

MEMORANDUM

Date: July 11, 2023
To: City of Thousand Oaks, Attn. Justine Kendall, AICP
From: Envicom Corporation, Attn. Laura Kaufman, AICP
Subj: July 11 Additional Comment Letters – Latigo Hillcrest Project EIR

Two additional Comment Letters were received by the City on July 11, 2023, at 12:24 p.m. from the offices of Michael M. Tsai, Attorney at Law, less than six hours before the City Council meeting where the project will be addressed. These letters are addressed as follows (numbering continues from the prior received letters provided in the Final EIR Section 2.2, Specific Responses):

Comment Letter 13: Michael M. Tsai Attorney at Law (for “SWMSRCC”), July 11, 2023 (295 pages) and Comment Letter 14: Michael M. Tsai Attorney at Law (for “SWMSRCC”), July 11, 2023 (33 pages)

The vast majority of comments in these letters are verbatim to Comment Letter 4 by the same author, May 22, 2023, and Comment Letter 8 by the same author dated June 1, 2023. The following responses address several additional commenter concerns and provide additional clarification, by topic. The comments are paraphrased by topic below, with the full letter provided as an attachment to this memorandum.

Comment Regarding Mitigation Measure BIO-1

This comment further states that the Final Environmental Impact Report (EIR) appropriately responds to the author’s prior comment about use of the applicant’s biologist, by clarifying that the City’s role in selection of the qualified biologist. However, the author is further concerned about the surveys and stated that they must occur prior to adoption [certification] of the project EIR.

Response Regarding Mitigation Measure BIO-1

Bats are addressed in the Section 4.2, Biological Resources of the Draft EIR, and in the Final EIR (Response 4-9, 10-4, 12-1). As stated in Final EIR Response 10-4, there has been no evidence of pallid bat (a species of special concern, or SSC) presence, including the Phase I ESA survey inside of the building and the biologist’s field reconnaissance on November 15, 2022 wherein the site was walked and native plant and animal species present were recorded, along with a review of the exotic landscaping plants present (see Draft EIR Section 4.2, page 4.2-1). The mitigation measure is provided in an abundance of caution. It requires that the pre-construction survey occur. The measure is sates that, “[n]o earlier than three days prior to ground or vegetation disturbing activities, and separately three days prior to demolition activities if occurring 14 days or more after ground

or vegetation disturbing activities.” Also as stated in the mitigation measure, the CDFW approves Bat Avoidance Plans with allow for eviction of bats from a building to be demolished and avoiding the potential for significant impacts. Such a plan would be required by the measure, and thus the measure follows CDFW procedures to assure no significant impacts. The timing of the measure is prior to ground or vegetation disturbing activities, and thus would be prior to any potential impact.

Comment Regarding Traffic and VMT

The commenter raises issues of traffic congestion and VMT. Regarding traffic congestion, the author asserts that the Project is anticipated to have 1,788 average daily trips [ADT], “which further indicates the project may have a significant traffic impact.”

Regarding VMT, the commenter states that the Draft EIR is confusing in stating that VMT impacts would be less than significant. The commenter states that the thresholds used should be those offered by the state.

Response Regarding Traffic and VMT

The ADT number alone is not a determinant of significant traffic congestion impacts. More importantly, the state of California has clarified that the focus of transportation analysis under CEQA, in the interest of sustainable communities, greenhouse gas (GHG) reduction, and livable cities, among other reasons, has shifted from traffic congestion to vehicle miles traveled (VMT). Senate Bill 743 required the Governor’s Office of Planning and Research (OPR) to identify new metrics for identifying and mitigating transportation impacts within CEQA. For land use development projects, OPR identified VMT as a new metric for transportation analysis.

Nevertheless, the issue of traffic congestion was analyzed by the City of Thousand Oaks in its evaluation of the proposed projects. That analysis showed, compliant with City policy, that all intersections potentially affected by the proposed project, would operate at recommended City Levels of Service (LOS), which are LOS C for most intersections, and LOS D for the intersection of Rancho Conejo Boulevard and Hillcrest Drive, as well as specific intersections on Thousand Oaks Boulevard. (See Draft EIR Section 4.11, Transportation. Thus, the project would comply with traffic congestion-related policy of the City of Thousand Oaks. Further, the Draft EIR Transportation Section evaluates potential geometric hazards (Subsection 4.11.3.3). The City Department of Public Works studied the anticipated inbound and outbound traffic onto Hillcrest Drive at the proposed project driveways and found no functional concerns at either driveway. The commenter provides no substantial evidence of significant traffic congestion impacts.

The project VMT analysis was prepared based on City of Thousand Oaks Administrative Policies and Procedures,¹ compliant with SB 743, and reviewed and approved by the City Department of Public Works. The OPR suggested thresholds are not mandatory and individual jurisdictions may establish thresholds for use within their jurisdiction. In fact, the CEQA Guidelines, Section 15064.3, suggests various approaches, including a qualitative approach. Section 15064.3(b)(4) states, “lead agency has discretion to choose the most appropriate methodology to evaluate a

¹ City of Thousand Oaks Administrative Policies and Procedures, Subject: Vehicle Miles Traveled (VMT) Analysis for CEQA Compliance, APP No: 12-14-007, June 29, 2020.

project’s vehicle miles traveled, including whether to express the change in absolute terms, per capita, per household or in any other measure.” The estimated VMT for project was calculated utilizing the Ventura County Transportation Model (VCTM), a land use model that is based on the SCAG’s travel demand model, as stated in Draft EIR Subsection 4.11.3.2. As shown in Table 4.11-3, the project’s residential and commercial average daily VMT would be 32 percent and 18 percent less, respectively than the Citywide average. The state thresholds recommend a 15 percent decrease, and thus if those thresholds were utilized to compare to the Citywide average, the project’s impact would be even further below thresholds. The commenter does not provide substantial evidence of a significant VMT impact.

Comment Regarding Air Quality Impacts from Trees

The commenter repeats a concern that removing mature trees from the site and replacing with younger (smaller) trees would present a significant air quality impact.

Response Regarding Air Quality Impacts from Trees

The project is a mixed-use project on an infill property. Tree impacts are discussed in the Draft EIR (Project Description, Section 4.2 Biological Resources, among others) and the Final EIR (Responses to Comment Letter 10). The City’s Protected Tree Ordinance aims to protect trees, which are an aesthetic as well as biological resource. As the commenter points out, trees also have a benefit of absorbing carbon and producing oxygen. Where trees are removed, the City requires the applicant to submit tree replacement plans. These plans must be consistent with the Ordinance, complying with replacement size requirements and replacement ratio requirements. The size and replacement requirements – as well as ongoing monitoring requirements for replacement trees - take into account the potential that some trees may not survive, and work towards assurance that survival will occur with minimal exceptions. The commenter does not provide substantial evidence that removal of trees on a less than 10-acre urban infill site in a City with millions of trees, would result in a net decrease in air quality (and presumably GHG though not mentioned in the comment) benefits.

Comment Regarding Cumulative Impacts

The commenter raises concerns that the Draft EIR mentions that the related projects are not proximate to the site and would not have combined impacts and asserts that collective cumulative project impacts would contribute to significant impacts on air quality, noise and traffic congestion.

Response Regarding Cumulative Impacts

The statements CEQA analysis regarding the proximate projects have to do with issue that are generally localized, such as construction impacts. These statements should be read in context with each analysis. The EIR appropriately addressed cumulative impacts for all issue areas. Regarding the issues cited: the methodology for air quality and traffic congestion (LOS) analysis are necessarily inclusive of cumulative impacts. As discussed in Draft EIR Section 4.1 Air Quality, and as described in the CEQA thresholds and analysis there, project impacts for air quality using the CalEEMod model are evaluated in a cumulative sense. Analysis of traffic noise utilized projected roadway volumes, which includes cumulative traffic. The commenter does not further

state or provide substantial evidence that the cumulative analysis is deficient and has not provided substantial evidence of a significant cumulative impact.

Comment Regarding Hazardous Materials

The commenter raises concern that demolition of the older building on site would cause significant environmental impacts through the release of lead based paint (LBP) and asbestos.

Response Regarding Hazardous Materials

The Draft EIR discusses these issues in Section 4.6, Hazards and Hazardous Materials. The proposed project will take all precautions required by the City, which are commensurate with industry precautions, and will comply with City Code Section 8-4.13.

As previously stated in the Draft EIR, “This is a standard regulatory requirement that assures that if there are hazardous materials within the existing building, Thousand Oaks Municipal Code and CFR Title 40 limit the affects demolition has by creating needed surveys and regulations to follow before demolition of the project site. The proper disposal of hazardous materials will occur for asbestos since the Department of Industrial Relations requires licensed companies to remove asbestos from a site. To obtain a Demolition Permit, a debris recycling plan needs to be approved by the City Public Works Department for the waste generated from the demolition of an existing building. As required by the regulations, the project owner must provide a hazardous waste plan, approved by the City Public Works Department before that department will issue a demolition permit. This will ensure proper disposal of hazardous materials, in this case materials potentially containing asbestos and LBP. With regulatory compliance, demolition impacts considering potential transport, use, or disposal and foreseeable upset and accident conditions, would be less than significant.”

