## Executive Summary

Hazard Management Consulting, Inc. (HMC) is pleased to submit this Environmental Site Assessment (ESA) for the property referenced above in the City of Perris, California (Site) (Figures 1 & 2). This ESA was prepared to evaluate the Site for potential Recognized Environmental Conditions (RECs) that may be present and was conducted as part of your efforts to acquire the Site. The Site is noted to be an approximately 6.64-acre parcel. The Site has historically been used for agricultural purposes and residential uses. The Site currently contains a residence, vacant land, and remnants and foundations of former storage and residential structures.

The Site is relatively flat with an elevation of approximately 1,460 feet above mean sea level (msl) with a regional slope to the southeast. The Site is located in the City of Perris, Riverside County and is set in a developing area noted with vacant land, residential, and industrial uses.

The Site is located in a mixed use area and is bound:

- to the north by Harley Knox Boulevard across which are two residential structures and a semi-truck staging compound;
- on the east by an industrial warehouse;
- to the south by East Nance Street across which is a semi-truck staging yard; and,
- to the west by a residential property.

Key findings of this Phase I ESA are as follows:

- The Site and Site vicinity was observed to have historically been used for agricultural or vacant land since at least from the earliest aerial photograph in 1938 until the Site was first seen developed with residential and storage structures in 1985. The Site is currently vacant land. Given the city directory records, it appeared that some of the former residents may have run business from their homes. The Site vicinity was seen to be vacant, agricultural, or residential land throughout the available records. In recent years the Site vicinity has been noted with sparse industrial developments;

- Based on the review of the available regulatory information, the Site is located in an area with a minimal history of industrial or commercial uses. No facilities in the Site vicinity were found to pose an environmental condition affecting the Site. No RECs were identified from off Site sources;
- The Site is currently vacant. There were no RECs noted from the current use of the Site;
- Given the findings of this Phase I ESA, a vapor intrusion condition is considered unlikely to exist at the Site; and,
- The Site is vacant and the foundations of the former structures at the Site are of concrete construction. It is unlikely that ACMs pose a hazard at the Site.

### **Conclusions**

We have performed a Phase I Environmental Site Assessment in accordance with ASTM E1527-13 Guidelines for the property located at 280 and 25264 East Nance Street and Assessor's Parcel Numbers: 302-100-031 in Perris, California. **No RECs, HRECs or CRECs were identified during this investigation.**

While not an REC by ASTM standards, the Site is vacant and the foundations of the former structures at the Site are of concrete construction. It is unlikely that ACMs pose a hazard at the Site.

### **Recommendations**

Based on the findings of this ESA, HMC recommends that no further investigation is necessary at this time.

**1. INTRODUCTION**

Hazard Management Consulting, Inc. (HMC) is pleased to submit this Environmental Site Assessment (ESA) for the property referenced above in the City of Perris, California (Site) (Figures 1 & 2). This ESA was prepared to evaluate the Site for potential Recognized Environmental Conditions (RECs) that may be present and was conducted as part of your efforts to acquire the Site. The Site is noted to be an approximately 6.64-acre parcel. The Site has historically been used for agricultural purposes and residential uses. The Site currently contains a residence, vacant land, and remnants and foundations of former storage and residential structures.

The Site is relatively flat with an elevation of approximately 1,460 feet above mean sea level (msl) with a regional slope to the southeast. The Site is located in the City of Perris, Riverside County and is set in a developing area noted with vacant land, residential, and industrial uses.

**1.1. Objective**

In accordance with the ASTM E 1527-13 Standard Practice for Environmental Site Assessments, the objective of the ESA is to assess, to the extent feasible under the standard, the likelihood that Recognized Environmental Conditions (RECs), as defined by ASTM, are present at the Site.

A Recognized Environmental Condition “means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health

or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies” (ASTM Standard Practice E1527-13). Performance of a Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for Recognized Environmental Conditions in connection with a property, within reasonable limits of time and cost.

All Appropriate Inquires (AAI) as defined in the Final Rule (40 CFR, Part 312), must be conducted by persons seeking the landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) prior to acquiring a property or seeking or receiving federal brownfields grants under the authorities of CERCLA. The purpose of AAI, as defined in the AAI Final Rule, is to identify releases and threatened releases of hazardous substances, which cause or threaten to cause the incurrence of response costs. The U.S. Environmental Protection Agency (EPA) has stated that ASTM Standard E-1527-13 is consistent with the Standards and Practices for AAI and is compliant with the statutory criteria for AAI.

