Mr. Steven Schwarz
VWP-OP Shinohara Owner, LLC
2390 East Camelback Road, Suite 305
Phoenix, Arizona 85016

Subject: Phase I Environmental Site Assessment (Assessment)

**Site: Assessor's Parcel Number (APN) 644-040-01
517 Shinohara Lane, Chula Vista, California 91911**

Dear Mr. Schwarz:

SCS Engineers (SCS) is pleased to present this report (Report) of the Assessment of the above-described Site. This Report summarizes the results of the Assessment that was conducted in order to evaluate the Site's current environmental conditions. The work described in this Report was performed by SCS in general accordance with Exhibit 01 to the Master Services Agreement (Contract) between SCS and VWP-OP Shinohara Owner, LLC (Client). Exhibit 01 was fully executed on June 22, 2021. The Contract was fully executed on June 21, 2021.

Because your full understanding of the Assessment is important to us, SCS recommends that you read the Report in its entirety. However, if time does not allow you a complete reading, summaries may be found in text boxes at the end of each section (pages 11, 21, and 26), and our conclusions and recommendations may be found on page 26. A glossary of terms commonly used in environmental assessments is also provided in the Appendices to this Report.

SCS enjoyed working with you on this project. Providing economical environmental solutions to meet your needs is more than our goal—it is our mission and the measure of our success. If we may assist you in any way, now or in the future, please call our office at (858) 571-5500.

Sincerely,

Allison O'Neal
Staff Professional
SCS ENGINEERS

Luke Montague, MESM, PG 8071

Résumés

1 BACKGROUND

Based on conversations with VWP-OP Shinohara Owner, LLC (Client) and a review of in-house databases, SCS Engineers (SCS) understands that 517 Shinohara Lane, Chula Vista, California 91911 (Site), consists of one approximately 9.56-acre parcel of land (Figure 1). The Site is currently a vacant and undeveloped lot. The Client is proposing to purchase the Site and develop it into an industrial building.

A review of the in-house ParcelQuest database of information from the San Diego County Assessor's Office provided the following information in connection with the Site.

| APN | Address | Area | Description |
|------------|--------------------|------------|-------------|
| 644-040-01 | 517 Shinohara Lane | 9.56 acres | Vacant |

2 STANDARDS BACKGROUND

This Assessment was conducted in general accordance with the following:

- U.S. Environmental Protection Agency (EPA), 40 Code of Federal Regulations (CFR) 312, Standards and Practices for All Appropriate Inquiries; Final Rule (AAI)
- American Society for Testing and Materials (ASTM) Standard Practice for Phase I Environmental Site Assessment Process E1527-13
- The scope, conditions, and limitations of Exhibit 01

The Client understands that the above-referenced EPA and ASTM standards were not developed to identify all environmental risk to property. The standards were developed to allow a user (Client) to qualify for the innocent purchaser defense, bona fide prospective purchaser defense, and contiguous property owner defense to the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA, a.k.a. Superfund) liability. This Assessment is intended to constitute an appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice, as part of the due diligence process required by CERCLA, the Superfund Amendments and Reauthorization Act of 1986, and the Small Business Liability Relief and Brownfields Revitalization Act of 2002 (collectively, Acts).

While this Assessment may initially qualify the Client for a CERCLA defense, after purchase, there may be continuing obligations that must be implemented in order to preserve this defense through the term of property ownership. There may be additional requirements under state law that also apply. The Client should contact qualified legal counsel regarding matters of liability, interpretation of the Acts, and potential continuing obligations. Although it is outside the scope of this Assessment, SCS would be pleased to work with the Client's legal counsel to develop and implement a strategy to preserve the Client's CERCLA liability defenses through the term of its ownership.

This Assessment focused on potential sources of hazardous substances and petroleum products that could be considered either a recognized environmental condition,¹ controlled recognized environmental condition,² or historical recognized environmental condition,³ and potentially a liability due to their presence in significant concentrations (e.g., above acceptable limits set by the federal, state, or local government) or due to the potential for exposure and risk due to contaminant migration and complete exposure pathways (e.g., soil vapor inhalation or groundwater ingestion). Materials that contain substances that are not currently deemed hazardous by the EPA or the California Environmental Protection Agency were not considered as part of this Assessment.

Unless specifically included in SCS' scope of services, building materials such as asbestos, lead-based paint, urea formaldehyde, and pressure-treated lumber, as well as lead in drinking water, are not considered in this Assessment, nor are building issues such as fire safety, indoor air quality (with the possible exception of vapor intrusion), mold, or similar matters. SCS did not evaluate the Site for compliance with land use, zoning, wetlands, or similar laws. This Assessment also excludes regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, and high-voltage power lines. This Assessment is not intended to be an environmental compliance audit.

Hazardous substances occurring naturally in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, and radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt) is not considered, unless obvious indications suggest that hazardous substances are likely to be present in significant concentrations or likely to migrate.

An evaluation of business environmental risk associated with a parcel of commercial real estate may necessitate investigation beyond that included herein.

-
- ¹ *Recognized environmental conditions*, as defined by ASTM, include the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. However, the term is not intended to include *de minimis* conditions (a condition that generally does not present a threat to human health or the environment and that generally would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies). A condition considered *de minimis* is not a recognized environmental condition.
 - ² *Controlled recognized environmental condition*, as defined by ASTM, is a *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity use limitations, institutional controls, or engineering controls).
 - ³ *Historical recognized environmental condition*, as defined by ASTM, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

3 OBJECTIVE

The objective of the scope of services was to assess the likelihood that recognized environmental conditions are present at the Site as a result of the current or historical Site land use or from a known and reported off-Site source.

4 SCOPE OF SERVICES

The scope of services designed and conducted to meet the objective was as follows:

- Site Reconnaissance, Site Research, Interviews, and User Requirements
- Topography, Geology, Hydrogeology, and Water Quality Survey
- Site Vicinity Reconnaissance and Off-Site Source Survey
- Historical Site and Site Vicinity Land Use Review
- Identification of Data Gaps
- Data Evaluation, Figure Preparation, and Assessment Report Preparation

SITE RECONNAISSANCE

On July 1, 2021, SCS personnel conducted a Site reconnaissance to observe and document existing Site conditions.¹ The general Site location is shown in Figure 1, and a Site and Site Vicinity Plan is shown in Figure 2. Selected color photographs of the Site and Site vicinity are presented as Figures 3a through 3h.

The Site grounds and Site perimeter were systematically traversed on foot during the Site reconnaissance. SCS personnel observed the Site features unaccompanied.

General Information

The following table summarizes general information in connection with the Site.

| | |
|-------------------------|---|
| APN | 644-040-01 |
| Address | 517 Shinohara Lane, Chula Vista, California 91911 |
| Area | 9.56 acres |
| Site Land Use | Vacant, undeveloped land |
| Occupant | None |
| Figure Reference | Figures 3a-1 through 3f-2 |

Site Buildings

No buildings were observed on Site.

Site Grounds

The Site grounds were observed to be vacant, undeveloped land (Figures 2 and 3a-1 through 3f-2). Concrete drainage channels were observed in the northeastern and east central portions of the Site (Figures 3e-1 and 3f-2). After a review of the City of Chula Vista GIS Web Map including a map of their storm drain system,⁴ it does not appear that the drainage observed on Site is connected to the city's storm drain system. Small piles of household trash and wood furniture, electronics, and debris were observed in various locations on Site (Figures 2 and 3e-2).

Hazardous Materials/Petroleum Products

No obvious indications of the storage or use of hazardous materials and/or petroleum products were observed at the Site during the Site reconnaissance.

Hazardous Wastes

No obvious indications of the generation of hazardous wastes were observed at the Site during the Site reconnaissance.

Indications of Releases of Hazardous Materials/Wastes or Petroleum Products

No obvious indications were observed that a release of hazardous materials/wastes or petroleum products had occurred at the Site.

On-Site Utilities

| | |
|--------------------------------------|---|
| Gas and Electricity | Reported to be San Diego Gas and Electric (SDG&E) |
| High-power Transmission Lines | None observed at or adjacent to the Site |
| Storm Drains | None observed to be located at the Site |
| Source of Heating and Cooling | None |
| Potable Water Source | None |
| Wastewater Conveyance | None |

No SDG&E transformers were observed to be located at the Site.

No obvious indications of wells, cisterns, pits, sumps, dry wells, or bulk storage tanks were observed at the Site.

⁴ <https://gisweb.chulavistaca.gov/cvmapper/>

SITE RESEARCH

Department of Environmental Health (DEH) File Review

A review of the September 2010 DEH Hazardous Materials Management Division (HMMD) HE-17 database of facilities storing hazardous materials, generating hazardous wastes, and discharging unauthorized releases indicated that there is no regulatory file associated with the Site. In addition, the DEH was contactedⁱⁱ and indicated that there are no files associated with the Site.

Review of Client-Provided Documents

The Client provided a report titled *Phase I Environmental Site Assessment Report, Industrial Land, 517 Shinohara Lane, Chula Vista, CA 91911*, which was prepared by Partner Engineering and Science, Inc. (Partner) and dated January 16, 2018. This report provided the following findings, conclusions and recommendations in connection with the Site:

- “A recognized environmental condition (REC) refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

“Based on subsurface investigations conducted at the east adjacent Brandywine Distribution Center sites, it appears that chlorinated hydrocarbons (TCE reported at concentrations of 1 µg/l to 720 µg/l) potentially originating from the up-gradient former Omar Rendering site and the Otay Landfill have impacted the groundwater at the east adjacent Brandywine Distribution Center sites, and the potential exists that chlorinated hydrocarbons originating from the former Omar Rendering site and the Otay Landfill have impacted the subsurface of the subject property. The Regional Water Quality Control Board (RWQCB), the lead oversight agency, reviewed a 1996 Soil and Groundwater Investigation report for the Brandywine Distribution Center case and in a letter dated November 15, 1996, summarized that volatile organic compounds (VOC) including trichloroethene (TCE), tetrachloroethene (PCE), and methylene chloride (MEC) had been discovered at elevated concentrations in groundwater beneath the sites, but not in the unsaturated soil zone. Even though the RWQCB cited that the former Omar Rendering site and the former Otay Landfill had not been clearly identified as the sources of impacted groundwater beneath the Brandywine Distribution Center, the RWQCB appeared to concur with the consultant's findings including the determination that the source of the impact was not related to historic or present activities at the Brandywine Distribution Center but from up-gradient sources. In the 1996 letter, the RWQCB stated that No Further Action (NFA) was required and that the RWQCB did not intend to pursue regulatory action against the current or former owners of the Brandywine Distribution Center. The case was granted regulatory closure on May 3, 2017. Based on the aforementioned, the potential exists that chlorinated hydrocarbons originating from the former Omar Rendering site and the Otay Landfill have impacted the subsurface of the subject property. The likely presence of subsurface contamination at the subject property is considered a recognized environmental condition.

- “This assessment has revealed evidence of recognized environmental conditions and/or environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

“The potential for vapor intrusion, from documented contaminants in up-gradient groundwater samples, should be evaluated through a limited subsurface investigation prior to development of the subject property.”

SCS concurs with the above findings, which are discussed in further detail in the “Additional SCS Research” section below.

Fire Department Records Review

The City of Chula Vista Fire Department (CVFD) was contacted regarding hazardous materials/waste or UST records for the Site.ⁱⁱⁱ

The CVFD reported that they have no records for the Site. A copy of the SDFD letter is included in the Appendices.

Building Department Records Review

Chula Vista Building Department (CVBD) records were requested for the Site. The CVBD reported that there are no records maintained for the Site. A copy of the correspondence is included in the Appendices.

San Diego Air Pollution Control District (SDAPCD) Records Review

The SDAPCD was contacted^{iv} regarding records for the Site. Mr. Radley Salamat reported that no records are maintained for the Site. A copy of the correspondence is included in the Appendices.

San Diego Industrial Wastewater Program (IWP) Records Review

The IWP was contacted^v regarding records for the Site. The IWP reported that they have no records for the Site. A copy of the IWP letter is included in the Appendices.

Regional Water Quality Control Board (RWQCB) Records Review

The San Diego RWQCB was contacted^{vi} regarding records for the Site. The following table summarizes the RWQCB records provided for the Site. Copies of the records are included in the Appendices.

| Year | Description | Reported Owner |
|------|--|------------------------------|
| 1992 | A Notice of Intent to comply with the terms of the general permit to discharge storm water associated with construction activity was issued | Lawrence and Stephen Cushman |
| 2007 | Notice of Termination (NOT) to the general permit to discharge storm water associated with construction activity due to completion of the construction project | Lawrence and Stephen Cushman |

| Year | Description | Reported Owner |
|------|---|------------------------------|
| 2007 | The RWQCB approved the NOT for the Site | Lawrence and Stephen Cushman |

Based on the absence of disposal violations and the approval of the NOT there is a low likelihood that a recognized environmental condition exists at the Site in connection with the review of the RWQCB records.

INTERVIEWS

The previously referenced EPA and ASTM standards require that attempts be made to conduct interviews with past and present owners and occupants of the Site to obtain information indicating recognized environmental conditions in connection with the Site. As part of this Assessment, the following contacts were either interviewed or attempts were made to conduct interviews.

| Contact | Affiliation to Site | Description | Interview Date |
|------------------|-----------------------------------|-----------------|----------------|
| Ms. Sarina Davis | Current Site owner representative | Discussed below | July 6, 2021 |

Ms. Davis, National Director of Real Estate of Encompass Health California Real Estate, LLC, Site owner's representative who has been familiar with the Site for 2 years and 10 months, stated that, to her knowledge, hazardous materials and petroleum products were not used or stored at the Site and that hazardous wastes were not generated at the Site. Also, to her knowledge, there have been no releases of hazardous materials, petroleum products, and/or hazardous waste at the Site.

Ms. Davis stated that she was not aware of environmental cleanup liens or activity and use limitations (e.g., engineering controls, deed restrictions) that have been recorded for the Site. She was not aware of pending or threatened litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Site. She was not aware of notices from governmental entities regarding possible violations of environmental laws or possible liability relating to hazardous substances or petroleum products at the Site.

USER REQUIREMENTS

In order to qualify for one of the landowner liability protections offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (discussed in the "Background" section), 40 CFR 312 requires that the user (Client) provide the following information to the environmental professional. Mr. Todd Dwyer completed the User Questionnaire on June 22, 2021. The following table summarizes the responses by the Client.

| Question | Response |
|---|----------|
| Have environmental cleanup liens been filed or recorded against the Site? | No |
| Are activity or land use limitations in place at the Site, or have they been filed or recorded in the registry? | No |

| | |
|---|-----|
| Does the user have specialized knowledge or experience in connection with the Site? | No |
| Does the purchase price being paid for the Site reasonably reflect the fair market value of the Site? | Yes |
| Is the Client aware of commonly known or reasonably ascertainable information about the Site that would indicate releases or threatened releases? | No |
| Are there obvious indications that point to the presence of contamination at the Site? | No |

DATA GAPS IN CONNECTION WITH CURRENT SITE LAND USE

Based on observations and research, and with the possible exception discussed below, there are no obvious indications of data gaps in connection with the current Site land use:

- The current Site owner did not have contact information for previous owners of the Site. Additionally, SCS was unable to find contact information for previous Site owners via online searches. Therefore, interviews were not conducted with previous Site owners. This data gap is not a significant data gap in our opinion based on the availability of other relevant information.

| Findings and Opinions—Current Site Land Use |
|---|
| Based on observations and research, it is our opinion that there are no recognized environmental conditions at the Site as a result of the current Site land use. |

TOPOGRAPHY, GEOLOGY, HYDROGEOLOGY, AND WATER QUALITY SURVEY

Topography

A topographic map for the Site vicinity was reviewed and is summarized in the following table.

| | |
|---------------------------------|--|
| Reported Elevation | 150 to 240 feet above mean sea level |
| Reported Slope Direction | Slopes down to the south |
| Source | United States Geological Survey 7.5 Minute Topographic Map, Imperial Beach Quadrangle, California – San Diego County, 2018 |

Geology

A geological map for the Site vicinity was reviewed and is summarized in the following table.

| | |
|---------------------------|--|
| Reported Formation | Old alluvial flood-plain deposits (Qoa), undivided late to middle Pleistocene aged |
|---------------------------|--|

| | |
|-----------------------------|---|
| Reported Description | Fluvial sediments deposited on canyon floors. Consists of moderately well consolidated, poorly sorted, permeable, commonly slightly dissected gravel, sand, silt, and clay-bearing alluvium |
| Source | Kennedy, Michael P., and Siang S. Tan, <i>Geologic Map of the San Diego 30' x 60' Quadrangle, California</i> , California Geological Survey, 2008 |

Hydrogeology

Data regarding depth to groundwater and flow direction for the Site were not readily available. In the absence of Site-specific data, depth to groundwater and flow direction information was reviewed for properties within the Site vicinity using the State Water Resources Control Board GeoTracker database. The following table summarizes the results of this review.

| | |
|--|--|
| Property Location | Adjacent to the east of the Site |
| Reported Depth to Groundwater | 52.6 to 76.3 feet below grade |
| Reported Groundwater Flow Direction | Southwest |
| Source | <i>Soil and Groundwater Investigation, Brandywine Distribution Center, 1670 and 1690 Brandywine Avenue, Chula Vista, California</i> , prepared by Ogden Environmental and dated May 1996 |

Many variables influence depth to groundwater and flow direction and the actual depth to groundwater and flow direction at the Site may be different than presented in this section.

Water Quality Survey

The following table summarizes the reported water quality in the Site vicinity.

| | |
|------------------------------------|--|
| Reported Hydrologic Subarea | None |
| Reported Hydrologic Area | Otay Valley (910.20) |
| Reported Hydrologic Unit | Otay (910.00) |
| Reported Beneficial Use | Industrial |
| Source | California RWQCB, San Diego Region, <i>Water Quality Control Plan for the San Diego Basin</i> , September 8, 1994, with amendments effective prior to May 17, 2016 |

SITE VICINITY RECONNAISSANCE AND OFF-SITE SOURCE SURVEY

Current Site Vicinity Conditions

The following table summarizes land use and observations in the immediate Site vicinity.^{vii} For the purpose of this Report, the immediate Site vicinity includes those properties judged to be adjacent⁵ to the Site.

| Direction | Land Use | Comments |
|-----------|--|---|
| North | Mendocino Condominium Complex (1555–1595 Mendocino Drive) (Figure 3g-2) | No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed. |
| East | Tecnico Corporation Ship Building & Repair and TransAmerican Manufacturing (1670 Brandywine Avenue) (Figure 3h-1) | No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed; however, hazardous materials/wastes are judged likely to be present as discussed in the "Additional SCS Research" section below. |
| Southeast | Surgical Specialties Corporation and TForce Logistics Courier (1690 Brandywine Avenue) (Figure 3h-2) | |
| South | Crash Champions Collision Repair (515 Main Street) Jabil Manufacturer (505 Main Street) (Figure 3h-2) | Hazardous materials/wastes or petroleum products use, storage, or generation were observed and are discussed in the "Additional SCS Research" section below. |
| West | Single-family residences (512, 514, 515 Tan Oak Court, 516 Timber Street, and 1649–1665 Oleander Avenue) (Figure 3g-1) | No obvious indications of the use, storage, or generation of hazardous materials/wastes or petroleum products were observed. |

Environmental Regulatory Database Report

An environmental regulatory database report (Radius Map™ report^{viii}) was prepared by EDR for the Site. Local, state, and federal regulatory databases were reviewed for the Site and for those facilities within up to 1 mile of the Site. The Radius Map™ report was reported to have been prepared in general accordance with the ASTM standard for the regulatory database review for Phase I Environmental Site Assessments. The locations of the referenced facilities relative to the Site are shown on the overview maps, included in the Radius Map™ report. A description of the various

⁵ *Adjacent* is defined by ASTM E1527-13 as any real property or properties the border of which is contiguous or partially contiguous with that of the Site or that would be contiguous or partially contiguous with that of the Site but for a street, road, or other public thoroughfare separating them.

databases, as well as the date each database was most recently updated, is included in the Radius Map™ report. The Radius Map™ report is included in the Appendices to this Report.

Based on a review of the Radius Map™ report, the following table summarizes the facilities within the selected search radii and whether the Site or a facility that was interpreted to be adjacent to the Site was listed on each database.

| Federal or State Government Database | Search Radius | Number of Reported Facilities | On Site | Adjacent to the Site |
|--|---------------|-------------------------------|---------|----------------------|
| National Priorities List (NPL) | 1.00 mile | 0 | No | No |
| NPL Delisted | 1.00 mile | 0 | No | No |
| Superfund Enterprise Management System (SEMS) | 0.50 mile | 0 | No | No |
| No Further Remedial Action Planned (NFRAP) | 0.50 mile | 3 | No | No |
| Resource Conservation and Recovery Act-Corrective Action (RCRA COR ACT) | 1.00 mile | 1 | No | No |
| RCRA Treatment and Disposal Facilities (RCRA TSD) | 0.50 mile | 0 | No | No |
| RCRA Generators (RCRA GEN) | 0.25 mile | 10 | No | Yes |
| Federal Engineering and Institutional Controls (IC/EC) | 0.50 mile | 0 | No | No |
| Emergency Response Notification System (ERNS) | 0.12 mile | 0 | No | No |
| State/Tribal-Equivalent NPL | 1.00 mile | 0 | No | No |
| State/Tribal-Equivalent CERCLIS (ENVIROSTOR) | 1.00 mile | 4 | No | No |
| State/Tribal Solid Waste List (SWL) | 0.50 mile | 2 | No | No |
| State/Tribal Leaking Underground Storage Tanks (LUST, San Diego County Site Assessment and Mitigation [SAM], Spills, Leaks, Investigation, and Cleanup [SLIC]) | 0.50 mile | 11 | No | Yes |
| State/Tribal Underground/Aboveground Storage Tanks (USTs/ASTs) | 0.25 mile | 4 | No | No |
| State/Tribal Voluntary Cleanup Program (VCP) | 0.50 mile | 0 | No | No |
| Federal Brownfields | 0.50 mile | 1 | No | No |

| Federal or State Government Database | Search Radius | Number of Reported Facilities | On Site | Adjacent to the Site |
|---|---------------|-------------------------------|---------|----------------------|
| Local Lists of Landfill/Solid Waste Disposal Sites | Various | 1 | No | No |
| Local Lists of Hazardous Waste/Contaminated Sites (San Diego HMMMD) | Various | 13 | No | Yes |
| Local Lists of Registered Storage Tanks (Statewide Environmental Evaluation and Planning System [SWEEPS UST], Historic UST, CA Facility Inventory Database [FID] UST) | 0.25 mile | 7 | No | No |
| Local Land Records (DEED) | 0.50 mile | 1 | No | No |
| Records of Emergency Release Reports | 0.001 mile | 0 | No | No |
| Other (RCRA NonGen and CA CIWQS) | Various | 36 | Yes | Yes |
| EDR High Risk Historical Records (Historic Auto, Historic Cleaner, Manufactured Gas Plant [MGP]) | 0.125 mile | 0 | No | No |
| Exclusive Recovered Government Archives | 0.001 mile | 0 | No | No |

The Site was listed on the following databases:

- California Integrated Water Quality System (CIWQS) database as 517 Shinohara Lane for storm water construction on the Site in 1994

Regulatory agency files requested for the Site are discussed in the “Site Research” section above.

Off-Site facilities listed in the Radius Map™ report were evaluated as to their potential to impact the Site. The databases included in the Radius Map™ report can be grouped into two general categories: databases reporting unauthorized releases of hazardous substances or petroleum products (e.g., LUSTs, RCRA COR ACT facilities, National Priorities List [a.k.a. Superfund] sites) and databases reporting permitted hazardous materials users and hazardous waste generators for which a release has not been reported to, and recorded by, the regulatory agency.

SCS evaluated each of the off-Site facilities listed in the Radius Map™ report as to their potential to impact the Site, based on the following factors:

- Reported distance of the facility from the Site⁶

⁶ Based on “Technical Justification for Groundwater Media-Specific Criteria,” (Groundwater Study) (March 2012) developed to support the state of California “Low Threat Closure Policy” (adopted May 2012), “plume length studies recognize that petroleum plumes stabilize in length due to natural attenuation.” The Groundwater Study goes on to cite Shih et al., 2004, that a peer-reviewed study of plume lengths at 500 petroleum UST sites in the Los Angeles area

- The nature of the database on which the facility is listed, and/or whether the facility was listed on a database reporting unauthorized releases of hazardous materials, petroleum products, or hazardous wastes
- Reported case type (e.g., soil only, failed UST test only)
- Reported substance released (e.g., chlorinated solvents, gasoline, metals)
- Reported regulatory agency status (e.g., case closed, “no further action”)
- Location of the facility with respect to the reported groundwater flow direction and depth to groundwater (discussed in the “Hydrogeology” section of this Report)

Based on one or more of the factors listed above, and with possible exceptions discussed in the “Additional SCS Research” section below, there is a low likelihood that the off-Site facilities listed in the Radius Map™ report represent a recognized environmental condition in connection with the Site.

EDR listed four facilities as being “orphans,” which are facilities for which EDR does not have sufficient information to accurately locate them on a map. Based on a review of the orphans, it is interpreted that none of the facilities are within the requisite search radii for their reported database listings.

Additional SCS Research

Brandywine Distribution Center/Tap Manufacturing LLC/Transpere, LLC/Keystone Automotive Industries/Jones, Lang, LaSalle Property Management/Lyon Technologies, 1670 & 1690 Brandywine Avenue, Adjacent to the East

Based on its listing on the Cleanup Program Sites – Spills, Leaks, Investigations, and Cleanups (CPS-SLIC) and CERS databases and its proximity to the Site (adjacent to the east), the DEH file for this adjacent facility was reviewed. The DEH file includes a soil and groundwater investigation report from May 1996 and Compliance Inspection Reports (CIRs) for the period from 1996 through 2020. In addition, the September 2010 DEH HE-17 database of facilities storing hazardous materials, generating hazardous wastes, and discharging unauthorized releases was reviewed. The following table summarizes information obtained from review of CIRs and the in-house HE-17 database regarding hazardous materials and petroleum products reported to be used and stored, hazardous wastes reported to be generated, and violations of the hazardous waste control law.

is widely accepted as representative of plume lengths at California UST sites. Shih et al. reports methyl tertiary butyl ether (MTBE), with 90th percentile maximum plume lengths of 540 feet. Therefore, the detailed review radius for open groundwater cases has been conservatively established by SCS at 0.20 mile (approximately 1,000 feet). For non-release cases (e.g., permitted facilities), only those facilities that were judged to be immediately adjacent to the Site were interpreted to have the potential to represent a recognized environmental condition.

| Year | Hazardous Materials, Petroleum Products, Hazardous Waste | Violations |
|--------------|--|---|
| 1996 to 2002 | Paint booth Paint filters (55 gallons) Paint sludge (30 gallons) Organic solids (330 gallons) Inorganic solid waste (3,900 pounds) | Paint chips not swept but washed away with water (1999) Paint car outside of paint booth (1999) Disposal to an unauthorized point (1997) |
| 2007 to 2014 | Absorbent waste Rags Powder coating dust Sand blasting media dust Scrap metal Used lubricating oil (55 gallons) | Accumulated waste too long Missing records |
| 2017 to 2019 | Lubricating oil (55 gallons) Plasma quench coolant (55 gallons) Used oil (55 gallons) Used coolant (55 gallons) Acetylene, argon/carbon dioxide mixture, nitrogen, and oxygen (up to 3,900 cubic feet) Propane (8 gallons) Parts washer processing unit (30-gallon capacity) | None |
| 2020 | Capacitors and ballasts with polychlorinated biphenyls (PCBs) (110 gallons) Laptop batteries (110 gallons) Alkaline batteries (55 gallons) | Missing records Inadequate training |

In 1997, records indicate hazardous waste disposal to an unauthorized point. No additional details were available, although an unauthorized release case was not opened by the DEH at that time. Note that in our experience, disposal violations typically regarded the disposal of minor quantities of paint, used oil, rags, or filters to the ground surface, trash, or sanitary sewer system, and if not opened as unauthorized release cases by the overseeing regulatory agency, typically present a low likelihood of a recognized environmental condition. Overall, based on the reported types and quantities of hazardous materials and waste reported at this facility, and the reported depth to groundwater (approximately 52 to 76 feet below grade), there is a low likelihood that the materials reported on the CIRS database represent a recognized environmental condition to the Site.

Omar Rendering facility located at 1886 Auto Park Place (Approximately 1,500 feet to the east)

The following reports were included in the DEH file regarding the CPS-SLIC, soil and groundwater investigation, and reviewed as part of this Assessment:

- *Soil and Groundwater Investigation Brandywine Distribution Center, 1670 and 1690 Brandywine Avenue, Chula Vista, California* prepared by Ogden Environmental and dated May 1996

- *Annual Report: April 2020 to March 2021, Monitoring and Reporting Program No. R9-2017-0114 and Cleanup and Abatement Order R9-2003-0080, Waste Management Containment Cell, Former Omar Rendering Site, 1886 Auto Park Place, Chula Vista, CA 91911, prepared by LandBank Properties, LLC and dated April 29, 2021*

In March 1994, a Phase I investigation at the property located adjacent to the east of the Site at the Brandywine Distribution Center at 1670 & 1690 Brandywine Avenue found that no regulated or hazardous substances were found to be used or disposed of at the property and that all previous tenants were primarily product distributors.

In May 1995, a Phase II was conducted at the same property and results indicated volatile organic compounds (VOCs) were found in the soil near the water table and in the groundwater.

In May 1996, groundwater was found to be impacted by VOCs at this east adjacent property. Groundwater results indicated VOCs above laboratory reporting limits, primarily with trichloroethene (TCE) at 720 micrograms per liter (ug/L), and also with tetrachloroethene (PCE) at 56 ug/L, and methylene chloride (MEC) at 79 ug/L in MW-04.

It was determined that the property was not the source of the pollutants and that the likely source is the former Omar Rendering facility located at 1886 Auto Park Place, a property that stored hazardous waste in evaporation ponds from 1959 to 1978, which were situated to the east and cross- to up-gradient of the Brandywine Distribution Center.

The RWQCB closed the case administratively in 2017, noting the Brandywine Distribution Center was not the source of the contamination and that the samples collected at the property suggest a potential threat to indoor air. The RWQCB recommended more recent groundwater data.

Omar Rendering facility is approximately 1,500 feet to the east and cross- to up-gradient of the Site and began remediation circa 1980, with removal of the waste ponds and their disposal at a permitted location. In 1981, the impacted soil beneath the waste ponds was placed in a lined and capped waste cell in the northwest corner of the property. Subsequently the waste cell has been maintained and monitored by the RWQCB.

In January 2021, during the most recent sampling event at the former Omar Rendering facility, the monitoring well closest to the Site, well MW-18, situated approximately 1,500 feet to the east of the Site, indicated results for TCE at 4.3 ug/L. No additional recent well data was available for wells closer to the Site, to indicate whether or not the TCE plume may still be in the immediate vicinity of or beneath the Site.

Based on the concentrations of VOCs at the east adjacent property indicated in 1996 (up to 720 ug/L TCE), the cross- to up-gradient position of the source with respect to the groundwater flow direction to the Site (southwest), that the presence of TCE was reported to be present in the monitoring well closest to the Site from the source in the most recent groundwater monitoring report from January 2021, and that no additional, more recent data is available to indicate whether or not the TCE plume may still be in the immediate vicinity of or beneath the Site, there is a low to moderate likelihood that a recognized environmental condition exists at the Site in connection with the former release from the Omar Rendering facility. Additional assessment (e.g., soil vapor sampling) would be necessary to evaluate the potential associated releases.