RE: City of Thousand Oaks' 2150 West Hillcrest Drive Mixed Use Project.

Dear Justine Kendall,

On behalf of the Southwest Mountain States Regional Council of Carpenters (“**Southwest Mountain States Carpenters**” or “**SWMSRCC**”), my Office is submitting these comments for the City of Thousand Oaks’ (“**City**”) Draft Environmental Impact Report (“**DEIR**”) and Final Environmental Impact Report (“**FEIR**”) for the **July 11, 2023** City Council meeting for the 2150 West Hillcrest Drive Mixed Use Project (“**Project**” or “**Latigo Hillcrest Project**”).

The Project proposes to construct two (2) new podium buildings that include a four-story (4) mixed-use building that contains 333 multi-family residential units, common areas, and amenities, as well as about 5,300 square feet of commercial space with alcohol consumption use above semi-subterranean parking structures, along with the removal of seventeen (17) coast live oak trees and encroachment into eleven (11) coast live oak trees in the protected zone.¹ The Project is proposed at the site of a “long-vacant welcome center property” used as the headquarters for the Amgen

¹ Draft Environmental Impact Report Notice of Availability (Apr. 7, 2023), at p. 1.

biotech company campus and was previously entitled by the City for a 333-unit housing development with 20% of units (i.e., 67 units) set aside as affordable.^{2, 3}

The Applicant Latigo has just completed another 142-unit luxury mixed-use Santal project at 299 E. Thousand Oaks Blvd, across the street from Tarantula Hill Brewery near Moorpark Road.⁴

The Southwest Mountain States Carpenters is a labor union representing 63,000 union carpenters in 10 states, including California, and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Individual members of SWMSRCC live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

The Southwest Mountain States Carpenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

The Southwest Mountain States Carpenters incorporates by reference all comments raising issues regarding the Environmental Impact Report (EIR) submitted prior to certification of the EIR for the Project. See *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, the Southwest Mountain States Carpenters requests that the City provide notice for any and all notices referring or related to the Project issued under the

³ Per the EIR, the Project is only proposing 30 affordable units for very low income families. DEIR, 1.0-1.

⁴ *Id.*, see also **Exhibit E**, also available at: <https://www.toacorn.com/articles/a-7000-apartment-boulevard-builder-may-break-record-books/>, accessed 5/26/2023; and **Exhibit F** (Latigo's projects, including in Thousand Oaks), available at <https://www.latigo-group.com/current-developments>, accessed 5/26/2023.

California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), and the California Planning and Zoning Law (“**Planning and Zoning Law**”) (Gov. Code, §§ 65000–65010). California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency’s governing body.

I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY’S ECONOMIC DEVELOPMENT AND ENVIRONMENT

The City should require the Project to be built using local workers who have graduated from a Joint Labor-Management Apprenticeship Program approved by the State of California, have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state-approved apprenticeship training program, or who are registered apprentices in a state-approved apprenticeship training program.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

[L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California’s workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.⁵

Furthermore, workforce policies have significant environmental benefits given that they improve an area’s jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the “[u]se of a local state-certified apprenticeship program” can result in air pollutant reductions.⁶

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.⁷

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.⁸ Some municipalities have even tied local hire and

⁵ California Workforce Development Board (2020) Putting California on the High Road: A Jobs and Climate Action Plan for 2030 at p. ii, *available at* <https://laborcenter.berkeley.edu/wp-content/uploads/2020/09/Putting-California-on-the-High-Road.pdf>.

⁶ South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions, *available at* <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10>.

⁷ California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, *available at* <https://cproundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf>

⁸ Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? *Journal of the American Planning Association*

other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city's First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 (“**AB2011**”). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

II. THE CITY SHOULD IMPOSE TRAINING REQUIREMENTS FOR THE PROJECT'S CONSTRUCTION ACTIVITIES TO PREVENT COMMUNITY SPREAD OF COVID-19 AND OTHER INFECTIOUS DISEASES

Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupational Safety and Health Administration. Recently, several construction sites have been identified as sources of community spread of COVID-19.⁹

72 (4), 475-490, 482, available at <http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf>.

⁹ Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, available at <https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx>.

Southwest Mountain States Carpenters recommend that the Lead Agency adopt additional requirements to mitigate public health risks from the Project's construction activities. SWMSRCC requests that the Lead Agency require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon Southwest Mountain States Carpenters' experience with safe construction site work practices, SWMSRCC recommends that the Lead Agency require that while construction activities are being conducted at the Project Site:

Construction Site Design:

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.
- Provide hand washing stations throughout the construction site.

Testing Procedures:

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.

- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.
- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.
- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

Planning

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches)

communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.¹⁰

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The Agency should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

Southwest Mountain States Carpenters has also developed a rigorous Infection Control Risk Assessment (“**ICRA**”) training program to ensure it delivers a workforce that understands how to identify and control infection risks by implementing protocols to protect themselves and all others during renovation and construction projects in healthcare environments.¹¹

ICRA protocols are intended to contain pathogens, control airflow, and protect patients during the construction, maintenance and renovation of healthcare facilities. ICRA protocols prevent cross contamination, minimizing the risk of secondary infections in patients at hospital facilities.

The City should require the Project to be built using a workforce trained in ICRA protocols.

III. THE PROJECT WOULD BE APPROVED IN VIOLATION OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

A. Background Concerning the California Environmental Quality Act

The California Environmental Quality Act is a California statute designed to inform decision-makers and the public about the potential significant environmental effects of

¹⁰ See also The Center for Construction Research and Training, North America’s Building Trades Unions (April 27 2020) NABTU and CPWR COVID-19 Standards for U.S. Construction Sites, available at https://www.cpwr.com/sites/default/files/NABTU_CPWR_Standards_COVID-19.pdf; Los Angeles County Department of Public Works (2020) Guidelines for Construction Sites During COVID-19 Pandemic, available at https://dpw.lacounty.gov/building-and-safety/docs/pw_guidelines-construction-sites.pdf.

¹¹ For details concerning Southwest Carpenters’ ICRA training program, see <https://icrahealthcare.com/>.

a project. 14 California Code of Regulations (“**CEQA Guidelines**”), § 15002, subd. (a)(1).¹² At its core, its purpose is to “inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made.” *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.

1. *Background Concerning Environmental Impact Reports*

CEQA directs public agencies to avoid or reduce environmental damage, when possible, by requiring alternatives or mitigation measures. CEQA Guidelines, § 15002, subds. (a)(2)-(3); see also *Berkeley Keep Jets Over the Bay Committee v. Board of Port Comes* (2001) 91 Cal.App.4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; *Laurel Heights Improvement Assn.*, 47 Cal.3d at p. 400. The EIR serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to “identify ways that environmental damage can be avoided or significantly reduced.” CEQA Guidelines, § 15002, subd. (a)(2). If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” and that any unavoidable significant effects on the environment are “acceptable due to overriding concerns” specified in Public Resources Code section 21081. See CEQA Guidelines, § 15092, subds. (b)(2)(A)-(B).

While the courts review an EIR using an ‘abuse of discretion’ standard, the reviewing court is not to *uncritically* rely on every study or analysis presented by a project proponent in support of its position. *Berkeley Jets*, 91 Cal.App.4th at p. 1355 (quoting *Laurel Heights Improvement Assn.*, 47 Cal.3d at pp. 391, 409 fn. 12) (internal quotations omitted). A clearly inadequate or unsupported study is entitled to no judicial deference. *Id.* Drawing this line and determining whether the EIR complies with CEQA’s information disclosure requirements presents a question of law subject to independent review by the courts. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal.App.4th 48, 102, 131. As the court stated in *Berkeley Jets*, prejudicial abuse of discretion occurs if the

¹² The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 et seq., are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. Cal. Pub. Res. Code, § 21083. The CEQA Guidelines are given “great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous.” *Center for Biological Diversity v. Dept. of Fish & Wildlife* (2015) 62 Cal.4th 204, 217.

failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process. 91 Cal.App.4th at p. 1355 (internal quotations omitted).

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. *Communities for a Better Environment v. Richmond* (2010) 184 Cal.App.4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 449-450). The EIR's function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. *Id.* For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Id.*

A strong presumption in favor of requiring preparation of an EIR is built into CEQA. This presumption is reflected in what is known as the “fair argument” standard under which an EIR must be prepared whenever substantial evidence in the record supports a fair argument that a project may have a significant effect on the environment. *Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602; *Friends of “B” St. v. City of Hayward* (1980) 106 Cal.3d 988, 1002.

The fair argument test stems from the statutory mandate that an EIR be prepared for any project that “may have a significant effect on the environment.” PRC, § 21151; see *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.App.3d 68, 75; accord *Jensen v. City of Santa Rosa* (2018) 23 Cal.App.5th 877, 884. Under this test, if a proposed project is not exempt and may cause a significant effect on the environment, the lead agency must prepare an EIR. PRC, §§ 21100 (a), 21151; CEQA Guidelines, § 15064 (a)(1), (f)(1). An EIR may be dispensed with only if the lead agency finds no substantial evidence in the initial study or elsewhere in the record that the project may have a significant effect on the environment. *Parker Shattuck Neighbors v. Berkeley City Council* (2013) 222 Cal.App.4th 768, 785. In such a situation, the agency must adopt a negative declaration. PRC, § 21080, subd. (c)(1); CEQA Guidelines, §§ 15063 (b)(2), 15064(f)(3).