## **1.2. Scope of Services, Methodology and Limitations**

The findings of this ESA must be viewed in recognition of certain limiting conditions. The scope of work commissioned for this project does not represent an exhaustive study, but rather a reasonable inquiry, consistent with good commercial practice, in general accordance with ASTM Practice E-1527-13.

The scope of work for this ESA included the following activities:

- A Site walk to document the current condition of the Site and neighboring facilities.
- Review of a regulatory database report.
- Review of previously prepared reports for the Site.
- Submittal of questionnaires to the current Owner and User of the report.

- Review of historical references including aerial photographs, city directories, Sanborn Maps and topographic maps.
- On-line research and file review requests concerning the Site and suspect off site sources at the State of California Regional Water Quality Control Board (RWQCB) and Department of Toxic Substances Control (DTSC) websites.
- Review of records maintained by the Riverside County Department of Environmental Health.
- Review of records kept by the Riverside County Transportation and Land Management Agency's Building and Safety Department
- Review of Records kept by the City of Perris.
- Review of the records kept by South California Air Quality Management District's online database Facility Information Detail (FIND).
- Preparation of this report of findings.

In the course of this assessment, HMC has relied on information provided by outside parties, such as regulatory agencies, previous reports and interview sources. For the purpose of this assessment, such third-party information is assumed to be accurate unless contradictory evidence is noted, and HMC does not express or imply any warranty regarding information provided by third-party sources.

## **2. SITE DESCRIPTION**

### **2.1. Site Setting**

The Site is noted to be a 6.64-acre parcel. The Site is relatively flat with an elevation of approximately 1,460 feet above mean sea level (msl) with a regional slope to the southeast. The Site is located in the City of Perris, Riverside County and is set in a developing area noted with vacant land, residential, and industrial uses.

The Site is located in a mixed use area and is bound:

- to the north by Harley Knox Boulevard across which are two residential structures

- and a semi-truck staging compound;
- on the east by an industrial warehouse;
- to the south by East Nance Street across which is a semi-truck staging yard; and,
- to the west by a residential property.

Utilities in the Site vicinity are provided by:

- Electricity: Southern California Edison
- Natural Gas: Southern California Gas Company
- Water: Eastern Municipal Water District

## **2.2. Regional Geology and Hydrogeology**

Information regarding regional geological and hydrogeological conditions was obtained from information included on the California Department of Water Resources website. The Site lies within the San Jacinto Groundwater Basin which underlies San Jacinto, Perris, Moreno, and Menifee Valleys in western Riverside County. This basin is bound by the San Jacinto Mountains on the east, the San Timoteo Badlands on the northeast, the Box Mountains on the north, the Santa Rosa Hills, and Bell Mountain on the south, and unnamed hills on the west. Lake Perris is located in the eastern part of Perris Valley. The valleys are drained by the San Jacinto River and its tributaries. Average annual precipitation ranges from 10 to 18 inches.

The San Jacinto Groundwater Basin contains sediments that have filled valleys and underlying canyons incised into crystalline basement rock. The valley fill deposits are generally divided into younger and older alluvium. Maximum depths of valley fill reach about 900 feet in the western and northern parts of the basin but may exceed 5,000 feet in the eastern part of the basin between the Casa Loma and Claremont faults. Confined groundwater is found in the eastern part of the basin between the Casa Loma and Claremont fault. Wells in this basin produce 200 to 2,600 gpm (CDWR 2006).

The following groundwater information was found on the Regional Water Quality Control Board's website GeoTracker. In 2009, groundwater was reported at depths of approximately 80 feet below ground surface in a groundwater monitoring report generated for a Shell facility located approximately 3,900 feet southwest of the Site.

Groundwater is reported to flow southwest at gradient of 0.003 feet per foot below this facility (DC 2009).

### **2.3. Interviews and User Provided Information**

The User of this report is Harley Knox 2021 LLC c/o Proficiency Capital who is looking to acquire the Site and would be considered a “User” of the report per ASTM definitions. We requested all available information from the User and was provided two Preliminary Title Reports.

### **2.4. Title Records**

Two Title Reports (Report) prepared by First American Title Insurance Company dated January 22, 2021 for 280 East Nance Street and January 25, 2021 for 25264 Nance Street were provided to HMC for review.

