the San Fernando Valley area, within the Los Angeles Basin region, in the eastern portion of California's Transverse Ranges Geomorphic Province. The Transverse Ranges Province generally consists of east-trending, elongate, fault-derived, sequential mountains and valleys, and geologically is quite complex. Structural features in the region generally are related to crustal shortening (compressional forces).

The Transverse Ranges Geomorphic Province is characterized by complexly folded and faulted rock units, primarily consisting of marine and non-marine sedimentary materials, with some localized outcroppings of intrusive (granitic) and extrusive (volcanic) igneous rocks, and associated metamorphic rocks. Formational/mapped units of the Transverse Ranges Province vary in age from Proterozoic to Holocene (greater than 570 million years old to less than 11,000 years in age).

3.2 Soils Conditions

The entire site and surrounding land have been developed with buildings and pavement. Native soils were not observed. According to information provided for this project by ERS, the region's soils belong to the Mocho assemblage. Soils of this grouping are reported to consist of loamy sands that exhibit slow to moderate infiltration rates. Based on regional setting, the soils beneath the site likely consist of stratified intervals of silts, sands and clays. Stratified and/or fine-grained soils of this type would be expected to exhibit slow infiltration rates. These soil types would tend to inhibit the migration of liquid- and/or vapor-phase contamination, if present.

3.3 Geologic Conditions

According to a geologic map of the area, the site vicinity is underlain by undivided, Quaternary-aged alluvium, likely derived from erosion of the nearby mountains. These recent deposits appeared to be unconformably underlain by Pliocene- to Pleistocene-aged, non-marine sedimentary rocks.

Numerous named and unnamed faults have been identified at on-shore and off-shore locations in the Los Angeles County area, and southern California in general is known to be seismically active. Several active and inactive faults have been mapped within a 20-mile radius of the subject site.

However, according to CEC's project-related research, no known or suspected active faults are present at or adjacent to the site. Therefore, like most of southern California, the site may be subjected to significant ground motion during an earthquake event. However, based on this finding, it is deemed unlikely that ground-surface rupture would directly impact the site's building or other physical improvements.

3.4 Hydrologic/Hydrogeologic Conditions

The site area was found to be relatively level, with an approximate elevation of 757 feet above mean sea level. The site appeared to have been graded to route surface runoff into storm drains that were observed in the adjacent municipal roadway. Adjacent sites appeared to have been graded to direct runoff away from the subject site.

No mapped water courses pass through or adjacent to the site. According to information provided by ERS, the site does not lie within any mapped flood zones. Therefore, routine flooding of the site does not appear to be a concern. Additionally, no designated-wetland areas were mapped at or adjacent to the site.

No site-specific depth or quality data for ground water beneath the site has been reviewed. Based on CEC's previous review of information gathered for an adjacent property (see Section 4.5), first ground water beneath the site occurs at depths of roughly 65 feet below ground surface. Flow direction for ground water beneath the site reportedly is toward the southeast, roughly paralleling the trend of the Los Angeles River (see Figure 1).

4.0 RESULTS OF INVESTIGATION

4.1 Site Inspection Observations

On March 16, 2017, CEC's Certified Environmental Specialist performed reconnaissance activities at the subject site. As discussed in Section 2.3, the site was found to be occupied by a two-story commercial building that housed a private film-making college. Vaults and features noted at and near the site were deemed to be indicative of the presence of municipal services (potable water and sanitary sewer) and regional-vendor utility (electricity and natural gas) connections.

Access to an equipment room that housed hydraulic equipment, which is associated with operation of an on-site elevator, was provided by site personnel. No evidence of recent or on-going leakage of fluids were found in the equipment room.

Two pad-mounted electrical transformers were noted to the north of the property, across Oxnard Street. Another transformer was reported to be present within a locked room within the site building. This on-site transformer is understood to be owned and maintained by the local power company. No signs of damage to or leakage from the observed transformer were noted. In addition, no leaking fluorescent light fixtures were observed at the site. Based on these observations, and the apparent lack of hydraulic-fluid leaks at the elevator room, it is deemed unlikely that the site has been adversely impacted by polychlorinated biphenyls (PCBs).

Several 3-yard trash bins and smaller refuse containers were present at various locations on the property. The observed containers appeared to be collected by a local rubbish company, and were labeled for use only in the disposal of non-liquid, non-hazardous materials. No indications of improper use of these vessels for disposal of hazardous materials were noted.

Numerous instances of 5-gallon and smaller containers of paints, thinners, cleaning products, and landscape-maintenance chemicals were observed at various site locations, including the “janitor room”, “janitor closet”, “loading dock area”, and small yard-type sheds on the south end of the site’s parking lot. However, no instances of hazardous materials or wastes were observed at the site. Additionally, observed regulated materials were found to be stored within the site building or the described shed, in a well-maintained and organized manner, and no indications of large-scale or recurring chemical leakage or spills were noted in these areas, or elsewhere at the site. Further, no on-site waste treatment, or improper disposal activities were observed.

Instances of what appeared to be monitoring-well covers were noted at the site. These features, and observed sub-slab depressurization equipment that was noted at and near the site, are further discussed in Section 4.5.

No indications of regulated TSD facilities, such as: above-ground or underground storage tanks; pools of liquid; pits, ponds or lagoons; dry wells; septic systems; or large-scale chemical treatment or storage areas; were observed at the site. In addition, no indications of apparent contamination from past operations, such as irregular topography or pavement surfaces, noxious odors and/or stressed vegetation, were identified during CEC’s site visit.

4.2 Adjacent Site and Vicinity Observations

A walk-by reconnaissance of the adjacent properties and general neighborhood was performed on March 16, 2017, to check for readily apparent conditions that would be of potential environmental concern. An agency-listed business formerly occupied the adjacent building to the east of the subject site. This adjacent building was found to be vacant at the time of CEC’s visit. Additional discussion of the former thermal-treating facility to the east is included in Section 4.5.

Other adjacent properties included multi-tenant residences to the south, a health-care center to the west, and a feed and tack business to the north, beyond Oxnard Street. No active service stations, dry cleaners, maintenance yards, or other types of probable environmental concern, were observed on the remaining adjacent or nearby properties.

4.3 Results of Regulatory Agency Lists Review

CEC reviewed the state’s Geotracker website, where county and state-level regulatory mandates and technical reports are archived in a digitized, public-domain format. These local-agency records typically are related to leaking tanks, and/or other releases of hazardous-materials. The subject site and adjacent properties were not included on any of the Geotracker listings. The closest nearby listed property was plotted along Baird Avenue, and was shown to be a “Closed Case” leaking underground storage tank (LUST) listing. Status as a closed case indicates assessment and/or remediation has been completed to the satisfaction of an oversight agency. This condition makes it unlikely significant and/or migratory contamination would be present. Additionally, this closest nearby property was found to be situated over 800 feet from the subject site.

CEC also reviewed the state's EnviroStor website, where listings of non-tank-related cleanups are maintained. The subject site was not included on any of the EnviroStor listings. The adjacent-east parcel (former Bodycote facility) was found to be an active case, under the oversight of the California Department of Toxic Substances Control (DTSC), due to subsurface chemical impacts from historical heat-treating operations at that property (see Sections 4.4.1 and 4.5 for additional descriptions of adjacent-east conditions).

Additionally, CEC reviewed a database-derived summary of governmental listings of known or suspected hazardous materials sites that may have an adverse impact on the subject site. The database search was performed by and the report was provided by ERS, in accordance with ASTM standards for this type of investigation. A summary of the database report's findings follows. Copies of the Executive Summary and pertinent detail pages from the ERS report, along with descriptions of the researched governmental lists, list objectives, recommended search areas, and responsible oversight agencies, are provided in Appendix B.

The subject site was not listed on any of the various enforcement-type regulatory listings. The site address appeared on numerous permit-based and historical-directory references, for Columbia College Hollywood, and a prior occupant (Panavision).

No violations were identified for the site's various operating and/or compliance permits. Additionally, permit-derived listings unto themselves do not indicate an unauthorized release has occurred, or other form of environmental concern exists. Similarly, directory-based historical references are not unto themselves indicative of an environmental condition. Additionally, the existence of such permits suggests operations are/were being conducted under regulatory oversight. As stated above, it would be unlikely significant and/or migratory contamination would be present at a closed-case property.

Based on review of the above-referenced regulatory listings and additionally gathered information, it is deemed unlikely the described regulatory listings in the ERS database report or described website references are indicative of unreported environmental impacts at the subject site.

4.4 Results of Site History/Land-Use Review

4.4.1 Personal Interviews and Questionnaire Reviews

CEC spoke with Mr. Richard Crowe, CCH's Director of Finance and Human Resources, at the time of the recent site visit. Mr. Crowe indicated the adjacent-east property was under on-going investigation and correctives action mandate, as related to solvent impacts from prior operations, and that these activities had been required of the former owner, under DTSC directive.

Specifically, it was understood that DTSC had assigned responsibility for further assessment and corrective actions to the former owners of the adjacent property (see Section 4.5 for additional discussion). Mr. Crowe also indicated he was not aware of any underground tanks, or any other known environmental concerns at the site.

CEC previously has contacted individuals associated with local regulatory agencies regarding any personal knowledge they may have about known or potential environmental concerns associated with a particular site. CEC has been informed agency representatives would not be aware of any environmental issues that were not included in the above-described database listings. Based on this information, it was deemed unlikely additional interviews of local agency personnel would provide information that would not otherwise be available through the described research.

Review of typical “owner” and “report-user” questionnaires was deemed redundant, as the current property owner is seeking to refinance, and the above-described discussion addressed questions that are contained in CEC’s standard questionnaires. Specifically, no undisclosed known or probable environmental concerns were identified in Mr. Crowe’s responses. Additionally, no environmental liens were described in the provided responses.

4.4.2 Ownership Information

According to gathered information, the site currently is owned by Columbia College, Incorporated. The site’s historical-ownership information was not readily available or provided to CEC. The collection, review and reporting of prior-ownership records would require an increase in the scope of CEC’s investigation.

4.4.3 Air Resources Control Board Records

The referenced database report included summaries of various listings that would be related to air emissions. Emission-related permits were reported for the site and adjacent-east property. These permits appeared to pertain to on-going remediation/depressurization activities at and adjacent to the site (see Section 4.5).

4.4.4 Aerial Photographs

Historical aerial photographs of the site and vicinity, provided by ERS, were reviewed to gather historical-usage information. Aerial photographs of the site area dating back to 1947 were provided and reviewed. Specifically, photographs from 1947, 1952, 1964, 1967, 1972, 1980, 1989, 1995, 2002, 2006, 2011 and 2016 were observed. A summary of the information gathered from these photographs follows.

The scale and/or generally poor quality of several aerial photographs made detailed examination of specific site features impractical. However, general use of the site and area appeared to be generally consistent with the historical information gathered through the other described information sources.

In the photographs prior to 1964, the site and surrounding land appeared to have been occupied by former residential structures and trees. At the time of the 1964 and 1967 photographs, the site area appeared to have been vacant, graded land, with present-day commercial development present to the east and west.

The existing site building and associated grounds could be seen in the 1972 aerial view, and in each of the more-recent aerial photographs. No large-scale TSD-type facilities, such as disposal/treatment ponds, lagoons, land-filling operations, oil wells and/or tank farms, were observed at the site in these historical aerial photographs.

4.4.5 Fire Insurance Maps

Sanborn Maps originally were prepared for use by the insurance industry, and date back to the late 1800s for some metropolitan areas. These maps often depict pertinent site information regarding number, approximate size and location of structures on the property, types of construction materials, presence of above-ground or underground storage tanks, and age of site improvements.

ERS’s researchers indicated Sanborn Maps are not available for the site area. This finding is consistent with a lack of historically significant commercial-type development at and near the subject property.

4.4.6 Regional Wildcat Map

CEC visited the state's Well Finder website to check their collection of Wildcat Maps for the existence of historical petroleum wells at or near the site. According to gathered information, no oil wells have ever been installed at or near the subject property. Inasmuch, adverse impact to the site from oil-exploration and/or -production activities is unlikely.

4.4.7 Topographic Maps

CEC reviewed excerpts of topographic maps of the site area to gather additional historical-usage information. The project-specific map excerpts were provided by ERS. The earliest provided topographic base map was prepared in 1903. Subsequent map excerpts included publication dates of 1913, 1928, 1944, 1954, 1968, 1986 and 2016.

The site was depicted to have been occupied by residences from 1928 through 1986. The present-day condition of the site and adjacent and nearby properties could be seen on the 2016 map, which incorporated a superimposed aerial photograph. No large-scale TSD-type facilities, such as waste-disposal or waste-treatment ponds, land-filling operations, oil wells and/or tank farms, were depicted at the site on these historical maps.

4.4.8 Historical Directories

ERS provided an historical directories (telephone) summary for the site and nearby addresses. The recently provided directories summary dated back to 1971. Previously reviewed directory-based site references dated back to 1920. The earliest listing for the site appeared in a 1975 directory.

The initial site-address listing in 1975, and subsequent directory listings through 1995, pertained to the property's former occupant (Panavision). Directory-based references from the years 2000 and 2005 pertained to Columbia College Hollywood.

4.4.9 Environmental Liens/Institutional Controls/Engineering Barriers

The referenced environmental-screening guidelines require this report's user to determine whether any environmental liens or other types of institutional controls exist for the subject property. However, in support of this investigation, CEC reviewed a provided copy of a Preliminary Title Report (PTR) for the site, which recently had been issued by First American Title Insurance Company.

Only routine language, such as that pertaining to water and mineral rights, tax-liens, lease-agreements, and/or easements, was identified in the reviewed text. Specifically, no references to environmental liens, institutional controls, or engineering barriers, such as concrete caps that must remain in place, or other types of land-use restrictions, were described in the PTR.

4.4.10 Building Permits

As described in Section 4.5, the site has been the subject of three prior Phase I investigations. Inasmuch, re-reviewing the city's building permits was deemed redundant, and unlikely to generate pertinent additional information that has not otherwise been reported.

4.5 Synopsis of Previous Environmental Investigations

CEC previously prepared a Phase I report for the site, during 2010. In addition to updated reviews, CEC's previous Phase I report referenced review of two earlier Phase I reports for the site, which had been prepared by others, during 2004 and 2007. No readily apparent environmental concerns had been identified for the site in these previous Phase I reports. Copies of the text pages of CEC's previous report are included in Appendix C. The complete copies of these earlier reports should be considered a part of this summary and are herein included by reference.

CEC also reviewed provided copies of a recent "2016 Annual Sub-Slab Depressurization System Operation, Maintenance, and Monitoring Report", dated January 25, 2017, and a response letter issued by DTSC, bearing a date of March 10, 2017. The annual report described the on-going operation of a vacuum-based subsurface depressurization/remediation of solvent-type soil impacts, as related to former industrial activities at the adjacent-east property.

The reviewed monitoring data indicated the depressurization/remediation system's contaminant-recovery values had significantly declined since initial operation of the system, which began in 2012, and near asymptotic declines were reported for the more-recent data. Additionally, the referenced response letter indicated "DTSC approves the report and notes that the system is operating in accordance with performance objectives set for the system."

As such, additional assessment and/or remediation of the site's subsurface and/or above-ground conditions is deemed unlikely. Copies of pertinent excerpts of the described annual report and DTSC letter also are included in Appendix C.

4.6 Results of Suspect ACM Observations

Asbestos is a naturally occurring mineral fiber that has been used in construction and many other industries. Manufacturers used asbestos in their commercial products because asbestos is noncombustible, noncorrosive, nonconductive, and it has high tensile strength. Asbestos fibers have been mixed with binding agents to create approximately 3,600 different commercial products. The amount of asbestos contained in these asbestos-containing materials (ACMs) can vary from less than 1% to 100%.

Over several decades, it generally was determined that any inhalation exposure to asbestos fibers represented a potential health hazard. Regulatory agencies banned the use of friable, ACMs after 1978. The site's building was constructed prior to 1978. Therefore, ACMs could be present within and on the exterior of the site building.

Suspect ACMs typically include, but may not be limited to, sheetrock wall and ceiling materials and associated joint compounds, troweled-on and sprayed-on (textured) ceiling and other surfaces, and resilient flooring materials and flooring mastics.