“Significant effect upon the environment” is defined as “a substantial or potentially substantial adverse change in the environment.” PRC, § 21068; CEQA Guidelines,

§ 15382. A project may have a significant effect on the environment if there is a reasonable probability that it will result in a significant impact. *No Oil, Inc.*, 13 Cal.3d at p. 83 fn. 16; see *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 309. If any aspect of the project may result in a significant impact on the environment, an EIR must be prepared even if the overall effect of the project is beneficial. CEQA Guidelines, § 15063(b)(1); see *County Sanitation Dist. No. 2 v. County of Kern* (2005) 127 Cal.App.4th 1544, 1580.

This standard sets a “low threshold” for preparation of an EIR. *Consolidated Irrigation Dist. v. City of Selma* (2012) 204 Cal.App.4th 187, 207; *Nelson v. County of Kern* (2010) 190 Cal.App.4th 252; *Pocket Protectors v. City of Sacramento* (2004) 124 Cal.App.4th 903, 928; *Bowman v. City of Berkeley* (2004) 122 Cal.App.4th 572, 580; *Citizen Action to Serve All Students v. Thornley* (1990) 222 Cal.App.3d 748, 754; *Sundstrom*, 202 Cal.App.3d at p. 310. If substantial evidence in the record supports a fair argument that the project may have a significant environmental effect, the lead agency must prepare an EIR even if other substantial evidence before it indicates the project will have no significant effect. See *Jensen*, 23 Cal.App.5th at p. 886; *Clews Land & Livestock v. City of San Diego* (2017) 19 Cal.App.5th 161, 183; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 150; *Brentwood Assn. for No Drilling, Inc. v. City of Los Angeles* (1982) 134 Cal.App.3d 491; *Friends of “B” St.*, 106 Cal.App.3d 988; CEQA Guidelines, § 15064(f)(1).

For the reasons set forth below, the Project may have a significant effect on the environment. As such, the DEIR must be revised and recirculated to adequately account for the Project’s potential environmental effects.

B. The Project May Have a Significant Effect on Biological Resources

The Project may have a significant effect on biological resources for a number of reasons.

1. *Bats, Birds and Wildlife Species.*

The DEIR ultimately concludes that the Project will either have no impact, a less than significant impact, or a less than significant impact after mitigation, despite acknowledging facts showing that the Project may indeed have impacts.¹³ Specifically, with regards to the Project’s potential impact on native species, the DEIR notes that

¹³ Draft Environmental Impact Report (Apr. 2023), pp. ES-6-7.

the Project Site contains mature trees that could potentially be used by the Cooper's hawk (*Accipiter cooperii*), a species listed on the California Department of Fish and Wildlife ("CDFW") Watchlist, for nesting.¹⁴

Furthermore, the DEIR notes that "the pallid bat (*Antrozous pallidus*), a CDFW Species of Special Concern, is known to roost in vacant structures and could therefore potentially roost in the building on site.¹⁵ Yet, the DEIR merely relies on the Project's compliance with the Migratory Bird Treaty Act ("MBTA") to conclude that this would reduce to a level of less than significant the Project's potential impact to the Cooper's hawk and other birds that have potential to nest at the Project Site.¹⁶ However, mere reliance on a project's regulatory compliance is insufficient to conclude that the Project's potential impacts would be reduced to a level of less than significant. Even further, regarding the Project's potential impact on pallid bats, the DEIR proposes the implementation of mitigation measure BIO-1, which states that

[n]o earlier than **three days prior to ground or vegetation disturbing activities**, and **separately three days prior to demolition if occurring 14 days or more after ground or vegetation disturbing activities**, a City-approved qualified biologist shall inspect the outside and inside of the vacant structure for sign of roosting bats, . . . [and a] report of the bat survey results shall be submitted to the City for review and approval prior to ground and/or vegetation disturbance activities. **If evidence of bat roosting is observed, building demolition shall not be allowed until a qualified biologist can verify that the roost is no longer active.** Separate ground or vegetation disturbing activities may commence **if determined appropriate** by the biologist, with **or** without an avoidance buffer **if** found necessary. **If necessary, bats may be evicted** and building demolished following submittal and approval of a Bat Avoidance Plan by California Department of Fish and Wildlife (CDFW).¹⁷

However, the proposed mitigation measure is deficient for a number of reasons. First, the mitigation measure relies on potentially the Applicant's own qualified biologist¹⁸

¹⁴ *Id.* at p. 4.2-11.

¹⁵ *Id.* at pp. 4.2-11-12.

¹⁶ *Id.*

¹⁷ *Id.*

¹⁸ While the mitigation measure indicates that the biologist should be "City-approved" – it does not mean the biologist will be provided by the City itself. In other words, just by

inspecting the Project Site *after* the Project has already been approved. Yet, it is settled that a mitigation measure is inappropriate if all it does is require a report to be prepared and followed, or allow approval by a public agency without setting any standards. *California Clean Energy Committee v. City of Woodland* (2014) 225 Cal.App.4th 173, 195, citing to *Endangered Habitats League, Inc. v. County of Orange* (2005) 131 Cal.App.4th 777, 794 (court found the mitigation measure inadequate where it did not identify any specific mitigation measures and did not provide any standards for the community development department to adhere to in deciding whether the developer-proposed mitigation is sufficient.)

In the City's May 2023 Final Environmental Impact Report, the City responded to SWMSRCC's May 22, 2023 comment pertaining to the pallid bats, stating in Response 4-9 that

“[t]he EIR considers potential impacts to bird species, including the hawk, to be less than significant with regulatory compliance with the MBTA. However, while pallid bats are not known to be present, the EIR includes a mitigation measure to assure no potential impacts. Mitigation measure BIO-1 specifically requires a ‘a [sic] City-approved qualified biologist’ and also that the biologist report will be reviewed by the City. Thus, the concern about **lack of City involvement is unfounded.**”

FEIR, p. 2.0-6-7. [Emphasis added.]

However, the City's response to SWMSRCC's comment misinterprets in part the issue at hand. As highlighted in SWMSRCC's May 22, 2023 comment letter, the first issue here pertains to the fact that the referenced qualified biologist would conduct an inspection of the Project Site *after the Project has already been approved*. See, SWMSRCC May 22, 2023 Comment Letter p. 11. The City should require that a survey of the Project Site be conducted *prior to* any adoption of the Project's Environmental Impact Report so that it can be determined whether pallid bats do in fact exist at the Project Site.

Furthermore, and as previously discussed in the SWMSRCC's prior comments, incorporated by reference herein, the mitigation measure is illusory on its face by including numerous “if”s and conditioning on the measure's compliance on the

requiring City' approval of the biologist, the City is not committing to this mitigation measure itself. Instead, it remains the Applicant's commitment to hire a biologist.

biologist’s discretion. Yet, CEQA requires mitigation measures to be **specific and fully enforceable**. In the words of the court in an analogous situation:

In addition, the agency “shall provide that measures to mitigate or avoid significant effects on the environment are fully enforceable through permit conditions, agreements, or other measures” (§ 21081.6, subd. (b))⁴ and must adopt a monitoring program to ensure that the mitigation measures are implemented (§ 21081.6, subd. (a)). *The purpose of these requirements is to ensure that feasible mitigation measures will actually be implemented as a condition of development, and not merely adopted and then neglected or disregarded.* (See § 21002.1, subd. (b)).¹⁹

. . . . However, the circumstances here do not support a finding that the city has made a binding commitment to implement the mitigation measures or, more appropriately, that they are incorporated into the project or required as a condition of project approval in a manner that will ensure their implementation.

Federation of Hillside and Canyon Associations v. City of Los Angeles (2000) 83 Cal.App.4th 1252, 1260–1261.

However, the City fails to address this particular point in its FEIR responses to comments. *See*, FEIR, pp. 2.0-6-7.

Next, and as previously raised by this office, the Draft EIR concludes that the bats may, if necessary, be evicted if a Bat Avoidance Plan has been approved. However, this does not actually mitigate the Project’s potential impacts to the bats and relies on some later inspection to be taken after the Project’s approval. Although the City’s FEIR addresses the oversight by the City and CDFW in its response to these issues, it fails to address the fact that the use of a qualified biologist to inspect the Project Site *after* the Project’s approval or the fact that the bats still may, if necessary, be evicted pursuant to BIO-1, suggest that impacts to the bat species would not actually be mitigated.

