TRAFFIC IMPACT STUDY
FOR THE
AIRPORT GATEWAY SPECIFIC PLAN PROJECT
IN THE CITIES OF SAN BERNARDINO AND HIGHLAND

INTRODUCTION

Purpose and Study Objectives

This traffic impact study has been prepared to address the traffic-related impacts of the proposed Airport Gateway Specific Plan located in the Cities of San Bernardino and Highland. This traffic impact study has been conducted in accordance with the traffic study requirements of the Cities of San Bernardino and Highland, and in accordance with the San Bernardino Association of Governments (SANBAG) Congestion Management Program (CMP) requirements.

This report includes a description of existing traffic conditions in the surrounding area, estimated project trip generation and distribution, future traffic growth, and an assessment of project-related impacts on the roadway system. Where necessary, circulation system improvements have been identified to mitigate significant project impacts at the study locations.

PROJECT DESCRIPTION

The Airport Gateway Specific Plan (AGSP) area covers approximately 679.2 acres, located immediately north of the San Bernardino International Airport (SBIA). The Specific Plan area is bounded generally by 6th Street and Highland Creek on the north, 3rd Street and the SBIA on the south, State Route 210 (SR-210) on the east, and Tippecanoe Avenue on the west. North of the Specific Plan area (on the north side of 6th Street) is bordered by a mix of low- and medium-density residential uses and vacant parcels, as well as several public facilities including Indian Springs High School, Cypress Elementary School, Highland Community Park and the Highland Branch Library.

The Specific Plan area includes parcels in both the City of Highland (485 acres) and the City of San Bernardino (194.2 acres). The Project site is shown in its regional setting on Figure 1. The Specific Plan area is depicted on Figure 2.

The existing uses within the Specific Plan area include single-family and multi-family residential, small-lot commercial, educational facilities, and industrial uses. Vacant parcels make up approximately 209 acres of the Specific Plan area.

The AGSP would replace the existing uses within the Specific Plan area with approximately 9.2 million square feet of Industrial Mixed Uses, consisting of industrial warehouse, high-cube logistics warehouse, tech business park, and a small amount of commercial/retail/hotel uses. Development of the Specific Plan area will be accomplished over time, as market conditions allow, and as developers are successful in assembling individual parcels into parcels large enough for the allowed uses.

ANALYSIS SCENARIOS AND METHODOLOGY

Analysis Scenarios

The project will be evaluated for the following study scenarios:

- Existing Conditions
- Existing Plus Project
- Future Build-Out 2040
- Future Build-Out 2040 Plus Project
    - With Mitigation, if necessary

Study Locations

The study locations were established in consultation with traffic engineering staff from the Cities of San Bernardino and Highland through the Scoping Agreement process. A copy of the approved Scope of Study Forms is provided in *Appendix A*.

The study locations are shown on Figure 3.

Study Intersections:

Int. #	Intersection	Jurisdiction	Traffic Control
1	Del Rosa Avenue at I-210 WB Ramps	Caltrans	S
2	Del Rosa Avenue at I-210 EB Ramps	Caltrans	S
3	Date Street at Del Rosa Avenue	San Bernardino	S

ANALYSIS METHODOLOGY

Intersection Analysis – HCM Methodology

Peak hour intersection operations are evaluated using the methodology outlined in the Highway Capacity Manual (HCM), consistent with the requirements of the Cities of San Bernardino and Highland and the San Bernardino County CMP. The intersection analysis was conducted using the Vistro software program and using the input parameters specified in the San Bernardino County CMP.

Per the HCM Methodology, Level of Service (LOS) for signalized intersections is defined in terms of average vehicle delay for all intersection movements during the peak hour. Specifically, LOS criteria are stated in terms of the average control delay per vehicle, which includes initial deceleration delay, queue move-up time, and final acceleration time in addition to the stop delay. Level of Service for unsignalized intersections is based on the average vehicle delay for the intersection approach or movement that has the worst (highest) delay.

The following charts provide a description of the operating characteristics of each Level of Service and average seconds of delay for signalized and unsignalized intersections.

LEVEL OF SERVICE DEFINITIONS	
Level of Service	Description
A	No approach phase is fully utilized by traffic and no vehicle waits longer than one red indication. Typically, the approach appears quite open, turns are made easily and nearly all drivers find freedom of operation.
B	This service level represents stable operation, where an occasional approach phase is fully utilized and a substantial number are approaching full use. Many drivers begin to feel restricted within platoons of vehicles.
C	This level still represents stable operating conditions. Occasionally drivers may have to wait through more than one red signal indication, and backups may develop behind turning vehicles. Most drivers feel somewhat restricted but not objectionably so.
D	This level encompasses a zone of increasing restriction, approaching instability at the intersection. Delays to approaching vehicles may be substantial during short peaks within the peak period; however, enough cycles with lower demand occur to permit periodic clearance of developing queues, thus preventing excessive backups.
E	Capacity occurs at the upper end of this service level. It represents the most vehicles that any particular intersection approach can accommodate. Full utilization of every signal cycle is seldom attained no matter how great the demand.
F	This level describes forced flow operations at low speeds, where volumes exceed capacity. These conditions usually result from queues of vehicles backing up from a restriction downstream. Speeds are reduced substantially and stoppages may occur for short or long periods of time due to the congestion. In the extreme case, both speed and volume can drop to zero.

LEVEL OF SERVICE CRITERIA FOR SIGNALIZED AND UNSIGNALIZED INTERSECTIONS		
Level of Service [1]	Signalized Intersection (Average delay per vehicle, in seconds) [2]	Unsignalized Intersections (Average delay per vehicle, in seconds) [3]
A	≤ 10	0 – 10
B	> 10 – 20	> 10 – 15
C	> 20 – 35	> 15 – 25
D	> 35 – 55	> 25 – 35
E	> 55 – 80	> 35 – 50
F	> 80	> 50

[1] Per the San Bernardino County CMP, intersections will be considered operating at LOS F if the critical v/c ratio equals or exceeds 1.00.
[2] Source: Highway Capacity Manual (HCM 6th Edition), Exhibit 18-4.
[3] Source: Highway Capacity Manual (HCM 6th Edition), Exhibits 19-1 and 20-2.

Roadway Segment Analysis

The roadway segment analysis will address the project's impact on daily operating conditions on roadways within the project vicinity. Roadway segments are evaluated by comparing the daily traffic volume to the daily capacity of that segment, to determine the volume-to-capacity (v/c) ratio. Daily capacity is based on the roadway classification in the City of San Bernardino, as shown in the following chart:

DAILY ROADWAY CAPACITY		
Roadway Classification	Number of Lanes	Daily Capacity (Vehicles per day)
Major Arterial	6	60,000
Major Arterial	4	40,000
Major Arterial	2	15,000
Secondary Arterial	4	30,000
Secondary Arterial	2	12,000
Collector Street	4	25,000
Collector Street	2	10,000
Source: City of San Bernardino General Plan		

Many of the study roadway segments cross city boundaries between the Cities of San Bernardino and Highland. In several cases, the city boundary runs down the middle of the roadway and the Cities of San Bernardino and Highland have assigned different functional classifications to the roadway.

It should also be noted that the City of Highland evaluates roadway segments using a different methodology, based on the HCM Base Free-Flow Speed (BFFS) approach. For purposes of this joint study, all roadway segments are evaluated using the daily capacity methodology presented above. If a roadway segment located wholly within the City of Highland is found to be deficient based on the daily capacity methodology, that roadway segment will be re-evaluated using the BFFS approach to determine if the deficient roadway within the City of Highland would operate acceptably during the AM and PM peak hours.

Corridor Analysis

Per request from the City of Highland, a corridor analysis was conducted to evaluate the operations of the roadway segment of 5th Street between I-215 Southbound Ramps and SR-210 Westbound Ramps. Corridor operations were evaluated based on the Highway Capacity Manual 2000 (HCM 2000) Urban Street methodology or the arterial level of service analysis within Synchro software. It should be noted that the City does not have any significance criteria for arterial level of service and the results are stated for informational purposes.

For urban street segments, the level of service is based on travel time as defined in the chart below. 5th Street is a Class II arterial.