H130637, Nypro San Diego, 505 Main Street, Adjacent to the South

Based on its listing on the San Diego County HMMD, CERS HAZWASTE, and CER TANKS databases and its proximity to the Site (adjacent to the south), the DEH file for this adjacent facility was reviewed. The DEH file includes CIRs for the period from 1989 through 2020. In addition, the September 2010 DEH HE-17 database of facilities storing hazardous materials, generating hazardous wastes, and discharging unauthorized releases was reviewed. The following table summarizes information obtained from review of CIRs and the in-house HE-17 database regarding hazardous materials and petroleum products reported to be used and stored, hazardous wastes reported to be generated, and violations of the hazardous waste control law.

| Year | Hazardous Materials, Petroleum Products, Hazardous Waste | Violations |
|--------------|--|--|
| 1989 | None listed | Missing records Missing labels |
| 1993 to 1996 | Waste & mixed oil (695 gallons) Hydrocarbon solvent waste (120 gallons) Oxygenate solvents (360 gallons) Inorganic solid waste (120 pounds) Organic solids (400 pounds) Unspecified solvent mixture (120 gallons) Ultrathene pellets (10,000 pounds) Polyvinylchloride pellets (300,000 pounds) Copolyester pellets (15,000 pounds) Nylon pellets (15,000 pounds) Acrylic pellets (15,000 pounds) Polycarbonate resin pellets (750,000 pounds) Lead batteries (5,176 pounds) | Missing records Open waste containers |
| 1997 to 1999 | Waste & mixed oil (695 gallons) Hydrocarbon solvent waste (120 gallons) Oxygenate solvents (360 gallons) Inorganic solid waste (120 pounds) Organic solids (400 pounds) Unspecified solvent mixture (120 gallons) Ultrathene pellets (10,000 pounds) Polyvinylchloride pellets (300,000 pounds) Copolyester pellets (15,000 pounds) Nylon pellets (15,000 pounds) Acrylic pellets (15,000 pounds) Polycarbonate resin pellets (750,000 pounds) Lead batteries (5,176 pounds) | Disposal of hazardous waste to an unauthorized point Waste container not kept closed Missing records Inadequate training |

| Year | Hazardous Materials, Petroleum Products, Hazardous Waste | Violations |
|--------------|--|--|
| 2001 to 2020 | Waste & mixed oil (695 gallons) Hydrocarbon solvent waste (120 gallons) Oxygenate solvents (360 gallons) Inorganic solid waste (120 pounds) Organic solids (400 pounds) Unspecified solvent mixture (120 gallons) Ultrathene pellets (10,000 pounds) Polyvinylchloride pellets (300,000 pounds) Copolyester pellets (15,000 pounds) Nylon pellets (15,000 pounds) Acrylic pellets (15,000 pounds) Polycarbonate resin pellets (750,000 pounds) Lead batteries (5,176 pounds) | Failed to make a proper waste determination Accumulated waste for too long Missing labels Container not kept closed |

In 1997, solvent was observed spilled in a flammable storage cabinet, in 1998 waste oil was observed spilled/leaked on the concrete cooling water pad, and in 1999 disposal of metal shavings was observed to the trash. No additional details were available, although unauthorized release cases were not opened by the DEH at that time. Note that in our experience, disposal violations typically regarded the disposal of minor quantities of paint, used oil, rags, or filters to the ground surface, trash, or sanitary sewer system, and if not opened as unauthorized release cases by the overseeing regulatory agency, typically present a low likelihood of a recognized environmental condition.

Based on the minor nature of the disposal violations, the lack of known and reported releases, and the down gradient location of this facility with respect to the reported groundwater flow direction and the Site (i.e., groundwater reported to flow to the southwest), there is a low likelihood that a recognized environmental condition exists at the Site in connection with the listing of this south adjacent facility.

H208691, Fuller Ford Collision Center, 515 Main Street, Adjacent to the South

Based on its listing on the San Diego County HMMD, CERS HAZWASTE, and CER TANKS databases and its proximity to the Site (adjacent to the south), the DEH file for this adjacent facility was reviewed. The DEH file includes CIRs for the period from 2007 through 2021. In addition, the September 2010 DEH HE-17 database of facilities storing hazardous materials, generating hazardous wastes, and discharging unauthorized releases was reviewed and indicated no files are maintained for the facility. The following table summarizes information obtained from review of CIRs regarding hazardous materials and petroleum products reported to be used and stored, hazardous wastes reported to be generated, and violations of the hazardous waste control law.

| Year | Hazardous Materials, Petroleum Products, Hazardous Waste | Violations |
|--------------|--|-----------------------------------|
| 2007 to 2021 | Waste oil (30 gallons) Waste oil filters Waste coolant (55 gallons) Waste sand dust (55 gallons) Water-based paint waste (30 gallons) Solvent-based paint waste (30 gallons) Solid paint waste (60 gallons) Oily absorbent waste (30 gallons) Parts washer | Missing records Missing labels |

Based on the quantities of hazardous materials and petroleum products used and stored and hazardous waste generated at this facility, the down gradient location of this facility with respect to the reported groundwater flow direction and the Site (i.e., groundwater reported to flow to the southwest), the absence of disposal violations, and the lack of known and reported releases, there is a low likelihood that a recognized environmental condition exists at the Site in connection with the this west adjacent facility.

California Division of Oil and Gas

SCS personnel reviewed the California Division of Oil and Gas Map regarding oil and gas well locations within 1 mile of the Site.^{ix} There were no wells interpreted to be located within a 1-mile radius of the Site.

DATA GAPS IN CONNECTION WITH OFF-SITE SOURCES

Based on the Site vicinity reconnaissance and off-Site source survey, there are no obvious indications of data gaps in connection with off-Site sources.

| Findings and Opinions—Off-Site Source Survey |
|--|
| <p>Based on the off-Site source survey, several facilities in the Site vicinity were reported to have had releases of hazardous materials/waste or petroleum products. With the possible exception below, it is our opinion that there are no recognized environmental conditions at the Site as a result of known and reported releases of hazardous materials/wastes or petroleum products from an off-Site source. This judgment is based on one or more of the following: the reported regulatory status (e.g., case closed), the media affected (e.g., soil contamination only), the distance from the Site, the direction from the Site with respect to the reported groundwater flow direction, and information obtained through a review of County of San Diego Department of Environmental Health files.</p> <p>Omar Rendering facility located at 1886 Auto Park Place (Approximately 1,500 feet to the east)</p> <p>In May 1996, groundwater was found to be impacted by VOCs at the property located adjacent to the east of the Site at the Brandywine Distribution Center at 1670 & 1690 Brandywine Avenue. Groundwater results indicated VOCs above laboratory reporting limits,</p> |

Findings and Opinions—Off-Site Source Survey

primarily with TCE at 720 ug/L, and also with PCE at 56 ug/L, and MEC at 79 ug/L in MW-04.

It was determined that the property was not the source of the pollutants and that the likely source is the former Omar Rendering facility located at 1886 Auto Park Place, a property that stored hazardous waste in evaporation ponds from 1959 to 1978, which were situated to the east and cross- to up-gradient of the Brandywine Distribution Center.

The RWQCB closed the case administratively in 2017, noting the Brandywine Distribution Center was not the source of the contamination and that the samples collected at the property suggest a potential threat to indoor air. The RWQCB recommended more recent groundwater data.

Omar Rendering facility is approximately 1,500 feet to the east and cross to up-gradient of the Site and began remediation circa 1980, with removal of the waste ponds and their disposal at a permitted location. In 1981, the impacted soil beneath the waste ponds was placed in a lined and capped waste cell in the northwest corner of the property. Subsequently the waste cell has been maintained and monitored by the RWQCB.

In January 2021, during the most recent sampling event at the former Omar Rendering facility, the monitoring well closest to the Site, well MW-18, situated approximately 1,500 feet to the east of the Site, indicated results for TCE at 4.3 ug/L. No additional recent well data was available for wells closer to the Site, to indicate whether or not the TCE plume may still be in the immediate vicinity of or beneath the Site.

Based on the concentrations of VOCs at the east adjacent property indicated in 1996 (up to 720 ug/L TCE), the cross- to up-gradient position of the source with respect to the groundwater flow direction to the Site (southwest), that the presence of TCE was reported to be present in the monitoring well closest to the Site from the source in the most recent groundwater monitoring report from January 2021, and that no additional more recent data is available to indicate whether or not the TCE plume may still be in the immediate vicinity of or beneath the Site, there is a low to moderate likelihood that a recognized environmental condition exists at the Site in connection with the former release from the Omar Rendering facility. Additional assessment (e.g., soil vapor sampling) would be necessary to evaluate the potential associated releases.

HISTORICAL LAND USE REVIEW

In accordance with the ASTM Standard and AAI rule, numerous reasonably ascertainable standard historical information sources were reviewed, and an attempt was made to interpret the historical Site and Site vicinity land use back to the obvious first developed use of the Site. Historical information was reviewed for current Site address. The following table summarizes the historical resources reviewed as part of this Assessment.

| Resource | Source | Years Available |
|-------------------------------|--|--|
| Aerial Photographs | NETR Online http://www.historicaerials.com/ Google Earth | 1953, 1964, 1966, 1968, 1971, 1978, 1980, 1981, 1982, 1983, 1985, 1988, 1990, 1994, 1997, 2000, 2003, 2005, 2010, 2014, 2016, 2021 |
| City Directories | EDR | 1960, 1965, 1971, 1975, 1979, 1982, 1986, 1992, 1995, 2000, 2005, 2010, 2014, 2017 |
| Sanborn Fire Insurance Maps | EDR | Unmapped area |
| Topographic Maps | NETR Online http://www.historicaerials.com/ | 1904, 1908, 1911, 1915, 1920, 1928, 1932, 1941, 1943, 1955, 1960, 1962, 1977, 2002, 2012, 2015, 2018 |
| Previous Environmental Report | Not applicable | Discussed in the "Review of Client-Provided Documents" section above |
| Interviews | Not applicable | Discussed in the "Interviews" section above |

Historical Site Land Use

The following table provides a chronology of the apparent historical Site land uses, as interpreted from a review of information from the sources referenced.

| Year | Interpreted Site Tenants | Interpreted Site Use |
|--------------|---|----------------------|
| 1904 to 1991 | Vacant, undeveloped land | None |
| 1993 to 2021 | Vacant, undeveloped land, with the northern portion of the Site as graded land, with concrete drainage channels in portions of the Site | None |

Because many of the dates listed above are based on a limited selection of historical resources, they are considered to be approximations only; the actual beginning/ending dates for many of the Site uses listed above may have been earlier or later than indicated.

No obvious historical facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical resources reviewed.

Historical Site Vicinity Land Use

The following table provides a chronology of the apparent historical Site vicinity land uses as interpreted from a review of information from the sources referenced.

| Years | Interpreted Site Vicinity Tenants | Interpreted Site Vicinity Use |
|---|---|-------------------------------|
| 1555–1595 Mendocino Drive (North) | | |
| 1904 to 1971 | Vacant, undeveloped land | None |
| 1975 to 2021 | Mendocino Residential Condominium Complex | Multi-family residence |
| 1670 Brandywine Avenue (East) | | |
| 1904 to 1964 | Vacant, undeveloped land | None |
| 1966 to 1987 | Agricultural land | Agricultural |
| 1988 to 2021 | Various industrial tenants: Icore, USA Discounters, VSE Corp, RayChem Corporation, Hardwoods Inc., Nobel Floral, Grainger, Tecnico, and TransAmerican | Industrial |
| 1690 Brandywine Avenue (Southeast) | | |
| 1904 to 1964 | Vacant, undeveloped land | None |
| 1966 to 1987 | Agricultural land | Agricultural |
| 1988 to 2021 | Various industrial tenants: General Textiles, Family Bargain Center Stores, Best Buy Wholesale, Lyon Electronic, Lloyd Johnson Company, Bee International, Surgical Specialties, TForce Logistics | Industrial |
| 505 & 515 Main Street (South) | | |
| 1904 to 1950 | Vacant, undeveloped land | None |
| 1953 to 1970 | Greenhouses | Agricultural |
| 1975 to 1979 | Vacant, graded land | None |
| 1985 to 2021 | Various industrial tenants: Nypro Inc., Foot Point, Hamilton Meats, Shoe Magoo LLC, South Frames, Fuller Collision Center, Crash Champions Collision Repair, Jabil Manufacturer | Industrial |

| Years | Interpreted Site Vicinity Tenants | Interpreted Site Vicinity Use |
|--|---|-------------------------------|
| 512, 514, 515 Tan Oak Court, 516 Timber Street, 1649, 1651, 1655, 1657, 1661, 1665 Oleander Avenue (West) | | |
| 1904 to 1964 | Vacant, undeveloped land | None |
| 1966 to 2021 | Various single-family residential tenants | Single-family residential |

Because many of the dates listed above are based on a limited selection of historical resources, they are considered to be approximations only; the actual beginning/ending dates for many of the Site vicinity uses/development described above may have been earlier or later than indicated.

With the possible exceptions described in the “Additional Research” section above and also below, no obvious historical facilities, features of concern, or land uses indicative of the use, storage, or generation of hazardous materials/wastes or petroleum products were found in the historical resources reviewed.

Historical Adjacent Agricultural

A review of aerial photographs revealed that some type of agricultural activity took place within the Site vicinity between 1966 and 1987. The agricultural activity is interpreted to have possibly taken place at the time that organochlorine pesticides (e.g., DDT and chlordane), toxic metals, and others were in wide general use.

These classes of pesticides are known to have the potential to remain in detectable concentrations in the surface for extended periods of time. Based on the interpreted land use of these adjacent properties, SCS’ experience with agricultural properties, and a review of the available literature, it is SCS’ judgment that it is likely that trace concentrations of organochlorine or metallic pesticides are present in the soil at these adjacent properties as a result of the interpreted agricultural land use. It is also SCS’ experience that trace concentrations are likely to be present even in cases of mass grading and earth movement. However, it has generally been SCS’ experience that unless a pesticide mixing, storage, or disposal area was present, concentrations of organochlorine pesticides in the subsurface in general agricultural areas tend to be low. No such areas were reported or are known to have existed at these adjacent properties.

Based on SCS’ experience, there is a moderate likelihood that residual concentrations of organochlorine- and metal-based pesticides are present in the shallow surface soil beneath the adjacent properties. Assuming the legal and permitted application of these pesticides, and assuming existing land use remains the same, this common occurrence is, in SCS’ experience, unlikely to lead to an enforcement action and is therefore likely to be considered *de minimis*, as defined by ASTM.

Based on the fact that Site was not interpreted to have been used for agricultural purposes and the lack of known or reported releases, as well as the down- to cross-gradient topographic location of these facilities with respect to the Site, there is a low likelihood that an adverse environmental condition exists at the Site as a result of the historical agricultural land use at adjacent properties.

DATA GAPS IN CONNECTION WITH THE HISTORICAL SITE LAND USE

Based on a review of historical sources, and with the possible exceptions below, there are no obvious indications of data gaps in connection with the historical Site and Site vicinity land use.

Readily available historical information was limited, and information was not available that would provide 5-year data intervals between the following years: 1920 and 1928, 1932 and 1941, 1943 and 1953. Based on the corroborating data from the historical information reviewed (i.e., the Site was interpreted to have been vacant, undeveloped land in each of these years), SCS judged it likely that the historical Site land use during this time period was not significantly different from the interpretation presented in the table above.

Findings and Opinions—Historical Site and Site Vicinity Land Use

Based on a review of historical resources, it is our opinion that there are no recognized environmental conditions at the Site as a result of a release of hazardous materials/wastes or petroleum products from a known or interpreted historical Site or Site vicinity land use.

5 CONCLUSIONS AND RECOMMENDATIONS

SCS has performed an Assessment of 517 Shinohara Lane, Chula Vista, California 91911 (Site), in general conformance with the ASTM Standard Practice for Phase I Environmental Site Assessment Process E 1527-13 and the EPA, 40 CFR 312, Standards and Practices for All Appropriate Inquiries, Final Rule (AAI). Any exceptions to, or deletions from, the ASTM and AAI Scope of Work were previously described in this Report where applicable.

With the possible exception below, this Assessment has revealed no evidence of a recognized environmental condition in connection with the Site.

Omar Rendering facility located at 1886 Auto Park Place (Approximately 1,500 feet to the east)

In May 1996, groundwater was found to be impacted by volatile organic compounds (VOCs) at the property located adjacent to the east of the Site at the Brandywine Distribution Center at 1670 & 1690 Brandywine Avenue. Groundwater results indicated VOCs above laboratory reporting limits, primarily with trichloroethene (TCE) at 720 micrograms per liter (ug/L), and also with tetrachloroethene (PCE) at 56 ug/L, and methylene chloride (MEC) at 79 ug/L in MW-04.

It was determined that the property was not the source of the pollutants and that the likely source is the former Omar Rendering facility located at 1886 Auto Park Place, a property that stored hazardous waste in evaporation ponds from 1959 to 1978, which were situated to the east and cross- to up-gradient of the Brandywine Distribution Center.

The Regional Water Quality Control Board (RWQCB) closed the case administratively in 2017, noting the Brandywine Distribution Center was not the source of the contamination and that the samples collected at the property suggest a potential threat to indoor air. The RWQCB recommended more recent groundwater data.

Omar Rendering facility is approximately 1,500 feet to the east and cross- to up-gradient of the Site and began remediation circa 1980, with removal of the waste ponds and their disposal at a permitted location. In 1981, the impacted soil beneath the waste ponds was placed in a lined and capped waste cell in the northwest corner of the property. Subsequently the waste cell has been maintained and monitored by the RWQCB.

In January 2021, during the most recent sampling event at the former Omar Rendering facility, the monitoring well closest to the Site, well MW-18, situated approximately 1,500 feet to the east of the Site, indicated results for TCE at 4.3 ug/L. No additional recent well data was available for wells closer to the Site, to indicate whether or not the TCE plume may still be in the immediate vicinity of or beneath the Site.

Based on the concentrations of VOCs at the east adjacent property indicated in 1996 (up to 720 ug/L TCE), the cross- to up-gradient position of the source with respect to the groundwater flow direction to the Site (southwest), that the presence of TCE was reported to be present in the monitoring well closest to the Site from the source in the most recent groundwater monitoring report from January 2021, and that no additional, more recent data is available to indicate whether or not the TCE plume may still be in the immediate vicinity of or beneath the Site, there is a low to moderate likelihood that a recognized environmental condition exists at the Site in connection with the former release from the Omar Rendering facility. Additional assessment (e.g., soil vapor sampling) would be necessary to evaluate the potential associated releases.

This Assessment has been conducted by an environmental professional whose qualifications⁷ were made known to the Client. The conclusions and recommendations presented above are based on the review of readily available data obtained as part of this Assessment, current regulatory guidelines, the Site and Site vicinity reconnaissance, and SCS' experience.

6 REPORT USAGE AND FUTURE SITE CONDITIONS

This Report is intended for the sole usage of the Client and other parties designated by SCS. The methodology used during this Assessment was in general conformance with the requirements of the Client and the specifications and limitations presented in the Consulting Agreement (Contract) between the Client and SCS. This Report contains information from a variety of public and other sources, and SCS makes no representation or warranty about the accuracy, reliability, suitability, or completeness of the information. Any use of this Report, whether by the Client or by a third party, shall be subject to the provisions of the Contract between the Client and SCS. Any misuse of or reliance upon the Report shall be without risk or liability to SCS.

Assessments are qualitative, not comprehensive, in nature and may not identify all environmental problems or eliminate all risk. For every property, but especially for properties in older downtown or urban areas, it is possible for there to be unknown, unreported recognized environmental conditions, USTs, or other features of concern that might become apparent through demolition, construction, or excavation activities, etc. In addition, the scope of services for this project was limited to those items

⁷ SCS declares that, to the best of its professional knowledge and belief, the reviewer meets the definition of Environmental Professional as defined in section 312.10 of 40 CFR 312 and has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. SCS has developed and performed All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR 312. The qualifications of the report preparers are included in the Appendices.

specifically named in the scope of services for this Report. Environmental issues not specifically addressed in the scope of services for this project are not included in this Report.

Land use, condition of the properties within the Site, and other factors may change over time. The information and conclusions of this Report are judged to have been relevant at the time the work described in this Report was conducted. This Report should not be relied upon to represent future Site conditions unless a qualified consultant familiar with the practice of Phase I Environmental Site Assessments in the County of San Diego is consulted to assess the necessity of updating this Report.

The property owners at the Site are solely responsible for notifying all governmental agencies and the public of the existence, release, or disposal of any hazardous materials/wastes or petroleum products at the Site, whether before, during, or after the performance of SCS' services. SCS assumes no responsibility or liability for any claim, loss of property value, damage, or injury that results from hazardous materials/wastes or petroleum products being present or encountered within the Site.

Although this Assessment has attempted to assess the likelihood that the Site has been impacted by a hazardous material/waste release, potential sources of impact may have escaped detection for reasons that include, but are not limited to, (1) inadequate or inaccurate information rightfully provided to SCS by third parties, such as public agencies and other outside sources; (2) the limited scope of this Assessment; and (3) the presence of undetected, unknown, or unreported environmental releases.

7 LIKELIHOOD STATEMENTS

Statements of "likelihood" have been made in this report. Likelihood statements are based on professional judgments of SCS. The term "likelihood," as used herein, pertains to the probability of a match between the prediction for an event and its actual occurrence. The likelihood statement assigns a measure for a "degree of belief" for the match between the prediction for the event and the actual occurrence of the event.

The likelihood statements in this Report are made qualitatively (expressed in words). The qualitative terms can be approximately related to quantitative percentages. The term "low likelihood" is used by SCS to approximate a range of 10 to 20 percent; the term "moderate likelihood" refers to an approximate range of 40 to 60 percent; and the term "high likelihood" refers to an approximate range of 80 to 90 percent.

8 SPECIAL CONTRACTUAL CONDITIONS BETWEEN USER AND ENVIRONMENTAL PROFESSIONAL

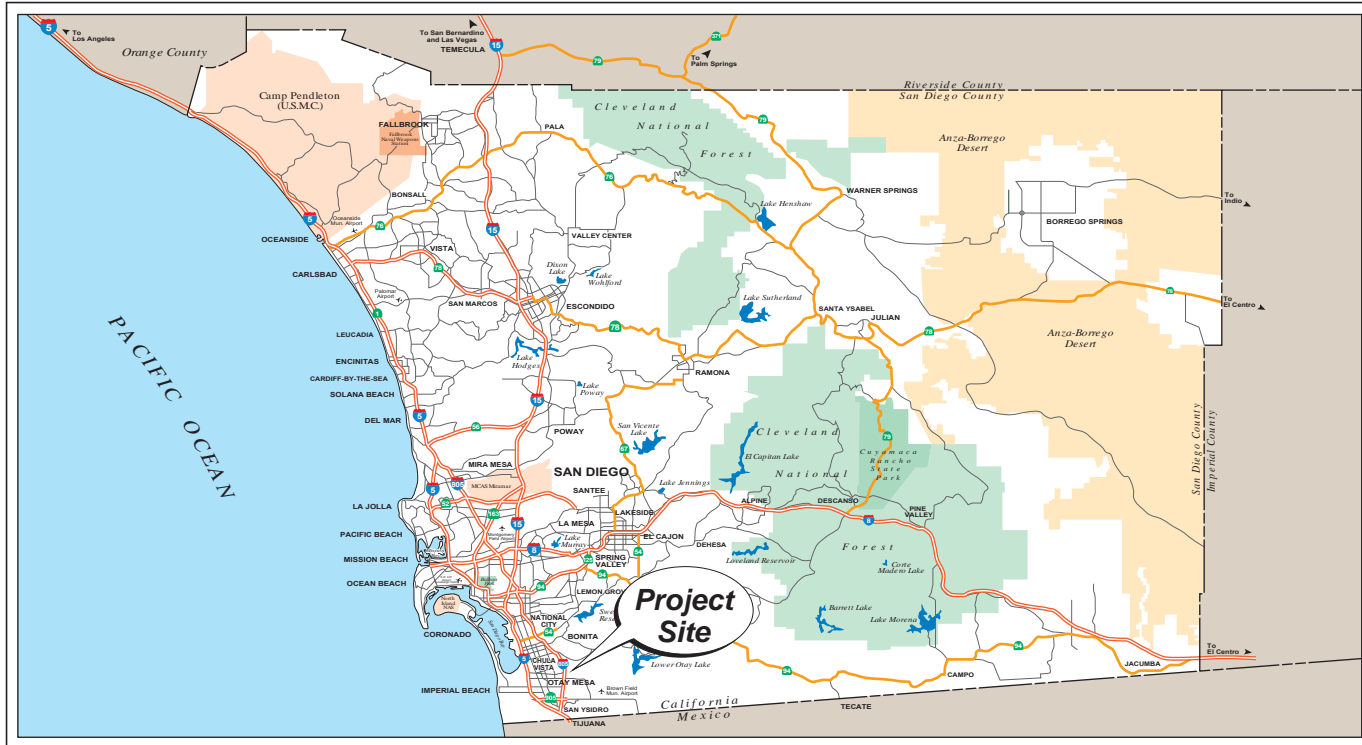

There were no special contractual conditions between the user of this Assessment, the environmental professional, and SCS.

APPENDICES

GLOSSARY

- adjacent property.** Any real property or properties the border of which is contiguous or partially contiguous with that of the Site or that would be contiguous or partially contiguous with that of the Site but for a street, road, or other public thoroughfare separating them.
- aerial photographs.** Photographs taken from an airplane or helicopter of areas encompassing the Site.
- asbestos.** Six naturally occurring fibrous minerals found in certain types of rock formations. Of the six, the minerals chrysotile, amosite, and crocidolite have been the most commonly used in building products. When inhaled in sufficient quantities, asbestos fibers can cause serious health problems.
- asbestos-containing material (ACM).** Any material or product that contains more than 1% asbestos.
- construction debris.** Any concrete, brick, asphalt, and other building materials discarded in the construction of a building or other improvement to property.
- Controlled recognized environmental conditions.** A *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity use limitations, institutional controls, or engineering controls).
- de minimis condition.** A condition that generally does not present a threat to human health or the environment and that generally would not be subject to an enforcement action if brought to the attention of appropriate governmental agencies). A condition considered *de minimis* is not a *recognized environmental condition*.
- drum.** A container (typically, but not necessarily, holding 55 gallons of liquid) that may be used to store hazardous substances or petroleum products.
- dry well.** Underground areas where soil has been removed and replaced with pea gravel, coarse sand, or large rocks. Dry wells are used for drainage, to control storm runoff, for the collection of spilled liquids (spilled intentionally or not), and for wastewater disposal (often illegal).
- fill dirt.** Dirt, soil, sand, or other earth that is obtained off site and that is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation of real property. It does not include material that is used in limited quantities for normal landscaping activities.
- fire insurance map.** Maps produced for private fire insurance map companies that indicate uses of properties at specified dates and that encompass the property.
- hazardous material.** Any material that, because of its quantity, concentration, or physical and chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment. Hazardous materials include, but are not limited to, hazardous substances, hazardous waste, and any material which a handler or the administering agency has a reasonable basis for believing would be injurious to the health or safety of persons or harmful to the environment if released into the workplace or the environment.
- hazardous substance.** Pursuant to CERCLA, hazardous substances include the following:

- 1) All toxic pollutants and hazardous substances listed under the Clean Water Act
- 2) Hazardous wastes regulated under RCRA
- 3) Any hazardous air pollutant under the Clean Air Act
- 4) Chemicals designated as “immediately hazardous” under the Toxic Substance Control Act

The EPA is also allowed to designate additional substances as hazardous if they present a substantial danger to the public health or welfare or the environment when released.

hazardous waste. A substance defined pursuant to the Solid Waste Disposal Act amended by RCRA, a hazardous waste is a solid waste, or a combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics, may contribute to an increase in mortality or an increase in serious irreversible, or incapacitating illness or pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed.

historical recognized environmental condition. A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

landfill. A place or area of land used for the disposal of solid wastes as defined by state solid waste regulations. Synonymous with the term *solid waste disposal site*, a landfill is also known as a garbage dump or trash dump.

likelihood. As used in this Report, the term *likelihood* pertains to the probability of a match between the prediction of an event and its actual occurrence. As used by SCS Engineers, the term *low likelihood* approximates a percentage range to 10 to 20 percent; *moderate likelihood* approximates 40 to 60 percent; and *high likelihood* approximates 80 to 90 percent.

Material Safety Data Sheet (MSDS). Written or printed material concerning a hazardous substance which is prepared by chemical manufacturers, importers, and employers for hazardous chemicals pursuant to OSHA standards.

obvious. That which is plain or evident. The term refers to a condition or fact that could not be ignored or overlooked by a reasonable observer while physically observing the property.

PCE. Perchloroethene/perchloroethylene, or “Perc”; also tetrachloroethene/tetrachloroethylene; commonly used as a solvent for dry-cleaning.

petroleum products. Petroleum, including crude oil, natural gas, natural gas liquids, liquefied natural gas, synthetic gas usable for fuel, kerosene, diesel oil, jet fuels, motor oil, hydraulic oil, gear oils, and fuel oil.

recognized environmental conditions (RECs). Recognized environmental conditions, as defined by the American Society for Testing and Materials (ASTM), include the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. However, the term is

not intended to include *de minimis* conditions.

retail quantities (RQs). Quantities of hazardous materials usually less than 50 gallons, 100 pounds, or 200 cubic feet of gas (under the regulatory reporting limits).

small retail quantities (SRQs). Quantities of hazardous materials in containers of 5 gallons or less, and less than 50 gallons in aggregate.

solvent. A chemical compound that is capable of dissolving another substance and is itself a hazardous substance, such as TCE, TCA, PCE, Stoddard solvent, paint thinner, mineral spirits, and acetone. Solvents are used in a number of manufacturing or industrial processes.

TCA. Trichloroethane; also 1,1,1 TCA; a commonly used industrial solvent for degreasing/cleaning.

underground storage tank (UST). Any tank, including underground piping connected to the tank, that is or has been used to contain hazardous substances or petroleum products and the volume of which is 10 percent or more beneath the surface of the ground.

visually and/or physically observed. This term refers to observations made by vision during the Site visit while walking through the Site or Site building(s), and observations made by the sense of smell, particularly awareness of noxious or foul odors.

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

Industrial Land

517 Shinohara Lane
Chula Vista, California 91911

Report Date: January 16, 2018
Partner Project No. 17-199602.1

Prepared for:

STOS Partners

669 2nd Street
Encinitas, California 92024

January 16, 2018

Mr. CJ Stos
STOS Partners
669 2nd Street
Encinitas, California 92024

Subject: Phase I Environmental Site Assessment
Industrial Land
517 Shinohara Lane
Chula Vista, California 91911
Partner Project No. 17-199602.1

Dear Mr. Stos:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in general conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (619) 925-9672 or MLambson@partneresi.com.

Sincerely,

DRAFT

Mark Lambson
Principal

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in general accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by STOS Partners for the property located at 517 Shinohara Lane in the City of Chula Vista, San Diego County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide STOS Partners with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located at the western terminus of Shinohara Lane, approximately 350 feet west of Brandywine Avenue within a mixed commercial, industrial, and residential area of San Diego County. Please refer to the table below for further description of the subject property:

Subject Property Data

| | |
|--|---|
| Address: | 517 Shinohara Lane, Chula Vista, California |
| Property Use: | Vacant |
| Land Acreage (Ac): | 9.56 Ac |
| Number of Buildings: | 0 |
| Number of Floors: | Not applicable |
| Gross Building Area (SF): | Not applicable |
| Net Rentable Area (SF): | Not applicable |
| Date of Construction: | Not applicable |
| Assessor's Parcel Number (APN): | 644-040-01-00 |
| Type of Construction: | Not applicable |
| Current Tenants: | Not applicable |
| Site Assessment Performed By: | Sara A. Gengler of Partner |
| Site Assessment Conducted On: | January 2, 2018 |

The subject property is currently vacant land occupied by no tenants. No operations are conducted on site.

According to available historical sources, the subject property was formerly undeveloped as early 1904. No tenants have occupied the subject property.

The immediately surrounding properties consist of a residential condominium complex to the north; a multi-unit light industrial building and Fuller Collision Center to the south; two multi-unit light industrial buildings and Shinohara Lane to the east; and a single-family residential community to the west.

