CNDDB Element Ranks: **Global:** G2

State: S2

General Habitat:

CHAPARRAL, COASTAL SCRUB, CISMONTANE WOODLAND, VALLEY AND FOOTHILL GRASSLAND.

Micro Habitat:

IN ROCKY OR CLAY SOILS; SOMETIMES ASSOCIATED WITH VERNAL POOL MARGINS. 3-550 M.

Last Date Observed:	2001-XX-XX	**Occurrence Type:**	Natural/Native occurrence
Last Survey Date:	2001-XX-XX	**Occurrence Rank:**	Unknown
Owner/Manager:	PVT	**Trend:**	Decreasing
Presence:	Presumed Extant		

Location:

WEST OF DENNERY CANYON; APPROXIMATELY 0.5-0.8 AIR MILE NORTH OF OTAY MESA ROAD, OTAY MESA.

Detailed Location:

MAPPED BY CNDDB AS 3 POLYGONS ACCORDING TO A 1998 AFFINIS MAP AND CITY OF SAN DIEGO DIGITAL DATA.

Ecological:

OCCURS WITH DUDLEYA EDULIS, FEROCACTUS VIRIDESCENS, AND AMBROSIA CHENOPODIIFOLIA.

Threats:

SOME POPS TO BE IMPACTED BY DEVELOPMENT; PLANTS TO BE TRANSPLANTED NEARBY (1998). NW POLY EXTIRPATED BY DEVELOPMENT.

General:

5000+ INDIVIDUALS OBSERVED IN 1998. UNKNOWN NUMBER OBSERVED IN 2001 ACCORDING TO CITY OF SAN DIEGO DIGITAL DATA.

PLSS:	T18S, R01W, Sec. 30, NE (S)	**Accuracy:**	specific area	**Area (acres):**	10

SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank

General Habitat:

CHAPARRAL, COASTAL SCRUB, CISMONTANE WOODLAND, VALLEY AND FOOTHILL GRASSLAND.

Micro Habitat:

IN ROCKY OR CLAY SOILS; SOMETIMES ASSOCIATED WITH VERNAL POOL MARGINS. 3-550 M.

Last Date Observed: 2001-XX-XX
Last Survey Date: 2009-05-22
Owner/Manager: CITY OF SAN DIEGO
Presence: Presumed Extant
Occurrence Type: Natural/Native occurrence
Occurrence Rank: Unknown
Trend: Unknown

Location:

SW END OF LAKE MURRAY WITHIN MISSION TRAILS REGIONAL PARK.

Detailed Location:

MAPPED BY CNDDB IN THE FAR NW 1/4 OF THE SW 1/4 OF SECTION 13.

Ecological:

Threats:

POSSIBLY THREATENED BY NON-NATIVE GRASSES.

General:

UNKNOWN NUMBER OF PLANTS OBSERVED IN 2001 ACCORDING TO CITY OF SAN DIEGO DIGITAL DATA. NO PLANTS OBSERVED IN 2008 AND 2009 BUT SURVEY COORDINATES ARE FROM JUST NE OF MAPPED SITE.

General Habitat:
CHAPARRAL, CISMONTANE WOODLAND.

Micro Habitat:
OFTEN IN MIXED CHAPARRAL IN CALIFORNIA, SOMETIMES POST-BURN. 30-855 M.

Last Date Observed: 1963-09-26
Occurrence Type: Natural/Native occurrence
Last Survey Date: 1963-09-26
Occurrence Rank: Unknown
Owner/Manager: CITY OF SAN DIEGO
Trend: Unknown
Presence: Presumed Extant

Location:
NEAR CROSS ON SOLEDAD MOUNTAIN, ELEV. 800 FT.

Detailed Location:
EXACT LOCATION UNKNOWN. MAPPED AS BEST GUESS BY CNDDB IN THE VICINITY OF THE "EASTER CROSS" ON USGS TOPO MAP.

Ecological:
IN CHAPARRAL WITH RHUS INTEGRIFOLIA, XYLOCOCCUS BICOLOR, ETC.

Threats:

General:
ONLY SOURCE OF INFORMATION FOR THIS OCCURRENCE IS 1963 EVERETT COLLECTION.

Presence: Presumed Extant

Location:

BOUNDARY MONUMENT 256 ALONG THE US-MEXICO BORDER, ABOUT 2 MILES SSW OF SAN YSIDRO.

Detailed Location:

LOCALLY KNOWN AS SPOONERS MESA, THIS SITE IS EAST OF SMUGGLER GULCH ON THE IMPERIAL BEACH TOPO. 14 COLONIES MAPPED WITHIN 2 POLYGONS, MOSTLY WITHIN THE N 1/2 NW 1/4 SECTION 10.

Ecological:

CHAPARRAL WITH CEANOTHUS VERRUCOSUS AND SALVIA MELLIFERA. OTHER RARE PLANTS FOUND ON MESA INCLUDE COREOPSIS MARITIMA, BERGEROCACTUS EMORYI, EUPHORBIA MISERA, OPUNTIA PARRYI SERPENTINA, FEROCACTUS VIRIDESCENS, AND SELAGINELLA CINERASCENS.

Threats:

BRUSH CLEARING FOR ROAD, LITTER, TRAILS, FREQUENT FIRES, SCRAPING OF MESA TOP TO FILL ADJACENT CANYON.

General:

103 PLANTS OBSERVED IN 1999. SEEDLINGS WERE NOT LOCATED IN 1998, 1999. THIS IS THE ONLY KNOWN US OCCURRENCE FOR THIS SPECIES. PROPOSAL BY BORDER PATROL WOULD SCRAPE THE TOP OF THIS MESA TO FILL SMUGGLER GULCH TO IMPROVE BORDER MONITORING.

Key Quad:	Imperial Beach (3211751)	**Element Code:**	PDEUP0Q1B0
Occurrence Number:	2	**Occurrence Last Updated:**	2013-04-04

Scientific Name: *Euphorbia misera*

Common Name: cliff spurge

Listing Status: **Federal:** None

State: None

Rare Plant Rank: 2B.2

Other Lists: SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden

CNDDB Element Ranks: **Global:** G5

State: S2

General Habitat:

COASTAL BLUFF SCRUB, COASTAL SCRUB, MOJAVEAN DESERT SCRUB.

Micro Habitat:

ROCKY SITES. 3-430 M.

Last Date Observed:	2011-07-XX	**Occurrence Type:**	Natural/Native occurrence
Last Survey Date:	2011-07-XX	**Occurrence Rank:**	Unknown
Owner/Manager:	SDG COUNTY, PVT	**Trend:**	Unknown
Presence:	Presumed Extant		

Location:

NORTH AND SOUTH OF LOWER END OF MOODY CANYON, WEST END OF OTAY MESA, JUST EAST OF SAN YSIDRO.

Detailed Location:

5 POLYGONS MAPPED PRIMARILY IN THE EASTERN HALF OF SECTION 36 AND THE NE 1/4 OF SECTION 1. 4 NORTHERN POLYGONS MAPPED ACCORDING TO A 2012 ALBRIGHT REPORT, SOUTHERN POLYGON MAPPED TO ENCOMPASS A 1995 PROJECT SITE, UNKNOWN WHERE PLANTS SEEN.

Ecological:

ROCKY/GRAVELLY SLOPES ABOVE CANYON. MARITIME DESERT SCRUB. MODERATELY FINE SANDY CLAY LOAM. ASSOCIATED WITH ENCELIA CALIFORNICA, CYLINDROPUNTIA PROLIFERA, C. CALIFORNICA, AMBROSIA CHENOPODIIFOLIA, SIMMONDSIA CHINENSIS, LYCIUM CALIFORNICUM.

Threats:

DEVELOPMENT NEARBY.

General:

MORE THAN 1000 PLANTS OBSERVED IN 1981. UNKNOWN NUMBER OF PLANTS SEEN IN 1994 AND 1998. 6% COVER OF EUPHORBIA OVER A >5 ACRE SITE IN 2009. "FAIRLY WIDESPREAD" IN 2011. 1938 GANDER COLLECTION FROM "OTAY MESA NEAR SAN YSIDRO" ATTRIBUTED HERE.

Presence:	Presumed Extant		

Location:

SLOPES ABOVE DENNERY CANYON, NORTHWEST END OF OTAY MESA.

Detailed Location:

MAPPED BY CNDDB AS 4 POLYGONS. NORTHERN 3 POLYGONS ARE SPECIFIC. SOUTH POLYGON IS NONSPECIFIC, BASED ON 1968 BAKER COLLECTION FROM "200 FT N OF OTAY MESA RD, 1 MI W OF HERITAGE RD".

Ecological:

MARITIME DESERT SCRUB ON STONY SOILS, EXPOSED SLOPES. STOCKPEN GRAVELLY CLAY. ASSOCIATES INCLUDE DEINANDRA FASCICULATA, DUDLEYA PULVERULENTA, NASSELLA SP.

Threats:

PROPOSED FOR DEVELOPMENT.

General:

50+ PLANTS OBSERVED IN NORTH POLYGON IN 1984. UNKNOWN NUMBER SEEN IN SOUTHERN MIDDLE POLYGON SOMETIME BETWEEN 1980-1992. HUNDREDS OF PLANTS IN NORTHERN MIDDLE POLYGON IN 2009. INCLUDES FORMER OCCURRENCE #39.

ROCKY SITES. 3-430 M.

Last Date Observed: 1998-04-24
Occurrence Type: Natural/Native occurrence
Last Survey Date: 1998-04-24
Occurrence Rank: Fair
Owner/Manager: PVT
Trend: Unknown
Presence: Presumed Extant

Location:

JUST NORTHEAST OF JUNCTION OF I-805 AND I-905, ABOUT 1 MILE NORTHEAST OF SAN YSIDRO, EAST OF IMPERIAL BEACH.

Detailed Location:

NO SPECIFIC MAP DETAIL GIVEN FOR FEROCACTUS VIRIDESCENS; MAPPED USING PROJECT LOCATION AS BOUNDARY. SITE BORDERED BY FREEWAYS TO SOUTH AND WEST, BY DEL SOL BLVD TO THE NORTH, AND DEVELOPMENT TO THE EAST.

Ecological:

MARITIME SUCCULENT SCRUB ON HILLS, NON-NATIVE GRASSLAND AT HILL BASE, SOME DISTURBED COASTAL SAGE SCRUB ON THE HILLS, SMALL NORTH-SOUTH DRAINAGE WITH SELAGINELLA CINERASCENS.

Threats:

OFF-ROAD VEHICLE USE BY TRESPASSERS, DUMPING. SINCE THIS IS A "PROJECT" SITE, PRESUME DEVELOPMENT IS A THREAT TOO.

General:

UNK # OF PLANTS IN 1998. HABITAT ON HILLS IS HIGH QUALITY, REST OF SITE IS DISTURBED. RARE PLANTS PRESENT: ADOLPHIA CALIFORNICA, AMBROSIA CHENOPODIIFOLIA, CALANDRINIA MARITIMA & FEROCACTUS VIRIDESCENS.

Element Code: PDEUP0Q1B0
Occurrence Number: 28
Occurrence Last Updated: 2013-04-05

Scientific Name: *Euphorbia misera*
Common Name: cliff spurge

Listing Status: **Federal:** None
State: None
Rare Plant Rank: 2B.2
Other Lists: SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden

CNDDB Element Ranks: **Global:** G5
State: S2

General Habitat:
COASTAL BLUFF SCRUB, COASTAL SCRUB, MOJAVEAN DESERT SCRUB.

Micro Habitat:
ROCKY SITES. 3-430 M.

Last Date Observed: 2008-03-08
Occurrence Type: Natural/Native occurrence
Last Survey Date: 2008-03-08
Occurrence Rank: Unknown
Owner/Manager: UNKNOWN
Trend: Unknown
Presence: Presumed Extant

Location:
WESTERN EDGE OF OTAY MESA, UPPER END OF SMALL CANYON ABOUT 20 M SOUTH OF HWY 905 AND ABOUT 2 KM EAST OF HWY 805.

Detailed Location:
SITE ACCESS AT OTAY MESA RD, ABOUT 40 M EAST. 2 POLYGONS MAPPED ACCORDING TO A 2001 MAP BY CALTRANS.

Ecological:
CANYON BOTTOM WITH EUCALYPTUS SP., BUT SOUTH-FACING, SHADED SLOPE SUPPORTING HIGH-QUALITY SAGE SCRUB. DOMINANT SPECIES INCLUDE ARTEMISIA CALIFORNICA, SIMMONDSIA CHINENSIS, AND BAHIOPSIS LACINIATA.

Threats:
SITE IS SURROUNDED BY ROADS AND DEVELOPMENT.

General:
UNKNOWN NUMBER OF PLANTS OBSERVED CIRCA 1995. A 2008 COLLECTION BY GUILLIAMS IS ALSO ATTRIBUTED TO THIS OCCURRENCE.

PLSS: T18S, R01W, Sec. 31, NE (S)
Accuracy: specific area
Area (acres): 1
UTM: Zone-11 N3603384 E498064
Latitude/Longitude: 32.56788 / -117.02061
Elevation (feet): 500

ROCKY SITES. 3-430 M.

Last Date Observed:	2009-06-25	**Occurrence Type:**	Natural/Native occurrence
Last Survey Date:	2009-06-25	**Occurrence Rank:**	Unknown
Owner/Manager:	PVT	**Trend:**	Unknown
Presence:	Presumed Extant		

Location:

EAST SIDE OF MOODY CANYON, ABOUT 1 AIR MILE ENE OF BEYER ELEMENTARY SCHOOL.

Detailed Location:

MAPPED AS 3 POLYGONS BY CNDDB IN CENTER OF SEC 31. WESTERN 2 POLYGONS BASED ON 2009 COORDINATES; STAND OCCURS FROM TOE TO TOP OF SLOPE AND CONTINUES IN BOTH DIRECTIONS FOR HUNDREDS OF METERS. EASTERN COLONY BASED ON 2008 COORDINATES.

Ecological:

OPEN CANOPY SHRUBLAND. CONSPICUOUS LACK OF CACTI. SOIL PALE TAN/GRAY. LACK OF ANNUAL SPP. ASSOCIATED WITH AMBROSIA CHENOPODIIFOLIA, SIMMONDSIA CHINENSIS, CYLINDROPUNTIA PROLIFERA, ERIOGONUM FASCICULATUM, VIGUIERA LACINIATA, ETC.

Threats:

General:

EASTERN POLYGON: "COMMON" IN 2008. TWO WESTERN POLYGONS: ~3% COVER OF EUPHORBIA OVER >5 ACRES IN 2009.

COASTAL DUNES, COASTAL SCRUB.

Micro Habitat:
ON SAND DUNES. 0-20 M.

Last Date Observed: 1936-05-24
Occurrence Type: Natural/Native occurrence
Last Survey Date: 2001-05-03
Occurrence Rank: None
Owner/Manager: USFWS-TIJUANA SLOUGH NWR, PVT
Trend: Unknown
Presence: Extirpated

Location:
MOUTH OF TIJUANA RIVER, SOUTHWEST OF IMPERIAL BEACH NAVAL AIR STATION.

Detailed Location:

Ecological:
LOW LYING DUNES AND SANDY FLATS.

Threats:
RIVER MOUTH RECONFIGURED, SITE PERIODICALLY UNDERWATER.

General:
SITE BASED ON HISTORIC COLLECTIONS FROM AREA. IN 2001, SUTTLE SURVEYED 0.5 MILE NORTH AND SOUTH OF MOUTH OF TIJUANA RIVER AND DID NOT FIND PLANTS; BEACH HAS RETREATED 100 FT IN RECENT YEARS AND RIVERMOUTH IS RECONFIGURED. LIKELY EXTIRPATED.

PLSS: T18S, R02W, Sec. 31, S (S)
Accuracy: 2/5 mile
Area (acres): 280
UTM: Zone-11 N3602146 E488041
Latitude/Longitude: 32.55665 / -117.12738
Elevation (feet): 0

County Summary:
San Diego

Location:

SILVER STRAND BEACH, FROM NAVAL AMPHIBIOUS BASE SOUTH OF CORONADO TO NAVAL RADIO STATION JUST NORTH OF IMPERIAL BEACH.

Detailed Location:

MANY SCATTERED LOCATIONS AT US NAVAL RADIO FACILITY, ALONG SILVER STRAND BLVD (HWY 75), SILVER STRAND STATE BEACH, & US NAVAL AMPHIBIOUS BASE. VAGUE COLLECTIONS FROM SILVER STRAND ARE ALSO ATTRIBUTED TO THIS SITE.

Ecological:

PLANTS FOUND ABOVE THE SALT FLATS IN DISTURBED COASTAL SAND DUNES, IN SANDY OPENINGS IN BACKDUNES, IN SANDY FLATS, AND IN RESTORATION AREA ALONG BAYSHORE WITH ABRONIA, CRYPTANTHA, CAMISSONIA, ETC. PLANTS AT ONE SITE MAY BE SOWED.

Threats:

ORV ACTIVITY, HUMAN TRAMPLING, WEED INVASION, DEVELOPMENT, MILITARY OPS, SOIL ENRICHMENT, EROSION, TRASH.

General:

>12,250 PLANTS ESTIMATED IN 1991. FEWER THAN 34,000 PLANTS ESTIMATED IN 2001. DETAILED POPULATION DATA AT CNDDB. POP #S FOR PORTIONS OF SITE: 34,700+ IN 2011; 934,400+ ESTIMATED IN 2012; UNK # IN 2013 & 2015. INCLUDES FORMER EO #4.

Last Survey Date:	2005-05-01	**Occurrence Rank:**	Unknown
Owner/Manager:	DOD-NORTH ISLAND NAS	**Trend:**	Unknown
Presence:	Presumed Extant		

Location:

NORTH ISLAND NAVAL AIR STATION, NORTHEAST OF RUNWAYS, BETWEEN WRIGHT AVENUE AND UTGOFF AVENUE, SAN DIEGO.

Detailed Location:

MAPPED BY CNDDB AS 2 POLYGONS ACCORDING TO A 2001 SUTTLE MAP (NON-SPECIFIC SOUTHERN POLYGON) AND 2005 DIGITAL DATA (SPECIFIC NORTHERN POLYGON).

Ecological:

URBAN/DEVELOPED.

Threats:

CONSTRUCTION, LANDSCAPING, CARPOBROTUS.

General:

GREATER THAN 5000 PLANTS OBSERVED AT OVER A DOZEN SITES (BETWEEN OCCURRENCES 17 AND 19) BY SUTTLE IN 2001. 10 PLANTS OBSERVED IN NORTHERN POLYGON IN 2005.

PLSS:	T17S, R03W, Sec. 09, NE (S)	**Accuracy:**	non-specific area	**Area (acres):**	18

Trend: Unknown

Location:
LOEWS CORONADO BAY RESORT, EAST OF SILVER STRAND STATE BEACH BETWEEN CROWN COVE AND THE CORONADO KEYS, SAN DIEGO.

Detailed Location:
PLANTS SCATTERED ON EAST END OF PENINSULA AT RESTORATION/MITIGATION SITE, A SLIVER OF LAND BETWEEN BAY FRONT RIPRAP AND HOTEL PARKING ACCESS ROAD.

Ecological:
PLANTS THINLY DISTRIBUTED, VERDANT BY SPRINKLER HEADS, CRAWLING OVER AUSTRALIAN TEA PLANT ALONGSIDE ROCKROSE AND PAMPAS GRASS.

Threats:
CONVENTIONAL LANDSCAPE PLANTS ARE CROWDING OUT LOTUS NUTTALLIANUS (ACMISPON PROSTRATUS).

General:
ABOUT 20 PLANTS OBSERVED IN 2001. PLANTS WERE SOWED AND SUTTLE BELIEVES THEY ARE UNLIKELY TO PERSIST.

Location:

KENDALL-FROST MISSION BAY MARSH RESERVE, CROWN POINT, 1.3 MILES NORTH OF STONY POINT, SAN DIEGO.

Detailed Location:

SOUTHWEST CORNER OF KENDALL-FROST MISSION BAY MARSH RESERVE (UCSD NATURAL RESERVE SYSTEM) TO EAST OF PARKING LOT AT "CROWN POINT SHORES" BAYSIDE PARK, NEAR INTERSECTION OF CROWN POINT DRIVE AND CORONA ORIENTE ROAD.

Ecological:

PLANTS ON A SANDY BERM APPROX 12 YARDS WIDE AND 150 YARDS LONG, FLANKED BY HIGHTIDE LINE TO SOUTH AND MUDFLATS/SALT PAN TO THE NORTH. GROWING WITH CAMISSONIA CHEIRANTHIFOLIA, AMBROSIA CHAMISSONIS, ABRONIA, AND ATRIPLEX SEMIBACCATA.

Threats:

EXOTICS INCLUDING CHRYSANTHEMUM CORONARIUM & MELILOTUS ADVANCING ON BERM. HIGH TIDE EROSION AT BASE OF BERM.

General:

ABOUT 100 PLANTS (SEEDLINGS, JUVENILES, MATURE AND SENESCENT ADULTS) OBSERVED IN 2001. SITE IS A SAND DUNE RESTORATION AREA; LOTUS NUTTALLIANUS (ACMISPON PROSTRATUS) WAS SEEDED AT SITE.

Location:

MISSION BAY FROM EL CARMEL POINT SOUTH TO MISSION BEACH SCHOOL, SAN DIEGO.

Detailed Location:

SEVERAL COLONIES MAPPED ALONG MISSION BLVD AND BEACH BAYWALK FROM EL CARMEL PLACE TO NORTH OF SAN FERNANDO PLACE. MOST COLONIES KNOWN FROM THE 1970S AND 1980S, NOW EXTIRPATED DUE TO DEVELOPMENT, HERBICIDES, BEACH CLEANING EQUIPMENT, ETC.

Ecological:

ONLY PLANTS FOUND IN 2000 WERE GROWING IN A CRACK BETWEEN PARKING LOT AND SIDEWALK, UNDERNEATH AN OLEANDER BUSH. FORMER COLONIES WERE IN SANDLOTS, WEEDY AREAS, BENEATH ROLLER COASTER, AND BEACH/BAYWALK AREAS.

Threats:

DEVELOPMENT (ROWING CLUB, SCHOOL PARKING LOT); BEACH CLEANING MACHINES, TRAMPLING, COMPETITION FROM EXOTICS, HERBICIDES.

General:

MISSION BEACH SCHOOL: 4 FLOWERING PLANTS IN 2000 IN A CRACK BETWEEN NORTH PARKING LOT & ADJACENT SIDEWALK, SITE CLEARED IN 2001, 1 PLANT REMAINED IN 2002. PLANTS AT EL CARMEL PLACE BETWEEN YACHT & ROWING CLUBS SEEN IN 1998 BUT NOT IN 2000.

Location:

MARINERS BASIN, MISSION BAY, SAN DIEGO.

Detailed Location:

WITHIN MISSION BAY PARK. MAPPED BY CNDDB AS 3 POLYGONS BASED ON 1998 SUTTLE MAP, 2005 BREISCH COORDINATES FROM COLLECTION LABEL, AND 2009 MILLER COORDINATES. INCLUDES FORMER OCCURRENCES #28 AND 29.

Ecological:

SAND WITH MANY MOLLUSK SHELLS. PROBABLY FILL FROM WHEN MISSION BAY WAS DREDGED. AMBROSIA CHAMISSONIS-ABRONIA MARITIMA ALLIANCE. ASSOCIATED WITH BUR-CLOVER AND FILAREE.

Threats:

LOW COVER OF INVASIVES. NE SITE APPEARS TO BE FENCED AND PROTECTED FROM TRAMPLING/WEEDING. BRUSH MANAGMENT.

General:

TWO W POLYS: LAST SEEN IN 1970S/1980S; EXTIRPATED ACC TO SUTTLE (1998). NE POLYGON: SEEN IN 1998; 1269 FLOWERING ADULTS EST IN 2000; 1582 FLOWERING ADULTS IN 2001; 2473 FLOWERING ADULTS IN 2002; OBS IN 2005, 2009, 2014, 2015; 1054 IN 2016.

Presence:	Presumed Extant		

Location:

DUSTY RHODES PARK, JUNCTION OF SUNSET CLIFFS BOULEVARD & INTERSTATE 8, OCEAN BEACH, SAN DIEGO.

Detailed Location:

2 COLONIES; N COLONY NORTH OF SUNSET CLIFFS BOULEVARD FROM THE JUNCTION WITH I-8. S COLONY SOUTH OF SUNSET CLIFFS BOULEVARD IN DUSTY RHODES PARK, IN ONE OF TWO CURB-ENCLOSED SANDY AREAS ALONG SOUTH EDGE OF PARK.

Ecological:

N COLONY IN FORMERLY LANDSCAPED SANDY SOIL AREA CONTAINING REMNANTS OF NATIVE VEGETATION E.G. CAMISSONIA CHEIRANTHIFOLIA, ABRONIA UMBELLATA, AMBROSIA BIPINNATIFIDA, & NEMACAULIS DENDATA. S COLONY IN SANDY SPARSELY VEGETATED AREA.

Threats:

LIGHT PEDESTRIAN TRAFFIC, WEEDS, CITY LANDSCAPING; TRAMPLING, DOG FECES, & WEED ABATEMENT.

General:

ABOUT 50 PLANTS AT NORTH COLONY IN 2001, SITE IS NOW A NATIVE PLANT RESTORATION AREA SUPPORTED BY SAN DIEGO CNPS. 7 PLANTS AT SOUTHERN COLONY IN 2001, TINY REMNANT POPULATION UNLIKELY TO PERSIST.

Location:
CHANNEL FOR FAMOSA SLOUGH, WEST POINT LOMA BLVD.