Title for 280 East Nance Street was reported to be vested in Cheng-Ping Chang and Shueh-Lee Wang Chang, Trustees of the Chang Family Trust, dated January 10, 2003. Title for 25264 Nance Street was reported to be vested in Than Van Thai, a Married Man, as His Sole and Separate Property; Xuan Nguyen, an Unmarried Man; Joseph Nguyen and Lynn Nguyen, Husband and Wife and Diana Giang, an Unmarried Woman, all as Joint Tenants.

The Reports included information regarding tax obligations, mortgage liens, easements for various utilities, and related matters but did not contain any information of an environmental nature. One environmental constraint item was noted in each Report stating that, as of 1979, the land division fell within the 70 to 75 decibel range of March Air Force Base. The environmental constraints also noted that new dwelling units must be floodproofed by raising the finished floor a minimum of 24 inches above ground surface and that erosion protection shall be provided to mobile home supports. These environmental notes did not provide any concerns relating to the environmental condition of the Site.

### **2.5. User Knowledge**

We interviewed Mr. Matt Enghard of Proficiency Capital who indicated that his firm has no previous knowledge or experience with the property and is unaware of any chemical spills or releases or ongoing environmental matters. He indicated that they are paying full market value for the Site.

## **2.6. Owner Knowledge**

An Owner Questionnaire was not supplied to HMC and representatives of the Site were not available for an interview.

## **2.7. Environmental Liens or Activity and Use Limitations**

The best of HMC's knowledge from the review of material provided by third parties, there are no environmental liens or AULs in relation to the Site.

## **3. SITE USE AND HISTORY**

Past usage of the subject Site was assessed through a review of historical aerial photographs, topographic maps and an EDR search of city directories and prior reports. Sanborn maps were not generated for the Site.

### **3.1. Aerial Photograph Review**

Aerial photographs covering the Site were obtained from Environmental Data Resources, Inc. (EDR). Photographs were available from the period 1938 through 2016. Copies of the aerial photographs are included in Appendix B. A summary of the observations noted from the aerial photographs are as follows:

1938-78        The Site and Site vicinity was observed to be vacant or in agricultural use during this time period.

1985        The parcel immediately west of the Site was first seen to be developed with a residential structure as well as storage structures. A small structure was first seen at the western most parcel at the Site. A residential structure was also noted along the eastern border of the Site. The Site vicinity was noted with some residential and agricultural structures but remained largely in use for agriculture.

1989        The small structure at the western portion of the Site was no longer seen however a larger storage structure was observed in its place. No significant changes to the Site vicinity were noted.

1997        No significant changes were seen at the Site. Additional residential and new industrial development were noted in the Site vicinity.

2002-16 No significant changes were seen to the Site. The Site vicinity was noted with sparse industrial developments within this time period.

### **3.2. Topographic Maps**

Historical topographic maps were also reviewed as part of this effort and aided in interpreting the overall Site history although no specific observations were made from the review of these maps.

### **3.3. Sanborn Maps**

Sanborn maps are maps that were created for the insurance industry to document site activities in metropolitan areas of the country and were used in underwriting. They often times contain detailed information about a site. While they were prepared for insurance underwriting and were not environmental maps per se, they often times contain information that is useful in evaluating the historical use of a site. Sanborn maps were not generated for the Site.

### **3.4. EDR City Directory Review**

EDR performed a search of the City Directory records for the Site addresses provided at the initiation of this Phase I ESA and nearby properties at approximately five-year intervals. The following records were found:

#### **280 E. Nance St.**

<u>Year</u>	<u>Occupant</u>
2017	Arias, Gabriela
2014	Arias, Gabriela
2010	Arias, Gabriela
1990	CA Network Design Rudd, Willard R.

### **3.5. Summary**

The Site and Site vicinity was observed to have historically been used for agricultural or vacant land since at least from the earliest aerial photograph in 1938 until the Site was first seen developed with residential and storage structures in 1985. The Site is currently

vacant land. Given the city directory records, it appeared that some of the former residents may have run business from their homes. The Site vicinity was seen to be vacant, agricultural, or residential land throughout the available records. In recent years the Site vicinity has been noted with sparse industrial developments.

**4. PRIOR INVESTIGATIONS**

We were not provided with any previously prepared environmental reports for the Site.