According to a previous subsurface investigation conducted at the east adjacent sites, the depth and direction of groundwater in the vicinity of the subject property is inferred to be approximately 45 to 85 feet below ground surface (bgs) and flows toward the southwest.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Based on subsurface investigations conducted at the east adjacent Brandywine Distribution Center sites, it appears that chlorinated hydrocarbons (TCE reported at concentrations of 1 µg/l to 720 µg/l) potentially originating from the up-gradient former Omar Rendering site and the Otay Landfill have impacted the groundwater at the east adjacent Brandywine Distribution Center sites, and the potential exists that chlorinated hydrocarbons originating from the former Omar Rendering site and the Otay Landfill have impacted the subsurface of the subject property. The Regional Water Quality Control Board (RWQCB), the lead oversight agency, reviewed a 1996 Soil and Groundwater Investigation report for the Brandywine Distribution Center case and in a letter dated November 15, 1996, summarized that volatile organic compounds (VOC) including trichloroethene (TCE), tetrachloroethene (PCE), and methylene chloride (MEC) had been discovered at elevated concentrations in groundwater beneath the sites, but not in the unsaturated soil zone. Even though the RWQCB cited that the former Omar Rendering site and the former Otay Landfill had not been clearly identified as the sources of impacted groundwater beneath the Brandywine Distribution Center, the RWQCB appeared to concur with the consultant's findings including the determination that the source of the impact was not related to historic or present activities at the Brandywine Distribution Center but from up-gradient sources. In the 1996 letter, the RWQCB stated that No Further Action (NFA) was required and that the RWQCB did not intend to pursue regulatory action against the current or former owners of the Brandywine Distribution Center. The case was granted regulatory closure on May 3, 2017. Based on the aforementioned, the potential exists that chlorinated hydrocarbons originating from the former Omar Rendering site and the Otay Landfill have impacted the subsurface of the subject property. The likely presence of subsurface contamination at the subject property is considered a recognized environmental condition.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria

established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Partner did not identify any environmental issues during the course of this assessment.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 517 Shinohara Lane in the City of Chula Vista, San Diego County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of recognized environmental conditions and/or environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- The potential for vapor intrusion, from documented contaminants in up-gradient groundwater samples, should be evaluated through a limited subsurface investigation prior to development of the subject property.

- Appendix C** Regulatory Database Report
- Appendix D** Qualifications

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in general conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 517 Shinohara Lane in the City of Chula Vista, San Diego County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in general accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential

exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

STOS Partners engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of STOS Partners. Either verbally or in

writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted the Terms and Conditions for which this report was completed. A copy of Partner's standard Terms and Conditions can be found at <http://www.partneresi.com/terms-and-conditions.php>.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner submitted a Freedom of Information Act (FOIA) request to the Chula Vista Building Department (CVBD) for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property and/or adjacent properties. As of this writing, the Chula Vista Building Department (CVBD) has not responded to Partner's request. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens, and a title search. This information was not provided at the time of the assessment.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 517 Shinohara Lane in Chula Vista, California is located at the western terminus of Shinohara Lane, approximately 350 feet west of Brandywine Avenue. According to online research, the abbreviated legal description of the subject property is "SEC 19-18-1W*LOT 1*(EX ST)DOC91-685199 IN," and ownership is currently vested in San Francisco Assets, LLC and Selma Investments, LLC since 2009.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently undeveloped land. No operations are conducted on site.

The subject property is designated for industrial development by the City of Chula Vista.

The subject property was not identified in the regulatory database report of Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within a mixed commercial/industrial/residential area of San Diego County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties

North: Mendocino residential condominium complex (1555-1595 Mendocino Drive)

South: A multi-unit light industrial building (505 Main Street) and Fuller Collision Center (515 Main Street)

East: Two multi-unit light industrial buildings (1670 and 1690 Brandywine Avenue) and Shinohara Lane

West: A single-family residential community

The adjacent properties to the east were identified as CA WMUDS/SWAT and CA SLIC sites in the regulatory database report of Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *Imperial Beach, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 200 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping moderately toward the south. The subject property is depicted on the 2012 map as undeveloped.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

According to topographic map interpretation, the direction of groundwater in the vicinity of the subject property is inferred to flow toward the southwest. The nearest surface water in the vicinity of the subject property is the Otay River located approximately one-quarter mile south of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the Otay Water District serves the subject property vicinity. According to the Otay Water District website, shallow groundwater beneath the subject property is not utilized for domestic purposes. The Otay Water District purchases water from the San Diego County Water Authority (CWA), a public agency that operates as a wholesale water supplier in San Diego County. Much of this water is in turn purchased from the Los Angeles-based Metropolitan Water District of Southern California (MWD), another public agency that imports water from both Northern California (through the State Water Project) and the Colorado River.

According to a previous subsurface investigation conducted on the east adjacent properties (1670 and 1690 Brandywine Avenue and Case 9 000247N96), the depth of groundwater in the vicinity of the subject property is inferred to be approximately 45 to 85 feet below ground surface (bgs).

2.4.3 Geology/Soils

The subject property is situated within the San Diego plain of the Coast Ranges physiographic province of the State of California. The coastal plain is characterized by a series of dissected wave-cut terraces (mesas) extending inland from the coast. These terraces are underlain by generally flat-lying Cretaceous and Eocene sedimentary formations, which, in turn, are capped by relatively thin deposits of Pliocene and Pleistocene age. Directly below this latter unit is the Pliocene age San Diego Formation, which consists predominantly of sandstone.

Based on information obtained from the USDA Natural Resources Conservation Service Web Soil Survey online database, the subject property is mapped as mainly Salinas clay loam with about 15 percent of the northwestern corner of the property Olivenhain cobbly loam.

The Salinas series consists of deep, well-drained, moderately permeable soils that formed on alluvial plains from alluvium derived from mixed sources. Slopes range from 2 to 9 percent. The Olivenhain series consists of shallow, well-drained, very low to moderately low permeable soils that formed on marine terraces from gravelly alluvium derived from mixed sources. Slopes range from 2 to 30 percent.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Numbers 2156G and 2157G, dated May 16, 2012, the subject property appears to be located in Zone X, an area located outside of the 100-year and 500-year flood plains.

A copy of the reviewed flood map is not included in Appendix B of this report.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information

| Period/Date | Source | Description/Use |
|--------------|---|------------------|
| 1904-Present | Aerial Photographs, Topographic Maps, City Directories, Onsite Observations | Undeveloped Land |

No tenants have ever occupied the subject property. Recognized environmental conditions were identified in association with the subject property, as further discussed in Section 4.2.3.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Data Resources (EDR) on December 28, 2017. The following observations were noted to be visible on the subject property and adjacent properties during the aerial photograph review:

Date: 1949 *Scale: 1"=500'*

| | |
|--------------------------|-------------|
| Subject Property: | Undeveloped |
| North: | Undeveloped |
| South: | Undeveloped |
| East: | Undeveloped |
| West: | Undeveloped |

Date: 1953, 1964 *Scale: 1"=500'*

| | |
|--------------------------|-------------|
| Subject Property: | Undeveloped |
| North: | Undeveloped |
| South: | Greenhouses |
| East: | Undeveloped |
| West: | Undeveloped |

Date: 1966, 1970 *Scale: 1"=500'*

| | |
|--------------------------|---|
| Subject Property: | Undeveloped |
| North: | Undeveloped |
| South: | Greenhouses |
| East: | Agricultural land |
| West: | The current single-family residential community |

Date: 1979 *Scale: 1"=500'*

| | |
|--------------------------|---|
| Subject Property: | Undeveloped |
| North: | The current residential condominium complex |
| South: | Vacant land |
| East: | Agricultural land |
| West: | The current single-family residential community |

Date: 1985 *Scale: 1"=500'*

| | | | |
|--------------------------|---|---------------|----------------|
| Date: | 1985 | Scale: | 1"=500' |
| Subject Property: | Undeveloped | | |
| North: | The current residential condominium complex | | |
| South: | The current two commercial buildings | | |
| East: | Vacant land | | |
| West: | The current single-family residential community | | |

| | | | |
|--------------------------|---|---------------|----------------|
| Date: | 1989, 1994, 2005, 2009, 2010, 2012 | Scale: | 1"=500' |
| Subject Property: | Undeveloped | | |
| North: | The current residential condominium complex | | |
| South: | The current two commercial buildings | | |
| East: | The current two commercial buildings and Shinohara Lane | | |
| West: | The current single-family residential community | | |

Copies of select aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner reviewed the collection of Sanborn Fire insurance maps from Environmental Data Resources (EDR) on December 29, 2017. Sanborn map coverage was not available for the subject property.

A copy of the Sanborn No Coverage Letter is included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from Environmental Data Resources (EDR) on December 28, 2017 for past names and businesses that were listed for the subject property and adjacent properties. City directories were not identified for the subject property. Based on the city directory review, no environmentally sensitive listings were identified for the subject property address.

According to the city directory review, the adjacent properties have been occupied by commercial businesses and private residential parties dating back to 1970. Neighboring properties of environmental concern, if any, are discussed in Section 4.2.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from Environmental Data Resources (EDR) on December 27, 2017. The following observations were noted to be depicted on the subject property and adjacent properties during the topographic map review:

| | |
|--------------------------|---|
| Date: | 1904, 1930, 1943, 1953 |
| Subject Property: | Undeveloped native land |
| North: | Undeveloped native land |
| South: | Undeveloped native land |
| East: | Undeveloped native land |

Date: 1904,
1930,
1943,
1953

West: Undeveloped native land

Date: 1975

Subject Property: Undeveloped native land
North: Shaded to indicate urban development
South: Four small structures
East: Undeveloped native land
West: The current single-family residential community

Date: 1991

Subject Property: Undeveloped native land
North: Shaded to indicate urban development
South: The current two commercial buildings
East: The current two commercial buildings
West: Shaded to indicate urban development

Date: 1996

Subject Property: Shaded to indicate urban development
North: Shaded to indicate urban development
South: Shaded to indicate urban development
East: Shaded to indicate urban development
West: Shaded to indicate urban development

Date: 2012

Subject Property: Undeveloped land
North: Undeveloped land
South: Undeveloped land
East: Undeveloped and Shinohara Lane
West: Undeveloped land

Copies of reviewed topographic maps are included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 Health Department

Regulatory Agency Data

| | |
|----------------------------------|---|
| Name of Agency: | San Diego County Department of Environmental Health (SDCDEH) |
| Point of Contact: | Mr. Edwin C. Andrus |
| Agency Address: | 5510 Overland Avenue, Suite 170, San Diego, California 92112 |
| Agency Phone Number: | (858) 505-6700 / (858) 505-6937 |
| Date of Contact: | December 27, 2017 |
| Method of Communication: | Email |
| Summary of Communication: | No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the SDCDEH. |

A copy of pertinent documents is not included in Appendix B of this report.

4.1.2 Fire Department

Regulatory Agency Data

| | |
|----------------------------------|--|
| Name of Agency: | City of Chula Vista Fire Department (CVFD) |
| Point of Contact: | City Clerk's Office |
| Agency Address: | 447 F Street, Chula Vista, California 91910 |
| Agency Phone Number: | (619) 691-5055 |
| Date of Contact: | December 27, 2017 |
| Method of Communication: | Telephone |
| Summary of Communication: | Jurisdiction over management of hazardous materials, hazardous waste, and underground storage tanks (USTs) within the City of San Diego falls under the oversight of the SDCDEH, Hazardous Materials Management Division (HMMD) and Site Assessment and Mitigation Program (SAM), and not the CVFD, as discussed in Section 4.1.2, Health Department, above. |

A copy of pertinent documents is not included in Appendix B of this report.

4.1.3 Air Pollution Control Agency

Regulatory Agency Data

| | |
|----------------------------------|--|
| Name of Agency: | San Diego Air Pollution Control District (SDAPCD) |
| Point of Contact: | https://publicservices.sdcounty.ca.gov/citizenaccess/ |
| Agency Address: | 10124 Old Grove Road, San Diego, California 92131 |
| Agency Phone Number: | (858) 586-2600 |
| Date of Contact: | December 27, 2017 |
| Method of Communication: | On line |
| Summary of Communication: | No Permits to Operate (PTO), Notices of Violation (NOV), or Notices to Comply (NTC) or the presence of AULs, dry cleaning machines, or USTs were on file for the subject property with the SDAPCD. |

A copy of pertinent documents is not included in Appendix B of this report.

4.1.4 Regional Water Quality Agency

Regulatory Agency Data

| | |
|----------------------------------|---|
| Name of Agency: | California State Water Quality Control Board (SWQCB)–San Diego Region |
| Point of Contact: | http://geotracker.waterboards.ca.gov/default.asp |
| Agency Address: | 2375 Northside Drive, Suite 100, San Diego, California 92108 |
| Agency Phone Number: | (619) 516-1990 |
| Date of Contact: | December 27, 2017 |
| Method of Communication: | On line |
| Summary of Communication: | The subject property address was not reported on the Geotracker database as a site where releases to the environment have occurred. |

A copy of pertinent documents is not included in Appendix B of this report.

4.1.5 Department of Toxic Substances Control

Regulatory Agency Data

| | |
|----------------------------------|---|
| Name of Agency: | California Department of Toxic Substances Control (DTSC) |
| Point of Contact: | <ul style="list-style-type: none">• http://www.dtsc.ca.gov/database/LUC/name_list.cfm• http://www.envirostor.dtsc.ca.gov/public/• http://www.hwts.dtsc.ca.gov/report_search.cfm?id=5 |
| Agency Address: | 5796 Corporate Avenue, Cypress, California 92630 |
| Agency Phone Number: | (714) 484-5300 |
| Date of Contact: | December 27, 2017 |
| Method of Communication: | On line |
| Summary of Communication: | The subject property was not reported on the Envirostor database as a site where releases to the environment have occurred, on the LUC database as a site where land use restrictions have been imposed, or on the HWTS database as a site that disposed of hazardous waste under manifest. |

A copy of pertinent documents is not included in Appendix B of this report.

4.1.6 Building Department

Regulatory Agency Data

| | |
|----------------------------------|---|
| Name of Agency: | Chula Vista Building Department (CVBD) |
| Point of Contact: | https://pip.chulavistaca.gov/CitizenAccess/chulavista.aspx |
| Agency Address: | 276 Fourth Avenue, Chula Vista, California 91910 |
| Agency Phone Number: | (619) 691-5272 |
| Date of Contact: | December 27, 2017 |
| Method of Communication: | On line and Telephone |
| Summary of Communication: | As of the date of this report, Partner has not received a response from the CVBD for inclusion in this report. |

A copy of pertinent documents is not included in Appendix B of this report.

4.1.7 Planning Department

Regulatory Agency Data

| | |
|----------------------------------|---|
| Name of Agency: | Chula Vista Planning Department (CVPD) |
| Point of Contact: | https://pip.chulavistaca.gov/CitizenAccess/chulavista.aspx |
| Agency Address: | 276 Fourth Avenue, Chula Vista, California 91910 |
| Agency Phone Number: | (619) 691-5272 |
| Date of Contact: | December 27, 2017 |
| Method of Communication: | On line |
| Summary of Communication: | According to records reviewed, the subject property is zoned ILP (Limited Industrial Precise Plan) for industrial use by the County of San Diego. |

A copy of pertinent documents is not included in Appendix B of this report.

4.1.8 Oil & Gas Exploration

Regulatory Agency Data

| | |
|----------------------------------|---|
| Name of Agency: | California Division of Oil, Gas and Geothermal Resources (DOGGR) |
| Point of Contact: | http://www.conservation.ca.gov/dog/Pages/WellFinder.aspx |
| Agency Address: | 5816 Corporate Avenue, Cypress, California 90630 |
| Agency Phone Number: | (714) 816-6847 |
| Date of Contact: | December 27, 2017 |
| Method of Communication: | On line |
| Summary of Communication: | According to the DOGGR website, no oil or gas wells are located on or adjacent to the subject property. |

A copy of pertinent documents is not included in Appendix B of this report.

4.1.9 Assessor's Office

Regulatory Agency Data

| | |
|----------------------------------|---|
| Name of Agency: | San Diego County Assessor |
| Point of Contact: | https://arcc-acclaim.sdcounty.ca.gov/search/SearchTypeParcel |
| Agency Address: | 1600 Pacific Highway, Suite 103, San Diego, California 92101 |
| Agency Phone Number: | (619) 235-5200 |
| Date of Contact: | December 27, 2017 |
| Method of Communication: | On line |
| Summary of Communication: | According to records reviewed, the subject property is identified by Assessor Parcel Number (APN) 644-040-01-00. |

A copy of pertinent documents is not included in Appendix B of this report.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by Environmental Data Resources, Inc. (EDR). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing

a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

| Radius Report Data | | | | |
|---|-----------------------------|-------------------------|----------------------------|-------------------------|
| Database | Search Radius (mile) | Subject Property | Adjacent Properties | Sites of Concern |
| Federal NPL or Delisted NPL Site | 1.00 | N | N | N |
| Federal CERCLIS Site | 0.50 | N | N | N |
| Federal CERCLIS-NFRAP Site | 0.50 | N | N | N |
| Federal RCRA CORRACTS Facility | 1.00 | N | N | N |
| Federal RCRA TSD Facility | 0.50 | N | N | N |
| Federal RCRA Generators Site (LQG, SQG, CESQG) | 0.25 | N | N | N |
| Federal IC/EC Registries | 0.50 | N | N | N |
| Federal ERNS Site | Subject Property | N | N | N |
| State/Tribal Equivalent NPL | 1.00 | N | N | N |
| State/Tribal Equivalent CERCLIS | 1.00 | N | N | Y |
| State/Tribal Landfill/Solid Waste Disposal Site | 0.50 | N | N | Y |
| State/Tribal Leaking Storage Tank Site | 0.50 | N | N | N |
| State/Tribal Registered Storage Tank Sites (UST/AST) | 0.25 | N | N | Y |
| State/Tribal Voluntary Cleanup Sites (VCP) | 0.50 | N | N | N |
| State/Tribal Spills | 0.50 | N | N | N |
| Federal Brownfield Sites | 0.50 | N | N | N |
| State Brownfield Sites | 0.50 | N | N | N |
| EDR MGP | Varies | N | N | N |
| EDR US Hist Auto Station | Varies | N | N | N |
| EDR US Hist Cleaners | Varies | N | N | N |
| State/Tribal SLIC (Spills, Leaks, Investigations, and Cleanups) | Varies | N | Y | N |
| Other Miscellaneous Environmental Databases | Varies | N | Y | Y |

4.2.2 Subject Property Listings

The subject property is not identified in the regulatory database report.

4.2.3 Adjacent Property Listings

The adjacent properties to the east were identified as CA SLIC and CA WMUDS/SWAT sites in the regulatory database report, as discussed below:

- The properties identified as Brandywine Distribution Center at 1670 and 1690 Brandywine Avenue are located adjacent to the east of the subject property. These sites are identified as one closed SLIC case site on the State Water Quality Control Board (RWQCB) GeoTracker database. The lead agency is identified as the San Diego Regional Water Quality Control Board (RWQCB) Region 9 and the case number is 9000247N96. It has a cleanup status of "Completed – Case closed as of 5/3/17." The case is listed as a Category 1 site, which is described as follows:

Category 1 includes most leaking underground fuel tank (LUFT) sites and many small commercial facilities, such as dry cleaners. Category 1 sites are characterized by soil or groundwater contamination that does not pose an immediate human health threat and does not extend off-site onto neighboring properties. Off-site groundwater plumes that extend only into the public right of way are also included in this category. We expect little or no public interest at Category 1 sites.

Based on records reviewed for the case, groundwater beneath the site was found to be impacted by chlorinated hydrocarbons (TCE reported at concentrations of 1 µg/l to 720 µg/l) and determined to have originated from the former Omar Rendering site and the Otay Landfill, facilities situated in up-gradient directions. Based on assessment activities conducted by Ogden Environmental and Energy Services and related in a May 1996 Soil and Groundwater Investigation report, "there did not appear to be a risk to human health at the subject site. Odgen concluded that "the source of groundwater contamination beneath the site appears to be from an off-site source." As per a 1997 report summarized in a 2017 Phase I Environmental Site Assessment Report by Partner for the Brandywine Distribution Center sites, "it is clearly evident that properties to the east and north of Brandywine Distribution Center, specifically the Omar Rendering Facility and the Otay Landfill, have affected the underlying groundwater table. Further, clear evidence indicates that the source of this impact is not related to historic or present activities at either 1670 or 1690 Brandywine Avenue."

According to the 2017 Phase I Environmental Site Assessment Report for the Brandywine Distribution Center, the RWQCB reviewed the 1996 Soil and Groundwater Investigation report for the Brandywine Distribution Center and in a letter dated November 15, 1996, summarized that volatile organic compounds (VOC) including trichloroethene (TCE), tetrachloroethene (PCE), and methylene chloride (MEC) had been discovered at elevated concentrations in groundwater beneath the sites, but not in the unsaturated soil zone. Even though the RWQCB cited that the former Omar Rendering site (located approximately 700 feet to the east) and the former Otay Landfill (located about one-half mile to the northeast) had not been clearly identified as the sources of impacted groundwater beneath the Brandywine Distribution Center, the RWQCB appeared to concur with the consultant's findings. In the 1996 letter, the RWQCB stated that No Further Action (NFA) was required and that the RWQCB did not intend to pursue regulatory action against the current or former owners of the Brandywine Distribution Center.

In the Phase I Environmental Site Assessment for the Brandywine Distribution Center, Partner identified the historical subsurface contamination case as an environmental concern and

recommended no further investigation. The potential exists that chlorinated hydrocarbons originating from the former Omar Rendering site and the Otay Landfill have impacted the subsurface of the subject property. The likely presence of subsurface contamination at the subject property is considered a recognized environmental condition.

- The properties identified as Brandywine Distribution Center at 1670 and 1690 Brandywine Avenue are also listed as a California WMUDS/SWAT site. CA Waste Management Unit Database (WMUDS) is used by the State Water Resources Control Board (SWRCB) and the RWQCB for program tracking and inventory of waste management units. The database report lists the facility type as "Other-Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)" and the primary waste type as "hazardous/influent or solid wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards."

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.4 Sites of Concern Listings

Properties to the east and northeast are identified as CA DEED, CA LDS, CA BOND EXP. PLAN, CA Cortese, CA ENF, CA NPDES, ENVIROSTOR, CA SWF/LF, CA San Diego Co. HMMD, CA HIST UST, CA EMI, and CA HWP sites in the regulatory database report, as discussed below:

- The property, identified as Otay Sanitary Landfill at Otay Valley Road and Allied Waste at Otay Landfill at 1700 Maxwell Road, is located approximately 0.25-miles to the east-northeast of the subject property, and situated hydrologically up-gradient. This site is identified as an ENVIROSTOR, CA SWF/LF, CA San Diego Co. HMMD, CA HIST UST, CA EMI, and CA HWP site. Based on subsurface investigations conducted at the east adjacent Brandywine Distribution Center sites and as discussed above in Section 4.2.3, it appears that chlorinated hydrocarbons originating from the former Omar Rendering site and the Otay Landfill have impacted the groundwater at the east adjacent Brandywine Distribution Center sites, and the potential exists that chlorinated hydrocarbons originating from the former Omar Rendering site and the Otay Landfill have impacted the subsurface of the subject property. The likely presence of subsurface contamination at the subject property is considered a recognized environmental condition.
- The property, identified as Former Omar Rendering Landfill at 1886 Auto Park Place, is located approximately 0.75-miles to the east of the subject property, and situated hydrologically up-gradient. This site is identified as a CA DEED, CA LDS, CA BOND EXP. PLAN, CA Cortese, CA ENF, CA NPDES site. Based on subsurface investigations conducted at the east adjacent Brandywine Distribution Center sites and as discussed above in Section 4.2.3, it appears that chlorinated hydrocarbons originating from the former Omar Rendering site and the Otay Landfill have impacted the groundwater at the east adjacent Brandywine Distribution Center sites, and the potential exists that chlorinated hydrocarbons originating from the former Omar Rendering site and the Otay Landfill have impacted the subsurface of the subject property. The likely presence of

subsurface contamination at the subject property is considered a recognized environmental condition.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.5 Orphan Listings

Five orphan listings are identified in the regulatory database report; however, based on their relative distance, down-gradient location, nature of the listing and/or regulatory status, these listings are not expected to represent significant environmental concerns.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from STOS Partners (User of this report).

| User Responsibilities | | | | |
|--|-------------------------|-----------------------------|------------------------|-----------------------|
| Item | Provided By User | Not Provided By User | Discussed Below | Does Not Apply |
| Environmental Pre-Survey Questionnaire | | X | | |
| Title Records, Environmental Liens, and AULs | | | X | |
| Specialized Knowledge | | | X | |
| Actual Knowledge | | | X | |
| Valuation Reduction for Environmental Issues | | | X | |
| Identification of Key Site Manager | Section 5.1.3 | | | |
| Reason for Performing Phase I ESA | Section 1.1 | | | |
| Prior Environmental Reports | | X | | |
| Other | | | | X |

5.1 Interviews

5.1.1 Interview with Owner

The owners of the subject property since 2009, identified as San Francisco Assets, LLC and Selma Investments, LLC, were not available to be interviewed at the time of the assessment.

5.1.2 Interview with Report User

Mr. Jason Richards, Partner, STOS Partners, and report user, was not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

According to Mr. Richards, the subject property has never been developed and has been always been vacant land. Mr. Richards further stated that there are no USTs, ASTs, clarifiers, oil/water separators, groundwater monitoring wells, or hazardous substance use/storage/generation on the subject property to the best of his knowledge. Mr. Richards provided Partner with a Phase I Environmental Site Assessment report (for the east adjacent sites at 1670 and 1690 Brandywine Avenue) by Partner Engineering and Science, Inc., dated May 3, 2017, as further discussed in Section 4.2.3.

5.1.3 Interview with Key Site Manager

A key site manager was not available to be interviewed at the time of this assessment.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

Mr. Jason Richards, Partner, STOS Partners, and report user, provided Partner with a Phase I Environmental Site Assessment report (for the east adjacent sites at 1670 and 1690 Brandywine Avenue) by Partner Engineering and Science, Inc., dated May 3, 2017, as further discussed in Section 4.2.3.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data

| | |
|--------------------------------------|-----------------|
| Site Assessment Performed By: | Sara A. Gengler |
| Site Assessment Conducted On: | January 2, 2018 |

No site visit personnel accompanied Partner during the field reconnaissance activities.

No potential environmental concerns were identified during the onsite reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste is not generated at the subject property, and no solid waste disposal contractor services the subject property. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

6.1.2 Sewage Discharge and Disposal

No sanitary discharge is generated at the subject property and no wastewater treatment facilities or septic systems are observed or reported on the subject property.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property via concrete stormwater channels throughout the site.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Department of Agriculture; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. A natural storm water wash traversing northeast to southwest spans within the perimeter of the southeastern portion of the subject property. No other surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

There are no heating or cooling systems or domestic water at the subject property.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

No domestic wastewater is generated at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

No hazardous substances or petroleum products were observed on the subject property during the site reconnaissance.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current or former ASTs or USTs was observed during the site reconnaissance.

6.2.3 Evidence of Releases

No spills, stains or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

No potential PCB-containing equipment (transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, etc) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

Due to the lack of buildings on the subject property, ACMs were not considered within the scope of this assessment.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm² (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

Due to the lack of buildings on the subject property, LBP was not considered within the scope of this assessment.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

| EPA Radon Zones | | |
|------------------------|---------------------------------------|------------------|
| EPA Zones | Average Predicted Radon Levels | Potential |
| Zone 1 | Exceed 4.0 pCi/L | Highest |
| Zone 2 | Between 2.0 and 4.0 pCi/L | Moderate |
| Zone 3 | Less than 2.0 pCi/L | Low |

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 3. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the Otay Water District serves the subject property vicinity. According to the Otay Water District website, shallow groundwater beneath the subject property is not utilized for domestic purposes. The Otay Water District purchases water from the San Diego County Water Authority (CWA), a public agency that operates as a wholesale water supplier in San Diego County. Much of this water is in turn purchased from the Los Angeles-based Metropolitan Water District of Southern California (MWD), another public agency that imports water from both Northern California (through the State Water Project) and the Colorado River. According to the Otay Water District and the 2016 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g. in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Due to the lack of buildings on the subject property, mold was not considered within the scope of this assessment.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises. No items of environmental concern were identified on the adjacent properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

7.0 FINDINGS AND CONCLUSIONS

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Based on subsurface investigations conducted at the east adjacent Brandywine Distribution Center sites, it appears that chlorinated hydrocarbons (TCE reported at concentrations of 1 µg/l to 720 µg/l) potentially originating from the up-gradient former Omar Rendering site and the Otay Landfill have impacted the groundwater at the east adjacent Brandywine Distribution Center sites, and the potential exists that chlorinated hydrocarbons originating from the former Omar Rendering site and the Otay Landfill have impacted the subsurface of the subject property. The Regional Water Quality Control Board (RWQCB), the lead oversight agency, reviewed a 1996 Soil and Groundwater Investigation report for the Brandywine Distribution Center case and in a letter dated November 15, 1996, summarized that volatile organic compounds (VOC) including trichloroethene (TCE), tetrachloroethene (PCE), and methylene chloride (MEC) had been discovered at elevated concentrations in groundwater beneath the sites, but not in the unsaturated soil zone. Even though the RWQCB cited that the former Omar Rendering site and the former Otay Landfill had not been clearly identified as the sources of impacted groundwater beneath the Brandywine Distribution Center, the RWQCB appeared to concur with the consultant's findings including the determination that the source of the impact was not related to historic or present activities at the Brandywine Distribution Center but from up-gradient sources. In the 1996 letter, the RWQCB stated that No Further Action (NFA) was required and that the RWQCB did not intend to pursue regulatory action against the current or former owners of the Brandywine Distribution Center. The case was granted regulatory closure on May 3, 2017. Based on the aforementioned, the potential exists that chlorinated hydrocarbons originating from the former Omar Rendering site and the Otay Landfill have impacted the subsurface of the subject property. The likely presence of subsurface contamination at the subject property is considered a recognized environmental condition.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been

addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Partner did not identify any environmental issues during the course of this assessment.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 517 Shinohara Lane in the City of Chula Vista, San Diego County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of recognized environmental conditions and/or environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- The potential for vapor intrusion, from documented contaminants in up-gradient groundwater samples, should be evaluated through a limited subsurface investigation prior to development of the subject property.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 517 Shinohara Lane in the City of Chula Vista, San Diego County, California in general conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

This report presents the results of a limited ground-water and soil investigation conducted by Ogden Environmental and Energy Services Co., Inc. (Ogden) at the Brandywine Distribution Center, located at 1670 and 1690 Brandywine Avenue in Chula Vista, California. The investigation was conducted on behalf of Chula Vista Industrial Realty, Inc. The purpose of the investigation was to verify the presence of ground-water contamination beneath the site, evaluate ground-water flow direction, velocity and gradient, and assess potential sources of identified contamination.

Two previous investigations have been conducted at the site: a Phase I Environmental Site Assessment conducted by BEM Systems, Inc. in March 1994, and a Phase II subsurface environmental investigation conducted by Ceres Environmental in May 1995. Results of the Phase I site assessment indicated that no regulated or hazardous substances were found to be in current use at the site, nor were such substances being disposed of at the site. Previous tenants were primarily product distributors who would not likely use hazardous substances. The Phase II investigation results indicated that halogenated and non-halogenated volatile organic compounds (HVOCs and VOCs) occur in site soil and ground water. The observed soil impacts were located adjacent to the water table and likely associated with ground water contamination. According to the previous Phase I and Phase II investigation results, hazardous substances, especially compounds such as trichloroethene (TCE), tetrachloroethene (PCE), and methylene chloride that were detected in site soil and ground water were not used or likely disposed of at the site. BEM Systems therefore concluded that an offsite source of the observed VOC and HVOC contamination was likely. Known potential offsite sources include the former Omar rendering facility, located approximately 700 feet east of the site (the Omar facility accepted Class 1 liquid industrial wastes from 1959 to 1978), and the Otay Landfill, located approximately one-half mile northeast of the site. Extensive documentation exists in San Diego Regional Water Quality Control Board (SDRWQCB) files that indicates significant TCE and methylene chloride contamination occurs in soil and ground water at the Omar facility.

This limited soil and ground-water investigation, conducted between February 5 and March 13, 1996, included completion and sampling of five soil borings, installation and sampling of five ground-water monitoring wells, analytical testing of soil and ground-water samples, heat pulse flow logging to determine ground water flow direction, gradient and velocity, geochemical evaluation of ground water, and report preparation.