Detailed Location:
MAPPED AS TWO COLONIES. S COLONY ORIGINAL COLLECTION FROM SLIGHT DEPRESSION IN SANDY UNDULATING FLAT (FILL), ELEVATION 3 METERS. NORTHERN COLONY ALONG WEST SIDE OF TRAIL APPROXIMATELY 0.2 MILE NORTH OF TRAILHEAD AND WEST POINT LOMA BLVD.

Ecological:
SOUTH COLONY WAS WITH CAMISSONIA AND HETEROTHECA. NORTH COLONY IS IN UPLAND FLAT ADJACENT TO FAMOSA SLOUGH CHANNEL.

Threats:
AT SOUTH COLONY HABITAT DESTROYED BY DREDGING AND FLOODING. NORTH COLONY IS THREATENED BY THICK WEED GROWTH.

General:
SOUTH COLONY COLLECTED IN 1981 BY CASS, CONFIRMED BY FAMOSA SLOUGH AUTHORITY JIM PEUGH. HABITAT DESTROYED BY DREDGING AND FLOODING (SUTTLE 2001). 2 PLANTS AT NORTH COLONY IN JUNE 2001. SITE IS VERY VULNERABLE AND PRECARIOUS.

Occurrence Last Updated: 2016-11-07

Scientific Name: *Quercus dumosa*
Common Name: Nuttall's scrub oak

Listing Status: **Federal:** None
State: None
Rare Plant Rank: 1B.1
Other Lists: BLM_S-Sensitive
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank
USFS_S-Sensitive
CNDDB Element Ranks: **Global:** G3
State: S3

General Habitat:

CLOSED-CONE CONIFEROUS FOREST, CHAPARRAL, COASTAL SCRUB.

Micro Habitat:

GENERALLY ON SANDY SOILS NEAR THE COAST; SOMETIMES ON CLAY LOAM. 15-640 M.

Last Date Observed: 2015-04-14
Occurrence Type: Natural/Native occurrence
Last Survey Date: 2015-04-14
Occurrence Rank: Unknown
Owner/Manager: DOD, NPS-CABRILLO NM
Trend: Unknown
Presence: Presumed Extant

Location:

POINT LOMA; VICINITY OF FORT ROSECRANS, EXTENDING SOUTH INTO CABRILLO NATIONAL MONUMENT.

Detailed Location:

5 POLYGONS MAPPED ACCORDING TO A 2006 TIERRA DATA INC MAP. 1908 DUDLEY COLLECTION FROM "S OF FORT ROSECRANS, POINT LOMA" & 1993 MCEACHERN COLLECTIONS FROM "CABRILLO NM, SE CORNER OF MAINTENANCE YARD" AND "NEAR BAYSIDE TRAIL" ATTRIB HERE.

Ecological:

SANDY COMPACTED SOIL. ASSOCIATED WITH ISOMERIS ARBOREA, ELYMUS, RHUS INTEGRIFOLIA, AND ENCELIA CALIFORNICA. THE RARE CEANOTHUS VERRUCOSUS, EUPHORBIA MISERA, AND FEROCACTUS VIRIDESCENS ALSO OCCUR IN THIS VICINITY.

Threats:

General:

UNKNOWN NUMBER OF PLANTS SEEN, MOST LIKELY DURING 1999 SURVEYS. 15 PLANTS OBSERVED AT SOUTHERN END OF OCCURRENCE IN 2015. COLLECTIONS FROM 1908 AND 1993 ALSO ATTRIBUTED HERE.

Micro Habitat:

ENDEMIC TO ACTIVE VERTISOL CLAY SOILS OF MESAS & VALLEYS. USUALLY ON CLAY LENSES WITHIN GRASSLAND OR CHAPARRAL COMMUNITIES. 25-945 M.

Last Date Observed:	XXXX-XX-XX	**Occurrence Type:**	Natural/Native occurrence
Last Survey Date:	XXXX-XX-XX	**Occurrence Rank:**	None
Owner/Manager:	UNKNOWN	**Trend:**	Unknown
Presence:	Possibly Extirpated		

Location:

JUST NORTH OF SWEETWATER RESERVOIR.

Detailed Location:

EXACT LOCATION UNKNOWN. MAPPED IN VICINITY OF LA PRESA.

Ecological:

Threats:

THREATENED BY A HOTEL DEVELOPMENT.

General:

MAIN SOURCE IS GENERAL LOCATION PROVIDED BY HOGAN. A 1920 SPENCER COLLECTION FROM "FIELDS NEAR SWEETWATER" ALSO ATTRIBUTED HERE. INCLUDES FORMER EO #9. A 2009 SNAPP-COOK REVIEW NOTES THIS POPULATION AS EXTIRPATED; NEEDS CONFIRMATION.

Key Quad: La Mesa (3211771)
Element Code: PDLAM0V020
Occurrence Number: 19
Occurrence Last Updated: 2016-08-09

Scientific Name: *Lepechinia cardiophylla*
Common Name: heart-leaved pitcher sage

Listing Status: **Federal:** None
State: None
Rare Plant Rank: 1B.2
Other Lists: SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden
USFS_S-Sensitive

CNDDB Element Ranks: **Global:** G3
State: S2S3

General Habitat:
CLOSED-CONE CONIFEROUS FOREST, CHAPARRAL, CISMONTANE WOODLAND.

Micro Habitat:
115-1345 M.

Last Date Observed: 2011-07-07
Occurrence Type: Natural/Native occurrence
Last Survey Date: 2011-07-07
Occurrence Rank: Unknown
Owner/Manager: PVT
Trend: Unknown
Presence: Presumed Extant

Location:
SPRING CANYON, SW OF SYCAMORE LANDFILL, NW OF SANTEE.

Detailed Location:
MAPPED ACCORDING TO MAP PROVIDED IN A 2011 TETRA TECH INC REPORT FOR THE COGENTRIX QUAIL BRUSH GENERATION PROJECT. IN THE SW 1/4 OF THE NE 1/4 OF SECTION 24.

Ecological:
ADJACENT TO EMERGENT WETLAND.

Threats:

General:
UNKNOWN NUMBER OF PLANTS OBSERVED SOMETIME BETWEEN MAY 12 AND JULY 7, 2011.

PLSS: T15S, R02W, Sec. 24, NE (S)
Accuracy: 80 meters
Area (acres): 5
UTM: Zone-11 N3635273 E496472
Latitude/Longitude: 32.85554 / -117.03771
Elevation (feet): 388

County Summary:
San Diego

Quad Summary:
La Mesa (3211771)

Scientific Name: *Monardella viminea*
Common Name: willowy monardella

Listing Status: **Federal:** Endangered
State: Endangered
Rare Plant Rank: 1B.1
Other Lists: SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank

CNDDB Element Ranks: **Global:** G1
State: S1

General Habitat:

COASTAL SCRUB, CHAPARRAL, RIPARIAN FOREST, RIPARIAN SCRUB, RIPARIAN WOODLAND.

Micro Habitat:

IN CANYONS, IN ROCKY AND SANDY PLACES, SOMETIMES IN WASHES OR FLOODPLAINS; WITH BACCHARIS, IVA, ETC. ALLUVIAL, EPHEMERAL WASHES WITH ADJACENT COASTAL SCRUB. 45-230 M.

Last Date Observed: 1993-07-08
Occurrence Type: Natural/Native occurrence
Last Survey Date: 2003-XX-XX
Occurrence Rank: None
Owner/Manager: CITY OF SAN DIEGO
Trend: Decreasing
Presence: Possibly Extirpated

Location:

WITHIN SAN CLEMENTE PARK, IN SAN CLEMENTE CANYON; SOUTH OF STADIUM STREET AND HWY 52, SAN DIEGO.

Detailed Location:

MAPPED BY CNDDB AT 0.35 MILE NE OF REGENTS ROAD, ACCORDING TO A 1981 DICE MAP.

Ecological:

SYCAMORE ALLUVIAL SCRUB WITH WILLOW/MULE FAT UNDERSTORY. CHANNEL BARS VEGETATED WITH ERIOGONUM FASCICULATUM, BACCHARIS PILULARIS, TOXICODENDRON, AND SCIRPUS.

Threats:

INCREASED RUNOFF DUE TO HIGHWAY CONSTRUCTION HAS RESULTED IN INVASION BY SEDGES/WILLOWS (1987).

General:

50 PLANTS IN 1980 IN 60 SQ METER AREA, 28 IN 1985, 13 PLANTS IN 1987, 4 IN 1993. ELVIN SAYS THAT HE "SURVEYED SYCAMORE CYN FROM 805 TO I-5 IN ABOUT 2003" AND NO SUITABLE HABITAT REMAINED IN THE AREA.

PLSS: T15S, R03W, Sec. 29, E (S)
Accuracy: 80 meters
Area (acres): 0

Last Survey Date:	2000-08-17	**Occurrence Rank:**	Fair
Owner/Manager:	DOD-MCAS MIRAMAR, CITY OF SDG	**Trend:**	Decreasing
Presence:	Presumed Extant		

Location:

SAN CLEMENTE CANYON, FROM JUST W OF I-805 TO ABOUT 1.8 MILES E OF I-805, AT MARINE CORPS AIR STATION MIRAMAR, SAN DIEGO.

Detailed Location:

MAPPED BY CNDDB AS 8 POLYGONS TO ENCOMPASS MULTIPLE SOURCES OF INFO WITH VARYING LEVELS OF SPECIFICITY. IN THE N 1/2 OF SECTIONS 26 AND 27, INTO THE SE 1/4 OF SEC 23 & THE SW 1/4 OF SEC 24. PORTION REMOVED BY CALTRANS DUE TO HWY EXTENSION.

Ecological:

GROWING IN RIPARIAN SCRUB ON CHANNEL BANK/BENCH OF SANDY/COBBLY ALLUVIUM; ADJACENT TO MIXED CHAPARRAL. ASSOCIATES INCLUDE BACCHARIS SAROTHROIDES, ERIOGONUM FASCICULATUM, LOTUS SCOPARIUS, AND ARTEMISIA CALIFORNICA.

Threats:

ORV DAMAGE AND TRASH DUMPING ARE MAJOR THREATS. POTENTIAL COMPETITION FROM INCREASED SALIX. HWY 52 EXTENSION.

General:

150+ IN 1981. 98 PLANTS OBSERVED "1 TO 1.5 MILES EAST OF I-805" IN 1987. COLONY JUST W OF I-805 AND COLONY ~0.25 MI E OF I-805 NOT SEEN IN 1987; POSSIBLY EXTIRPATED. 41 CLUMPS OBSERVED E OF I-805 IN 2000. INCLUDES FORMER OCC #13, 18, & 19.

Location:

MURPHY CANYON; NEAR JUNCTION OF HIGHWAY 52 AND I-15, MARINE CORPS AIR STATION MIRAMAR, SAN DIEGO.

Detailed Location:

MAPPED BY CNDDB AS 3 POLYGONS IN THE WEST HALF OF SECTION 29 AND THE EAST HALF OF SECTION 30 BASED ON MULTIPLE SOURCES OF INFORMATION WITH VARYING LEVELS OF SPECIFICITY. INCLUDES 1928 FEUDGE COLLECTION FROM MURPHY CANYON AT 200 FT ELEV.

Ecological:

CHAPARRAL COVERED SLOPE JUST ABOVE GRAVEL CANYON BOTTOM. SANDY-LOOSE SOIL.

Threats:

MAJORITY OF OCCURRENCE WAS EXTIRPATED WHEN I-15 WAS EXTENDED. EROSION ALSO THREATENS.

General:

15 PLANTS IN 1980; PLANTS TO BE LOST DUE TO CONSTRUCTION OF I-15. GONE BY 1985 ACCORDING TO SCHEID (1987). 1 PLANT IN 1999. 2 CLUMPS IN SMALL POLYGON IN THE NW 1/4 OF SEC 29 IN 2001. 1928 FEUDGE COLLECTION ATTRIB HERE; "FAIRLY COMMON."

Location:

ALONG MURPHY CANYON, APPROXIMATELY 0.3 MILE SOUTHEAST OF RIFLE RANGE, MARINE CORPS AIR STATION MIRAMAR, SAN DIEGO.

Detailed Location:

2 COLONIES: SOUTHERN COLONY NEAR THE COMMON CORNER OF SECTIONS 16, 17, 20, & 21; NORTHERN COLONY IN THE NW 1/4 OF THE SW 1/4 OF SECTION 16.

Ecological:

RIPARIAN SCRUB- BACCHARIS SAROTHROIDES, ERIOGONUM FASCICULATUM, AND SALVIA APIANA. COBBLY/SANDY ALLUVIUM, CANYON BOTTOM.

Threats:

AREA DISTURBED AND SITE IS HEAVILY INVADED BY EXOTIC ANNUAL GRASSES. STREAM CHANNELIZATION AND EXPANSION OF RIFLE RANGE.

General:

SOUTH COLONY: TWO CLUMPS (~40 PLANTS) SEEN IN 1981 & 1987. VAGUE 1992 MAP IS THE ONLY SOURCE OF INFORMATION FOR NORTHERN COLONY; UNKNOWN WHEN SEEN, POSSIBLY THE SAME SITE AS SOUTHERN COLONY. NEEDS FIELDWORK. INCLUDES FORMER OCCURRENCE #30.

Location:

WEST SYCAMORE CANYON AND TRIBUTARIES, EAST SIDE OF MIRAMAR AIR STATION, NEAR SANTEE.

Detailed Location:

SCATTERED THROUGHOUT MAIN CANYON AND SIDE CANYONS. MAPPED AS 4 POLYGONS. UPPER PORTIONS OF OCCURRENCE MAPPED MORE PRECISELY THAN LOWER PORTIONS OF OCCURRENCE; NEED BETTER MAP DETAIL FOR NEAR MOUTH OF WEST SYCAMORE CANYON.

Ecological:

IN SANDY LOAM SOIL IN CANYONS WITH EPILOBIUM CANUM, YUCCA WHIPPLEI, MALACOTHAMNUS SP., RHUS SP., STIPA SP., CLEMATIS SP., TOXICODENDRON DIVERSILOBUM, BROMUS MOLLIS, B. DIANDRUS, ADENOSTOMA, QUERCUS, CERCOCARPUS, ERIOGONUM, BACCHARIS, ETC.

Threats:

SOME ORV ACTIVITY. THREATENED BY NON-NATIVES. FIRE BREAKS WERE CUT IN THIS AREA DURING 2003 WILDFIRES.

General:

10-20 PLANTS IN 1981. NORTH END OF SITE: 650 COLONIES IN 1987, 37 PLANTS IN 1993. 880 CLUMPS IN 2000. 700 IN 2003. UNKNOWN NUMBER SEEN IN 1990, 2009 & 2011. EXCELLENT SITE DUE TO LARGE POP & ROBUST CLUSTERS, ONLY SLIGHTLY DISTURBED HABITAT.

Key Quad:	La Mesa (3211771)	**Element Code:**	PDLAM18140
Occurrence Number:	24	**Occurrence Last Updated:**	2012-06-18

Scientific Name: *Monardella viminea*

Common Name: willowy monardella

Listing Status: **Federal:** Endangered

State: Endangered

Rare Plant Rank: 1B.1

Other Lists: SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank

CNDDB Element Ranks: **Global:** G1

State: S1

General Habitat:

COASTAL SCRUB, CHAPARRAL, RIPARIAN FOREST, RIPARIAN SCRUB, RIPARIAN WOODLAND.

Micro Habitat:

IN CANYONS, IN ROCKY AND SANDY PLACES, SOMETIMES IN WASHES OR FLOODPLAINS; WITH BACCHARIS, IVA, ETC. ALLUVIAL, EPHEMERAL WASHES WITH ADJACENT COASTAL SCRUB. 45-230 M.

Last Date Observed:	2000-08-18	**Occurrence Type:**	Natural/Native occurrence
Last Survey Date:	2000-08-18	**Occurrence Rank:**	Unknown
Owner/Manager:	DOD-NAVY, CITY OF SAN DIEGO	**Trend:**	Unknown
Presence:	Presumed Extant		

Location:

ELANUS CANYON; BOTH SIDES OF HIGHWAY 52 BETWEEN SANTO RD & I-15, S EDGE OF MARINE CORPS AIR STATION MIRAMAR, SAN DIEGO.

Detailed Location:

MAPPED BY CNDDB AS 5 POLYGONS TO ENCOMPASS MULTIPLE SOURCES OF INFORMATION. IN THE NW 1/4 OF SECTION 28 AND THE SOUTH HALF OF SECTION 29.

Ecological:

CHAPARRAL CANYON DRAINAGE BOTTOM WITH SANDY-COBBLY SOIL. ASSOCIATED WITH ADENOSTOMA FASCICULATUM, BACCHARIS SAROTHROIDES, SALVIA MELLIFERA, CRYPTANTHA SP., HETEROMELES ARBUTIFOLIA, ERIOGONUM FASCICULATUM, RHUS LAURINA, ETC.

Threats:

THREATENED BY HIGHWAY CONSTRUCTION AND POSSIBLY DEVELOPMENT (1987).

General:

NORTH OF HWY 52: 10 PLANTS IN 1982 (AREA RECENTLY BURNED), 17 IN 1985, 24 IN 1987, 9 CLUMPS OBSERVED IN 2000. SOUTH OF HWY 52: NO POPULATION/DATE INFORMATION AVAILABLE; POLYGONS BASED ON A 2006 MAP AND 2008 CITY OF SAN DIEGO DIGITAL DATA.

Presence:	Presumed Extant		

Location:

ALONG SPRING CANYON, FROM ABOUT 1.1-3.2 AIR MILES NORTH OF SAN DIEGO RIVER, ABOUT 5 AIR MILES SOUTHEAST OF MIRAMAR.

Detailed Location:

MAPPED BY CNDDB AS SEVERAL POLYGONS BASED ON 2000 FWS DIGITAL DATA AND MAPS FROM 2006, 2011, AND 2013. IN THE EAST HALF OF T15S R2W SECTIONS 12 AND 13, THE NW 1/4 OF THE NE 1/4 OF SECTION 24, AND IN THE WEST HALF OF T15S R1W SECTION 7.

Ecological:

ASSOCIATED WITH ERIOGONUM FASCICULATUM. SELAGINELLA CINERASCENS WITHIN SAMPLING AREA. NON-NATIVES FOUND ON SITE CONSIST OF PERENNIAL MUSTARD, TOCOLOTE, LONG-BEAK FILAREE, AND NON-NATIVE GRASSES.

Threats:

NON-NATIVE SPECIES, FIRE BREAKS, HIKERS, MOUNTAIN BIKING, COMPETITION WITH NATIVE PLANTS, EROSION.

General:

185 PLANT CLUSTERS OVER ~3/4 ACRE OBSERVED IN NORTH PART OF OCCURRENCE (SEC 12) IN 1987. PORTIONS OF SOUTHERN COLONIES (SECTIONS 13 & 24): 133 CLUMPS IN 2000, SEEN IN 2001 & 2011, 31 PLANTS IN 2015, 7 PLANTS IN 2016.

Scientific Name: *Pogogyne abramsii*
Common Name: San Diego mesa mint

Listing Status: **Federal:** Endangered
State: Endangered
Rare Plant Rank: 1B.1
Other Lists: SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank

CNDDB Element Ranks: **Global:** G1
State: S1

General Habitat:

VERNAL POOLS.

Micro Habitat:

VERNAL POOLS WITHIN GRASSLANDS, CHAMISE CHAPARRAL, OR COASTAL SAGE SCRUB COMMUNITIES. 70-195 M.

Last Date Observed: 2001-XX-XX
Occurrence Type: Natural/Native occurrence
Last Survey Date: 2001-XX-XX
Occurrence Rank: Fair
Owner/Manager: DOD-NAVY
Trend: Unknown
Presence: Presumed Extant

Location:

MURPHY CANYON HEIGHTS HOUSING COMPLEX, TIERRA SANTA SOUTH; SOUTH END OF SANTO ROAD, MISSION VALLEY.

Detailed Location:

BEAUCHAMP POOL COMPLEX G1. MAPPED BY CNDDB AS 4 POLYGONS ACCORDING TO A 1979 RECON MAP (MIDDLE AND SOUTH-MOST POLYGONS), A 1980 PSBS MAP (WEST-MOST POLYGON) AND A 1989 WESTEC MAP (MIDDLE AND NORTH-MOST POLYGONS).

Ecological:

INLAND SAGE SCRUB WITH VERNAL POOLS. ASSOCIATED WITH PSILOCARPHUS BREVISSIMUS VAR. BREVISSIMUS, DESCHAMPSIA DANTHONIOIDES, PILULARIA AMERICANA, LILAEA SCILLOIDES, BRODIAEA ORCUTTII, MYOSURUS MINIMUS SSP. APUS, AND ISOETES ORCUTTII.

Threats:

AREA HEAVILY IMPACTED BY ILLEGAL DUMPING AND ORVS. SOME GRADING ALSO PRESENT. SITE SURROUNDED BY DEVELOPMENT.

General:

OBSERVED THROUGHOUT AREA IN 1979. OBSERVED IN THE WEST-MOST AND MIDDLE POLYGON IN 1980. 1000+ PLANTS OBSERVED IN MIDDLE POLYGON IN 1981. PLANTS ABUNDANT IN MORE THAN 50% OF THE G1 POOLS IN 1986. OBSERVED IN SEVERAL POOLS IN 1989 AND 2001.

Owner/Manager: CITY OF SAN DIEGO, PVT
Presence: Presumed Extant

Occurrence Type: Natural/Native occurrence
Occurrence Rank: Good
Trend: Decreasing

Location:
EAST END OF MONTGOMERY FIELD; NW OF THE JUNCTION OF AERO DRIVE AND RUFFIN ROAD, NNW OF SAN DIEGO.

Detailed Location:
BEAUCHAMP POOL COMPLEXES: N1-N6. INCLUDES "GENERAL DYNAMICS" SITE. MAPPED BY CNDDB AS 6 POLYGONS ACCORDING TO 1979 RECON & BEAUCHAMP MAPS, AND 2003 DIGITAL DATA. PORTIONS OF OCCURRENCE ON PRIVATE PROPERTY HAVE BEEN LOST TO DEVELOPMENT.

Ecological:
VERNAL POOLS IN GRASSLAND AND CHAMISE CHAPARRAL. REDDING SOILS. ASSOCIATED WITH CALLITRICHE MARGINATA, CRASSULA AQUATICA, DESCHAMPSIA DANTHONIOIDES, DOWNINGIA CUSPIDATA, ELATINE CALIFORNICA, ISOETES HOWELLII, I. ORCUTTII, LILAEA, ETC.

Threats:
DEVELOPMENT, DISKING & SILTING. MOST POOLS ARE FENCED, SOME ARE PROTECTED. GROWTH OF EXOTICS DUE TO ALTERED DRAINAGE.

General:
SEEN IN POOLS N1-N6 IN 1979. 1986: COMMON IN 10-50% OF N1-N4 POOLS; N5 POOLS (AT END OF PONDEROSA AVE) LOST TO DEVELOPMENT; COMMON IN <10% OF N6 POOLS. SEEN IN ~150 BASINS IN 2003 & 2004. N POLY: 250 IN 2008, 300 IN 2009, SEEN IN 2019.

Presence:	Presumed Extant		

Location:

KEARNY MESA; FROM JUST SOUTH OF CLAIREMONT MESA BLVD EXTENDING NORTH TO THE RUNWAYS AT MIRAMAR MCAS, SAN DIEGO.

Detailed Location:

BEAUCHAMP COMPLEXES: AA3-AA7, BB1, E1-5, F1, F2, F4, F7, F8, F12-14, F16-19, F23, GA, U2, U3, U5-12, V2-3, W1 & W3. ALSO SEEN BY BAUDER IN EE1-2, FF1-2, F27, F28, U14 & U18. MAPPED AS MANY POLYGONS BASED ON VARIOUS SOURCES FROM 1979-2020.

Ecological:

VERNAL POOLS VERY DIVERSE IN SIZE, SOIL, BOTTOM TEXTURE AND SPECIES COMPOSITION. IN CHAMISE AND MIXED CHAPARRAL AND SCRUB. SOME OF THE POOLS IN THIS AREA HAVE EXCEPTIONAL POPULATIONS OF POGOGYNE ABRAMSII.

Threats:

PARTS EXTIRPATED BY DEVELOPMENT & FREEWAY. THREATS: DIRT RDS, ORVS, BRUSHING, ALTERED DRAINAGE, DUMPING, NON-NATIVES.

General:

SEEN IN 1979 & 1982, COMMON/ABUNDANT IN 1986. PORTIONS OF OCC: ~2000 IN 1993, 2 POOLS IN 2003, 1000S IN 72 POOLS IN 2005, >5000 IN 2011, SEEN IN 2013 & 2017, ~300 IN 2019, SEEN IN 2020. INCL EOS 9, 10, 13-18, 20-22, 47, 48, 50, 51, 57.

Occurrence Report

California Department of Fish and Wildlife

California Natural Diversity Database

Map Index Number:	86744	**EO Index:**	13687
Key Quad:	La Mesa (3211771)	**Element Code:**	PDLAM1K010
Occurrence Number:	8	**Occurrence Last Updated:**	2012-10-01

Scientific Name: *Pogogyne abramsii*

Common Name: San Diego mesa mint

Listing Status: **Federal:** Endangered

State: Endangered

CNDDB Element Ranks: **Global:** G1

State: S1

Rare Plant Rank: 1B.1

Other Lists: SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank

General Habitat:

VERNAL POOLS.

Micro Habitat:

VERNAL POOLS WITHIN GRASSLANDS, CHAMISE CHAPARRAL, OR COASTAL SAGE SCRUB COMMUNITIES. 70-195 M.