Some of these material types were noted during CEC's site visit. However, observed construction materials appeared to be in generally good condition, with a low likelihood of excessive damage due to normal usage, and no instances of friable materials were noted. Given these findings and observations, it is deemed unlikely that asbestos-related remediation would be required under current regulatory mandate(s). However, it is recommended that current and future owners and occupants be notified of the presence of suspect ACMs and cautioned against activities that would disturb potential ACMs. Additionally, owners and occupants

should be informed that future demolition and renovation activities may require special permitting and/or engineering activities.

4.7 Radon Potential and Air-Quality Concerns

Radon is a colorless, odorless, tasteless radioactive gas that occurs in soil and ground water as a by product of radioactive decay of uranium and thorium isotopes found in certain rocks. Various levels of naturally occurring radon exist across the United States. Radon can become concentrated in buildings with poor air circulation. Prolonged exposure to radon has been associated with increased risk of certain types of cancer.

The California Statewide Radon Survey Interim Results Report was reviewed regarding potential naturally occurring radon levels at the site. For this report, the California Department of Health Services divided the state into nine regions, based on general geology, climate and existing radon occurrence and distribution knowledge.

The subject site is located in Region 9. Based on statistical analysis of random sampling performed by ZIP Code, the report predicted only 0.5% of the homes in Region 9 exceeded the EPA's action level of 4.0 pCi/l. (picocuries per liter). Therefore, elevated levels of naturally occurring radon at the site are not anticipated.

Sampling and/or inspecting the site for radon, mold, and/or other air-quality concerns, such as vapor intrusion, would require use of specialty sampling equipment and specialized laboratories for sample analyses. If desired, such sampling services, or other form of air-quality evaluation, would necessitate an increase in CEC's scope of work.

5.0 VAPOR ENCROACHMENT SCREENING (VES)

In order to address potential vapor-encroachment concerns, as related to nearby sites, ASTM Standard E2600-10 (Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions) was referenced for general guidance, as part of this Phase I environmental screening. The step-wise screening process, rationale, and associated outcome, are discussed below.

The purpose of this type of additional vapor-threat screening is to establish whether or not an ASTM-defined Vapor Encroachment Condition (VEC) may exist, due to migratory contamination (ground water and/or soil vapor), that may be derived from nearby database-listed properties. Conversely, the vapor-encroachment screening process is intended to provide a procedure for establishing that a VEC does not or is not likely to exist for a given property.

If one or more nearby "suspect" properties, as identified in the database report, can not be eliminated as potential vapor-migration sources, additional evaluation (sample collection) typically is recommended.

5.1 Tier I VES

The initial step in a VES involves a cursory review of the regulatory database report described in Section 4.3 and other historical records where applicable, to assess if any "known or suspect potentially contaminated properties" exist within close proximity of the site. The referenced ASTM guidelines require initial screening at a radius of 1 mile, in establishing a default Area of Concern (dAOC) that surrounds the site.

At this level of potential vapor-migration evaluation, there is no distinction between releases of petroleum products and other chemicals of concern, such as industrial cleaning and/or degreasing solvents, or local physical conditions. Some of the nearby agency-listed properties that were described in Section 4.3 lie within the ASTM-defined dAOC for the subject site. Based on this initial finding, additional evaluation of the potential for off-site migratory contamination was conducted, as described below.

5.2 Tier II VES

Tier II screening uses more-detailed information for the nearby sites of potential concern that had been identified through the Tier I process, to better assess whether or not a migratory contaminant plume is close enough to the subject site to result in a possible VEC.

Specific distances between properties, with respect to the direction of ground-water flow and/or chemical type, soil types, and more-detailed review of the nature of nearby listings, are used to further assess the likely presence of a VEC. The known or likely presence of a nearby VEC unto itself could require consideration as a potential REC.

5.3 Tier III VES

As described in Section 4.5, the subject site is undergoing active depressurization/remediation of the subsurface materials/environment, as related to previously reported solvent impacts on the adjacent-east property. The reviewed monitoring data indicated the depressurization/remediation system's contaminant-recovery values had significantly declined since initial operation of the system, which began in 2012, and near asymptotic declines were reported for the more-recent data. Inasmuch, no Tier III VES activities (collection and analysis of physical samples) presently are deemed warranted.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on CEC's described reviews and research findings, the site and general area appear to have been vacant land prior to initial development with residential structures, which occurred sometime prior to 1928. The former residences had been removed and the site area was vacant, graded land at the time of 1964 and 1967 aerial photographs. The site's present-day building and associated improvements have been present at the subject property since initial construction, which is reported to have occurred during 1972.

As described in various report sections, no indications of former usage for heavy industry, or on-site disposal or treatment of hazardous wastes, were identified for the site. Only operating-type permits for the site's former and current occupants were encountered in the regulatory listings. Permit-derived listings unto themselves do not indicate an unauthorized release has occurred, or other form of environmental concern exists.

Similarly, directory-based historical references are not unto themselves indicative of an environmental condition. Additionally, the existence of such permits suggests operations are/were being conducted under regulatory oversight. Also, it would be unlikely significant and/or migratory contamination would be present at a closed-case property.

As described in Section 4.5, the subject site is undergoing active depressurization/remediation of the subsurface materials/environment, as related to previously reported solvent impacts on the adjacent-east property. The reviewed monitoring data indicated the depressurization/remediation system's contaminant-

recovery values had significantly declined since initial operation of the system, which began in 2012, and near asymptotic declines were reported for the more-recent data. Inasmuch, additional assessment and/or remediation of the site's subsurface and/or above-ground conditions is deemed unlikely.

No other agency-listed sites were found to be situated adjacent to the site and/or in an up-gradient position with respect to the reported direction of ground-water flow. Based on distance from the site, relative location with respect to hydraulic gradient, nature of listing(s) and/or status, it is deemed unlikely the listed properties in the general area have resulted in presently unknown reportable conditions at the subject site.

No "significant" data gaps deemed likely to adversely affect the findings of this investigation were identified. CEC therefore concludes the site has been satisfactorily screened for potential environmental concerns. Given these findings, no additional site assessment or remediation activities presently are deemed necessary or recommended.

7.0 LIMITATIONS

No site assessment activities, no matter how extensive or expensive, can guarantee the absence of hazardous or otherwise-regulated materials at a particular site. Despite the use of reasonable care, CEC and other well-qualified and competent environmental professionals may fail to detect the presence of hazardous/regulated substances at a property. In addition, CEC and other environmental professionals may under or over estimate the amount and/or extent of hazardous or regulated substances present.

CEC assumes no responsibility for conditions that were not readily apparent at the time of its work, or for the accuracy or completeness of information provided or compiled by others. The professional services provided for this report and the related investigation are intended to meet the degree of skill and care ordinarily exercised by other environmental professionals in the region practicing under similar conditions and circumstances. No other warranty or guarantee, express or implied, is made.

This report has been prepared for submittal to Rabobank, N.A., on behalf of Columbia College Hollywood, and is intended to be used solely by these parties and their designated agents in evaluating the potential impact, if any, of regulated or otherwise hazardous materials at the site.

This report is not intended for use by other parties, and may not contain sufficient detail for use by others. Any use of, or other reliance upon, the herein-contained information by another party shall be at the sole risk of such third party, and without legal recourse against CEC, its employees, or officers, regardless of whether such action is based upon contract, tort or statute.

This report is not a legal opinion. CEC's comments are based on its understanding of current regulations and experience with similar projects. A qualified environmental attorney should be consulted for a legal opinion on any related matters, including site ownership/management requirements and options. Other, non-general limitations for this report are described at the end of report Section 4.7.

9.0 QUALIFICATIONS AND PROFESSIONAL DECLARATION

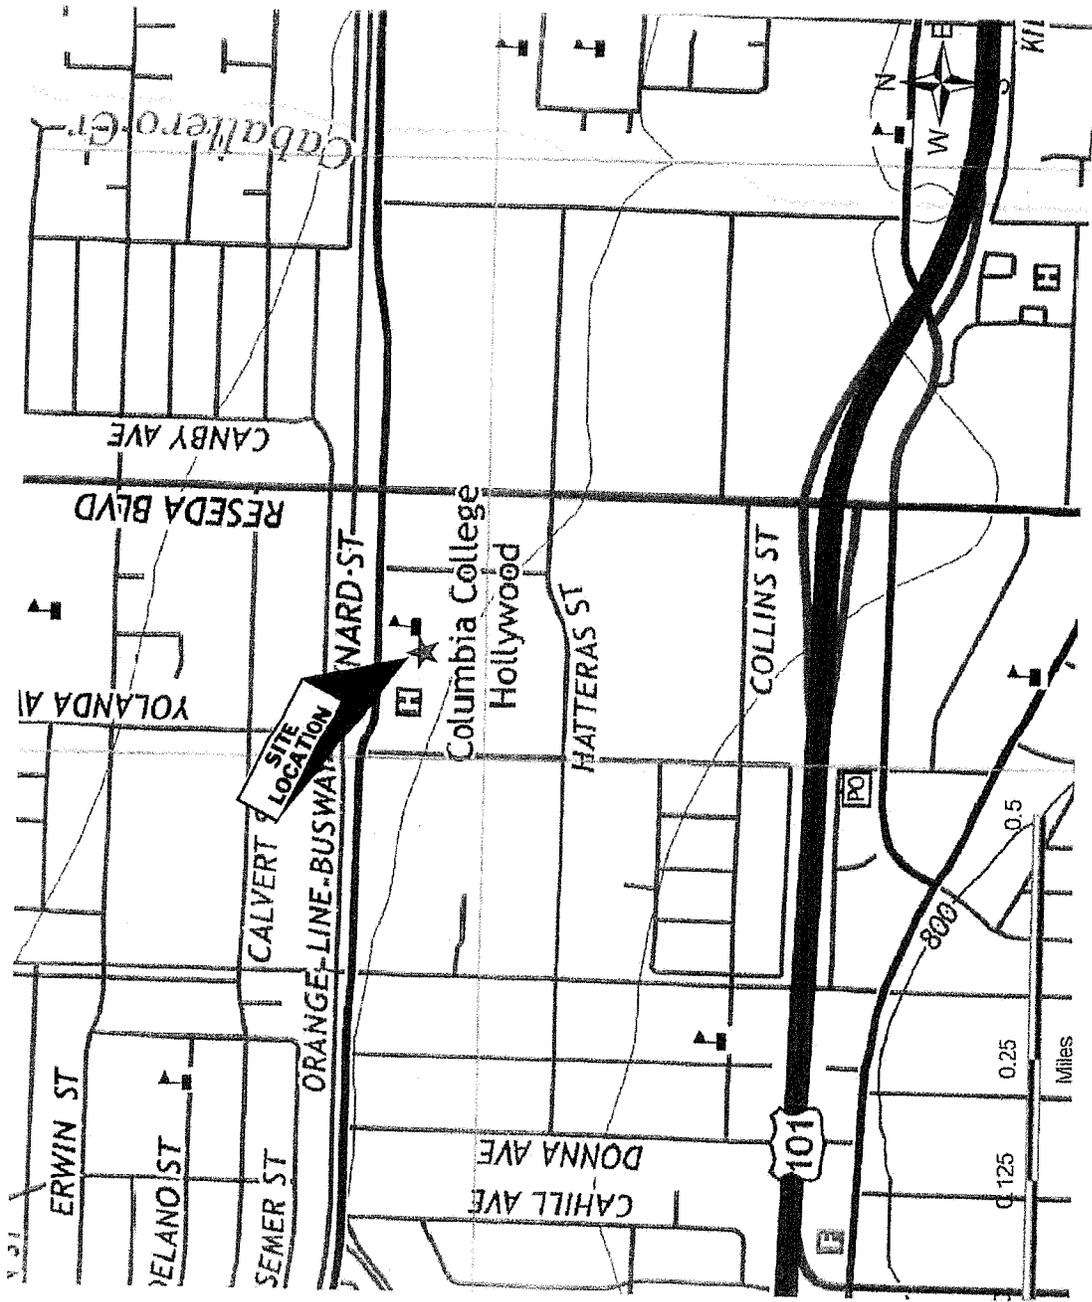

All Phase I investigation/review activities described in the preceding report sections were performed by CEC's President and CEO, Mr. David R. Johannes. Mr. Johannes founded CEC at the beginning of 1996, after working for 10-plus years with Southern California offices of international and regionally based geotechnical and environmental consulting companies.

To date, CEC has performed over 870 environmental site assessment, remediation and/or monitoring programs, in conformance with a variety of published and/or project-specific guidelines. CEC's list of clients includes a diverse grouping of public agencies, major and regional banks, attorneys, defense contractors, other consulting firms, and property owners and management firms.

Mr. Johannes is a Registered/Professional Geologist (California), Registered Environmental Assessor (California), Certified Environmental Specialist (USA), Certified Air Quality Specialist (USA), and is a California-Licensed "A" General Engineering Contractor. A resume of Mr. Johannes' professional experience and credentials is maintained at CEC's office, and can be provided upon request.

Declaration: "I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312, and that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. In preparing the Phase I report, I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

SITE LOCATION TOPOGRAPHIC MAP

U.S. Geological Survey. Canoga Park (2015-02-23) Quadrangle, 7.5 Minute Series

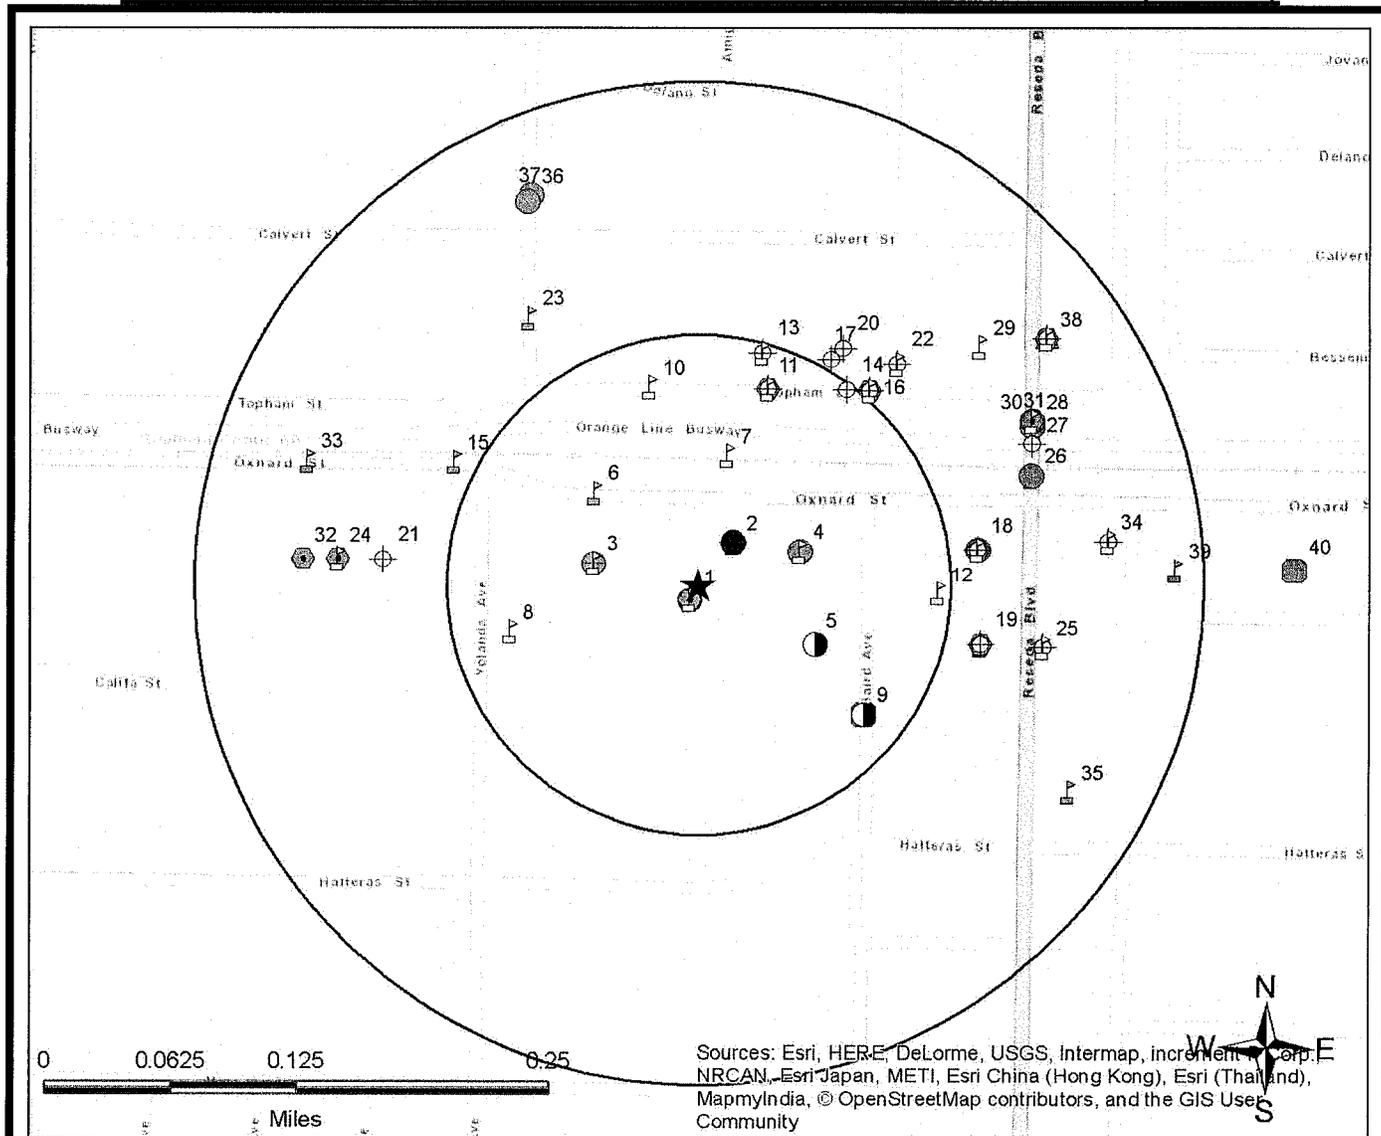

Certified Environmental Consultants, Inc.	18618 Oxnard Street Tarzana, CA 91356	FIGURE: 1 JOB: 17-1870 DATE: 3/10/2017
---	--	--