Neither does the EIR accurately disclose, or account for, the fact that CDFW and other agencies afford specific protections to bats, in light of their declining numbers. Indeed, California Department of Fish and Wildlife alarms about the devastating

¹⁹ See, <https://wildlife.ca.gov/Conservation/Mammals/Bats/Report-Colony>.

decline in bat population and calls for reports of bat colonies to ensure their protection.²⁰ Bats are considered non-game mammals and are afforded protection by State law from take and/or harassment. Fish & Game Code, § 4150; Cal. Code of Regs, § 251.1. Several bat species are considered SSC and meet the CEQA definition of rare, threatened, or endangered species (CEQA Guidelines, § 15065). Take of SSC could require a mandatory finding of significance by the City (CEQA Guidelines, § 15065). To protect this declining population of bats and mitigate impacts on bats and other species, including both individual and cumulative impacts, CDFW requires specific mitigation measures and accurate disclosures that the EIR must follow here.²¹

Therefore, mitigation measure BIO-1 is insufficient and does not adequately mitigate the Project’s potential environmental impact on native species to a level of less than significant. As such, the DEIR should be revised and recirculated to properly address the outstanding concerns with regards to the Project’s potential impact on pallid bats.

2. *Protected Trees*

The Project calls for the removal of at least seventeen (17) *protected* coast live oak trees and the encroachment into the protected zone of eleven (11) coast live oak trees at the Project Site, which requires a Protected Tree Permit.²² Thus, such a permit is granted with various conditions, namely the replacement of the removed trees at a ratio set by the Oak Tree Preservation and Protection Guidelines or payment of an in-lieu fee if replacement is not possible.²³

First, there are a multitude of issues associated with planting new trees. For instance, there is the strong possibility that many of the trees will not survive. As noted by Lara Roman, a U.S. Forest Service researcher who studies tree mortality, “planting a massive

²⁰ See, <https://wildlife.ca.gov/Conservation/Mammals/Bats/Report-Colony>

²² DEIR, *supra*, at p. 4.2-3, 4.2-14

²³ *Id.*

number of trees is not necessarily a positive investment if not enough of them survive to become mature plants.”²⁴

Second, the Project may affect, albeit not replace, other protected trees. It is also possible that the replanted trees may not have the proper position to survive. The EIR’s mitigation measure of tree-replacement does not account for such details; yet it should, as detailed in the CDFW’s comments, including on projects’ impacts on protected coast live oaks, as here.²⁵

Third, “there’s also a carbon cost to tree-planting, meaning that trees have to survive years before they offset that cost. The largest environmental gain comes when trees mature, sometimes decades after they’re planted.”²⁶ Thus, the new trees will not immediately, or maybe even ever, mitigate the impacts associated with removing the already mature trees.

Although the City’s FEIR response to this comment in Response 4-10 addresses a tree replacement ratio and/or payment of an in-lieu fee as permitted by Resolution 2010-014 – Oak Tree Preservation and Protection Ordinance, the Response still fails to address the points made in the SWMSRCC’s prior comment letters pertaining to the air quality impacts associated with removing mature trees and replacing them with other trees. SWMSRCC incorporates by reference all comments raised in its prior comment letters on the Project and its EIR.

Therefore, should the tree removal take place, it may very well result in significant air quality impacts and biological resources impacts and the proposed new trees cannot properly mitigate the impact on air quality of removing the existing trees. The EIR should adequately disclose, and account for, the Project’s biological and air quality impacts associated, *inter alia*, with the removal or adverse impact to the trees on site.

²⁶ *Id.*

C. The Project May Have a Significant Traffic Impact

The very nature of the four-story (4) mixed-use building that will include 333 multi-family residential dwelling units and commercial retail and restaurant space²⁷ and the fact that it is proposed on a long-vacant office site, indicates that the Project may have a significant traffic impact. In fact, according to the DEIR's Transportation analysis and Traffic, Circulation and Vehicle Miles Traveled (“**VMT**”) Study, the Project is anticipated to generate 1,788 average daily trips,²⁸ which further indicates that the Project may have a significant traffic impact.

That the Project may have significant traffic impacts is also suggested by the Applicant's own statements that its commercial component, including the restaurant/bar is anticipated to be very busy: “restaurant/bar where people working at Amgen headquarters and other nearby companies (Skyworks is just down the street) can get together at lunch and after work.”²⁹

In addition, the Project may have a significant cumulative traffic impact along with other related projects, including but not limited to the ones proposed or built by the same Applicant, such as the Santal development in Thousand Oaks, as mentioned *supra*. Yet, there is no evidence the DEIR considered a full list of related projects or the Santal project, in its cumulative related projects' list. DEIR, at 3.0-3—3.0-6 & Figure 3-1.

Even further, the DEIR's Transportation analysis is deficient as it fails to include any analysis on the Project's potential impacts during the *construction* or *operation* phases of the Project. Although the City acknowledges this comment in the FEIR Response to Comment No. 8-12, the actual response fails to address this issue altogether and the EIR continues to fail to address the Project's potential impacts during construction or operation.³⁰ Therefore, the EIR must be revised and recirculated to account for this issue.

Even further, the DEIR confusingly and misleadingly argues the Project will have less than significant impacts under the VMT and, doing so, it (1) fails to present what the known VMT thresholds of significance are, per the OPR Guidance; and (2) relies on

²⁷ *Id.* at p. ES-1.

²⁸ *Id.* at p 4.1-13; Appendix H, 2150 Hillcrest Drive Traffic, Circulation and Vehicle Miles Traveled (VMT) Study (“**Traffic Study**”) (Mar. 23, 2023), p. 8.

²⁹ See, **Exhibit D**

³⁰ FEIR, *supra*, at p. 2.0-11.

some administrative policies the City adopted to determine thresholds of significance for VMTs, which the DIER cites to no reference or link to ascertain. DEIR, at 4.11-8—9.

The DEIR fails to disclose the applicable and verifiable standard of determining traffic impacts under the VMT standard. As such, in addition, to achieve the legislative goals of reducing traffic impacts under SB 743, the Office of Planning and Research (“OPR”) issued its 2018 Technical Advisory on Evaluating Transportation Impacts in CEQA,³¹ which recognizes that areas outside of metropolitan planning areas, especially rural counties, have fewer options for reducing VMT. (OPR Advisory, 15-16.) As such, VMT thresholds may be best determined on a case-by-case basis. (*Ibid.*)

Yet, for non-rural areas, the land use project VMT thresholds recommended by OPR for projects in metropolitan planning organization (MPO) areas are listed below:

- For **residential** projects, OPR recommends a **project threshold of 15 percent below the existing VMT per capita**, either measured as a **regional VMT per capita** or as **city VMT per capita**. The VMT for the residential metric only includes VMT generated by residents, some of which starts and ends outside the area.
- For **office** projects, OPR recommends a project threshold of **15 percent below** the existing **regional VMT per employee**. The VMT for the office metric only includes VMT generated by workers employed in the area.
- For **retail** projects, OPR recommends a project threshold of **any net increase** in total area VMT. Another VMT per capita threshold option is total VMT per service population (total of residents and employees). (*Ibid.* at 12-14.)

In addition, according to the OPR’s Technical Advisory on Evaluating Transportation Impacts in CEQA, “projects that generate or attract fewer than 110 trips per day generally may be assumed to cause a less-than-significant transportation impact.”³²

In light of the foregoing thresholds of significance suggested by OPR, the Project’s – which is both residential and retail of high intensity, including a restaurant/bar on a now vacant office site – generated net 1,788 average daily trips clearly exceeds the

³¹ See, *Technical Advisory on Evaluating Transportation Impacts in CEQA* (April 2018), pp. 12-14/pdf pp. 14-16, available at: https://opr.ca.gov/docs/20180416-743_Technical_Advisory_4.16.18.pdf

³² Office of Planning and Research (“OPR Guidelines”), *Technical Advisory on Evaluating Transportation Impacts in CEQA* (Dec. 2018), p. 10/pdf p. 12, available at https://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf (accessed on May 23, 2023.)

threshold of net increase in total area VMT for a retail project and fails to meet the 15 percent below the existing VMT per capita threshold of significance for a residential building. Specifically, the DEIR states that “[t]he project TAZ’s daily residential VMT per capita and commercial VMT per capita employee would be approximately 32% and 18% less than the City-wide averages, respectively. As such, neither the VMT per capita nor VMT per employee would exceed the Citywide baselines, and project VMT impact would be less than significant.”³³ However, not only do the foregoing percentages *exceed* the OPR fifteen (15) percent recommended threshold for residential projects, which OPR states may indicate a significant traffic impact,³⁴ but the DEIR completely ignores this issue by instead concluding that the VMT per employee would exceed the baselines and therefore that the Project VMT would not have a significant impact. The aforementioned analysis shows that the City’s VMT analysis and finding of no significant traffic impacts is flawed and omits critical analysis and information suggesting potential traffic impacts.

Therefore, the DEIR’s and its transportation analysis are misleading, deficient and flawed, and must be revised and recirculated to fully account for and mitigate the Project’s individual and cumulative impacts.

D. The Project May Cause Significant Air Quality, Greenhouse Gas Emission, Water Quality, Noise, and Human Health and Wildlife Impacts

There is an acknowledged direct correlation between the increase in traffic impacts and an increase in their associated air quality, greenhouse gas emission (“**GHG**”), and noise impacts. See e.g., *City of Redlands v. County of San Bernardino* (2002) 96 Cal.App.4th 398, 413, “it is reasonable to assume” that a project enabling physical residential development would have reasonably foreseeable indirect air and other impacts.