Last Date Observed:	1986-04-08	**Occurrence Type:**	Natural/Native occurrence
Last Survey Date:	1986-04-08	**Occurrence Rank:**	Good
Owner/Manager:	DOD, CALTRANS, OTHERS	**Trend:**	Decreasing
Presence:	Presumed Extant		

Location:

JUST EAST OF THE JUNCTION OF SR 52 AND SANTO ROAD, MESA BETWEEN SHEPHERD CANYON AND ELANUS CANYON, EAST MCAS MIRAMAR.

Detailed Location:

BEAUCHAMP POOL COMPLEX: A4. MAPPED BY CNDDB AS TWO POLYGONS ACCORDING TO A 1979 RECON MAP.

Ecological:

IN CHAMISE CHAPARRAL AND GRASSLAND ON REDDING SOILS. FINE, SANDY LOAM. VERNAL POOLS ASSOCIATED WITH BRODIAEA ORCUTTII, PSILOCARPHUS BREVISSIMUS, DESCHAMPSIA DANTHONIOIDES, CRYPTANTHA, ORTHOCARPUS, LASTHENIA, LEPIDIUM, ETC.

Threats:

SITE THREATENED BY URBANIZATION, ORVS, ILLEGAL DUMPING, FILLING, AND FUTURE ROAD CONSTRUCTION.

General:

OBSERVED ACROSS SITE IN 1979. 10,000+ PLANTS OBSERVED IN 1981. FEWER THAN 1000 PLANTS IN 1982. ABUNDANT IN OVER 50% OF THE A4 POOLS IN 1986.

PLSS:	T15S, R02W, Sec. 28, N (S)	**Accuracy:**	specific area	**Area (acres):**	12

Owner/Manager: DOD-MCAS MIRAMAR
Presence: Presumed Extant

Occurrence Type: Natural/Native occurrence
Occurrence Rank: Good
Trend: Unknown

Location:

MARINE CORPS AIR STATION MIRAMAR; NORTH OF THE WEST END OF THE RUNWAYS, JUST SOUTH OF ROSE CANYON, SAN DIEGO.

Detailed Location:

BAUDER POOL CODE: HH, RECON POOL CODE: MM. MAPPED BY CNDDB AS 5 POLYGONS: 4 S POLYS ARE BASED ON 1979 RECON MAP & 1982 BEAUCHAMP MAP; N POLYGON IS BASED ON A 1994 HULL COLLECTION FOR NAVARRETIA FOSSALIS WITH POGOGYNE MENTIONED AS ASSOCIATE.

Ecological:

VERNAL POOLS IN CHAMISE CHAPARRAL WITH PSILOCARPHUS, DOWNINGIA CUSPIDATA, PILULARIA AMERICANA, ISOETES, LILAEA SCILLOIDES, CALLITRICHE, ERYNGIUM ARISTULATUM VAR. PARISHII, BRODIAEA ORCUTTII, ISOETES ORCUTTII, ORCUTTIA CALIFORNICA, ETC.

Threats:

EARTH MOVING AND RUNWAY CONSTRUCTION HAVE ALTERED WATER REGIME. INVASIVE PLANT SPECIES.

General:

4 SOUTH POLYGONS: OBSERVED IN 1979 & 1982, COMMON IN OVER 50% OF HH POOLS IN 1986. NORTH POLYGON BASED ON 1994 COLLECTION FROM THE "HHI+ SERIES." SEEN IN 42 BASINS IN THIS VICINITY DURING 2004/2005 SURVEYS. ~500 IN W POLYGON IN 2019.

PLSS: T15S, R03W, Sec. 14 (S)

STE85F0008 STEELE, B. - FIELD SURVEY FORM FOR POGOGYNE ABRAMSII 1985-04-04

Occurrence Report

California Department of Fish and Wildlife

California Natural Diversity Database

Map Index Number: 86761
EO Index: 13668
Key Quad: Poway (3211781)
Element Code: PDLAM1K010
Occurrence Number: 53
Occurrence Last Updated: 2012-09-20

Scientific Name: *Pogogyne abramsii*
Common Name: San Diego mesa mint

Listing Status: **Federal:** Endangered
State: Endangered
Rare Plant Rank: 1B.1

CNDDB Element Ranks: **Global:** G1
State: S1
Other Lists: SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank

General Habitat:
VERNAL POOLS.

Micro Habitat:
VERNAL POOLS WITHIN GRASSLANDS, CHAMISE CHAPARRAL, OR COASTAL SAGE SCRUB COMMUNITIES. 70-195 M.

Last Date Observed: 1986-XX-XX
Occurrence Type: Natural/Native occurrence
Last Survey Date: 1986-XX-XX
Occurrence Rank: Unknown
Owner/Manager: DOD-MCAS MIRAMAR
Trend: Unknown
Presence: Presumed Extant

Location:
ABOUT 0.3 TO 0.7 MILE EAST OF I-15, BETWEEN ROSE CANYON AND SAN CLEMENTE CANYON, EAST MARINE CORPS AIR STATION MIRAMAR.

Detailed Location:
BAUDER POOL CODE: AA10. MAPPED BY CNDDB AS 7 POLYGONS ACCORDING TO A 1979 RECON MAP, MOSTLY IN THE SW 1/4 OF THE SW 1/4 OF SECTION 9.

Ecological:
VERNAL POOLS ASSOCIATED WITH PSILOCARPHUS SP., DOWNINGIA CUSPIDATA, BRODIAEA ORCUTTII, ISOETES ORCUTTII, CALLITRICHE LONGIPEDUNCULATA, AND ELATINE SP.

Threats:
ACCESS TO THIS AREA IS LIMITED BUT POSSIBLY THREATENED BY OFF-ROAD VEHICLES (TANKS).

General:
OBSERVED ACROSS THIS SITE IN 1979. ABUNDANT IN OVER 50% OF THE AA10 POOLS IN 1986.

PLSS: T15S, R02W, Sec. 09, SW (S)
Accuracy: specific area
Area (acres): 7
UTM: Zone-11 N3637594 E490768
Latitude/Longitude: 32.87645 / -117.09868
Elevation (feet): 535

Location:
NEAR MONTEZUMA ROAD AND COLLEGE WAY, SAN DIEGO.

Detailed Location:
EXACT LOCATION UNKNOWN. MAPPED BY CNDDB AS BEST GUESS NEAR THE JUNCTION OF MONTEZUMA ROAD AND COLLEGE AVENUE JUST SOUTH OF SAN DIEGO STATE UNIVERSITY.

Ecological:
ABUNDANT IN DRY MESA POOLS WITH SALVIA APIANA.

Threats:
SITE LIKELY EXTIRPATED BY DEVELOPMENT.

General:
SITE BASED ON A 1952 COOP COLLECTION. A 1949 BRATTSTROM COLLECTION FROM "MESA SE OF SAN DIEGO STATE COLLEGE" IS ALSO ATTRIBUTED TO THIS SITE.

Owner/Manager: PVT
Trend: Unknown
Presence: Presumed Extant

Location:

OTAY MESA; APPROXIMATELY 0.5 AIR MILE SW OF OTAY MESA ROAD / HERITAGE ROAD JUNCTION, SOUTH OF DENNERY CANYON.

Detailed Location:

BEAUCHAMP POOL COMPLEX J-14. A 1997 ELVIN & ANDERSON COLLECTION FROM "S OF 905, 0.4 MI W OF HERITAGE RD, 0.5 MI S OF OTAY MESA RD" IS ALSO ATTRIBUTED TO THIS SITE.

Ecological:

NATURAL VERNAL POOL WITH HEMIZONIA CONJUGENS AND NAVARRETIA FOSSALIS. ASSOCIATED WITH LILAEA SCILLOIDES, PSILOCARPHUS BREVISSIMUS, CRASSULA AQUATICA, DESCHAMPSIA DANTHONIOIDES, EPILOBIUM, ETC. THE SOILS ARE ALTAMONT / DIABLO CLAY SERIES.

Threats:

POOLS IN DIRT ROAD. FARM EQUIPMENT AND ROAD WIDENING THREATEN. HIGHLY DISTURBED BY ILLEGAL ALIEN FOOT TRAFFIC & ORV USE.

General:

OBSERVED IN 1978 AND 1979. NO PLANTS SEEN IN 1985. A 3 SQUARE METER POPULATION OBSERVED IN 1986. 630+ PLANTS OBSERVED SOMETIME BETWEEN 1995 AND 2001. ~500 PLANTS IN 1997 (ELVIN 1997). UNKNOWN NUMBER OBSERVED IN 2003.

DRY BEDS OF VERNAL POOLS AND MOIST SWALES WITH ERYNGIUM ARISTULATUM VAR. PARISHII AND ORCUTTIA CALIFORNICA. 135-165 M.

Last Date Observed:	2016-04-21	**Occurrence Type:**	Introduced Back into Native Hab./Range
Last Survey Date:	2016-04-21	**Occurrence Rank:**	Fair
Owner/Manager:	CITY OF SAN DIEGO, PVT	**Trend:**	Unknown
Presence:	Presumed Extant		

Location:

OTAY MESA; VICINITY OF DENNERY CANYON ON THE NORTH SIDE OF OTAY MESA ROAD.

Detailed Location:

MAPPED AS 7 POLYGONS ACCORDING TO 2009 COORDINATES & DIGITAL DATA FROM CITY OF SAN DIEGO (2003); DATA ORIGINALLY FROM RECON & HELIX. SITE NAMES FOR VARIOUS PORTIONS OF SITE INCLUDE J-2, RECON CAL TERRACES, OTAY MESA ROAD, & ROBINHOOD RIDGE.

Ecological:

NEARLY ALL OF THESE VERNAL POOLS WERE CREATED ARTIFICIALLY. A FEW NATURAL POOLS ARE PRESENT. NATURAL VERNAL POOL ASSOCIATES: DESCHAMPSIA DANTHONIOIDES, NIT GRASS, FEROCACTUS VIRIDESCENS, PSILOCARPHUS AND HEMIZONIA.

Threats:

OFF-ROAD VEHICLE ACTIVITY & NON-NATIVES. AREA HIGHLY DEVELOPED; NATURAL POOLS LIKELY COVERED A LARGER AREA AT ONE TIME.

General:

JUST N OF OTAY MESA RD (SE 1/4 SW 1/4 SEC 29), NATURAL POOLS: OBS IN 1979, <50 IN 1980, NONE IN 1985 OR 1986, REINTROD IN 1990S, OBS IN 2010. FAR N POLY, "RESTORED" POOLS: ~10 IN '08 & ~120 IN '09, 44 IN '15, 21 IN '16. OTHER POOLS CREATED.

General Habitat:

VERNAL POOLS.

Micro Habitat:

DRY BEDS OF VERNAL POOLS AND MOIST SWALES WITH ERYNGIUM ARISTULATUM VAR. PARISHII AND ORCUTTIA CALIFORNICA. 135-165 M.

Last Date Observed: 2003-02-21
Occurrence Type: Transplant Outside of Native Hab./Range
Last Survey Date: 2003-02-21
Occurrence Rank: Unknown
Owner/Manager: PVT
Trend: Unknown
Presence: Presumed Extant

Location:

OTAY MESA, NORTH OF MOODY CANYON AND SOUTH OF OTAY MESA ROAD.

Detailed Location:

MAPPED BY CNDDB ACCORDING TO DIGITAL DATA SUBMITTED BY THE CITY OF SAN DIEGO (2003); DATA ORIGINALLY FROM HELIX, SITE NAME IS OTAY MESA A + B (ALSO KNOWN AS J-32). POOL IN NW POLYGON IS NATURAL AS WELL AS 3 OF THE 7 POOLS IN THE SE POLYGON.

Ecological:

NATURAL AND CREATED VERNAL POOLS. THE RARE ERYNGIUM ARISTULATUM, MYOSURUS MINIMUS AND NAVARRETIA FOSSALIS ALSO OCCUR IN SOME OF THESE POOLS.

Threats:

General:

SITE CONTAINS A MIXTURE OF UNNATURAL RUTS FROM HISTORIC GRADING, RECENTLY CREATED BASINS, AND A FEW NATURAL DEPRESSIONS. SEEN IN 2003. EO MARKED AS A "TRANSPLANT" AT CNDDB; POGOGYNE WAS LIKELY SEEDED AT THIS SITE BUT NEEDS CONFIRMATION.

PLSS: T18S, R01W, Sec. 31, W (S)

Presence: Presumed Extant

Location:

APPROXIMATELY 0.4 AIR MILE SE OF THE MOUTH OF WRUCK CANYON, SW END OF OTAY MESA.

Detailed Location:

MAPPED BY CNDDB ACCORDING TO A 2006 ECOLOGICAL RESTORATION SERVICE MAP. THIS SITE IS CALLED "ARNIE'S POINT". EO MARKED AS A "TRANSPLANT" AT CNDDB; POGOGYNE WAS LIKELY SEEDED AT THIS SITE BUT CNDDB NEEDS CONFIRMATION.

Ecological:

CREATED/RESTORED VERNAL POOLS. ASSOCIATED WITH DESCHAMPSIA DANTHONIOIDES, ERYNGIUM ARISTULATUM, JUNCUS BUFONIUS, LYTHRUM HYSSOPIFOLIUM, NAVARRETIA FOSSALIS, PLAGIOBOTHRYS SP., PLANTAGO ELONGATA, PSILOCARPHUS BREVISSIMUS, ETC.

Threats:

THREATS INCLUDE IMPACTS FROM OFF-ROAD VEHICLE ACTIVITY SUCH AS BORDER PATROL AND ILLEGAL IMMIGRANT TRAFFIC.

General:

NOT SEEN IN 2003. SEEN IN 8 CREATED / RESTORED POOLS IN 2004 & 2005 AND SEEN IN 9 CREATED / RESTORED POOLS IN 2006; POPULATION ESTIMATES RANGED FROM >48 PLANTS IN 2004 TO ~216 PLANTS IN 2006. POOLS WERE CREATED/RESTORED IN 2002.

Occurrence Last Updated: 1999-01-21

Scientific Name: *Orobanche parishii ssp. brachyloba*
Common Name: short-lobed broomrape

Listing Status: **Federal:** None
Rare Plant Rank: 4.2
State: None
Other Lists:

CNDDB Element Ranks: **Global:** G4?T4
State: S3

General Habitat:

COASTAL BLUFF SCRUB, COASTAL DUNES, COASTAL SCRUB.

Micro Habitat:

SANDY SOIL NEAR BEACHES; REPORTED TO GROW ON ISOCOMA MENZIESII AND OTHER SHRUBS. 3-305 M.

Last Date Observed: 1981-XX-XX
Occurrence Type: Natural/Native occurrence
Last Survey Date: 1981-XX-XX
Occurrence Rank: None
Owner/Manager: DOD-NAVAL OCEAN SYSTEMS CENTER
Trend: Unknown
Presence: Extirpated

Location:

POINT LOMA; NAVAL OCEAN SYSTEMS CENTER, ALONG DIRT ROAD BETWEEN CABRILLO MEMORIAL DRIVE AND WOODWARD ROAD.

Detailed Location:

GROWING ALONG DIRT ROAD EAST OF BATTERY WOODWARD AND SE OF PISTOL RANGE, WEST OF ANTENNAE. MAPPED ABOUT 200 METERS SW OF 'MID' BEHNCHMARK.

Ecological:

WITHIN MARITIME SAGE SCRUB/CHAPARRAL WITH ARTEMISIA CALIFORNICA, ADENOSTOMA FASCICULATUM, CNEORIDIUM DUMOSUM, CEANOTHUS VERRUCOSUS, ENCELIA CALIFORNICA, ERIOGONUM FASCICULATUM, EUPHORBIA MISERA, SALVIA MELLIFERA, AND XYLOCOCCUS BICOLOR.

Threats:

SITE DESTROYED IN 1988 FOR CONSTRUCTION OF A NARROW ROAD REPAIR (REISER, 1994).

General:

ONE COLONY IN 1981. ADDITIONAL POPULATIONS MAY BE ON POINT LOMA BUT MAY HAVE BEEN OVERLOOKED.

PLSS: T17S, R04W, Sec. 13, NW (S)
Accuracy: 80 meters
Area (acres): 0

General Habitat:
COASTAL SCRUB, CHAPARRAL, CLOSED-CONE CONIFEROUS FOREST.

Micro Habitat:
SANDY SITES AND OPENINGS; SOMETIMES IN TRANSITION ZONES. 3-125 M.

Last Date Observed: 1962-04-04
Occurrence Type: Natural/Native occurrence
Last Survey Date: 2000-XX-XX
Occurrence Rank: None
Owner/Manager: DOD-NAVY
Trend: Unknown
Presence: Possibly Extirpated

Location:
POINT LOMA, JUST NORTH OF FORT ROSECRANS NATIONAL CEMETERY ALONG THE WEST SIDE OF CABRILLO MEMORIAL DRIVE.

Detailed Location:
SITE MAPPED ABOUT 100-150 METERS NORTH OF THE BENNINGTON MONUMENT ON THE OPPOSITE SIDE OF THE ROAD. HARDHAM MAP NOTES THAT THIS IS WHERE COLLECTION WAS MADE IN 1962 "...IF CEMETERY BOUNDARY IS STILL THE SAME."

Ecological:
FOUND IN SANDY SOIL.

Threats:
THIS AREA THREATENED BY DEVELOPMENT AND CARPOBROTUS EDULIS (BAUDER 2000).

General:
MAIN SOURCE OF INFORMATION FOR THIS SITE IS A 1981 MAP BY C. HARDHAM BASED UPON HER 1962 COLLECTION. 3 SURVEYS CONDUCTED "RECENTLY" (P. GORDON-REEDY 1996); NO PLANTS SEEN. NO PLANTS SEEN IN 1999/2000 (BAUDER 2000).

EO Index: 241
Element Code: PDPGN040K1
Occurrence Last Updated: 2013-07-30

Scientific Name: *Chorizanthe polygonoides var. longispina*
Common Name: long-spined spineflower

Listing Status: **Federal:** None
State: None
CNDDB Element Ranks: **Global:** G5T3
State: S3
Rare Plant Rank: 1B.2
Other Lists: BLM_S-Sensitive
SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank

General Habitat:

CHAPARRAL, COASTAL SCRUB, MEADOWS AND SEEPS, VALLEY AND FOOTHILL GRASSLAND, VERNAL POOLS.

Micro Habitat:

GABBROIC CLAY. 30-1630 M.

Last Date Observed: 2003-05-15
Last Survey Date: 2003-05-15
Owner/Manager: DOD-MCAS MIRAMAR
Presence: Presumed Extant
Occurrence Type: Natural/Native occurrence
Occurrence Rank: Fair
Trend: Unknown

Location:

MARINE CORPS AIR STATION MIRAMAR, BETWEEN ROSE CANYON AND SAN CLEMENTE CANYON, SE OF MIRAMAR.

Detailed Location:

MANY SMALL COLONIES IN SECTION 8 AND THE WEST 1/2 OF SECTION 9. MAPPED BY CNDDB BASED ON SHAPEFILES FROM RARE PLANT SURVEYS AT MCAS MIRAMAR.

Ecological:

DISTURBED, HARD-PACKED OPENINGS WITHIN CHAPARRAL. OFTEN FOUND ON TRAILS, DIRT ROADS, AND PREVIOUSLY SCOURED AREAS. ASSOCIATED WITH ERODIUM BOTRYS.

Threats:

AREA PREVIOUSLY USED AS A TRAINING AREA. LARGE AREAS OF SCARRED EARTH REMAIN. SOME PLANTS OBSERVED ON TRAILS AND ROADS.

General:

1497 PLANTS REPORTED HERE IN MANY COLONIES IN 2003.

PLSS: T15S, R02W, Sec. 08 (S)
Accuracy: specific area
Area (acres): 19
UTM: Zone-11 N3637991 E490266
Latitude/Longitude: 32.88002 / -117.10405
Elevation (feet): 530

CHAPARRAL, COASTAL SCRUB, MEADOWS AND SEEPS, VALLEY AND FOOTHILL GRASSLAND, VERNAL POOLS.

Micro Habitat:

GABBROIC CLAY. 30-1630 M.

Last Date Observed:	1995-04-20	**Occurrence Type:**	Natural/Native occurrence
Last Survey Date:	1995-04-20	**Occurrence Rank:**	Unknown
Owner/Manager:	UNKNOWN	**Trend:**	Unknown
Presence:	Presumed Extant		

Location:

VICINITY OF THE S ENTRANCE TO MIRAMAR LANDFILL; BOTH SIDES OF SR 52 NEAR ITS INTERSECTION WITH CONVOY ST, KEARNY MESA.

Detailed Location:

SE-MOST POP IS "S OF VERNAL POOL 3." MAPPED AS BEST GUESS BY CNDDB AS 2 POLYGONS. N POLY: 100 YDS E OF THE SOUTHERN ENTRANCE TO MIRAMAR LANDFILL. S POLY: JUST E OF THE NORTHERN TERMINUS OF CONVOY RD (S OF SR 52) & JUST E OF OLD MERCURY CT.

Ecological:

OPEN CHAPARRAL. SE-MOST POPULATION IS ON FLAT MESA NEAR VERNAL POOLS WITH BARE SCRAPED LANDFILL SURFACE AND OPEN, DISTURBED BROOM BACCHARIS SCRUB, SPARSE MIXED (QUERCUS DUMOSA/ LOTUS SCOPARIUS) SCRUB AND CLOSED UNDERSTORY OF ANNUAL GRASSES.

Threats:

General:

SEEN IN BOTH POLYGONS IN 1995. A SUBSTANTIAL POPULATION EXISTS AT THE S POLY ACCORDING TO REISER (2001). NEED BETTER LOCATION INFORMATION.

State: S3

General Habitat:

CHAPARRAL, COASTAL SCRUB, MEADOWS AND SEEPS, VALLEY AND FOOTHILL GRASSLAND, VERNAL POOLS.

Micro Habitat:

GABBROIC CLAY. 30-1630 M.

Last Date Observed: 2010-05-07
Occurrence Type: Natural/Native occurrence
Last Survey Date: 2010-05-07
Occurrence Rank: Unknown
Owner/Manager: UNKNOWN
Trend: Unknown
Presence: Presumed Extant

Location:

NW OTAY LANDFILL, APPROXIMATELY 1.2 MILES (1.9 KM) NE OF JUNCTION OF I-805 AND OTAY VALLEY ROAD/MAIN STREET.

Detailed Location:

600 M ESE OF WATER TANKS AND 440 M SOUTH OF POGGI CYN. MAPPED ACCORDING TO COORDINATES PROVIDED ON A 2010 SILVERMAN COLLECTION, IN THE NE 1/4 OF THE SE 1/4 OF SECTION 18. DATUM NOT PROVIDED, BUT NAD83 MATCHES LOCALITY AND GIVEN ELEVATION.

Ecological:

OPEN, EXPOSED RIDGETOP ON CRUSTY-CLAYEY SOILS WITH PEBBLES. DISTURBED COASTAL SAGE SCRUB WITH ERIOGONUM FASCICULATUM, ISOCOMA MENZIESII DECUMBENS, CARDIONEMA RAMOSISSIMUM, DEINANDRA CONJUGENS, OSMADENIA TENELLA, CRASSULA CONNATA, ETC.

Threats:

General:

ONLY SOURCE OF INFORMATION FOR THIS SITE IS A 2010 SILVERMAN COLLECTION; DESCRIBED AS "LOCALLY RARE".

Occurrence Last Updated: 2017-09-08

Scientific Name: *Nemacaulis denudata var. denudata*
Common Name: coast woolly-heads

Listing Status: **Federal:** None
State: None
Rare Plant Rank: 1B.2
Other Lists: SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank

CNDDB Element Ranks: **Global:** G3G4T2
State: S2

General Habitat:
COASTAL DUNES.

Micro Habitat:
0-5 M.

Last Date Observed: 2012-03-23
Occurrence Type: Natural/Native occurrence
Last Survey Date: 2012-03-23
Occurrence Rank: Fair
Owner/Manager: CITY OF SAN DIEGO
Trend: Unknown
Presence: Presumed Extant

Location:
SOUTHEAST LOBE OF FIESTA ISLAND, APPROXIMATELY 0.5 AIR MILE WEST OF THE I-5/TELECOTE ROAD INTERCHANGE.

Detailed Location:
MAPPED BY CNDDB ACCORDING TO 2011 AND 2012 DIGITAL DATA PROVIDED BY CNPS.

Ecological:
OPEN AREA IN SAND, ~50-75% COVER. ASSOCIATED WITH ERODIUM BOTRYS, LOTUS STRIGOSUS, HETEROTHECA GRANDIFLORA, GLEBIONIS CORONARIUM, LOTUS NUTTALLIANUS, CAMISSONIOPSIS CHEIRANTHIFOLIA, FILAGO CALIFORNICA, HYPOCHAERIS GLABRA, ETC.

Threats:
THREATENED BY DOG WALKERS ON NEARBY PATH AND WEEDS, PRIMARILY ERODIUM BOTRYS AND GLEBIONIS CARINATUM.

General:
APPROXIMATELY 3550 PLANTS OBSERVED IN 2011. ABOUT 31,000 PLANTS ESTIMATED IN 2012. A 1969 LANTZ COLLECTION FROM "MISSION BAY 0.5 MILE S OF HILTON INN" IS ALSO ATTRIBUTED TO THIS OCCURRENCE.

Map Index Number:	16462	**EO Index:**	18462
Key Quad:	La Jolla (3211772)	**Element Code:**	PDPLM0C080
Occurrence Number:	4	**Occurrence Last Updated:**	2009-03-04

Scientific Name: *Navarretia fossalis*

Common Name: spreading navarretia

Listing Status: **Federal:** Threatened

State: None

Rare Plant Rank: 1B.1

Other Lists: SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank

CNDDB Element Ranks: **Global:** G2

State: S2

General Habitat:

VERNAL POOLS, CHENOPOD SCRUB, MARSHES AND SWAMPS, PLAYAS.