URBAN STREET LEVEL OF SERVICE DEFINITION				
Urban Class	I	II	III	IV
Range of free-flow speeds (FFS)	55 to 45 mph	45 to 35 mph	35 to 30 mph	35 to 25 mph
Typical FFS	50 mph	40 mph	35 mph	30 mph
LOS	Average Travel Speed (mph)			
A	> 42	> 35	> 30	> 25
B	> 34 - 42	> 28 - 35	> 24 - 30	> 19 - 25
C	> 27 - 34	> 22 - 28	> 18 - 24	> 13 - 19
D	> 21 - 27	> 17 - 22	> 14 - 18	> 9 - 13
E	> 16 - 21	> 13 - 17	> 10 - 14	> 7 - 9
F	≤ 16	≤ 13	≤ 10	≤ 7

Source: Transportation Research Board, Highway Capacity Manual 2000, National Research Council, 2000

Level of Service Standards and Measure of Significance

City of San Bernardino

The City of San Bernardino General Plan Circulation Element establishes minimum Level of Service standards, which require that City intersections operate at LOS D or better during the morning and evening peak hours, and that roadway segments operate at LOS C or better. Traffic impacts at an intersection are considered to be significant when any of the following changes in the volume-to-capacity (V/C) ratio occurs between the "without project" and the "with project" conditions:

LOS Without Project	V/C Difference
C	> 0.0400
D	> 0.0200
E, F	> 0.0100

New development is required to mitigate impacts where the project results in a significant impact as shown above.

City of Highland

The Level of Service standard for intersections in the City of Highland is LOS D or better for peak hour operations and LOS C or better for roadway segments. Based on the City of Highland's Public Works Policies, Procedures, and Standards, Section 9.0 (Traffic), all intersection levels of service below "D" and all roadway segment levels of service below "C" shall be mitigated.

State-Controlled Intersections (Caltrans)

For State-controlled intersections, Caltrans' Level of Service standards and impact criteria will apply. The Caltrans *Guide for the Preparation of Traffic Impact Studies* (2003) states that, "Caltrans endeavors to maintain a target LOS at the transition between LOS "C" and LOS "D" on State highway facilities. If an existing State highway facility is operating at less than the appropriate target LOS, the existing MOE (measure of effectiveness) should be maintained.

General Plan Circulation Plans

The City of San Bernardino General Plan Circulation Plan and the City of Highland General Plan Circulation Element provide roadway designations for the roadway system serving the Specific Plan area and the surrounding vicinity. A copy of the City of San Bernardino Circulation Plan and Standard Cross Sections is provided on Figure 4. A copy of the City of Highland Circulation Element and Standard Cross Sections is provided on Figure 5.

EXISTING TRAFFIC CONDITIONS

Existing Street System

Regional access to the site is provided primarily by the Interstate 215 (I-215) Freeway, located approximately 2 miles to the west of the Specific Plan area. In addition, the I-10 Freeway is located approximately 3 miles to the south of the project. State Route 210 (SR-210) is oriented in an east-west direction approximately 2.5 miles to the north of the Specific Plan area, and then turns southward and is oriented in a north-south direction adjacent to the Specific Plan eastern boundary.

The following provides a description of the roadways surrounding the Specific Plan area.

Waterman Avenue is a north-south roadway that provides two to three lanes in each direction, with either a raised median or a center two-way left-turn lane in the project vicinity. The speed limit is 40 miles per hour (MPH) and on-street parking is prohibited on both sides. Waterman Avenue is designated on the City of San Bernardino's Circulation Plan as a Major Arterial.

Tippecanoe Avenue is a north-south roadway that provides two to three lanes in each direction, with either a raised median or a center two-way left-turn lane. Tippecanoe Avenue will form the westernmost boundary of the Specific Plan area. The speed limit ranges from 30 to 45 MPH and on-street parking is prohibited on both sides. Tippecanoe Avenue is designated on the City of San Bernardino's Circulation Plan as a Secondary Arterial north of 3rd Street and a Major Arterial south of 3rd Street; Tippecanoe Avenue is designated on the City of Highland's Circulation Element as a Secondary Highway.

Del Rosa Drive is a north-south roadway that provides one to two lanes in each direction, with either a raised median or a center two-way left-turn lane in the project vicinity. Del Rosa Drive extends through and beyond the Specific Plan boundary in both the north and south directions. The speed limit ranges from 35 to 45 MPH, with a 25-MPH school zone from Baseline Street to 6th Street. Del Rosa Drive is designated on the City of San Bernardino's Circulation Plan as a Major Arterial and is designated on the City of Highland's Circulation Element as a Secondary Highway.

Sterling Avenue is a north-south roadway that provides two lanes in each direction, with a center two-way left-turn lane in the project vicinity. Sterling Avenue starts at 3rd Street, and extends northward through and beyond the Specific Plan boundary. The speed limit is 40 MPH. Sterling Avenue is designated on the City of San Bernardino's Circulation Plan as a Major Arterial and is designated on the City of Highland's Circulation Element as a Major Highway.

Victoria Avenue is a north-south roadway that provides two lanes in each direction, with a center two-way left-turn lane in the project vicinity. Victoria Avenue extends through and beyond the Specific Plan boundary in both the north and south directions. The speed limit ranges from 40 to 45 MPH and on-street parking is prohibited on both sides. Victoria Avenue is designated on the City of San Bernardino's Circulation Plan as a Secondary Arterial and is designated on the City of Highland's Circulation Element as a Major Highway.

Central Avenue is a north-south undivided roadway that provides one lane in each direction. Central Avenue starts at 3rd Street and extends northward through and beyond the Specific Plan boundary. On-street parking is permitted on both sides. Central Avenue is designated on the City of San Bernardino's Circulation Plan as a Collector and is designated on the City of Highland's Circulation Element as a Collector Street.

Palm Avenue is a north-south roadway that provides two lanes in each direction, with either a raised median or a center two-way left-turn lane in the project vicinity. Palm Avenue extends through and beyond Specific Plan boundary in both the north and south directions. The speed limit is 45 MPH. Palm Avenue is designated on the City of San Bernardino's Circulation Plan as a Major Arterial and in the City of Highland's Circulation Element as a Major Highway north of Pacific Street and between Base Line Street and 3rd Street; a Special Collector Street between Pacific Street and Base Line Street; and a Primary Arterial south of 3rd Street.

Church Avenue is a north-south undivided roadway that provides one lane in each direction. Church Avenue started at 5th Street and extends northward to Pacific Street. The speed limit ranges from 35 MPH. Church Avenue is designated on the City of Highland's Circulation Element as a Collector Street.

6th Street is an east-west undivided roadway that provides one travel lane in each direction. 6th Street will form the northern boundary of the Specific Plan area from Tippecanoe Avenue to Central Avenue. The posted speed limit is 40 MPH, with a 25-MPH school zone from Tippecanoe Avenue to Del Rosa Drive. 6th Street is designated as a Collector Street on the City of San Bernardino's Circulation Plan and on the City of Highland's Circulation Element.

5th Street is an east-west roadway that provides one to two lanes in each direction in the project vicinity, with a center two-way left-turn lane in some sections. 5th Street provides a direct connection to both the I-215 Freeway to the West and the SR-210 Freeway to the East. 5th Street will traverse the entire length of the Specific Plan area and will have development on both sides of the street. The speed limit ranges from 40 to 45 MPH, with a 25-MPH school zone to the east of Waterman Avenue. 5th Street is designated on the City of San Bernardino's Circulation Plan as a Major Arterial and in the City of Highland's Circulation Element as a Major Highway west of Palm Avenue within the City's boundary and as a Primary Arterial east of Palm Avenue.

3rd Street is an east-west roadway that provides two lanes in each direction, with a center two-way left-turn lane. The speed limit ranges from 45 to 50 MPH. 3rd Street is designated on the City of San Bernardino's Circulation Plan as a Major Arterial and is designated on the City of Highland's Circulation Element as a Primary Arterial. 3rd Street will form the southern boundary of the Specific Plan area from Tippecanoe Avenue to its eastern terminus.

3rd Street currently dead-ends southwest of the intersection of 5th Street at Church Avenue, in the City of Highland. The City has approved an improvement project that will connect 3rd Street to 5th Street to the east and west of Church Avenue. The future connection to the east of Church Avenue will allow eastbound traffic on 3rd Street to merge onto eastbound 5th Street. The connection to the west of Church Avenue will allow limited access from 5th Street to westbound 3rd Street. The timing for completion of this improvement is uncertain.