As stated in the Office of Planning Research’s (“OPR”) technical advisory in 2018:

“VMT and Greenhouse Gas Emissions Reduction. Senate Bill 32 (Pavley, 2016) requires California to reduce greenhouse gas (GHG) emissions 40 percent below 1990 levels by 2030, and Executive Order B-16-12 provides a target of 80 percent below 1990 emissions levels for the transportation sector by 2050. The transportation sector has three major means of

³³ DEIR, *supra*, at p. 4.11-8.

³⁴ OPR Guidelines, *supra*, at p. 15.

reducing GHG emissions: increasing vehicle efficiency, reducing fuel carbon content, and reducing the amount of vehicle travel.”³⁵

Similarly, there is an acknowledged nexus between the increase of traffic and an increase in related air quality, GHG impacts, noise, water/flooding impacts and impacts on human health and natural environment, including wildlife and waterways. As described in the 2018 OPR Technical advisory:

“VMT and Other Impacts to Health and Environment. VMT mitigation also creates substantial benefits (sometimes characterized as “co-benefits” to GHG reduction) in both in the near-term and the long-term. Beyond **GHG emissions, increases in VMT** also impact **human health** and the **natural environment**. Human health is impacted as increases in **vehicle travel** lead to **more vehicle crashes, poorer air quality**, increases in chronic diseases associated with reduced physical activity, and worse mental health. Increases in vehicle travel also negatively affect other road users, including pedestrians, cyclists, other motorists, and many transit users. The **natural environment** is **impacted** as **higher VMT** leads to more collisions with wildlife and fragments habitat. Additionally, development that leads to more vehicle travel also tends to consume **more energy, water, and open space** (including farmland and sensitive habitat). This increase in impermeable surfaces **raises** the **flood risk** and **pollutant transport** into **waterways**.”³⁶

In light of the understated and flawed traffic impact findings, detailed in Section E, *supra*, the DEIR’s findings about the traffic-related impacts (air quality, noise, greenhouse gas emissions, etc.) are also understated and flawed. Derivatively, the Project may have adverse impacts on human beings.

In addition, in light of the DEIR’s failure to account for the reasonably foreseeable intensity of the restaurant/bar uses, which will be serving many large nearby business structures, schools, and offices as contemplated by the Applicant, the Project may also have significant energy and water impacts. While the DEIR provides that the Project

³⁵ Office of Planning and Research, *2018 Technical Advisory on Evaluating Transportation Impacts in CEQA* (Dec. 2018) at 2, available at https://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf

³⁶ *Id.* at p. 3.

will not have gas appliances for the *residences*, it is apparent that the more intensive other land uses – i.e., restaurant/bar and others – will be using gas appliances. DEIR, 4.4-6.

In addition, “the commercial spaces would be open to the public, as well as the outdoor open spaces proximate to those uses. Additional indoor amenities would be provided to the residents.” DEIR, ES-2. As such, the Project may also have significant energy and water impacts, in light of its amenities being open to the public.

Further, as noted above, the cumulative list of related projects to the Project is inaccurate and omits other related projects, especially by the Project Applicant here. This also suggests that the DEIR’s conclusions about no impacts on air, GHG, and other impacts are flawed and unsupported.

In sum, the Project may have traffic, air, GHG, energy, water, noise and other impacts, including impacts on human beings and natural environment and the EIR fails to account for or mitigate those.

E. The Project May Have a Cumulative Impact

For purposes of cumulative impacts analysis, CEQA mandates to consider the impacts of the past, present, and reasonably foreseeable future projects. CEQA Guidelines §§ 15063(b)(1) (prepare an EIR “if the agency determines that there is substantial evidence that any aspect of the project, either individually or cumulatively, may cause a significant effect on the environment, regardless of whether the overall effect of the project is adverse or beneficial”); 15064(h) (need to consider cumulative impacts of past, other current and “probable future” projects). Even if the Project’s impacts may not be significant, its incremental effects, when added to other past, present, and probable future projects, can be cumulatively significant. CEQA Guidelines §§15065(a)(3), 15130(b)(1)(A), 15355(b).

The DEIR identifies thirteen (13) different cumulative projects within a two-mile (2) radius of the Project Site, with the closest project being just 0.8 miles away at 1875 Newbury Road, Thousand Oaks.³⁷ Yet, the DEIR asserts that

the related projects are not reasonably close to the project site to have combined impacts that would make the project’s lack of effects be of concern, and none of these related projects are expected to substantially

³⁷ DEIR, *supra*, at p. 3.0-3.

add to a cumulatively shared impact with the project . . . [and thus, n]o further analysis of cumulative impacts . . . [is] required in the EIR.³⁸

However, the Project, along with the thirteen (13) other related projects collectively contribute to potentially significant impacts on air quality, noise, and traffic congestion in Thousand Oaks, and collectively burden utilities and public services' ability to adequately serve the Project Site.

In addition, as mentioned above, the DEIR's related project list is manifestly incomplete; it even omits the Applicant's own very recent project (*see*, **Exhibit F**), of which the City and the Applicant clearly had notice of.

Although the City's Response No. 8-14 in the FEIR states that "[t]he Draft EIR impact analysis section for each issue area, [sic] evaluates cumulative impacts relevant to that issue" and that "[t]he projects listed in Section 3.0, Cumulative Projects, are a [sic] considered where appropriate in each analysis. . . ." (FEIR, *supra*, p. 2.0-13), the Response still fails to acknowledge that the Cumulative Projects list in the EIR leaves out various other projects.

Thus, the Project may result in a cumulative impact, and the DEIR's cumulative impact analysis, based on erroneous assumptions and omissions of all related projects, is flawed as a matter of law, making the DEIR fail as an informational document.

IV. CONCLUSION

For the reasons set forth above, SWMSRCC respectfully requests that the City require the revision and recirculation of the Draft Environmental Impact Report pursuant to CEQA, consistent with the concerns and authority mentioned in this letter.

Sincerely,

Stephanie Papayanis

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise (“SWAPE”) is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas (“GHG”) emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model (“CalEEMod”) is a “statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects.”¹ CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.²

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.³

¹ “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

² “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

³ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled (“VMT”) associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.⁴

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

$$\text{“VMT}_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$$

Where:

n = Number of land uses being modeled.”⁵

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

$$\text{“Emissions}_{\text{pollutant}} = \text{VMT} * \text{EF}_{\text{running,pollutant}}$$

Where:

$\text{Emissions}_{\text{pollutant}}$ = emissions from vehicle running for each pollutant

VMT = vehicle miles traveled

$\text{EF}_{\text{running,pollutant}}$ = emission factor for running emissions.”⁶

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.⁷ In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence.⁸ The default number of construction-related worker trips is calculated by multiplying the

⁸ CalEEMod User Guide, available at: <http://www.caleemod.com/>, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.⁹ Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively.”¹⁰ Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.¹¹ The operational home-to-work vehicle trip lengths are:

“[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings” (emphasis added).¹²

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).¹³

Worker Trip Length by Air Basin		
Air Basin	Rural (miles)	Urban (miles)
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8

¹³ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8- miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7- miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan (“Project”) located in the City of Claremont (“City”). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.¹⁴ In an effort to evaluate the potential for a local hire provision to reduce the Project’s construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,623
Amortized Construction GHG Emissions (MT CO ₂ e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,024
Amortized Construction GHG Emissions (MT CO ₂ e/year)	100.80
% Decrease in Construction-related GHG Emissions	17%

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project’s urbanization level and location.

¹⁴ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-85.

Village South Specific Plan (Proposed)
Los Angeles-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

3.0 Construction Detail

Construction Phase

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Phase Number	Phase Name	Phase Type	Start Date	End Date	Num Days Week	Num Days	Phase Description
1	Demolition	Demolition	9/1/2021	10/12/2021	5	30	
2	Site Preparation	Site Preparation	10/13/2021	11/9/2021	5	20	
3	Grading	Grading	11/10/2021	1/11/2022	5	45	
4	Building Construction	Building Construction	1/12/2022	12/12/2023	5	500	
5	Paving	Paving	12/13/2023	1/30/2024	5	35	
6	Architectural Coating	Architectural Coating	1/31/2024	3/19/2024	5	35	

Acres of Grading (Site Preparation Phase): 0

Acres of Grading (Grading Phase): 112.5

Acres of Paving: 0

Residential Indoor: 2,025,000; Residential Outdoor: 675,000; Non-Residential Indoor: 326,400; Non-Residential Outdoor: 108,800; Striped Parking Area: 0 (Architectural Coating – sqft)

OffRoad Equipment

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Phase Name	Offroad Equipment Type	Amount	Usage Hours	Horse Power	Load Factor
Demolition	Concrete/Industrial Saws	1	8.00	81	0.73
Demolition	Excavators	3	8.00	158	0.38
Demolition	Rubber Tired Dozers	2	8.00	247	0.40
Site Preparation	Rubber Tired Dozers	3	8.00	247	0.40

Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

<i>% Decrease in Construction-related GHG Emissions</i>	17%

EXHIBIT B

Paul Rosenfeld, Ph.D.