**5. SITE RECONNAISSANCE**

Mr. Troy Taylor of HMC conducted a Site and Site vicinity reconnaissance on February 25, 2021. The reconnaissance was conducted in order to identify visible evidence of REC's at the Site and to assess possible conditions off Site that may impact the Site. Mr. Taylor was unaccompanied during the investigation at the Site.

The Site was noted to be a rectangular parcel and was seen to contain vacant land noted with the footprints and/or foundations of former structures. Evidence of illegal trash dumping was observed in the vacant portions of the Site that included E-waste, cushions, empty plastic containers, and used tires. A back-hoe was seen parked along the eastern border of the Site. There were no chemical uses or storage noted at the Site. No staining, spills, or other evidence of chemical releases were seen at the Site. No RECs were identified during the Site reconnaissance.

Selected photographs illustrating the Site and nearby off-Site conditions are included in Appendix A. Summaries of the Site and observations are detailed below.

<b>Description and Use of Site:</b>	The Site was seen to contain vacant land.
<b>Underground and Aboveground Storage Tanks:</b>	No evidence of UST or AST use was noted.
<b>Hazardous Materials, Hazardous Wastes or Petroleum Products:</b>	No hazardous materials were observed at the Site.

<b>Drains, Drain lines and Sumps:</b>	No drainage features were seen at the Site.
<b>Pits, Ponds, Lagoons</b>	These features were not observed at the Site.
<b>Industrial Wastewater:</b>	Industrial wastewater was not being generated at the Site.
<b>Stains:</b>	No staining was observed at the Site.
<b>Wells:</b>	No wells were observed at the Site.
<b>Transformers:</b>	Transformers were not observed at the Site.
<b>Other Features:</b>	A back-hoe was parked along the eastern border of the Site.

### 5.1. Site Vicinity

The Site is located in a mixed use area and is bound:

- to the north by Harley Knox Boulevard across which are two residential structures and a semi-truck staging compound;
- on the east by an industrial warehouse;
- to the south by East Nance Street across which is a semi-truck staging yard; and,
- to the west by a residential property.

## 6. REGULATORY AGENCY DATABASE RESEARCH

Regulatory agency database information was obtained from a standard radius Site Assessment (ASTM) report by Environmental Data Resources, Inc. The center of the search was in the approximate center of the Site. Search distances for specific databases were one-quarter to one mile as specified in the ASTM 1527-13 standard. The database search includes over 70 federal, state, local, and proprietary records. A complete copy of this report is included in Appendix B.

### 6.1. Database Records Concerning the Target Property

The Site was not listed in any database searched as part of the EDR report.

## 6.2. Database Records Concerning the Site Vicinity

We reviewed the database report for off-Site potential sources within the relevant search distance. In review of the many entries on the database, we reviewed the following factors that affect the ability of a facility to affect the Site:

- Distance from the Site,
- Location from the Site with regard to the direction of groundwater flow,
- Nature of the release and whether the release has affected soil, groundwater or both,
- Status of the investigation (e.g. open or closed)

Groundwater was noted to flow in a southwesterly direction at another nearby facility, therefore facilities located adjacent to or to the northeast were further considered. Only those facilities judged using these factors are discussed below. The following presents a summary of our findings:

Location	Address	Dist.	Direction	Lists	REC	RATIONALE
Meade Valley Elementary School Addition	21-100 Oleander Avenue	465'	WNW	ENVIROSTOR SCH	NO	This facility was noted to have been investigated by DTSC since it is a school facility and no RECs were identified.

### *Orphan Sites*

Orphan Sites are those properties that are included on various agency lists, but for which the records do not have sufficient address information for the database program to map the site. No orphan sites were identified as part of the EDR database research.

## 6.3. Summary of Off-Site Issues

Based on the review of the available regulatory information, the Site is located in an area with a sparse history of industrial or commercial uses. No facilities in the Site vicinity were found to pose an environmental condition affecting the Site. No RECs were identified from off Site sources.

## **7. LOCAL AGENCY AND OTHER RECORDS REVIEW**

### **7.1. Tribal Records**

The Site is not located in a tribal area therefore there were no tribal records to review.