Results of this investigation indicated no detectable soil contamination (VOCs and HVOCs) occurs within the unsaturated zone onsite. However, relatively high VOC and HVOC ground-water contamination was encountered in the central portion of the site, with lower concentrations detected throughout the remainder of the site.

Heat pulse flow logging results from the central portion of the site (MW-03 and MW-04) indicate that ground-water flow in this area of the site appears to be in a generally westward direction. Observed ground-water flow rates ranged from 2.7 to 13.9 feet per day. These measurements are generally consistent with the overall direction of the measured hydraulic gradient. Heat pulse flow logging of outlying wells indicated no measurable flow (MW-01 and MW-05) or variable flow (MW-02).

Results of geochemical analysis of site ground water indicate that site ground water is of poor quality, with generally high total dissolved solids, hardness, electrical conductivity sulfate, and chloride. The ground water is not considered to be a potable water resource by the SDRWQCB (SDRWQCB 1995). One well (MW-02) had considerably lower general minerals results than the others, suggesting a localized freshwater source such as irrigation water or a leaking water line.

Contaminant mobility calculations indicate that a TCE plume originating at the Omar facility could migrate to the subject site within a relatively short time period (0.4 to 2.7 years). Because no evidence indicates that an onsite source of the observed ground-water contamination exists, and based on the results of the ground-water flow direction, velocity and gradient measurements, the most likely source of ground water contamination appears to be the adjacent Omar facility. To be effective, potential ground-water remediation activities would have to be initiated at the offsite contaminant source rather than at the subject site.

SECTION 1

INTRODUCTION AND SITE DESCRIPTION

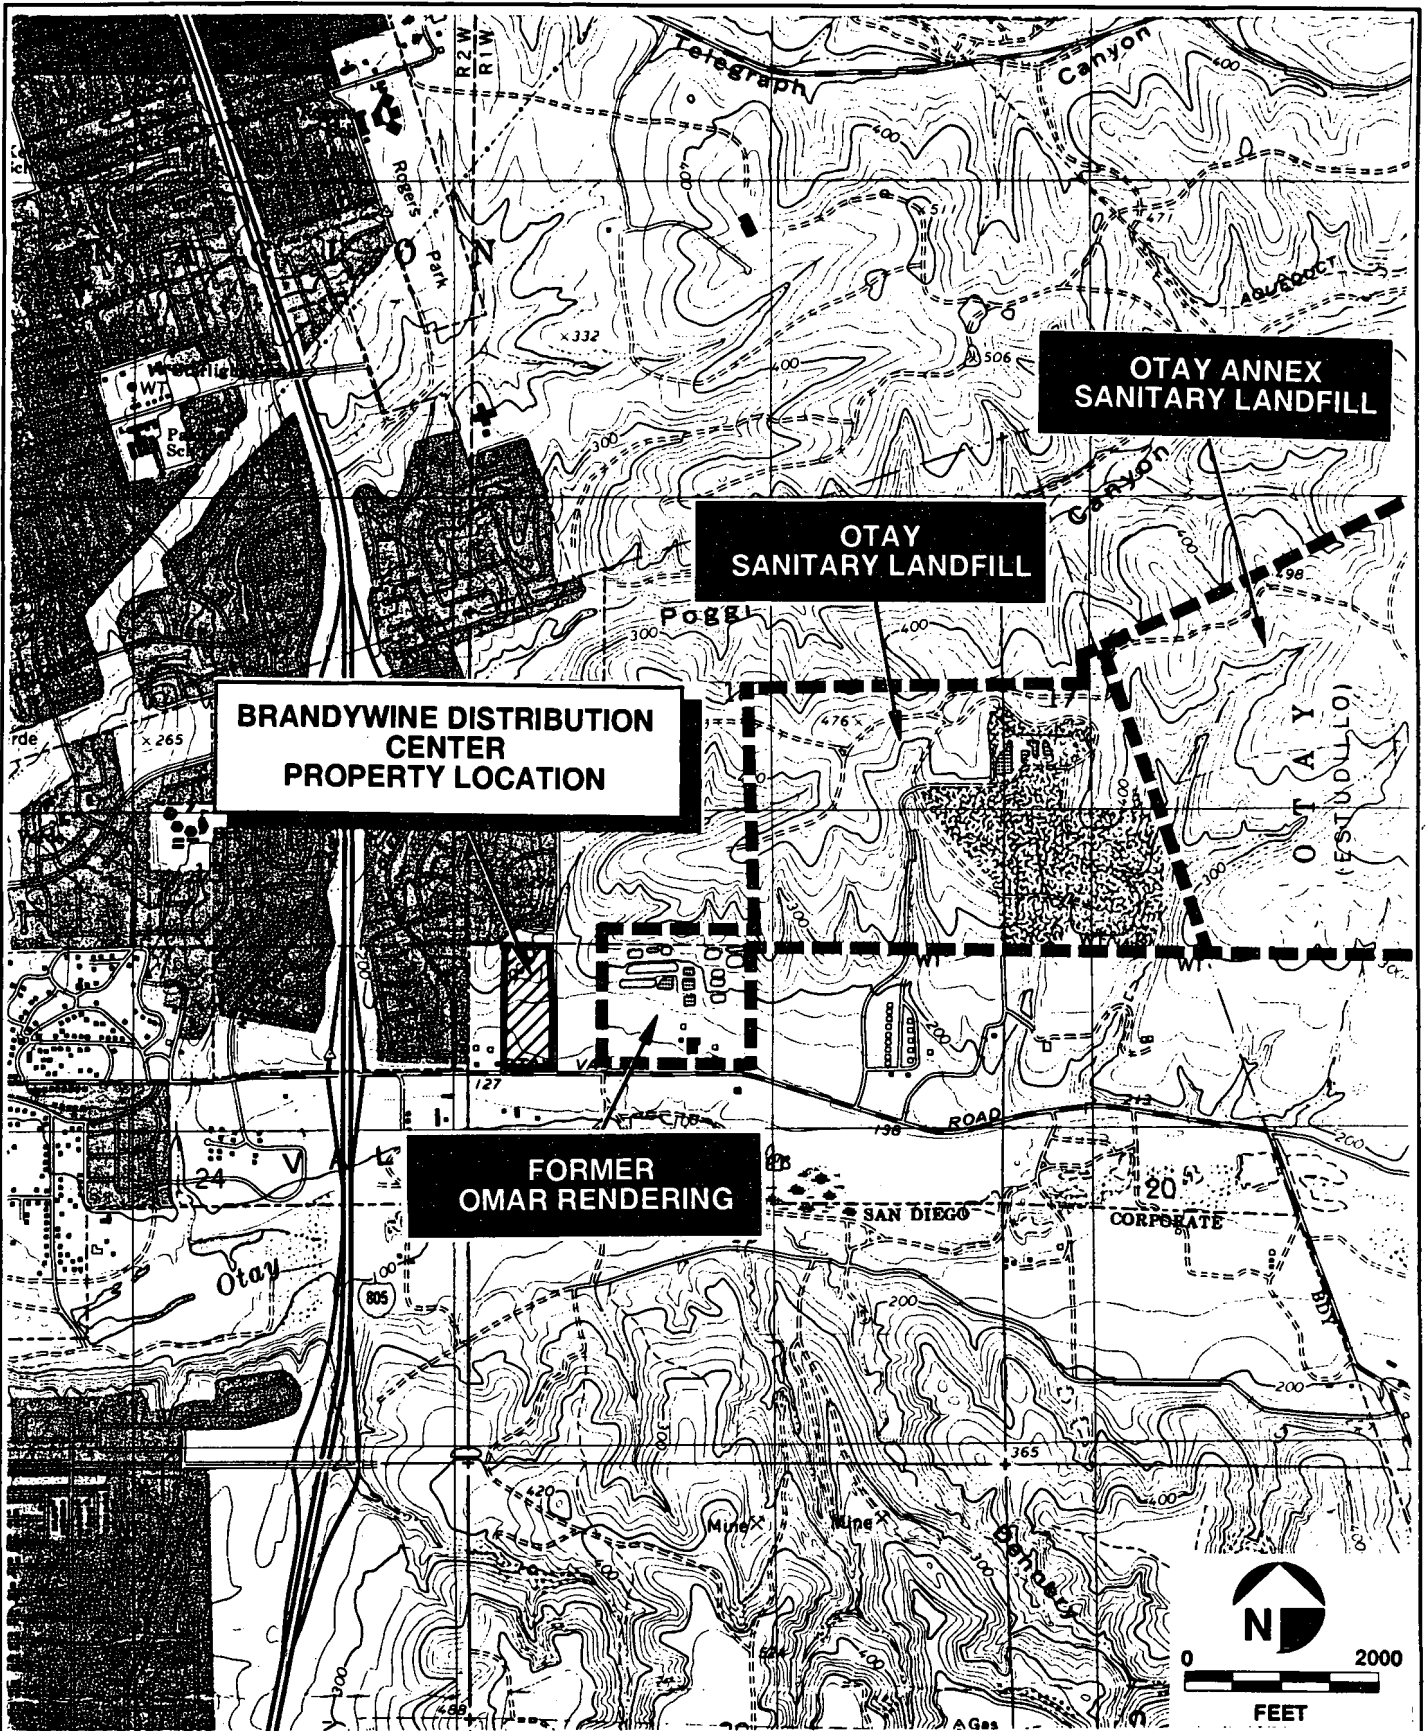

1.1 INTRODUCTION

This report presents results of a limited soil and ground-water investigation conducted at the Brandywine Distribution Center (subject site), located at 1670 and 1690 Brandywine Avenue in Chula Vista, California. A project location map is shown in Figure 1-1. This investigation was conducted by Ogden Environmental and Energy Services Company, Inc., (Ogden) for Chula Vista Industrial Realty, Inc. at the request of Mr. Robert C. Lascelles. The investigation was conducted to verify the presence of ground-water contamination beneath the subject site, evaluate ground-water flow direction, velocity, and gradient, and assess potential sources of the identified contamination.

This report includes an introduction and site description (Section 1); a discussion of previous investigations conducted at the subject site (Section 2); field investigation activities (Section 3); investigation results and discussion (Section 4); conclusions and recommendations (Section 5); references (Section 6) and limitations (Section 7).

1.2 SITE DESCRIPTION

The subject site is located along the west side of Brandywine Avenue, immediately north of Otay Valley Road, in Chula Vista, California (Figure 1-1). According to a previous Phase I Environmental Site Assessment performed for the property, the site consists of two rectangular parcels with a combined area of 9.84 acres (BEM 1994). The subject property contains two commercial/light industrial buildings located at 1670 and 1690 Brandywine Avenue, located across Shinohara Lane from each other. The majority of the site is paved with asphalt, with landscaping around the edges of the site. The site generally slopes from north to south and ranges in elevation from approximately 175 feet above mean sea level (MSL) along the northern boundary to approximately 130 feet MSL along the southern site boundary.

SECTION 2

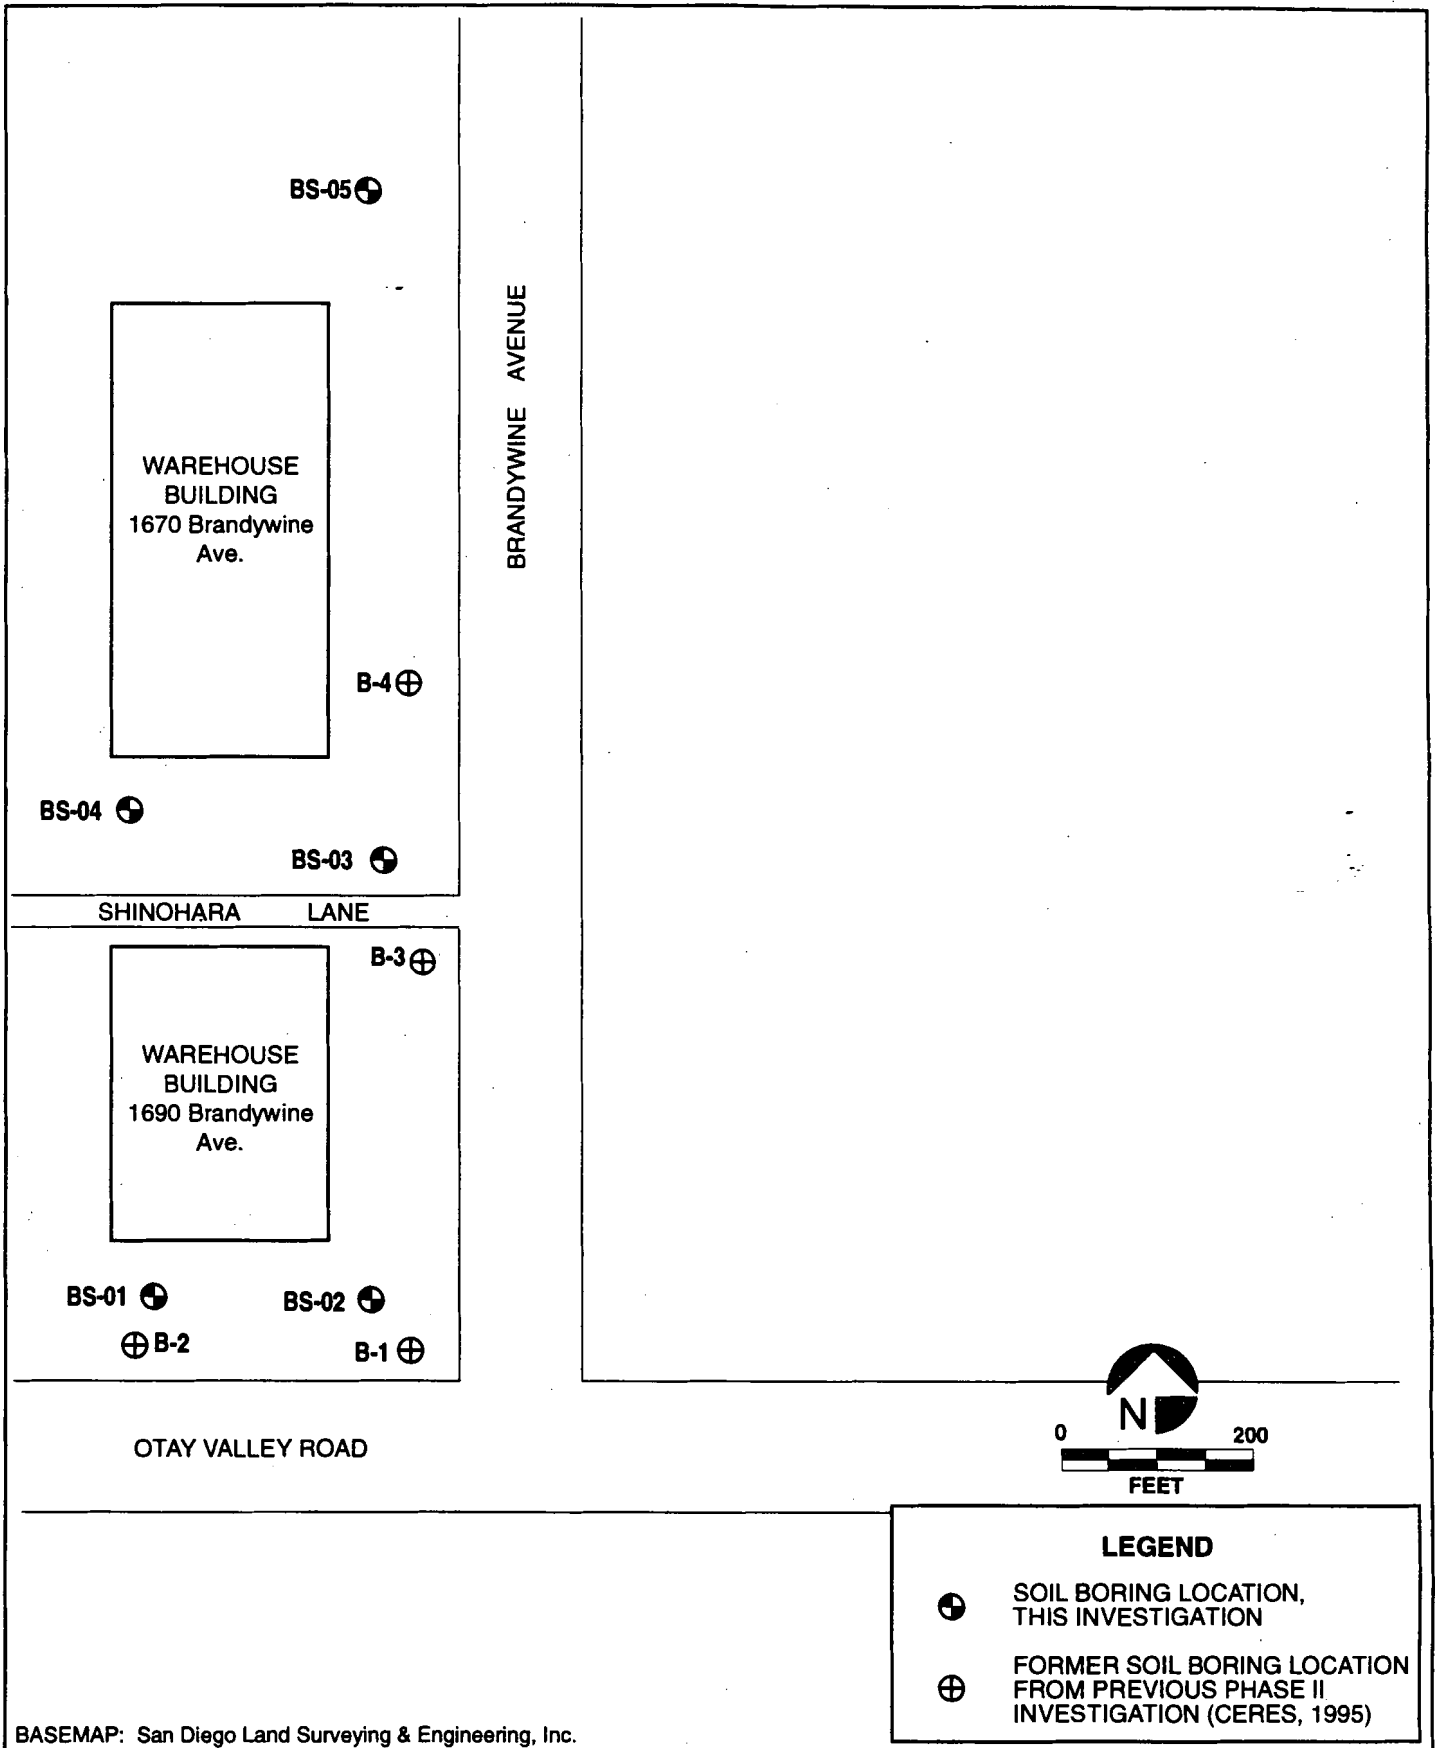

PREVIOUS INVESTIGATIONS

Two previous environmental investigations have been conducted at the subject site, including a Phase-I Environmental Site Assessment and a Phase II subsurface soil assessment. BEM Systems, Inc. (BEM) conducted a Phase I investigation in March, 1994. The purpose of the Phase I investigation was to identify existing or potential environmental hazards and to recommend whether further investigation would be warranted.

According to the Phase I report, the site was believed to be previously undeveloped. Based on a site reconnaissance and interviews with current building tenants, no regulated or hazardous substances were found to be in current use at the site, nor were such substances being disposed of at the site. According to the property manager, previous tenants were primarily product distributors who would not likely use hazardous substances. Current tenants were reported to be involved in the sale or distribution of lumber, hardware, dried flowers, halogen lamps, and Easter baskets, and would not be likely to use hazardous substances (BEM 1994).

A Phase II subsurface environmental investigation conducted by Ceres Environmental (CERES) in May, 1995, provided data indicating that soil and ground water beneath the subject site contains halogenated and non-halogenated volatile organic compounds (HVOCs and VOCs). Four soil borings were excavated on May 12 and 15, 1995, as shown in Figure 2-1. Soil samples collected at the soil/ground-water interface from borings B-1, B-3, and B-4 were submitted to an analytical laboratory for analysis (refusal on large cobbles was encountered in B-2 prior to reaching ground water). Ground-water samples were also obtained from soil borings B-1, B-3, and B-4. Table 2-1 presents the analytical results for soil and ground water.

CERES concluded that the most likely source of the observed HVOCs and VOCs in soil and ground water was the former Omar Rendering (Omar) site, located approximately 700 feet east of the subject site. The Omar site is described in the 1994 BEM Phase I report as being listed in the CORTESE, CERCLIS, CALSITES, and SWIS environmental databases. According to files reviewed by CERES at the San Diego Regional Water Quality Control Board (SDRWQCB), the Omar Rendering facility accepted Class I liquid industrial wastes from 1959 to 1978. These liquids, which included organic solvents,

were stored in large surface impoundments in the northern portion of the site (CERES 1995).

Based on the proximity of the Omar site to the subject property, the period of time that evaporation ponds were in operation, and the anticipated southwestward ground-water flow direction, CERES concluded that the adjacent Omar site was most likely the source of ground-water contamination beneath the subject site. The Otay Landfill, located approximately 1/2 mile northeast of the subject property, was also identified as a possible secondary contamination source (CERES 1995).

Files reviewed by Ogden at the Site Assessment and Mitigation (SA/M) Division of the County of San Diego Department of Environmental Health indicate that ground-water contamination beneath the Omar site is well documented. A site investigation report for the Omar site by Dames and Moore (1989) indicates that trichloroethene (TCE) was detected in 7 of 9 ground-water monitoring wells at concentrations ranging from 3 to 1,100 parts per billion (ppb). In addition, several metals were detected in ground-water samples, with mercury and selenium exceeding primary drinking water standards in several monitoring wells. An annual ground-water monitoring report by Dames and Moore (1995) indicates that TCE concentrations as high as 3,000 micrograms per liter ($\mu\text{g/l}$) were measured in ground water beneath the Omar site between 1989 and 1994. A 1996 addendum to the 1989 Dames and Moore report by Risk-Based Decisions, Inc. indicates that a ground-water TCE concentration of 21,000 $\mu\text{g/l}$ was measured in a monitoring well located within the area occupied by the former southwestern surface impoundment at the Omar site.

Available SA/M files were also reviewed for the property occupied by Hyspan Precision Products, Inc. This property is located at 1685 Brandywine Avenue, directly east of the subject site on the eastern side of Brandywine Avenue. According to the County of San Diego Compliance Inspection Report, a single 1,000-gallon diesel fuel underground storage tank (UST) was removed from the property in February, 1986. No indication of soil or ground-water contamination was apparent in the tank excavation. In addition, a 1994 Compliance Inspection Report for the Hyspan property indicates that onsite machinery was observed to be leaking oil to the ground. Available records did not indicate that any other hazardous materials releases, leaks, or removals have been reported at this property. Based on these records, the Hyspan property does not appear to be a possible source for HVOCs and VOCs detected in ground water at the subject site.

SECTION 3

FIELD INVESTIGATION ACTIVITIES

The current field investigation activities were performed by Ogden at the subject property between February 5 and March 13, 1996. The activities included a subsurface utility detection survey; drilling and soil sampling; installation, development, and sampling of monitoring wells; land surveying; heat-pulse flow logging; and management of investigation-derived waste (IDW). The following sections describe these activities.

3.1 UNDERGROUND UTILITY CHECK AND UTILITY DETECTION SURVEY

Underground Service Alert (USA) was contacted prior to commencement of field activities. All utility companies contacted by USA indicated that no underground utilities were present in the direct vicinity (i.e., within 5 feet) of proposed boring/monitoring well locations.

An underground utility detection survey was conducted by Underground Location Services Company (ULS) of La Jolla, California, on February 5, 1996. The underground utility survey was conducted to locate and identify underground cables, pipes and utilities at each boring location. ULS performed an Electromagnetic Pipe and Cable Location (EMPCL) conductive utility survey, which utilized passive, ground induction and connection modes. ULS also conducted an Electromagnetic Induction (EMIND) sweep for potential metal mass interference. A 10-foot radius around each boring was investigated. No anomalous readings or underground utilities were identified at any of the five boring locations surveyed. The utility detection survey report by ULS is included in Appendix A.

3.2 SOIL SAMPLING

Soil sampling activities were conducted on February 10 and 11, and on February 17 and 18, 1996. Valley Well Drilling of Ventura, California, provided the drilling services. A total of five soil borings were conducted to depths ranging from 56.5 to 91 feet below ground surface (bgs). Soil boring locations BS-01 through BS-05 are shown in Figure 2-1. Three borings were conducted at 1670 Brandywine Avenue and two were conducted at 1690 Brandywine Avenue.

Soil borings were conducted using a Failing F-6 drill rig equipped with 8-inch (outside diameter) hollow-stem augers. Soil cuttings were examined every 10 feet to identify

changes in lithology, soil moisture, and organic vapor concentrations. Soil sampling was accomplished using a California Modified 1 3/8" inside diameter split-spoon sampler equipped with three 6-inch brass sleeves. Soil samples were obtained by driving the sampler with a 140-pound hammer dropped from a height of 30 inches in accordance with ASTM D 1586. Two to three split-spoon samples were collected from each boring, for a total of 13 samples. Sample locations were selected to include at least one sample each from the unsaturated and saturated zones.

The ends of the sample sleeves were covered with Teflon tape, capped, labeled, and placed immediately on ice. Headspace vapor analysis was performed as a field screening technique for assessing whether organic contaminants were present in soil samples. This was done by first placing a portion of the soil sample or cuttings into a zip-lock plastic bag. After the bag was allowed to remain in the sun for several minutes, an H-NuTM photoionization detector (PID) was used to measure organic vapor concentrations within the plastic bag. Soil classification and sampling activities were conducted by a State of California Registered Geologist. Soils were logged using the Unified Soil Classification System (USCS) in accordance with ASTM D 2488. Soil boring logs are included in Appendix A, along with a description of the USCS.

All drilling equipment was decontaminated using a hot-water high pressure washer system prior to the commencement of field activities and between each boring. Field sampling equipment (e.g., split-spoon samplers, sleeves, caps, etc.) was decontaminated prior to sampling and between each sample using Ogden's standard decontamination procedures, which include a wash in a laboratory grade detergent, potable water rinse, isopropyl alcohol spray, potable water rinse, and distilled water rinse. All decontamination fluids were containerized in DOT approved 55-gallon drums and temporarily stored onsite pending sampling results.

3.3 MONITORING WELL INSTALLATION

The five soil borings (BS-01 through BS-05) were converted to monitoring wells (MW-01 through MW-05) following soil sampling activities. A two-inch polyvinyl chloride (PVC) ground-water monitoring well was installed in each boring. Well screens consisted of slotted PVC with 0.010-inch slot size. Well screen sections were 20 feet in all monitoring wells except MW-01, in which a 30-foot section of well screen was installed due to a large amount of ground-water rise following drilling activities. All installation procedures were

conducted in accordance SA/M Division requirements as specified in the 1996 SA/M Manual. Surface completions for each well consisted of a flush-mounted traffic box finished with a Class A cement surface seal in accordance with SA/M requirements. Monitoring-well construction was overseen by a State of California Registered Geologist. Well construction logs are included in Appendix A.

Following installation, each monitoring well was developed in accordance with SA/M division requirements. A surge and bail method was used to develop the monitoring wells. Each well was surged with a surge block for a minimum of 20 minutes, after which ground water was removed with a bailer. Purged water was monitored for pH, temperature, turbidity and electrical conductivity. The process of alternately surging the well and removing ground water with a bailer was continued until the parameters stabilized and until ground water became substantially less turbid. All purged water was drummed in DOT approved 55-gallon drums and temporarily stored onsite. Appendix A contains the monitoring-well development records.

3.4 GROUND-WATER SAMPLING

Ground-water samples were collected from monitoring wells MW-01 through MW-05 on February 27, 1996, in accordance with SA/M Division requirements, following a minimum 72-hour period after monitoring well development. Prior to sampling, depths to ground water were measured and each monitoring well was purged by pumping with a 2-inch Grundfos™ submersible pump, which was decontaminated prior to use and between monitoring wells. Purged water was monitored for temperature, pH, and conductivity. Purging was continued until these parameters stabilized with successive measurements. Well development and purge records are included in Appendix A. Purge water was contained and stored onsite in 55-gallon DOT-approved drums. Ground-water samples were collected from each well with disposable polyethylene bailers.

3.5 SOIL AND GROUND-WATER SAMPLE ANALYSIS

Soil and ground-water samples collected for analysis were delivered with proper chain-of-custody documentation to CKY Inc. Analytical laboratories, in Torrance, California. Soil samples were analyzed for halogenated and non-halogenated VOCs using EPA methods 8010/8020 and for Total Organic Carbon (TOC) using EPA method 90-3.2 ASA. All thirteen soil samples collected were submitted for analysis.

Ground-water samples were analyzed for halogenated and non-halogenated VOCs using EPA methods 8010/8020, and for general chemistry constituents and metals (various EPA Methods). Five ground-water samples were submitted for analysis. Complete copies of original analytical laboratory reports for soils and ground water are included in Appendix B.

3.6 SURVEYING AND DEPTH TO GROUND-WATER MEASUREMENTS

San Diego Land Surveying & Engineering, Inc. was subcontracted to survey the monitoring well elevations. Monitoring wells were surveyed to a vertical accuracy of 0.01-foot using a bench mark reference to mean sea level. All monitoring wells were surveyed at a notch located at the top of the PVC casing to provide a datum for water-level measurements. Depth to ground water was measured in each monitoring well on February 27, 1996, prior to ground-water sampling activities. Ground-water depths were measured with respect to the notch at the top of the PVC casing using a Solinst Model 101 water-level meter.

3.7 HEAT-PULSE FLOW LOGGING

Heat-pulse flow (HPF) logging was performed at the subject site on March 12 and 13, 1996, using a Model 200 GeoFlo™ ground-water flow meter. A heat-pulse flow meter is a hydrological logging device used to determine ground-water flow direction and velocity in monitoring wells and open boreholes. A heat-pulse flow meter operates by emitting a heat pulse and measuring subsequent temperature changes in the ground water as a result of the ground-water movement. Direct small-scale ground-water velocity and flow direction measurements can therefore be made within a single well. An article (Gutherie 1986) describing the use of a heat-pulse flow meter is included in Appendix C.

Ground-water velocities and flow directions were directly measured in MW-02, MW-03, and MW-04. Ground-water flow measurements were conducted at two different depths in each monitoring well. A minimum of four velocity measurements were collected at each depth and averaged to provide a mean ground-water flow velocity measurement and error range. Measurable ground-water flow was not detected in MW-01 and MW-05. Ground-water flow direction measurements were referenced to magnetic north and subsequently corrected to true north.

3.8 MANAGEMENT OF INVESTIGATION-DERIVED WASTE

A total of 41 55-gallon DOT-approved drums of investigation-derived waste (IDW) were generated during this investigation. Drum contents include soil cuttings, purge water, decontamination water, unused grout, and asphalt. Other IDW, including used tyvek coveralls, nitrile gloves, used headspace bags, and plastic sheeting, were double-bagged, sealed, and disposed of as municipal waste. Drums were labeled, sealed, and stored temporarily onsite pending analytical results. Details of IDW disposal will be provided in a separate report.

SECTION 4 INVESTIGATION RESULTS AND DISCUSSION

4.1 GENERAL GEOLOGIC CONDITIONS

According to the Phase II report by CERES (1995), the subject site is underlain by river terrace deposits of Holocene age (less than 11,000 years old). These deposits are underlain by Pliocene-age (less than 5 million years old) deposits of the San Diego Formation (Kennedy and Tan 1977; Kuper and Gastil 1977). The terrace deposits are described as unconsolidated sand, gravel, and clay derived from older geologic units. The San Diego Formation consists of yellowish-brown to reddish-brown, fine- to medium-grained marine sandstone.

The closest mapped fault is the La Nacion fault zone. A strand of the La Nacion fault zone has been mapped as trending approximately north-south in the general vicinity of Brandywine Avenue adjacent to the eastern edge of the subject site (Kennedy and Tan 1977; Kuper and Gastil 1977). This fault strand is presently considered to show evidence of offset during Quaternary time (last 1.6 million years) but not during Holocene time (Jennings 1994).