Principal Environmental Chemist

Chemical Fate and Transport & Air Dispersion Modeling

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H₂O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey

Duarte et al, *Plaintiffs*, vs. United States Metals Refining Company et. al. *Defendant*.

Case No.: 2:17-cv-01624-ES-SCM

Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division

M/T Carla Maersk, *Plaintiffs*, vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS “Conti Perdido”
Defendant.

Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237

Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants

Case No.: No. BC615636

Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants

Case No.: No. BC646857

Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado

Bells et al. Plaintiff vs. The 3M Company et al., Defendants

Case: No 1:16-cv-02531-RBJ

Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District

Phillip Bales et al., Plaintiff vs. Dow Agrosiences, LLC, et al., Defendants

Cause No 1923

Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa

Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants

Cause No C12-01481

Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois

Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants

Case No.: No. 0i9-L-2295

Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles

Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC

Case No.: LC102019 (c/w BC582154)

Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division

Brenda J. Cooper, et al., *Plaintiffs*, vs. Meritor Inc., et al., *Defendants*

Case Number: 4:16-cv-52-DMB-JVM

Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

**Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review**

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Developer buys Amgen property for \$25M

Plans to build 330 apartments, retail

April 22, 2022

By Kyle Jorrey

tonewstip@theacorn.com

CHANGING HANDS—Amgen’s former Building No. 34 has been sold to the Latigo Group, the same firm developing 299 E. Thousand Oaks Blvd. Last year, Amgen received pre-approval from the council for a concept involving a mix of around 333 apartments and retail on the ground floor. Acorn file photo

If the pharmaceutical market ever dries up, Thousand Oaksbased Amgen might stand a good chance in real estate.

The biotech giant recently sold its old welcome center at 2150 W. Hillcrest Drive to a developer for \$25.5 million.

Latigo Group, the Los Angeles based firm behind the soon-to-be completed mixed-use development at 299 E. Thousand Oaks Blvd., said this week it intends to transform the site off Rancho Conejo Boulevard in Newbury Park into a “beautifully designed mixed-use project that will be an asset to Thousand Oaks and the surrounding community.”

“The Latigo Group strives to create best-in-class properties, in collaboration with future residents and the community,” said Mark Maron, co-founder and managing partner of Latigo, in

a statement.

Before the sale, Amgen received pre-approval from the City Council for up to 333 apartments at the 8.2-acre site, 20% of which were to be offered at below-market rate for income-eligible applicants.

That pre-approval now transfers to Latigo, which will begin the process of getting full entitlements from city staff, the Thousand Oaks Planning Commission and the City Council, which will have to sign off on a general plan amendment to change the property from industrial to mixed-use.

In an April 14 announcement, Latigo said the apartments will feature “top-tier amenities,” including a swimming pool, fitness center, outdoor lounge areas and a pet spa.

As for the retail use, Latigo said it imagines a restaurant/bar where people working at Amgen headquarters and other nearby companies (Skyworks is just down the street) can get together at lunch and after work.

At the April 2021 hearing where the City Council gave the design concept pre-approval, Councilmember Al Adam said the long-vacant welcome center property—formerly Amgen Building No. 34—was the perfect candidate for housing, which the city is desperate to see built.

“With this piece so close to Amgen, it seems to me there’s a great opportunity here for some workforce housing that would certainly benefit the Amgen corporation,” Adam said.

It’s unclear how Latigo’s affordable housing plans will differ from Amgen’s, which proposed either 28 units for very-low-income applicants or 50 units for low-income applicants. To qualify as low-income in Ventura County, a family of four must earn less than \$89,700 a year, according to annual limits set by the federal Department of Housing and Urban Development.

As for when Latigo’s first mixed-use project in the city— 299 E. Thousand Oaks Blvd.— will begin leasing, a spokesperson said it would likely be this fall.

The company is building a three-story, 142-apartment complex with 11,000 square feet of retail space across the street from Tarantula Hill Brewery near Moorpark Road.

Maron said the commercial portion of the project is almost fully leased and will include a specialty coffee shop and sushi restaurant. Two other spaces are available.

THOUSAND OAKS Acorn

A \$7,000 apartment? Boulevard builder may break record books

July 29, 2022

By Kyle Jorrey
tonewstip@theacorn.com

LUXURY LIVING—A third-floor unit at the new Santal development at 299 E. Thousand Oaks Blvd., which begins pre-leasing next month, features a 450-square-foot balcony overlooking the city's namesake thoroughfare and 13-foot-high ceilings. Another third-floor unit with a 628-square-foot deck is expected to be the costliest ever rented in T.O. MICHAEL COONS/Acorn Newspapers

Among the 142 apartments that will go on the market later this year at 299 E. Thousand Oaks Boulevard, a few stand out.

On the third floor of the four-story development is a unit that features a 628-square-foot wraparound deck with unparalleled views of the city's namesake thoroughfare. Inside, floor-to-ceiling windows fill the space with natural light; there are backlit mirrors in the bathroom, two-tone cabinets in the kitchen, quartz countertops and a wine cooler.

The blinds are electric and can be controlled along with many other features in the home via a smartphone app.

Mark Maron, managing partner of The Latigo Group, the developer behind the new construction, has taken to calling the space the "mack daddy" unit. It is one of two in the building with 13-

foot-high ceilings, enormous private decks and unobstructed sightlines.

“They’re both phenomenal,” Maron said.

At a time when much of the public discourse around housing is centered on affordability—the project does include 11 affordable units—the spaces are expected to shatter the record for the most expensive apartments ever listed in Thousand Oaks, a combination of market forces (rents citywide are at an all-time high) and the amenity-rich project Latigo is building.

TOP OF THE CITY—Construction is nearing completion at 299 E. Thousand Oaks Blvd. The mixed-use development features 142 units, 11 of which have been designated as “affordable” and will be leased for significantly less than the 131 market-rate apartments. MICHAEL COONS Acorn Newspapers

While declining to give the exact price, Maron hinted in June that one of the units on the third floor (the largest is 1,144 square feet) could fetch as much as \$7,000 a month based on comparable units at new luxury developments in Woodland Hills. The square footage does not include the deck.

Scott Whittaker, Latigo co-founder and partner, said the firm felt the need to create a couple units that were “above and beyond anything else.”

In addition to three third-floor units that have large private decks and boulevard views, there are several premium units on the fourth floor, or penthouse level, that are also expected to fetch top

dollar.

While he acknowledges that the rents might be higher than most residents can afford, Maron said Santal, the name given to the new complex, is addressing an unmet need in Thousand Oaks, especially for those working in life sciences.

“People want high-quality apartments to live in. There’s no reason for them to have to go to the west side of L.A., which many people at Amgen do,” he said.

Whittaker said Santal will offer features that can’t be found elsewhere in the Conejo Valley.

“Even some of the newer projects that have come on-line, they’re not necessarily that bad from a quality standpoint, they just don’t have amenities,” Whittaker said. “They don’t have a nice pool and a nice fitness center and smart technology and co-work space. They just lack all of that stuff.”

For example, Santal, named for a fragrance that comes from sandalwood, will have its own patented scent.

“We’re going to have diffusers actually pump out the scent that we create, which is very much inspired by Le Labo’s Santal,” said Danielle Maron, Latigo vice president.

At the center of the future complex, an “upscale a pool,” the developers said. The project also includes a rooftop terrace with firepit and lounge seating, a robust fitness center and various covered seating areas on the first and second floor. KYLE JORREY/Acorn Newspapers

One of the biggest draws of Santal, according to the developer, is easy access to the commercial businesses on the ground floor. Two anchor tenants have already signed—Go Fish Sushi Bar, which has one location at Simi Valley Town Center, and JOi Cafe, a Westlake staple that is opening its second location—with two more tenants in the works.

“You can walk downstairs, get sushi, walk downstairs, get coffee, get grab-and-go stuff, or you can walk across the street to the brewery (Tarantula Hill),” Whittaker said. “It will be a little

community within itself.”

The city’s first mixed-use development, 1710 on the Boulevard, has had residential tenants for over a year but has yet to welcome a restaurant. A New York-style pizza place is said to be coming soon.

Mark Maron said he’s determined to have every commercial space at Santal filled in short order.

“We’re actively trying to fill up the retail space, which we will,” he said.

Santal starts pre-leasing next month. Prospective tenants can go online and reserve a space in the building by putting down a deposit.

“We expect this thing to lease very, very quickly,” Maron said.

The luxury apartment complex rises above E. Thousand Oaks Boulevard across from Tarantula Hill Brewing Company. Residents are expected to begin moving in sometime in October. Two restaurants, Go Fish Sushi and JOi Cafe, have already signed on to fill the commercial spaces on the bottom floor facing. MICHAEL COONS/Acorn Newspapers

Because competition for the apartments, especially the 11 that will charge a rate that is significantly below market is expected to be fierce, Latigo has brought on property manager Greystar to handle leasing.