Existing Transit Service

Transit service to the project area is provided by OmniTrans, which serves the Cities of San Bernardino, Highland and other surrounding cities. Currently only Route 15 travels on any of the streets within the Specific Plan area.

OmniTrans Route 15 operates between the City of Redlands and the City of Fontana, traveling through the Specific Plan area along Tippecanoe Avenue, Del Rosa Avenue, Central Avenue, and Palm Avenue. Key stops along Route 15 include The San Bernardino County Court Building, Redlands Mall, San Bernardino Stadium, San Bernardino Valley College, Fontana Metrolink, and the San Bernardino Transit Center. At the San Bernardino Transit Center, passengers can transfer to other OmniTrans routes, as well as to Riverside Transit (RTA), Mountain Transit, Pass Transit and Victor Valley Transit Authority (VVTA) routes, or to Metrolink.

Route 15 operates on weekdays from 6:40 AM to 10:40 PM with approximately 30-minute headways (the time between bus arrivals), and on Saturdays and Sundays from approximately 6:40 AM to 7:25 PM with approximately 1-hour headways.

The OmniTrans bus stops located closest to the Specific Plan area are as follows:

- Tippecanoe Avenue at 3rd Street
- Del Rosa Drive at 3rd Street
- Del Rosa Drive at 6th Street
- Central Avenue at 5th Street
- Palm Avenue at 5th Street

Existing Traffic Volumes

Intersection and roadway traffic volumes at the study locations were obtained from traffic studies for other projects in the vicinity, where available; and were collected at the study locations where counts were not available. Copies of the traffic count data worksheets are provided in *Appendix B*.

The traffic counts included vehicle classifications for passenger cars, 2-axle trucks, 3-axle trucks, and 4+-axle trucks. The vehicle classification data was used to develop Passenger Car Equivalent (PCE) volumes by applying a PCE factor of 2.0 PCE for 2-axle trucks, 2.5 PCE for 3-axle trucks, and 3.0 PCE for 4+-axle trucks. For locations without vehicle classification data, the percentage of trucks was estimated from classification counts at surrounding locations.

Existing lane configurations and traffic control at the study intersections are shown on Figure 6. Existing morning and evening peak hour intersection volumes are presented on Figure 7. Daily roadway volumes are presented on Figure 8. The existing volumes on Figures 7 and 8 reflect the PCE factors described above.

Existing Operating Conditions

Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for the morning and evening peak hours using the analysis procedures and assumptions described previously in this report. The results are shown on Table 1. Review of this table indicates that all study intersections currently operate at an acceptable Level of Service in both peak hours, with the exception of the following intersections:

- #20 – Sterling Avenue at 6th Street (unsignalized): AM – LOS F; PM – LOS E
- #41 – Central Avenue at 3rd Street (unsignalized): PM – LOS E

Copies of the intersection analysis worksheets are provided in *Appendix C*.

These two intersections are unsignalized. As described in the methodology section, the Level of Service for unsignalized intersections is based on the average vehicle delay for the intersection approach or movement that has the worst (highest) delay. In the case of these intersections, vehicles on the side street stop-controlled movements (6th Street at intersection #20, and Central Avenue at intersection #41) experience delay as they wait for a gap in the through traffic on the main arterial. Under current conditions, neither intersection would warrant a signal based on the peak hour volumes.

Daily Roadway Operating Conditions

Roadway Level of Service analysis was conducted based on the roadway capacities presented previously in this report. The results are shown on Table 2. Review of this table indicates that the following study roadway segments are currently operating at an unacceptable Level of Service:

- Tippecanoe Avenue: Mill Street to Orange Show Road / San Bernardino Avenue (LOS D)
- Del Rosa Drive: Highland Avenue to Pacific Street (LOS F)

Notes:
- Level of Service is based on the delay value.
- Bold and shaded values indicate intersections operating at LOS E or F or significant impact to intersection per City or Caltrans standards.
- At a signalized intersection, delay refers to the average control delay for the entire intersection, measured in seconds per vehicle.
- At a two-way stop-controlled intersection, delay refers to the average vehicle delay on the movement with the highest delay.
- Delay values are based on the methodology outlined in the Highway Capacity Manual, 6th Edition.
- S = Signalized; U = Unsignalized
- C = Caltrans; SB = San Bernardino; H = Highland

[2] Existing daily traffic volumes include passenger car equivalent (PCE) factors for trucks: 2-axle - 2.0; 3-axle - 2.5; 4+-axle - 3.0

LOS = Level of Service ADT = Average Daily Traffic V/C = Volume-to-Capacity

Jurisdiction: SB = San Bernardino, H = Highland, SB / H = Portions of the roadway segment are in both cities

PROJECT TRAFFIC

Project Trip Generation

The AGSP would replace the land uses currently existing within the Specific Plan area with approximately 9.2 million square feet of Industrial Mixed Uses, consisting of industrial warehouse, high-cube logistics warehouse, tech business park, and a small amount of commercial / retail uses.

Trip generation estimates for the Airport Gateway Specific Plan project are based on daily and peak hour trip generation rates obtained from the Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition).

Based on the uses and intensities (expressed as floor area ratio, or FAR) allowed in the Specific Plan, the AGSP mix of uses assumed for this analysis and the associated ITE Land Use Category for each land use are as follows:

Land Use	ITE Land Use Code	Quantity	Unit
Industrial Warehouse	150	6,310,472	Sq. Ft.
High-Cube Warehouse	154	1,352,244	Sq. Ft.
Research and Development	760	1,302,161	Sq. Ft.
Retail / Commercial	820	205,483	Sq. Ft.
Hotel	310	150	Room

Passenger vehicle and truck mix assumptions were applied to the warehouse and high cube components of the project, based on the City of Fontana Truck Trip Generation Study. Passenger car equivalent (PCE) factors were then applied to the truck types, based on number of axles (2.0 PCE for 2-axle trucks, 2.5 PCE for 3-axle trucks, and 3.0 PCE for 4+-axle trucks) to determine the total PCE trips to be generated by the project.

Trip credits were taken into account for the existing uses in the Specific Plan area that would be removed. For a conservative analysis, the trip generation estimates for the existing uses were reduced by 25%. A summary of existing land uses and the associated trip generation is provided on Table B-2 in *Appendix A*.

The trip generation rates, truck mix, PCE factors, and the resulting trip generation estimates for the project are summarized on Table 3. The AGSP project is estimated to generate 30,972 net PCE trips on a daily basis, with 1,772 net PCE trips in the morning peak hour, and 2,220 net PCE trips in the evening peak hour. The net project trips, including the existing land use credits, were divided proportionately into smaller zones within the Specific Plan. The smaller zones were based on access to adjacent streets.

Trip Distribution and Assignment

Trip distribution assumptions for the project were developed taking into account the proposed Specific Plan uses, the roadway system serving the project area, and the routes to and from the freeway system for the warehouse trucks. The Specific Plan area was divided into smaller zones based on access to adjacent streets and modeled using the Vistro software. The internal project trip distribution and assignment were proportional to the land use intensities within the smaller zones. Separate distribution patterns were assumed for passenger car trips and truck trips. Project trucks are assumed to use 3rd Street or 5th Street to enter the warehouse developments. No truck entrances will be located on 6th Street. Passenger car entrances will be located on the north-south streets, where feasible, to minimize project traffic on 6th Street. Trip distribution assumptions are shown on Figure 9.

Trip distribution percentages were applied to the project trip generation to determine the project trips through each study intersection and on the study roadway segments. The resulting project-related peak hour volumes are shown on Figure 10. Daily roadway volumes are shown on Figure 11.

EXISTING PLUS PROJECT CONDITIONS

The Existing Plus Project analysis scenario is a hypothetical scenario that assumes completion of the project and full absorption of the project traffic on the surrounding street network at the current time. The Existing Plus Project scenario is required by the California Environmental Quality Act (CEQA).

Project-related traffic was added to the Existing traffic volumes. The Existing Plus Project traffic volumes at the study intersections are shown on Figure 12. Existing Plus Project daily roadway volumes are shown on Figure 13.

Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for the Existing Plus Project condition. The results are shown on Table 4. Copies of the intersection analysis worksheets are provided in *Appendix C*.

