

# Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: Well 205 Groundwater Treatment Project

Lead Agency: Santa Clarita Valley Water Agency

Contact Name: Rick Vasilopoulos, Water Resources Planner

Email: rvasilopoulos@scvwa.org Phone Number: 661-705-7912

Project Location: Santa Clarita Los Angeles  
*City* *County*

Project Description (Proposed actions, location, and/or consequences).

The proposed project would involve construction and operation of a new groundwater treatment facility for treatment of perchlorate and other groundwater contaminants at the existing Well 205 site. Under the project, Well 205 would be reactivated, and all existing facilities would remain in place. Groundwater pumped from Well 205 would proceed through pre-filters, granular activated carbon (GAC) vessels, ion exchange (IX) vessels, and chemical injection before connecting to an existing water distribution pipeline on the project site. The project would not increase the production capacity of Well 205, and consistent with previous operating conditions, Well 205 would be equipped to produce up to 2,700 gallons of groundwater per minute from the Saugus Formation of the Santa Clara River Valley Groundwater Basin. The project would treat up to 4,360 acre-feet per year of groundwater. The new treatment facility would consist of a chemical building, water tanks, pumps, and treatment equipment alongside existing facilities at the site. Construction of the new groundwater treatment facility would occur between mid-2023 and mid-2024. Maintenance of the proposed project would include regular backwashing, replacement of filtration media, and routine performance monitoring and sampling. Maintenance staff would visit the project site daily, 365 days per year. Regular and routine maintenance activities would not include any ground-disturbing activities.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The project would result in potentially significant effects to biological resources, cultural resources, paleontological resources, hazards and hazardous materials, hydrology and water quality, tribal cultural resources, and wildfire. However, implementation of the following mitigation measures was determined in the IS-MND to reduce these project effects to less-than-significant levels:

- BIO-1 (General Best Management Practices)
- BIO-2 (Nesting Birds)
- CR-1 (Cultural Resources Sensitivity Training)
- CR-2 (Unanticipated Archaeological Resources)
- GEO-1 (Paleontological Resources Monitoring)
- HAZ-1 (Hazardous Materials Management and Spill Control Plan)
- HAZ-2 (Fire Prevention Measures)
- HWQ-1 (Erosion Control and Stormwater Pollution Prevention)
- TCR-1 (Native American Monitoring)
- TCR-2 (Archaeological/Cultural Resource Document Submittal)
- TCR-3 (Native American Consultation)

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

None.

Provide a list of the responsible or trustee agencies for the project.
