Construction Vibration Impacts

Reference Levels at 25 feet are based on FTA, 2006 (Transit Noise and Vibration Impact Assessment)
Calculations using FTA procedure with n= **1.5** (for receptors 25 feet or greater)
n= **1.1** (for receptors less than 25 feet, per Caltrans procedure)

ON-SITE CONSTRUCTION ACTIVITIES

Table 1: Construction Equipment Vibration Levels (PPV) - Building Damage

Equipment	Reference Vibration Levels at 25 ft., PPV	Estimated Vibration Levels at nearest off-site building structures, distance in feet, PPV							
		Single-Family Residential Buildings to the North		Commercial Buildings to the West		Multi-Family Residential Buildings to the East		Commercial Buildings to the South	
		Distance	Level	Distance	Level	Distance	Level	Distance	Level
Large Bulldozer**	0.089	130	0.008	10	0.244	10	0.244	115	0.009

Supplemental Noise Analysis

AES
ACOUSTICAL ENGINEERING SERVICES

Sustainable Communities Environmental Assessment
Sportsmen's Lodge Mixed-Use Project

Revised Noise Mitigation Measures

This memo provides supplemental information for the noise mitigation measure, as specified in the Sustainable Communities Environmental Assessment (SCEA) for the Sportsmen's Lodge Project (Project).[1]

As provided in the SCEA (page 230), seven off-site noise receptor locations (receptor locations R1 through R7) were selected to represent noise-sensitive uses within 500 feet of the Project Site. The residential homes situated on Alcove Avenue and Valleyheart Drive are represented by receptor R7, as shown on Figure 15 of the SCEA.

As concluded in the SCEA (Table 18), the construction noise impacts at the Studio City Court Yard Hotel (represented by receptor R3) would be less than significant. Receptor R3 would be shielded from the Project construction by the presence of existing buildings along Coldwater Canyon and buildings adjacent to the Project Site. Therefore, noise mitigation measure is not required for receptor R3. In addition, the construction noise impacts receptor R7 would be less than significant with implementation of Mitigation Measure NOI-MM-1.

The noise analysis as provided in the SCEA evaluated the Project construction noise with the major construction equipment (i.e., major noise sources) located at the ground level, e.g., excavator, tractor, loader, backhoe, bore/drill rig, grader, scraper, and dozers. Construction activities take place at the upper levels of the Project buildings would involve smaller construction equipment (i.e., hand tools), which would generate lower noise levels than the large earth moving equipment at the ground level. Furthermore, Project construction at the upper floors, such as fit-out constructions, occur, normally, when the building exterior walls are in-place, which would minimize transmission of construction noise to the exterior.

The Mitigation Measure NOI-MM-1 as provided in the SCEA is intended to provide the noise reduction at both the ground and upper levels of the affected receptors, including receptor R1. For clarification, the Mitigation Measure NOI-MM-1 will be revised as follow, to reduce the noise levels generated by construction activities at the upper levels of the off-site noise-sensitive receptors.

[1] City of Los Angeles, Sustainable Communities Environmental Assessment Sportsmen's Lodge Mixed-Use Project, July 2022.

NOI-MM-1: Prior to commencement of construction, the Project Applicant shall erect temporary and impermeable sound barriers at the locations listed below. At plan check, building plans shall include documentation prepared by a noise consultant verifying compliance with this measure.

- Within the northern portion of the Project Site between the construction areas and the residential uses at receptor locations R1 and R7. The temporary sound barrier shall be designed to provide a minimum 6-dBA and 16-dBA noise reduction, or not to exceed the ambient noise by 5 dBA, at the ground and upper levels of the residential uses at receptor locations R1 and R7, respectively. The temporary sound barrier shall be 24 feet tall in order to block line of sight between the on-site construction activities and off-site sensitive receptors at receptor locations R1 and R7, respectively.
- Within the western portion of the Project Site (along Coldwater Canyon Avenue) between the construction areas and residential use at receptor location R2. The temporary sound barrier shall be designed to provide a minimum 12-dBA noise reduction, or not to exceed the ambient noise by 5 dBA, at the ground and upper levels of receptor location R2. The temporary sound barrier shall be 18 feet tall in order to block line of sight between the on-site construction activities and off-site sensitive receptors at receptor location R2.
- Within the southern portion of the Project Site between the construction areas and residential uses on the south side of Ventura Boulevard, receptor locations R5 and R6. The temporary sound barrier shall be designed to provide a minimum 5-dBA and 10-dBA noise reduction, or not to exceed the ambient noise by 5 dBA at the ground level of receptor locations R5 and R6, respectively. The temporary sound barrier shall be 8 feet tall (at the west end) to 24 feet tall (at the east end) in order to block line of sight between the on-site construction activities and off-site sensitive receptors at receptor locations R5 and R6, respectively.

The revised Mitigation Measure NOI-MM-1 would require the applicant to employ construction noise barriers of various heights, to ensure noise reduction at the upper levels of the noise-sensitive receptors.