Micro Habitat:

SAN DIEGO HARDPAN AND SAN DIEGO CLAYPAN VERNAL POOLS; IN SWALES & VERNAL POOLS, OFTEN SURROUDED BY OTHER HABITAT TYPES. 15-850 M.

Last Date Observed:	1979-XX-XX	**Occurrence Type:**	Natural/Native occurrence
Last Survey Date:	1986-04-09	**Occurrence Rank:**	Excellent
Owner/Manager:	PVT	**Trend:**	Unknown
Presence:	Presumed Extant		

Location:

NE END OF MONTGOMERY FIELD BETWEEN RUNWAYS & PONDEROSA AVE, WEST OF MURPHY CANYON AND EAST OF HWY 163.

Detailed Location:

FOUND IN FISH & GAME (BEAUCHAMP) POOL COMPLEX "N6". AIRPORT FENCE APPEARS TO AFFORD PROTECTION TO THE MAJORITY OF THIS POOL COMPLEX; A FEW POOLS OCCUR OUTSIDE FENCE. THIS POOL COMPLEX CONTAINED 34 VERNAL POOLS IN 1979.

Ecological:

ON REDDING SOILS IN GRASSLAND. ASSOCIATED WITH POGOGYNE ABRAMSII & ISOETES ORCUTTII.

Threats:

SOME DESTRUCTION & DEGRADATION HAS OCCURRED DUE TO SEWER LINE PLACEMENT, DISKING, & SILTATION FROM ADJACENT DEVELOPMENT.

General:

FOUND IN THIS VERNAL POOL COMPLEX BY BEAUCHAMP IN 1979. NOT SEEN IN 1986 SURVEY OF THESE POOLS. THESE WERE "EXCELLENT" IN 1979; WHAT IS THEIR STATUS NOW?

Occurrence Rank: Fair
Owner/Manager: UNKNOWN
Trend: Decreasing
Presence: Presumed Extant

Location:

WEST OF FINGER CANYON & DILLON CANYON, NORTH OF SOUTH RIM & SE OF MOODY CANYON, EAST OF SAN YSIDRO.

Detailed Location:

MAPPED TO ENCOMPASS FISH & GAME (BEAUCHAMP) POOL COMPLEX "J-13" (THIS COMPLEX HAD 4 POOLS IN 1979) & A 1985 GRIGGS MAP. NORTH-MOST POLYGON BASED ON DIGITAL DATA SUBMITTED BY THE CITY OF SAN DIEGO, 2003 (SITE J13N, IN A ROAD RUT).

Ecological:

IN VERNAL POOLS GROWING IN ASSOCIATION WITH ORCUTTIA CALIFORNICA, ERYNGIUM ARISTULATUM PARISHII, MYOSURUS MINIMUS APUS, PSILOCARPHUS BREVISSIMUS, ELEOCHARIS, EPILOBIUM PYGMAEUM, ORCUTTIA CALIFORNICA, PHALARIS LEMMONII, ETC.

Threats:

MOUNDS REMOVED, GRAZING, DISKING, ROADS THOUGH PONDS (1985). POTENTIAL DEV & ILLEGAL ALIEN TRAFFIC ALSO THREATEN.

General:

NOT SEEN BY BEAUCHAMP IN 1979 BUT SEEN BY CASS IN SEVERAL "J13" VERNAL POOLS (J13A-D, H) IN 1979. SEEN IN 1985 IN "WEST MESA PONDS". COMMON TO ABUNDANT IN 4 OF THESE POOLS IN 1986. COVERED 17 SQ FT IN N-MOST POOL IN 2003.

Presence:	Presumed Extant		

Location:

OTAY MESA, NEAR THE HEAD OF DENNERY CANYON.

Detailed Location:

NEARLY ALL POOLS IN THIS AREA ARE CREATED. N. FOSSALIS REPORTED TO NATURALLY OCCUR IN SE-MOST POOL (J2S) IN 1985; POOL HAS SINCE BEEN RESTORED AND SDG NOW REPORTS IT AS A CREATED POOL (2003). WITHIN 1/4 MILE OF NATURAL OCC #S 34 & 55.

Ecological:

NATURAL VERNAL POOL (1985) WAS ON STOCKPEN SOILS WITH MIMA MOUNDS. ASSOCIATED WITH FESTUCA MEGALURA, DESCHAMPSIA DANTHONIOIDES, MYOSURUS MINIMUS SSP. APUS, AND ERYNGIUM ARISTULATUM VAR. PARISHII.

Threats:

HEAVY ORV DISTURBANCE IN AREA IN 1985.

General:

PLANT NOT SEEN IN THIS AREA IN 1980 SURVEY BUT ~80 PLANTS SEEN IN A NATURAL POOL IN 1985 BY BRAMLET. MORE THAN 70 POOLS WERE CREATED AND SEEDED WITH NAVARRETIA FOSSALIS BY RECON AS REPORTED BY THE CITY OF SAN DIEGO (2003). SEEN IN 2010.

Location:

OTAY MESA ABOVE SPRING CANYON, ABOUT 0.15 MI SOUTH OF OTAY MESA ROAD AND 2.1 MI EAST OF I-805, SOUTHEAST OF SAN DIEGO.

Detailed Location:

NEAR DIRT ROAD. MAPPED BY CNDDB ACCORDING TO 2003 DIGITAL DATA FROM THE CITY OF SAN DIEGO; DATA ORIGINALLY FROM HELIX, SITE NAME IS J14. NOT REPORTED FROM FISH & GAME (BEAUCHAMP) POOL COMPLEX "J14" IN 1979.

Ecological:

VERNAL POOL ON ALTAMONT/DIABLO CLAY SOILS. ASSOCIATED WITH POGOGYNE NUDIUSCULA, MYOSURUS MINIMUS. POOL SURROUNDED BY HEMIZONIA CONJUGENS AND COASTAL SAGE SCRUB.

Threats:

SITE DAMAGED BY BORDER PATROL VEHICLES AND TRAMPLING BY ILLEGAL ALIENS.

General:

NOT SEEN IN THIS POOL COMPLEX BY BEAUCHAMP IN 1979. UNKNOWN NUMBER OF PLANTS SEEN IN 1991, 1995, AND 2003. ABOUT 30 PLANTS OBSERVED SOMETIME PRE-2001. THIS NATURAL SITE IS WITHIN 1/4 MILE OF INTRODUCED OCCURRENCE #S 20 & 51.

Owner/Manager:	UNKNOWN	**Trend:**	Unknown
Presence:	Presumed Extant		

Location:

NORTH SIDE OF MOODY CANYON, SOUTH OF OTAY MESA ROAD, SW END OF OTAY MESA.

Detailed Location:

MAPPED BY CNDDB ACCORDING TO DIGITAL DATA SUBMITTED BY THE CITY OF SAN DIEGO (2003); DATA ORIGINALLY FROM HELIX (2003), SITE NAME IS WEST OTAY A+B.

Ecological:

CREATED VERNAL POOLS. ASSOCIATED WITH MYOSURUS MINIMUS & POGOGYNE NUDIUSCULA.

Threats:

General:

SEEN IN 3 CREATED VERNAL POOLS WITH AN ESTIMATED COVER OF 18 SQ FT IN 2003.

PLSS:	T18S, R01W, Sec. 31, SW (S)	**Accuracy:**	specific area	**Area (acres):**	2

Scientific Name: *Navarretia fossalis*

Common Name: spreading navarretia

Listing Status: **Federal:** Threatened

State: None

Rare Plant Rank: 1B.1

Other Lists: SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank

CNDDB Element Ranks: **Global:** G2

State: S2

General Habitat:

VERNAL POOLS, CHENOPOD SCRUB, MARSHES AND SWAMPS, PLAYAS.

Micro Habitat:

SAN DIEGO HARDPAN AND SAN DIEGO CLAYPAN VERNAL POOLS; IN SWALES & VERNAL POOLS, OFTEN SURROUDED BY OTHER HABITAT TYPES. 15-850 M.

Last Date Observed:	2009-05-11	**Occurrence Type:**	Natural/Native occurrence
Last Survey Date:	2016-04-21	**Occurrence Rank:**	Poor
Owner/Manager:	CITY OF SAN DIEGO	**Trend:**	Decreasing
Presence:	Presumed Extant		

Location:

EAST SIDE OF DENNERY CANYON, WEST OF CHESTER GRADE & BROWN FIELD.

Detailed Location:

MAPPED BY CNDDB ACCORDING TO DIGITAL DATA SUBMITTED BY THE CITY OF SAN DIEGO (2003); DATA ORIGINALLY FROM HELIX, SITE NAME IS ROBINHOOD RIDGE. WITHIN 1/4 MILE OF CNDDB OCCURRENCE #20 WHICH CONTAINS CREATED/RESTORED POOLS.

Ecological:

RESTORED VERNAL POOL, MARITIME SUCCULENT SCRUB. ASSOCIATED WITH ERYNGIUM ARISTULATUM, MYOSURUS MINIMUS, POGOGYNE NUDIUSCULA, PSILOCARPHUS BREVISSIMUS, DESCHAMPSIA DANTHONIOIDES, DEINANDRA FASCICULATA, BROMUS HORDACEUS, ETC.

Threats:

HIGH COVER OF NON-NATIVE GRASSES IN UPLANDS. HOMELESS ENCAMPMENTS NEARBY.

General:

SEEN IN 4 POOLS COVERING 13 SQ FT IN 2003. 50 PLANTS OBSERVED OVER 770 SQ FT IN 2009. NO PLANTS SEEN IN 2014-2016; 2015 DIGITAL DATA INDICATES RESTORATION MAY HAVE NOT BEEN SUCCESSFUL.

Scientific Name: *Myosurus minimus ssp. apus*

Common Name: little mousetail

Listing Status: **Federal:** None

State: None

Rare Plant Rank: 3.1

Other Lists: SB_CRES-San Diego Zoo CRES Native Gene Seed Bank

CNDDB Element Ranks: **Global:** G5T2Q

State: S2

General Habitat:

VERNAL POOLS, VALLEY AND FOOTHILL GRASSLAND.

Micro Habitat:

ALKALINE SOILS. 20-640 M.

Last Date Observed:	1986-07-09	**Occurrence Type:**	Natural/Native occurrence
Last Survey Date:	1986-07-09	**Occurrence Rank:**	Unknown
Owner/Manager:	DOD-NAVY, USFWS	**Trend:**	Decreasing
Presence:	Presumed Extant		

Location:

TIERRASANTA SOUTH; S END SANTO RD. F&G POOL CODES G1&2. CITY-RECON:G.

Detailed Location:

SITE BISECTED BY POWERLINE AND HAS 2 PARALLEL DIRT ROADS FROM NORTH TO SOUTH.

Ecological:

OCCURS WITH POGOGYNE ABRAMSII, BRODIAEA ORCUTTII AND OTHER VERNAL PLANTS.

Threats:

MED-HIGH DISTURBANCE FROM ORVS, TRASH DUMPING & BRUSHING.

General:

SP COMMON IN 10-50% OF APPROXIMATELY 35-40 POOLS. SMALL-MEDIUM SIZED POOLS. SP ALSO OBSERVED IN 1979.

PLSS:	T16S, R02W, Sec. 08 (S)	**Accuracy:**	non-specific area	**Area (acres):**	20

General Habitat:

CHAPARRAL, COASTAL SAGE SCRUB, VALLEY AND FOOTHILL GRASSLAND.

Micro Habitat:

FROM SANDY/GRAVELLY TO CLAY SOILS WITHIN GRASSLAND, COASTAL SAGE SCRUB, OR CHAPARRAL; VARIOUS EXPOSURES. 5-335 M.

Last Date Observed: 1994-04-06
Last Survey Date: 1994-04-06
Owner/Manager: UNKNOWN
Presence: Presumed Extant
Occurrence Type: Natural/Native occurrence
Occurrence Rank: Unknown
Trend: Unknown

Location:

VICINITY OF RADIO DRIVE, BURIAN STREET, AND REPUBLIC STREET, SOUTHEAST SAN DIEGO.

Detailed Location:

EXACT LOCATIONS UNKNOWN. MAPPED GENERALLY BY CNDDB TO ENCOMPASS COLLECTIONS FROM "NEAR ROAD, OFF OF RADIO DR, NEAREST CROSS STREET, BURIAN ST, IN SE SAN DIEGO" AND "1540 REPUBLIC ST, ENCANTO."

Ecological:

DRY LIME SLOPE NEAR ROAD CUT-AWAY. CLOSED SLOPING CLAY SOIL, EAST-FACING SLOPE. ASSOCIATED WITH MALOSMA LAURINA, HETEROMELES ARBUTIFOLIA, OPUNTIA PROLIFERA, AND FEROCACTUS VIRIDESCENS.

Threats:

General:

BASED ON A 1992 ENCISCO COLLECTION AND A 1994 HANSON COLLECTION. NEEDS FIELDWORK.

PLSS: T17S, R02W, Sec. 02, SW (S)
Accuracy: 1/5 mile

Last Survey Date:	2013-XX-XX	**Occurrence Rank:**	Unknown
Owner/Manager:	PVT	**Trend:**	Unknown
Presence:	Presumed Extant		

Location:

CHOLLAS VALLEY; NE SIDE OF FAIRMOUNT AVENUE JUST EAST OF ITS JUNCTION WITH RIDGE VIEW DRIVE, SAN DIEGO.

Detailed Location:

MAPPED BY CNDDB AS 2 POLYGONS ACCORDING TO A SAN DIEGO CANYONLANDS MAP. NOTE ON MAP SAYS VEGETATION DATA WAS COLLECTED IN 2012/2013; PRESUMABLY THE RARE PLANT DATA WAS ALSO COLLECTED/OBSERVED IN 2012/2013.

Ecological:

ADENOSTOMA FASCICULATUM. ALSO ASSOCIATED WITH FEROCACTUS VIRIDESCENS.

Threats:

CEANOTHUS WAS LIKELY MORE EXTENSIVE IN THIS AREA BEFORE DEVELOPMENT BASED ON 1934 MAP.

General:

BASED ON A SAN DIEGO CANYONLANDS MAP; PLANTS PRESUMABLY OBSERVED IN 2012 OR 2013. A 1934 VEGETATION MAP DEVELOPED BY WIESLANDER FOR THE USFS ALSO SHOWS CEANOTHUS IN THIS AREA; CEANOTHUS WAS LIKELY MORE EXTENSIVE IN AREA IN THE 1930S.

SB_UCBG-UC Botanical Garden at Berkeley

General Habitat:
CHAPARRAL.

Micro Habitat:
25-470 M.

Last Date Observed: 1938-02-05
Last Survey Date: 1938-02-05
Owner/Manager: UNKNOWN
Presence: Possibly Extirpated
Occurrence Type: Natural/Native occurrence
Occurrence Rank: None
Trend: Unknown

Location:
LA JOLLA MESA, SAN DIEGO.

Detailed Location:
OCCURRENCE MAPPED BASED UPON ASSOCIATION OF C. VERRUCOSUS WITH CHAPARRAL AT THIS SITE.

Ecological:
CHAPARRAL WITH ADENOSTOMA FASCICULATUM.

Threats:
EXTENSIVE DEVELOPMENT THROUGHOUT THIS AREA.

General:
ONLY SOURCES OF INFO FOR THIS SITE ARE 1934 VEGETATION MAPS DEVELOPED BY WIESLANDER FOR THE USFS AND 6 COLLECTIONS. MOST RECENT SOURCE OF INFO IS A 1938 COLLECTION BY ROSE. OCCURRENCE MAY HAVE BEEN DESTROYED BY DEVELOPMENT.

Trend: Unknown
Presence: Extirpated

Location:

ABOUT 0.6 MI NORTH OF OTAY MESA ROAD, 1.0 MI EAST OF I-805, IMMEDIATELY EAST OF UNIMPROVED DIRT ROAD, OTAY MESA.

Detailed Location:

MAPPED ACCORDING TO A 1992 CITY OF SAN DIEGO REPORT. THIS WAS THE ONLY NATURAL POPULATION IN THE US. COLLECTIONS FROM THE 1980S APPEAR TO HAVE INCORRECT TRS INFORMATION; SOME LABELS STATE SEC 29 OR 31 BUT SITE IS WITHIN SEC 30.

Ecological:

ON DENSE MARINE COBBLE SUBSTRATE WITH OLIVENHAIN COBBLY LOAM SOILS. ASSOCIATED WITH ARTEMISIA CALIFORNICA, ERIOGONUM FASCICULATUM, NON-NATIVE GRASSES, FILAREE.

Threats:

SITE WAS USED AS ORV PLAYGROUND. ORIGINAL POPULATION EXTIRPATED IN PREPARATION FOR DEVELOPMENT (TRANSPLANTED TO EO #2).

General:

100+ STEMS OVER A 30X50 METER AREA SEEN IN 1985 (POSSIBLY JUST ONE LARGE CLONAL INDIVIDUAL). ALSO OBSERVED IN 1987, 1988, & 1997. 245 ROOT CUTTINGS TRANSLOCATED IN 1997 TO ADJACENT OPEN SPACE PRESERVE. ORIGINAL PLANT/CLONE WAS EXTIRPATED.

Map Index Number: 97360
EO Index: 98635
Key Quad: Imperial Beach (3211751)
Element Code: PDROS1J1B0
Occurrence Number: 3
Occurrence Last Updated: 2015-09-01

Scientific Name: *Rosa minutifolia*
Common Name: small-leaved rose

Listing Status: **Federal:** None
State: Endangered
Rare Plant Rank: 2B.1
Other Lists: SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank

CNDDB Element Ranks: **Global:** G2G3
State: SXC

General Habitat:

COASTAL SCRUB, CHAPARRAL.

Micro Habitat:

IN THE UNITED STATES, ON COBBLY SOIL AT THE HEAD OF A SMALL, DRY CANYON ON OTAY MESA. 150-160 M.

Last Date Observed: 2014-05-13
Occurrence Type: Transplant Outside of Native Hab./Range

Last Survey Date: 2014-05-13
Occurrence Rank: Good

Owner/Manager: CITY OF SAN DIEGO
Trend: Unknown

Presence: Presumed Extant

Location:

DENNERY RANCH; SOUTH OF FALCONHURST TERRACE, OTAY VALLEY REGIONAL PARK.

Detailed Location:

MAPPED BY CNDDB ACCORDING TO A MAP SUBMITTED WITH A 2014 FIELD SURVEY FORM.

Ecological:

MARITIME SUCCULENT SCRUB. ASSOCIATED WITH BROMUS MADRITENSIS RUBENS, FESTUCA MYUROS, ANAGALLIS ARVENSIS, ARTEMISIA CALIFORNICA, SIMMONDSIA CHINENSIS, BAHIOPSIS LACINIATA, ENCELIA CALIFORNICA, RHUS INTEGRIFOLIA, DEINANDRA CONJUGENS, ETC.

Threats:

INVASIVE GRASSES. POSSIBLY THREATENED BY BRUSH MANAGEMENT/VEGETATION CLEARING.

General:

1 PLANT IN 2008, 13 PLANTS IN 2009, 7 IN 2013, 9 IN 2014. SITE NOT SPECIFICALLY MENTIONED AS A TRANSPLANT SITE BUT THE ONLY KNOWN NATIVE SITE (CNDDB OCCURRENCE #1) WAS EXTIRPATED BY DEVELOPMENT IN THE 1990S.

PLSS: T18S, R01W, Sec. 30, NW (S)

California Natural Diversity Database

Map Index Number: 04074
EO Index: 17505
Key Quad: Imperial Beach (3211751)
Element Code: PDSCR0J0C2
Occurrence Number: 36
Occurrence Last Updated: 2009-08-18

Scientific Name: *Chloropyron maritimum ssp. maritimum*
Common Name: salt marsh bird's-beak

Listing Status: **Federal:** Endangered
State: Endangered
Rare Plant Rank: 1B.2

CNDDB Element Ranks: **Global:** G4?T1
State: S1
Other Lists: BLM_S-Sensitive
SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank
SB_SBBG-Santa Barbara Botanic Garden

General Habitat:
MARSHES AND SWAMPS, COASTAL DUNES.

Micro Habitat:
LIMITED TO THE HIGHER ZONES OF SALT MARSH HABITAT. 0-10 M.

Last Date Observed: 2001-XX-XX
Occurrence Type: Natural/Native occurrence
Last Survey Date: 2001-XX-XX
Occurrence Rank: Unknown
Owner/Manager: DPR-BORDER FIELD SP
Trend: Decreasing
Presence: Presumed Extant

Location:
BORDER FIELD STATE PARK, ABOUT 0.4 MILE NORTH OF INTERNATIONAL BOUNDARY AT MONUMENT #258, SOUTH OF IMPERIAL BEACH.

Detailed Location:

Ecological:
COASTAL SALT MARSH WITH MONANTHOCHLOE, FRANKENIA GRANDIFOLIA, LIMONIUM CALIFORNICUM, SALICORNIA SPP., SUAEDA, AND ATRIPLEX SP. ELEVATION RANGE: 5-10 FEET.

Threats:

General:
200-250 PLANTS IN 1979, 35-40 IN 1980, NONE IN 1981, UNKNOWN NUMBER OF PLANTS SEEN IN 2001. CURRENT STATUS OF THIS POPULATION NEEDED.

PLSS: T19S, R02W, Sec. 06, S (S)
Accuracy: specific area
Area (acres): 2

Occurrence Last Updated: 2015-12-17

Scientific Name: *Dicranostegia orcuttiana*
Common Name: Orcutt's bird's-beak

Listing Status: **Federal:** None
State: None
CNDDB Element Ranks: **Global:** G2G3
State: S1

Rare Plant Rank: 2B.1
Other Lists: SB_CRES-San Diego Zoo CRES Native Gene Seed Bank

General Habitat:

COASTAL SCRUB.

Micro Habitat:

FOUND IN COASTAL SCRUB ASSOCIATIONS ON SLOPES; ALSO REPORTED FROM INTERMITTENTLY MOIST SWALES, AND IN WASHES. 0-200 M.

Last Date Observed: 2001-XX-XX
Last Survey Date: 2001-XX-XX
Owner/Manager: CITY OF CHULA VISTA
Presence: Presumed Extant
Occurrence Type: Natural/Native occurrence
Occurrence Rank: Unknown
Trend: Unknown

Location:

OTAY RIVER VALLEY; NORTH OF LINDBERGH STREET AND EAST OF BEYER WAY, OTAY VALLEY REGIONAL PARK.

Detailed Location:

MAPPED ACCORDING TO 2008 CITY OF SAN DIEGO DIGITAL DATA. REISER (2001) MENTIONS THAT THIS PLANT IS LOCALLY ABUNDANT IN THE "OTAY RIVER DRAINAGE WEST OF I-805 TO BEYER BLVD" WITH "SCATTERED OCCURRENCES FOUND DOWNSTREAM."

Ecological:

Threats:

General:

ONLY SOURCE OF INFORMATION FOR THIS SITE IS CITY OF SAN DIEGO DIGITAL DATA; OBSERVED IN 2001 BUT NO OTHER INFORMATION WAS PROVIDED.

Scientific Name: *Stemodia durantifolia*

Common Name: purple stemodia

Listing Status: **Federal:** None

State: None

Rare Plant Rank: 2B.1

Other Lists: SB_CRES-San Diego Zoo CRES Native Gene Seed Bank

CNDDB Element Ranks: **Global:** G5

State: S2

General Habitat:

SONORAN DESERT SCRUB.

Micro Habitat:

SANDY SOILS; MESIC SITES. 35-385 M.

Last Date Observed:	2009-05-01	**Occurrence Type:**	Natural/Native occurrence
Last Survey Date:	2009-05-01	**Occurrence Rank:**	Unknown
Owner/Manager:	CITY OF SAN DIEGO	**Trend:**	Unknown
Presence:	Presumed Extant		

Location:

ALONG TRAIL HEADING WEST TO QUARRY, 0.43 MILE NW OF MISSION GORGE ROAD AND JACKSON DRIVE, MISSION TRAILS RP.

Detailed Location:

MAPPED ACCORDING TO 2009 GREGORY COORDINATES.

Ecological:

GRANITIC, STEEP ROCKY BANKS OVERHEAD. ALONGSIDE THE SAN DIEGO RIVER BED WITH SALIX SPP, QUERCUS AGRIFOLIA, ERIOGONUM FASCICULATUM, DUDLEYA PULVERULENTA, D. EDULIS, AND SOLANUM. BURNED IN 2003.

Threats:

General:

SITE BASED ON 2009 GREGORY COLLECTION, MENTIONED AS "UNCOMMON" IN 2009. 1883 ORCUTT COLLECTIONS FROM "MISSION CANYON," 1885 CLEVELAND COLLECTION FROM "MISSION VALLEY," & 1928 NUTTALL COLLECTION ARE ALSO ATTRIBUTED TO THIS SITE.

Micro Habitat:

COASTAL BLUFFS AND SLOPES WITHIN COASTAL SAGE SCRUB. 10-120 M.

Last Date Observed:	2016-10-01	**Occurrence Type:**	Natural/Native occurrence
Last Survey Date:	2016-10-01	**Occurrence Rank:**	Poor
Owner/Manager:	DPR-BORDER FIELD SP, PVT	**Trend:**	Decreasing
Presence:	Presumed Extant		

Location:

EAST OF BORDER MONUMENT #258, EAST OF BORDER FIELD NAVAL RESERVATION.

Detailed Location:

TYPE LOCALITY. IN 2006, DENSE CLONES WERE SCATTERED ABOUT THE MESA TOP AND ON THE N-FACING SLOPES BUT SITE HAS SINCE BEEN CLEARED FOR BORDER FENCE. MANY PLANTS WERE REMOVED WITH THE INTENT OF RE-ESTABLISHING THE POP AFTER SITE WAS CLEARED.