### **7.2. Oil and Gas Wells**

The State of California Department of Conservation, Division of Oil, Gas, and Geothermal Resources online mapping website was reviewed for the location of active, plugged, or abandoned oil and gas wells in the vicinity of the Site. No oil or gas wells were listed as having been drilled on Site.

### **7.3. State of California**

The State of California Geotracker and EnviroStor websites were also reviewed for information on potential on or off-Site facilities that are being remediated under either RWQCB or DTSC oversight. No active cases were listed on these databases that were not listed in the EDR review.

HMC also submitted public records requests to the DTSC and RWQCB. After thorough records searches, neither the RWQCB nor the DTSC found files responsive to our request for the Site.

### **7.4. Riverside County Department of Environmental Health**

A public records request was submitted online to the RCDEH. HMC's request is still being processed at this time. Given the limited historical use, we do not anticipate any significant findings from this search.

### **7.5. Riverside County Department of Building and Safety**

No building permits were found for the addresses and APN of the Site.

### **7.6. South Coast Air Quality Management District**

A review of the SCAQMD Facility Information Detail website indicated that no records are maintained for the Site by this agency.

### **7.7. City Clerk City of Perris**

A public records request was submitted to the City. HMC's request is still being processed at this time.

## **8. VAPOR INTRUSION, ASBESTOS AND OTHER CONCERNS**

### **8.1. Vapor Intrusion**

Given the findings of this Phase I ESA, a vapor intrusion condition is considered unlikely to exist at the Site.

### **8.2. Asbestos**

The Site is vacant and the foundations of the former structures at the Site are of concrete construction. It is unlikely that asbestos poses a hazard at the Site.

### **8.3. Radon**

The Site is listed as being located in Zone 2 with regards to radon indicating that radon maybe present at concentrations less than 4 pico curies / liter.

### **8.4. Mold**

No evidence of mold or water damage was observed at the Site.

## **9. SUMMARY OF FINDINGS**

Key findings of this Phase I ESA are as follows:

- The Site and Site vicinity was observed to have historically been used for agricultural or vacant land since at least from the earliest aerial photograph in 1938 until the Site was first seen developed with residential and storage structures in 1985. The Site is currently vacant land. Given the city directory records, it appeared that some of the former residents may have run business from their homes. The Site vicinity was seen to be vacant, agricultural, or residential land throughout the available records. In recent years the Site vicinity has been noted with sparse industrial developments;
- Based on the review of the available regulatory information, the Site is located in an area with a minimal history of industrial or commercial uses. No facilities in the Site vicinity were found to pose an environmental condition affecting the Site. No RECs were identified from off Site sources;

- The Site is currently vacant. There were no RECs noted from the current use of the Site;
- Given the findings of this Phase I ESA, a vapor intrusion condition is considered unlikely to exist at the Site; and,
- The Site is vacant and the foundations of the former structures at the Site are of concrete construction. It is unlikely that ACMs pose a hazard at the Site.

## 10. DATA GAPS

Data gaps identified during this investigation include the following:

- Public records requests submitted to the City of Perris and Riverside County Department of Environmental Health are still being processed at the time of this report; and,
- An Owner Questionnaire has not been supplied to HMC for review.

These data gaps are not considered to affect the outcome of this investigation.

## 11. CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in accordance with ASTM E1527-13 Guidelines for the property located at 280 and 25264 East Nance Street and Assessor's Parcel Numbers: 302-100-031 in Perris, California. **No RECs, HRECs or CRECs were identified during this investigation.**

While not an REC by ASTM standards, the Site is vacant and the foundations of the former structures at the Site are of concrete construction. It is unlikely that ACMs pose a hazard at the Site.

## **12. RECOMMENDATIONS**

Based on the findings of this ESA, HMC recommends that no further investigation is necessary at this time.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal RCRA generators list***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

#### ***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/26/2020 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. ### DEED: Deed Restriction Listing

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## **EDR HIGH RISK HISTORICAL RECORDS**

### ***EDR Exclusive Records***

#### **EDR MGP: EDR Proprietary Manufactured Gas Plants**

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### **EDR Hist Auto: EDR Exclusive Historical Auto Stations**

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

These sensitive receptors typically include the elderly, the sick, and children. ### USGS TOPOGRAPHIC MAP

Target Property Map:	5641330 PERRIS, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## **AQUIFLOW®**

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

## OTHER STATE DATABASE INFORMATION

### Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

## HYDROGEOLOGIC INFORMATION

AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