Review of this table indicates that, with the addition of Project traffic, the following intersections would operate at an unacceptable Level of Service:

- #1 - Del Rosa Drive at SR-210 WB Ramps: AM – LOS E
- #20 - Sterling Avenue at 6th Street: AM – LOS F; PM – LOS F
- #21 - Victoria Avenue at 6th Street: PM – LOS F
- #33 - Palm Avenue at 5th Street: AM – LOS E; PM – LOS F
- #41 - Central Avenue at 3rd Street: PM – LOS F

Based on the impact criteria presented earlier in the report for the Cities of San Bernardino and Highland and for Caltrans, the Project impact at each of these intersections would be considered to be a significant project impact.

Notes:
- Level of Service is based on the delay value.
- Bold and shaded values indicate intersections operating at LOS E or F or significant impact to intersection per City or Caltrans standards.
- At a signalized intersection, delay refers to the average control delay for the entire intersection, measured in seconds per vehicle.
- At a two-way stop-controlled intersection, delay refers to the average vehicle delay on the movement with the highest delay.
- Delay values are based on the methodology outlined in the Highway Capacity Manual, 6th Edition.
- S = Signalized; U = Unsignalized
- C = Caltrans; SB = San Bernardino; H = Highland

Daily Roadway Operating Conditions

Roadway Level of Service analysis was conducted for the Existing Plus Project condition, and the results are summarized on Table 5. Review of this table indicates that with the addition of Project traffic, the following roadway segments would operate at an unacceptable Level of Service (LOS D or worse):

- Tippecanoe Avenue: Mill Street to Orange Show Road / San Bernardino Avenue (LOS F)
- Del Rosa Drive: Highland Avenue to Pacific Street (LOS F)
- 6th Street:
    - Sterling Avenue to Victoria Avenue (LOS F)
    - Victoria Avenue to Central Avenue (LOS F)
- 5th Street:
    - I-215 NB Ramps to E Street (LOS F)
    - E Street to Waterman Avenue (LOS D)
    - Waterman Avenue to Tippecanoe Avenue (LOS F)
    - Tippecanoe Avenue to Del Rosa Drive (LOS F)
    - Sterling Avenue to Victoria Avenue (LOS F)
    - Victoria Avenue to Central Avenue (LOS D)
    - Central Avenue to Palm Avenue (LOS D)
    - Palm Avenue to SR-210 EB Ramps (LOS F)

The Project impact on each of these roadway segments would be considered to be a significant project impact. With the exception of the Tippecanoe Avenue and Del Rosa Drive roadway segments, and the roadway segment of 5th Street from I-215 NB Ramps to Waterman Avenue; the deficient roadways are located within the Specific Plan boundaries and would require improvement as part of the future development of the Specific Plan, as discussed later in this report.

FUTURE CONDITIONS

The Airport Gateway Specific Plan is a programmatic policy-level plan that will be developed incrementally over time, as market conditions allow. There are no identified developers, end users, or even site-specific plans at this time. As developers purchase and assemble individual parcels into parcels large enough for the allowed uses and submit applications for development, a site-specific traffic study, among other technical studies, will be required as part of the entitlement process. Since the timing of development of any portion of the Specific Plan area is uncertain, the analysis of the project for future conditions will focus on build-out conditions for the area.

TABLE 5

Notes: [1] Source: City of San Bernardino General Plan Update (2005)

[2] Existing daily traffic volumes include passenger car equivalent (PCE) factors for trucks: 2-axle - 2.0; 3-axle - 2.5; 4+-axle - 3.0

LOS = Level of Service ADT = Average Daily Traffic V/C = Volume-to-Capacity

[3] The estimated Project ADTs are conservative to account for potential variability in traffic generation and distribution for different types of industrial users, employee shift schedules etc.

Future Build-Out 2040 Conditions

To develop Future Build-Out 2040 intersection and roadway traffic forecasts, the San Bernardino Transportation Analysis Model (SBTAM) Base Year 2012 and Build-out Year 2040 model outputs were used. The raw volumes obtained from the model output were post-processed by determining the annual growth between the base model year and the future model year and applying the growth increment to existing count volumes. This was accomplished using the B-Turns methodology, based on the National Cooperative Highway Research Program (NCHRP) Report 255, developed by the Federal Highway Administration (FHWA). As a conservative approach, if a future forecast volume produced by this process was less than the Existing volume, manual adjustments were made to assure that all forecast volumes would not be less than the Existing volumes. In addition, per request from the City of Highland, trips from the traffic studies for the following Cumulative Projects were added to the future forecasts, as they were not included in the SBTAM model projections: (1) SBIA Air Freight/Eastgate Warehouse project, (2) Duke Realty Warehouse project, and (3) Transition Properties project.

The Future Build-Out 2040 SBTAM forecasts include land use assumptions within the Specific Plan area, based on the current General Plan land use designation for the area – a combination of low- and medium-density residential, industrial, commercial, and institutional uses. For a conservative approach, the trips associated with these land uses were not deducted from the 2040 forecasts before adding the Specific Plan project-related trips. It should be noted that future forecasts and project trip assignments were manually adjusted to account for the future connection of 5th Street and 3rd Street, east and west of Church Avenue. Existing lane geometries at the study locations were assumed to remain for the Future Build-Out 2040 and Future Build-Out 2040 Plus Project scenarios.

The SBTAM Model plots, B-Turns worksheets, and Cumulative Project traffic studies are provided in *Appendix D.* The resulting Future Build-Out 2040 peak hour intersection traffic volumes are shown on Figure 14. Daily roadway volumes are shown on Figure 15.

Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for the Future Build-Out 2040 condition, and the results are shown on Table 6. The intersection analysis worksheets are provided in *Appendix C.*

Review of this table indicates that, under Future Build-Out 2040 conditions, the following intersections would operate at an unacceptable Level of Service:

- #1 – Del Rosa Drive at SR-210 WB Ramps: AM – LOS E
- #20 – Sterling Avenue at 6th Street: AM LOS F; PM LOS F
- #21 – Victoria Avenue at 6th Street: PM – LOS E
- #38 – Del Rosa Drive at 3rd Street: PM – LOS E
- #41 – Central Avenue at 3rd Street: PM – LOS F
- #42 – Palm Avenue at 3rd Street: PM – LOS E
- #46 – Tippecanoe Avenue at Orange Show Road/San Bernardino Avenue: PM – LOS E

Notes:
- Level of Service is based on the delay value.
- Bold and shaded values indicate intersections operating at LOS E or F or significant impact to intersection per City or Caltrans standards.
- At a signalized intersection, delay refers to the average control delay for the entire intersection, measured in seconds per vehicle.
- At a two-way stop-controlled intersection, delay refers to the average vehicle delay on the movement with the highest delay.
- Delay values are based on the methodology outlined in the Highway Capacity Manual, 6th Edition.
- F* = Per County of San Bernardino CMP guidelines, the Level of Service for an intersection with a v/c of 1.00 or greater is LOS F, regardless of the LOS based on delay.

Daily Roadway Operating Conditions

Roadway Level of Service analysis was conducted for the Future Build-Out 2040 condition, and the results are summarized on Table 7. Review of this table indicates that for the Future Build-Out 2040 condition, all study roadway segments would operate at Level of Service C or better, except for the following roadway segments:

- Tippecanoe Avenue: Mill Street to Orange Show Road / San Bernardino Avenue (LOS F)
- Del Rosa Drive: Highland Avenue to Pacific Street (LOS F)
- 6th Street: Sterling Avenue to Victoria Avenue (LOS D)
- 5th Street:
    - I-215 NB Ramps to E Street (LOS E)
    - Waterman Avenue to Tippecanoe Ave (LOS E)
    - Tippecanoe Avenue to Del Rosa Drive (LOS E)
    - Palm Avenue to SR-210 EB Ramps (LOS D)
- 3rd Street: Del Rosa Drive to Sterling Avenue (LOS D)

Future Build-Out 2040 Plus Project Conditions

Project-related traffic was added to the Future Build-Out 2040 traffic volumes. The resulting Future Build-Out 2040 Plus Project peak hour intersection volumes are shown on Figure 16. Daily roadway volumes are shown on Figure 17.

Peak Hour Operating Conditions

Intersection Level of Service analysis was conducted for the Future Build-Out 2040 Plus Project condition. The results are shown on Table 8. Copies of intersection analysis worksheets are provided in *Appendix C*.

