

MEMORANDUM

Date: July 9, 2024
From: Tina Fransson, PE, MS
Subject: Multi-Building and Truck Bay Reduction Alternative

This memo refers to the proposed changes to the Eddie Jones Way project. The Multi-Building and Truck Bay Reduction Alternative consists of four (4) separate buildings on-site for a total building square footage of 497,822 SF (inclusive of mezzanine areas).

These changes to the project design will have no impact on the floodplain study that was prepared in the "Hydrology and Hydraulics Report" by Tory R. Walker Engineering. The proposed project will be protected by a floodwall. Therefore, all areas within the project will have no exposure to flood flows, and therefore no impact on the floodplain water surface elevations.
