

Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: Perris Valley Channel Lateral B, Stage 4 Project

Lead Agency: Riverside County Flood Control and Water Conservation District

Contact Name: Jerry Aguirre

Email: jeraguir@rivco.org Phone Number: 951-955-1245

Project Location: Perris Riverside County
City *County*

Project Description (Proposed actions, location, and/or consequences).

The Riverside County Flood Control and Water Conservation District (District), in partnership with the March Joint Powers Authority (MJPA) and March Air Reserve Base (MARB) is proposing to construct the Perris Valley Channel (PVC) Lateral B, Stage 4 Project (Project), an approximately 6,000-lineal-foot underground reinforced concrete box (RCB) storm drain partially located within the limits of the city of Perris and lands owned by MJPA and MARB in southwestern Riverside County. The objectives of the Project are to: provide flood protection to MARB and the adjacent area by constructing the regional storm drain needed to convey 100-year runoff from the PVC Lateral B, Stage 5 facility to the existing PVC Lateral B, Stage 2 facility at Heacock Street; and provide adequate outlet to proposed developments west of the Project within the city of Perris. The Project's general alignment begins at the downstream terminus of PVC Lateral B, Stage 5 facility and continues south and east adjacent to the MARB west perimeter security fence before tying into the PVC Lateral B, Stage 2 facility at Heacock Street. The Project would be located mostly within MARB right of way.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The Project's potentially significant effects include those to Biological Resources, Cultural Resources, Geology and Soils, and Tribal Cultural Resources. Mitigation Measures are proposed to reduce all effects to less than significant levels. Biological resources mitigation includes conducting a preconstruction burrowing owl survey no more than 30 days prior to the commencement of construction activities in accordance with the Western Riverside County MSHCP burrowing owl survey guidelines (County of Riverside 2006). Cultural resources protection mitigation includes that a qualified professional archaeologist examine inadvertent discoveries of cultural resources and/or human remains. Geology mitigation measures require that a Paleontological Resource Impact Mitigation Plan be prepared prior to ground disturbing activities. Tribal Cultural Resources Mitigation requires that a Tribal/Cultural Resources Mitigation Plan be prepared prior to ground disturbing activities and also require an archaeological monitor as needed during ground disturbing activities.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.