Review of this table indicates that, with the addition of Project traffic, the following intersections would operate at an unacceptable Level of Service:

- #1 – Del Rosa Drive at SR-210 WB Ramps: AM – LOS E
- #7 – Victoria Avenue at Highland Avenue: PM – LOS E
- #20 – Sterling Avenue at 6th Street: AM LOS F; PM LOS F
- #21 – Victoria Avenue at 6th Street: AM – LOS F; PM – LOS F
- #33 – Palm Avenue at 5th Street: AM – LOS E; PM – LOS F
- #35 – SR-210 EB Ramps at 5th Street: PM – LOS F
- #38 – Del Rosa Drive at 3rd Street: PM – LOS E
- #41 – Central Avenue at 3rd Street: PM – LOS F
- #42 – Palm Avenue at 3rd Street: PM – LOS E
- #46 – Tippecanoe Avenue at Orange Show Road /San Bernardino Avenue: PM – LOS E

Notes:
- Level of Service is based on the delay value.
- Bold and shaded values indicate intersections operating at LOS E or F or significant impact to intersection per City or Caltrans standards.
- At a signalized intersection, delay refers to the average control delay for the entire intersection, measured in seconds per vehicle.
- At a two-way stop-controlled intersection, delay refers to the average vehicle delay on the movement with the highest delay.
- Delay values are based on the methodology outlined in the Highway Capacity Manual, 6th Edition.
- F* = Per County of San Bernardino CMP guidelines, the Level of Service for an intersection with a v/c of 1.00 or greater is LOS F, regardless of the LOS based on delay.

Based on the impact criteria presented earlier in the report for the Cities of San Bernardino and Highland and for Caltrans, the Project impact at each of these intersections would be considered to be a significant project impact.

Mitigation measures and improvements for all deficient intersections are identified in the Mitigation Section of this report.

Daily Roadway Operating Conditions

Roadway Level of Service analysis was conducted for the Future Build-Out 2040 Plus Project condition, and the results are summarized on Table 9. Review of this table indicates that with the addition of Project traffic, the following study roadway segments would operate at an unacceptable Level of Service:

- Tippecanoe Avenue:
  - 3rd Street to Mill Street (LOS D)
  - Mill Street to Orange Show/San Bernardino Avenue (LOS F)
- Del Rosa Drive: Highland Avenue to Pacific Street (LOS F)
- 6th Street:
  - Del Rosa Drive to Sterling Avenue (LOS F)
  - Sterling Avenue to Victoria Avenue (LOS F)
  - Victoria Avenue to Central Avenue (LOS F)
- 5th Street:
  - I-215 NB Ramps to E Street (LOS F)
  - E Street to Waterman Avenue (LOS D)
  - Waterman Avenue to Tippecanoe Avenue (LOS F)
  - Tippecanoe Avenue to Del Rosa Drive (LOS F)
  - Sterling Avenue to Victoria Avenue (LOS F)
  - Victoria Avenue to Central Avenue (LOS D)
  - Central Avenue to Palm Avenue (LOS E)
  - Palm Avenue to SR-210 EB Ramps (LOS F)
- 3rd Street: Del Rosa Drive to Sterling Avenue (LOS F)

The Project impact on each of these roadway segments would be considered to be a significant project impact. Mitigation measures for these segments are identified in the Mitigation Section of this report.

Notes: [1] Source: City of San Bernardino General Plan Update (2005)

LOS = Level of Service ADT = Average Daily Traffic V/C = Volume-to-Capacity

[3]The estimated Project ADTs are conservative to account for potential variability in traffic generation and distribution for different types of industrial users, employee shift schedules etc.

Base Free-Flow Speed (BFFS) Arterial Analysis

The following deficient roadway segments are located wholly within the City of Highland:

- 6th Street:
  - Del Rosa Drive to Sterling Avenue
  - Victoria Avenue to Central Avenue
- 5th Street:
  - Tippecanoe Avenue to Del Rosa Drive
  - Victoria Avenue to Central Avenue
  - Central Avenue to Palm Avenue
  - Palm Avenue to SR-210 EB Ramps

A base free-flow speed (BFFS) arterial analysis was conducted for these segments based on the Highway Capacity Manual 6th Edition. A BFFS arterial analysis evaluates the travel speed of a particular roadway segment compared to its base free-flow speed in each direction of travel during the morning and evening peak hour. The analysis was conducted using the Highway Capacity Software (HCS7) for Future Build-Out 2040 peak hour conditions. The results of the analysis are presented on Table 10. HCS7 outputs for the BFFS arterial analysis can be found in *Appendix G*. Review of the table shows that all deficient roadways noted above operate at an acceptable BFFS Level of Service during the AM and PM peak hours, except for following roadway segment:

- 5th Street: Central Avenue to Palm Avenue (Eastbound): PM – LOS F

Corridor Analysis

Per request from the City of Highland, a corridor analysis was conducted to evaluate the operations of the segment of 5th Street between the I-215 Southbound Ramps and SR-210 Westbound Ramps, which may be classified as a Class II Arterial. It should be noted that the City does not have any significance criteria for arterial level of service and the results are stated for informational purposes.

The results of the corridor analysis are shown in Table 11. Under Existing conditions, the corridor operates at LOS D or better during the AM peak hour and LOS D or better during the PM peak hour. Under the Existing Plus Project conditions, the corridor would operate at LOS E or better during the AM peak and LOS E or better during the PM peak hour.

For Future Build-Out 2040 conditions, signal timings were adjusted to account for the periodical signal re-timings Cities perform to account for change in traffic patterns and growth over the years. Under Future Build-Out 2040 conditions, the corridor would operate at LOS E or better during the AM peak hour and LOS E or better during the PM peak hour. Under Horizon Year Plus Project conditions, the corridor would operate at LOS F or better during the AM peak hour and LOS F or better during the PM peak hour. It should be noted that the roadway segment of 5th Street from Central Avenue to Palm Avenue in the eastbound direction operate at an acceptable LOS during the AM and PM peak hours. Therefore, it is recommended that this roadway segment widen to 3 lanes. Synchro outputs for the corridor analysis can be found in *Appendix H*.

MITIGATION MEASURES

As noted above, the development of the Airport Gateway Specific Plan has a potential to cause a significant impact to 10 study intersections. There would be a total of 10 study intersections that would operate at an unacceptable Level of Service under Future Build-Out 2040 Plus Project conditions. Intersection improvements for these 10 deficient intersections, as shown on Table 12, have been identified to improve the intersections to operate at an acceptable Level of Service. Intersection worksheets for the mitigation measures are provided in *Appendix F*. The roadway improvements shown on Table 13 have been identified to mitigate the project impact on the deficient roadway segments. The project fair share proportion of the improvements are shown on Table 14, and the estimated costs of the proposed improvements, as derived from the Congestion Management Program (CMP) Appendix G, are shown on Table 15.

Most of the roadways within the Specific Plan area are not yet built to their master plan build-out configuration. It is recommended that each development within the Specific Plan be required to construct the roadway improvements along the project frontage to achieve the full roadway width, including curb, sidewalk, and gutter, as indicated on the applicable Circulation Element (either the City of San Bernardino or City of Highland).

In addition, it is recommended to incorporate truck parking lots within the Specific Plan or at nearby locations to allow trucks that may arrive early to their destination within the Specific Plan to wait if on-site queues block the truck from entering the truck yard.

SITE ACCESS AND CIRCULATION

The Specific Plan area presented on Figure 2 (previously referenced) provides a conceptual layout of the Specific Plan area, with potential layout and orientation of buildings within the plan area. The existing grid street system of north-south and east-west streets would remain, with improvements needed to accommodate the project traffic.

Site access provisions to individual developments will be determined through the site plan review process, as site-specific development proposals are brought to the City of San Bernardino or City of Highland for processing. The Specific Plan will specify that any project trucks for the warehouse developments must be assigned to use 3rd Street or 5th Street to enter and exit the warehouse properties. This will be accomplished by requiring that the warehouse building and site layout be designed to have all truck entrances on 3rd Street or 5th Street. No truck entrances will be located on 6th Street. In addition, to the extent possible, depending on the location and layout of a project parcel, site driveways for employee or customer traffic should be located on the north-south streets, to reduce the dependence on 6th Street for access to the area development. Those parcels with frontage on the north-south streets should be required to locate their passenger car driveways on the north-south streets.