4.2 REGIONAL GROUND-WATER CONDITIONS

The subject site is located within the Otay Valley Hydrologic Area (HA) of the Otay Hydrologic Unit of the San Diego Drainage Province (SDRWQCB 1995). Ground water within the Otay HA generally flows from east to west, along the course of the Otay River, toward San Diego Bay. Ground-water quality in portions of the Otay HA is considered to be of poor quality due to high total dissolved solids (TDS) and elevated chloride concentrations. High chloride content may be due partially to the presence of connate water and dissolved salts within marine sediments (Dames and Moore 1989). According to the current Water Quality Control Plan for the San Diego Basin (the Basin Plan), the subject site lies within a portion of the Otay Hydrologic Unit that is designated as having beneficial uses only for industrial purposes; however, discussions with staff at the SDRWQCB indicate that ground-water beneath the Brandywine site is not exempted from having municipal and agricultural beneficial uses (verbal comm. with Brian McDaniel on May 8, 1996).

4.3 SUBSURFACE SOIL CONDITIONS

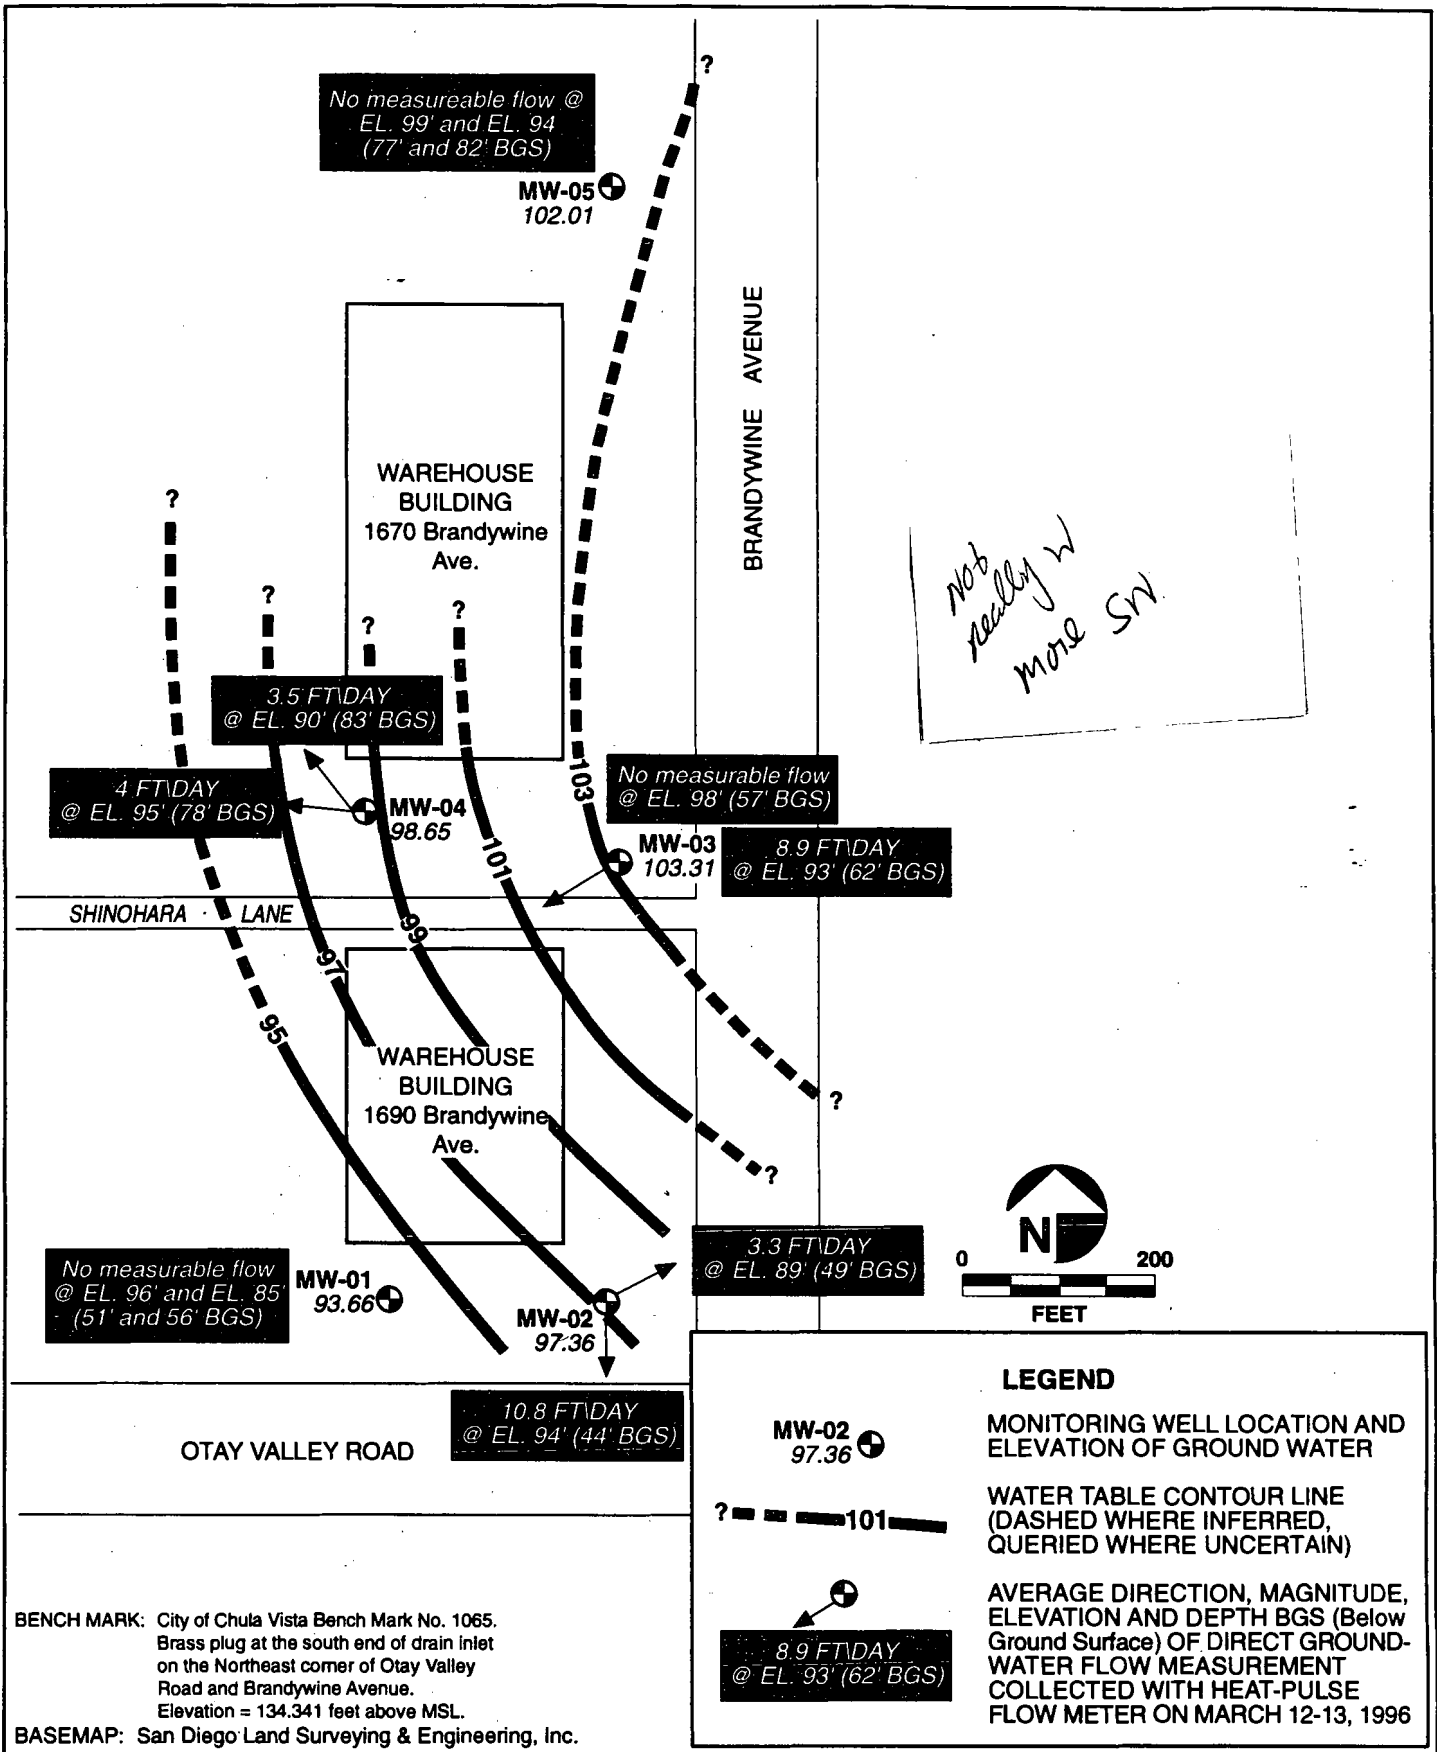

Subsurface conditions encountered during this investigation were generally similar to those described in the previous Phase II subsurface investigation (CERES 1995). Probable fill soils were encountered in the upper few feet bgs of BS-01, BS-02, and BS-04. These soils were lithologically similar to the underlying terrace deposits and consisted primarily of moist, brown to light olive brown, silty sand in BS-01 and BS-04, and dark grayish brown, moist clay in BS-02. Terrace deposits were encountered beneath fill soils in BS-01, BS-02, and BS-04, and consisted of brown to dark grayish brown, moist, dense, silty sands and clays. No fill soils were encountered in BS-03. Terrace deposits encountered in BS-02 were finer grained than in other borings. Cobbly horizons characterized by difficult drilling conditions were encountered at approximately 25 to 37 feet bgs in BS-01, 28 to 33 feet bgs in BS-02, and 40 to 50 feet bgs in BS-03. The San Diego Formation was encountered beneath the terrace deposits at depths ranging from the ground surface in BS-05 to depths of 65 to 70 feet bgs in BS-04. All five borings were terminated within the San Diego Formation, which consisted of moist to wet, dense to very dense, micaceous, olive brown silty sand and silt.

No hydrocarbon or solvent odors were detected in any of the borings, nor was any visual evidence of soil contamination (i.e., staining, discoloration, etc.) observed. Slight headspace PID readings of 1 to 2 parts per million (ppm) were measured between 36 and 67 feet bgs in BS-04 and at 36 feet bgs in BS-05.

4.4 SITE GROUND-WATER CONDITIONS

Ground water was encountered at depths ranging from approximately 52.6 feet bgs in MW-02 to 76.3 feet bgs in MW-04. Ground water rose approximately 10 to 13 feet in MW-01, MW-02, and MW-03 within approximately 60 minutes after first being encountered. In contrast, ground water equilibrated at a level approximately 2 feet higher in MW-04 and MW-05 within several hours after boring completion. Ground-water levels in MW-01 and MW-02 recovered relatively quickly subsequent to purging, whereas water levels in MW-03, MW-04, and MW-05 recovered more slowly, as indicated by well purge records (Appendix A).

Ground-water elevations and ground-water contours are shown in Figure 4-1. HPF logging results are discussed in Section 4.6. Ground-water elevations range from 103 feet

FIGURE

4-1

MSL in the northeastern portion of the site to 93.7 feet MSL in the southwestern portion of the site. Monitoring well recovery data from MW-01, MW-02, and MW-03 (presented in previous paragraph) suggest that the uppermost aquifer beneath the site is somewhat confined (i.e., under pressure) locally; however, static ground-water elevations across the site indicate that ground-water generally flows from northeast to southwest, as evidenced by the trend of the ground-water contours (Figure 4-1). These results indicate that the subject site is down-gradient of the Omar and Otay Landfill sites. The ground-water gradient (i.e., the slope of the ground-water table) at the subject site is approximately equal to 0.02 ft/ft (106 feet per mile).

Figure 4-2 shows a comparison of ground-water contours at the subject site with ground-water contours at the Omar and Otay Landfill sites. As shown in Figure 4-2, ground-water elevations generally increase toward the northeast, indicating that ground-water flow in the uppermost aquifer is generally southwest.

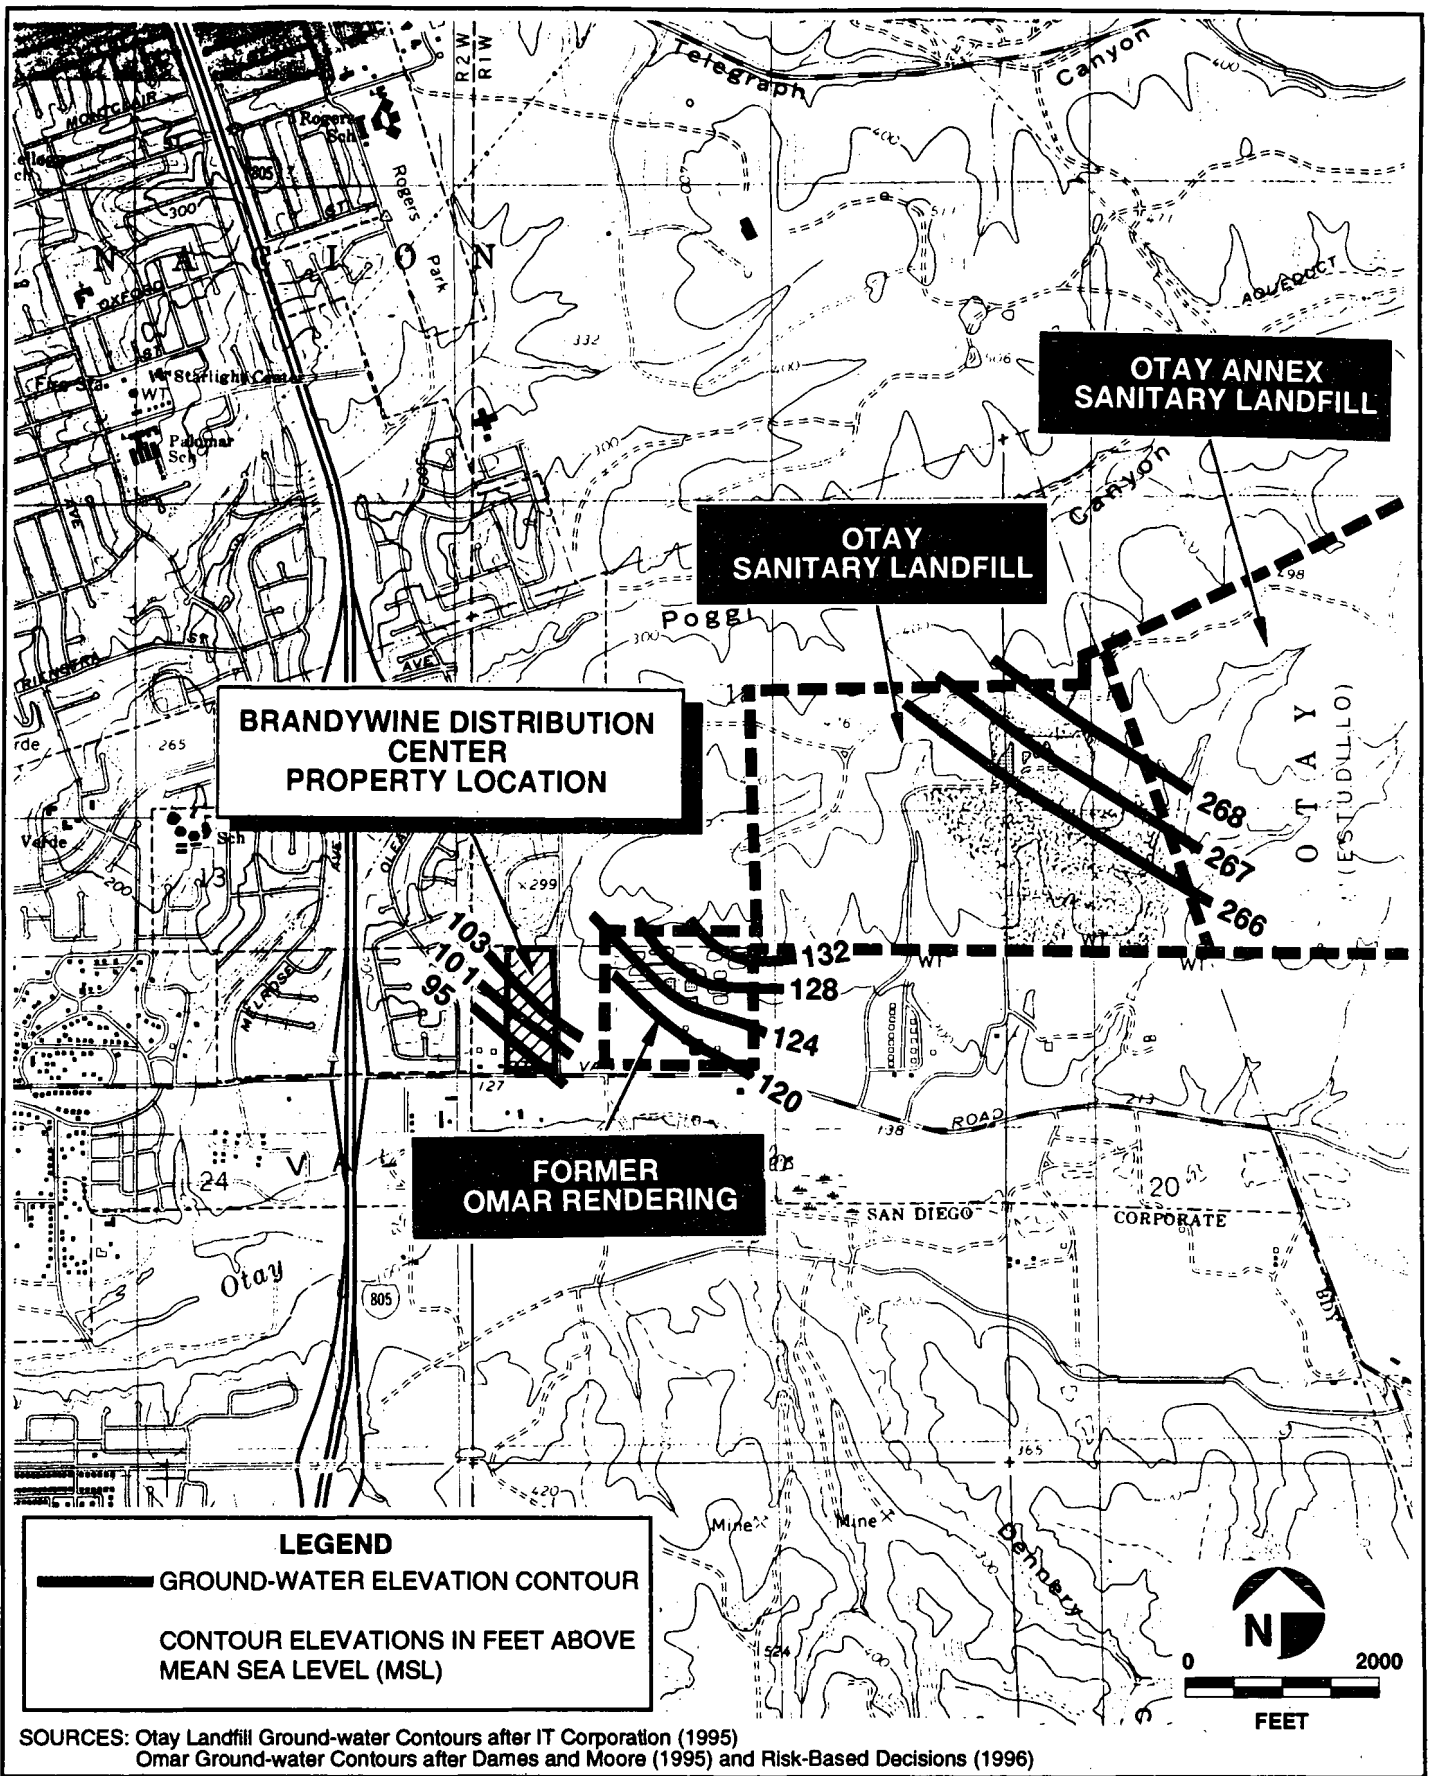

4.5 ANALYTICAL RESULTS

Soil

Soil analytical results are shown in Figure 4-3. HVOCs and benzene, toluene, xylenes, and ethylbenzene (BTXE) were not detected above their respective laboratory detection limits in BS-01, BS-02, and BS-05. None of the soil samples collected within the unsaturated zone contained detectable HVOC or BTXE concentrations.

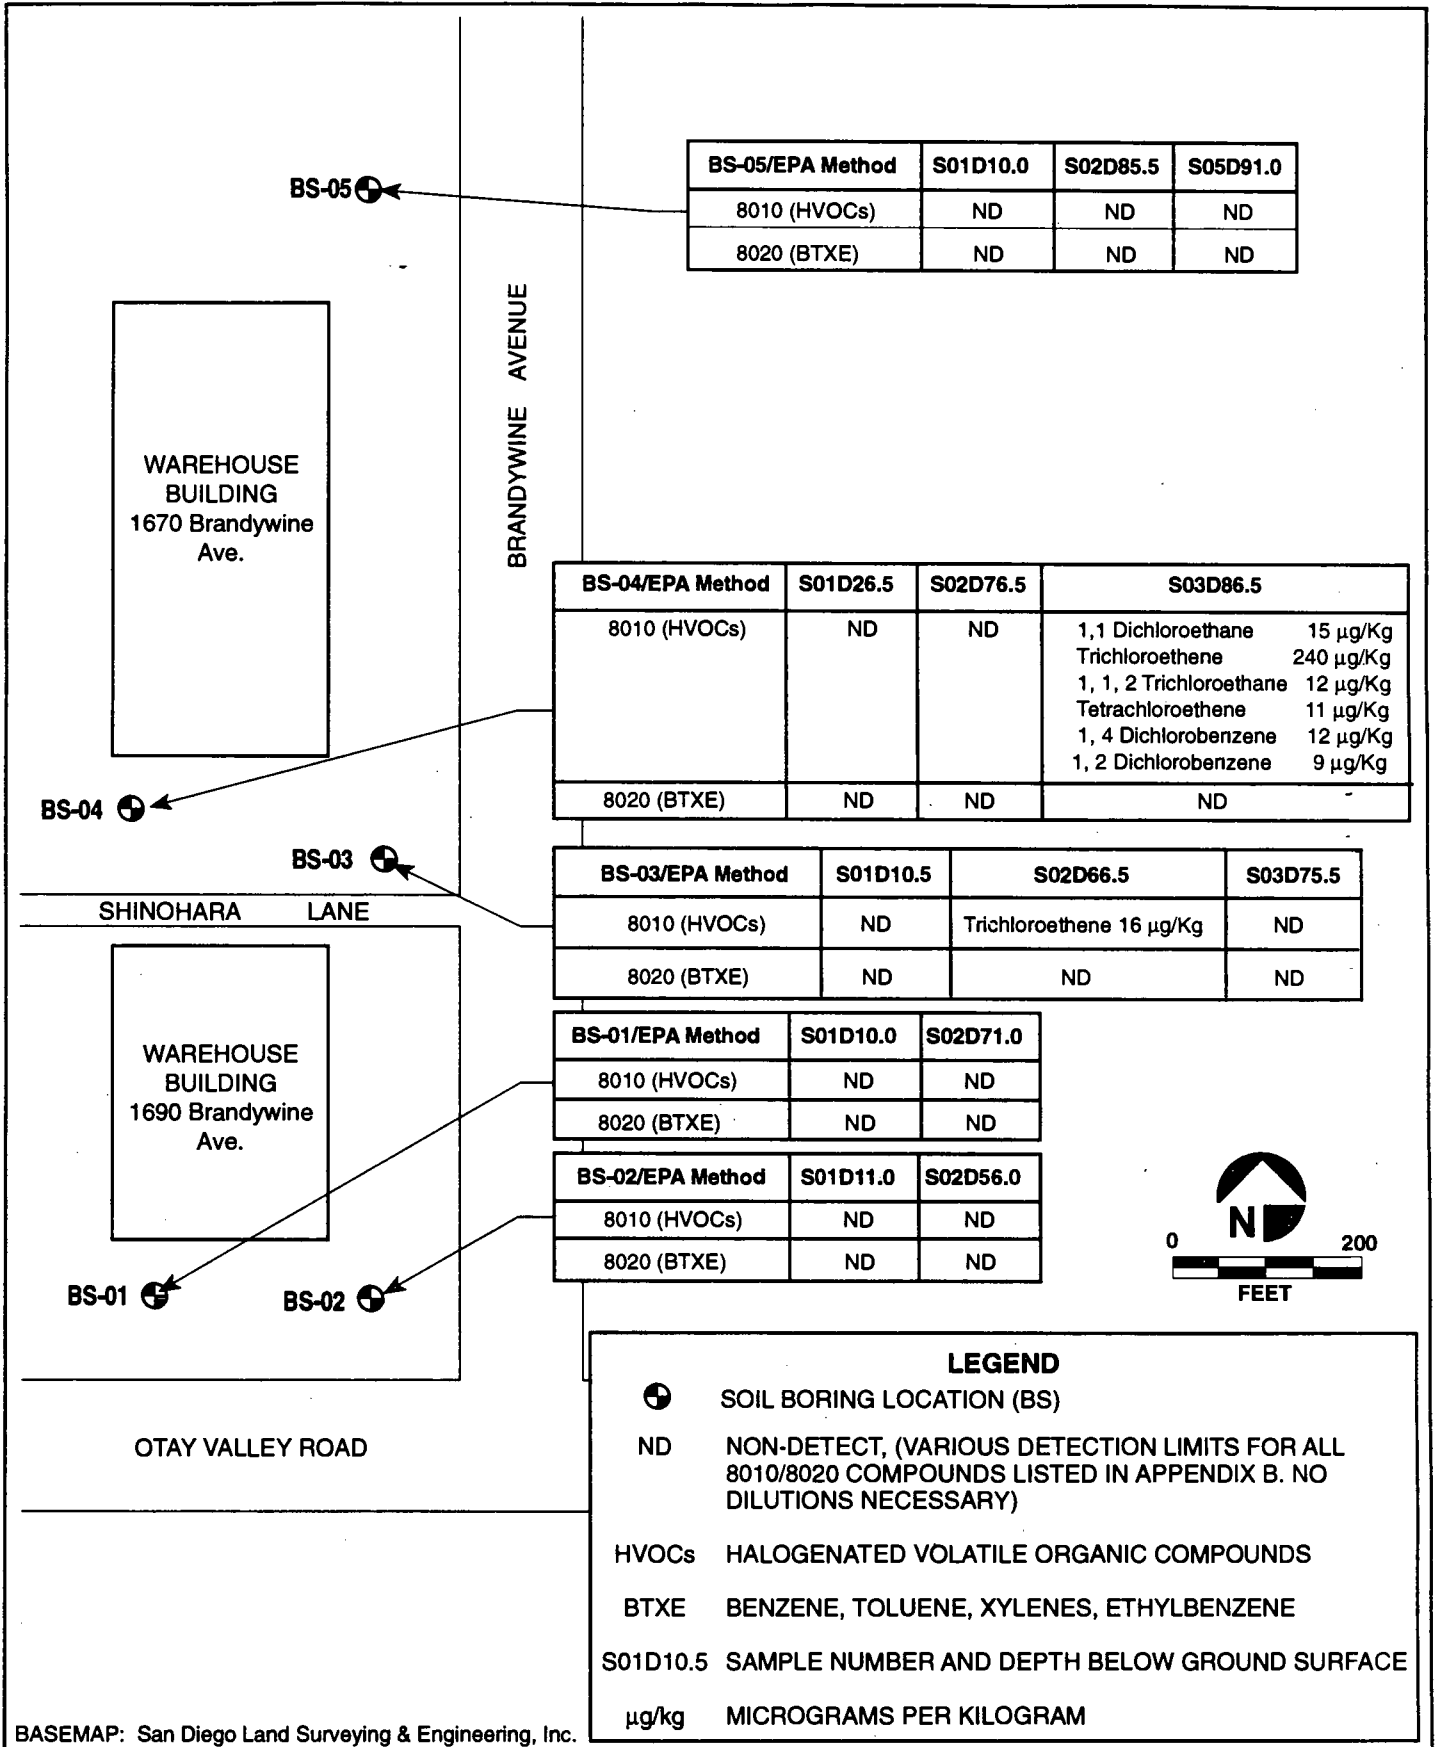

HVOCs were detected in BS-03 and in BS-04 at depths of 66.5 feet and 86.5 feet bgs, respectively. A trichloroethene (TCE) concentration of 240 $\mu\text{g}/\text{kg}$ was detected in sample S03D86.5, collected at a depth of 86.5 feet bgs; a TCE concentration of 16 $\mu\text{g}/\text{kg}$ was detected in S02D66.5 in BS-04, collected at 66.5 feet bgs in BS-04. Both of these samples were collected within the saturated zone (i.e., below the ground-water table).

The absence of detectable HVOC and BTXE concentrations within the unsaturated zone, relatively high ground-water HVOC concentrations, and a lack of historical and current hazardous materials usage at the site indicate an offsite contamination source. Table 4-1 lists the total organic carbon (TOC) results for soil. These results and their influence on contaminant mobility are discussed in Section 4.7.

Ground Water

General minerals analytical results for ground water are shown in Table 4-2. Ground water beneath the subject site appears to be of poor quality, with elevated total dissolved solids (TDS) concentrations ranging from 2,310 to 10,600 milligrams per liter (mg/l) and chloride concentrations ranging from 598 to 5,400 mg/l.

The general minerals results for MW-02 differ considerably from the results for the other monitoring wells. Specifically, chloride, sulfate, electrical conductivity (EC), total dissolved solids (TDS) and hardness results are much lower for MW-02 than for MW-01, MW-03, MW-04, and MW-05. These results indicate that the ground water in the vicinity of MW-02 is chemically distinct from other portions of the site. This difference may be a result of influence from an anthropogenic water source, such as over-irrigation of the adjacent landscaping or a leaky irrigation line.

The ground-water analytical results for EPA Methods 8010 (HVOCs) and 8020 (BTXE) are shown in Figure 4-4. All five ground-water samples contained detectable concentrations of HVOCs. TCE concentrations in MW-03 and MW-04 are significantly higher than in MW-01, MW-02, and MW-05. TCE concentrations detected in MW-01, MW-02, and MW-05 range from 1.6 to 13 $\mu\text{g/l}$, while concentrations of 400 and 720 $\mu\text{g/l}$ were detected in MW-03 and MW-04, respectively. Methylene chloride concentrations in MW-01 through MW-05 ranged from 30 to 87 $\mu\text{g/l}$.