1-MILE RADIUS STREET MAP W/OCCURRENCES (MAP1)

All plotted occurrences represent approximate locations based on geographic information provided by the respective agency. Actual locations may vary due to numerous reasons such as: the size of the property, accuracy of the provided location, accuracy of the software used to determine the location, etc. Occurrences are shown in three colors to give a visual indication of the potential risk of the listed occurrence based on the type of list and the current status of the occurrence. Occurrences shown in RED are locations with known contamination that have not received a "case closed" or "no further action" status. Occurrences shown in YELLOW have been listed by the respective agency, but do not always represent an environmental risk. The detailed status information and description of the listing should be reviewed for further information. Occurrences shown in GREEN are occurrences that have active permits or have had contamination in the past but have received a "case closed" or "no further action" status and therefore, do not likely present an environmental risk.

1-MILE TOPOGRAPHIC MAP W/OCCURRENCES (MAP3)

All plotted occurrences represent approximate locations based on geographic information provided by the respective agency. Actual locations may vary due to numerous reasons such as: the size of the property, accuracy of the provided location, accuracy of the software used to determine the location, etc. Occurrences are shown in three colors to give a visual indication of the potential risk of the listed occurrence based on the type of list and the current status of the occurrence. Occurrences shown in RED are locations with known contamination that have not received a "case closed" or "no further action" status. Occurrences shown in YELLOW have been listed by the respective agency, but do not always represent an environmental risk. The detailed status information and description of the listing should be reviewed for further information. Occurrences shown in GREEN are occurrences that have active permits or have had contamination in the past but have received a "case closed" or "no further action" status and therefore, do not likely present an environmental risk.

AGENCY DIFFERENCES IN MAPPED LOCATIONS (MAP 4)

Note: Occurrences on this map have agency provided coordinates which differ significantly from geocoded locations.

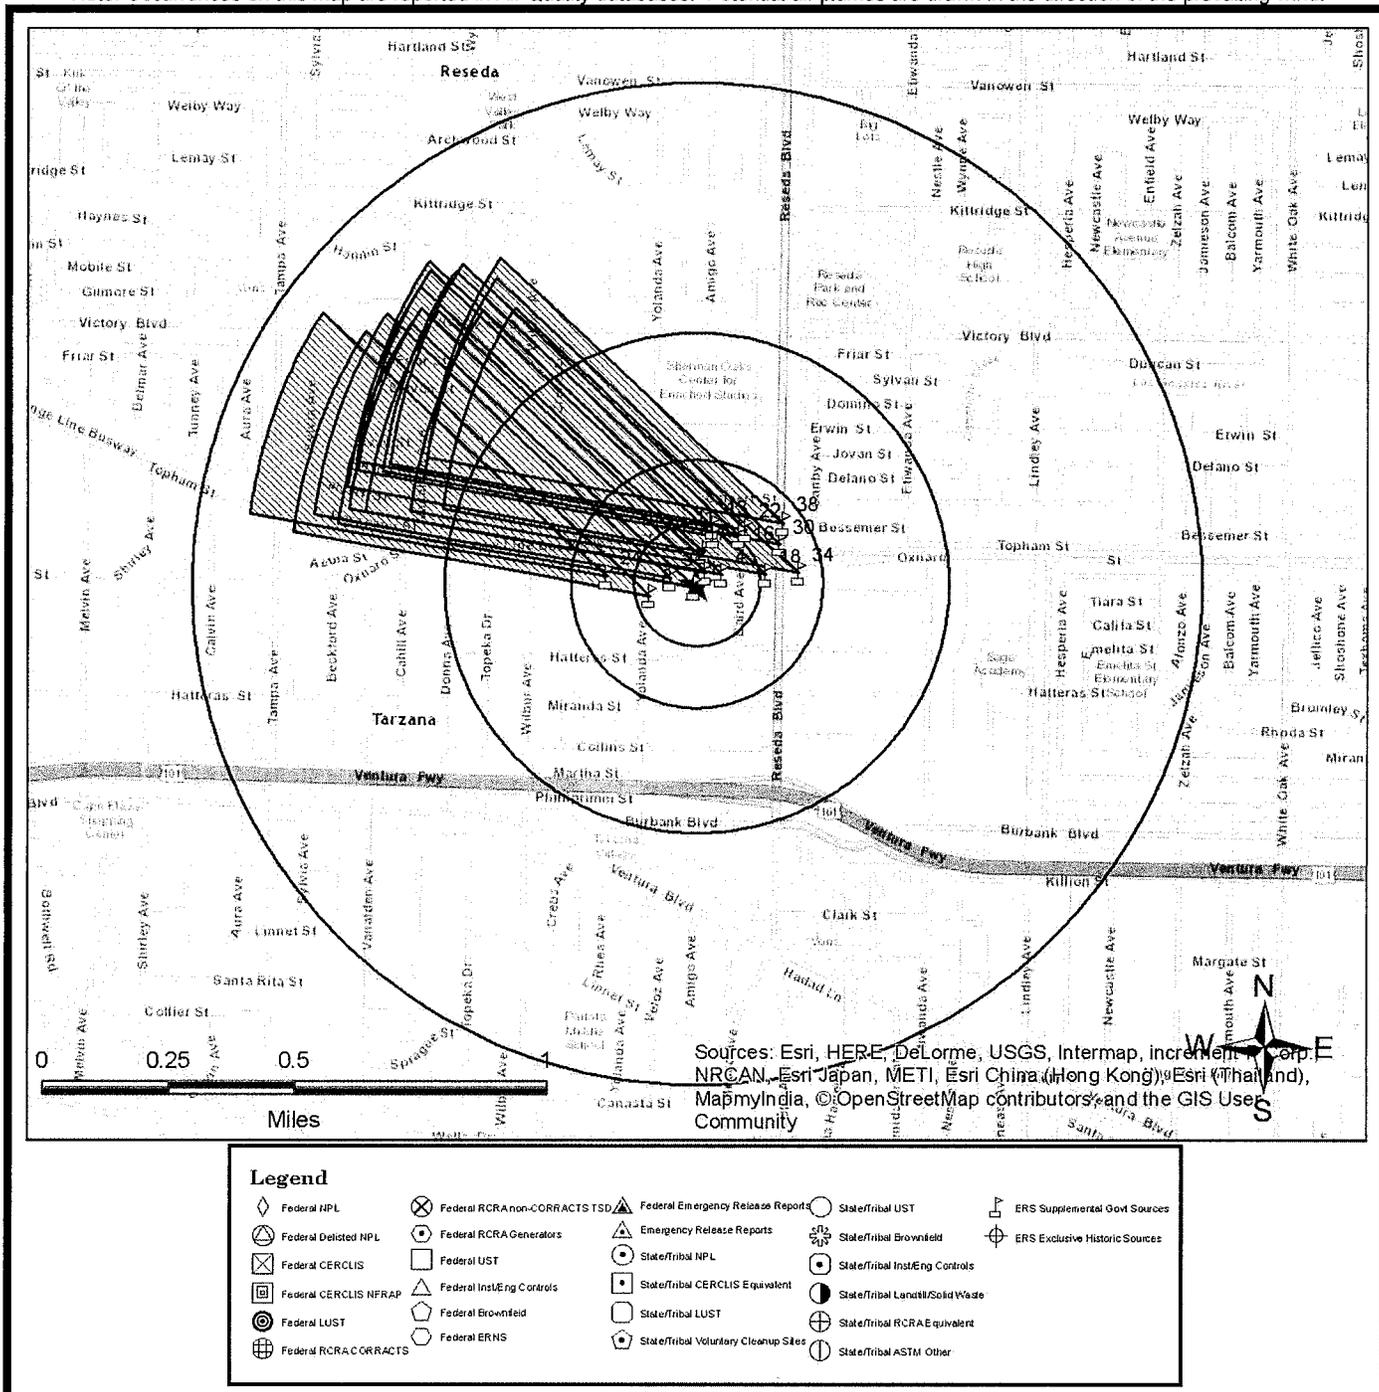

This "AGENCY DIFFERENCES IN MAPPED LOCATIONS (MAP 4)" is fully protected against reproduction in any way, shape or form by ERS Environmental Record Search. ALL applicable laws, copyrights, pending copyrights, trademarks, and any and all applicable Federal and State laws apply at all times. These protections include the concept, procedures, processes, layout, vision, color scheme, mapping layout, legends, data, any and all verbiage, and the entire concept.

MAPPED AIR PERMITS WITH POTENTIAL DISPERSION (MAP5)

Note: Occurrences on this map are reported in Air Quality databases. Potential air plumes are drawn in the direction of the prevailing wind.

All plotted occurrences represent approximate locations based on geographic information provided by the respective agency/source. Actual locations may vary due to numerous reasons such as: the size of the property, accuracy of the provided location, accuracy of the software used to determine the location, etc. Potential air dispersion plumes are depicted to graphically show the direction contaminates may travel based on prevailing wind data and provide a visual screening tool only. Actual direction will vary especially by season. Depending on the actual contaminant, amount released, and other variables, the distance from the source the contaminant may travel can and will vary. Interpretation and review of all the actual relevant data by an environmental professional is recommended before making any decisions, conclusions or otherwise based on the map depictions, air data, and potential air dispersion plumes.

This "MAPPED AIR PERMITS WITH POTENTIAL DISPERSION (MAP 5)" is fully protected against reproduction in any way, shape or form by ERS Environmental Record Search. ALL applicable laws, copyrights, pending copyrights, trademarks, and any and all applicable Federal and State laws apply at all times. These protections include the concept, procedures, processes, layout, vision, color scheme, mapping layout, legends, data, any and all verbiage, and the entire concept.

Air Permitting Agency Contact:	Atul Kandhari 21865 East Copley Drive Diamond Bar, CA 91765

2. SUB-SLAB DEPRESSURIZATION (SSD) SYSTEM OPERATION OVERVIEW

System Operation Summary							
Reporting Period	January through December 2016						
Hours Operated¹	Treatment Train A		Treatment Train B				
	Current Period:	7,959	7,874				
	Cumulative Total:	37,048	36,774				
Unscheduled Shut Downs?	No unscheduled shut downs occurred during the current reporting period.						
Extraction Points Operated	EP-3, EP-4, EP-6, EP-7, EP-9			EP-12, EP-14, EP-16, EP-17, EP-18, EP-19			
Minimum -0.02 IWG Observed at all Monitoring Points?²	Yes			Yes			
Range of Influent PID Concentrations (ppbv)³	0 to 2.1			0 to 1.1			
Range of Influent PCE and TCE Concentrations (ppbv)⁴	PCE	TCE	PCE		TCE		
	1.7 to 170	0.72 to 75	66 to 190		20 to 93		
Current Period Mass Removal (lbs), Vapor Phase⁵	PCE	TCE	c-DCE	t-DCE	VC	Benzene	Total VOCs
	6.11	2.55	0.024	0.023	0.015	0.020	8.75
Cumulative Total Mass Removal (lbs), Vapor Phase⁵	64.5	20.9	0.85	0.82	0.53	0.67	88.3

Notes:

- Operational summary is provided as Table 1. Cumulative total includes hours operated from August 27, 2012 to present.
- System pressure summary is provided as Tables 2a and 2b.
- PID range excludes any data which was rejected upon review as non-representative of field conditions (Table 3).
- Influent PCE and TCE concentrations reflect concentration in samples collected throughout reporting period (Table 4).
- Total mass estimate assumes total volumetric flow at each blower multiplied by average concentration of each analyte in samples collected during reporting period. Cumulative total mass estimate calculation includes first reporting period total, which assumed analyte concentration in samples collected during startup testing of system rather than throughout the monitoring period (Table 5). Where constituent was not detected in any analytical laboratory results, associated mass is estimated assuming a concentration equal to the reporting limit. Total VOCs value is computed as the sum of the VOCs listed.

System Summary:	<p>- The SSD system (System) began operating at the Site in the summer of 2012. Influent to the System consists of soil vapor extracted from a subset of nineteen extraction points (EPs). Non-deployed extraction points are used along with monitoring points (PMPs) and non-deployed air inlet points (APs) for monitoring of sub-slab pressures. Air inlet points were included as a provisional feature in the System design, but because performance objectives are satisfied without deploying, these remain in valved-off condition and are used for monitoring of sub-slab pressures. Soil vapor is conveyed to the treatment system via header pipes and is processed and treated via the following series of processes in each of two treatment trains (Figure 1):</p> <ul style="list-style-type: none"> • Manifold to allow for reconfiguration of flow regime; • Skid-mounted blower to extract vapor, with knock-out pot to remove liquid condensate; • Heat exchanger that prevents high temperatures to protect carbon; • Two 1,000 pound granular activated carbon (GAC) units in series to adsorb volatile organic compounds (VOCs); and • Combined effluent stack. <p>- A process flow diagram is provided as Figure 2. Treated vapor was discharged to the atmosphere as provided in SCAQMD permit.</p> <p>- A summary of System operation is provided as Table 1.</p>
Site Chemicals of Concern (COCs):	<p>- Tetrachloroethene (PCE), trichloroethene (TCE), and cis-1,2-dichloroethene (cis-DCE).</p>
SCAQMD Compliance:	<p>- Monthly sampling events were conducted on the following dates during system operation:</p> <ul style="list-style-type: none"> • 22 January 2016; • 12 February 2016; • 11 March 2016; • 12 April 2016; • 6 May 2016; • 17 June 2016; • 8 July 2016; • 8 August 2016; • 9 September 2016; • 7 November 2016;and • 2 December 2016 <p>- In addition to required monthly monitoring, the System was also monitored (without sample collection) on:</p> <ul style="list-style-type: none"> • 8 January 2016; • 26 February 2016; • 31 March 2016;

SCAQMD Compliance (cont'd):	<ul style="list-style-type: none"> • 27 April 2016; • 18 May 2016; • 3 June 2016; • 22 July 2016; • 26 August 2016; • 23 September 2016; • 18 November 2016; and • 16 December 2016 <p>- SV-3A and SV-3B, the influent locations, and E-8, the combined effluent location, were sampled and analyzed for VOCs via Environmental Protection Agency (EPA) Method TO-15 (Figure 2).</p> <p>- System effluent was in compliance with SCAQMD permit effluent limits during this reporting period. The System sampling laboratory results are provided in Table 4. Laboratory analytical reports and chain-of-custody forms are included in Appendix A (electronic copy). System PID results are provided in Table 3.</p>
Performance:	<ul style="list-style-type: none"> - Field pressure readings are taken on a routine basis, on an interval not to exceed monthly, at all performance monitoring points. - Data indicate that sub-slab environment was continually under negative pressure consistently above (more negative than) the performance objective of a minimum of 0.02 IWG negative pressure in all monitoring points. A field pressure summary is provided as Tables 2a and 2b. - As requested by DTSC in a letter dated 13 January 2016, the system was shut down from 27 September 2016 to 31 October 2016 due to a step-out subsurface investigation conducted at the Bodycote property by SLR International Corporation on behalf of Bodycote Thermal Processing West, Inc. - System operated continuously otherwise during the reporting period.
Maintenance Performed:	<ul style="list-style-type: none"> - Routine maintenance was performed on the System including confirmation of Sensaphone function, oil changes, lubrication service, air filter change, and belt replacement and tightening. - Non-routine maintenance was performed on the System including cleaning the heat exchanger fins and coils to address overheat, and calibrating the magnehelics on Blowers A and B. - A summary of System operation and maintenance is included as Table 1.
Next Annual Period Planned Activities:	<ul style="list-style-type: none"> - Continued bi-monthly inspections of treatment system and sub-slab field pressures. - System compliance sampling will continue in accordance with SCAQMD requirements. - The 2017 Annual OM&M Report will be submitted on 31 January 2018, for the reporting period of 1 January to 31 December 2017.