Notes:
- Bold and shaded values indicate intersections operating at an unacceptable Level of Service per City standards.
- At a signalized intersection, delay refers to the average control delay for the entire intersection, measured in seconds per vehicle.
- Delay values are based on the methodology outlined in the 6th Edition Highway Capacity Manual.
- S = Signalized; U = Unsignalized

Notes: [1] Source: City of San Bernardino General Plan Update (2005)

[2] Roadway segment is currently built to ultimate configuration.

[3] Based on standard cross section for the roadway segment, based on the City's General Plan, does not provide enough roadway width for an 8-lane roadway.

[4] For consistency with adjacent roadway segments, a 6-lane divided roadway is recommended. However, a 4-lane divided roadway would yield an acceptable Level of Service.

LOS = Level of Service ADT = Average Daily Traffic V/C = Volume-to-Capacity

[1] Higher of AM or PM project fair share percentage

[2] Source: San Bernardino County CMP, 2003 Update; Preliminary Construction Cost Estimates for Congestion Management Plan

[3] Assumes minor re-striping for mitigation measure

[4] Tippecanoe Avenue is currently 6-lanes from Mill Street to Central Avenue

[5] Mitigation costs reflects widening to 6-lanes for consistency with adjacent roadway segments; however, the roadway segment as a 4-lane divided roadway would also yield an acceptable Level of Service.

Traffic Signal Warrants

The following unsignalized intersections would operate at an unacceptable Level of Services:

- #20 – Sterling Avenue at 6th Street
- #21 – Victoria Avenue at 6th Street
- #41 – Central Avenue at 3rd Street

Traffic signal warrant analyses were completed for these intersections. The California Manual on Uniform Traffic Control Devices (MUTCD, 2017), Warrant 3 for peak hour was used. Using the forecasted volumes from the Future Build-out 2040 Plus Project condition, Warrant 3 is met in both peak hours for intersections #20 and #21. Warrant 3 is met in the AM peak hour only for intersection #41. The traffic signal warrant worksheets are provided in *Appendix E*.

The California Manual on Uniform Traffic Control Devices (MUTCD) specifically states that, "The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal." The reference document goes on to state a number of other factors to take into account when considering a signal for a specific location, including whether or not a signal would improve the overall safety of the intersection, whether it would benefit or disrupt progressive traffic flow, and consideration of characteristics such as queuing, signal spacing, and overall delay to the main street through movements.

The decision to install a traffic signal should be based on engineering judgment, and not solely upon satisfying a single peak hour warrant. It is recommended that the intersection be monitored once individual projects are completed within the Specific Plan to observe actual peak hour operation, and a decision about signalization should be made based on those observations as well as engineering judgment, based on the factors listed above.

SAN BERNARDINO COUNTY CONGESTION MANAGEMENT PROGRAM

The San Bernardino County Congestion Management Program (CMP) was established in 1991 to reduce traffic congestion and to provide a mechanism for coordinating land use and development decisions. Compliance with CMP requirements ensures a city's eligibility to compete for State gas tax funds for local transportation projects.

The San Bernardino County CMP determines the geographic area for a traffic study with the following criteria:

> "At a minimum, the study area must include all freeway links with 100 or more peak-hour project trips (two-way) and other CMP roadways with 50 or more peak-hour project trips (two-way). Within the defined study area, all "key intersections," as listed in the most current CMP, must be analyzed. Key intersections represent intersections of CMP roadways plus those additional intersections recognized by local jurisdictions and/or SANBAG to be important to mobility on CMP roadways".

The following intersections in the vicinity of the Specific Plan area are listed as a key CMP intersection:

- #4 – Del Rosa Drive at Highland Avenue
- #7 – Victoria Avenue at Highland Avenue
- #12 – Del Rosa Drive at Baseline Street
- #14 – Victoria Avenue at Baseline Street
- #25 – E Street at 5th Street
- #27 – Waterman Avenue at 5th Street
- #29 – Del Rosa Drive at 5th Street
- #31 – Victoria Avenue at 5th Street
- #33 – Palm Avenue at 5th Street
- #38 – Del Rosa Drive at 3rd Street
- #40 – Victoria Avenue at 3rd Street
- #42 – Palm Avenue at 3rd Street
- #46 – Tippecanoe Avenue at Orange Show Road/San Bernardino Avenue

These CMP key intersections were included as study intersections. The project's traffic contribution to these intersections was analyzed. The traffic analysis for the project is in compliance with the San Bernardino County CMP requirements.

FINDINGS AND CONCLUSIONS

- The Airport Gateway Specific Plan (AGSP) area covers approximately 680 acres, located immediately north of the San Bernardino International Airport (SBIA). The Specific Plan area includes parcels in both the City of Highland (485 acres) and the City of San Bernardino (195 acres).

- The existing uses within the Specific Plan area include single-family and multi-family residential, small-lot commercial, educational facilities, and industrial uses.

- The AGSP would replace the existing uses within the Specific Plan area with approximately 9.2 million square feet of Industrial Mixed Uses, consisting of industrial warehouse, high-cube logistics warehouse, tech business park, and a small amount of commercial/retail/hotel uses.

- Development of the Specific Plan area will be accomplished over time, as market conditions allow, and as developers are successful in assembling individual parcels into parcels large enough for the allowed uses.

- Intersection and roadway traffic volumes at the study locations were obtained from traffic studies for other projects in the vicinity, where available; and were collected at the study locations where counts were not available.

- Under Existing Conditions, all study intersections currently operate at an acceptable Level of Service in both peak hours, with the exception of the following intersections:

    - #20 – Sterling Avenue at 6th Street (unsignalized): AM – LOS F; PM – LOS E
    - #41 – Central Avenue at 3rd Street (unsignalized): PM – LOS E

- Under Existing Conditions, the following study roadway segments are currently operating at an unacceptable Level of Service:

    - Tippecanoe Avenue: Mill Street to Orange Show Road / San Bernardino Avenue
    - Del Rosa Drive: Highland Avenue to Pacific Street

- The AGSP project is estimated to generate 30,972 net PCE trips on a daily basis, with 1,772 net PCE trips in the morning peak hour, and 2,220 net PCE trips in the evening peak hour. The net project trips, including the existing land use credits, were divided proportionately into smaller zones within the Specific Plan.

- Under Existing Plus Project Conditions, the following intersections would operate at an unacceptable Level of Service:

    - #1 - Del Rosa Drive at SR-210 WB Ramps: AM – LOS E
    - #20 - Sterling Avenue at 6th Street: AM – LOS F; PM – LOS F
    - #21 - Victoria Avenue at 6th Street: PM – LOS F
    - #33 - Palm Avenue at 5th Street: AM – LOS E; PM – LOS F
    - #41 - Central Avenue at 3rd Street: PM – LOS E

- Under Existing Plus Project conditions, the following roadway segments would operate at an unacceptable Level of Service:

    - Tippecanoe Avenue: Mill Street to Orange Show Road / San Bernardino Avenue
    - Del Rosa Drive: Highland Avenue to Pacific Street
    - 6th Street:
        - Sterling Avenue to Victoria Avenue
        - Victoria Avenue to Central Avenue
    - 5th Street:
        - I-215 NB Ramps to E Street
        - E Street to Waterman Avenue
        - Waterman Avenue to Tippecanoe Avenue
        - Tippecanoe Avenue to Del Rosa Drive
        - Sterling Avenue to Victoria Avenue
        - Victoria Avenue to Central Avenue
        - Central Avenue to Palm Avenue
        - Palm Avenue to SR-210 EB Ramps

- To develop Future Build-Out 2040 intersection and roadway traffic forecasts, the San Bernardino Transportation Analysis Model (SBTAM) Base Year 2012 and Build-out Year 2040 model outputs were used. In addition, trips from the traffic studies for Cumulative Projects that were not included in the SBTAM model projections, were added to the future forecasts.