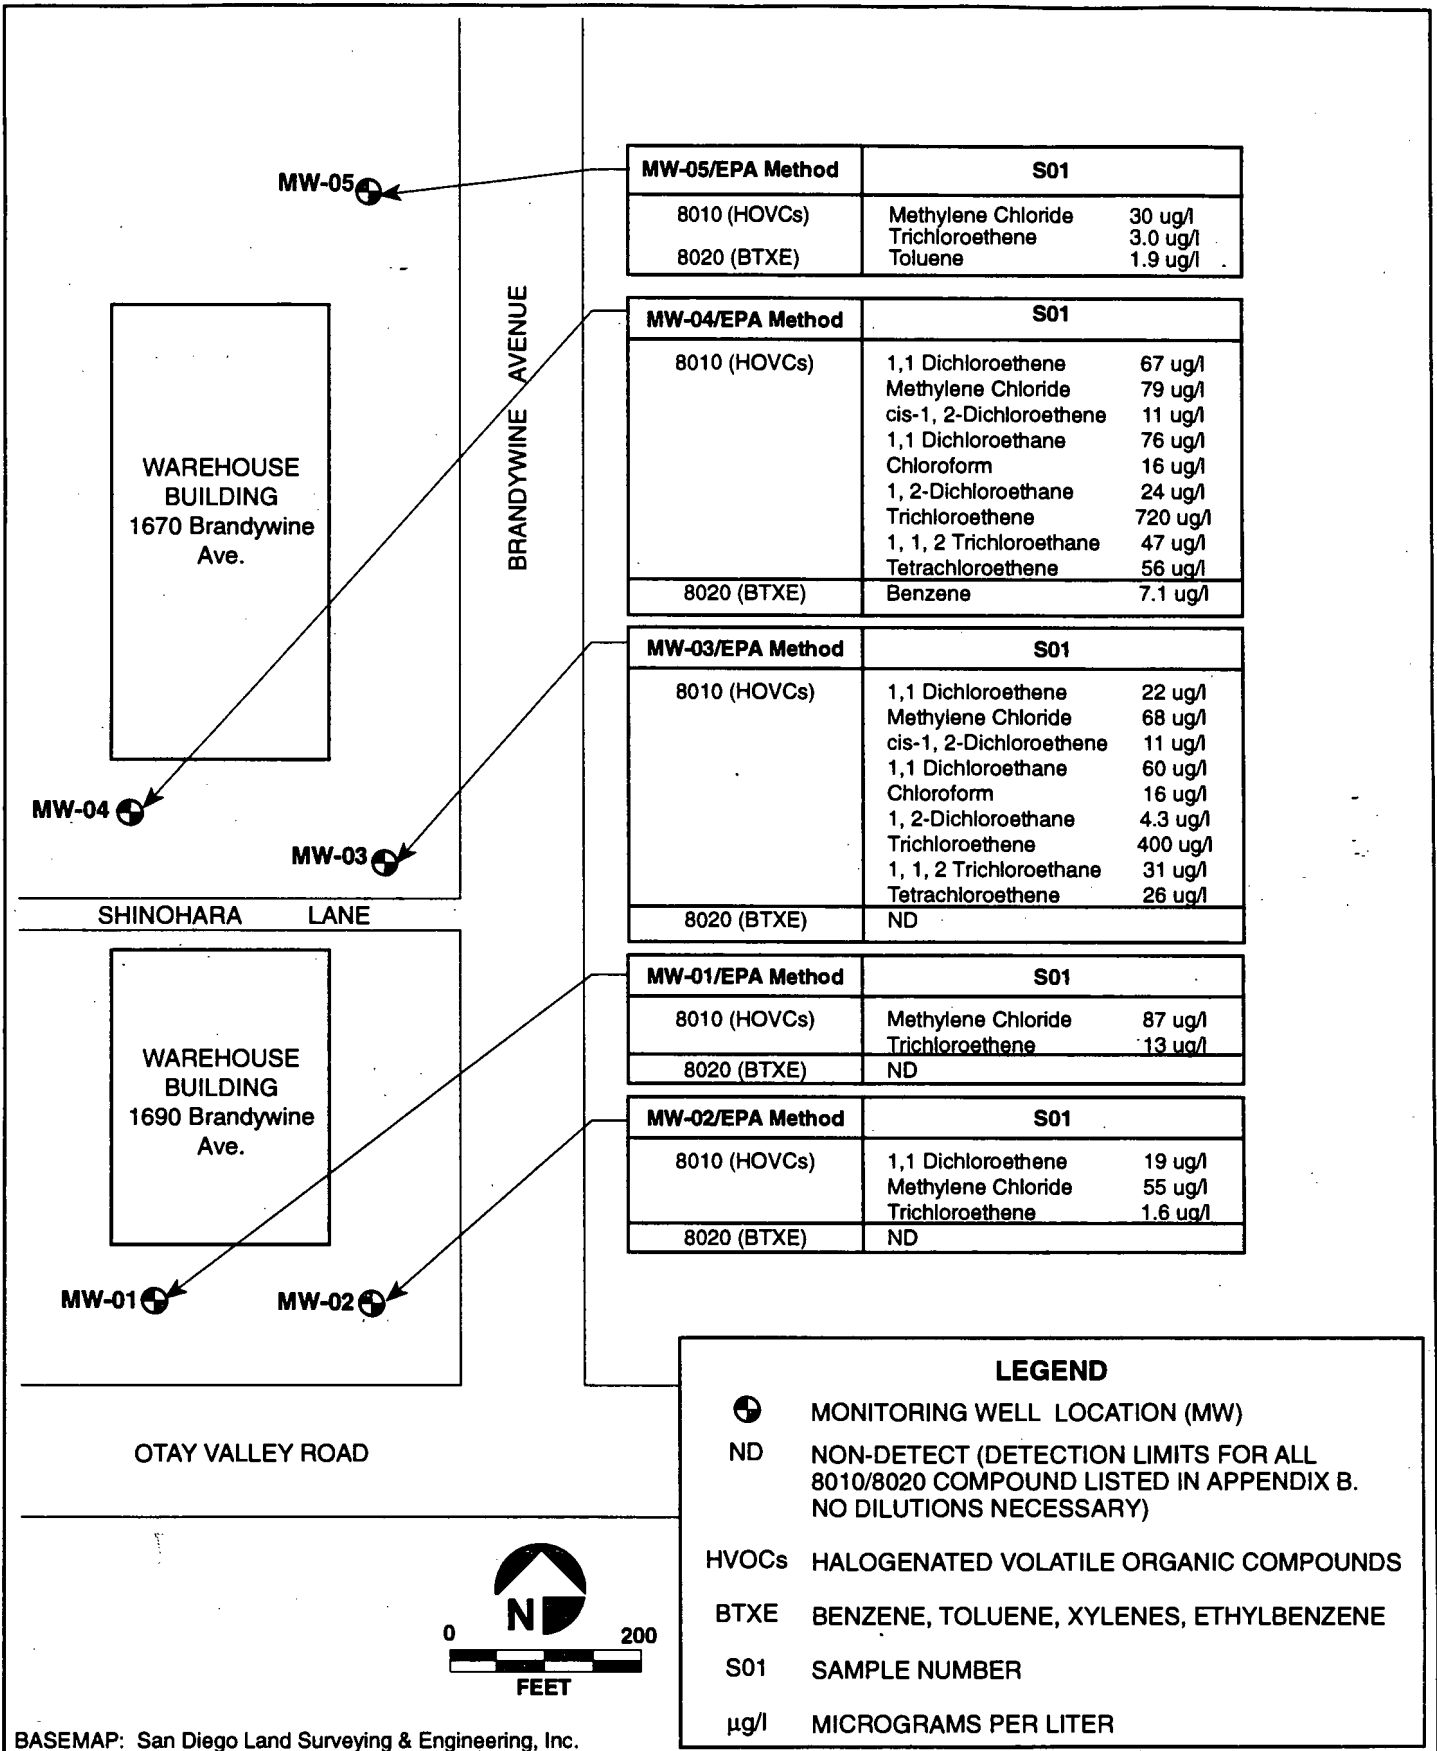

A comparison of the TCE and methylene chloride ground-water results for the subject site and the adjacent Omar and Otay Landfill sites is shown in Table 4-3. Ground-water analytical data for the Omar and Otay Landfill sites were obtained from available reports on file at the San Diego County SA/M Division. As shown in Table 4-3, the maximum TCE concentrations measured in ground-water beneath the Omar site are substantially higher (by one to two orders of magnitude) than concentrations at the subject site and the Otay Landfill site. Methylene chloride concentrations at the Omar site are also higher than concentrations at the subject site.

Otay Landfill Data from IT Corporation (1993) and County of San Diego (1994). Otay Landfill data shown are for uppermost (perched) aquifer.

²A less-than symbol (<) followed by a value indicates the laboratory detection limit.

Although both the Otay Landfill and the Omar facility are located upgradient from the subject site, ground-water TCE concentrations beneath the subject site are higher than those detected at the Otay Landfill. In addition, the Omar site is substantially closer to subject site than is the Otay Landfill. Given these observations and analytical results, the Omar site represents a more likely source of ground-water contamination at the subject site than does the Otay Landfill.

Analytical results for metals are shown in Table 4-4. These results, which are for unfiltered ground-water samples, also indicate poor ground-water quality. Table 4-5 shows a comparison of selected metal concentrations in ground water from the subject site with available analytical data from the nearby Omar and Otay Landfill sites. Maximum ground-water metal concentrations generally appear to be higher at the subject site than at the Omar and Otay Landfill sites; however, direct comparisons of metal concentrations among the three sites listed in Table 4-5 are not possible due to varying levels of suspended solids in ground-water at the three sites. Typically, high levels of suspended solids in ground water result in increased total metal concentrations. The main conclusion to be

A less-than symbol (<) followed by a value indicates the laboratory detection limit.

drawn from Table 4-5 is that elevated metal concentrations occur in the ground water beneath all three sites.

4.6 HEAT-PULSE FLOW LOGGING RESULTS

HPF logging results are presented in Table 4-6 and Figure 4-1. Ground-water flow directions and velocity measurements obtained from HPF logging are considered approximate due to variability in the HPF data; however, these results are generally consistent with ground-water flow directions indicated by the trend of the ground-water contours (also shown in Figure 4-1). The HPF data and the ground-water contours both indicate that ground-water beneath the subject site flows in a southwest to northwest direction. Vertical variability of the ground-water flow field was also observed, as is typical for many aquifers (Fetter 1988).

The results from MW-03 indicate a southwest flow direction of approximately 3.9 to 13.9 feet per day, with an average value of approximately 8.9 feet per day. HPF logging results indicate that ground-water flow in the vicinity of MW-04 is generally west to northwest at velocities ranging from approximately 2.7 to 4.3 feet per day, with average values of 3.5 to 4.1 feet per day. No measurable flow was detected in MW-01 and MW-05, located in the southern and northern portions of the site, respectively. Based on the flow meter instrument sensitivity and on site ground-water conditions, ground-water flow in the direct vicinity of these wells is estimated to be less than about 1 foot per day. Measured ground-water flow directions in each monitoring well generally exhibited 10 to 30 degrees of variability, and ground-water flow velocity measurements generally exhibited approximately 0.2 to 5 feet per day of variability.

A northeast ground-water flow of approximately 3 feet per day was measured at 49 feet bgs in MW-02, whereas a southward flow of approximately 11 feet per day was measured at 44 feet bgs in MW-02. These results may reflect localized influence from an anthropogenic surface water source, as discussed in Section 4.5. Alternatively, these results may reflect a natural variability of the overall ground-water flow field, as discussed below.

One explanation for the vertical variability of flow directions and velocities measured in MW-02 is that since HPF measurements are made at a point source (i.e., a particular level in a small-diameter monitoring well), such measurements may reflect localized flow irregularities through the aquifer material rather than regional ground-water flow directions.

Table 4-6

SUMMARY OF HEAT-PULSE FLOW LOGGING RESULTS

| Monitoring Well | Depth to Water at Time of Flow Measurement ¹ | Depth of Flow Measurement ¹ | Magnitude of Ground-water Flow | Direction of Ground-water Flow (azimuth) |
|-----------------|---|--|---|--|
| MW-01 | 48.05 ft | 51 ft 56 ft | < 1 ft/day < 1 ft/day | NM NM |
| MW-02 | 41.6 ft | 44 ft 49 ft | 10.8 +/- 0.8 ft/day 3.3 +/- 1.4 ft/day | 171° +/- 10° 69° +/- 30° |
| MW-03 | 52.09 ft | 57 ft 62 ft | < 1 ft/day 8.9 +/- 5 ft/day | NM 261° +/- 20° |
| MW-04 | 75.21 ft | 78 ft 83 ft | 4.1 +/- 0.2 ft/day 3.5 +/- 0.8 ft/day | 293° +/- 10° 327° +/- 20° |
| MW-05 | 74.2 ft | 77 ft 82 ft | < 1 ft/day < 1 ft/day | NM NM |

¹ Measured from ground surface.
 NM Not Measurable

Such flow irregularities can result from locally heterogeneous aquifer conditions such as changes in lithology, which cause significant changes in hydraulic conductivity. Flow variability in MW-02 may therefore be a result of preferential groundwater flow at discrete depths in the direct vicinity of MW-02.

Ground-water elevations and heat pulse flow data indicate an overall westward ground-water flow direction in the direct vicinity of MW-03 and MW-04. HPF data indicate that the most significant ground-water flow is primarily occurring beneath the central portion of the site, as indicated by generally higher flow velocities and more consistent flow directions in this area than in the northern and southern portions of the site (Figure 4-1). Ground-water TCE concentrations are also higher in this portion of the subject site than in the northern and southern portions of the site. This portion of the site is directly down-gradient of the adjacent Omar site; therefore, the Omar site represents the most likely source of ground-water contamination observed at the subject site.

As a rough check of the HPF ground-water velocity results, hydraulic conductivities were back-calculated for aquifer materials from HPF data and from the measured ground-water gradient (i.e., the slope of the water table) beneath the subject site. Hydraulic conductivity (K) is a measure of the rate at which water moves through a permeable medium. Calculated hydraulic conductivities range from 0.014 to 0.073 centimeters per second (cm/s). These values are within a typical K range of 0.0001 to 0.01 for silty sand (Fetter 1988). Measured ground-water velocities at the subject site therefore appear to be realistic values.

4.7 RESULTS OF CONTAMINANT MOBILITY EVALUATION

The mobility of TCE in ground-water beneath the subject site and vicinity was evaluated by calculating its retardation factor (R). R represents the degree to which the average velocity of a dissolved contaminant plume in ground water is retarded (i.e., slowed down) relative to the ground-water flow velocity. The larger the R value, the slower the average velocity of the contaminant plume relative to that of the seepage velocity (i.e., the velocity of ground water). R is strongly influenced by the fraction of organic carbon (TOC) in the aquifer material. The higher the fraction of TOC in the aquifer material, the lower the mobility of an organic contaminant, since organic compounds exhibit a strong tendency to sorb onto organic carbon particles within an aquifer (Fetter 1993).

As explained below, average TCE plume velocities (i.e., retarded velocities) derived from estimated R values are relatively close to measured ground-water velocities. This indicates that the dissolved TCE ground-water plume beneath the subject site is relatively mobile, since its average velocity is close to that of the ground water. As noted above, aquifer materials contain very little organic carbon, indicating high TCE mobility.

TCE plume travel times from the Omar site to the subject site were estimated to be relatively low (0.4 to 2.7 years); therefore, not much time would be required for a TCE plume originating at the Omar site to migrate to the subject site. Historical TCE concentrations as high as 3,000 $\mu\text{g/l}$ have been measured in ground water beneath the Omar site (Table 4-3). Methylene chloride concentrations as high as 14,000 $\mu\text{g/l}$ have also been measured (Dames and Moore 1995).

Discussion of Contaminant Mobility Results

The retardation factor (R) is defined by the following equation:

$$R = 1 + \frac{K_d B_d}{\Theta_{eff}} \quad (\text{Equation 4-2; Fetter 1988})$$

where

K_d = the distribution coefficient;

B_d = the bulk density of the aquifer material (assumed to equal 1.3 kg/l); and

Θ_{eff} = the effective porosity of the aquifer material (assumed to equal 0.3).

The distribution coefficient (K_d) in Equation 4-2 is a measure of the equilibrium partitioning of a compound between the sorbed and dissolved phases. A site-specific K_d value can be estimated by dividing the TCE concentration in soil by the TCE concentration in ground water at the subject site. Bulk density (B_d) and effective porosity (Θ_{eff}) values were estimated from typical ranges for these parameters given by Holtz and Kovacs (1981) and Fetter (1988).

Two methods were used to estimate K_d for TCE. The first method used the soil and ground-water analytical results presented in Figures 4-3 and 4-4 to calculate K_d values of approximately 0.04 liters per kilogram (l/kg) and 0.33 l/kg from MW-03 and MW-04 data, respectively (see Table 4-7).

The second method estimated K_d values based on a published relationship between the organic carbon/water partitioning coefficient (K_{oc}) and the octanol/water partitioning coefficient (K_{ow}). K_d is equal to the K_{oc} value for the compound times the organic carbon fraction (Fetter 1988). The higher the organic carbon fraction of the soil, the greater the tendency of the organic compound to sorb onto the soil rather than remain in the ground water, and thus the lower the mobility of the compound in ground water. The TOC results shown in Tables 4-1 and 4-7 provide a measure of the organic carbon fraction present in soil samples from MW-03 and MW-04. K_d values estimated for TCE were calculated based on a published K_{ow} value for TCE (Fetter 1993) and an empirical relationship between K_{ow} and K_{oc} (Karichoff et al. 1979).

Table 4-7 provides a summary of the estimated K_d values for MW-03 and MW-04 obtained by the two methods described above.

Table 4-8 provides a summary of estimated R values using the K_d estimates shown in Table 4-7. The estimated R values shown in Table 4-7 are relatively low, suggesting that TCE in ground water beneath the subject site and vicinity is relatively mobile. Dividing the measured ground-water velocities in MW-03 and MW-04 by the estimated R values shown in Table 4-7 gives the average velocity range of the TCE contaminant plume beneath the subject site. TCE plume velocity estimates are approximately equal to the average ground-water velocities measured in MW-03 and MW-04, indicating very little retardation of the TCE plume.

Dividing the estimated TCE plume velocities in Table 4-8 by the distance from MW-03 and MW-04 to the former Omar evaporation ponds (a distance of 1,000 to 1,500 feet) yields average plume travel times ranging from 0.4 to 2.7 years. This result indicates that a relatively short time period would be required for a TCE plume originating at the Omar site to migrate to the subject site relative to the elapsed time since 1978, when the Omar site stopped receiving hazardous wastes.

Table 4-7
SUMMARY OF ESTIMATED K_d VALUES

| Monitoring Well | TCE Concentration Soil | TCE Concentration in Ground Water | K_d Estimated from Analytical Data | Range of TOC Results (percent) | Estimated K_{oc} for TCE ¹ | K_d Derived from Estimated K_{oc} |
|-----------------|------------------------|-----------------------------------|--------------------------------------|--------------------------------|---|---------------------------------------|
| MW-03 | 16 µg/kg | 400 µg/l | 0.04 l/kg | 0.032-0.17 | 123 | 0.04-0.21 l/kg |
| MW-04 | 240 µg/kg | 720 µg/l | 0.33 l/kg | 0.015-0.079 | 123 | 0.02-0.10 l/kg |

¹ Based on a published K_{ow} value for TCE (Fetter 1993) and an empirical relationship between K_{ow} and K_{oc} by Karichoff et al. (1979) ($K_{oc}=0.63K_{ow}$).

Table 4-8
ESTIMATED R VALUES AND TCE PLUME VELOCITIES

| Monitoring Well | Range of Estimated R values (Equation 4-2) | Estimated Average Velocity Range of TCE Plume | Average Ground-Water Velocity (From HPF Data) |
|-----------------|--|---|---|
| MW-03 | 1.2 | 7.4 ft/day | 8.9 ft/day |
| MW-04 | 1.1-2.4 | 1.5-3.7 ft/day | 3.5-4.1 ft/day |

SECTION 5 SUMMARY AND CONCLUSIONS

A limited ground-water and soil investigation was conducted at the Brandywine Distribution Center, located at 1670 and 1690 Brandywine Avenue in Chula Vista, California. The investigation was conducted on behalf of Chula Vista Industrial Realty, Inc. to verify the presence of ground-water contamination beneath the subject site, evaluate ground-water flow direction, velocity, and gradient, and determine potential sources of the identified contamination.

The investigation included completion of soil borings, installation and sampling of ground-water monitoring wells, analytical testing of soil and ground-water samples, heat-pulse flow logging, geochemical evaluation of ground water, and report preparation. The following conclusions have been developed as a result of this investigation:

1. Ground-water analytical results indicate elevated HVOC concentrations beneath the central portion of the subject site. TCE concentrations of 400 and 720 $\mu\text{g/l}$ were measured in ground water samples collected from MW-03 and MW-04, respectively. In contrast, MW-01, MW-02, and MW-05 analytical results for ground water displayed much lower HVOC concentrations ranging from 1.6 to 13 $\mu\text{g/l}$.
2. No detectable concentrations of contaminants were observed in site soil within the unsaturated zone.
3. There is no evidence of historic or current hazardous materials storage, use, or release at the site. Therefore, an offsite source of the detected contamination is indicated.
4. Review of available records indicates that the Hispan property, located adjacent to the subject site on the eastern side of Brandywine Avenue, does not appear to be a possible source for HVOCs detected in ground water at the subject site. Similarly, HVOC concentrations detected in ground water at the Otay Landfill are lower than those at the subject site; therefore, the Otay Landfill also does not appear to be a likely source of ground-water impacts at the subject site.
5. HPF logging results indicate that ground-water flow beneath the subject site appears to be generally in a westward direction. Results from MW-03 indicate a southwest flow

direction of approximately 3.9 to 13.9 feet per day in the east-central portion of the site, with an average value of approximately 8.9 feet per day. HPF logging results also indicate that ground-water flow in the vicinity of MW-04 is generally west to northwest at velocities ranging from approximately 2.7 to 4.3 feet per day.

6. Direct measurements of ground-water flow direction in the vicinity of MW-03 and MW-04 are generally consistent with the overall direction of the hydraulic gradient. Both lines of evidence indicate an overall westward ground-water flow direction beneath this portion of the subject property. This portion of the subject property displays the highest TCE concentrations in ground water and appears to be located directly down-gradient of the adjacent Omar site.
7. TCE in ground water beneath the subject site and vicinity is relatively mobile, as evidenced by low retardation factor (*R*) values and estimated TCE plume velocities approaching average estimated ground-water flow velocities. Estimates of the ground-water travel time between the Omar and subject sites suggest that a TCE plume originating at the Omar site could migrate to the subject site within a relatively short time period (approximately 0.4 to 2.7 years).
8. Review of the previous Phase I and Phase II reports for the subject property and review of SA/M Division files indicates that ground-water contamination has been extensively documented beneath the Omar site, with TCE and methylene chloride concentrations in ground water as high as 21,000 and 14,000 µg/l, respectively.

No evidence indicates that ground-water contamination at the subject site has originated from an onsite source. The most likely source for contamination of ground water beneath the subject site appears to be the adjacent Omar site.

SECTION 6 RECOMMENDATIONS

No further site assessment activities are warranted at the subject site. There is no evidence of the storage, use, or release of hazardous chemicals at the site. The results of soil and ground-water testing indicate that the ground-water contamination observed onsite is a result of migration from an upgradient, offsite source or release. To be effective, potential ground-water remediation activities would have to be initiated at the offsite contaminant source rather than at the subject site.

Ogden recommends that this report be submitted to the SDRWQCB. They are currently compiling and evaluating data associated with the known ground-water contamination in the area (per. comm. with Mark Alpert, April 1996). Following SDRWQCB review of this report, it is recommended that Ogden meet with the SDRWQCB on behalf of Chula Vista Industrial Realty, Inc. to discuss the results for the subject site and to request a "no further action" letter specifying that the observed ground-water contamination is not due to former or current site uses or activities and is the result of the migration of releases from offsite sources. Ogden Environmental can assist in this effort as requested.

SECTION 8 LIMITATIONS

The data presented in this report are intended for use in the course of a site investigation. The data cited herein should not be used for other than its intended purpose. Furthermore, Ogden's conclusions are based solely on these data.

Changes in the condition of the project site may occur with time due to either natural processes or human activities. The site investigation was carried out using the degree of care and skill ordinarily exercised under similar circumstances by qualified professionals; no further warranty is made.

APPENDIX B
ANALYTICAL LABORATORY REPORTS

CKY incorporated Analytical Laboratories

Date: 02-26-1996
CKY Batch No.: 96B085

Attn: Don Barrie

Ogden Environmental
5510 Morehouse Drive
San Diego, CA 92121

Subject: Laboratory Report
Project: Brandywine

Enclosed is the Laboratory report for samples received on 02/19/96. The samples were received in coolers with ice and intact; the chain-of-custody forms were properly filled out. The data reported include :

| Sample ID | Control No. | Matrix | Analysis |
|----------------|-------------|--------|-----------------------------|
| BWBS01S01D10.0 | B085-01 | Soil | EPA 8010 EPA 8020 TOC |
| BWBS01S02D71 | B085-02 | Soil | EPA 8010 EPA 8020 TOC |
| BWBS02S01D11.0 | B085-03 | Soil | EPA 8010 EPA 8020 TOC |
| BWBS02S02D56.0 | B085-04 | Soil | EPA 8010 EPA 8020 TOC |
| BWBS03S01D10.5 | B085-05 | Soil | EPA 8010 EPA 8020 TOC |
| BWBS03S02D66.5 | B085-06 | Soil | EPA 8010 EPA 8020 TOC |
| BWBS03S03D75.5 | B085-07 | Soil | EPA 8010 EPA 8020 TOC |

The results are summarized on the following pages.

Please feel free to call if you have any questions concerning these results.

Sincerely yours,

Kam Y. Pang, Ph.D.
Laboratory Director

P.S. - All analyses requested for the above referenced project have been completed. Therefore, unless instructed, the remaining portions of the samples will be disposed after fifteen (15) days from the date of this report.

| 4307-7 | --- | TOC | % | 0.032 | 0.027 | 17 |

Notes:

Note that Matrix Spikes are not project specific. Therefore, spike information shown on this report may not be from the same project; however, they were analyzed in the same analytical batch.

Definitions:

Spike: A sample from the analytical batch which has been spiked with the parameter(s) of interest at a known concentration and taken through the same preparation and analysis as the samples.

Spike Duplicate: A duplicate of the spiked sample, taken from a separate aliquot of the sample.

RPD: Relative Percent Difference between a Spike and a Spike Duplicate (or a sample and sample duplicate).
 $RPD = [(Spike - Spk. Dup.) / Mean] * 100$

Where the mean is the average spike recovery of the matrix spike and the matrix spike duplicate.

Mean: The average sample results, from both samples and sample duplicates.

Control limits are calculated by Sterling Analytical Laboratory for internal use from existing spike data. Control limits are found by calculating three standard deviations above and below the mean of the population.

The results are summarized on the following pages.

Please feel free to call if you have any questions concerning these results.

Sincerely yours,

Kam Y. Pang, Ph.D.
Laboratory Director

P.S. - All analyses requested for the above referenced project have been completed. Therefore, unless instructed, the remaining portions of the samples will be disposed after fifteen (15) days from the date of this report.

EPA METHOD 8010
HALOGENATED VOLATILE ORGANICS

Notes:

Note that Matrix Spikes are not project specific. Therefore, spike information shown on this report may not be from the same project; however, they were analyzed in the same analytical batch.

Definitions:

Spike: A sample from the analytical batch which has been spiked with the parameter(s) of interest at a known concentration and taken through the same preparation and analysis as the samples.

Spike Duplicate: A duplicate of the spiked sample, taken from a separate aliquot of the sample.

RPD: Relative Percent Difference between a Spike and a Spike Duplicate (or a sample and sample duplicate).
$$RPD = [(Spike - Spk. Dup.) / Mean] * 100$$

Where the mean is the average spike recovery of the matrix spike and the matrix spike duplicate.

Mean: The average sample results, from both samples and sample duplicates.

Control limits are calculated by Sterling Analytical Laboratory for internal use from existing spike data. Control limits are found by calculating three standard deviations above and below the mean of the population.

Subject: Laboratory Report
Project: Brandywine

Enclosed is the Laboratory report for samples received on 02/28/96. The samples were received in coolers with ice and intact; the chain-of-custody forms were properly filled out. The data reported include :

| Sample ID | Control No. | Matrix | Analysis |
|-----------|-------------|--------|--|
| MW01-S01 | B134-01 | Water | EPA 8010 EPA 8020 Metals Mercury MBAS Turbidity Alkalinity Sulfate Chloride Fluoride pH Conductivity TDS Color Odor Total Hardness Nitrate |
| MW02-S01 | B134-02 | Water | EPA 8010 EPA 8020 |

| <u>Sample ID</u> | <u>Control No.</u> | <u>Matrix</u> | <u>Analysis</u> |
|------------------|--------------------|---------------|--|
| | | | Metals Mercury MBAS Turbidity Alkalinity Sulfate Chloride Fluoride pH Conductivity TDS Color Odor Total Hardness |
| MW03-S01 | B134-03 | Water | Nitrate EPA 8010 EPA 8020 Metals Mercury MBAS Turbidity Alkalinity Sulfate Chloride Fluoride pH Conductivity TDS Color Odor Total Hardness |
| MW05-S01 | B134-04 | Water | Nitrate EPA 8010 EPA 8020 Metals Mercury MBAS Turbidity Alkalinity Sulfate Chloride |

| Sample ID | Control No. | Matrix | Analysis |
|-----------|-------------|--------|---|
| MW04-S01 | B134-05 | Water | Fluoride pH Conductivity TDS Color Odor Total Hardness Nitrate EPA 8010 EPA 8020 Metals Mercury MBAS Turbidity Alkalinity Sulfate Chloride Fluoride pH Conductivity TDS Color Odor Total Hardness Nitrate |

The results are summarized on the following pages.

Please feel free to call if you have any questions concerning these results.

Sincerely yours,

K. Y. Pang
 Kam Y. Pang, Ph.D.
 Laboratory Director

P.S. - All analyses requested for the above referenced project have been completed. Therefore, unless instructed, the remaining portions of the samples will be disposed after fifteen (15) days from the date of this report.

February 28, 1996

CLIENT: OGDEN

GENERAL MINERALS LIST

MBAS, Turbidity, Alkalinity, Sulfate, Chloride, Fluoride, pH, Electrical Conductivity, TDS, Color, Odor, Hardness, Nitrate.

Aside from CAM Metals (17 metals) client also requests the following elements:
Calcium, Magnesium, Sodium and Potassium.

**USE OF A GEO FLOWMETER FOR THE DETERMINATION
OF GROUND WATER FLOW DIRECTION**

Reference: Guthrie, M., "Use of a Geo Flowmeter for the Determination of Ground Water Flow," Ground Water Monitoring Review, Vol. 6, No. 1, 1986, pp. 81-86.

Use of a Geo Flowmeter for the Determination of Ground Water Flow Direction

by Marilyn Guthrie

Abstract

The Geo Flowmeter is manufactured by K.V. Associates of Falmouth, Massachusetts, and is used to determine ground water flow direction and velocity in monitoring wells or open boreholes. It operates by emitting heat pulses and measuring subsequent temperature increases carried by the ground water movement. The meter can be used in wells as small as 2 inches in diameter and only a single well is required for determination of ground water flow direction and rate.

This paper is a case history of the use of the Geo Flowmeter in a complex hydrogeologic setting consisting of a partially above grade landfill located between a navigable waterway and a large storm water impoundment basin. Mounding effects of the landfill, tidal changes in the channel, varying water levels in the impoundment basin and a complex substrate (alternating layers of sand, silt and clay) presented a challenge for ground water interpretation and analysis. The Geo Flowmeter was lowered into existing monitoring wells surrounding the landfill to determine ground water flow direction and rate. Sensitivity of the meter was sufficient to distinguish two separate flow directions in a single well screen. Later investigation involving installation of piezometers, long-term ground water level monitoring and plotting of ground water contours verified initial findings of the meter.

This article presents numerous graphs and pictures to illustrate field use of the instrument and discusses advantages and disadvantages of its use. Actual field data collected is included to provide a basis for evaluating the accuracy of the instrument and identifying situations where it may be used.

Introduction

The Geo Flowmeter, manufactured by K.V. Associates of Falmouth, Massachusetts, is a portable field instrument used for determining ground water direction and velocity. It can be used in saturated soil, open boreholes and in different size wells.

The instrument operates by emitting heat pulses and simultaneously measuring the temperature differential around the circumference of the well. The heat pulses are carried in one direction by the movement of soil pore water, thus causing a temperature differential. By plotting the measured temperature differential in vector form, the direction of ground water flow is determined.

K.V. Associates has used this instrument for measuring ground water direction and velocity in many different settings. In one reported case, borings were made through rock and screened in the sandy till below and the meter was used to predict the deep and shallow flow movement. Studies have also been done to determine flow through lakes and ponds.

This paper documents use of the instrument in the understanding of flow in a complex hydrology setting. Operating principles, operating instructions and supporting data documenting its accuracy are also presented. Finally, advantages and disadvantages of using the instrument are presented based on actual field experience.

Methods and Materials

Figure 2.1 shows all the components of the K.V. Associates Geo Flowmeter. The instrument operates on the theory of heat movement by the soil pore water as illustrated by Figure 2.2.