Notes:
 1. Location EP-16 initially served as a performance monitoring point, until deployment as an extraction point on 12/16/2016 due to the continued decrease in vacuum. Location was deployed during the course of system readings, and nearby monitoring points were re-recorded to reflect the changed condition. Because not all locations could be re-recorded, this data should be omitted from trend analysis on this date.
 2. Location EP-17 initially served as a performance monitoring point, until deployment as an extraction point on 5/24/2013 for the purpose of flow balancing.
 3. Location EP-18 initially served as a performance monitoring point, until deployment as an extraction point on 11/21/2014 (after the collection of system readings) due to the continued decrease in vacuum.
 4. Due to a leak in the system, location EP-3 was temporarily shut off during system readings. Values recorded on 5/21/14 reflect regulatory compliance, but indicate a non-standard configuration and should not be used for evaluation of equipment stability.
 5. Due to a leak in the system, location EP-3 was temporarily shut off during system readings. Values recorded on 5/21/14 reflect regulatory compliance, but indicate a non-standard configuration and should not be used for evaluation of equipment stability.
 All pressure readings recorded using Dwyer brand digital handheld manometer with pressure range indicated.
 Values in bold indicate vacuum readings less than 0.02 IWG. Location AP-7 has been found to be defective, due to the presence of a 12-inch thick concrete core observed during installation. It is expected that this point is disconnected with the building sub-slab field due to a local feature of the slab construction and the point is not representative of sub-slab conditions.

Notes:

ppmv = parts per million by volume

1. System was transition from operation under various locations permit numbers F53568 and F53577, to operation under site-specific permit number G18759, on 8 January 2013.
2. System startup date.
3. All startup PID readings (2 through 8 June 2012) are reported as required, but are considered invalid as described in report. These MiniRAE 2000 readings were erratic, not-repeatable, and were inconsistent with laboratory data. More robust model PID (MiniRAE 3000) was obtained for 13 and 16 July 2012 inspections, and subsequent readings were consistent with previous laboratory data.
4. System temporarily shut down; PID data not required on this date.
5. System restart after confirming permit compliance based upon laboratory analytical data.
6. Blower A temporarily shutdown; restarted.
7. PID readings not required on event date.
8. Blower B temporarily shutdown.
9. Blower B restarted.

Notes:

ppbv = parts per billion by volume

µg/m³ = micrograms per meter cubed

H = Due to laboratory constraints, sample analysis occurred beyond the applicable holding time.

NMOC as Hexane = non-methane organic compounds, quantified as hexane

Non-detected analytes are presented as "< laboratory reporting limit"

PCE = Tetrachloroethene

TCE = Trichloroethene

cis-DCE = cis-1,2-Dichloroethene

trans-DCE = trans-1,2-Dichloroethene

VC = Vinyl Chloride

1. Due to laboratory constraints, total organic analysis on 1/11/2013 was reported as EPA method TO-3 total organic compounds (TOC) as hexane, rather than TO-15 NMOC as hexane.

2. Anomalous laboratory results for 9/11/15 reflect elevated NMOC as Hexane, the anomalous result was below the compliance limit of 10 ppmv. However to investigate anomaly, laboratory procedures were scrutinized by Geosyntec and by Eurofins/Columbia Analytical, including re-analysis, all of which confirmed the result. Subsequent sampling did not affirm effluent breakthrough of NMOC as Hexane. Heat exchanger was temporarily offline the morning of sampling, and anomalous results may be associated with temporarily high carbon temperatures. Anomalous concentrations remained within limits established by SCAQMD effluent permit.

Notes:

1. Mass removal for first reporting period (through December 2012) is calculated assuming influent concentration as detected in samples submitted to the analytical laboratory during startup testing. Subsequent months are calculated using influent concentrations in samples collected during that month.
2. Due to laboratory constraints, samples collected on 9/13/13 were analyzed beyond the applicable holding time. Mass removal for the month of September 2013 is estimated using the reported detections or reporting limits.
3. The hour meter of Blower A was found to be not working on the day of inspection. However, the blower was operating. VOC mass removal was estimated using the hours of operation of Blower B.

Concentrations in *italics* represent the reporting limit for compounds not detected, and associated mass is estimated assuming concentrations equal to the reporting limit.

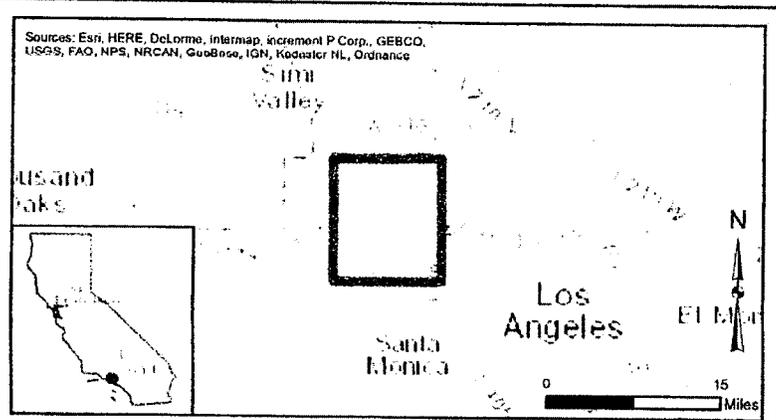

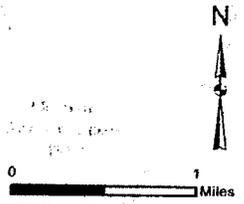

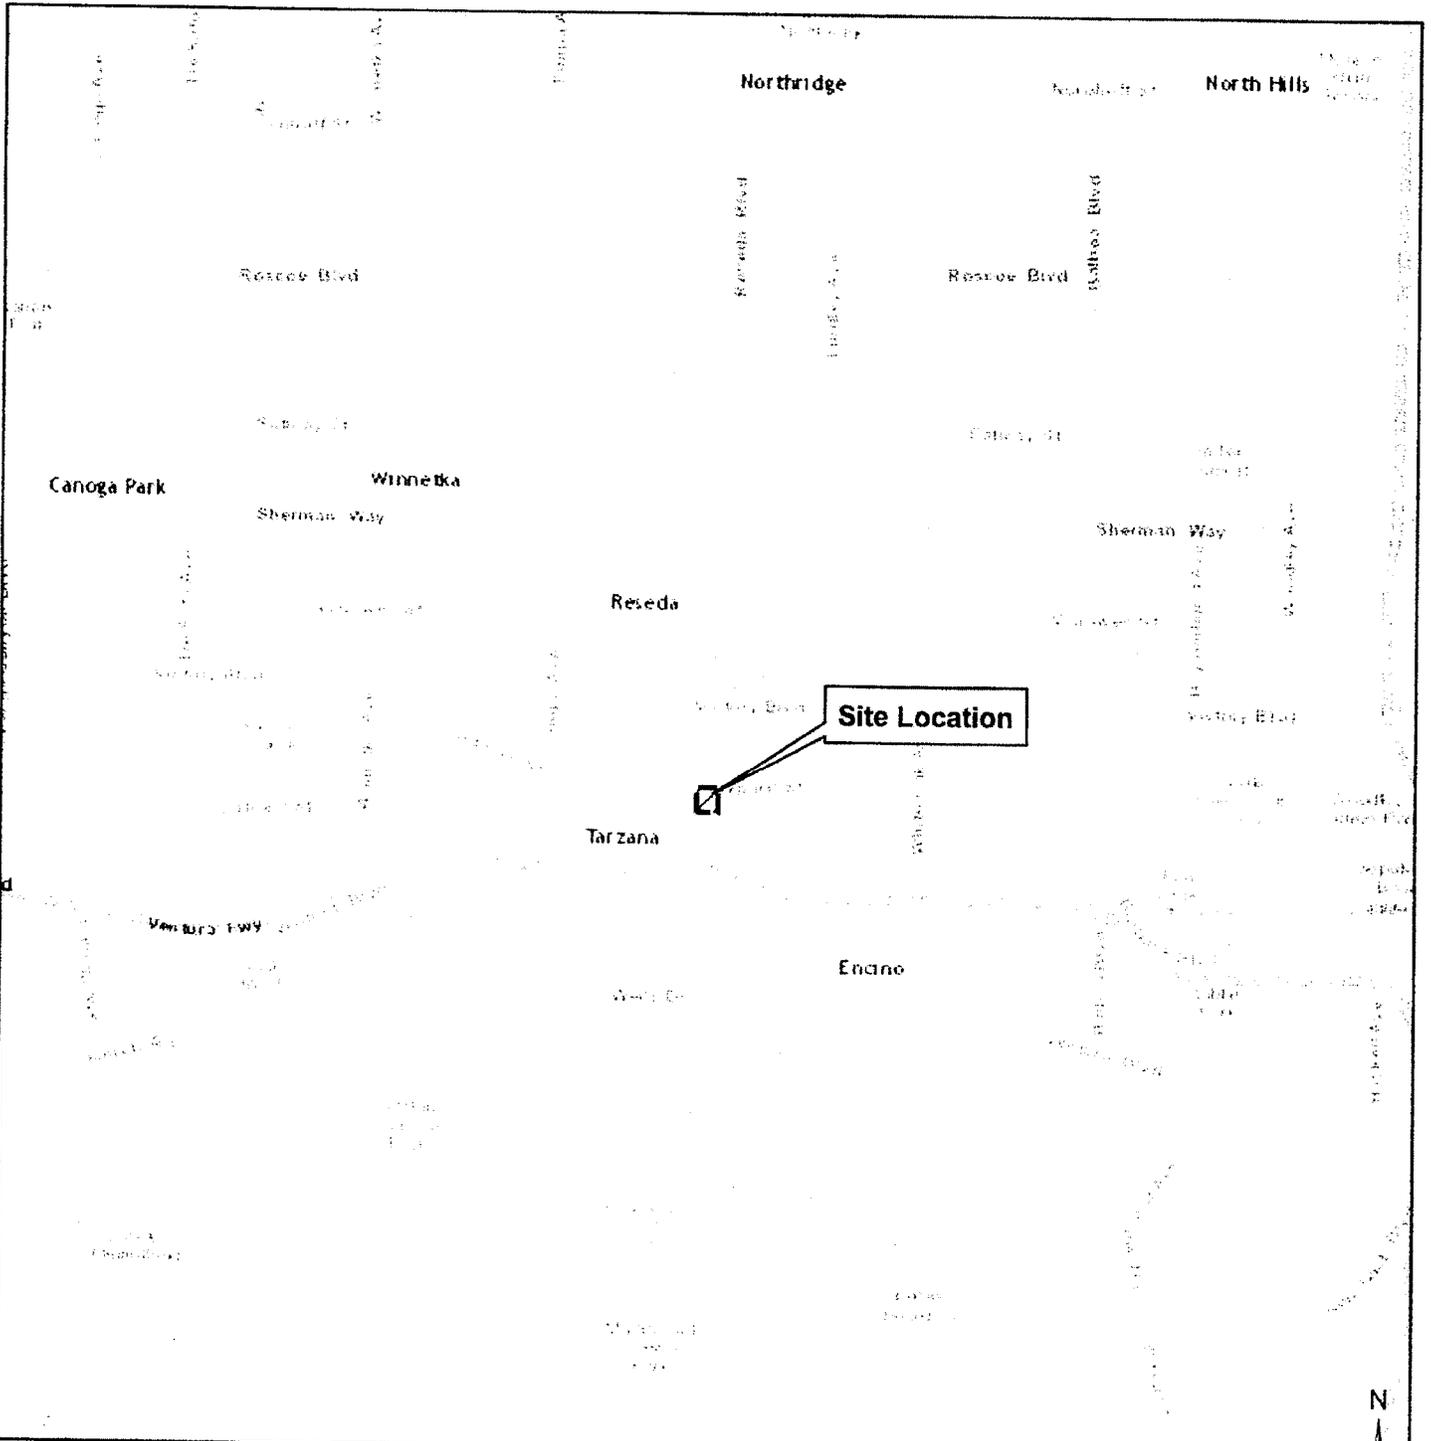

Conversion factors:

- m³ per ft³: 0.02832
- minute per hour: 60
- µg per lb: 453,592,370

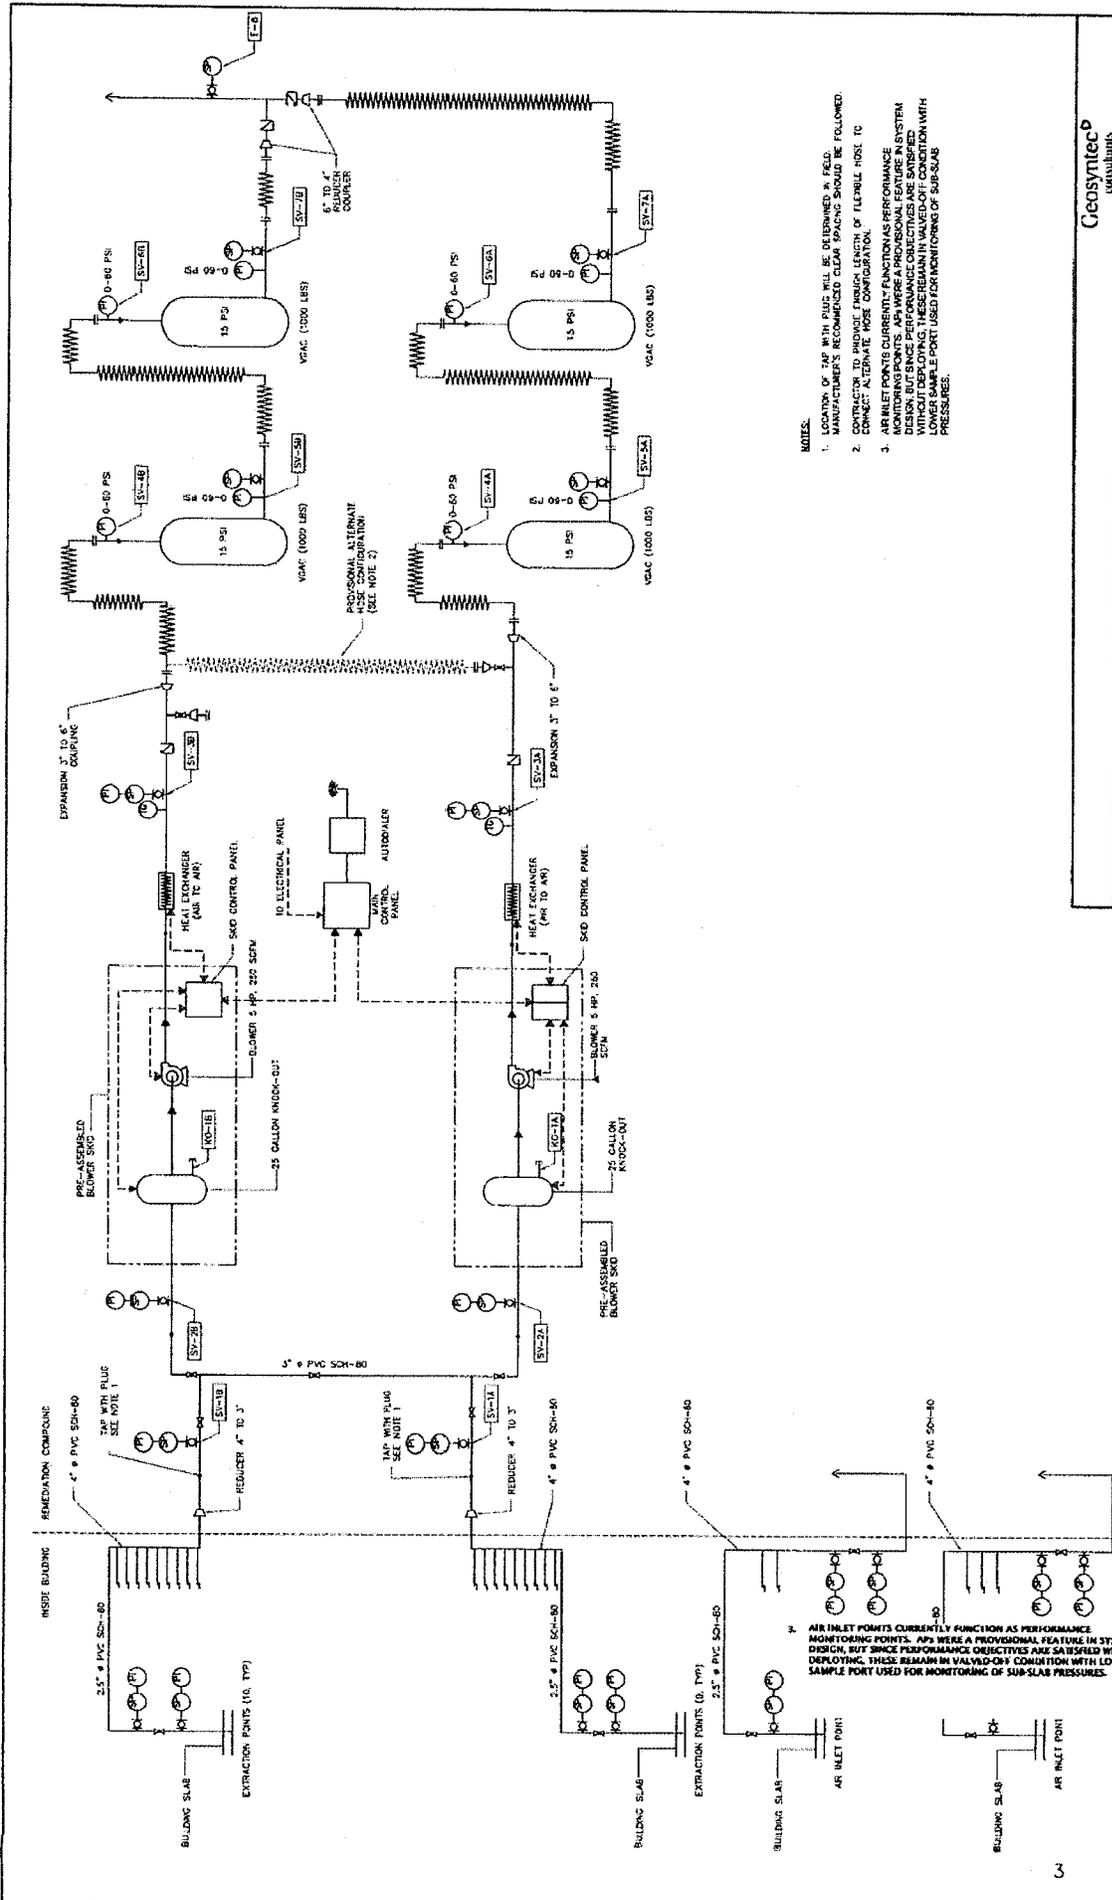

Abbreviations:

- µg = microgram
- cis-DCE = cis-1,2-Dichloroethene
- conc. = concentration
- ft³ = cubic feet
- lb = pound
- m³ = meter cubed
- PCE = Tetrachloroethene
- remv'd = removed
- std = standard
- TCE = Trichloroethene
- trans-DCE = trans-1,2-Dichloroethene
- VC = Vinyl Chloride

Parts per Billion Volume (ppbv), Calibrated as 50 ppbv Hexane

Treatment Train A
 Treatment Train B

Notes:
 ppmv - parts per million by volume
 PID - photolization detector
 Site startup testing data indicated that initial MiniRAE 2000 data were invalid, as readings were erratic, not repeatable, and were inconsistent with laboratory data. More robust model PID (MiniRAE 3000) was generally utilized for inspections beginning in July 2012. Subsequent readings appeared to be generally more consistent with previous laboratory data. In select cases, PID was inadvertently calibrated with Hexane 100 ppmv gas rather than 50 ppmv gas, as indicated in Table 4.

**APPROVAL 2016 ANNUAL SUB SLAB DEPRESSURIZATION SYSTEM OPERATIONS,
MAINTENANCE AND MONITORING REPORT FOR FORMER BODYCOTE THERMAL
PROCESSING FACILITY (SITE CODE: 301481)**

Dear Mr. Crowe,

The Department of Toxic Substances Control (DTSC) has reviewed the *2016 Annual Sub-Slab Depressurization System Operations, Maintenance and Monitoring Report* (Report) for the Former Bodycote Thermal Processing Facility located at 18600 Oxnard Street, Tarzana, California (Geosyntec, January 2016). The Report details the operation, maintenance and monitoring of the Sub Slab Depressurization System (SSDS) system installed the Columbia College of Hollywood campus.

The SSDS has been operating within system design parameters. However, enclosed are comments from DTSC staff that needs clarification. DTSC approves the report and notes that the system is operating in accordance with performance objectives set for the system. If you have any questions please contact me at 818-717-6560 or mbose@dtsc.ca.gov

Sincerely,

Manjul Bose

Christine.Brown@dtsc.ca.gov

General Comments:

- Table 2a, Extraction Points. As of November 7, 2016, the pressures in extraction points EP-3, EP-4, EP-6, EP-7 and EP-9 dropped to approximately half their previous values (on 9/23/2016). The facility should provide an explanation for the drop in pressure.
- As of 12/2/2016, Treatment train B (pulling vapors from the North side of the building (as depicted in Drawing C-2 of the Interim Removal Action Completion Report dated April 3, 2013)) has pulled more contaminant mass (cumulatively) from the subsurface than treatment train A (pulling vapors from the south side of the building) (50.52 lb vs, 37.82lb). The mass removed during the present reporting period (Jan-Dec 2016) from treatment train B was roughly twice the mass removed from treatment train A.

CEC Project Number 10-1535

July 12, 2010

EXECUTIVE SUMMARY

Certified Environmental Consultants, Inc. (CEC) recently completed a Phase I Environmental Site Assessment (Phase I) for commercial property located at 18618 Oxnard Street, within the community of Tarzana, City of Los Angeles, Los Angeles County, California. This report summarizes the procedures that were followed, and describes the findings of CEC's related investigation.

The purpose of the assessment was to identify and assess apparent and recognizable site characteristics that may be of environmental concern, if present, and conversely, to ascertain and describe the apparent lack of recognized environmental conditions. Areas of potential environmental concern typically include present/past activities related to the treatment, storage and/or disposal (TSD) of regulated/hazardous materials, which could have adversely impacted the site, or other environmental hazards that likely would affect the property's value and/or future land usage.

"Recognized environmental conditions" (RECs) do not include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of the local regulatory agency. Small, isolated staining of the pavement surface in a vehicle parking area would be an example of a *de minimis* condition.

This project was performed by CEC for Columbia College Hollywood (CCH), on behalf of Rabobank, N.A., as authorized by CCH's Mr. Richard Crowe.

Based on CEC's described reviews and research findings, the site and general area appear to have been vacant land prior to initial development with residential structures, which occurred sometime prior to 1928. The former residences had been removed and the site area was vacant, graded land at the time of the referenced 1965 aerial photograph. The site's present-day building and associated improvements have been present at the site since being constructed during 1972.

As described in the above report sections, no indications of former usage for heavy industry, or disposal or treatment of regulated wastes, were identified for the site. Only operating permits for the site's former occupant were encountered in the regulatory listings. Operating permits do not indicate a release has occurred or other type of environmental concern exists, only that regulated materials are used, stored or generated. Additionally, no instances of violations or regulatory enforcement actions were identified for the site's former occupant. No regulatory listings were identified for the site's current occupant (CCH).

No agency-listed sites were found to be situated adjacent to the site and/or in an up-gradient position with respect to the reported direction of ground-water flow. Based on distance from the site, relative location with respect to hydraulic gradient, nature of listing(s) and/or status, it is deemed unlikely the listed properties in the general area have resulted in reportable conditions at the subject site.

In summary, no indications of RECs were identified at the site during CEC's recent site visits, or through the described historical land-use research. Based on the described considerations and findings, it is deemed unlikely adverse impacts are present at the site. No "significant" data gaps deemed likely to adversely affect the findings of this investigation were identified. CEC therefore concludes the site has been satisfactorily screened for potential environmental concerns. Given these findings, no additional site assessment or remediation activities presently are deemed necessary or recommended.

1.0 INTRODUCTION

Certified Environmental Consultants, Inc. (CEC) recently completed a Phase I Environmental Site Assessment (Phase I) for commercial property located at 18618 Oxnard Street, within the community of Tarzana, City of Los Angeles, Los Angeles County, California. This report summarizes the procedures that were followed, and describes the findings of CEC's environmental-screening investigation.

1.1 Purpose

The purpose of the assessment was to identify and assess apparent and recognizable site characteristics that may be of environmental concern, if present, and conversely, to ascertain and describe the apparent lack of recognized environmental conditions. Areas of potential environmental concern typically include present/past activities related to the treatment, storage and/or disposal (TSD) of regulated/hazardous materials, which could have adversely impacted the site, or other environmental hazards that likely would affect the property's value and/or future land usage.

"Recognized environmental conditions" (RECs) do not include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of the local regulatory agency. Small, isolated staining of the pavement surface in a vehicle parking area would be an example of a *de minimis* condition.

1.2 Involved Parties

This project was performed by CEC for Columbia College Hollywood (CCH), on behalf of Rabobank, N.A., as authorized by CCH's Mr. Richard Crowe.

1.3 Scope of Work

The Scope of Work for the Phase I was based on published guidelines (American Society for Testing and Materials Guideline E1527-05) and experience with similar projects. Specifically, the project included completion of the following investigative tasks: performing a reconnaissance of the site and nearby properties; reviewing local regulatory agency listings; reviewing a database-derived printout of federal, state, regional and local regulatory lists; reviewing various site-history and land-usage information sources, such as historical photographs and maps; reviewing provided copies of previously prepared environmental reports for the site and an adjacent property; and conducting personal interviews of individuals knowledgeable about the site and general area.

CEC's services culminated with preparation of this written summary report. Data acquisition for this report commenced on June 23, 2010. Data review and evaluation for this report ended on July 12, 2010. Several site-specific informational reports for this project, including the requisite current regulatory database report, were provided by Environmental Data Resources, Inc. (EDR), of Milford, Connecticut.

2.0 GENERAL SITE CHARACTERISTICS

2.1 Site Location

The subject site consists of a rectangle-shaped parcel that is located along the southern side of Oxnard Street, in the Community of Tarzana, City of Los Angeles, California, on land situated roughly 800 feet west of Reseda Boulevard and 2,000 feet north of Highway 101. The general site location is shown on Figure 1 -

Site Location Map. The base map utilized in creating Figure 1 pre-dates construction of the present-day improvements at the site.

The site location, and relationship of the subject parcel to adjacent and nearby roadways, has been delineated on Figure 2 - Assessor's Parcel Map. Figure 2 also denotes the dimensions/area of the subject site.

2.2 Adjacent Properties

The subject site is located in an area of relatively dense, mixed-use, commercial and residential land usage. To the north, the property is bounded by Oxnard Street, with a tack and feed store and a mass-transit railway easement beyond. A former thermal-treating business (presently vacant building) lies to the east of the site, with a Public Works yard and commercial properties beyond. To the south, the site is bordered by a series of residential properties, with Highway 101 beyond. A treatment center bounds the site to the west, with additional commercial properties beyond.

Several of the adjacent and nearby properties can be seen in recent photographs of the site that are provided in Appendix A. An aerial view of the site and adjacent and nearby properties also can be seen on Figure 3 - Site Plan.

2.3 Site Description and Current Site Uses/Operations

The site consists of a rectangle-shaped parcel with roughly 142 feet of street frontage along the south side of Oxnard Street, and a total area of approximately 1.5 acres. A private driveway along the western edge of the site provides access to on-site parking areas.

The site area was found to be relatively level, with an approximate elevation of 753 feet above mean sea level. The site appeared to have been graded to route surface runoff into storm drains that were observed in the adjacent municipal roadway. Adjacent sites appeared to have been graded to direct runoff away from the subject site.

The site is occupied by a two-story commercial building that consists of concrete-wall construction and exhibited a concrete, slab-on-grade foundation and flooring system. The site building, which has a street address of 18618 Oxnard Street, Tarzana, California 91356, was found to be occupied by a privately owned, film-making college. Only administrative and classroom activities were observed at the time of CEC's site visit.

Additional observed site improvements included asphalt-paved parking and driveway areas, a small, yard-type storage shed, landscaping, and features indicative of the presence of municipal services and regional-vendor utility connections. Recent photographs of the site are provided in Appendix A. The site layout is depicted on Figure 3.

3.0 ENVIRONMENTAL SETTING

3.1 Regional Physiographic Conditions

The site is located within the San Fernando Valley area, within the Los Angeles Basin region, in the eastern portion of California's Transverse Ranges Geomorphic Province. The Transverse Ranges Province generally consists of east-trending, elongate, fault-derived, sequential mountains and valleys, and geologically is quite complex. Structural features in the region generally are related to crustal shortening (compressional forces).

The Transverse Ranges Geomorphic Province is characterized by complexly folded and faulted rock units, primarily consisting of marine and non-marine sedimentary materials, with some localized outcroppings of intrusive (granitic) and extrusive (volcanic) igneous rocks, and associated metamorphic rocks. Formational/mapped units of the Transverse Ranges Province vary in age from Proterozoic to Holocene/Recent (greater than 570 million years old to less than 11,000 years in age).

3.2 Soils Conditions

The entire site and surrounding land have been developed with buildings and pavement. Native soils were not observed. According to information provided for this project by EDR, the region's soils belong to the Mocho assemblage. Soils of this grouping are reported to consist of loamy sands that exhibit slow to moderate infiltration rates.

3.3 Geologic Conditions

According to a geologic map of the area, the site vicinity is underlain by undivided, Quaternary-aged alluvium, likely derived from erosion of the nearby mountains. These recent deposits appeared to be unconformably underlain by Pliocene- to Pleistocene-aged, non-marine sedimentary rocks.

Numerous named and unnamed faults have been identified at on-shore and off-shore locations in the Los Angeles County area, and southern California in general is known to be seismically active. Several active and inactive faults have been mapped within a 20-mile radius of the subject site.

However, according to CEC's project-related research, no known or suspected active faults are present at or adjacent to the site. Therefore, like most of southern California, the site may be subjected to significant ground motion during an earthquake event. However, based on this finding, it is deemed unlikely that ground-surface rupture would directly impact the site's building or other physical improvements.

3.4 Hydrogeologic Conditions

No water wells are known to exist at the site, and no site-specific depth or quality data has been provided for ground water beneath the site. Based on CEC's review of information gathered from an adjacent property (see Section 4.5), first ground water beneath the site occurs at depths of roughly 65 feet below ground surface. Flow direction for ground water beneath the site reportedly is toward the southeast, roughly paralleling the trend of the Los Angeles River (see Figure 1).

According to information provided by EDR, the site does not lie within any mapped flood-zone areas. Therefore, routine flooding of the site does not appear to be a concern. Additionally, no wetland areas were mapped at or adjacent to the site.