- Under Future Build-Out 2040 conditions, the following intersections would operate at an unacceptable Level of Service:

    - #1 – Del Rosa Drive at SR-210 WB Ramps: AM – LOS E
    - #20 – Sterling Avenue at 6th Street: AM LOS F; PM LOS F
    - #21 – Victoria Avenue at 6th Street: PM – LOS E
    - #38 – Del Rosa Drive at 3rd Street: PM – LOS E
    - #41 – Central Avenue at 3rd Street: PM – LOS F
    - #42 – Palm Avenue at 3rd Street: PM – LOS E
    - #46 – Tippecanoe Avenue at Orange Show Road/San Bernardino Avenue: PM – LOS E

- Under Future Build-Out 2040 conditions, following roadway segments would operate at an unacceptable Level of Service:

    - Tippecanoe Avenue: Mill Street to Orange Show Road / San Bernardino Avenue
    - Del Rosa Drive: Highland Avenue to Pacific Street
    - 6th Street: Sterling Avenue to Victoria Avenue
    - 5th Street:
        - I-215 NB Ramps to E Street
        - Waterman Avenue to Tippecanoe Ave
        - Tippecanoe Avenue to Del Rosa Drive
        - Palm Avenue to SR-210 EB Ramps
    - 3rd Street: Del Rosa Drive to Sterling Avenue

- Under Future Build-Out 2040 Plus Project conditions, the following intersections would operate at an unacceptable Level of Service:

    - #1 – Del Rosa Drive at SR-210 WB Ramps: AM – LOS E
    - #7 – Victoria Avenue at Highland Avenue: PM – LOS E
    - #20 – Sterling Avenue at 6th Street: AM LOS F; PM LOS F
    - #21 – Victoria Avenue at 6th Street: AM – LOS F; PM – LOS F
    - #29 – Del Rosa Drive at 5th Street: PM – LOS F
    - #33 – Palm Avenue at 5th Street: AM – LOS E; PM – LOS F
    - #35 – SR-210 EB Ramps at 5th Street: PM – LOS F
    - #38 – Del Rosa Drive at 3rd Street: PM – LOS E
    - #41 – Central Avenue at 3rd Street: PM – LOS F
    - #42 – Palm Avenue at 3rd Street: PM – LOS E
    - #46 – Tippecanoe Avenue at Orange Show Road /San Bernardino Avenue: PM – LOS E

- Under Future Build-Out 2040 Plus Project conditions, following roadway segments would operate at an unacceptable Level of Service:

    - Tippecanoe Avenue:
        - 3rd Street to Mill Street
        - Mill Street to Orange Show/San Bernardino Avenue
    - Del Rosa Drive: Highland Avenue to Pacific Street
    - 6th Street:
        - Del Rosa Drive to Sterling Avenue
        - Sterling Avenue to Victoria Avenue
        - Victoria Avenue to Central Avenue
    - 5th Street:
        - I-215 NB Ramps to E Street
        - E Street to Waterman Avenue
        - Waterman Avenue to Tippecanoe Avenue

        - Tippecanoe Avenue to Del Rosa Drive
        - Sterling Avenue to Victoria Avenue
        - Victoria Avenue to Central Avenue
        - Central Avenue to Palm Avenue
        - Palm Avenue to SR-210 EB Ramps
    - 3rd Street: Del Rosa Drive to Sterling Avenue

- The development of the AGSP would cause a significant impact to 10 study intersections and 15 study roadway segments. Intersection and roadway improvements have been identified to mitigate the project impact at deficient intersections and roadway segments.

- Site access provisions to individual developments will be determined through the site plan review process, as site-specific development proposals are brought to the City of San Bernardino or City of Highland for processing.

- The Specific Plan will specify that any project trucks for the warehouse developments must be assigned to use 3rd Street or 5th Street to enter and exit the warehouse properties.

- To the extent possible, depending on the location and layout of a project parcel, site driveways for employee or customer traffic should be located on the north-south streets, to reduce the dependence on 6th Street for access to the area development.

- Traffic signal warrant analyses were completed for the following unsignalized intersections:

    - #20 – Sterling Avenue at 6th Street
    - #21 – Victoria Avenue at 6th Street
    - #41 – Central Avenue at 3rd Street

- Using the forecasted volumes from the Future Build-out 2040 Plus Project condition, Warrant 3, of the California MUTCD, is met in both peak hours for intersections #20 and #21. Warrant 3 is met in the AM peak hour only for intersection #41.

- A base free-flow speed (BFFS) arterial analysis was conducted for 6 deficient roadway segments based on the Highway Capacity Manual 6th Edition. Review of the HCS7 analysis table shows that all deficient roadways operate at an acceptable BFFS Level of Service during the AM and PM peak hours, except for following roadway segment:

    - 5th Street: Central Avenue to Palm Avenue (Eastbound): PM – LOS F

- The traffic impact analysis for this project is in compliance with the San Bernardino Congestion Monitoring Program (CMP).

Airport Gateway Specific Plan

Proposed Land Use					
	Total				
Land Use Designation	Acres	Non-Res. square feet	Hotel Sq Ft[6]	Hotel Rooms[6]	Employment[7]
Industrial Mixed Use[1,2,3,4]	459.90	9,124,491	75,000	150	5,019
ROW[5]	141.04	0			0
Floodway	68.79	0			0
TOTAL	669.73	9,124,491			5,019
Revised 12/18/2018					

Notes

1. A mix of industrial (and supporting) uses are permitted in the specific plan; the size and type of activity may vary substantially from one facility to another and may include manufacturing or warehousing, and may include office, research or associated functions. See Chapter X for a detailed list of permitted, conditionally permitted, and prohibited uses.

For purposes of the analyses prepared as part of this specific plan, the following mix of uses were assumed in the Industrial Mixed-use designation: 15% industrial distribution/logistics (large scale), 70% general/light industrial and logistics (small scale), 13% Tech business park, and 2% commercial/retail/service uses. This mix was assumed based upon current market demand (see memorandum dated August 13, 2017) but is not intended to serve as a limiting factor for the type and mix of development allowed. The cumulative total square footage of all projects in the AGSP should not exceed the maximum square footage allowed in Table X-X above and the associated roadway capacities planned for in Chapter X.

2. Industrial and distribution uses were assumed at a 0.45 FAR. The City of Highland General Plan assumes a maximum 0.45 FAR for industrial and business park and a maximum of 0.50 FAR for office uses. The San Bernardino General Plan assumes a maximum 0.75 FAR for heavy and light industrial uses, and a FAR of 1.0 for office parks. Based on the conceptual design concepts envisioned for the plan, the building footprints are anticipated to be closer to 0.45 FAR, which was applied to this Proposed Land Use buildout table as an average (the SP may allow a higher maximum per building so long as the total square footage assumed in this table is not exceeded).

3. Assumes a 0.50 FAR for Tech Business Park. Typically, Tech Business Park uses range in intensity from about 0.35-0.75 FAR.

4. Assumes 0.35 FAR for Commercial use. The intensity could range between 0.30-0.50 FAR.

5. Right-of-way acreages reflects the existing alignment of 5th street.

6. Hotel estimated at about 500 gross sq. ft. per room (which includes walls, elevators, stairways, corridors, storage, and mechanical areas, etc.) Source: Planning and Programming a Hotel, Jan A. deRoos, Cornell University (2011) http://scholarship.sha.cornell.edu/cgi/viewcontent.cgi?article=1293&context=articles Hotel employees: https://www.quora.com/How-many-employees-do-I-need-to-manage-a-150-room-hotel

7. Employment generation rates of 3,000 sq. ft./job for industrial (warehousing/distribution), 600 sq. ft./job for tech businesses/light industrial and 500 sq. ft./job for Commercial uses were used. If industrial land uses were employee intensive than employment rate would be closer to 2,000 sq. ft/job. If warehouses/distribution are highly automated, the employment rate would be closer to 4,000 sq. ft./job. 3,000 sq.ft./job has been applied as an average. Assumes 100 hotel employees, see #6 above.

Information in the gray highlighted columns - Hotel - are provided to supplement the tech studies, the sq ft for the assumed hotel (Total Non-Res Sq Ft) should be subtracted from the total if analysis uses rooms instead of sq ft.