Maron said Greystar has special software to detect falsified bank records, which will come in handy as they go through the process of proving that the applicants for the affordable units are income eligible. A married couple, for example, cannot make more than \$50,200 a year in combined income—the threshold to qualify as very-low income in Ventura County.

“The last thing you want is someone to be in there for fraudulent reasons,” Maron said. “Those units are built the exact same way as every other unit, but obviously the rent is dramatically different.”

Those wishing to apply for one of the 11 units are encouraged to go to [santalthousandoaks.com](https://www.santalthousandoaks.com) once the site goes live Aug. 1.

If all goes according to plan, tenants will begin moving in Oct. 1. Maron said Latigo is planning a special opening night event to celebrate, when guests will be able to walk around the complex's courtyard and pool and dine at one of the restaurants.

RE: City of Thousand Oaks' 2150 West Hillcrest Drive Mixed Use Project.

Dear Justine Kendall,

On behalf of the Southwest Mountain States Regional Council of Carpenters (“**Southwest Mountain States Carpenters**” or “**SWMSRCC**”), my Office is submitting these supplemental comments for the City of Thousand Oaks’ (“**City**”) Draft Environmental Impact Report (“**DEIR**”) and Final Environmental Impact Report (“**FEIR**”) for the **July 11, 2023** City Council meeting for the 2150 West Hillcrest Drive Mixed Use Project (“**Project**” or “**Latigo Hillcrest Project**”).

The Southwest Mountain States Carpenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

The Southwest Mountain States Carpenters incorporates by reference all comments related to the Project or its CEQA review, including the Environmental Impact

Report (“**EIR**”). See *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project’s environmental documentation may assert any issue timely raised by other parties).

I. THE PROJECT WOULD BE APPROVED IN VIOLATION OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

A. Background Concerning the California Environmental Quality Act

The California Environmental Quality Act is a California statute designed to inform decision-makers and the public about the potential significant environmental effects of a project. 14 California Code of Regulations (“**CEQA Guidelines**”), § 15002, subd. (a)(1).¹ At its core, its purpose is to “inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made.” *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.

B. The Project May Have a Significant Hazards Impact

The Project may have a significant hazards impact. The Project proposes to demolish an existing office building that is estimated to have been constructed between 1978 and 1985.² The DEIR even admits that demolition of the existing structure at the Project Site could cause a release of hazardous materials, such as asbestos and lead, into the atmosphere.³ The DEIR further asserts that in the Phase I Environmental Site Assessment (“**ESA**”) that was prepared for the Project, no hazardous materials such as asbestos, LBP, lead, or mercury, among other things, were detected, and indicates that this conclusion was reached through an interior observation through interviews and records review.⁴

Yet, there is ample scientific data that buildings built before the 1980s used asbestos and lead. (See **Exhibit A**.)⁵

¹ The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 et seq., are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. Cal. Pub. Res. Code, § 21083. The CEQA Guidelines are given “great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous.” *Center for Biological Diversity v. Dept. of Fish & Wildlife* (2015) 62 Cal.4th 204, 217.

² Latigo Hillcrest Project Environmental Impact Report (Apr. 2023), pp. 4.4-1, 4.6-9.

³ *Id.* at p. 5.0-13.

⁴ *Id.* at p. 4.6-9.

⁵ Also available at: <https://www.mesothelioma.com/asbestos-exposure/jobsites/homes>; and https://www.cdph.ca.gov/Programs/CCDC/DEOD/CLPPB/Pages/home_test.aspx.

The DEIR then goes on to state that “[w]hile asbestos and [lead-based paint (“LBP”)] bans were starting up in the 1970s and 1980s, not all asbestos materials were banned. Thus, it is assumed that the existing building on the project site could have asbestos and LBP from the original construction, which occurred between 1978 and 1985.”⁶

It is undisputed that both *lead* and *asbestos* are dangerous to people’s health. While intact asbestos by itself may not be hazardous, damaged or disturbed asbestos may release asbestos fibers and become a health hazard.⁷ Per Occupational Health and Safety Administration’s (“OSHA”) description:

What are the hazards of asbestos?

Asbestos is well recognized as a health hazard and its use is now highly regulated by both OSHA and EPA. Asbestos fibers associated with these health risks are too small to be seen with the naked eye. Breathing asbestos fibers can cause a buildup of scar-like tissue in the lungs called asbestosis and result in loss of lung function that often progresses to disability and death. Asbestos also causes cancer of the lung and other diseases such as mesothelioma of the pleura which is a fatal malignant tumor of the membrane lining the cavity of the lung or stomach. Epidemiologic evidence has increasingly shown that all asbestos fiber types, including the most commonly used form of asbestos, chrysotile, causes mesothelioma in humans.

OSHA’s Definition of “Asbestos” on its Official Website.⁸

Similarly, *lead* is dangerous to people and their families. Per OSHA’s report:

Lead has been poisoning workers for thousands of years. Lead can damage the central nervous system, cardiovascular system, reproductive system, hematological system, and kidneys. When absorbed into the body in high enough doses, lead can be toxic.

⁶ *Id.*

⁷ See, <https://www.cpsc.gov/safety-education/safety-guides/home/asbestos-home>; see also, medical conditions associated with asbestos: https://www.atsdr.cdc.gov/asbestos/health_effects_asbestos.html

⁸ See, United States Department of Labor, *Asbestos*, available at <https://www.osha.gov/asbestos> (accessed on Mar. 27, 2023.)

In addition, workers' lead exposure can harm their children's development. Short-term (acute) overexposure—as short as days--can cause acute encephalopathy, a condition affecting the brain that develops quickly into seizures, coma, and death from cardiorespiratory arrest.

Short-term occupational exposures of this type are highly unusual but not impossible. Extended, long-term (chronic) overexposure can result in severe damage to the central nervous system, particularly the brain. It can also damage the blood-forming, urinary, and reproductive systems. There is no sharp dividing line between rapidly developing acute effects of lead and chronic effects that take longer to develop.⁹

OSHA also documents the adverse effects of lead on people's reproductive health:

REPRODUCTIVE RISKS

Lead is toxic to both male and female reproductive systems. Lead can alter the structure of sperm cells and there is evidence of miscarriage and stillbirth in women exposed to lead or whose partners have been exposed. Children born to parents who were exposed to excess lead levels are more likely to have birth defects, mental retardation, or behavioral disorders or to die during the first year of childhood.

Workers who desire medical advice about reproductive issues related to lead should contact qualified medical personnel to arrange for a job evaluation and medical followup--particularly if they are pregnant or actively seeking to have a child. Employers whose employees may be exposed to lead and who have been contacted by employees with concerns about reproductive issues must make medical examinations and consultations available.¹⁰

For the foregoing reasons, the Project may have a significant hazard impact, including due to the disturbance of potential asbestos and lead and other chemicals as part of demolition.

The DEIR's or Phase I ESA's statements that no asbestos was discovered by interior observation lacks credence: visual observation or discussions with

⁹ See, OSHA Report, *Lead in Construction* (2004) p. 3, available at <https://www.osha.gov/sites/default/files/publications/osha3142.pdf>

¹⁰ *Id.* at p. 4.

others cannot be conclusive proof of whether the building contains asbestos-related material.

Yet, the DEIR ultimately concludes that with regulatory compliance, no mitigation measures are required with regards to the Project's impacts pertaining to transport, use, or disposal/foreseeable upset and accident conditions. In light of the fact that the DEIR fully disclaims the existence of asbestos or other chemicals, its statement that regulatory compliance will help reduce their impacts lacks credibility as well. Simply put, asbestos removal requires delicate and detailed work ahead of demolition. Where the existence of asbestos is denied, there is no guarantee the Applicant will even comply with regulatory measures. Stated differently, the regulatory measures or compliance relied upon in the EIR is illusory and unenforceable and non-binding in light of the EIR's denial of presence of the noted chemicals on the Project site.

Thus, the EIR should be revised and recirculated to adequately account for and mitigate the potential hazards impact.

II. CONCLUSION

For the reasons set forth above, SWMSRCC respectfully requests that the City require the revision and recirculation of the Draft Environmental Impact Report pursuant to CEQA, consistent with the concerns and authority mentioned in this letter.

Sincerely,

Stephanie Papayanis
Attorneys for Southwest Mountain
States Regional Council of Carpenters

Home > Asbestos Exposure > Exposure Sites by Type > Asbestos in the Home

Asbestos was used in many homes built before the 1980s. Some of those homes may still have flooring, ceiling tiles, insulation or other materials with asbestos. This puts residents at risk for mesothelioma and other asbestos-related diseases. Homeowners can take measures to prevent exposure.

Learn More About Asbestos Exposure in the Home in Our Free Guide

[Request Your Free Guide >](#)

01. DANGERS OF ASBESTOS IN HOMES

Why Is Asbestos in the Home Dangerous?

Asbestos materials in the home can pose a danger to residents. Over time, **asbestos-containing products** can become worn or damaged. Disturbing these materials can cause microscopic asbestos fibers to become airborne. Anyone in the home may inhale or ingest the airborne fibers.