Ecological:

ON LOAMY MARINE SEDIMENT WITH RHUS INTEGRIFOLIA, ENCELIA CALIFORNICA, ATRIPLEX CANESCENS, MARAH MACROCARPA, MIRABILIS CALIFORNICA, LUPINUS SP., COAST CHOLLA, FEROCACTUS VIRIDESCENS, SPHAERALCEA AMBIGUA AND SEVERAL ANNUALS.

Threats:

DEVELOPMENT. MAJORITY DESTROYED BY DEPT OF HOMELAND SECURITY AS PART OF VEG CLEARANCE TO CONSTRUCT TRIPLE BORDER FENCE.

General:

ONLY NATIVE POP IN CA. SEVERAL DESTROYED IN 1970S DUE TO PARKING LOT. 2 LARGE CLONES IN 1987. 100S-1000S IN 2006. ~1000 IN 2008 BUT REDUCED TO 1 CLONE (~50 ROSETTES) DUE TO VEG CLEARANCE. 1 PATCH IN 2013. 70 PLANTS (ROSETTES?) IN 2016.

Location:

POINT LOMA; FLEET COMBAT TRAINING CENTER ON BOTH SIDES OF WOODWARD ROAD.

Detailed Location:

LICHTY MESA POP (EO #1) IS THE ONLY CONFIRMED NATURAL POPULATION; ALL EVIDENCE SUGGESTS POINT LOMA POPS ARE SELF-SUSTAINING/NATURALIZED TRANSPLANTS POSSIBLY FROM >100 YRS AGO ACC TO SCHEIDT (2009). MAY ALSO BE AT SUNSET CLIFFS TO THE NORTH.

Ecological:

COASTAL SUCCULENT SCRUB. ON THE OCEAN BLUFF.

Threats:

POTENTIAL THREATS: STABILITY OF OCEAN BLUFFS, LOW RECRUITMENT, GENETIC DILUTION, TRAMPLING, CROWDING.

General:

200 ROSETTES IN 1969. A 1981 REPORT GIVES ~1000 ROSETTES & A TRANSPLANTED INDIVIDUAL. <10 PLANTS SEEN IN 1985. 60 INDIVIDUALS (1500 ROSETTES) IN 2008/2009. 167 CLUSTERS SEEN ACROSS PT LOMA (EOS 2, 5-8) IN 2016. INCLUDES FORMER EO #4.

Map Index Number:	71731	**EO Index:**	14324
Key Quad:	La Jolla (3211772)	**Element Code:**	PMLIL0C0B0
Occurrence Number:	27	**Occurrence Last Updated:**	2019-11-20

Scientific Name: *Brodiaea orcuttii*

Common Name: Orcutt's brodiaea

Listing Status: **Federal:** None

State: None

CNDDB Element Ranks: **Global:** G2

State: S2

Rare Plant Rank: 1B.1

Other Lists: BLM_S-Sensitive
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank
USFS_S-Sensitive

General Habitat:

VERNAL POOLS, VALLEY AND FOOTHILL GRASSLAND, CLOSED-CONE CONIFEROUS FOREST, CISMONTANE WOODLAND, CHAPARRAL, MEADOWS AND SEEPS.

Micro Habitat:

MESIC, CLAY HABITATS; USUALLY IN VERNAL POOLS AND SMALL DRAINAGES. 30-1615 M.

Last Date Observed:	2009-04-28	**Occurrence Type:**	Natural/Native occurrence
Last Survey Date:	2009-04-28	**Occurrence Rank:**	Good
Owner/Manager:	DOD, CITY OF SAN DIEGO, PVT	**Trend:**	Unknown
Presence:	Presumed Extant		

Location:

KEARNY MESA, NEAR THE JUNCTIONS OF HIGHWAY 52, HIGHWAY 163, AND INTERSTATE 15, SAN DIEGO.

Detailed Location:

MANY POLYGONS MAPPED BY CNDDB ACCORDING TO 1979 VILLASENOR/RECON AND BEAUCHAMP MAPS, AND 2008 CITY OF SAN DIEGO DIGITAL DATA. SOME POLYGONS ENCOMPASS VERNAL POOL COMPLEXES WHERE BRODIAEA OCCURS BUT ARE NOT SPECIFIC AS TO WHICH POOL.

Ecological:

VERNAL POOLS, CHAMISE CHAPARRAL, AND GRASSLAND. ASSOCIATED WITH ELEOCHARIS PALUSTRIS, CRASSULA AQUATICA, AGROSTIS AVENACEA, POLYPOGON MARITIMA, NAVARRETIA FOSSALIS, ERYNGIUM ARISTULATUM, PSILOCARPHUS BREVISSIMUS, POGOGYNE ABRAMSII, ETC.

Threats:

SOME POOLS HAVE BEEN DESTROYED BY DEVELOPMENT AND FREEWAY CONSTRUCTION. EXTENSIVE DUMPING ALSO A PROBLEM IN 1986.

General:

HUNDREDS OF POOLS WITH HIGH SIZE AND DEPTH DIVERSITY. PORTIONS OF OCCURRENCE OBSERVED IN 1979, 1982, 1986, 1992, 2001, AND 2009. INCLUDES FORMER OCCURRENCES #26, 35, 36, 37, 40, AND 97.

General Habitat:

VERNAL POOLS, VALLEY AND FOOTHILL GRASSLAND, CLOSED-CONE CONIFEROUS FOREST, CISMONTANE WOODLAND, CHAPARRAL, MEADOWS AND SEEPS.

Micro Habitat:

MESIC, CLAY HABITATS; USUALLY IN VERNAL POOLS AND SMALL DRAINAGES. 30-1615 M.

Last Date Observed: 1978-XX-XX
Last Survey Date: 1986-04-07
Owner/Manager: PVT
Presence: Extirpated
Occurrence Type: Natural/Native occurrence
Occurrence Rank: None
Trend: Unknown

Location:

SOUTH OF CLAIREMONT MESA BLVD, BETWEEN COMPLEX DRIVE AND OVERLAND AVENUE, SAN DIEGO.

Detailed Location:

VERNAL POOL SERIES BB.

Ecological:

WATERSHED OF 3 ACRES ON REDDING SOILS IN SCRUB WITH ERYNGIUM ARISTULATUM VAR. PARISHII AND POGOGYNE ABRAMSII.

Threats:

2008 AERIAL PHOTO SHOWS THAT THIS SITE HAS BEEN FULLY DEVELOPED; OCCURRENCE EXTIRPATED.

General:

PLANTS FOUND IN 9 POOLS OF 150 SQ METER AREA IN 1978. JUST AFTER 1978 SURVEY, THESE POOLS WERE FILLED IN WITH TRUCK LOADS OF TOP SOIL AND SITE WAS DESTROYED. NO POOLS REMAINED AT SITE IN 1986 BAUDER SURVEY.

Scientific Name: *Brodiaea orcuttii*

Common Name: Orcutt's brodiaea

Listing Status: **Federal:** None

State: None

CNDDB Element Ranks: **Global:** G2

State: S2

Rare Plant Rank: 1B.1

Other Lists: BLM_S-Sensitive
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank
USFS_S-Sensitive

General Habitat:

VERNAL POOLS, VALLEY AND FOOTHILL GRASSLAND, CLOSED-CONE CONIFEROUS FOREST, CISMONTANE WOODLAND, CHAPARRAL, MEADOWS AND SEEPS.

Micro Habitat:

MESIC, CLAY HABITATS; USUALLY IN VERNAL POOLS AND SMALL DRAINAGES. 30-1615 M.

Last Date Observed:	2001-XX-XX	**Occurrence Type:**	Natural/Native occurrence
Last Survey Date:	2001-XX-XX	**Occurrence Rank:**	Unknown
Owner/Manager:	DOD-MCAS MIRAMAR	**Trend:**	Unknown
Presence:	Presumed Extant		

Location:

ON THE EAST SIDE OF KEARNY VILLA ROAD, ABOUT 0.1 MILE SOUTH OF INTERSECTION WITH VEGAS DRIVE, KEARNY MESA, SAN DIEGO.

Detailed Location:

ON KEARNY MESA, JUST SOUTH OF SAN CLEMENTE CANYON. RECON POOL COMPLEX AAIV. MAPPED BY CNDDB ACCORDING TO A 1979 VILLASENOR/RECON MAP, 1982 BEAUCHAMP MAP, AND 2008 CITY OF SAN DIEGO DIGITAL DATA.

Ecological:

ASSOCIATED WITH POGOGYNE ABRAMSII, PSILOCARPHUS SP, DOWNINGIA CUSPIDATA, ERYNGIUM ARISTULATUM VAR. PARISHII, AND ELATINE SP.

Threats:

General:

OBSERVED IN 1979, 1982 AND 2001. NEED POPULATION INFORMATION FOR THIS SITE.

Presence:	Presumed Extant		

Location:

SOUTH END OF SANTO ROAD NEAR MURPHY CANYON HEIGHTS HOUSING COMPLEX, BETWEEN I-15 & ADMIRAL BAKER GOLF COURSE, SAN DIEGO.

Detailed Location:

F&G POOL CODES G1&2. CITY-RECON: G. MAPPED ACCORDING TO 2008 DIGITAL DATA FROM THE CITY OF SAN DIEGO.

Ecological:

FINE SANDY LOAM OF LINDA VISTA FORMATION. INLAND SAGE SCRUB WITH ARTEMISIA CALIFORNIA, ERIOGONUM FASCICULATUM, AND PSILOCARPHUS BREVISSIMUS. OTHER SENSITIVE TAXA: POGOGYNE ABRAMSII, MYOSURUS MINIMUS APUS AND MUILLA CLEVELANDII.

Threats:

AREA HEAVILY IMPACTED BY ILLEGAL DUMPING, ORVS AND ESPECIALLY BY CHILDREN ON BICYCLES. SITE TRAVERSED BY DIRT ROADS.

General:

OVER 1000 PLANTS OBSERVED IN THIS AREA IN 1981. SITE SURVEYED FOR VERNAL POOL TAXA IN 1986 BUT SPECIES NOT RECORDED. UNKNOWN NUMBER OF PLANTS OBSERVED AT MAPPED SITE IN 2001.

Presence:	Presumed Extant		

Location:

BANK OF OAK CREEK, OAK CANYON, ABOUT 0.5 MILE UPSTREAM FROM OLD MISSION DAM, MISSION TRAILS REGIONAL PARK, SAN DIEGO.

Detailed Location:

MAPPED BY CNDDB AS 2 POLYGONS ACCORDING TO SDMMP DIGITAL DATA AND COORDINATES FROM A 2011 SIMPSON COLLECTION, IN THE NW 1/4 OF THE NW 1/4 OF SECTION 25.

Ecological:

CRACKS OF BOULDERS IN CREEKBED. OPEN RIPARIAN VEGETATION. ASSOCIATED WITH PLATANUS RACEMOSA, ELEOCHARIS MACROSTACHYA, STEMODIA DURANTIFOLIA, AVENA BARBATA, BRACHYPODIUM DISTACHYON, BROMUS DIANDRUS, BROMUS MADRITENSIS, ETC.

Threats:

SILTATION TO CREEKBED IF UPLANDS ARE EVER DEVELOPED OR BURNED IS A POSSIBLE THREAT. NON-NATIVES AND TRAILS.

General:

FEWER THAN 10 PLANTS OBSERVED IN THIS AREA IN 1981. UNKNOWN NUMBER OF PLANTS OBSERVED IN EASTERN POLYGON IN 2011. WESTERN POLYGON: 19 PLANTS OBSERVED IN 2015, 2 PLANTS OBSERVED IN 2016, 79 PLANTS IN 2017 AND 2018.

Location:

EASTERN PORTION OF MONTGOMERY FIELD AIRPORT, SAN DIEGO.

Detailed Location:

WITHIN FISH AND GAME POOL COMPLEXES N1, N3, N4, AND N6. MAPPED AS 13 POLYGONS ACCORDING TO MULTIPLE SOURCES. TWO LARGE MIDDLE POLYGONS BASED MOSTLY ON 2008 CITY OF SAN DIEGO DIGITAL DATA BUT SPECIFICITY OF DATA IS UNCLEAR.

Ecological:

ON REDDING SOILS IN DISTURBED GRASSLAND. ASSOCIATED WITH ERYNGIUM ARISTULATUM VAR. PARISHII AND NAVARRETIA FOSSALIS.

Threats:

SOME OF THE EASTERN POOLS WERE DESTROYED BY COMMERCIAL DEVELOPMENT.

General:

OBSERVED ACROSS SITE IN 1979. ABUNDANT TO COMMON IN THESE POOLS IN 1986. TWO LARGE MIDDLE POLYGONS OBSERVED IN 2001 BUT NO OTHER INFORMATION WAS GIVEN. INCLUDES FORMER OCCURRENCE #60.

Occurrence Type: Natural/Native occurrence
Occurrence Rank: None
Trend: Unknown

Location:

MESA NORTH OF SAN DIEGO STATE COLLEGE.

Detailed Location:

ELEVATION RANGES FROM 375-500 FEET. EXACT LOCATION UNKNOWN, MAPPED AS BEST GUESS BY CNDDB.

Ecological:

DRIED MESA POOLS. ASSOCIATES INCLUDE BRODIAEA SYNANDRIA AND PLANTAGO INSULARIS.

Threats:

AREA IS NOW EXTENSIVELY DEVELOPED.

General:

PLANTS NOTED AS INFREQUENT IN 1949. OCCURRENCE IS NOW PROBABLY EXTIRPATED.

PLSS: T16S, R02W, Sec. 10 (S)
Accuracy: 3/5 mile

Map Index Number:	04284	**EO Index:**	21720
Key Quad:	La Mesa (3211771)	**Element Code:**	PMLIL1H010
Occurrence Number:	3	**Occurrence Last Updated:**	2017-10-30

Scientific Name: *Bloomeria clevelandii*

Common Name: San Diego goldenstar

Listing Status: **Federal:** None

State: None

CNDDB Element Ranks: **Global:** G2

State: S2

Rare Plant Rank: 1B.1

Other Lists: BLM_S-Sensitive
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank
SB_UCBG-UC Botanical Garden at Berkeley

General Habitat:

CHAPARRAL, COASTAL SCRUB, VALLEY AND FOOTHILL GRASSLAND, VERNAL POOLS.

Micro Habitat:

MESA GRASSLANDS, SCRUB EDGES; CLAY SOILS. OFTEN ON MOUNDS BETWEEN VERNAL POOLS IN FINE, SANDY LOAM. 60-465 M.

Last Date Observed:	2016-04-14	**Occurrence Type:**	Natural/Native occurrence
Last Survey Date:	2016-04-14	**Occurrence Rank:**	Fair
Owner/Manager:	PVT, CITY OF SAN DIEGO	**Trend:**	Unknown
Presence:	Presumed Extant		

Location:

APPROXIMATELY 0.8 MILE NORTH OF MISSION DAM, FIRST RIDGE WEST OF SPRING CANYON.

Detailed Location:

4 POLYGONS NORTH OF SR 52, 1 POLYGON SOUTH OF SR 52. MAPPED BY CNDDB AS 5 POLYGONS ACCORDING TO A 2003 KIM MAP, A 2005 CITY OF SAN DIEGO MAP, AND 2008 CITY OF SAN DIEGO DIGITAL DATA.

Ecological:

ON POMERADO CONGLOMERATE/REDDING SERIES SOILS. BURNED INLAND SAGE SCRUB COASTAL SAGE SCRUB WITH GRASSLAND UNDERSTORY. ASSOC W/ STIPA LEPIDA, BROMUS MOLLIS, CALOCHORTUS SPLENDENS, ORTHOCARPUS SP, DUDLEYA VARIEGATA, AND BLOOMERIA CROCEA.

Threats:

IN 1989, POSSIBLE HWY 52 CONSTRUCTION IN 5-10 YEARS WAS LISTED AS A THREAT. HIGH COVER OF NON-NATIVE GRASSES.

General:

POPULATION NUMBERS FOR PORTIONS OF SITE: >1000 PLANTS IN 1982, 1,000 PLANTS IN 2003, OBSERVED IN 2001 AND 2008, 100 PLANTS IN 2009, 193 PLANTS IN 2014, 1100 PLANTS IN 2015, 855 PLANTS IN 2016.

Location:

RIDGE NORTH OF FORTUNA MOUNTAIN; SOUTH OF ELLIOT ELEVATION MARKER 916, MARINE CORPS AIR STATION MIRAMAR.

Detailed Location:

MAPPED BY CNDDB ACCORDING TO 2008 CITY OF SAN DIEGO DIGITAL DATA IN THE SE 1/4 OF THE NW 1/4 OF SECTION 23.

Ecological:

ON MESA, ON COBBLY REDDING SERIES SOILS. CHAMISE CHAPARRAL/INLAND SAGE. ASSOCIATED WITH LOTUS SCOPARIUS, GRASSES, CALOCHORTUS SPLENDENS, AND MALOSMA LAURINA.

Threats:

IN 1984, SITE WAS WITHIN PROPOSED HIGHWAY ALIGNMENT FOR SR 52.

General:

OVER 1000 PLANTS IN 1982. ONE PLANT FOUND IN 1984. UNKNOWN NUMBER OBSERVED IN 2001.

Presence:	Presumed Extant		

Location:

RIDGES AROUND LITTLE SYCAMORE CANYON, QUAIL CANYON AND WEST SYCAMORE CANYON, NORTHWEST OF CARLTON HILLS.

Detailed Location:

MAPPED BY CNDDB AS MANY POLYGONS BASED ON A 1984 MAP, 2004 COORDINATES, A 2005 CITY OF SAN DIEGO MAP, 2008 DIGITAL DATA, AND A MAP FROM A 2013 CITY OF SAN DIEGO FINAL EIR REPORT FOR THE CASTLEROCK PROJECT.

Ecological:

IN GRASSLAND AND COASTAL SAGE SCRUB ON REDDING SERIES SOIL. HABITAT BURNED IN 2003. POPULATIONS OF FEROCACTUS VIRIDESCENS AND DUDLEYA VARIEGATA OCCUR NEARBY.

Threats:

PORTIONS THREATENED BY PROPOSED LANDFILL OPERATIONS.

General:

POPULATION NUMBERS ARE FOR PORTIONS OF OCC: OVER 1000 PLANTS IN 1984, UNKNOWN NUMBER SEEN ACROSS MUCH OF SITE IN 2001, 45 PLANTS IN 2004. UNCOMMON IN 2008. ABUNDANT AND WIDESPREAD SOMETIME BETWEEN 2001 & 2010. INCLUDES FORMER OCC #23 & #71.

Element Code: PMLIL1H010
Occurrence Number: 12
Occurrence Last Updated: 2014-07-11

Scientific Name: *Bloomeria clevelandii*
Common Name: San Diego goldenstar

Listing Status: **Federal:** None
State: None
Rare Plant Rank: 1B.1

CNDDB Element Ranks: **Global:** G2
State: S2
Other Lists: BLM_S-Sensitive
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank
SB_UCBG-UC Botanical Garden at Berkeley

General Habitat:
CHAPARRAL, COASTAL SCRUB, VALLEY AND FOOTHILL GRASSLAND, VERNAL POOLS.

Micro Habitat:
MESA GRASSLANDS, SCRUB EDGES; CLAY SOILS. OFTEN ON MOUNDS BETWEEN VERNAL POOLS IN FINE, SANDY LOAM. 60-465 M.

Last Date Observed: 2001-XX-XX
Occurrence Type: Natural/Native occurrence
Last Survey Date: 2001-XX-XX
Occurrence Rank: Unknown
Owner/Manager: DOD-MCAS MIRAMAR
Trend: Unknown
Presence: Presumed Extant

Location:
KEARNY MESA; BOTH SIDES OF SR 52 NEAR ITS JUNCTION WITH SR 163, MCAS MIRAMAR.

Detailed Location:
MAPPED BY CNDDB AS 5 POLYGONS ACCORDING TO 1986 BAUDER INFORMATION AND 2008 DIGITAL DATA FROM THE CITY OF SAN DIEGO. MAPPED AROUND BAUDER POOLS E4, F1-17, F20, F26, F27, AND U1-13.

Ecological:
ASSOCIATED WITH ANAGALLIS MINIMUS, AVENA BARBATA, BRASSICA NIGRA, BRODIAEA ORCUTTII, BROMUS DIANDRUS, B. MOLLIS, B. RUBENS, CALLITRICHE MARGINATA, CHLOROGALUM PARVIFLORUM, COTULA CORONOPIFOLIA, CRASSULA AQUATICA, C. ERECTA, ETC.

Threats:
LOW-HIGH DISTURBANCE FROM ORVS, BRUSHING, WATER IMPOUNDMENT, DUMPING & HIGHWAY CONSTRUCTION. PORTIONS DEVELOPED.

General:
PRESENT IN THIS AREA IN 1986. OBSERVED IN THE SMALL NORTH-MOST AND EAST-MOST POLYGONS IN 2001. INCLUDES FORMER OCCURRENCES #31 AND #32. A 1978 MORAN COLLECTION FROM "5900 BLOCK, KEARNEY VILLA RD" ATTRIBUTED HERE.

Location:

EAST AND SOUTH ENDS OF MONTGOMERY FIELD.

Detailed Location:

MAPPED BY CNDDB AS 3 POLYGONS. NORTHERN 2 POLYGONS BASED ON 1986 BAUDER REPORT WHICH NOTES THIS SPECIES AS OCCURRING IN THE N1-4 AND N5-6 POOLS. SOUTHERN POLYGON BASED ON A 2003 NORDBY SURVEY FORM OF PROJECT SITE.

Ecological:

COASTAL TERRACE DISSECTED ALONG EASTERN PORTION BY STREAM, DOMINATED BY NON-NATIVE GRASSLAND, AREAS OF DIEGAN COASTAL SAGE SCRUB, SOUTHERN WILLOW SCRUB, & ORNAMENTAL EUCALYPTUS. PLANT OCCURS IN GRASSLAND IN VICINITY OF VERNAL POOLS.

Threats:

PORTION OF SOUTHERN POLYGON TO BE IMPACTED BY DEVELOPMENT IN 2003.

General:

OBSERVED IN TWO NORTHERN POLYGONS IN 1986; "VERY DENSE" IN 2ND NORTH-MOST POLYGON IN 1986. 306 INDIVIDUALS OBSERVED IN SOUTHERN POLYGON IN 2003.

SB_CRES-San Diego Zoo CRES Native Gene Seed Bank
SB_UCBG-UC Botanical Garden at Berkeley

General Habitat:

CHAPARRAL, COASTAL SCRUB, VALLEY AND FOOTHILL GRASSLAND, VERNAL POOLS.

Micro Habitat:

MESA GRASSLANDS, SCRUB EDGES; CLAY SOILS. OFTEN ON MOUNDS BETWEEN VERNAL POOLS IN FINE, SANDY LOAM. 60-465 M.

Last Date Observed: 2003-05-01
Last Survey Date: 2003-05-01
Owner/Manager: DOD-MCAS MIRAMAR
Presence: Presumed Extant
Occurrence Type: Natural/Native occurrence
Occurrence Rank: Good
Trend: Unknown

Location:

BETWEEN MURPHY CANYON AND SAN CLEMENTE CANYON; ABOUT 0.3 AIR MILE SW OF RIFLE RANGE ON TOPO, KEARNY MESA, MCAS MIRAMAR.

Detailed Location:

MAPPED BY CNDDB ACCORDING TO 2007 RECON DIGITAL DATA IN THE NORTH 1/2 OF SECTION 20.

Ecological:

NON-NATIVE GRASSLAND WITH NATIVE BUNCH GRASSES. WITH AVENA FATUA, BROMUS SP., HEMIZONIA FASCICULATA, ERODIUM SP., ERIOGONUM FASCICULATUM, AND NASSELLA PULCHRA. REDDING GRAVELLY LOAM. 2 TO 9% SLOPES. GENERALLY FLAT.

Threats:

DISTURBANCE/POSSIBLE THREAT IS TRASH.

General:

1552 INDIVIDUALS OBSERVED IN 2003.

PLSS: T15S, R02W, Sec. 20, N (S)

Location:

BETWEEN MURPHY CANYON AND ELANUS CANYON; APPROXIMATELY 1-1.3 AIR MILES NE OF SR52/I-15 JUNCTION.

Detailed Location:

MAPPED BY CNDDB AS 2 POLYGONS ACCORDING TO 2007 RECON DIGITAL DATA. THIS IS IN THE VICINITY OF BAUDER'S AA8 POOLS.

Ecological:

VERNAL POOLS IN CHAMISE WITH WELL-DEVELOPED MOUNDS. THE RARE POGOGYNE ABRAMSII, BRODIAEA ORCUTTII, AND ISOETES ORCUTTII ALSO OCCUR IN THIS AREA. OTHER ASSOCIATES INCLUDE ADENOSTOMA FASCICULATUM, HEMIZONIA FASCICULATA, ERIOPHYLLUM, ETC.

Threats:

DIRT ROAD BISECTS SITE, ORV DAMAGE (1986).

General:

OBSERVED IN BAUDER'S AA8 POOLS IN 1986. 20,244 INDIVIDUALS OBSERVED IN 2003.

Ecological:

VERNAL POOLS WITH POLYPOGON MONSPELIENSIS, CROTON SETIGERUS, LYTHRUM HYSSOPIFOLIA, LOLIUM PERENNE, AGROSTIS AVENACEA, DEINANDRA, JUNCUS BUFONIUS, AND MALVA NEGLECTA. ON REDDING SOILS. SURROUNDED BY GRASSLAND OF NASELLA WITH ERIOGONUM.

Threats:

THREATENED BY HIGHWAY, VEHICLE DAMAGE. NON-NATIVE SPECIES ARE ABUNDANT (2011).

General:

OBSERVED IN 1979 & 1982. NOT SEEN IN A 1986 SURVEY. NOT SEEN IN 1990 BUT HABITAT WAS EXTANT. MORE THAN 500 GENETS OBSERVED IN 2011.

