PARKING LOT 6 REHABILITATION, IMPROVEMENT, AND MAINTENANCE PROJECT

Parking Lot 6, which is located immediately south of John Bangs Drive, currently serves as an overflow parking lot. It has been graded and has a 95% compacted base surface. Striping of parking lanes and some parking spaces exist on Lot 6.

The proposed rehabilitation, improvement and maintenance project for Parking Lot 6 will consist of the following activities: some further grading, further compaction of soil and base material, trenching and backfill for electrical and data equipment, drainage system installation, installation of asphalt concrete (AC) paving, and re-striping of parking lanes and spaces. Other activities include foundation construction for the installation of light poles, LED light fixtures, camera poles, security cameras, emergency call beacons, entrance and exit parking equipment, and canopies over all entrances and exits to Parking Lot 6.

The proposed project also includes improvements made at the intersection of John Bangs Drive and Rental Car Road which include: the removal of trees, shrubs, landscaping, and curbs within existing paved and right-of-way areas, and the relocation of crosswalks and stop signs, and the creation of bus lane bypass through landscaped area. Other activities include: the installation of entrance/exit equipment for bus use only (solar power), striping, compaction of base material, paving, and grading in existing John Bangs Drive.