4.0 RESULTS OF INVESTIGATION

4.1 Site Inspection Observations

On June 23, 2010, CEC's representative performed reconnaissance activities at the subject site. Photographs of the property that were taken at that time are provided in Appendix A. As discussed in Section 2.3, the site was found to be occupied by a two-story commercial building that housed a private film-making college. Municipal services and regional-vendor utility connections were noted at and near the site.

Two pad-mounted electrical transformers were noted to the north of the property, across Oxnard Street. Another transformer was reported to be present within a locked room within the site building. This on-site transformer is understood to be owned and maintained by the local power company. No signs of damage to or leakage from transformers were noted. In addition, no leaking fluorescent light fixtures were observed at the site. Based on these observations, it is deemed unlikely that the site has been adversely impacted by polychlorinated biphenyls (PCBs).

Several 3-yard trash bins were present at various locations on the property. These containers appeared to be maintained by a local rubbish company, and were labeled for use only in the disposal of non-liquid, non-hazardous materials. No indications of improper use of these vessels for disposal of hazardous materials were noted.

Numerous instances of 5-gallon and smaller containers of paints, thinners, cleaning products, and landscape-maintenance chemicals were observed at various site locations, including the "janitor room", "janitor closet", "loading dock area", and a small yard-type shed on the south end of the site's parking lot (see photographs provided in Appendix A).

However, no instances of hazardous materials or wastes were observed at the site. Additionally, observed regulated materials were found to be stored within the site building or the described shed, in a well-maintained and organized manner, and no indications of large-scale or recurring chemical leakage or spills were noted in these areas, or elsewhere at the site. Further, no on-site waste treatment, or improper disposal activities were observed.

A small surface stain was observed on the concrete flooring, within an enclosed room, adjacent to the building's elevator equipment. Given the apparent nature of the staining (hydraulic oil), small size, and the lack of cracked or otherwise deteriorated pavement and/or floor drains in the area, this observation was not deemed to represent a reportable condition.

No other indications of current TSD facilities, such as: above-ground or underground storage tanks; pools of liquid; pits, ponds or lagoons; dry wells; septic systems; or large-scale chemical treatment or storage areas, were observed at the site. In addition, no indications of potential contamination from past operations, such as irregular topography or pavement surfaces, noxious odors and/or stressed vegetation, were identified during CEC's site visit.

4.2 Adjacent Site and Vicinity Observations

A walk-by reconnaissance of the adjacent properties and general neighborhood was performed on June 23, 2010, to check for readily apparent conditions that would be of potential environmental concern. An agency-listed business formerly occupied the adjacent building to the east of the subject site. This adjacent building was found to be vacant at the time of CEC's visit. Additional discussion of the former thermal-treating facility to the east is included in Section 4.5.

Other adjacent properties included multi-tenant residences to the south, a treatment center to the west, and a feed and tack business to the north, beyond Oxnard Street. Inasmuch, no active service stations, dry cleaners, maintenance yards, or other types of probable environmental concern, were observed on the remaining adjacent or nearby properties.

Northeast-southwest trending high-tension power lines were observed to be present roughly 1/2 of a mile southeast of the site. Adverse impacts to the site are not anticipated. However, no measurements or other

evaluation of electro-magnetic fields (EMF) were conducted. Site-specific testing and/or other evaluation of EMF levels at the site would require an increase in CEC's scope of work.

4.3 Results of Regulatory Agency Lists Review

CEC reviewed database-derived summaries of governmental listings of known or suspected hazardous materials sites in the vicinity that may have an adverse impact on the subject site. The database search was performed by EDR, in accordance with ASTM standards for this type of investigation. A summary of the various listings and findings follows. Detailed descriptions of the various listings, listing objectives, responsible regulatory agencies, ASTM's recommended search radius for each type of listing, and a copy of the database report are included in Appendix B.

The subject site's former occupant (Panavision) appeared on four operating-permit-type listings. CEC understands Panavision at one time used small quantities (less than 55 gallons at any one time) of lubricating oils, Stoddard solvent, acetone, and 1,1,1-Trichloroethane (1,1,1-TCA). The 1,1,1-TCA reportedly was used for cleaning internal parts of motion-picture cameras. No violations or instances of chemical spills or violations by the former business were identified through the described project research.

Operating permits unto themselves are not indicative of unauthorized releases having occurred, or other types of environmental concerns being present. Based on the lack of identified spills and/or violations, and the age of Panavision's previous occupancy, reportable impacts to the site from former operations are deemed unlikely. No permit- or enforcement-type regulatory listings were identified for the subject site's current occupant/owner.

The vacant property to the east appeared on 10 permit-type listings, and an "assessment pending" listing. Additional discussion of the adjacent facility to the east is included in Section 4.5.

Other listed properties in the general area were more distant. Additionally, no listed sites in the general area were found to be situated up-gradient with respect to the apparent direction of surface- and ground-water flow. Based on distance from the site, relative location with respect to direction of ground-water flow, nature of listing and/or status, it is deemed unlikely the listings included in the database report are indicative of reportable environmental impacts at the subject site.

4.4 Results of Site History/Land-Use Review

4.4.1 Personal Interviews

CEC spoke with Mr. Richard Kobritz, Mr. Theodore O'Karma, and Mr. Richard Crowe, CCH's President and CEO, Treasurer, and Director of Finance and Human Resources, respectively, regarding site history, operations and conditions. These parties indicated they were not aware of any underground tanks, or other known environmental concerns at the site. Additionally, copies of pertinent portions of two previously prepared Phase I reports for the site were provided for CEC's review. Additional information gathered from the previous reports can be found in Section 4.5.

Also provided to CEC were copies of an Environmental Risk Questionnaire and a Report-User Questionnaire that had been completed by CCH's Mr. Crowe. No environmental concerns were identified at the site, and no specialized knowledge or restrictions were described in the questionnaires. Copies of the completed questionnaires are included in Appendix C.

Additionally, CEC spoke with Mr. Trevor Morris, with Rabobank, N.A., regarding known site conditions. Mr. Morris indicated that he had been familiar with site operations for several years, and that he was not aware of any known environmental concerns at the site.

CEC previously has contacted individuals associated with local regulatory agencies regarding any personal knowledge they may have about known or potential environmental concerns associated with a particular site. CEC has been informed agency representatives would not be aware of any environmental issues that were not included in the above-described database listings. Based on this information, it was deemed unlikely additional interviews of local agency personnel would provide information that would not otherwise be available through the described research.

The subject site has been occupied by CCH since 1997. Given the amount of time that has passed since then, and the depth and consistency of received descriptions of Panavision's former operations, it was deemed unlikely interviewing former Panavision personnel, if possible to locate, would provide any pertinent information that would not otherwise be available through the described research.

4.4.2 Ownership Information

According to provided information, the site currently is owned by CCH. Gathered information suggests the site formerly was owned and occupied by Panavision. Historical site ownership information was not readily available or provided to CEC. Collection, review and reporting of prior ownership records would require an increase in the scope of CEC's investigation.

4.4.3 Air Resources Control Board Records

The referenced EDR database report included summaries of various listings related to air emissions. No current site listings were included in the EDR report. A permit-related listing from 1990 was shown for Panavision. Given the amount of time that has passed since then, and the lack of any violations or enforcement-type listings, it is deemed unlikely this air-related listing would be indicative of reportable environmental impacts at the site.

4.4.4 Aerial Photographs

Historical aerial photographs of the site and vicinity, provided by EDR, were reviewed to gather additional, historical land-usage information. Aerial photographs of the site area dating back to 1928 were provided and reviewed.

Specifically, photographs from 1928, 1938, 1947, 1956, 1965, 1976, 1989, 1994, 2002 and 2005 were observed. A summary of the information gathered from the individual photographs follows.

In the photographs prior to 1965, the site and surrounding land appeared to have been occupied by former residential structures and trees. At the time of the 1965 photograph, the site area and adjacent land to the east appeared to have been vacant, graded land, with present-day commercial development present to the east and west.

The existing site building and associated grounds could be seen in the 1976 and more recent photographs. No large-scale TSD-type facilities, such as disposal/treatment ponds, land-filling operations, oil wells and/or tank farms, were observed at the site in these historical aerial photographs.

4.4.5 Fire Insurance Maps

Sanborn Maps originally were prepared for use by the insurance industry, and date back to the late 1800s for some metropolitan areas. These maps often depict pertinent site information regarding number, approximate size and location of structures on the property, types of construction materials, presence of above-ground or underground storage tanks, and age of site improvements.

According to EDR's research, Sanborn Maps are not available for the project area. This finding is consistent with a lack of historically significant commercial development at and near the subject parcel.

4.4.6 Regional Wildcat Map

The referenced EDR database report included information obtained from historical natural-gas and petroleum-exploration and -production maps (Wildcat Maps). No current or historical oil or gas wells, or distribution pipelines, were identified at or adjacent to the site in the EDR report. This finding was found to be consistent with that of others (see Section 4.5).

4.4.7 Topographic Maps

CEC reviewed excerpts of topographic maps of the site area to gather additional historical land-usage information. The project-specific map excerpts were provided by EDR. The earliest provided topographic base map was prepared in 1903. Subsequent maps included publication dates of 1910, 1928, 1947, 1952 and 1967.

Land usage inferred from these maps was consistent with that found during review of the aerial photographs and other historical information. The site was depicted to have been occupied by residences from 1928 through 1967. No structures or indications of a particular use were depicted at the site area on the earlier maps. No indications of large-scale, historical TSD facilities, such as disposal/treatment ponds, land-filling operations, oil wells and/or tank farms were depicted at the site on any of these maps.

4.4.8 Historical Directories

EDR provided an historical directory summary for the site and nearby addresses. The reviewed listings summary dated back to 1920. Subsequent directory searches included chronological intervals of 4 years or less.

The earliest listing for the site appeared in the 1975 directory. The initial reported site-address listing, and subsequent directory listings through 1995, pertained to the property's former occupant (Panavision). No listings for Panavision appeared after 1995, and no listings for the current occupants (CCH) were included in the more recent directories.

4.4.9 Environmental Liens/Institutional Controls/Engineering Barriers

CEC reviewed a copy of a Preliminary Title Report for the subject land, which recently had been issued by First American Title Insurance Company. Only routine tax-lien and easement language were identified in the reviewed text. No environmental liens, institutional controls, or engineering barriers, such as concrete caps that must remain in place, or other types of land-use restrictions, were described in the referenced title report.

4.4.10 Building Permits

CEC reviewed a Building Permits Report that was provided for this project by EDR. Reported permits for the site dated back to 1997, when permits related to the shift in use for CCH's occupancy were issued. No hazardous-waste references of TSD-type permits were identified for the site.

4.5 **Synopsis of Previous Environmental Investigations**

CEC was provided with copies of pertinent excerpts from two previously prepared Phase I reports for the subject site. The first report, titled Phase I Environmental Site Assessment Report, Columbia College Hollywood, 18618 Oxnard Street, Tarzana, California 91356, and dated March 4, 2004, was prepared by National Assessment Corporation (NAC), of Alameda, California. The more recent report, titled Phase I Environmental Site Assessment Report, Columbia College Hollywood, 18618 Oxnard Street, Tarzana, California, and dated November 5, 2007, was prepared by ENVIRON International Corporation, out of Irvine, California.

No environmental concerns were identified at the site in these earlier reports. For reference, copies of the text portions of the earlier reports are included in Appendix D.

Additionally, CEC has reviewed copies of an environmental assessment report for the adjacent property to the east. The previous investigation report, titled Environmental Sampling Report, Site: Former Bodycote Thermal Processing Facility, 18600 Oxnad Street, Tarzana, California 91356, and dated July 31, 2009, was prepared by Anderson Environmental (AE), of Culver City, California.

Based on information gathered from review of referenced AE report, the adjacent site has been reported to exhibit solvent impacts to underlying soil and ground water. The report also indicates the local ground water is present at depths of roughly 65 feet below grade, and that ground water flows toward the southeast. Based on the direction of ground-water flow, reportable impacts at the subject site that are related to migratory contamination from the down-gradient property are not anticipated.

4.6 **Results of Suspect ACM Observations**

Asbestos is a naturally occurring mineral fiber that has been used in construction and many other industries. Manufacturers used asbestos in their commercial products because asbestos is noncombustible, noncorrosive, nonconductive, and it has high tensile strength.

Asbestos fibers have been mixed with binding agents to create approximately 3,600 different commercial products. The amount of asbestos contained in these asbestos-containing materials (ACMs) can vary from less than 1% to 100%.

Over several decades, it generally was determined that any inhalation exposure to asbestos fibers represented a potential health hazard. Regulatory agencies banned the use of friable, asbestos-containing building materials after 1978. The existing building at the site appears to have been constructed during 1972. Therefore, ACMs may be present at the site.

Suspect ACMs typically include, but may not be limited to, sheetrock wall and ceiling materials and associated joint compounds, troweled- and sprayed-on (textured) ceiling and other surfaces, and resilient flooring materials and flooring mastics.

Some of these material types were noted during CEC's site visit. However, observed construction materials appeared to be in generally good condition, with a low likelihood of excessive damage due to normal usage, and no instances of friable materials were noted. Additionally, the earlier NAC report included ACM-testing data for several of the building's construction materials (see Appendix D). Regulated levels of ACMs were not reported for NAC's previously sampled materials.

Given these findings and observations, it is deemed unlikely that asbestos-related assessment or remediation of the site would be required under current regulatory mandate(s). However, it is recommended that current and future owners and occupants be notified of the presence of suspect ACMs and cautioned against activities that would disturb potential ACMs. Additionally, owners and occupants should be informed that future demolition and renovation activities may require special permitting and/or engineering activities.

4.7 Radon Potential and Air-Quality Concerns

Radon is a colorless, odorless, tasteless radioactive gas that occurs in soil and ground water as a by product of radioactive decay of uranium and thorium isotopes found in certain rocks. Various levels of naturally occurring radon exist across the United States. Radon can become concentrated in buildings with poor air circulation. Prolonged exposure to radon has been associated with increased risk of certain types of cancer.

The California Statewide Radon Survey Interim Results Report was reviewed regarding potential naturally occurring radon levels at the site. For this report, the California Department of Health Services divided the state into nine regions, based on general geology, climate and existing radon occurrence and distribution knowledge.

The subject site is located in Region 9. Based on statistical analysis of random sampling performed by ZIP Code, the report predicted only 0.5% of the homes in Region 9 exceeded the EPA's action level of 4.0 pCi/l. Therefore, elevated levels of naturally occurring radon at the site are not anticipated.

Sampling and/or inspecting the site for radon, mold or other air-quality concerns, such as vapor intrusion, would require use of specialty sampling equipment and specialized laboratory analyses. If desired, such sampling services, or other form of evaluation, would necessitate an increase in CEC's scope of work.

5.0 CONCLUSIONS AND RECOMMENDATIONS

Based on CEC's described reviews and research findings, the site and general area appear to have been vacant land prior to initial development with residential structures, which occurred sometime prior to 1928. The former residences had been removed and the site area was vacant, graded land at the time of the referenced 1965 aerial photograph. The site's present-day building and associated improvements have been present at the site since being constructed during 1972.

As described in the above report sections, no indications of former usage for heavy industry, or disposal or treatment of regulated wastes, were identified for the site. Only operating permits for the site's former occupant were encountered in the regulatory listings. Operating permits do not indicate a release has occurred or other type of environmental concern exists, only that regulated materials are used, stored or generated. Additionally, no instances of violations or regulatory enforcement actions were identified for the site's former occupant. No regulatory listings were identified for the site's current occupant (CCH).

No agency-listed sites were found to be situated adjacent to the site and/or in an up-gradient position with respect to the reported direction of ground-water flow. Based on distance from the site, relative location with

respect to hydraulic gradient, nature of listing(s) and/or status, it is deemed unlikely the listed properties in the general area have resulted in reportable conditions at the subject site.

In summary, CEC has performed a Phase I Environmental Site Assessment in conformance with the scope of limitations of ASTM Practice E 1527-05 for 18618 Oxnard Street, Tarzana, California, the subject property. Any exceptions to, or deletions from, this practice are described in Section 6.0 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property. No "significant" data gaps deemed likely to adversely affect the findings of this investigation were identified. CEC therefore concludes the site has been satisfactorily screened for potential environmental concerns. Given these findings, no additional site assessment or remediation activities presently are deemed necessary or recommended.