The instrument consists of a heat source sur-

Figure 2.1 Instrument setup for Geo Flowmeter

Figure 2.2 Concept of flow through pore spaces in soil and Geo Flowmeter flow conditions

rounded by 10 thermistors, each of which are paired to another making a total of five pair (Figure 2.1). The relative thermal difference is displayed, and the sign (+ or -) of the value indicates which of the two thermistors is reading the higher temperature. For example, if thermistor +1 is hotter than its pair, thermistor -6, the display will be a positive value indicating flow (heat) in the direction of +1 (Figure 2.2).

In a no-flow condition all thermistors see the same temperature rise with time and there is no net difference between pairs (Figure 2.2).

Equipment Description

Figure 2.3 illustrates how the probe is set up for down the well use. In short, the end cap which contains glass beads is attached to the probe and the probe is then suspended in the well by nylon rods. The compass tee is then attached to the last rod for orientation purposes.

The diameter of the well will determine the type of attachment that must be placed on the end of the probe. The first type of attachment, useful only in 2-inch wells, is called an end cap and consists of a grey netting filled with glass beads (Figure 2.1). This end cap is attached directly to the probe with two small screws and surrounds the probe with a loose porous medium (the glass beads). The second type of attachment is called a fuzzy packer and can be used in 2-, 4- and 6-inch wells. The fuzzy packer is a cylinder with a fuzzy covering made to fit tightly down a well (Figure 2.1). This cylinder is also filled with small glass beads to provide a porous medium through which the flow will stabilize (Figure 2.1). The fuzzy packer also attaches with two mounting screws directly to the probe.

The probe is suspended in the well by the 5-foot nylon suspension rods which join together by snap buttons (Figure 2.3). The probe is then lowered down the well until it is at the depth of the screen. Care must be taken to be sure that the probe is set in the screen of the well and not just in the water. (It is necessary to know the depth of the screen before heading to the field.) Using a pipe ring to hold the nylon tubing, the probe can be suspended at a certain depth.

Once the probe is set at the proper depth, it must be oriented to north. To facilitate this, the compass is placed on the top most attached nylon rod and snapped in (Figure 2.1). The snap attachment ensures that the number +1 probe is lined up with the north reading on the compass. When the compass arrow is oriented toward the north, the probe is ready for use.

Figure 2.3 Downwell setup for the Geo Flowmeter

Operating Procedure

The rotary switch selects which pair of thermistors are being read and displayed. (Figure 2.4, #5.) The flow rate and direction indicator by + or - is displayed on the LCD (liquid crystal display) as the rotary switch is moved from channel to channel.

Readings for each channel should be monitored at short intervals until a stable display is observed. Values should be within +10, however, they may be larger with a greater sensitivity setting. Values for the five channels are recorded on a Ground Water Flow Worksheet in Column A, as illustrated in Figure 2.5. After pressing the START button, the LED will flash to indicate that a measurement cycle is in progress. When the beeper sounds (1 1/2 minutes for Model 30), values from respective channels in the "end" column B are immediately recorded. The RESET button can be pressed to silence the beeper.

Next, the probe must be oriented in the south direction again allowing at least five minutes for heat to dissipate and flow to re-establish. It is suggested that the fuzzy packer be raised and lowered several times in order to help the heat dissipate. After five

OPERATING CONTROLS

SOURCE: K-V ASSOCIATES INC.

| Item | Function | Instruction |
|------|--|---|
| 1 | Switch applies batteries to instrument operation or external battery charger. | Push toggle to right to power instrument. Push left to charge battery. |
| 2 | Panel meter gives digital flow rate. | Values are typically read in units of ft/day. |
| 3 | Switch starts measurement cycle and heat pulse. | Push to start when probe is in place. |
| 4 | LED flashes during reading time of measurement cycle. | Do not disturb probe during measurement cycle. |
| 5 | Rotary switch selects direction, i.e. one of 3 pairs of opposed thermistors in probe; thermistor #1 oriented North. | Record readings for each position before and after measurement cycle. |
| 6 | Push button reset timers. | Push to reset buzzer or interrupt a measurement cycle in process. |
| 7 | a) Span switch adjusts sensitivity. b) Adjacent multi-turn span pot makes fine adjustments to span switch levels. | a) 12" low 42" medium 82" high sensitivity. b) Adjustments clockwise increase sensitivity. |
| 8 | Ammeter displays current flow. | Provides confirmation of current flow and indicates battery condition. |

1-3

Figure 2.4 Operating controls for the KV Associates Geo Flowmeter

minutes the cycle can be repeated and readings recorded in the second set of columns. Column B is then subtracted from Column A and the results placed in Column N (or C) as shown in Figure 2.5; repeating the procedure in Column S. Then Column S is subtracted from Column N and divided by 2 (the result is recorded in Column F). Each reading in Column F is then divided by the largest absolute value in this column. Vectors can then be drawn on the circular diagram on the right side of the worksheet for each value with the largest value being 1. Then starting at the end of the largest vector, draw vectors head to tail, keeping their respective lengths and directions the same. After redrawing the four other vectors, a line drawn from the center through the head of the last vector will intersect the outermost circle of the paper at a degree reading representing the principal direction of flow.

This instrument was also used in open core borings. In this case the prongs of the probe are inserted directly into the soil and readings taken as before. If the bottom of the hole consists of clay, placement of the probe may be difficult since the nylon rods bend easily. When the probe is rotated to the south, it is suggested that the probe be pulled completely from the hole and sediment removed from between the prongs of the probe.

Velocity of the ground water movement can also be computed as follows:

$$N_c \times F_L = \text{feet/day through } (V_G) \text{ glass beads}$$

Where:

N_c = Calibration number

F_L = Largest value in the Column F (worksheet)

Table of LCD Readout

| Probe pair | A | B | C | D |
|------------|---|----|----|---|
| +1-6 | 7 | 11 | 4 | |
| -2-7 | 2 | 13 | 11 | |
| -3-8 | 4 | 18 | 14 | |
| -4-9 | 0 | 6 | 6 | |
| -5-10 | 5 | 11 | 6 | |

Use of Table

Column B - Write each reading in column B by the largest absolute value. Draw three 3 vectors on the circle chart according to the scale provided (i.e., longest vector = 1.00).

Casine Test Shows Uniform Flow

Vectors and points will closely fit a circle for uniform flow. Values in column D will approximate vector lengths shown at right. If gross deviation, proceed with bias correction below.

Bias Offset Correction

Substitution of zero-offset for better precision at low flows (see manual).

| Probe pair | C | F | S | F |
|------------|----|---|----|----|
| +1-6 | 4 | 1 | 3 | .3 |
| -2-7 | 11 | 3 | 8 | .8 |
| -3-8 | 14 | 4 | 10 | 1 |
| -4-9 | 6 | 2 | 8 | .8 |
| -5-10 | 6 | 3 | 3 | .3 |

Operator: VM Date: 25 Jan 82
 Station: 6 Time: 10:15
 Location: Long Pond - NW 4058
 Soil Conditions: medium organic sand
 Depth to Measurement: 4.5 ft

EXAMPLE

Vector Resolution to Determine Direction

- Use the Vector Addition Program for TI-30 calculator.
- Enter graphically by placing 3 individual vector segments sequentially head to tail. (See manual for detailed instructions).

Velocity Determination

Refer to your calibration curve of reading versus preferred units of flow (e.g., feet per day).

Direction: 72° Velocity: 10

Form 100 available from your local K-V Associates, Inc. dealer.

Figure 2.5 Ground water flow worksheet

Then, using the ratio:

$$\frac{.33}{V_G} = \frac{P_s}{V_S}$$

Where:

.33 = the void space of the glass beads

V_G = feet/day through glass beads

V_S = feet/day through the soil

P_s = porosity of soil calculated by filling a graduated cylinder with 25 ml of water and then dumping soil into the water until the soil height reaches 25 ml. Then dividing the difference by the old measurement (25 ml) to compute void space.

Case History

Figure 3.1 shows a specific site layout where the KV-Meter was used for investigative purposes. The site under investigation is an above grade landfill, approximately two (2) acres in size. It is located adjacent to an intercoastal waterway. Ground water in this area is affected by tidal changes and the water level in a storm water impoundment. The geology of the area is made up of relatively complex river deposits of alternating layers of sand, silt and clay (Figure 3.2)

Concern over the area began with the installation of Well-A (Figure 3.1) Initial and later tests showed low pHs in this well and the source of the low pH was unknown. No record of what was deposited in the landfill was available and many pipelines run through this area making source determination difficult. A second well, Well-B, was placed near the storm water impoundment (Figure 3.1) but showed a relatively normal ph of 6 units.

Figure 3.1 Geo Flowmeter site map

The Geo Flowmeter was inserted in these two wells and the resultant readings are shown on Figure 3.3. The shallow reading (13 feet) in Well-A and the deep reading (25 feet) showed ground water flow to be in the direction of the water way. However, the shallow reading in Well-B showed flow to be in the direction of the storm water impoundment basin.

A series of new wells (Figure 3.4) were installed in order to determine the presence of contamination. From the new wells and the reading from the Geo Flowmeter, flow lines were drawn on a cross section to show the shallow and deep flow directions as shown in Figure 3.5; the above grade landfill is causing a slight

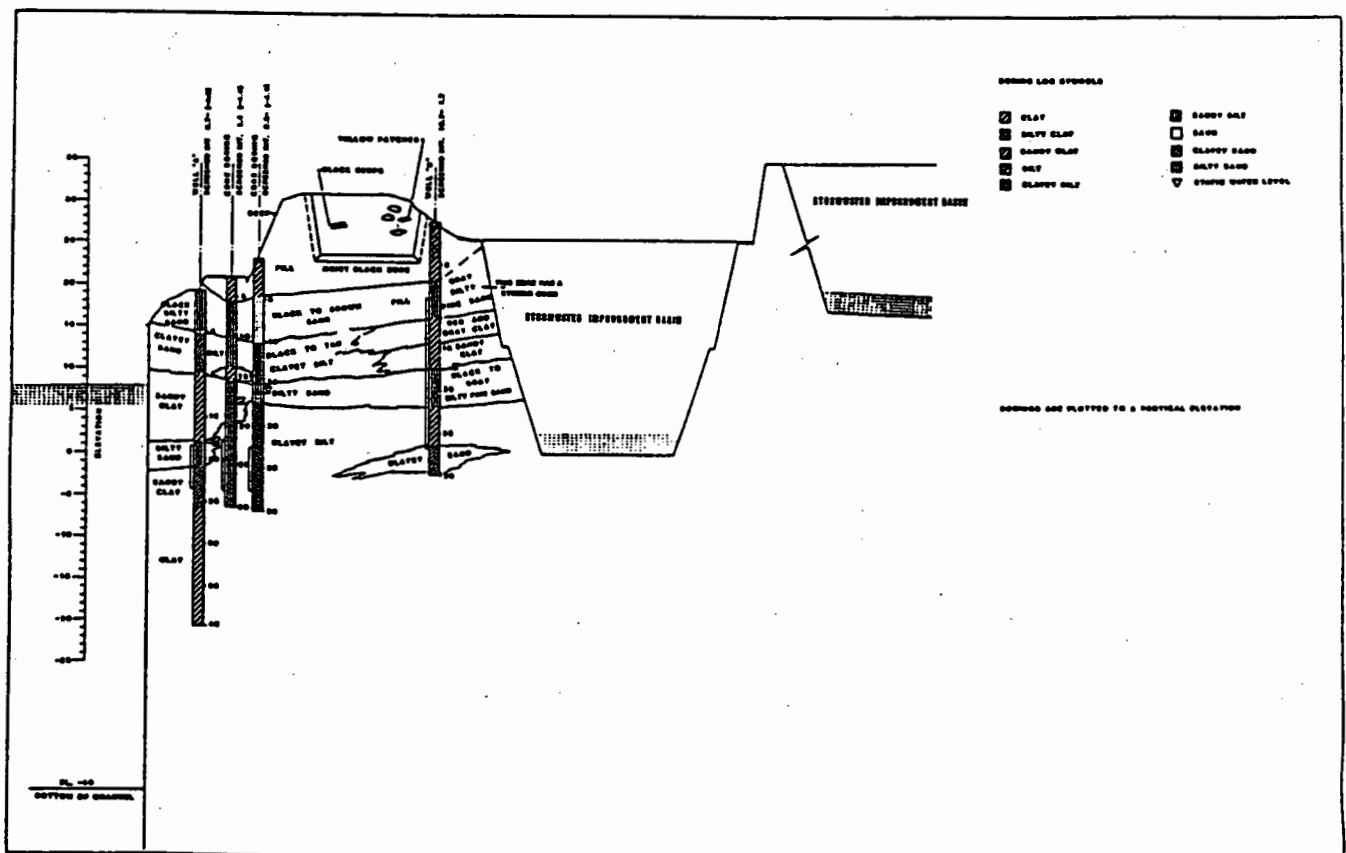

Figure 3.2 Subsurface cross section of above grade landfill

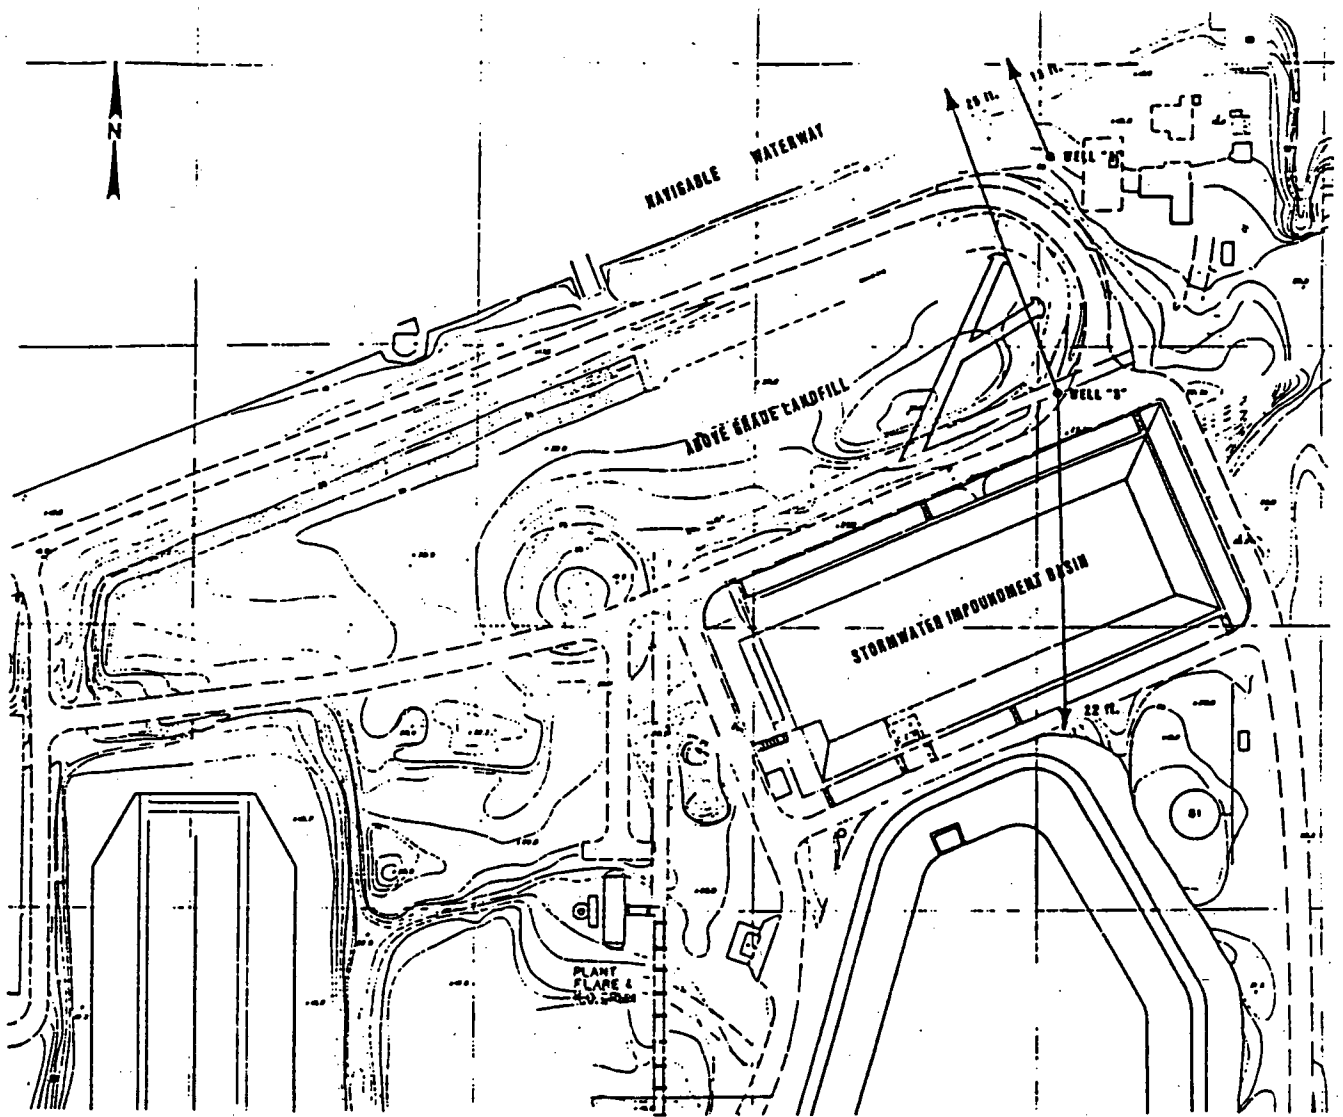

Figure 3.3 Site map with Geo Flowmeter readings

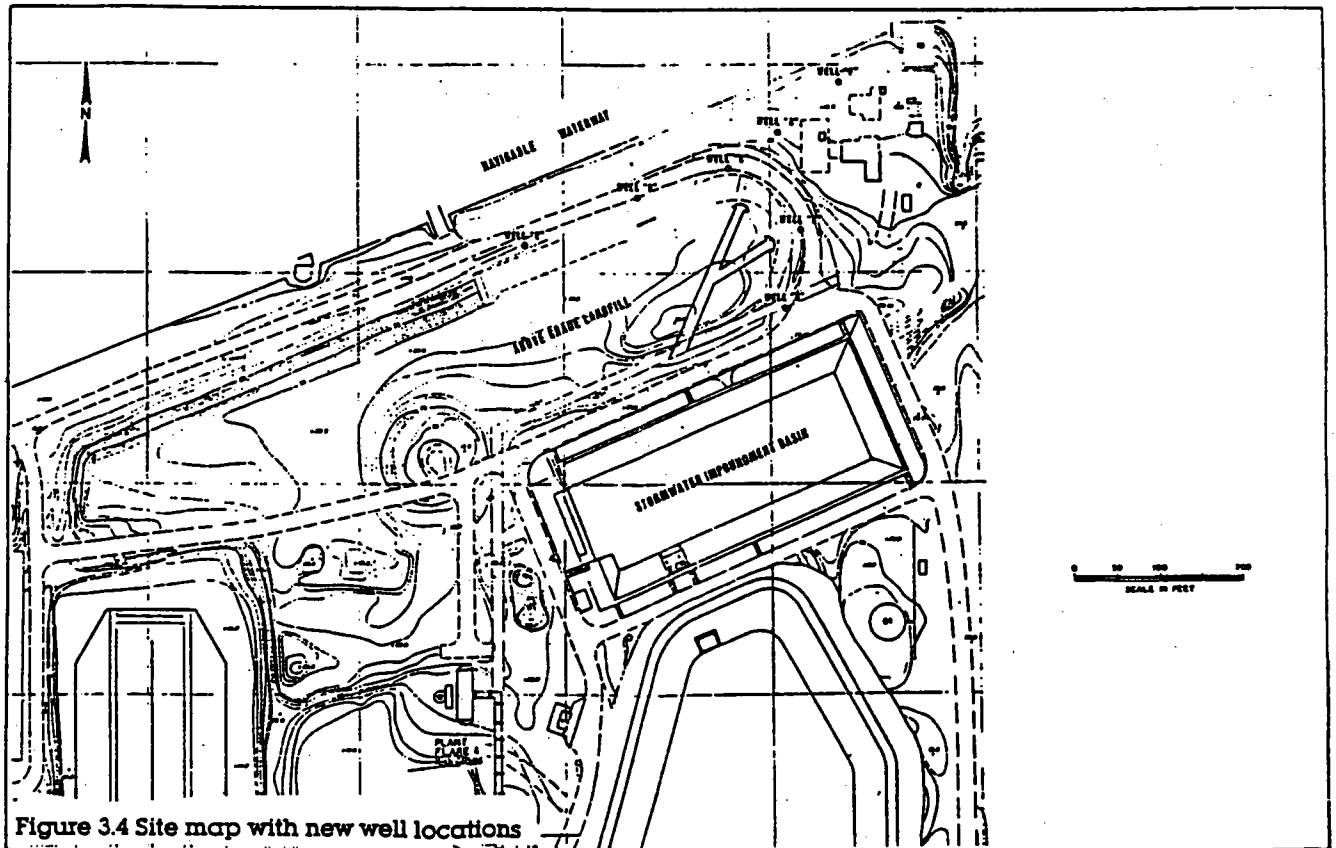

Figure 3.4 Site map with new well locations

mounding effect. Further, the storm water basin is continually pumped dry causing the local gradient to be toward the basin. However, the underlying regional gradient is toward the waterway.

Additional evidence to support the effects of the storm water basin was gathered from continual water level monitors placed in the basin, Well-A, Well-B and the water way. As rainfall was collected and the water level of the basin increased, Well-B adjusted accordingly. On the other hand, Well-A was affected directly by the rising and falling of the waterway.

Conclusions

The Geo Flowmeter is very appealing because it is portable and easy to use once operation of the instrument is mastered. It is sensitive enough to give readings of two different directions in a single screen and its sensitivity to local ground water flows makes it very attractive. Regional ground water flows derived from wells may miss local situations which may be important in analysis of underground storage facility settings. When compared to an extensive drilling program, it is relatively inexpensive. In addition, much information can be derived by using the instrument and only a few wells.

Disadvantages would include the time and effort it takes to understand and use the instrument properly. The operating manual certainly needs to be more explicit. It must also be remembered that in many cases the meter will indicate a very local situation that could be subject to change. For example, the flow in some wells actually reversed because of tidal situations. Not all readings taken during the testing of this instrument were 100 percent convincing, particularly those taken in open boreholes. In a deep boring, it was very difficult to determine if the instrument was placed in the soil correctly.

Acknowledgments

Support for the landfill study was provided by ERM-Southwest Inc. Suggestions regarding the ground water investigation and for improving the manuscript were made by Mike Pisani of ERM-Southwest.

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The community map repository should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations (BFEs)** and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations (BFEs) shown on this map apply only to landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) Zone 11. The horizontal datum was NAD83, GRS1980 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same vertical datum. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at <http://www.ngs.noaa.gov/> or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, NNGS12
National Geodetic Survey
SSMC-3, #5022
1315 East-West Highway
Silver Spring, Maryland 20910-3282
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242 or visit its website at <http://www.ngs.noaa.gov/>.

Base map information shown on this FIRM was provided in digital format by the USDA National Agriculture Imagery Program (NAIP). This information was photogrammetrically compiled at a scale of 1:24,000 from aerial photography dated 2009.

This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels, community map repository addresses, and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact the **FEMA Map Service Center** at 1-877-FEMA MAP (1-877-336-2627) for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and its website at <http://www.fema.gov/>.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call 1-877-FEMA MAP (1-877-336-2627) or visit the FEMA website at <http://www.fema.gov/business/firp/>.

The "profile base lines" depicted on this map represent the hydraulic modeling baselines that match the flood profiles in the FIS report. As a result of improved topographic data, the "profile base line", in some cases, may deviate significantly from the channel centerline or appear outside the SFHA.

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

- ZONE A** No Base Flood Elevations determined.
- ZONE AE** Base Flood Elevations determined.
- ZONE AH** Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
- ZONE AO** Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- ZONE AR** Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
- ZONE A99** Areas to be protected from 1% annual chance flood event by a Federal flood protection system under construction; no Base Flood Elevations determined.
- ZONE V** Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
- ZONE VE** Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

- ZONE X** Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

- ZONE X** Areas determined to be outside the 0.2% annual chance floodplain.
- ZONE D** Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

- 1% annual chance floodplain boundary
- 0.2% annual chance floodplain boundary
- Floodway boundary
- Zone D boundary
- CBRS and OPA boundary
- Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths, or flood velocities
- Base Flood Elevation line and value; elevation in feet* (EL 987)
- Base Flood Elevation value where uniform within zone; elevation in feet*

FEMA Digital Flood Map Products

- **FIRM Panel Image:** Flood Insurance Rate Maps (FIRM) are digital images of flood hazard maps. The images are digital pictures of entire flood map panels that can be viewed and printed from a computer. Most communities and counties have many map panels to cover the entire jurisdiction and an index map that shows the location of each map panel.
- **FIRM Worldfile:** A TFW or PGW file may accompany your flood hazard map. They are used to help view the flood maps in GIS applications.

FIRM Panel Images are TIF or PNG image files and have file names with a Community or County ID followed by a 4-digit panel number and letter suffix representing a version (e.g. 12345C0123F.tif). The FIRM worldfiles will have the same filenames but with a .tfw or .pgw extension.

FIRM Panel Images can be viewed using most freely available image viewer applications. You can also use the FIRMette-Desktop software available from the FEMA Flood Map Service Center (MSC) website at msc.fema.gov/portal/resources/firmettes. FIRM images can also be viewed in specialized GIS software where the worldfiles are used to make the images compatible with other GIS data. See the [MSC Products and Tools Overview page](#) for more information on available data and tools for using FEMA's flood risk data.

For more information on available digital products, visit FEMA's Map Service Center website at <https://msc.fema.gov> or call the FEMA Map Information eXchange (FMIX) at 877-336-2627.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/11/2017 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

| <u>Lower Elevation</u> | <u>Address</u> | <u>Direction / Distance</u> | <u>Map ID</u> | <u>Page</u> |
|------------------------|----------------------|-----------------------------|---------------|-------------|
| DRESSER-RAND REAPIR | 1675 BRANDYWINE AVEN | ESE 1/8 - 1/4 (0.134 mi.) | C6 | 12 |

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/30/2017 has revealed that there are 4 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

CA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the CA SWF/LF list, as provided by EDR, has revealed that there is 1 CA SWF/LF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

CA SAN DIEGO CO. SAM: The listing contains all underground tank release cases and projects pertaining to properties contaminated with hazardous substances that are actively under review by the Site Assessment and Mitigation Program.

A review of the CA SAN DIEGO CO. SAM list, as provided by EDR, and dated 03/23/2010 has revealed that there are 2 CA SAN DIEGO CO. SAM sites within approximately 0.5 miles of the target property.

CA SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA SLIC list, as provided by EDR, has revealed that there are 2 CA SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there is 1 CA UST site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: The EPA's listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDS list, as provided by EDR, and dated 08/21/2017 has revealed that there is 1 US BROWNFIELDS site within approximately 0.5 miles of the target property.

| <u>Lower Elevation</u> | <u>Address</u> | <u>Direction / Distance</u> | <u>Map ID</u> | <u>Page</u> |

EXECUTIVE SUMMARY

Local Lists of Landfill / Solid Waste Disposal Sites

CA WMUDS/SWAT: The Waste Management Unit Database System is used for program tracking and inventory of waste management units. The source is the State Water Resources Control Board.

A review of the CA WMUDS/SWAT list, as provided by EDR, and dated 04/01/2000 has revealed that there is 1 CA WMUDS/SWAT site within approximately 0.5 miles of the target property.

| <u>Lower Elevation</u> | <u>Address</u> | <u>Direction / Distance</u> | <u>Map ID</u> | <u>Page</u> |

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 3 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

Actual:
156 ft.

Status Date: 05/03/2017
 Global Id: L10003764847
 Lead Agency: SAN DIEGO RWQCB (REGION 9)
 Lead Agency Case Number: Not reported
 Latitude: 32.5964775432941
 Longitude: -117.029746770859
 Case Type: Cleanup Program Site
 Case Worker: UNA
 Local Agency: Not reported
 RB Case Number: 9 000247N96
 File Location: Regional Board
 Potential Media Affected: Indoor Air, Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Dichloroethene (DCE), Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Arsenic, Chromium, Copper, Lead, Mercury (elemental), Nickel, Other Metal, Zinc, Benzene, Xylene

Site History: Recent review of the Soil & Ground- water Investigation Report dated May 1996 concluded that the soil beneath this location has not been impacted by pollutants originating from the property and that ground water has been impacted by pollutants, primarily volatile organic compounds (e.g. trichloroethylene). Based on the information provided, historical operations/activities conducted at this location were not the source of these pollutants and that the likely source is the Former Omar Rendering site immediately to the east and up gradient of this location. Using today's standards, ground-water samples collected in 1996, suggests a potential threat to indoor air. Collection of more recent ground-water data would help to verify if that potential threat exists twenty years later. Since this property appears to not be a source of pollution this case is administratively closed.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

associated product piping, and a station building. On December 12, 2002, four 10,000-gallon USTs, five dispenser islands, and associated product piping were removed. Wayne Perry collected fourteen soil samples from beneath the dispenser islands and USTs during upgrade activities. Petroleum hydrocarbon contamination was detected in soil and unauthorized release case H02893-001 was opened by the Department of Environmental Health (DEH) in March 2003. No benzene concentrations and low concentrations of toluene, ethylbenzene and xylene were detected in soil at the Site. The main constituents of concern in soil at the Site are methyl tertiary butyl ether (MTBE) and tertiary butyl ether (TBA). Distribution of soil contamination is mostly localized around the UST cavity. There is no remaining residual total petroleum hydrocarbon-impacted soil that is above 100 mg/kg. Nine groundwater monitoring wells have been installed at the Site. Groundwater was monitored and sampled between December 2003 and January 2012. No liquid-phase hydrocarbons have been present in groundwater since sampling began in December 2003. The dissolved-phase groundwater plume is adequately assessed. Groundwater impacts include dissolved total petroleum hydrocarbons as gasoline (TPHg), MTBE and TBA. The dissolved phase groundwater plume is centered on well MW-3 and is mostly contained onsite. The dissolved plume is stable and the overall mass of impacts is decreasing. The environmental consultant analyzed the trends for MTBE and TBA. The analysis indicates that MTBE and TBA in groundwater will drop below their water quality objectives by 2049 and 2040, respectively. The DEH vapor risk model was utilized to evaluate the potential human health risk associated with soil vapor intrusion to Site building occupants and to the offsite Soup Plantation building workers (on the adjacent property to the east). Based on the model results, vapor from soil and groundwater contamination does not pose a vapor inhalation risk to the occupants of both buildings. A Corrective Action Plan (CAP) was submitted on October 21, 2011. The CAP concludes that the most appropriate remedial option is no further action with regulatory case closure. The Public Participation process for the CAP was completed. The public comment period ended on March 23, 2012. DEH received no comments. According to the environmental consultants registered professional, the Site presents no significant risk to human health and the environment. DEH concurs with this conclusion.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Potential Contaminants of Concern: * Acids/Corrosives, Arsenic, * Chlorinated Hydrocarbons, Waste Oil /

Site History: The Omar Rendering site is situated on forty acres enclosed by a chain-link and wood fence. The facility accepted hazardous wastes from 1959 to 1978 and utilized evaporation ponds for disposal. Prior to 1980, the contents of six former Class I waste ponds were removed and disposed at a permitted off site location. In 1981, the impacted soil from beneath the Class I waste ponds was placed in a lined and capped waste cell in the northwest corner of the site, in accordance with RWQCB Order No. 80-06 (Closure Requirements for the Omar Rendering Company Dumpsite in the Otay River Valley). Subsequently, the waste cell has been maintained and monitored per RWQCB Order No. 87-141, [Waste Discharge Requirements (WDRs) for the Omar Rendering

Company Closed Class I Disposal Site including Technical Change Order No. 1 Monitoring and Reporting Program], which was replaced by RWQCB Order No. 97-Annual/Semi-Annual Report April 2010 Former Omar Rendering Site 2 40 (Waste Discharge Requirements for Closure and Post-Closure Maintenance for the Class I Waste Management Containment Cell, Omar Rendering Facility, Darling International, which includes Monitoring and Reporting Program 97-40). Program No. 97-40 requires semi-annual groundwater monitoring and periodic monitoring and maintenance of the cap and surface water control features. The waste cell has the following physical properties: h Approximate waste cell area: 5 acres. h Stratigraphy, approximate depth below grade (City of Chula Vista Engineering Department, Samuel F. Savino PE, As-built grading plan, sheet 4 of 7, Sections A-A and B-B, dated 10-27-82). 0-6 ft: clean soil cover 6-9 ft: compacted clay cap 9-53 ft: compacted soil waste There is currently no documented human health exposure. 53-56 ft: compacted clay liner (base is at approx. elev. of 155 feet mean sea level [MSL]) h The bottom of the waste cell is greater than 25 feet above the groundwater table (the water table is encountered at an elevation of 120 to 130 feet MSL in the vicinity of the waste cell). h Clay material used for liners was analyzed and determined to have a permeability of less than 1E-06 centimeters per second (cm/sec), and compacted to 90 percent relative compaction (Geocon, Testing and Observation Services During Grading Operations, dated January 1982). h The material placed in the waste cell was primarily impacted soil excavated from beneath the former Class I ponds and rendering waste ponds (pond contents were removed off site); consequently, the material is assumed to have a low organic content, and have low potential for generating methane gas. h The waste cell contents were compacted to at least 90 percent relative compaction (Geocon, January 1982). San Diego Water Board issued cleanup and abatement Order R9-2003-0080 and addendum no. 1 to that Order for cleanup and abatement of areas of the site impacted by pollutants from the former waste disposal pits located onsite. The monitoring and maintenance of the Omar Landfill are covered by WDRs Order 97-40 (and addenda thereto) and a detection monitoring program issued under authority of Water Code section 13263, and the landfill is not part of the cleanup being conducted under the CAO.