Presence:	Presumed Extant		

Location:

EAST OF SAN YSIDRO, 1.7 AIR MILES ENE OF PORT OF ENTRY. NORTH OF WRUCK CANYON, SOUTH OTAY MESA.

Detailed Location:

FOUND IN FISH & GAME (BEAUCHAMP) POOL COMPLEX "J16". THIS POOL COMPLEX CONTAINED 5 VERNAL POOLS IN 1979. NOT MENTIONED AS OCCURRING IN THIS POOL COMPLEX IN 1979 BUT WAS SUBSEQUENTLY FOUND HERE BY BEAUCHAMP ACC TO 1981 PHONE CONVERSATION.

Ecological:

VERNAL POOLS WITH ERYNGIUM ARISTULATUM PARISHII. SCRUB SURROUNDS. IN 2001 VERNAL POOLS WERE VERY DIFFICULT TO DISTINGUISH FROM THE SURROUNDING VEGETATION.

Threats:

MINOR DISTURBANCE. AG HAS ELIMINATED MANY POOLS ON MESA. PROPOSED 2ND BORDER CROSSING & ILLEGAL ALIEN TRAFFIC THREATENS.

General:

SEEN BY BEAUCHAMP (LIKELY IN 1981?). POOLS WERE NOT VISITED IN 1986 SURVEY. NO PLANTS OBSERVED IN 1990 SITE VISIT, HABITAT WAS DESCRIBED AS EXTANT BUT HIGHLY DEGRADED. NO PLANTS SEEN IN 2001, SITE WAS VERY DRY.

Occurrence Report

California Department of Fish and Wildlife

California Natural Diversity Database

Map Index Number: 71112
Key Quad: Imperial Beach (3211751)
Occurrence Number: 39
EO Index: 72022
Element Code: PMPOA4G010
Occurrence Last Updated: 2016-02-08

Scientific Name: *Orcuttia californica*
Common Name: California Orcutt grass

Listing Status: **Federal:** Endangered
State: Endangered
CNDDB Element Ranks: **Global:** G1
State: S1
Rare Plant Rank: 1B.1
Other Lists: SB_CalBG/RSABG-California/Rancho Santa Ana Botanic Garden
SB_CRES-San Diego Zoo CRES Native Gene Seed Bank

General Habitat:
VERNAL POOLS.

Micro Habitat:
10-660 M.

Last Date Observed: 2010-07-26
Last Survey Date: 2010-07-26
Owner/Manager: CITY OF SAN DIEGO, UNKNOWN
Presence: Presumed Extant
Occurrence Type: Introduced Back into Native Hab./Range
Occurrence Rank: Unknown
Trend: Unknown

Location:

NEAR HEADWATERS OF DENNERY CANYON, NORTH OF STATE HWY 905 & BETWEEN CORPORATE CENTER DR & HIDDEN TRAILS RD, SAN YSIDRO.

Detailed Location:

MAPPED AS 11 POLYGONS CONSISTING OF >50 POOLS. MAPPED ACCORDING TO DIGITAL DATA SUBMITTED IN 2003 (DATA MOSTLY FROM R. MACALLER- RECON IN 2003, SITE NAMES ARE J2W & J2S). DATA INDICATES THESE ARE CREATED VERNAL POOLS.

Ecological:

OTHER RARE PLANTS HERE INCLUDE ERYNGIUM ARISTULATUM & POGOGYNE NUDIUSCULA IN ALL POOLS; NAVARRETIA FOSSALIS IN 20 OF THE POOLS; MYOSURUS MINIMUS SSP. APUS IN 1 POOL. ALSO ASSOCIATED WITH PILULARIA AMERICANA AND PSILOCARPHUS BREVISSIMUS.

Threats:

General:

OBSERVED IN 52 BASINS IN 2003. "RARE" IN TWO LOCATIONS IN 2010. NEED BETTER HABITAT AND POPULATION INFORMATION.

PLSS: T18S, R01W, Sec. 29, SW (S)
Accuracy: specific area
Area (acres): 7
UTM: Zone-11 N3603813 E499321
Latitude/Longitude: 32.57175 / -117.00724
Elevation (feet): 515

County Summary:
San Diego

Quad Summary:
Imperial Beach (3211751)

General Habitat:

VERNAL POOLS.

Micro Habitat:

10-660 M.

Last Date Observed:	1994-05-19	**Occurrence Type:**	Natural/Native occurrence
Last Survey Date:	1994-05-19	**Occurrence Rank:**	Unknown
Owner/Manager:	DOD-MCAS MIRAMAR	**Trend:**	Unknown
Presence:	Presumed Extant		

Location:

SOUTH OF ROSE CANYON AND NORTH OF THE RUNWAYS, MARINE CORPS AIR STATION MIRAMAR.

Detailed Location:

FOUND IN A SWALE WITHIN A LARGER VERNAL POOL. MAPPED BY CNDDB TO ENCOMPASS VERNAL POOLS IN "VERNAL POOL MANAGEMENT PLAN SERIES HHI+." ASSUMPTION MADE AT CNDDB THAT "HHI+" IS ACTUALLY "HH 1+".

Ecological:

OPEN FLAT SOIL. IN A SWALE WITHIN A LARGER VERNAL POOL. POGOGYNE ABRAMSII AND ERYNGIUM ARISTULATUM VAR. PARISHII, & NAVARRETIA FOSSALIS ALSO FOUND HERE.

Threats:

General:

ONLY SOURCE OF INFORMATION FOR THIS SITE IS A 1994 HULL COLLECTION FOR NAVARRETIA FOSSALIS WHICH MENTIONS THAT NAVARRETIA FOSSALIS WAS "FOUND IN ASSOCIATION WITH ORCUTTIA CALIFORNICA". NEEDS FIELDWORK.

Re: Cultural Resources Assessment
Floating Dry Dock and Waterfront Improvement Project

Introduction

General Dynamics NASSCO (NASSCO) is proposing the Floating Dry Dock Replacement and Waterfront Improvement Project (the Project; Figure 1) located at the NASSCO shipyard in San Diego, California. The Project requires a permit from the U.S. Army Corps of Engineers (Corps) under Section 404 of the Clean Water Act. The Corps must comply with Section 106 of the National Historic Preservation Act and Corps regulations at 33 Code of Federal Regulations (CFR) 325, Appendix C. Section 106 requires federal agencies to take into account the effects of their undertakings on historic properties. This memorandum assists the Corps in complying with Section 106 and applicable regulations.

Project Description

The Project is located at the NASSCO shipyard, at 2798 East Harbor Drive, in San Diego, California (Section 13 of Township 17 South, Range 3 West; latitude 32.689339 N, longitude -117.138958 W). The Project includes the following elements (Figure 2):

- Removal and replacement of the existing floating dry dock and construction of supporting infrastructure, including the following:
  - Removal of existing mooring dolphins and construction of four new dolphins supported with a total of 222 piling (in-water ground disturbance up to 100 feet below mean lower low water [MLLW])
  - Construction of a new catwalk and gangway supported by two concrete caps, each constructed on two concrete piles (in-water ground disturbance up to 100 feet below MLLW)
  - Modification to existing dry-dock approach pier, including 19 new fender piles (in-water ground disturbance up to 100 feet below MLLW)
- Repairs to the Repair Complex Wharf, including the following:
  - Replacement of the existing timber wharf with a larger, triangular-shaped wharf supported by concrete piles and protected by a pile-based wharf fender system (in-water ground disturbance up to 43 feet below MLLW)

  - Installation of a steel sheet-piled bulkhead supported by concrete piles and backfilled by placing gravel and compacted granular material on the existing slope to match the existing upland elevation (in-water ground disturbance up to 36 feet below MLLW)
- Improvements to the Repair Complex Wharf, including the following:
  - Repairs along approximately 2,450 linear feet of quay wall revetment, consisting of building up a new rock toe, overlaid with an approximate 9-inch layer of filter stone and 2-foot layer of quarter-ton rock riprap (in-water and shoreline ground disturbance of less than 1 foot)
- As-needed structural repair and/or replacement of selected piles at Berths 2, 3, 4, 5, 6, at Pier 12 and the floating dry-dock approach pier, and at the Berth 1 Platform (in-water ground disturbance up to 100 feet below MLLW)

Implementation of the Project would not expand the existing use of the Project site or result in changes to existing shipyard operations.

Regulatory Context

Under Section 106, the Corps is required to consider the effects of the permitted activity on historic properties. A historic property is any prehistoric or historic district, site, building, structure, or object included in, or eligible for inclusion in, the National Register of Historic Places (NRHP). Traditional Cultural Properties may also be historic properties. Under the Section 106 process, the Corps must consult with interested and affected Native American tribes and the State Historic Preservation Officer on potential impacts to cultural and historic resources.

To be eligible for inclusion in the NRHP, a historic property must be at least 50 years old, have significance, and retain integrity. Significance is defined as meeting one or more of the four NRHP criteria, and integrity is defined as a historic property's ability to convey its historic significance—in other words, its historic appearance and setting.

This memorandum assists the Corps with fulfilling the requirements of Section 106 and 33 CFR 325, Appendix C by recommending the following:

- The Area of Potential Effects (APE)
- Whether there are NRHP-eligible historic properties in the APE
- Whether the undertaking will adversely affect any NRHP-eligible historic properties

Natural and cultural resources in San Diego Bay are managed under the *San Diego Bay Integrated Natural Resources Management Plan* (Navy 2013). The plan indicates the completion of planning level surveys to identify significant and sensitive resources (including cultural resources) to meet regulatory requirements.

Area of Potential Effects

The recommended APE for the Project is the extent of ground disturbance (Figure 3). No changes to the Project setting or viewshed are expected. Modifications will occur to existing structures, but none are of historic age. No indirect effects are expected because the Project will not change patterns of use, circulation, or erosion. The horizontal extent of the APE is approximately 2.2 acres, and the vertical extent is 100 feet below MLLW.

Potential to Affect Historic Properties

Cultural Context

The Project is located in San Diego Bay, which is in the traditional territory of the Kumeyaay peoples (also known as Tipai-Ipai, formerly known as Kamia or Diegueno Mission Indians). At the time of European contact, the Kumeyaay lived in what is now southern California and Baja California, including the coastline from Mission Bay to lands south of Ensenada (Byrd and Raab 2007). Throughout the Holocene, Native American communities in the area were characterized at various times and places by "intensively maritime economies, seafaring, residential sedentism, and large-scale trade networks" (Byrd and Raab 2007:225). The Project area would have been an open water/subtidal zone traversed during on-water activities.

The Project area remained intertidal until the expansion of ship-building industries in the late 1930s. Figure 4 shows the Project area on U.S. Coast Survey nautical charts from 1918 to 2012. Dredging and filling to create uplands and deeper water in and adjacent to the Project area began around 1937 to 1938. Dredging and construction of a previous bulkhead occurred before 1958, based on an aerial photograph from that year (Photograph 1).

Ship repair activities have occupied the site since the 1930s. NASSCO began operations in the early 1960s, with a major renovation in the late 1970s and early 1980s. The pre-1958 bulkhead was likely replaced at that time. Table 1 lists construction dates for existing infrastructure that may be modified.

The bulkhead, Pier 12, and Berths 2 through 6 are less than 50 years old and are not historic properties. A pier in the location of Berths 1 and 2 were present as early as 1942; however, the original pier was a different shape than the existing pier: earlier versions were rectangular in shape, while the existing pier is trapezoidal. The trapezoidal shape appears on maps in 1973; it is likely that this structure was significantly renovated or replaced in 1972, when Berths 3 and 4 were added. Therefore, although the age of Berths 1 and 2 are unknown, and some individual elements such as piling may be older, the functional date of construction appears to be 1972.

A search of the California Historic Resources Information System was conducted in August 2020. The search revealed that no archaeological sites or historic structures have been recorded in the APE.

Two surveys have been conducted that overlap with the APE, but neither recorded historic properties in or near the APE (Dahl 2019; Welty 1913).

Potential Historic Properties

Examination of nautical charts and Corps records reveal evidence of extensive dredging in the APE. Prior to historic activities, water depth was -3 to -12 feet below mean lower low water (MLLW) in the APE. After construction of the original bulkhead along the shoreline in the 1930s (Figure 2), it was -19 to -27 feet MLLW. The current depth is approximately -27 feet MLLW across the APE. Past maintenance dredging, most recently in 2018, was authorized to -37 feet MLLW. The extent of ground disturbance for pile installation will reach native sediments. However, the upper 25 to 34 feet have been removed by historic dredging. The deeper sediments that will be encountered have little likelihood to contain archaeological materials.

There are no structures older than 50 years in the APE; the existing infrastructure generally dates to the late 1970s and early 1980s. Under NRHP Criteria Consideration G, a property less than 50 years old can be eligible if it is of exceptional significance. A property can have exceptional significance if it is notable in context of other similar properties, if it has been the object of scholarly study, if it is fragile or short-lived, or if there is widespread recognition of its historical value (Sherfy and Luce 1998). The piers, berths, and bulkheads in the APE are of common construction and are not significantly associated with local, state, or national historical context. They have not been the object of scholarly study and are not ephemeral; therefore, the structures are recommended not NRHP-eligible.

Because the Project area is primarily in water, and potential for historic properties is low, no field survey was conducted.

Little Likelihood Analysis

Corps regulations in 33 CFR 325 3.b describe an initial review step that analyzes whether a proposed project has "little likelihood" to affect historic properties, as follows:

> b. In certain instances, the nature, scope, and magnitude of the work, and/or structures to be permitted may be such that there is little likelihood that a historic property exists or may be affected. Where the district engineer determines that such a situation exists, he will include a statement to this effect in the public notice. Three such situations are:
>
> (1) Areas that have been extensively modified by previous work. In such areas, historic properties that may have at one time existed within the permit area may be presumed to have been lost unless specific information indicates the presence of such a property (e.g., a shipwreck).
>
> (2) Areas which have been created in modern times. Some recently created areas, such as dredged material disposal islands, have had no human habitation. In such cases, it may be presumed that there is no potential

for the existence of historic properties unless specific information indicates the presence of such a property.

(3) Certain types of work or structures that are of such limited nature and scope that there is little likelihood of impinging upon a historic property even if such properties were to be present within the affected area.

The first and third situations are applicable to Project. For situation 1, the Project area has been extensively modified by documented previous dredging and remodeling of the landform. No specific information exists that might indicate that historic properties are still present. For situation 2, the nature and scope of the work is such that no structures will be modified or demolished for the Project, so the only potential effect is in-water ground disturbance.

Therefore, the nature, scope, and magnitude of the work is such that there is little likelihood of affecting historic properties.

Recommendations

It is recommended that the Corps determine that no historic properties will be affected by the Project. No further cultural resources research or field work is recommended.

GEOTECHNICAL INVESTIGATION
NEW LARGE FLOATING DRY DOCK
GENERAL DYNAMICS-NASSCO SHIPYARD
SAN DIEGO, CALIFORNIA

Dear Mr. Maczko:

TerraCosta Consulting Group, Inc. (TerraCosta) is pleased to submit this report presenting the results of our geotechnical investigation and subsequent studies for the proposed improvements including a sheet piled bulkhead, wharf and fender system, dry dock approach pier fenders, dry dock mooring dolphins, catwalk support, and associated shoreline repairs, in support of a new large floating dry dock at the General Dynamics-NASSCO Shipyard in San Diego, California.

The accompanying report was prepared in general accordance with our Proposal No. 20012, dated April 14, 2020. With respect to the technical aspects of the project, this report presents the results of our field investigation, laboratory testing, and engineering analyses of the subsurface conditions at the site, as well as our conclusions and recommendations pertaining to the various geotechnical aspects of the proposed improvements.

We appreciate the opportunity to be of service and trust this information meets your needs. If you have any questions or require additional information, please give us a call.

Very truly yours,
TERRACOSTA CONSULTING GROUP, INC.

GEOTECHNICAL INVESTIGATION
NEW LARGE FLOATING DRY DOCK
GENERAL DYNAMICS-NASSCO SHIPYARD
SAN DIEGO, CALIFORNIA

1 INTRODUCTION AND PROJECT DESCRIPTION

The proposed project site is generally located within the northwest area of the General Dynamics-NASSCO Shipyard located at 2798 Harbor Drive, San Diego, California. As we understand, the existing NASSCO floating dry dock, "Builder," will ultimately be replaced by the proposed new large floating dry dock described herein. Builder is presently located east of Pier 12, south of Buildings 19 and 20, and between Berths 8 and 9. Figure 1, the Vicinity Map, indicates the approximate location of the subject site. A Site Plan is presented as Figures 2a and 2b.

As we understand, the proposed improvements will include construction of a sheet-pile bulkhead supported by precast concrete batter piles; a triangular-shaped wharf supported by octagonal vertical precast concrete piles and associated fender system; dry dock approach fenders; dry dock mooring dolphins; a catwalk support to access the floating dry dock while moored in its temporary position; and shoreline repairs between Berths 2 and 6. The shoreline improvements will consist of repairs to the existing rock revetment located within the area described. We also understand that landside improvements may also be proposed but are not a part of this study. The above improvements will facilitate the placement of a new 35,000-ton dry dock.

The design, construction, and dredging for this project are to be performed in accordance with the requirements of the most current California Building Code (CBC) applicable at the time of permitting and within the constraints identified in this report, as well as constraints imposed by any applicable permits.

Lastly, we understand that at the time of preparation of this report, no modification or refinements have been identified for the final design requirements. If, however, any additional site testing or design evaluation become necessary, appropriate changes will be made to this report, as warranted, and such changes will be submitted to the San Diego Unified Port District by General Dynamics-NASSCO for review and approval.

2 PURPOSE AND SCOPE OF INVESTIGATION

The purpose of this investigation is to provide geologic and geotechnical information to assist General Dynamics-NASSCO and their consultants in the design, dredging, and construction for the above-described project.

According to NASSCO's Request for Proposal (RFP), the project will include the following elements:

- Sheet-Pile Bulkhead: An approximately 293-foot-long steel sheet-pile bulkhead laterally supported by precast concrete batter piles will be constructed and the water area backfilled to an elevation that approximately matches the elevation of the existing pavement at the site.

- Wharf: The proposed wharf will be a triangular-shaped structure with a plan area of approximately 6,330 square feet supported by thirty four 24-inch octagonal vertical precast concrete piles. The deck thickness will be nominally 20 inches.

- Wharf Fender System: An approximately 140-foot-long piled fender system consisting of seventeen 14-inch square precast piles will be installed along the waterside edge of the proposed wharf. The deck level fender system will consist of rubber fender units, timber walers, and timber chocks supported by the fender piles.

- Dry Dock Approach Pier Fenders: The east side of the existing concrete approach pier that provides access to the dry dock will be protected by a 150-foot-long fender system consisting of eighteen 14-inch square P.C. fender piles, rubber fender units, timber walers, and timber chocks.

- Dry Dock Mooring Dolphins: Four concrete pile-supported mooring dolphins will be constructed as part of the dry dock project. Two of the dolphins will be constructed to secure the proposed dry dock in its permanent position, which will be located in the same general position as the existing dry dock. A second pair of dolphins will be constructed near the property boundary with BAE Systems to be used for temporary mooring of the new floating dry dock when ships are launched from Ways 4.

- Catwalk Support: A connecting catwalk and gangway system will be constructed near Gate 20 to access the floating dry dock while moored in its temporary position. The outboard end of the catwalk and the inboard end of the gangway will be supported by a concrete cap constructed on a pair of 16-inch round or square concrete piles.

- Shoreline Repairs: Approximately 950 lineal feet of exposed shoreline exists between Berths 2 and 6. The revetment is constructed from rock riprap and stacked slabs of concrete. Repairs to the revetment comprise a buildup of a new rock toe at approximate elevation 0 feet MLLW and overlay of the existing revetment slope with an approximate 9-inch layer of filter stone and 2-foot layer of 1/4-ton riprap rock.

SCOPE OF WORK

In accordance with NASSCO's RFP, TerraCosta performed the following scope of work:

- Reviewed readily available geotechnical reports, maps, literature, and other data pertinent to the NASSCO facility.

- Drilled, logged, and sampled seven offshore soil borings at the locations laid out in the RFP.

- Performed laboratory testing on select soil samples, including in-situ moisture content and dry density, direct shear, and gradation on the relatively undisturbed samples.

- Assessed faulting, general seismic conditions, and other geologic hazards affecting the area and their potential impact on the project, including:
  - Seismic response spectrum for use in design of new pile-supported concrete wharf.
  - Seismic design parameters, including soil profile types, seismic coefficients, near-source factors, etc., for design of structures.

- Performed geotechnical analyses and interpretation of collected data and provided descriptions of the different soil strata encountered.

- Prepared this report, which presents descriptions of field and laboratory procedures and equipment, maps of explorations, results of laboratory tests, and recommendations regarding design parameters for dredging, design of marine piles, and lateral earth pressures for the design of sheet-pile bulkheads.

We also performed the following scope of work for design input:

<u>For 16-inch Square PC Pile Capacity Curves</u>

- Prepared curves that provide ultimate axial compression capacity for a range of pile tip elevations and a range of existing sea bed elevations: Curves are provided for sea bed elevations of 0.0, -5, -10, -15, -20, and -25 feet (MLLW) with pile tip elevations from -20 to -70 feet in increments of 5 feet. The curves provide ultimate compression capacity in kips.

- Prepared curves that provide ultimate uplift capacity for a range of pile tip elevations and a range of existing sea bed elevations: Curves are provided for sea bed elevations of 0.0, -5, -10, -15, -20, and -25 feet (MLLW) with pile tip elevations from -20 to -70 feet in increments of 5 feet. The curves provide ultimate uplift (tension) capacity in kips, and indicate whether ultimate uplift capacities include weight of the pile.

<u>For 18-inch Square PC Pile Capacity Curves</u>

- Prepared curves that provide ultimate axial compression capacity for a range of pile tip elevations and a range of existing sea bed elevations: Curves are provided for sea bed elevations of 0.0, -5, -10, -15, -20, and -25 feet (MLLW) with pile tip elevations from -20 to -70 feet in increments of 5 feet. The curves provide ultimate compression capacity in kips.

- Prepared curves that provide ultimate uplift capacity for a range of pile tip elevations and a range of existing sea bed elevations: Curves are provided for sea bed elevations of 0.0, -5, -10, -15, -20, and -25 feet (MLLW) with pile tip elevations from -20 to -70 feet in increments of 5 feet. The curves provide ultimate uplift (tension) capacity in kips, and indicate whether ultimate uplift capacities include the weight of pile.

For 24-inch Octagonal PC Pile Capacity Curves

- Prepared curves that provide ultimate axial compression capacity for a range of pile tip elevations and a range of existing sea bed elevations: Curves are provided for sea bed elevations of -20, -30, -40, and -50 feet (MLLW) with pile tip elevations from -50 to -110 feet in increments of 10 feet. The curves provide ultimate compression capacity in kips.

- Prepared curves that provide ultimate uplift capacity for a range of pile tip elevations and a range of existing sea bed elevations: Curves are provided for sea bed elevations of -20, -30, -40, and -50 feet (MLLW) with pile tip elevations from -50 to -110 feet in increments of 10 feet. The curves provide ultimate uplift (tension) capacity in kips, and indicate whether ultimate uplift capacities include weight of the pile.

Other Design Recommendations

- Lateral load capacity for vertical piles assuming both fixed-head and free-head conditions (p-y curves).

- Information on how pile capacities are affected by proximity of piles to one another.

- Recommendations on pile jetting and impact on pile capacities if piles are jetted through clay layers.

- Dredged slope stability: Dredging near the northern property boundary near Gate 20 at the locations of mooring dolphins may be required in the future to create a sump for another floating dry dock. We understand that the invert of a dredged sump may be in the range of -55 to -60 feet. Recommended stable slopes for the different types of soils encountered from elevation -30 to -55 feet (MLLW) are provided.

3 PREVIOUS STUDIES, FIELD INVESTIGATION, AND LABORATORY TESTING

3.1 Previous Studies

The following studies, which were prepared for the project site, were reviewed:

- "Report Geotechnical Investigation, Module Assembly and Loadout Facility for National Steel and Shipbuilding Company, San Diego California," dated July 20, 1983, prepared by Dames & Moore.

- "Geotechnical Investigation for the Proposed NASSCO Floating Dry Dock and Mooring Facility," dated January 17, 1983, prepared by Woodward-Clyde Consultants.

In addition, we reviewed the following studies prepared by our firm for nearby projects:

- "Geotechnical Investigation, Pier 4 Replacement Project, BAE Systems San Diego Ship Repair, San Diego, California," dated October 18, 2011.

  The Pier 4 Replacement investigation included a geophysical evaluation of the subsurface shear wave velocity profile, which consisted of performing a refraction microtremor (ReMi™) survey. The ReMi technique uses recorded surface waves (Rayleigh waves) that are contained as background noise to develop a shear wave velocity profile of the site. The geophysical data from that survey was considered during the investigation for the subject project.

- "Geotechnical Investigation, Pier 1 North, Large Dry Dock, BAE Systems San Diego Ship Repair, San Diego, California," dated November 7, 2014.

- "Final Geotechnical Investigation, Pier 1 North, Large Dry Dock, BAE Systems San Diego Ship Repair, San Diego, California," dated October 13, 2015, revised January 22, 2016.

- "Geotechnical Investigation, Chollas Creek Quaywall Replacement, Naval Base San Diego, San Diego, California" dated June, 2020.

A complete list of documents reviewed is provided in the References section at the end of this report.

3.2 **Subsurface Investigation**

Our field investigation consisted of advancing, sampling, and logging a total of seven offshore borings to assess the underlying soil characteristics in the project area. Test borings were advanced from a spud barge operated by R.E. Staite between May 12 and 19, 2020. The approximate locations of our test borings are shown on the Site Plan (Figures 2a and 2b).