6.0 LIMITATIONS

No site assessment activities, no matter how extensive or expensive, can guarantee the absence of hazardous or otherwise regulated materials at a particular site. Despite the use of reasonable care, CEC and other well-qualified and competent environmental professionals may fail to detect the presence of hazardous/regulated substances at a property. In addition, CEC and other environmental professionals may under or over estimate the amount and/or extent of hazardous or regulated substances present.

CEC assumes no responsibility for conditions that were not readily apparent at the time of its work, or for the accuracy or completeness of information provided or compiled by others. The professional services provided for this report and the related investigation are intended to meet the degree of skill and care ordinarily exercised by other environmental professionals in the region practicing under similar conditions and circumstances. No other warranty or guarantee, express or implied, is made.

This report has been prepared for submittal to Rabobank, N.A., on behalf of Columbia College Hollywood, to be used solely by these parties and their designated agents in evaluating the potential impact, if any, of regulated or otherwise hazardous materials at the site. This report is not intended for use by other parties, and may not contain sufficient detail for use by others. Any use of or reliance upon the information by another party shall be at the sole risk of such third party, and without legal recourse against CEC, its employees, or officers, regardless of whether such action is based upon contract, tort or statute.

This report is not a legal opinion. CEC's comments are based on its understanding of current regulations and experience with similar projects. A qualified environmental attorney should be consulted for a legal opinion on any related matters, including site ownership/management requirements and options. Other, non-general limitations for this report are described at the ends of report sections 4.2 and 4.7.

8.0 QUALIFICATIONS

All Phase I investigation/review activities described in the preceding report sections were performed by CEC's President and CEO, Mr. David R. Johannes. Mr. Johannes founded CEC at the beginning of 1996, after working for over 10 years for a series of international and regionally based geotechnical and environmental consulting companies.

CEC has performed hundreds of environmental site assessment, remediation and monitoring programs, in conformance with a variety of published and/or project-specific guidelines. CEC's list of clients includes a

diverse grouping of public agencies, major and regional banks, attorneys, defense contractors, other consulting firms, and property owners and management firms. CEC has had no instances of claims or losses.

Mr. Johannes is a Registered Geologist (California), Registered Environmental Assessor (California), Certified Environmental Specialist (USA), Certified Air Quality Specialist (USA), and is a California-Licensed "A" General Engineering Contractor. A resume of Mr. Johannes' professional experience and credentials is included in Appendix E.

Declaration: "I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312, and that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. In preparing the Phase I report, I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

Chatsworth, California 91311

**Subject: 2016 Annual Sub-Slab Depressurization System Operation, Maintenance and Monitoring Report
Former Bodycote Thermal Processing Facility
18600 Oxnard Street, Tarzana, California**

Dear Mr. Bose:

On behalf of Columbia College Hollywood (CCH), Geosyntec Consultants, Inc. (Geosyntec) has prepared this 2016 Annual Sub-Slab Depressurization System Operation, Maintenance and Monitoring Report (OM&M Report) for the Former Bodycote Thermal Processing Facility, located at 18600 Oxnard Street, Tarzana, California (Site). The OM&M Report is being submitted to the California Department of Toxic Substances Control (DTSC) in accordance with the Interim Removal Action Workplan (IRAW) dated 20 December 2011 (Geosyntec, 2011). The IRAW was approved by the DTSC in a letter dated 13 March 2012 (DTSC, 2012).

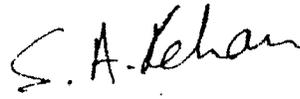

The attached OM&M Report summarizes the sub-slab depressurization (SSD) system operational details for the period of January through December 2016. In accordance with the IRAW, Geosyntec requested modifying the reporting frequency from a semiannual basis to an annual basis in the Second Semiannual 2015 OM&M Report (Geosyntec, 2016). The DTSC approved the report, hence the request, in a letter dated 23 March 2016.

During this reporting period, the SSD system remained in compliance and satisfied the site-specific performance criteria described in the IRAW. If you have any questions or comments on the OM&M Report, please call either of the undersigned at (510) 285-2700.

Sincerely,

Angus Chan, P.E.
Senior Staff Engineer

CERTIFIED MAIL

June 26, 2017

Ms. Kimberly Snyder
Chief Executive Officer
Panavision Inc.
6101 Variel Avenue
Woodland Hills, California 91367

IMPORTANT LEGAL MATTER – IMMEDIATE REPLY REQUESTED:
IN THE MATTER OF THE FORMER PANAVISION INC., LOCATED AT
18618 OXNARD STREET AND 18750 OXNARD STREET, TARZANA, CALIFORNIA

Dear Ms. Snyder:

The Department of Toxic Substances Control ("DTSC") is overseeing an environmental investigation at the Former Bodycote site, located at 18600 Oxnard Street, Tarzana, California. During the course of the investigation, the levels of trichloroethylene ("TCE") and tetrachloroethylene ("PCE") at the Bodycote site were found to be increasing in concentration with depth within the soil column and in groundwater. Results of sampling performed close to the western boundary of the site have identified a possible secondary source located offsite at the former headquarters of Panavision Inc. ("Panavision"). DTSC's historical records indicate that Panavision operated at 18618 Oxnard Street, Tarzana, California (the "Facility") from 1972 through 1996, and generated and manifested chlorinated solvents waste as part of their operations. The former Panavision location is now owned by Columbia College of Hollywood ("CCH").

CCH provided DTSC with a *Phase I Environmental Site Assessment Report* ("Phase I Report"), dated July 1996, which documented that chlorinated solvents were utilized as part of Panavision's regular operations at the Facility. A 55-gallon drum of TCE and several empty TCE containers were onsite during a site visit at the Facility. The Phase I Report also indicated that a Panavision representative confirmed the use of solvents at the Facility for cleaning parts.

Based on indoor air sampling results, an interim remedial action was conducted at the Facility by the use of a Sub-Slab Depressurization System (SSDS) installed at the CCH

Ms. Kimberly Snyder
June 26, 2017
Page 2

building from 2012 to 2013. At the time, the source of the contamination was assumed to be located on the neighboring Bodycote property and the SSDS was installed in order to safeguard human health and the environment. Recent investigation results and re-evaluation of the SSDS operational effectiveness indicates that there is a source on the CCH property.

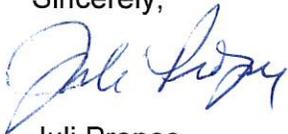

Pursuant to California Health and Safety Code section 25187(b)(5), as a prior owner and operator at the Facility, Panavision has been identified as a responsible party required to perform investigation and cleanup. This is a pressing matter to DTSC as the identified release of hazardous waste at or from the Facility may pose a threat to human health and the environment.

DTSC encourages Panavision to complete the necessary environmental investigations and cleanup under a Corrective Action Consent Agreement ("Consent Agreement"). A Consent Agreement is a mechanism to facilitate the corrective action process and to ensure the Facility is adequately investigated and remediated under DTSC oversight.

Please contact DTSC no later than July 22, 2017, to schedule a meeting to discuss this matter. If DTSC does not receive a response from you by July 22, 2017, we will have no alternative but to pursue enforcement action against Panavision.

You may contact Manjul Bose, Project Manager at (818) 717-6560 or email at manjul.bose@dtsc.ca.gov, or me at (818) 717-6539 or email at juli.propes@dtsc.ca.gov. Any legal representatives acting on behalf of Panavision with regard to this letter should contact Ms. Lynn Goldman, with DTSC's Office of Legal Counsel at (916) 327-6105 or e-mail at lynn.goldman@dtsc.ca.gov.

Hi Kelly,

I have spoken with our project manager, Manjul Bose, and he agrees that the records do in fact show that Panavision was using TCA, and not TCE. You may consider this matter closed.

Thank you,

Lynn Goldman
Attorney
Department of Toxic Substances Control
916-327-6105

Subject: RE: Panavision : Scoping Meeting

Hi Lynn:

I wanted to check in again on this matter, and see if we can close out the DTSC

inquiry. As you may recall, Manjul, you and I had a call on September 19 to discuss the matter. In that call, I informed you that our records showed that Panavision only used TCA in small quantities, and never TCE or PCE. Manjul said he thought there were references to Panavision usage of TCE in an old Phase I conducted by Columbia College of Hollywood (“CCH”), and that DTSC may have waste manifests from Panavision that indicated usage of TCE. As I noted in my last email (below), the CCH Phase I only referenced the usage of TCA by Panavision, not TCE or PCE, and we have not received any manifests from DTSC that show TCE usage by Panavision. None of the manifests in our records are for TCE or PCE; they are instead for TCA or other unrelated materials.

I was hoping we could discuss how to wrap this up. Please give me a call at your convenience.

Thanks,

Kelly

Thanks, Manjul. I took a quick look at the Phase I report. It mentions trichloroethane (“TCA”), but I did not see a reference to trichloroethylene (“TCE”). Please let me know if I am missing something.

Thanks,

Kelly

Hi Manjul:

Lynn and I have been exchanging voice messages. I was hoping to speak with her, or the two of you, before we scheduled a meeting. Unfortunately, I am in all day negotiations for the next three days. If it looks like there will be a scheduled break during those days, I will suggest that time for a call. Otherwise it would have to be on Thursday.

Thanks,

Kelly

Subject: Panavision : Scoping Meeting

Good Afternoon Mr. McTigue:

I have been in contact with Lynn Goldman, we'd like to schedule a meeting on Panavision. We could do a conference call or an in person meeting next week or the week after. If its in-person, I'll have to have Lynn travel from Sacramento.

Please let me know if your availability so we may schedule this meeting.

Regards

Manjul Bose

PERMIT TO CONSTRUCT/OPERATE

This initial permit must be renewed ANNUALLY unless the equipment is moved, or changes ownership.
If the billing for the annual renewal fee (Rule 301.f) is not received by the expiration date, contact the District.

Legal Owner
or Operator:

COLUMBIA COLLEGE HOLLYWOOD
18618 OXNARD ST
TARZANA, CA 91356

ID 169745

Equipment Location: 18618 OXNARD ST, TARZANA, CA 91356

Equipment Description :

SUB-SLAB VAPOR EXTRACTION AND TREATMENT SYSTEM FOR HALOGENATED AND NON-HALOGENATED HYDROCARBONS IN-SITU SOIL REMEDIATION ONLY, CONSISTING OF:

1. SUB-SLAB EXTRACTION WITH HORIZONTAL DUCTS AND PIPING.
2. CARBON ADSORPTION SYSTEM, TWO TREATMENT TRAINS, IN PARALLEL, ONE OPTIONAL, EACH TREATMENT TRAIN CONSISTING OF A KNOCK OUT DRUM, AN EXTRACTION BLOWER WITH MAXIMUM FLOW OF 375 SCFM, AND TWO CARBON ADSORBERS, MAKE BARNEBEY SUTCLIFFE, MODEL PROTECT VW SERIES, VW 1000 OR EQUIVALENT, IN SERIES, EACH WITH 1000 POUNDS OF GRANULAR ACTIVATED CARBON.
3. COMMON EXHAUST STACK FOR BOTH TREATMENT TRAINS, MINIMUM 32'-0" H ABOVE GRADE.

Conditions :

1. OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN ACCORDANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW.
2. THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.
3. PRIOR TO OPERATING THIS EQUIPMENT UNDER WHICH THIS PERMIT IS GRANTED, THE OPERATOR SHALL NOTIFY SCAQMD BY SUBMITTING A RULE 1166 NOTIFICATION FORM WITH THE APPROPRIATE FEES AS PER THE FORM INSTRUCTIONS. THE NOTIFICATION INFORMATION SHALL INCLUDE:
 - A. THE PERMIT NUMBER OF THE EQUIPMENT.
 - B. THE NAME AND PHONE NUMBER OF A CONTACT PERSON.
 - C. THE PROJECT START DATE AND THE ESTIMATED PROJECT COMPLETION DATE.

4. AN IDENTIFICATION TAG OR NAMEPLATE SHALL BE DISPLAYED ON THE EQUIPMENT TO SHOW MANUFACTURER, MODEL, SERIAL NUMBER AND FLOW RATING. THE TAG(S) OR PLATE(S) SHALL BE ISSUED BY THE MANUFACTURER AND SHALL BE AFFIXED TO THE EQUIPMENT IN A PERMANENT AND CONSPICUOUS POSITION.
5. CURRENT CONTACT PERSON NAME, COMPANY, AND PHONE NUMBER SHALL BE DISPLAYED IN A PERMANENT AND CONSPICUOUS POSITION.
6. UPON COMPLETION, SUCTION PITS, VAPOR EXTRACTION WELLS, AND DUCTS SHALL BE CAPPED WITH CONCRETE OR OTHER APPROPRIATE MEANS TO PREVENT VAPORS FROM VENTING TO THE ATMOSPHERE. VAPORS SHALL NOT BE EXTRACTED FROM THE SOIL UNLESS THEY ARE VENTED TO THE VAPOR CONTROL SYSTEM, WITH NO DETECTABLE LEAK BETWEEN THE OUTLET OF THE BLOWER AND THE OUTLET OF THE VAPOR CONTROL SYSTEM.
7. PRIOR TO CONNECTING ANY SUCTION PITS AND VAPOR EXTRACTION WELLS TO THE COLLECTION SYSTEM, THE COMPLETED SUCTION PITS AND VAPOR EXTRACTION WELLS SHALL BE CAPPED TO PREVENT VAPORS FROM VENTING TO THE ATMOSPHERE.
8. EACH TREATMENT TRAIN OR EXTRACTION BLOWER SHALL ONLY BE OPERATED WHEN THE EXTRACTED VAPORS ARE VENTED TO AT LEAST TWO (2) CARBON ADSORBERS CONNECTED IN SERIES WITH AT LEAST 2000 POUNDS OF TOTAL ACTIVATED CARBON PER TRAIN, AND AT LEAST 1000 POUNDS OF TOTAL ACTIVATED CARBON IN EACH ADSORBER. . IF BOTH OF THE EXTRACTION BLOWERS ARE IN SERVICE, EXTRACTED VAPORS SHALL BE VENTED THROUGH TOTAL OF FOUR (4) CARBON ADSORBERS WITH TWO ADSORBERS IN EACH TREATMENT TRAIN WITH AT LEAST 1000 POUNDS OF TOTAL ACTIVATED CARBON IN EACH ADSORBER.
9. THE TOTAL FLOW RATE AT THE INLET OF CARBON ADSORBERS FOR EACH TREATMENT TRAIN SHALL NOT EXCEED 375 SCFM. A FLOW INDICATOR SHALL BE INSTALLED AND MAINTAINED AT THE INLET OF CARBON ADSORBERS FOR EACH TREATMENT TRAIN TO INDICATE THE FLOW RATE IN SCFM. IN CASE A PRESSURE SENSING DEVICE IS USED IN PLACE OF THE FLOW INDICATOR, A CONVERSION CHART SHALL BE POSTED ON THE EQUIPMENT TO INDICATE THE FLOW RATE (IN SCFM) CORRESPONDING TO THE PRESSURE READING. FLOW SHALL BE RECORDED AT EACH MONITORING EVENT.
10. A TEMPERATURE MEASURING DEVICE SHALL BE INSTALLED AT THE INLET TO THE CARBON ADSORBER FOR EACH TREATMENT TRAIN. THE TEMPERATURE AT THE INLET OF THE CARBON ADSORBERS SHALL NOT EXCEED 145 DEGREES F. TEMPERATURE SHALL BE RECORDED AT EACH MONITORING EVENT.
11. THE INLET CONCENTRATION OF TOTAL ORGANIC COMPOUNDS AT THE INLET TO THE CARBON ADSORPTION SYSTEM SHALL NOT EXCEED 1000 PPMV, AS HEXANE.