CA BOND EXP. PLAN:

Responsible Party: BACKLOG SITE CLEANUP PLANNING REPORT

Project Revenue Source Company: Not reported

Project Revenue Source Addr: Not reported

Project Revenue Source City,St,Zip: Not reported

Project Revenue Source Desc: This site is projected to be remediated by responsible parties with reimbursement to DHS for its oversight/monitoring costs. However, if the responsible parties are unable to pay for site cleanup, another source of funds will need to be established.

Site Description: This site is situated on 40 acres and is enclosed by chain link and wood fencing. The facility accepted hazardous wastes from 1959 to 1978 and utilized evaporation ponds for disposal. These ponds were excavated upon closure and the residues were left onsite.

Hazardous Waste Desc: Chemicals disposed of onsite include petroleum hydrocarbons, acids, caustic solutions, and heavy metals. Soil samples indicate the presence of copper, chromium, nickel, lead, 1,1-dichloroethane, cadmium, dichlorodiphenyl,

|--------------------------------|---|
| Threat To Public Health & Env: | trichloroethane (TCA), aldrin, and polychlorinated biphenyls (PCBs). The public may be exposed to contaminated dust and/or volatile organic compounds if soil is disturbed. Ground water contamination could occur if the pond residuals are released from the disposal cell. Chronic exposures could occur if contaminated soils are left exposed after construction. There is no documented exposure at this time. |
| Site Activity Status: | The potential responsible party conducted a site assessment in Summer, 1988 to determine the location and concentrations of contaminants onsite and the potential to migrate off the property. DHS will evaluate the findings of the assessment to determine a priority for scheduling the site in future Bond Expenditure Plans. |

CA BOND EXP. PLAN:

Responsible Party: BACKLOG SITE CLEANUP PLANNING REPORT
 Project Revenue Source Company: Not reported
 Project Revenue Source Addr: Not reported
 Project Revenue Source City,St,Zip: Not reported
 Project Revenue Source Desc: This site is projected to be remediated by the responsible parties will reimbursement to DHS for its oversight activities. If the RPs are unable to fund site cleanup, another source of funds will need to be identified.
 Site Description: The site was formerly a junkyard. Many of the wastes onsite are thought to be associated with nearby naval facilities.
 Hazardous Waste Desc: Soil contamination includes low levels of copper, zinc, cadmium and lead. Hazardous wastes previously stored and spilled include petroleum distillates, solvents, electrical insulating oils, trichloroethane (TCA), chloroform, and perchloroethylene (PCE). The site is located on fill material.
 Threat To Public Health & Env: There is some potential threat to the Otay River. Farmland is adjacent to the site. PCE and TCA were found in standing surface water and ground water. Ground water is within 12 feet of the surface. The site has been partially abated through removal of the most highly contaminated soil. This site will be further evaluated in the future to determine if additional cleanup action is necessary.
 Site Activity Status: In February, 1981, a cleanup and abatement order was issued by the RWQCB, San Diego Region. DHS was working in coordination with the U.S. Navy, a potentially responsible party, when the salvage yard was destroyed by fire in August, 1985. Some subsequent surface removal occurred. There has been inadequate chatacterization to determine the current levels of contamination. Additional site characterization is necessary to confirm the adequacy of cleanup. The responsible parties are continuing remediation work under the oversight of the San Diego RWQCB.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

| | Data Release Frequency: Quarterly |

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

USGS TOPOGRAPHIC MAP

| | |
|----------------------|----------------------------|
| Target Property Map: | 5622818 IMPERIAL BEACH, CA |
| Version Date: | 2012 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

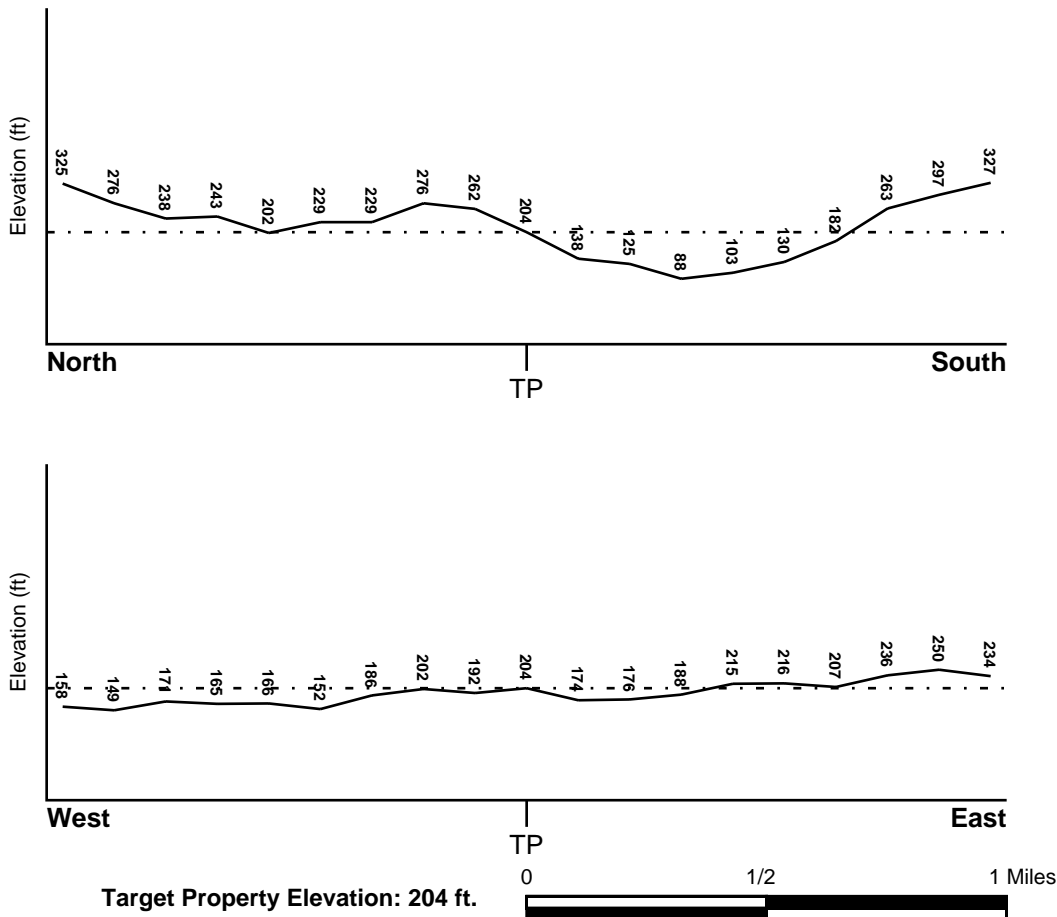

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

| | |
|---|-------------------------|
| <u>Flood Plain Panel at Target Property</u> | <u>FEMA Source Type</u> |
| 06073C2156G | FEMA FIRM Flood data |
| <u>Additional Panels in search area:</u> | <u>FEMA Source Type</u> |
| 06073C2157G | FEMA FIRM Flood data |
| 06073C2158G | FEMA FIRM Flood data |

NATIONAL WETLAND INVENTORY

| | |
|------------------------------------|--|
| <u>NWI Quad at Target Property</u> | <u>NWI Electronic Data Coverage</u> |
| IMPERIAL BEACH | YES - refer to the Overview Map and Detail Map |

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

| | |
|-----------------------------|---|
| Search Radius: | 1.25 miles |
| Location Relative to TP: | 1/2 - 1 Mile East |
| Site Name: | APPROPRIATE TECHNOLOGIES II |
| Site EPA ID Number: | CAT080010101 |
| Groundwater Flow Direction: | W TOWARD SAN DIEGO BAY. |
| Inferred Depth to Water: | 110 to 180 feet. |
| Hydraulic Connection: | Information is not available regarding the hydraulic connection between aquifer(s) underlying the site. |
| Sole Source Aquifer: | No information about a sole source aquifer is available |
| Data Quality: | Information is inferred in the CERCLIS investigation report(s) |

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |
|---------------|-------------------------|---|
|---------------|-------------------------|---|

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |
|---------------|-----------------------------|---|
| 1 | 1/8 - 1/4 Mile SW | WSW |
| 3 | 1/4 - 1/2 Mile ESE | Varies |
| 1G | 1/4 - 1/2 Mile ESE | Varies |
| 2G | 1/8 - 1/4 Mile SW | WSW |

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: OLIVENHAIN

Soil Surface Texture: cobbly loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|--------------------|--|--|--|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 9 inches | cobbly loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt. | Max: 14 Min: 4 | Max: 6 Min: 5.6 |
| 2 | 9 inches | 27 inches | very cobbly clay | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay | Max: 0.42 Min: 0.01 | Max: 5.5 Min: 5.1 |
| 3 | 27 inches | 44 inches | cobbly loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay | Max: 14 Min: 4 | Max: 5.5 Min: 5.1 |

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: SALINAS

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|--------------------|--|--|--|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 22 inches | clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils. | Max: 4 Min: 1.4 | Max: 8.4 Min: 6.6 |
| 2 | 22 inches | 46 inches | clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils. | Max: 4 Min: 1.4 | Max: 8.4 Min: 6.6 |
| 3 | 46 inches | 64 inches | loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils. | Max: 4 Min: 1.4 | Max: 8.4 Min: 7.9 |

Soil Map ID: 3

Soil Component Name: OLIVENHAIN

Soil Surface Texture: cobbly loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX D: QUALIFICATIONS/INSURANCE

Education

B.A. in Psychology with minors in business, English, and journalism – Indiana University

Highlights

10+ years – writing and editing in the environmental field as follows:

- Environmental Project Manager conducting Phase I Environmental Risk and Transaction Screen Assessments and writing associated assessment and desktop reports
- Technical Editor/Proofreader on a government contract working on the U.S. Department of Energy's Yucca Mountain High-Level Nuclear Waste Storage project License Application Design Selection; SAIC (1998 – 1999)
- Technical Editor on a government contract working the Environmental Impact Statement for the U.S. Department of Energy's Yucca Mountain High-Level Nuclear Waste Storage project License Application Design Selection; Jason Associates Corp. (2000 – 2001)

23+ years – writing and editing; journalism

Experience Summary

Ms. Gengler has been in the environmental services industry for over 10+ years. She has functioned as a Staff Assessor and Environmental Project Manager, conducting Phase I Environmental Risk, Transaction Screen Assessments, writing associated assessment and desktop reports, as well as records search with risk assessments on: multi-family residential and commercial properties that include gas stations, industrial sites, retail centers, motels/hotels. She has performed/conducted more than 1,000 environmental risk assessments.

Project Experience

Notable projects include:

- Serving as project manager for environmental assessments of 62 sites throughout Los Angeles County for the enhanced Los Angeles Regional Interoperable Communications System (LA RICS). The assessed sites included: sheriff stations, fire stations, and medical centers that were municipally owned.
- Served as project manager for a site in Vernon, CA that was represented as a bedding products storage and distribution facility. The site was identified as a decommissioned ammunitions manufacturing plant for the Department of the Army. Features of the site included three underground storage tanks (USTs) which consisted of a 10,000-gallon quench oil, a 20,000-gallon quench oil, and a 1,500-gallon fuel oil UST. The tanks were connected to piping which ran into the adjacent buildings and areas. It further included trenches, grinding machine areas, furnace pits, a phosphate machine containment area, a waste treatment containment area, a cooling tower sump, interior and exterior clarifiers, steam cleaning pits, plating bathes, and numerous other containment areas and sumps.
- Served as project manager for a 1,650-acre site in Riverdale, CA occupied by a dairy farm with a capacity of approximately 4,000 head of cattle, an onsite biogas project, and numerous active oil

wells. For the biogas project, methane gas was derived from manure to provide the gas to a Pacific Gas & Electric (PG&E) power plant. As cow manure decomposed, it produced methane, a greenhouse gas more potent than carbon dioxide. The biogas plant was installed to capture and treat methane to produce renewable gas.

To tap the renewable gas from cow manure, manure waste was discharged through piping and furrow irrigation into a pit with an outside perimeter of 152 linear feet. It was then pumped into a 33-foot-deep covered lagoon or "methane digester," first passing through a screen that filters out large solids. It was lined with plastic to protect the ground water, and the cover, made of high-density polyethylene, was held down at the edges by concrete. Gas collected underneath the cover. Weights on top of the digester channeled the gas to the biogas up-grade plant where it was "scrubbed" of hydrogen sulfide and carbon dioxide. The end product was reportedly nearly 99 percent pure methane. Once it was treated, the gas was injected into PG&E's pipeline, where it was then transferred to a power plant.

- Served as technical editor on the Environmental Impact Statement for the U.S. Department of Energy's Yucca Mountain High-Level Nuclear Waste Storage project License Application Design Selection and on the U.S. Department of Energy's Yucca Mountain High-Level Nuclear Waste Storage project License Application Design Selection itself. The Yucca Mountain Nuclear Waste Repository was to be a deep geological repository storage facility for spent nuclear fuel and other high-level radioactive waste.

The site is located on federal land adjacent to the Nevada Test Site in Nye County, Nevada, approximately 80 miles northwest of the Las Vegas Valley. Federal funding for the site ended in 2011, which leaves US non-governmental entities, such as utilities, without any designated long-term storage site for the high level radioactive waste stored on site at various nuclear facilities around the country. The project was highly contested by the general public and many politicians. The Government Accountability Office stated that the closure was for political, not technical or safety reasons. The Department of Energy (DOE) is reviewing other options for a high-level waste repository and a commission established by the Secretary of Energy released its final report in January 2012. It expressed urgency to find a consolidated, geological repository, and that any future facility should be developed by a new independent organization with direct access to the Nuclear Waste Fund, that is not subject to political and financial control like the DOE.

- Served as project manager for a ESA on a historic motel in Dalton, IL. Upon site inspection, four pipes of unknown purpose and/or use were observed. At each location was an approximately 1½-inch diameter J-shaped pipe protruding from the ground near a pipe at ground level. The piping was determined to be associated to two underground storage tanks.

Publications

Highlights

Over 20 years of experience in the environmental consulting industry

Site Mitigation

Phase I Environmental Site Assessments

Property Condition Reports

Experience Summary

Mr. Petersen has over 20 years of experience in the environmental consulting industry and has worked in various disciplines, including: site mitigation, environmental health and safety, regulatory compliance, construction monitoring, subsurface investigation, and environmental and engineering due diligence practices, including Phase I ESAs and PCAs. Mr. Petersen's primary area of expertise is in the environmental due diligence field, where he has performed and managed thousands of environmental due diligence projects throughout the country.

Mr. Petersen has conducted and managed Phase I ESAs on open space, agricultural land, industrial facilities, office buildings and complexes, multi-family developments, government installations, public right-of-ways, shopping malls, retail strips, telecommunication tower sites, service stations, drycleaner facilities and hospitality properties. Most notably, Mr. Petersen has managed due diligence portfolios for varied and demanding clients. In addition to these duties, Mr. Petersen has developed scopes of work, prepared proposals, managed, mentored and trained junior staff, and has regularly provided detailed reports within strict deadlines.

Mr. Petersen is familiar with all aspects of due diligence property assessments and reporting standards, including Fannie Mae DUS and Freddie Mac HUD, and is especially knowledgeable on EPA's All Appropriate Inquiry and ASTM E1527-05. In addition, he has worked with diverse client groups with unique client-specific scopes of work and reporting requirements.

Mr. Petersen has completed thousands of Phase I ESAs on multi-family properties, commercial office buildings, shopping centers, gasoline stations, hotels, dry cleaners, auto repair shops, and industrial facilities. Areas of concern included former chemical storage/transfer areas, areas of drainage/deteriorated piping, historical groundwater dispersion wells, and former underground storage tanks systems.

Thomas Petersen, REPA

Mr. Petersen has reviewed and evaluated hundreds of third-party Phase I reports.

Currently, Mr. Petersen provides management and QA/QC expertise of Phase I ESAs, transaction screens, and other product types, and is extensively involved in project management and client communications, maintaining an emphasis on providing exemplary client service. Mr. Petersen is responsible for ensuring consistency and quality of due diligence services and ensuring that client-specific requirements are met, as well as the requirements of ASTM and AAI standards. In addition, Mr. Petersen also provides research on specific markets in order to support growth of Partner's expanding client base.

Project Experience

Mr. Petersen has worked with national and regional lenders, banks, investors, equity stakeholders, industry, local governments and property owners, including, but not limited to:

- Bank of America
- Deutsche Bank
- City of San Carlos
- Applied BioSystems
- NorthMarq Capital
- Wells Fargo
- Terra-Gen Power
- Morgan Stanley
- EastWest Bank
- Genentech
- Met Life
- ReGen
- US Bank
- GE Capital
- American Tower
- Legacy Partners
- SR Commercial
- ClubCorp
- NetREIT

Finally, Mr. Petersen's role of managing projects across industrial, residential, retail, and commercial environments, as well as his diverse project experience, is a major contribution to Partner Engineering and Science's Project Management team.

Education

Bachelor of Arts, Public Administration & Economics, San Diego State University
Executive MBA Program, 2000-2003

Highlights

Over 20 years of experience in the environmental and engineering consulting industry
Property Condition Assessments (PCAs)
Fannie Mae, Freddie Mac, and HUD due diligence

Experience Summary

Mr. Lambson is a true veteran of the commercial real estate services industry. He has over 20 years of experience managing and performing environmental and engineering consulting projects on a national level. Mr. Lambson serves as a Principal for Partner and is located in Partner's San Diego County office. Mr. Lambson currently provides client management and consulting to a nationwide client base and specializes in advising "equity" clients during the acquisition phase of commercial property transactions in the U.S., Mexico, and Canada.

Mr. Lambson has assisted clients on over 10,000 commercial real estate transactions throughout his career. His due diligence resume includes experience at all levels, and includes advising REITs, developers, property managers, retail companies, commercial real estate brokers, mortgage brokers, attorneys, lenders, universities, and real estate investment groups with the following nationwide services:

- Property Condition Assessments (PCAs)
- Individual Building System Inspections for Roof, Mechanical Electrical Plumbing (MEP), Elevator, Structure, Façade, and ADA/Accessibility
- Phase I Environmental Site Assessments (ESAs)
- Phase II Subsurface Investigations (Soil and groundwater sampling and analysis)
- Phase III Environmental Remediation Services
- Asbestos, Lead, Radon, Mold Sampling
- Seismic and Structural Assessments (PMLs)
- Energy Audits, Benchmarking, AB1103 Energy Disclosure, and LEED-related services
- Hydrology, Water Conservation and Efficiency
- Fannie Mae / Freddie Mac / HUD Due Diligence
- Geotechnical and Soils Reports
- Zoning Reports
- ALTA Surveys

Building Sciences

Property Condition Assessment, MEP Report, Roof Report, Elevator Report, Structural and Seismic Assessment for a high-profile Class A office campus acquisition in the San Francisco Bay Area

ADA Compliance and Accessibility Reviews for a national bank branch portfolio

Fannie Mae Property Condition / Physical Needs Assessment services for a 5400-unit multifamily portfolio in Nevada

Environmental Assessments

Phase I and Phase II Environmental Assessments for a 75-acre aerospace facility in the Northwest United States

Over 500 Phase I Environmental Site Assessments for a national fast-food chain

Environmental consulting for over 1 million acres of desert land in California, Nevada, and Arizona

Land Surveys

ALTA Surveys for 2400-unit apartment portfolio in the Midwest

Multi-Site Portfolios

113-site office portfolio acquisition for a national REIT

122-site hotel portfolio for a national lending institution

55-site hotel portfolio acquisition for a private investment group

68-site healthcare portfolio acquisition for a national REIT

50-site country club/golf course acquisition for a private investment group

Energy and Water Efficiency

Energy & Water consulting for a national property owner that operates and manages 30 retail and office centers on the West Coast and Texas

Affiliations

RE: PUBLIC RECORDS REQUEST of June 23, 2021., Reference # R000783-062321.

Dear Allison O'Neal,

The City of Chula Vista is in receipt of your June 23, 2021 request for the following public records pursuant to the California Public Records Act ("CPRA") (Cal. Gov. Code section 6250 et seq.):

"Hello, Please send all Fire department and industrial waste water records in regards to hazardous materials/wastes, underground or aboveground storage tanks, and unauthorized releases or spills in regards to 517 Shinohara Lane, Chula Vista, CA 91911 APN 644-040-01. Thank you."

I have been informed by staff that there are no responsive records to your request. I have also been informed by staff that they believe that they have fully responded to your request; however, if you need additional information I will assist you in your efforts pursuant to Government Code section 6253.1. Please contact the County of San Diego for wastewater records.

Should you have any questions please feel free to email this response directly.

Sincerely,
City Clerk Records Staff

Cushman Lawrence M & Stephen P
2901 Fifth Avenue
San Diego, Ca. 92103

Dear Lawrence M Cushman:

YOUR RAINY SEASON RESPONSIBILITIES, 1997-1998

As a permittee under the statewide General Construction Storm Water Permit, you are responsible throughout the entire year for preventing pollutants from leaving your site(s). Extremely high precipitation, as a result of El Nino conditions, has been forecast for the upcoming winter. In the attached article, Scripps' scientists predict up to "three times normal rainfall". Historically, in the San Diego Region, El Nino conditions have resulted in significant water quality problems as a result of rainfall induced discharges of pollutants (e.g., sediment, petroleum products, fertilizers, heavy metals, bacteria, pesticides, etc.) to our natural water resources (e.g., creeks, bays, coastal lagoons, and Pacific Ocean).

Accordingly, I am requesting that you take extra precautions to prepare your construction site(s) immediately. Appropriate measures shall include, but are not limited to:

- **PREVENT** erosion by stabilizing all exposed soil, particularly on slopes. Stabilize with vegetation, matting, or other physical means.
- Back up erosion "prevention" measures with erosion "control" measures. Ensure erosion control measures are adequate, in place, and in operable condition. Protect storm drain inlets. Plan for the worst.
- Conduct pre- and post-storm inspections of erosion prevention and control measures for integrity.
- Maintain all erosion prevention and control measures throughout the season and replace as needed. Keep replacement supplies on hand.
- Ensure grading plans are fully implemented.
- Ensure all site personnel are trained in erosion prevention and control techniques as well as in their responsibilities under the statewide General Construction Storm Water Permit.
- Review, upgrade, and fully implement your site-specific Storm Water Pollution Prevention Plan consisting of best management practices for all pollutants, including those other than sediment.

Our records indicate that you are responsible for the following construction site(s):

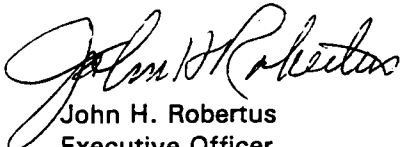

SITE ADDRESS
517 Shinohara Lane
Chula Vista

WDID NO.
9 37s304209

There are numerous resources and guidance documents available to assist you in preparing your site(s). For example the local Resource Conservation District (RCD) can provide invaluable guidance on erosion issues. Furthermore, it may be possible for staff of the San Diego Regional Water Quality Control Board, the RCD, your City or County, the State Water Resources Control Board, or the United States Environmental Protection Agency to assist you in conducting site inspections or assessing compliance.

To get more information, or if you have any questions about this letter or your responsibilities under the statewide General Construction Storm Water Permit, please contact Ms. Sayra Ramos of my staff at (619) 467-2959.

Sincerely,

John H. Robertus
Executive Officer

NOTICE OF TERMINATION

OF COVERAGE UNDER THE NPDES GENERAL PERMIT NO. CAS000002
FOR DISCHARGES OF STORM WATER
ASSOCIATED WITH CONSTRUCTION ACTIVITY

Submission of this Notice of Termination constitutes notice that the owner (and his/her agent) of the site identified on this form is no longer authorized to discharge storm water associated with construction activity by NPDES General Permit No. CAS000002.

I. **WDID NO.** 9 37S304209

II. **OWNER**

Cushman, Lawrence M.

COMPANY NAME & Stephen P. CONTACT PERSON Lawrence M. Cushman

STREET ADDRESS 2901 Fifth Avenue TITLE Owner

CITY San Diego STATE CA ZIP 92103 PHONE 619-299-4160

III. **CONSTRUCTION SITE INFORMATION**

Cushman, Lawrence M.

A. DEVELOPER NAME & Stephen P. CONTACT PERSON Lawrence M. Cushman

STREET ADDRESS 2901 Fifth Avenue TITLE Owner

CITY San Diego CA ZIP 92103 PHONE 619-299-4160

B. SITE ADDRESS 517 Shinohara Lane COUNTY San Diego

CITY Chula Vista CA ZIP 92111 PHONE N/A

IV. **BASIS OF TERMINATION**

1. The construction project is complete and the following conditions have been met.

- All elements of the Storm Water Pollution Prevention Plan have been completed.
- Construction materials and waste have been disposed of properly.
- The site is in compliance with all local storm water management requirements.
- A post-construction storm water operation and management plan is in place.

Date of project completion 11 / 26 / 07

2. Construction activities have been suspended, either temporarily or indefinitely and the following conditions have been met.

- All elements of the Storm Water Pollution Prevention Plan have been completed.
- Construction materials and waste have been disposed of properly.
- All denuded areas and other areas of potential erosion are stabilized.
- An operation and maintenance plan for erosion and sediment control is in place.
- The site is in compliance with all local storm water management requirements.

Date of suspension / / Expected start up date / /

3. Site can not discharge storm water to waters of the United States (check one).

SEND TO YOUR LOCAL RWQCB FOR APPROVAL

___ All storm water is retained on site.

___ All storm water is discharged to evaporation or percolation ponds offsite.

___ 4. Discharge of storm water from the site is now subject to another NPDES general permit or an individual NPDES permit.

NPDES Permit No. _____ Date coverage began ___/___/___

___ 5. There is a new owner of the identified site. Date of owner transfer ___/___/___

Was the new owner notified of the General Permit requirements? YES ___ NO ___

NEW OWNER INFORMATION

COMPANY NAME _____ CONTACT PERSON _____

STREET ADDRESS _____ TITLE _____

CITY _____ STATE _____ ZIP _____ PHONE _____

V. EXPLANATION OF BASIS OF TERMINATION (Attach site photographs - see instructions).

The site is no longer required to comply with the General Permit because the construction project has been completed, construction materials and waste have been disposed of, the site is in compliance with the stormwater management requirements of the City of Chula Vista and a post-construction stormwater operation and management plan entitled "Technical Report for 517 Shinohara Lane, Chula Vista, California", dated November 24, 2004 is in place. See attached photographs of the site.

VI. CERTIFICATION:

I certify under penalty of law that all storm water discharges associated with construction activity from the identified site that are authorized by NPDES General Permit No. CAS000002 have been eliminated or that I am no longer the owner of the site. I understand that by submitting this Notice of Termination, I am no longer authorized to discharge storm water associated with construction activity under the general permit, and that discharging pollutants in storm water associated with construction activity to waters of the United States is unlawful under the Clean Water Act where the discharge is not authorized by a NPDES permit. I also understand that the submittal of this Notice of Termination does not release an owner from liability for any violations of the general permit or the Clean Water Act.

Dear Permittee:

This letter is to inform you that we have approved the Notice of Termination (NOT) of Coverage under the Statewide Storm Water General Permit for WDID number as referenced above. Please keep this letter as proof of termination under the Statewide Storm Water General Permit. Should site conditions change such that coverage under the Storm Water General Permit is again necessary, you must submit a new Notice of Intent, site map, and appropriate fee.

Please note if there are applicable unpaid invoice(s) when the NOT is approved, all outstanding invoices are required to be paid in full. If you have any questions regarding fees, please contact the Fee Unit at (916) 341-5247.

If you have any further questions, please contact the California Regional Water Quality Control Board, San Diego Region at 858-467-2952.

Sincerely,

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

517 SHINOHARA LANE
CHULA VISTA, CA 91911

COORDINATES

Latitude (North): 32.5974620 - 32° 35' 50.86"
Longitude (West): 117.0314380 - 117° 1' 53.17"
Universal Transverse Mercator: Zone 11
UTM X (Meters): 497049.9
UTM Y (Meters): 3606473.8
Elevation: 204 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2021 has revealed that there

EXECUTIVE SUMMARY

are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 01/25/2021 has revealed that there are 4 CA ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 29 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

CA HWP: Detailed information on permitted hazardous waste facilities and corrective action ("cleanups") tracked in EnviroStor.

A review of the CA HWP list, as provided by EDR, and dated 02/16/2021 has revealed that there is 1 CA HWP site within approximately 1 mile of the target property.

Potential Contaminants of Concern: Dichloroethene (DCE), Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Arsenic, Chromium, Copper, Lead, Mercury (elemental), Nickel, Other Metal, Zinc, Benzene, Xylene

Site History: Recent review of the Soil & Ground- water Investigation Report dated May 1996 concluded that the soil beneath this location has not been impacted by pollutants originating from the property and that ground water has been impacted by pollutants, primarily volatile organic compounds (e.g. trichloroethylene). Based on the information provided, historical operations/activities conducted at this location were not the source of these pollutants and that the likely source is the Former Omar Rendering site immediately to the east and up gradient of this location. Using today's standards, ground-water samples collected in 1996, suggests a potential threat to indoor air. Collection of more recent ground-water data would help to verify if that potential threat exists twenty years later. Since this property appears to not be a source of pollution this case is administratively closed.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code:

F005

Waste Description:

THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Chemical Name: ArmaKleen MM-Dip Cleaning Solution Waste
Common Name: Ultrasonic washer waste fluid
Case Number: Not reported

Record ID: DEH2002-HUPFP-130637
Permit Status: Permit Renewed
Active Permit: Y
Child Record Id: DEH2020-HCHEM-0243364
Trade Secret: N
Hazardous Material Type: Mixture
Last Updated: 2020-05-13T02:05:52.000
Chemical Name: SYNTHETIC THERMOPLASTIC POLYMER
Common Name: LEXAN
Case Number: Not reported

Record ID: DEH2002-HUPFP-130637
Permit Status: Permit Renewed
Active Permit: Y
Child Record Id: DEH2020-HCHEM-0243365
Trade Secret: N
Hazardous Material Type: Pure
Last Updated: 2020-05-13T02:05:52.000
Chemical Name: LINEAR LOW DENSITY POLYETHYLENE
Common Name: RESIN - LINEAR LOW DENSITY POLYETHYLENE SILO 2

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HAZARDOUS AIR POLLUTANT MAJOR RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