Borings were drilled by Pacific Drilling of San Diego, California, using a Marl M10 drill rig with 6-inch hollow-stem augers. Borings were advanced to depths ranging from 31.5 feet (B-1a) to 91.5 feet (B-2) below the mudline, to a maximum ground elevation of -116.5 (B-1b) feet MLLW. Samples were obtained from the test borings using both a 2-inch O.D. Standard Penetration Test sampler and a 3-inch O.D. "California Sampler." The samplers were advanced by driving them into the soil at the bottom of the drill hole using a 140-pound hammer falling 30 inches. Samples obtained from the borings were sealed in the field to preserve in-situ moisture, and transported to the laboratory for additional inspection and testing. The drilling operations were observed, and borings logged and soils classified, by a registered geologist from TerraCosta. Field logs of the materials encountered in the test borings were prepared based on visual examination of the materials, and on the action of the drilling and sampling equipment. The descriptions on the logs are based on our field observations, sample inspection, and laboratory test results. A Key to Excavation Logs is presented in Appendix A as Figure A-1, and final logs of test borings are presented as Figures A-2 through A-5.

3.3 **Laboratory Testing**

Representative samples of the soils encountered and collected during our field investigation were tested in the laboratory to aid in our evaluation of their engineering characteristics. Laboratory testing included moisture/density relationships, grain size distribution, hydrometer, liquid and plastic limit, and shear strength. Laboratory test results were used in conjunction with the results of our field program and our experience with similar materials to evaluate the strength and compressibility characteristics of soils at the site. Laboratory test results are presented in Appendix B.

4 EXISTING SURFACE CONDITIONS AND GEOLOGIC SETTING

The subject study area includes the area immediately westerly of and within the vicinity of the existing NASSCO dry dock "Builder"; the open water area between Builder and east of the 780-foot-long Pier 12; the open water area northwest of Builder adjacent to the existing pile-supported timber wharf, and east of the crane rail extension bridge; and the general area east of Pier 12, and west of the approximately 700-foot-long concrete pile-supported Pier 4. The subject study area extends bayward approximately 650 feet from the revetted shoreline located between Piers 4 and 12, near the approximate location of Boring B-1. A steel sheet-pile bulkhead extends approximately 150 feet west of Pier 4, where it intersects with the aforementioned revetted shoreline. The segment of shoreline west of Pier 12 and east of the existing timber wharf is also revetted. Although no specific measurements were taken, the revetment slopes appear to generally be inclined at approximate slopes ranging from 1:1 to 1.5:1 (horizontal to vertical). The dredge slopes for the existing dry dock basin range from 2.5:1 to 4:1 (horizontal to vertical).

4.1 Site Development

The project site is located along the eastern edge of San Diego Bay. The site as it existed in 1857 is shown on Figure 3a. Over time, the eastern edge of the bay at the site was developed. Figures 3a through 3d show the progression of site development. As illustrated in Figures 3a to 3d, the site was developed by reclaiming land and by building out over the historic mudflats.

4.2 Geologic and Geomorphic Setting

The project site is located within the Peninsular Ranges Geomorphic Province. Easterly of the site lies the dissected San Diego coastal plain, which abuts the San Ysidro and Jamul Mountains. Carved out along the westerly margin of Otay Mesa (and the San Diego coastal plain) is a series of coastal terraces formed at various sea level still stands during Pleistocene time. Regional uplift, faulting, and erosion have modified these distinctive erosional features. Over the last million years, the San Diego region is estimated to have risen at an average rate of about 5.5 inches per 1,000 years (Abbott, 1999). In the last 80,000 years, the rate of uplift has increased to nearly 12 inches per 1,000 years northwest of the Rose Canyon

fault zone, and approximately 18 inches per 1,000 years southwest of the Rose Canyon fault zone.

Conversely, these tectonic forces have also caused down-dropping of the region within San Diego Bay. Following the Rose Canyon fault zone southerly, tectonic forces are spread across three major faults (and quite possibly other unidentified faults) that underlie San Diego Bay. These faults (the Silver Strand, Coronado, and Spanish Bight Faults) are believed to transfer tectonic forces to the Descanso Fault, which extends from offshore of Point Loma and continues southerly into Mexico. The right step that occurs between the Rose Canyon and the Descanso fault zones creates a releasing bend that causes the rocks underlying the bay to be stretched and down-dropped to accommodate the movement caused by these tectonic forces. Typical movements along the faults that underlie the bay are observed to experience a significant vertical or normal component to their movement.

From the standpoint of the overall geologic structure, San Diego Bay is a down-dropped faulted trough lying just west of a stable hinterland-coastal plain. Bedrock on the east side of the zone has been slightly deformed as opposed to that on the west side. Faults to the east (i.e., La Nacion-Sweetwater Faults) display down-to-the-west normal displacement. The Rose Canyon system exhibits right-slip (lateral) displacement and is believed to represent a portion of the motion between the North American and Pacific Tectonic Plates. The normal faults that parallel the margins of the bay are likely a result of stretching, subsidence, and compaction of the sedimentary deposits within the San Diego Embayment.

4.3 **Site Geology**

The local surface geology in the site vicinity is shown on Figures 4a and 4b. Figure 4a shows the current interpretation of surface geology, whereas Figure 4b shows a previous interpretation of surface geology. To further illustrate site geology and subsurface conditions, we developed two generalized geologic cross sections (Figures 5 and 6) that traverse the site (see Figures 2a and 2b). A general description of site geology is presented below.

As illustrated on Figures 4a and 4b, during the previous century, an approximately 750-foot to 1,000-foot-wide strip of artificial fill was placed adjacent to the bayshore, inclusive of the existing landward portion of the NASSCO Shipyard. The fill was most likely derived by a

combination of dredging of the harbor floor and locally derived fill soils. The thickness of the fill is estimated to be very thin at its distal eastern edge. Based upon review of the aforementioned previous studies, the thickness toward the bay end likely reaches approximately 8 to 12 feet adjacent to the revetted shoreline, existing timber wharf, and crane rail extension bridge. Underlying the fill are young Holocene-age unconsolidated bay sediments that are generally known to extend to an elevation of approximately -32 feet MLLW in the vicinity of Borings B-5, B-6 and B-7. As subsidence occurred in the bay, sediment was flushed out of the uplands and was slowly deposited over older Pleistocene-age sediments, leaving the terrace deposits (including both the older and younger quaternary deposits) that mantle the coastal terraces around San Diego Bay.

Overlying the San Diego Formation are Quaternary-age terrace deposits. These nearshore marine and non-marine deposits are generally composed of interbedded fine- to medium-grained, poorly to moderately consolidated silts, sands, and conglomerate. The sands vary from well to poorly sorted.

The Quaternary-age deposits were deposited on wave cut platforms (terraces) eroded into the Pliocene-age San Diego Formation. This old surface is estimated to extend offshore to a depth locally in excess of 150 feet below present sea level. Where exposed inland, the San Diego Formation consists of semi-consolidated fossiliferous fine-grained yellow-white/gray sandstone, with lenses of well rounded cobble conglomerate. Reportedly, as the San Diego Formation extends southerly to Mexico, it reaches at least an estimated thickness of 300 feet. Based on the shear wave velocity profile from the Pier 4 Replacement Project, we estimate that the top of the San Diego Formation is near elevation -150 feet, MLLW.

Based upon review of Woodward-Clyde's 1983 Geotechnical Investigation, we understand that the dredging of the basin for the current floating dry dock (Builder) resulted in an excavation bottom of approximately –55 feet (MLLW). Since that time, other minor dredging operations have also taken place within the vicinity of the NASSCO shipyard. Within the area that was dredged, recent bay deposits generally form a relatively thin (approximately 3 to 7-foot-thick) veneer covering the previously dredged surface of the bay floor.

4.4 **Stratigraphy (Soil Conditions)**

The materials encountered within the depths explored consist of recent bay deposits, younger Quaternary-aged terrace deposits, and older Quaternary-aged terrace deposits. These deposits are in turn underlain by the San Diego Formation at depth.

Generalized geologic cross sections of the stratigraphic conditions within the general project area are presented on Figures 5 and 6, with the locations of those sections indicated on Figures 2a and 2b.

More detailed descriptions of the soil units encountered, from oldest to youngest, are presented below.

San Diego Formation: Based upon our 2011 geophysical study for the Pier 4 Replacement Project, located approximately 500 feet northwest of Boring B-2, the top of the San Diego Formation in the area of the new floating dry dock is estimated to be near elevation -150 feet MLLW. The San Diego Formation typically consists of yellow-brown to gray-brown, fine- to medium-grained, poorly to moderately indurated sands and siltstones. The San Diego Formation is described in the literature as being late Pliocene to early Pleistocene in age, covering an area from the southerly flanks of Mount Soledad south to Rosarito Beach in Baja California, Mexico.

Older Quaternary Deposits: The older terrace deposits generally consist of olive-brown to gray-brown, dense to very dense silty sands, stiff to hard sandy silts, clayey silts, and silty clays of varying plasticity. These deposits are likely partially derived from the underlying San Diego Formation and were encountered at depths ranging from approximately -60 feet (Borings B-5 through B-7) to -85 feet (Boring B-1) MLLW.

Younger Quaternary Deposits: Younger quaternary-aged terrace deposits cover much of San Diego's coastline and generally include a series of middle to late Pleistocene-age paralic deposits derived from the local formational soils. Within the study area, these deposits generally consist of interbedded, medium dense, red-brown to olive-brown sands, silty fine sands, fine sandy to clayey silts, silty to fine grained sandy clays, and isolated layers of highly plastic clays. These deposits were generally encountered at depths ranging from approximately -37 feet (Borings B-1 and B-2) to -55 feet MLLW

(Borings B-3 and B-5). Variations in the depths at which the younger Quaternary deposits were encountered are due to the aforementioned dredging that took place associated with development of the shoreline and shipyard. Borings B-5, B-6, and B-7 were advanced within the previously dredged area near the existing timber wharf and encountered the younger terrace deposits near elevation -32 feet MLLW.

Bay Deposits: Bay deposits encountered during our recent investigation generally consist of loose to medium dense, gray, micaceous silty sand with occasional shell fragments, gravels, and soft clayey silt lenses. These bay deposits generally form a relatively thin (3- to 4-foot-thick) veneer covering the previously dredged surface of the bay floor. Outside the limits of dredging in the vicinity of Borings B-5, B-6, and B-7, these bay deposits extended to an approximate elevation of -32 feet MLLW.

4.5 **Groundwater**

We estimate that, due to tidal fluctuations, transient (landside) groundwater highs in the area may periodically reach a maximum of +8 feet MLLW (+7.89 feet NAVD88), particularly along the western margins of the landward improvements within the NASSCO Shipyard.

4.6 **Faulting and Seismicity**

From a seismic standpoint, the site is located within a seismically active region that has experienced earthquakes in recent historic time. The site is located approximately 1,800 feet south-southeast of the Silver Strand Fault, which is considered active, having demonstrated fault activity during the last 10,000 years. Studies for the Coronado Bay Bridge (Kennedy and Clarke, 1999), as well as other studies, have identified numerous faults under San Diego Bay (Figures 7 and 8). Many of these faults express a normal component (up/down) of movement that is related to the extensional forces that caused the opening of San Diego Bay.

4.6.1 *Faulting at the Site*

The project area is located along the easterly margins of San Diego Bay and east of the Silver Strand fault segment of the Rose Canyon fault system (Figures 7 and 8). Numerous secondary fault strands have also been identified within this part of the bay (Legg and Weld, 1980). According to the Quaternary Fault and Fold Database, the northern terminus of two

secondary fault segments of the Silver Strand Fault trend toward the area occupied by Pier 12.

5 GEOLOGIC HAZARDS

5.1 Introduction

Each project may be exposed to risks associated with various geologic hazards. Many of those hazards are associated with the actions of earthquakes and faulting, as well as other hazards that may impact the proposed project. A brief description of the various geologic hazards and their impact on the project site is presented below.

5.2 Geologic Hazards Associated with Earthquakes

Geologic hazards generally associated with earthquakes include ground rupture, ground shaking, tsunamis, seiches, seismic-induced flooding, liquefaction, seismic-induced ground settlement, and seismic-induced slope instability. With respect to these hazards, we have the following comments.

5.2.1 *Ground Rupture*

An assessment of the potential risk and magnitude of potential fault rupture is beyond the scope of this report. However, a review of USGS and CGS maps indicates that a number of small faults exist underlying San Diego Bay. These smaller faults are likely related to the opening of the San Diego Embayment Graben and are interpreted as being Potentially Active (Figure 7). No known active faults are mapped as passing or trending through the site.

In addition, the site is located approximately 0.55 miles from the closest A-P zone (Figure 8). As such, the risk associated with ground rupture is considered low.

5.2.2 *Ground Shaking*

Historically, a number of larger earthquakes with magnitudes greater than 4.0 have occurred near the site within and around San Diego Bay. The most recent earthquake with magnitude 4.0 occurred in June 1985, with the epicenter located approximately 0.9 mile south of the site

on the Silver Strand Fault. The closest and largest historically documented earthquake is reported to have occurred approximately 3.2 miles from the site. That earthquake, reported to have occurred on May 27, 1862, had an interpreted magnitude of 5.9. Using the computer program EQSEARCH, which contains a database of historical earthquakes from 1800 to 2007, and a Soil Class D, we estimate the likely historic peak ground acceleration at the site to have been on the order of 0.33g. As such, the risk associated with ground shaking is considered very high.

5.2.3 *Tsunamis and Seiches*

Tsunamis and seiches are considered likely hazards at this project site. A review of the Tsunami Inundation Map for Emergency Planning for San Diego Bay, dated June 1, 2009, shows the site as lying within a tsunami inundation area (Figures 9a through 9c).

Recently, San Diego Bay experienced the effects of two tsunamis generated by large, distant earthquakes (the 2010 M8.8 Chilean earthquake and the 2011 M9.0 Japan earthquake). Measurements and observations indicated that areas around the bay experienced tsunami amplitudes on average of 2 feet (0.6 meter), with a maximum of approximately 3.9 feet (1.2 meters) observed at Shelter Island. Docks and boats in the bay experienced moderate damage caused by the unusually high current speeds within some of the basins associated with the water surface changes, estimated locally to be upwards of 12 to 15 knots. As such, the risk associated with tsunamis and seiches is considered high.

5.2.4 *Liquefaction*

Three key components are required for liquefaction to occur: liquefaction-susceptible soils, groundwater, and strong ground shaking. Soils susceptible to liquefaction are generally loose to medium dense sands and non-plastic silt deposits located below the water table. Some of the soil within the recent bay deposits and bay deposits are comprised of saturated loose to medium dense sands, non-plastic silts, and loose bay deposits. These soils are potentially liquefiable. However, the soils comprising the younger and older terrace deposits are not considered liquefiable.

5.2.5 *Lateral Spreading*

Lateral spreading is likely to occur within the recent bay deposits, the bay deposits, and some fill soils that surround the bay.

5.2.6 *Seismic-Induced Slope Instability*

Slopes comprised of recent bay deposits and bay deposits, some fill soils containing loose sands and soft clays may be subject to seismic-induced slope instability.

5.2.7 *Landslides*

A review of aerial photographs, published reports and geologic maps, and our site reconnaissance did not reveal any features indicative of ancient natural landslides on or adjacent to the proposed project site limits. In our opinion, the risk associated with landslides at the site is negligible.

6 RECOMMENDATIONS

6.1 Introduction

The methodology for the assessment of the axial pile capacities consisted of the following:

- Reviewed two Woodward-Clyde reports (January 1983 and April 1983) and their pile capacity relationships for specified tip elevations. These two reports provided different capacity curves for similar environments.

- Reviewed our reports and pile capacity assessments, and the results of our pile driving analyses (PDA) of indicator piles (TerraCosta, 2013).

- Developed a single stratigraphic subsurface model for our analyses from our subsurface exploration. We compared this model to the previous Woodward-Clyde reports and our report, and found general agreement in the general stratigraphic conditions at the site.

- Given the interbedded nature of the site conditions, we developed multiple subsurface strength models to explore the variability of estimated ultimate pile capacities. These models considered a sand model, a clay model, and an interbedded sand clay model. The pile analyses were carried out using the computer program APILE. While the sand and clay models do not necessarily reflect the interbedded nature of the site, the homogenous models did capture the trends in pile capacities indicated by the interbedded model. The difficulty of the interbedded model is that the vertical variation of the interbedded layers of the sands and clays varied across the site and, as such, using a more homogeneous model allows one to assess the upper and lower bounds of the results.

- Based on comparisons between these various strength models, we then compared the results to the Woodward-Clyde capacity relationships, TerraCosta's capacity relationships, and the PDA results. As such, based on our assessment of the pile capacity curves using our stratigraphic model and the sand model strengths, with limits on skin friction and end-bearing that we developed for this project, we then developed the pile capacity curves presented below.

6.2 16-inch Square PC Pile Capacity Curves

Figure 10 provides estimates of the ultimate axial compression capacities of a 16-inch square precast concrete pile in kips for sea bed elevations of 0.0 feet, -5.0 feet, -10.0 feet, -15 feet, -20 feet, and -25.0 feet MLLW with pile tip elevations from -20 feet to -90 feet.

Figure 11 provides ultimate uplift capacities of a 16-inch square precast concrete pile for sea bed elevations of 0.0 feet, -5.0 feet, -10.0 feet, -15 feet, -20 feet, and -25 feet (MLLW) with pile tip elevations from -20 feet to -90 feet in kips. The curves do not include the weight of the pile in the uplift capacity estimate.

6.3 18-inch Square PC Pile Capacity Curves

Figure 12 provides estimated ultimate axial compression capacities of an 18-inch square precast concrete pile for sea bed elevations of 0.0 feet, -5.0 feet, -10.0 feet, -15 feet, -20 feet, and -25.0 feet (MLLW) with pile tip elevations from -20 feet to -90 feet in kips.

Figure 13 provides estimated ultimate axial pile capacities of an 18-inch square precast concrete pile for sea bed elevations of 0.0 feet, -5.0 feet, -10.0 feet, -15 feet, -20 feet, and -25 feet (MLLW) with pile tip elevations from -20 feet to -90 feet in kips. The weight of the pile is not included in the uplift capacity estimate.

6.4 **24-inch Octagonal PC Pile Capacity Curves**

Figure 14 provides estimated ultimate axial compression for a 24-inch octagonal precast concrete pile for sea bed elevations of -20 feet, -30 feet, -40 feet, and -50 feet (MLLW) with pile tip elevations from -50 feet to -110 feet in increments of 10 feet. The curves provide the ultimate compression capacity in kips.

Figure 15 provides ultimate uplift capacities for a 24-inch octagonal precast concrete pile for sea bed elevations of -20 feet, -30 feet, -40 feet, and -50 feet (MLLW) with pile tip elevations from -50 feet to -110 feet. The curves provide the ultimate uplift (tension) capacity in kips. The ultimate uplift capacities do not include the weight of the pile.

6.5 **Other Pile Recommendations**

Piles located greater than three pile diameters apart have no reduction in uplift or axial pile capacities.

Piles may be installed by jetting to within 10 feet of final tip elevations, then driven.

The site contains interbedded clay layers. As such, we recommend that piles installed by jetting to within 10 feet of the final tip elevation, then driven. The estimated ultimate pile capacity should be reduced by 10 percent.

6.6 **Lateral Load Capacity for Vertical Piles**

Estimated ultimate lateral load capacities for the vertical piles are presented in Table 1.

6.7 **Dredged Slope Stability**

We recommend that slopes dredged between elevations 0 and -15 feet MLLW have a maximum inclination of 1 unit vertical to 5 units horizontal.

We recommend that slopes dredged between elevations -15 and -25 feet MLLW have a maximum inclination of 1 unit vertical to 4 units horizontal.

We recommend that slopes dredged between elevations -25 and -55 feet MLLW have a maximum inclination of 1 unit vertical to 3 units horizontal.

6.8 **Response Spectra Design Input**

California Building Code response spectra for the Maximum Considered Earthquake and for the Design Earthquake are presented in Table 2.

6.9 **Sheet-Pile Bulkhead Adjacent to New Concrete Wharf**

A new sheet-pile bulkhead is to be constructed along the northerly limits of the proposed concrete wharf that will replace the existing timber wharf. This sheet-pile bulkhead is to be restrained by a series of both batter and vertical concrete piles. We understand that the sheet-pile bulkhead will be backfilled with gravel below elevation +3 feet (MLLW) and with compacted granular material above elevation +3 feet MLLW.

Given the proposed backfill materials, we recommend the following lateral pressures for design:

- For that portion of the wall backfilled with gravel, we recommend an equivalent fluid pressure of 45 pcf above the water table and 23 pcf for a restrained wall condition; and for an active wall condition, an equivalent fluid pressure of 28 pcf above the water table and 14 pcf below the water table. These pressures do not include hydrostatic pressures due to water.

- For that portion of the wall backfilled with compacted granular material, we recommend an equivalent fluid pressure of 60 pcf above the water table and 30 pcf for a restrained wall condition; and for an active wall condition, an equivalent fluid pressure of 38 pcf above the water table and 19 pcf below the water table. These pressures do not include hydrostatic pressures due to water.

- For surcharge loadings for an area wide load of 240 psf, we recommend a uniform pressure of 120 psf for a restrained wall condition and 72 psf for an active wall condition.
- For design purposes, we recommend using a maximum tidal lag of 3 feet.
- For soils that front the toe of the proposed sheet-pile bulkhead, we recommend the following:
    - From elevation -10 to -18 feet MLLW, the total unit weight of soil is 100 pcf and the soil has an undrained strength of 100 psf. For drained conditions, the soil has an effective angle of friction of 22 degrees.
    - From elevation -18 to -32 feet MLLW, the total unit weight of soil is 110 pcf and the soil has an effective angle of friction of 28 degrees.
    - From elevation -32 feet MLLW and below, the soil has a total unit weight of 125 pcf and an undrained strength of 3,000 psf. For drained conditions, the soil has an effective friction angle of 35 degrees.

7 LIMITATIONS

Professional judgments presented herein are based partly on our evaluation of the technical information gathered, partly on our understanding of the proposed construction, and partly on our general experience in the geotechnical field. We have observed only a small portion of the pertinent soil and subsurface conditions at the proposed project site. The recommendations made herein are based on the assumption that soil conditions do not deviate appreciably from those found during our field investigation. If the plans for site development are changed, or if variations or undesirable geotechnical conditions are encountered during construction, the geotechnical engineer should be consulted for further recommendations.

This firm does not practice or consult in the field of safety engineering. We do not direct the contractor's operations, and we cannot be responsible for the safety of other than our own personnel on the site; therefore, the safety of others is the responsibility of the contractor. The contractor should notify the owner if he considers any of the recommended actions presented herein to be unsafe.