PERMIT TO CONSTRUCT/OPERATE

Page 3
Permit No.
G18759
A/N-529491

12. TOTAL ORGANIC COMPOUNDS (TOC) CONCENTRATION SHALL BE MEASURED AT THE INLET AND OUTLET OF EACH ADSORBER FOR EACH TREATMENT TRAIN IN OPERATION AT LEAST ONCE A DAY FOR THE FIRST THREE DAYS AND THEN ACCORDING TO THE MONITORING SCHEDULE SHOWN BELOW, BY USING A FLAME IONIZATION DETECTOR (FID), PHOTOIONIZATION DETECTOR (PID), OR A SCAQMD APPROVED ORGANIC VAPOR ANALYZER CALIBRATED IN PARTS PER MILLION BY VOLUME (PPMV) AS HEXANE (IF OTHER CALIBRATING AGENT WAS USED, IT SHALL BE CORRELATED TO AND EXPRESSED AS HEXANE). PRIOR TO MONITORING, CALIBRATION OF THE INSTRUMENT SHALL BE PERFORMED USING EPA METHOD 21.

INLET TOC CONCENTRATION (PPMV AS HEXANE)	MONITORING FREQUENCY
1000 - 816	DAILY
815 - 544	2 DAYS
543 - 408	3 DAYS
407 - 326	4 DAYS
325 - 272	5 DAYS
271 - 233	6 DAYS
232 - 204	7 DAYS
203 - 181	8 DAYS
180 - 163	9 DAYS
162 - 148	10 DAYS
147 - 136	11 DAYS
135 - 126	12 DAYS
125 - 117	13 DAYS
116 - 109	14 DAYS

IF THE INLET CONCENTRATION TO THE CARBON ADSORPTION SYSTEM FOR ANY OF THE TREATMENT TRAINS IS BELOW 54 PPMV AS HEXANE FOR MORE THAN 2 MONTHS, THAT TREATMENT TRAIN SHALL BE MONITORED EVERY MONTH PROVIDED NO OTHER CHANGES ARE MADE IN THE FLOW STREAM TO THE TREATMENT TRAIN WHICH COULD POTENTIALLY CHANGE THE CONCENTRATION OF CONTAMINANTS AT THE INLET OF THE CARBON ADSORPTION SYSTEM.

13. SAMPLES SHALL BE COLLECTED AND ANALYZED DURING THE FIRST WEEK OF OPERATION FOR VOLATILE ORGANIC COMPOUNDS AND CHLORINATED COMPOUNDS AS FOLLOWS:
- SAMPLES SHALL BE COLLECTED AT THE INLET AND OUTLET OF THE CARBON ADSORPTION SYSTEM (INLET TO THE CARBON ADSORPTION SYSTEM & COMMON EXHAUST FROM BOTH OF THE TREATMENT TRAINS).
 - SAMPLING AND ANALYSIS SHALL BE CONDUCTED BY AN INDEPENDENT LABORATORY PER RULE 304.

FILE COPY

SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT
21865 Copley Drive, Diamond Bar, CA 91765

PERMIT TO CONSTRUCT/OPERATE

Page 4
Permit No.
G18759
A/N 529191

- C. SAMPLING SHALL CONFORM TO CARB METHOD 422 OR EQUIVALENT. SAMPLES WITH HIGH MOISTURE SHALL BE COLLECTED USING AN APPROPRIATE METHOD SUCH AS SCAQMD METHOD 25.1/25.3 OR OTHER METHODS APPROVED BY SCAQMD.
- D. ANALYSIS SHALL BE CONDUCTED USING EPA METHOD TO-15 AND EPA METHOD TO-3 OR OTHER METHOD APPROVED BY SCAQMD.
14. SAMPLES SHALL BE COLLECTED AND ANALYZED EVERY OTHER MONTH OF OPERATION FOR VOLATILE ORGANIC COMPOUNDS AND CHLORINATED COMPOUNDS AS FOLLOWS:
- A. SAMPLES SHALL BE COLLECTED AT THE INLET AND OUTLET OF THE CARBON ADSORPTION SYSTEM (INLET OF THE CARBON ADSORPTION SYSTEM & COMMON EXHAUST FROM BOTH OF THE TREATMENT TRAINS).
- B. SAMPLING SHALL CONFORM TO CARB METHOD 422 OR EQUIVALENT. SAMPLES WITH HIGH MOISTURE SHALL BE COLLECTED USING AN APPROPRIATE METHOD SUCH AS SCAQMD METHOD 25.1/25.3 OR OTHER METHODS APPROVED BY SCAQMD.
- C. ANALYSIS SHALL BE CONDUCTED USING EPA METHOD 8015/8021 AND EPA METHOD 8260 OR OTHER METHOD APPROVED BY SCAQMD.

15. THE CONCENTRATIONS OF THE FOLLOWING COMPOUNDS MEASURED AT THE OUTLET OF THE VAPOR CONTROL SYSTEM (EXHAUST TO ATMOSPHERE) SHALL NOT EXCEED THE FOLLOWING:

CHEMICAL NAME	OUTLET CONCENTRATION IN PPMV
TOC AS HEXANE	10.00
BENZENE (INCLUDING BENZENE FROM GASOLINE)	0.10
ETHYL BENZENE	0.10
PERCHLOROETHYLENE (OR TETRACHLOROETHYLENE)	0.25
TRICHLOROETHYLENE	0.25
ETHYLENE DICHLORIDE (OR 1,2-DICHLOROETHANE)	0.15
VINYL CHLORIDE (CHLOROETHYLENE)	0.10

THE LAB DETECTION LIMITS SHALL BE LOWER THAN THE EMISSION LIMITS SPECIFIED ABOVE.

16. VAPORS EXTRACTED OR TREATED BY THIS EQUIPMENT SHALL NOT CONTAIN ANY OTHER CARCINOGENIC AIR CONTAMINANTS AS LISTED IN TABLE 1, UNDER RULE 1401, AMENDED SEPTEMBER 10, 2010 WITH THE EXCEPTION OF BENZENE (INCLUDING BENZENE FROM GASOLINE), ETHYL BENZENE, PERCHLOROETHYLENE (OR TETRACHLOROETHYLENE), TRICHLOROETHYLENE, ETHYLENE DICHLORIDE (OR 1,2-DICHLOROETHANE), AND VINYL CHLORIDE.

PERMIT TO CONSTRUCT/OPERATE

17. FOR ANY TREATMENT TRAIN, WHENEVER THE TOC CONCENTRATION AT THE OUTLET OF THE FIRST ADSORBER INDICATES A CONTROL EFFICIENCY OF LESS THAN 90 PERCENT AND REACHES 10 PPMV, AS HEXANE, THEN THE CARBON SHALL BE REPLACED AS FOLLOWS:
 - A. CARBON IN FIRST ADSORBER SHALL BE REPLACED WITH FRESH CARBON OR CARBON FROM ADSORBER IN SECOND POSITION.
 - B. CARBON IN SECOND ADSORBER SHALL BE REPLACED WITH FRESH CARBON.
18. THE ACTIVATED CARBON USED IN THE ADSORBERS SHALL HAVE A CARBON TETRACHLORIDE ACTIVITY NUMBER (CTC) OF NOT LESS THAN 60% AS MEASURED BY ASTM METHOD D3467-99 OR A BUTANE ACTIVITY NUMBER OF NOT LESS THAN 23.5% AS MEASURED BY ASTM METHOD 5228-02.
19. SPENT CARBON REMOVED FROM THE SYSTEM SHALL BE STORED IN CLOSED CONTAINERS PRIOR TO DISPOSAL OR REGENERATION. IF DISPOSED, DISPOSAL SHALL BE IN ACCORDANCE WITH HAZARDOUS MATERIALS RULES AND REGULATIONS.
20. THE EXIT TO THE EXHAUST STACK SHALL HAVE A MINIMUM OF 32' ABOVE GRADE.
21. THE OPERATOR SHALL SUBMIT TO THE SCAQMD IN WRITING THE RESULTS OF THE FIRST MONTH OF OPERATING RECORDS, INCLUDING BUT NOT LIMITED TO, MONITORING DATA, LAB ANALYSIS, AND FLOW READINGS, TO PROVE COMPLIANCE WITH THE CONDITIONS OF THIS PERMIT. SUBMITTAL SHALL BE WITHIN 45 DAYS OF STARTUP AND ADDRESSED TO:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 10 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/25/2021 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 2 SWF/LF sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 43 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the Cortese list, as provided by EDR, and dated 12/17/2020 has revealed that there are 3 Cortese sites within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
RESEDA DIST MAINTENA Cleanup Status: COMPLETED - CASE CLOSED	6015 BAIRD AVE	ESE 0 - 1/8 (0.087 mi.)	C11	56

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

WDS:

Name: BODYCOTE THERMO PROCESSING
Address: 18600 Oxnard St
City: TARZANA
Facility ID: 4 19I001083
Facility Type: Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 4
Facility Telephone: 8184330216
Facility Contact: Phill Stella
Agency Name: BODYCOTE THERMO PROCESSING
Agency Address: Not reported
Agency City,St,Zip: 0
Agency Contact: Not reported
Agency Telephone: Not reported
Agency Type: Private
SIC Code: 3398
SIC Code 2: Not reported
Primary Waste Type: Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).
Primary Waste: STORMS
Waste Type2: Not reported
Waste2: Stormwater Runoff
Primary Waste Type: Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Site Name: CITY OF LA - PW - STREET SERVICES
Violation Date: 11-19-2018
Citation: 23 CCR 16 2641(h) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(h)
Violation Description: Failure to have an approved UST Monitoring Plan.
Violation Notes: Returned to compliance on 04/23/2019. OBSERVATION: Failure to make necessary corrections on monitoring plan. CORRECTIVE ACTION: Update the tank information section by entering a more accurate tank install date for both tanks and change the product piping from double wall fiberglass to double wall rigid plastic.
Violation Division: Los Angeles City Fire Department
Violation Program: UST
Violation Source: CERS

Site ID: 19691
Site Name: CITY OF LA - PW - STREET SERVICES
Violation Date: 11-14-2017
Citation: 23 CCR 16 2641(h) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(h)
Violation Description: Failure to have an approved UST Monitoring Plan.
Violation Notes: Returned to compliance on 04/23/2019. OBSERVATION: Failure to maintain approved monitoring plan. CORRECTIVE ACTION: Update the monitoring plan with a more accurate tank install date and update the product piping from double wall fiberglass to double wall rigid plastic.
Violation Division: Los Angeles City Fire Department
Violation Program: UST
Violation Source: CERS

Site ID: 19691

Violation Description: Failure to maintain secondary containment (e.g., failure of secondary containment testing).

Violation Notes: Returned to compliance on 04/23/2019. OBSERVATION: Failure to maintain tightness of secondary containment. On 10/5/17 the diesel annular went into alarm due to liquid in the secondary containment. A tank integrity test was performed per Supervisor Ron Muller and failed. The diesel product was completely removed from the primary tank. According to Mr. Muller Street Services is in the process for pulling a permit to repair the tank lining or remove the UST. CORRECTIVE ACTION: Pull necessary permit to either repair the primary tank or remove the UST.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:
Site ID: 115016
Site Name: EURO-BODY
Violation Date: 08-17-2018
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 03/11/2019. OBSERVATION: Two drums of waste solvent/paint and waste waterborne paint located in the west service bay were observed with a 2015 accumulation start date and a manifest/receipt demonstrating disposal within the past 180 days was not available. CORRECTIVE ACTION: Dispose of waste paint/solvent and submit a copy of the manifest/receipt to the CUPA.

Violation Date: 10-08-2015
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Haz Waste Generator Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 12/20/2016. OBSERVATION: Owner/Operator failed to submit the hazardous waste notification electronically to CERS. CORRECTIVE ACTION: Owner/Operator shall submit a notification of hazardous waste generated by the facility in accordance with HSC 25128 electronically to CERS. HSC 25404(e)(4) No later than three years after the statewide information management system is established, each CUPA, PA, and regulated business shall report program data electronically. The secretary shall work with the CUPAs to develop a phased in schedule for the electronic collection and submittal of information to be included in the statewide information management system, giving first priority to information relating to those chemicals determined by the secretary to be of greatest concern. The secretary, in making this determination shall consult with the CUPAs, the California Emergency Management Agency, the State Fire Marshal,

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:

Site ID: 92952
Site Name: ARCO 42105
Violation Date: 03-10-2015
Citation: 23 CCR 16 2666(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2666(c)

Violation Description: Failure of pump shut down when a leak is detected or when line leak detector is disconnected.

Violation Notes: Returned to compliance on 03/11/2015. 87 PLLD test Failure But corrected on site Possible air in line. "4/29/15 RTC Qualifier updated by Sam Kim due to the fact that Rey Husband is not able to see this see violation."

Violation Division: Los Angeles City Fire Department
Violation Program: UST
Violation Source: CERS

Site ID: 92952
Site Name: ARCO 42105
Violation Date: 02-15-2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, - 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1, - 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 07/08/2019. OBSERVATION: Failure to perform an inspection by October 13 2018. The overfill inspection report dated 9/12/18 failed to test the 87 main, 87 aux, and 91 drop tubes. CORRECTIVE ACTION: Repair/replace the 87 main, 87 aux, and 91 drop tubes.

Eval Date: 02-22-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Inspector Wilson LAFD, on site this date to conduct routine inspection of underground storage tank. Consent to enter, inspect and take photographs was given on this date by Manager Mike Silah Monitoring system certification was conducted at this time. Monitoring certification was performed by Robert Vargas with Fastech. Tester provided the following certifications: Robert Vargas ICC: 8144866-UC Exp: 5/13/2017 VR: #B34019 EXP: 8/30/2017 VMI: #1908 EXP: 7/4/2018 The UST monitoring panel showed all functions normal. The monitoring set up and alarm history were provided for review. The sumps and UDCs were opened for inspection and the sensors were observed positioned to detect a leak at the earliest opportunity. The spill buckets were also visually inspected. The Monitoring Plan was compared to the equipment onsite. The operation of the UST system was compared to the conditions of the operating permit. Property Owner: THRIFTY OIL CO. Tank Owner/ [Truncated]

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Notes: Inspector Williams on site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by Joe Lumsden - Manager Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to <https://cersbusiness2.calepa.ca.gov> to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.

Violation Notes: Returned to compliance on 12/11/2017. OBSERVATION: Owner/Operator failed to submit the hazardous waste notification electronically to CERS. CORRECTIVE ACTION: Owner/Operator shall submit a notification of hazardous waste generated by the facility in accordance with HSC 25128 electronically to CERS. HSC 25404(e)(4) No later than three years after the statewide information management system is established, each CUPA, PA, and regulated business shall report program data electronically. The secretary shall work with the CUPAs to develop a phased in schedule for the electronic collection and submittal of information to be included in the statewide information management system, giving first priority to information relating to those chemicals determined by the secretary to be of greatest concern. The secretary, in making this determination shall consult with the CUPAs, the California Emergency Management Agency, the State Fire Marshal, and the boards, departments, and offices within the California [Truncated]

Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to <https://cersbusiness2.calepa.ca.gov> to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.

Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-25-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes:

Consent to enter, inspect and take photographs was given by: Armen Zeytuntsyan, Owner. The Business Activities, Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan and Employee Training Plan sections were reviewed in CERS and field verified. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation. NOTE: The LAMC, Sections (L.A.M.C. SECTION 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA **** Annual submission of a Hazardous Materials Business Plan into California Environmental Reporting System (CERS) is required between January 1 and March 1 of every year. Per L.A.M.C. 57.121.3.5, failure to submit the required hazardous material business plan (HMBP) information [Truncated]

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 10/18/2002
Comments: Pursuant to the MOU, DTSC has reviewed a Phase I Environmental Site Assessment Report and other documents for the Los Angeles Jewish Home for the Aging (LAJHA). The subject property, Eisenberg Village, is a skilled nursing and residential care facility. LAJHA has recently constructed a new building on the subject property which is being proposed for insurance by Cal-Mortgage. A Supplemental Phase I Environmental Assessment Report was prepared by DTSC and concluded that no action was needed for this property; there is no contamination on the property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/27/2021

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

CERS HAZ WASTE: CERS HAZ WASTE

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

Date of Government Version: 01/20/2021	Source: CalEPA
Date Data Arrived at EDR: 01/20/2021	Telephone: 916-323-2514
Date Made Active in Reports: 04/08/2021	Last EDR Contact: 04/20/2021
Number of Days to Update: 78	Next Scheduled EDR Contact: 08/02/2021
	Data Release Frequency: Quarterly

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 12/07/2020	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 12/09/2020	Telephone: 202-307-1000

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