TOTAL	669.73	949	3,086	816,471	689
Updated 05/23/18					

Notes

1. Classifications from SANBAG (2012) which were derived from SCAG's original classifications.
2. The number of units and non-residential square feet are from the San Bernardino County Assessor's Office (Aug. 2017).
3. Existing population numbers are estimates calculated using 3.52 persons per household for both cities and a vacancy rate of 7.6 % for Highland and 9.0% for San Bernardino (DOF, Jan 2017)
4. Employment generation rates of 3,000 sq.ft./job for industrial, 600 sq.ft./job for transportation facilities and 500 sq.ft./job for Commercial and Educational Facilities were used. If industrial land uses were employee intensive than employment rate would be closer to 2,000 sq. ft/job. If warehouses/distribution are highly automated, the employment rate would be closer to 4,000 sq. ft./job. 3,000 sq.ft./job has been applied as an average.
5. Commercial properties generally consist of strip center commercial, gas station, offices, and hotel uses.
6. Highland Head Start
7. Transportation facilities are a parcel that includes commercial RV storage, and auto repair and autobody shops.
8. The utility facilities are developed with tanks/gas storage.

Airport Gateway Specific Plan

Proposed Land Use

Land Use Designation	Total Acres	Non-Res. square feet	Hotel Sq Ft[6]	Hotel Rooms[6]	Employment[7]
Industrial Mixed Use[1,2,3,4]	459.90	9,124,491	75,000	150	5,019
ROW [5]	141.04	0			0
Floodway	68.79	0			0
TOTAL	**669.73**	**9,124,491**			**5,019**

Revised 12/18/2018

Notes

1. A mix of industrial (and supporting) uses are permitted in the specific plan; the size and type of activity may vary substantially from one facility to another and may include manufacturing or warehousing, and may include office, research or associated functions. See Chapter X for a detailed list of permitted, conditionally permitted, and prohibited uses.

For purposes of the analyses prepared as part of this specific plan, the following mix of uses were assumed in the Industrial Mixed-use designation: 15% industrial distribution/logistics (large scale), 70% general/light industrial and logistics (small scale), 13% Tech business park, and 2% commercial/retail/service uses. This mix was assumed based upon current market demand (see memorandum dated August 13, 2017) but is not intended to serve as a limiting factor for the type and mix of development allowed. The cumulative total square footage of all projects in the AGSP should not exceed the maximum square footage allowed in Table X-X above and the associated roadway capacities planned for in Chapter X.

2. Industrial and distribution uses were assumed at a 0.45 FAR. The City of Highland General Plan assumes a maximum 0.45 FAR for industrial and business park and a maximum of 0.50 FAR for office uses. The San Bernardino General Plan assumes a maximum 0.75 FAR for heavy and light industrial uses, and a FAR of 1.0 for office parks. Based on the conceptual design concepts envisioned for the plan, the building footprints are anticipated to be closer to 0.45 FAR, which was applied to this Proposed Land Use buildout table as an average (the SP may allow a higher maximum per building so long as the total square footage assumed in this table is not exceeded).

3. Assumes a 0.50 FAR for Tech Business Park. Typically, Tech Business Park uses range in intensity from about 0.35-0.75 FAR.

4. Assumes 0.35 FAR for Commercial use. The intensity could range between 0.30-0.50 FAR.

5. Right-of-way acreages reflects the existing alignment of 5th street.

6. Hotel estimated at about 500 gross sq. ft. per room (which includes walls, elevators, stairways, corridors, storage, and mechanical areas, etc.) Source: Planning and Programming a Hotel, Jan A. deRoos, Cornell University (2011) http://scholarship.sha.cornell.edu/cgi/viewcontent.cgi?article=1293&context=articles Hotel employees: https://www.quora.com/How-many-employees-do-I-need-to-manage-a-150-room-hotel

7. Employment generation rates of 3,000 sq. ft./job for industrial (warehousing/distribution), 600 sq. ft./job for tech businesses/light industrial and 500 sq. ft./job for Commercial uses were used. If industrial land uses were employee intensive than employment rate would be closer to 2,000 sq. ft/job. If warehouses/distribution are highly automated, the employment rate would be closer to 4,000 sq. ft./job. 3,000 sq.ft./job has been applied as an average. Assumes 100 hotel employees, see #6 above.

Information in the gray highlighted columns - Hotel - are provided to supplement the tech studies, the sq ft for the assumed hotel (Total Non-Res Sq Ft) should be subtracted from the total if analysis uses rooms instead of sq ft.

Updated 05/23/18

Notes

1. Classifications from SANBAG (2012) which were derived from SCAG's original classifications.
2. The number of units and non-residential square feet are from the San Bernardino County Assessor's Office (Aug. 2017).
3. Existing population numbers are estimates calculated using 3.52 persons per household for both cities and a vacancy rate of 7.6 % for Highland and 9.0% for San Bernardino (DOF, Jan 2017)
4. Employment generation rates of 3,000 sq.ft./job for industrial, 600 sq.ft./job for transportation facilities and 500 sq.ft./job for Commercial and Educational Facilities were used. If industrial land uses were employee intensive than employment rate would be closer to 2,000 sq. ft/job. If warehouses/distribution are highly automated, the employment rate would be closer to 4,000 sq. ft./job. 3,000 sq.ft./job has been applied as an average.
5. Commercial properties generally consist of strip center commercial, gas station, offices, and hotel uses.
6. Highland Head Start
7. Transportation facilities are a parcel that includes commercial RV storage, and auto repair and autobody shops.
8. The utility facilities are developed with tanks/gas storage.

MEMORANDUM

To: Ms. Anne Hernandez

From: Serine Ciandella

Date: February 20, 2019

Subject: *IVDA Airport Gateway Specific Plan Traffic Study Scoping Agreement*

Thank you for your comments on the Traffic Study Scoping Agreement for the Inland Valley Development Agency (IVDA) Airport Gateway Specific Plan (AGSP) project. The revised Scoping Agreement form is attached.

A copy of your review comments is attached for ease of reference, and the following are in response to your comments:

A. The intersections listed in Comment A have been added to the study intersection list (in Attachment C).

B. All intersection counts will include truck classification data.

C. The roadway segments listed in Comment C have been added to the study roadway list, and we will provide information regarding existing and forecasted truck traffic in the traffic study.

D. The assignment of truck traffic will include use of the truck routes serving the area, including Del Rosa, Tippecanoe, Victoria, 3rd, and 5th.

E. The Traffic Study will acknowledge that the study locations are located in more than one jurisdiction, and the traffic analysis will follow the study guidelines of the jurisdiction in which the intersection or roadway is located.

Please feel free to contact me if you have any questions, or if you need additional information. If the revised Scoping Agreement is acceptable, please sign on the bottom of the first page and return. Thank you.

Kimley-Horn Scoping Agreement Attachment D

A. The project development area covers a large region and it is not reasonable to assume that all project traffic will travel on one northbound route in order to reach the I-210 freeway. Please add the following additional intersections to the analysis:

1. Victoria Avenue / Highland Avenue
2. Highland Avenue / I-210 EB Off Ramp
3. Highland Avenue / I-210 WB On Ramp
4. Victoria Avenue / Pacific Street
5. Victoria Avenue / 14th Street
6. Victoria Avenue / Base Line
7. Victoria Avenue / 9th Street

B. At the locations where traffic count data will be recorded within the City of Highland, please add classification counts at all locations to identify the existing truck traffic by axle.

C. The City of Highland reserves the right to request a pavement analysis on roadways segments. Please provide a comparison of existing truck traffic and proposed truck traffic on a daily basis and by number of axles for the following locations:

1. Victoria Street from 5th Street to Highland Avenue
2. 5th Street from Victoria Street to I-210
3. 3rd Street from Victoria Street to 5th Street (proposed new intersection)
4. Portions of Del Rosa and Tippecanoe Avenue within the City of Highland boundary

D. Attachment C does not show truck distribution percentages to the local streets; it only shows truck percentages to the freeways. The City of Highland expects truck traffic on the major arterials of Del Rosa, Tippecanoe, Victoria, 5th Street and 3rd Street and for these streets and intersections to be analyzed as such.

E. The scoping agreement refers to the City of San Bernardino traffic impact guidelines. Please note that the City of Highland has their own guidelines which may be slightly different from the City of San Bernardino.

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Del Rosa Ave / SR-210 WB Ramps

Control Type:	Signalized	Delay (sec / veh):	54.3
Analysis Method:	HCM 6th Edition	Level Of Service:	D
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.947

Intersection Settings

Located in CBD	No
Signal Coordination Group	-
Cycle Length [s]	100
Coordination Type	Time of Day Pattern Coordinated
Actuation Type	Semi-actuated
Offset [s]	0.0
Offset Reference	LeadGreen
Permissive Mode	SingleBand
Lost time [s]	0.00