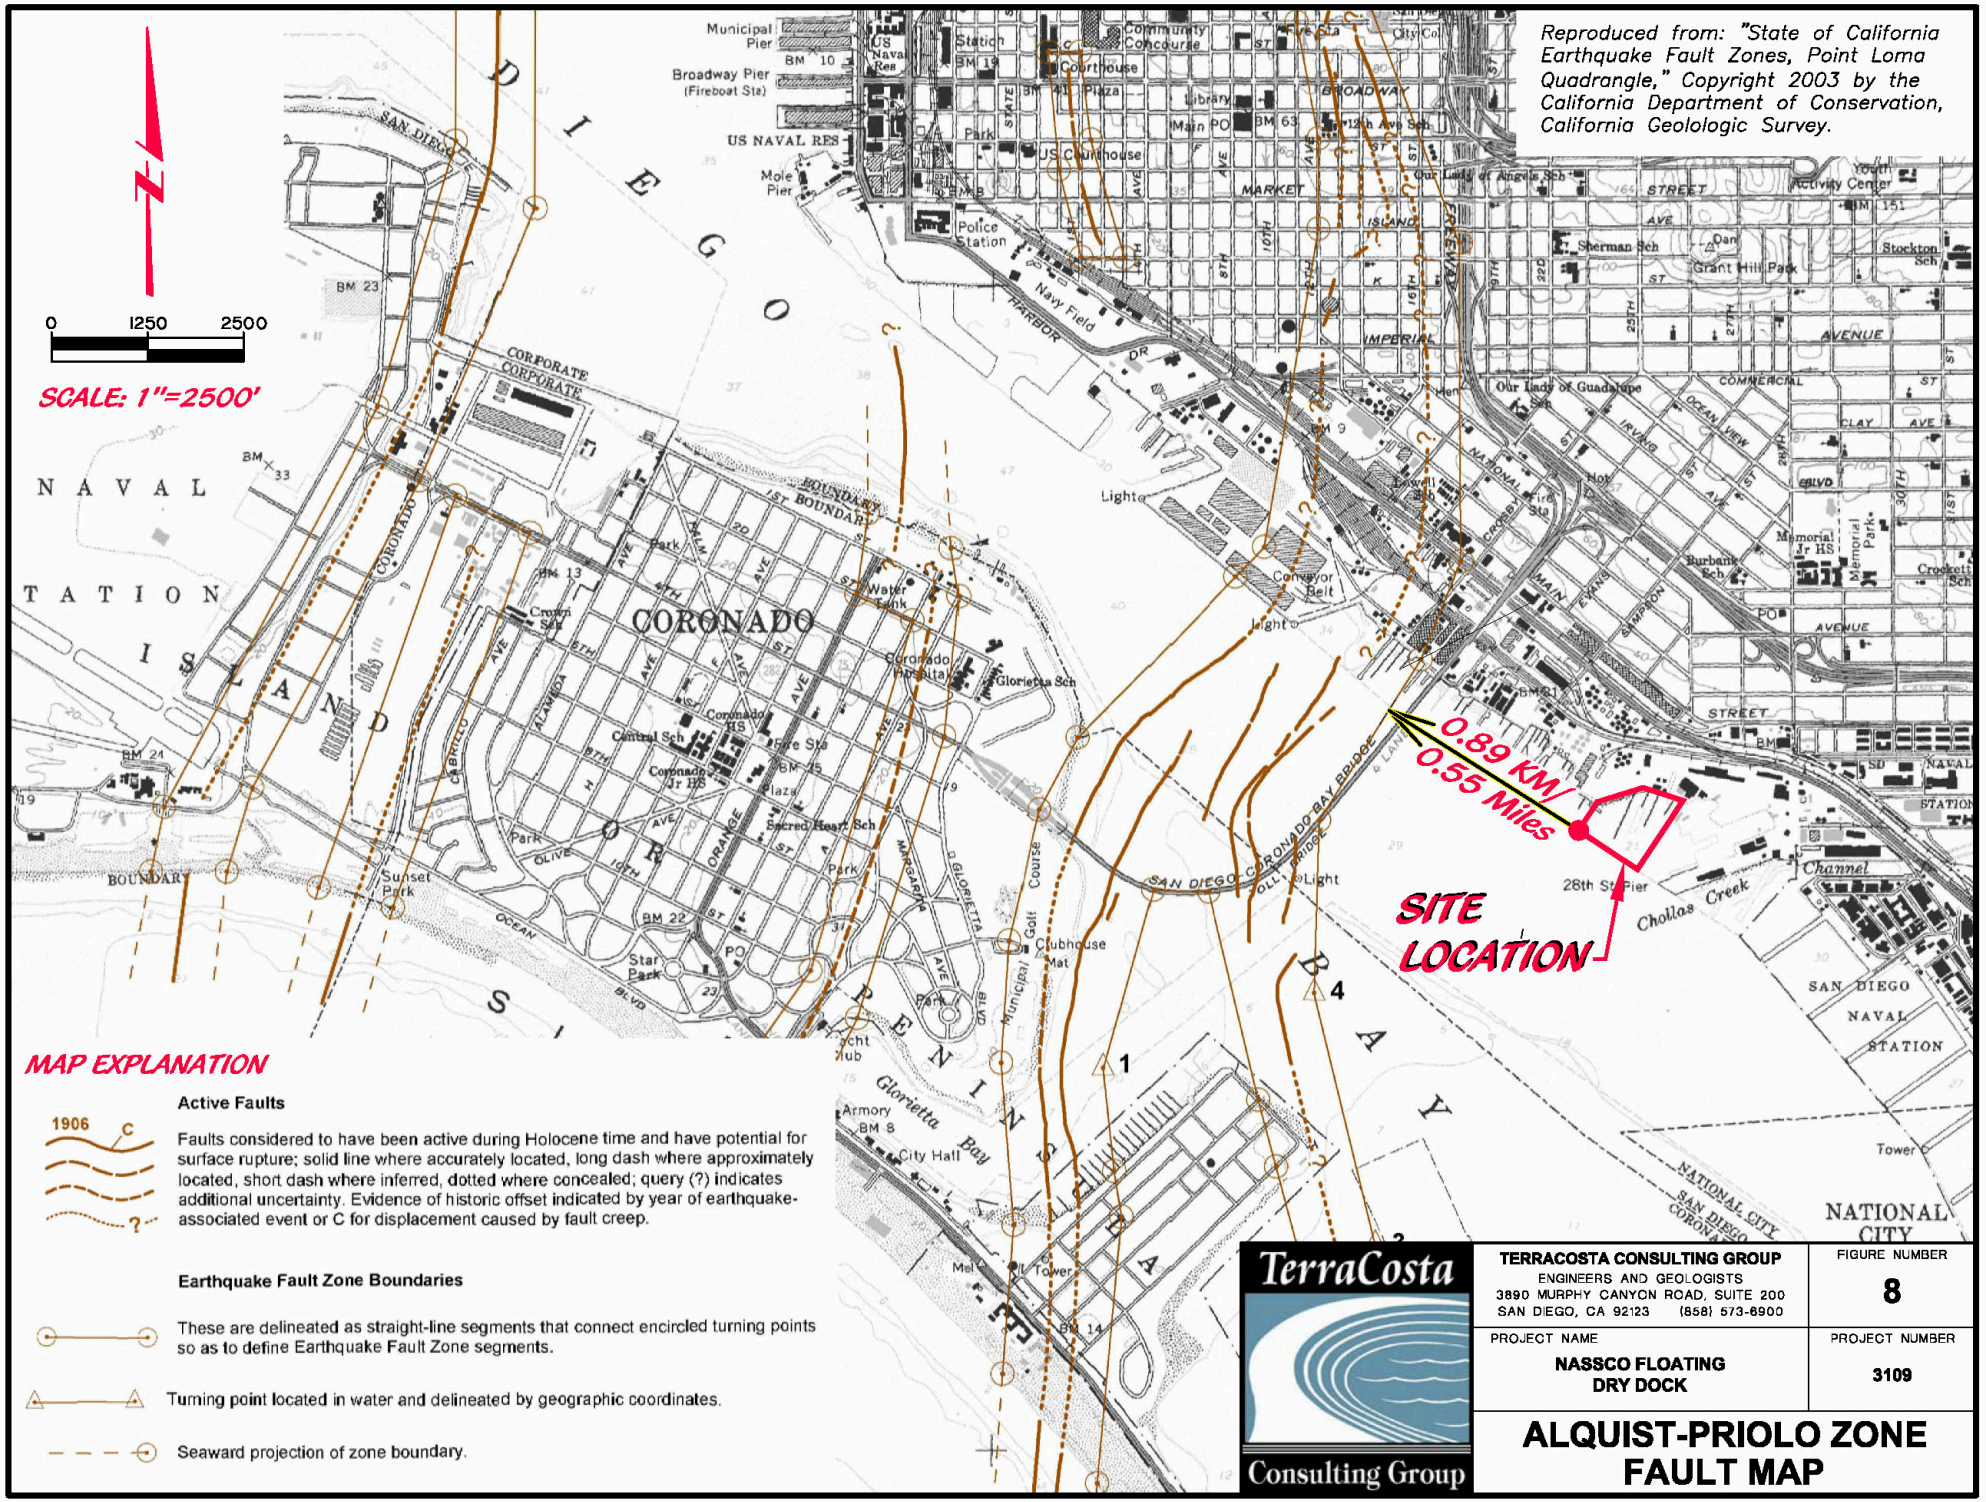
FAULT MAP



MAP EXPLANATION

Active Faults

1906 C

Faults considered to have been active during Holocene time and have potential for surface rupture; solid line where accurately located, long dash where approximately located, short dash where inferred, dotted where concealed; query (?) indicates additional uncertainty. Evidence of historic offset indicated by year of earthquake-associated event or C for displacement caused by fault creep.

Earthquake Fault Zone Boundaries

These are delineated as straight-line segments that connect encircled turning points so as to define Earthquake Fault Zone segments.

Turning point located in water and delineated by geographic coordinates.

Seaward projection of zone boundary.

TSUNAMI INUNDATION MAP FOR EMERGENCY PLANNING

State of California ~ County of San Diego

SAN DIEGO BAY

June 1, 2009

SCALE 1:52,000

METHOD OF PREPARATION

Initial tsunami modeling was performed by the University of Southern California (USC) Tsunami Research Center funded through the California Emergency Management Agency (CalEMA) by the National Tsunami Hazard Mitigation Program. The tsunami modeling process utilized the MOST (Method of Splitting Tsunami) computational program (Version 0), which allows for wave evolution over a variable bathymetry and topography used for the inundation mapping (Titov and Gonzalez, 1997; Titov and Synolakis, 1998).

The bathymetric/topographic data that were used in the tsunami models consist of a series of nested grids. Near-shore grids with a 3-arc-second (~ to 90-meters) resolution or higher, were adjusted to 'Mean High Water' sea-level conditions, representing a conservative sea level for the intended use of the tsunami modeling and mapping.

A suite of tsunami source events was selected for modeling, representing realistic local and distant earthquakes and hypothetical extreme undersea, near-shore landslides (Table 1). Local tsunami sources that were considered include offshore reverse/thrust faults, restraining bends on strike-slip fault zones and large submarine landslides capable of significant seafloor displacement and tsunami generation. Distant tsunami sources that were considered include great subduction zone events that are known to have occurred historically (1960 Chile and 1964 Alaska earthquakes) and others which can occur around the Pacific Ocean 'Ring of Fire.'

In order to enhance the result from the 75- to 90-meter inundation grid data, a method was developed utilizing higher-resolution digital topographic data (3- to 10-meters resolution) that better defines the location of the maximum inundation line (U.S. Geological Survey, 1993; Intermap, 2003; NOAA, 2004). The location of the enhanced inundation line was determined by using digital imagery and terrain data on a GIS platform with consideration given to historic inundation information (Lander, et al., 1993). This information was verified, where possible, by field work coordinated with local county personnel.

The accuracy of the inundation line shown on these maps is subject to limitations in the accuracy and completeness of available terrain and tsunami source information, and the current understanding of tsunami generation and propagation phenomena as expressed in the models. Thus, although an attempt has been made to identify a credible upper bound to inundation at any location along the coastline, it remains possible that actual inundation could be greater in a major tsunami event.

This map does not represent inundation from a single scenario event. It was created by combining inundation results for an ensemble of source events affecting a given region (Table 1). For this reason, all of the inundation region in a particular area will not likely be inundated during a single tsunami event.

MAP EXPLANATION

Tsunami Inundation Line

Tsunami Inundation Area

PURPOSE OF THIS MAP

This tsunami inundation map was prepared to assist cities and counties in identifying their tsunami hazard. It is intended for local jurisdictional, coastal evacuation planning uses only. This map, and the information presented hereon, is not a legal document and does not meet disclosure requirements for real estate transactions nor for any other regulatory purpose.

The inundation map has been compiled with best currently available scientific information. The inundation line represents the maximum considered tsunami runup from a number of extreme, yet realistic, tsunami sources. Tsunamis are rare events, due to a lack of known occurrences in the historical record, this map includes no information about the probability of any tsunami affecting any area within a specific period of time.

Please refer to the following websites for additional information on the construction and/or intended use of the tsunami inundation map:

State of California Emergency Management Agency, Earthquake and Tsunami Program: http://www.oes.ca.gov/WebPageoeswebsite.nsf/ContentBtnEC518BA2159317688525741F005E8C607OpenDocument

University of Southern California – Tsunami Research Center: http://www.usc.edu/dept/tsunami/2005/index.php

National Oceanic and Atmospheric Agency Center for Tsunami Research (MOST model): http://nctr.pmel.noaa.gov/time/background/models.html

MAP BASE

Topographic base maps prepared by U.S. Geological Survey as part of the 7.5-minute Quadrangle Map Series (originally 1:24,000 scale). Tsunami inundation line boundaries may reflect updated digital orthophotographic and topographic data that can differ significantly from contours shown on the base map.

DISCLAIMER

The California Emergency Management Agency (CalEMA), the University of Southern California (USC), and the California Geological Survey (CGS) make no representation or warranties regarding the accuracy of this inundation map nor the data from which the map was derived. Neither the State of California nor USC shall be liable under any circumstances for any direct, indirect, special, incidental or consequential damages with respect to any claim by any user or any third party on account of or arising from the use of this map.

PENETRATION RESISTANCE (BLOWS/ft)

Number of blows required to advance the sampler 1 foot.

California Sampler blow counts can be converted to equivalent SPT blow counts by using an end-area conversion factor of 0.67 when using a 140-pound hammer and a 30-inch drop.

SAMPLE TYPE

C ("California Sampler") - An 18-inch-long, 2-1/2-inch I.D., 3-inch O.D., thick-walled sampler. The sampler is lined with eighteen 2-3/8-inch I.D. brass rings. Relatively undisturbed, intact soils samples are retained in the brass rings.

S ("SPT") - a.k.a. Standard Penetration Test, an 18-inch-long, 2-inch O.D., 1-3/8-inch I.D. drive sampler.

NOTES ON FIELD INVESTIGATION

Borings were advanced using a truck-mounted Marl M10 drill rig with a 6-inch hollow-stem auger.

Standard Penetration Tests (SPT) and California Samplers (CAL) were used to obtain soil samples. The SPT were driven into the soil at the bottom of the borings with a 140-pound hammer falling 30 inches. When the samplers were withdrawn from the boring, the samples were removed, visually classified, sealed in plastic containers, and taken to the laboratory for detailed inspection.

Classifications are based upon the Unified Soil Classification System and include color, moisture, and consistency. Field descriptions have been modified to reflect results of laboratory inspection where deemed appropriate. At the completion of drilling, all borings were sealed per state and local standards.

TerraCosta Consulting Group, Inc.
3890 Murphy Canyon Road, Suite 200
San Diego, California 92123

THIS SUMMARY APPLIES ONLY AT THE LOCATION OF THIS BORING AND AT THE TIME OF DRILLING. SUBSURFACE CONDITIONS MAY DIFFER AT OTHER LOCATIONS AND MAY CHANGE AT THIS LOCATION WITH THE PASSAGE OF TIME. THE DATA PRESENTED IS A SIMPLIFICATION OF THE ACTUAL CONDITIONS ENCOUNTERED.

FHWA Roadway Construction Noise Model, January 2006. Table 9.1
U.S. Department of Transportation
CA/T Construction Spec. 721.560

Distance Propagation Calculations for Stationary Sources of Ground Vibration

KEY: Orange cells are for input.

Grey cells are intermediate calculations performed by the model.

Green cells are data to present in a written analysis (output).

STEP 1: Determine units in which to perform calculation.

— If vibration decibels (VdB), then use Table A and proceed to Steps 2A and 3A.

— If peak particle velocity (PPV), then use Table B and proceed to Steps 2B and 3B.

STEP 2A: Identify the vibration source and enter the reference vibration level (VdB) and distance.

STEP 3A: Select the distance to the receiver.

Table A. Propagation of vibration decibels (VdB) with distance

Noise Source/ID	Reference Noise Level			Attenuated Noise Level at Receptor		
	vibration level (VdB)	@	distance (ft)	vibration level (VdB)	@	distance (ft)
Impact Pile Driver	112	@	25	79.8	@	295
Vibratory Pile Driver	105	@	26	78.1		205

The Lv metric (VdB) is used to assess the likelihood for vibration to result in human annoyance.

STEP 2B: Identify the vibration source and enter the reference peak particle velocity (PPV) and distance.

STEP 3B: Select the distance to the receiver.

Table B. Propagation of peak particle velocity (PPV) with distance

Noise Source/ID	Reference Noise Level			Attenuated Noise Level at Receptor		
	vibration level (PPV)	@	distance (ft)	vibration level (PPV)	@	distance (ft)
Impact Pile Driver	1.518	@	25	0.49	@	53
Vibratory Pile Driver	0.730	@	25	0.50		32

The PPV metric (in/sec) is used for assessing the likelihood for the potential of structural damage.

Notes:

Computation of propagated vibration levels is based on the equations presented on pg. 185 of FTA 2018. Estimates of attenuated vibration levels do not account for reductions from intervening underground barriers or other underground structures of any type, or changes in soil type.

DRAFT

1.0 Introduction

The purpose of this Transportation Impact Study (TIS) is to identify and document any significant transportation related impacts associated with the NASSCO Floating Dry dock and Waterfront Improvement Project (Proposed Project), and to recommend mitigation measures for identified impacts, as necessary.

1.1 Project Description

General Dynamics NASSCO (NASSCO) is proposing a series of repairs and improvements to be conducted within their shipyard located within San Diego, CA. The Proposed Project includes the following elements:

- *Removal and Replacement of the existing floating dry dock and construction of supporting infrastructure* - The current floating dry dock, built in 1983, has reached the end of its useful life and would be replaced with a new floating dry dock of similar characteristics and the same functionality. Supporting infrastructure consisting of replacement mooring dolphins, utilities, and reconfiguration of the existing approach pier are required in order to comply with current standards and code.
- *Improvements to the Repair Complex Wharf* - The Repair Complex Wharf is landward of the existing and proposed floating dry dock. Currently, the wharf provides limited laydown and space for offices. However, it is in disrepair and must be replaced in order to fully use this area of the facility. As part of the Project, NASSCO is proposing Repair Complex Wharf Improvements in order to maximize the storage and laydown capabilities in this area of the facility.
- *Repairs to the quay wall toe of slope along stretches of shoreline throughout the NASSCO leasehold* - The Proposed Project would also repair the failed revetment and exposed shoreline present throughout the NASSCO leasehold, including shoreline segments from Lot 20 to Pier 12, floating dry dock approach pier to Berth 8, Ways to Building Dock, Berth 2 to Berth 3, Berth 4 to Berth 5, and Berth 6 to Navy Base Quay Wall. Proposed repairs include placement of stabilizing material (mostly rock riprap) to address existing damage and prevent future damage from wave action, in order to maintain existing safe operation of the NASSCO shipyard.
- *As-needed structural repair and/or replacement of selected piles* – The Proposed Project includes programmatic repair and/or replacement of damaged piles that support Berths 2, 3, 4, 5, 6, and Pier 12 and the floating dry dock approach pier and the Berth 1 Platform. The proposed repairs are necessary to restore the structural integrity of these piers, extend their service lives, and provide safe mooring berths for new construction and repair vessels.

The regional Project Location is displayed in Figure 1-1. The specific locations of the Proposed Project elements, described above, are provided in Figure 1-2.

It should be noted that the implementation of the Proposed Project would not expand the existing use of the current site or result in any changes to NASSCO's existing operations.

1.2 Report Organization

Following this Introduction chapter, this report is organized into the following sections:

2.0 *Analysis Methodology* – This chapter describes the methodologies and standards utilized to analyze and identify the transportation related impacts associated with the Proposed Project.

3.0 *Transportation Related Impacts and Mitigation* – This chapter derives and analyzes the projected Vehicle Miles Traveled (VMT) that will be generated by the Proposed Project. This chapter also identifies if the Proposed Project related VMT would create significant project related impacts, as it relates to the standards outlined in the California Environmental Quality Act (CEQA). Finally, the chapter provides recommendations for mitigation measures to reduce the identified transportation related impacts to less than significant levels, if necessary, and evaluates the feasibility of the proposed mitigation measures.

4.0 *Construction Related Impacts and Mitigation* - This chapter evaluates the potential transportation related impacts that may be associated with the construction of the Proposed Project. Recommendations for mitigation measures to reduce any identified transportation related impacts to less than significant levels, are provided, if necessary.

DRAFT

2.0 Analysis Methodology and Threshold

2.1 Background (SB-743)

On September 27, 2013, Governor Edmund G. Brown, Jr. signed SB-743 into law, starting a process that is expected to fundamentally change the way transportation impact analysis is conducted under CEQA. Within the State's CEQA Guidelines, these changes will include elimination of auto delay, level of service (LOS), and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts.

On December 2018, the Resources Agency certified and adopted the CEQA Guidelines update package, which included the California Natural Resources Agency Guidelines for the Implementation of the California Environmental Quality Act. As a result, the California Governor's Office of Planning and Research (OPR) updated and released the Technical Advisory on Evaluating Transportation Impacts in CEQA (Technical Advisory) in December 2018[1]. According to the updated guidelines, lead agencies will have until July 1, 2020 to comply with the updated CEQA revision.

2.2 Analysis Guidelines and Significance Thresholds

In response to the implementation of SB-743, the District recommends using the standards and thresholds outlined in the ORP Technical Advisory to determine transportation related impacts. For land use development projects that have trip-making characteristics like an employment trip, such as the Proposed Project's shipyards, OPR recommends using VMT/employee to determine if a project has a significant transportation related impact.

VMT/Employee includes all vehicle-based person trips grouped and summed to the work location of individuals on the trip. This includes all trips, not just work-related trips. The VMT for each work location is then summed for all work locations in a particular Traffic Analysis Zone (TAZ) and then divided by the total number of employees of that census tract to arrive at the VMT/Employee. OPR suggest that a Proposed Project that generates a VMT/Employee great than 85 percent of the average existing regional VMT/Employee may indicate a significant transportation impact.

Analysis Tool

The SANDAG Series 14 Activity Based Model (ABM2+) was utilized for this effort to determine the Proposed Project related VMT/Employee. The ABM2+ is a travel demand forecasting model that incorporates census data and travel surveys to inform the algorithms of the model's projections. It uses a simulated population, based on existing and projected demographics, to match residents to employment and forecasts the daily travel on the regional transportation network. In addition, the model is able to track the daily travel of individuals in the simulated population, including origins, destinations, travel distances and mode choices. The Series 14 ABM2+ has four (4) forecast scenarios: 2016, 2025, 2035, and 2050.

Additional information regarding the background, data sources and methodologies used within the ABM2+ can be found through the following resource:
https://www.sandag.org/index.asp?subclassid=120&fuseaction=home.subclasshome

DRAFT

3.0 Transportation Impact & Mitigation

This chapter derives and analyzes the projected VMT/Employee that will be generated by the Proposed Project. This chapter also identifies if the Proposed Project related VMT/Employee would create significant project related impact, as it relates to the standards outlined in the California Environmental Quality Act (CEQA) and the draft Guidelines. Finally, the chapter provides recommendations for mitigation measures that may reduce the Proposed Project's impacts to less than significant levels, and evaluates the feasibility of the proposed mitigation measures, if necessary.

3.1 Trip Generation

The improvements included within the Proposed Project are only rehabilitating existing facilities that already exist on the Proposed Project site. The improvements will not expand or add any new facilities or infrastructure onto the Proposed Project Site. Therefore, the Proposed Project is not anticipated to change the number of employees that access the NASSCO facilities on a daily basis, nor are they anticipated to increase the number of deliveries, vendors, or other services to the facility. Therefore, the implementation of the Proposed Project is not anticipated to increase or change the travel patterns within the area nor is it anticipated to increase or affect the VMT/Employee or overall daily VMT in which the NASSCO facility currently generates. As such, implementation of the Proposed Project will have a less than significant transportation related impact.

3.2 Parking

As noted in the previous section, the improvements included within the Proposed Project are not anticipated to change the number of employees that access the NASSCO facilities on a daily basis. As such, no additional parking demand is anticipated with the implementation of the Proposed Project. Therefore, implementation of the Proposed Project will have a less than significant parking related impact.

DRAFT

4.0 Construction Analysis

Construction of the various project components is anticipated to occur as follows:

- Floating Dry Dock Replacement and Modification: January 2023 to September 2024
- Repair Complex Wharf Improvements: September 2024 to July 2025
- Quay Wall Revetment Repairs (Berths 2-5): January 2024 to February 2024
- As-needed Quay Wall Revetment Repairs (additional 1,500 linear feet): January 2025 to December 2027 (500 linear feet per year)
- Structural Pile Repair and Replacement: January 2024 to January 2034 (100 piles per year as needed)

Construction activities would occur 24 hours per day and seven days per week, in a manner consistent with the City of San Diego Noise Ordinance (Section 21.0104 of the San Diego Municipal Code). Construction work during night-time hours (between 7:00 p.m. and 7:00 a.m.) would be limited to project deliveries, formwork, welding, and other activities that would not generate disturbing, excessive, or offensive noise. Pile driving activities would only be conducted during daylight hours.

4.1 Construction Trip Generation

The daily number of NASSCO employees that access the Proposed Project site is not anticipated to change during Proposed Project construction. It is anticipated that approximately 10 construction workers would be present on the construction site each day, including one tug operator, two crane operators, one foreman, two oilers, and four laborers. Construction activities are anticipated to generate approximately 11 truck trips per day, during peak times, for miscellaneous materials and equipment loading. The majority of contractor equipment, materials and personnel will be mobilized and demobilized from the project site via barge or water access.

Table 1 displays the daily and peak hour trip generation that is anticipated to be associated with Proposed Project construction. To be conservative, it is assumed that all construction workers would drive their own vehicles to the Proposed Project site and arrive during the AM peak hour and depart during the PM peak hour. It is assumed that truck trips would occur throughout the typical workday and outside of the typical commute peak hours.

Table 1: Proposed Project Construction Trip Generation

Use	Units	Daily Trip Generation Rate	PCE	ADT	AM Peak Hour		PM Peak Hour	
					In	Out	In	Out
Construction Worker	10	3 trips per worker	1.0	30	10	0	0	10
Truck Trips	11	2 trip per truck	3.0	66	0	0	0	0
			Total	*6	10	0	0	10

Note
PCE: Passenger Car Equivalent – since the truck size is not known at this time, the maximum rate of 3.0 was selected.

Construction VMT Analysis

Construction workers VMT is not newly generated; instead, it is redistributed throughout the network based on their travel to different work sites each day; therefore, they are not generating new VMT each day, only redistributing it. It is important to note that construction traffic is temporary and not expected to significantly increase VMT or permanently degrade operations of a roadway facility. This redistribution is considered to be nominal and momentary. Additionally, per OPR's Technical Advisory, SB 743's intent is to plan for "long term climate goals"[2], so projects with temporary affects to VMT and the transportation system are not deemed to be significant. Consequently, it is assumed that the transportation impacts would be less than significant during the construction of the Proposed Project.

4.2 Construction Parking

Contractors will be required to park within the limits of the project site in designated equipment and material staging areas. Construction workers would park in designated spaces within proximity to the project site and the contractor may elect to have high occupancy vehicles transporting construction workers on and off site daily. As noted in Section 4.1, 10 construction workers are anticipated to access the site on a daily basis. As such, the anticipated parking demand during Proposed Project construction would be a maximum of 10 parking spaces.

No parking lots will be used for construction staging or laydown. Designated areas (existing) at or near the construction site will be utilized for staging or laydown.

DRAFT

[2] Page 10 of OPR's *Technical Advisory* states "Based on OPR's extensive review of the applicable research, and in light of an assessment by the California Air Resources Board quantifying the need for VMT reduction in order to meet the State's long-term climate goals...."