Asbestos exposure is linked to several diseases, including **malignant mesothelioma**.

Exposure to asbestos in the home may cause:

- **Pleural mesothelioma**
- **Peritoneal mesothelioma**
- **Asbestos lung cancer**
- **Asbestosis**

Preventing asbestos exposure, in the home or on the **jobsite**, is the best way to prevent asbestos-related diseases.

When Was Asbestos Used in Homes?

Asbestos was commonly used in thousands of products and home construction materials before the 1980s. From the 1930s to the 1970s, building materials, vinyl products and other products contained asbestos. New regulations in the 1970s and 1980s limited asbestos use. But stockpiles of asbestos materials may have found their way into homes up to the 1990s.

Jump to a topic

[01. Dangers of Asbestos in Homes](#)[02. Where Is Asbestos in Homes?](#)[03. How to Identify Asbestos](#)[04. Testing for Asbestos](#)[05. Asbestos Exposure in Homes](#)[06. How to Handle Asbestos in Homes](#)[07. Actions to Protect Homeowners](#)[Get Financial Assistance](#)

According to the U.S. Environmental Protection Agency (EPA), more than 30 million tons of asbestos were used between 1900 and 1980. Some of these past uses are still in materials and products people may come into contact with today.

Asbestos is not banned in the United States, but the EPA did ban the use of asbestos in some new products after 1989. Older homes built before 1980 may be more likely to have asbestos, and there is less asbestos risk in newer homes.

02. WHERE IS ASBESTOS IN HOMES?

Where to Find Asbestos in Old Homes

Asbestos-containing materials may be found in all areas of older homes. From the 1930s through the 1970s, **asbestos was included in many different building materials**. The mineral was popular because of its durability and resistance to heat and chemicals.

Common asbestos-containing materials found in the home include:

- **Asbestos rope/sheet**
- **Boiler insulation**
- **Ceiling tiles**
- Cement roofing
- **Cement sheets**
- **Duct/pipe insulation**
- Furnaces
- **Joint compound**
- Millboard
- Rollboard
- Roof shingles
- **Roofing felt**
- Sheetrock
- Siding shingles
- **Vermiculite attic insulation**
- **Vinyl floor tiles**
- Vinyl sheet flooring

The varied uses of asbestos before the 1980s put many in danger of asbestos exposure in their homes.

03. HOW TO IDENTIFY ASBESTOS

How to Identify Asbestos in the Home

Homeowners may want to know how to identify asbestos in their house. It is not possible to identify asbestos-containing materials with the naked eye. However, there are signs of asbestos homeowners can look for. These clues may hint toward the presence of the mineral in certain products.

For example, homes built before the 1980s likely have asbestos in them. If the home has popcorn ceilings or vinyl flooring, it may have asbestos. A simple rule is the newer a home is, the less likely it has

asbestos materials. Homes built before 1980 should be assumed to contain the mineral somewhere.

There may be signs or visual clues of asbestos in the house, but homeowners should never touch anything they think may have the mineral. Homeowners should have a trained asbestos professional inspect and manage potential asbestos. Proper handling of the mineral will prevent asbestos exposure.

Visual Clues to Help Identify Asbestos in Houses

Homeowners may find visual clues that help identify asbestos in their homes. They won't be able to see asbestos itself because the mineral consists of microscopic fibers. However, the age of the home and some construction materials may suggest if a home has asbestos.

Another complication to visually finding asbestos is the different **types of asbestos** that may have been used. These asbestos types can range in color and appearance. But asbestos-containing products may not have visible asbestos fibers. In many cases, asbestos was used as a component in the product, making it impossible to see asbestos fibers. Still, some visual clues may suggest materials may contain asbestos.

Examples of Ways to Possibly Identify Asbestos in the Home

Popcorn Ceiling

The texture applied to walls and ceilings that was then painted over often contained asbestos. Popcorn ceilings were popular

between 1945 and the early 1990s. Homeowners should assume all popcorn ceilings from this period contain asbestos.

[Learn More About Popcorn Ceilings >](#)

Dimpling of Construction Materials

Asbestos causes dimpling in certain products' surfaces.

Products that may show dimpling include shingles, roofing materials or pipe insulation. Dimpling may often mean the material has asbestos and should be tested by an asbestos professional.

[Learn More About Asbestos in Construction Materials >](#)

Homeowners should remember that asbestos is a microscopic fiber that becomes airborne after being disturbed. If homeowners suspect potential asbestos in their home, they should hire a professional to inspect materials and recommend next steps.

Check Surplus Materials for Labels Identifying Asbestos

Surplus materials may have asbestos in them. The packaging may help identify which products contain asbestos.

For example, spare boxes of vinyl floor tiles may have a stamp on the box or the back of the tiles that states they contain asbestos. These products came in a variety of shapes and sizes, and not all used asbestos in their production. A date included on the packaging may also indicate that they were manufactured during the height of asbestos use (1930s – 1980s).

Handling the tiles or other surplus materials may carry exposure risk. Homeowners should only inspect the outside of the packaging for a label. If there are no packages, it is best to assume any flooring or other construction materials installed before 1980 contain the mineral. Homeowners should treat these materials with caution.

While visual clues like labels can suggest the presence of asbestos in the home, it is not a fool-proof method to identify asbestos. Only

asbestos abatement professionals can properly test for asbestos and safely handle any asbestos materials.

Questions About Asbestos Exposure in the Home and Mesothelioma?

Ask experienced
mesothelioma
advocate Jennifer
Lucarelli

Ask a Question

04. TESTING FOR ASBESTOS

How Do I Know if My House Has Asbestos?

The only way to know for sure if your house has asbestos is to test the home. The best way to test is to hire an asbestos abatement professional. Anyone with a home or planning to buy a house built before the 1980s may want to consider having their home tested, especially if they plan to remodel.

A trained asbestos abatement professional can test for asbestos while minimizing the risk of exposure. They will also offer advice on the proper way to **handle any asbestos-containing products present**. Options may include leaving it as is, removing it or encapsulating it. Encapsulating asbestos involves leaving it in place and sealing it with a protective barrier.

Home asbestos tests are available. However, the homeowner could expose themselves and anyone living in the home to asbestos by using these tests. Many experts recommend leaving the asbestos testing to the professionals. They have the needed training to test for asbestos and handle next steps, such as removal, to prevent exposure.

How Much Does Professional Asbestos Testing Cost?

The cost of professional asbestos testing varies. The number of samples needed, type of testing completed on the samples and part of the country can all impact cost. According to data from Essel Environment, the national average for basic asbestos testing is \$600.

Comprehensive testing will cost more, but it is more in depth.

Comprehensive asbestos testing includes:

- Air quality testing
- Asbestos Hazard Emergency Response Act (AHERA) inspection
- Initial test and sampling
- Full inspection after asbestos is detected

Homeowners may consider having asbestos testing done before conducting any renovations or home projects. The cost for comprehensive testing may be worth the peace of mind from knowing that dangerous exposure could be prevented.

Comprehensive testing costs can vary depending on location. These examples can help homeowners understand the cost variations.

Example Costs of Professional Asbestos Testing

West Coast

- **Location:** Los Angeles, California
- **Average Cost:** \$2,668

Middle America

- **Location:** Austin, Texas
- **Average Cost:** \$2,420

East Coast

- **Location:** New York State
- **Average Cost:** \$3,534

05. ASBESTOS EXPOSURE IN HOMES

How Does Asbestos Exposure Occur in Houses?

Asbestos exposure at home may happen whenever asbestos-containing materials are disturbed or damaged. This can happen through normal wear and tear or as a result of renovations. Other common ways for asbestos products to be disturbed include:

- Maintenance projects
- A fire or natural disaster
- Flooding or water damage

According to one study, an estimated 20% of all [mesothelioma diagnoses](#) in industrialized countries happen outside of the workplace.

Asbestos exposure can occur anywhere in the house. Common sources of asbestos exposure in the home include:

- Attics
- Basements
- Ceilings
- Crawl spaces
- Floors
- Roofs
- Walls

Asbestos in the Attic

Asbestos may be in insulation found in the attic. One of the most notorious sources for asbestos came from vermiculite attic insulation.

This type of insulation looks like small pebbles that have been put down on the floor of the attic. Vermiculite attic insulation, such as **Zonolite insulation**, has well-documented ties to asbestos contamination.

The EPA suggests up to 70% of the vermiculite sold in the United States between 1919 and 1990 came from Libby, Montana. Much of it may have been contaminated with asbestos.

Learn More About Asbestos in Libby, Montana >

If a home has vermiculite insulation, homeowners should be careful not to disturb it. They should call an asbestos abatement professional to test and remove it. Because so much of the vermiculite came from Libby, homeowners should assume any vermiculite insulation contains asbestos.

Asbestos in the Walls of Homes

Homes built before the 1980s may have wallboards and texture that includes asbestos. Wallboards go by many different names, like drywall, gypsum board or sheetrock. During the manufacturing process, asbestos was mixed with other materials and sandwiched between two sheets of paper. Asbestos in wallboards can be disturbed when drilling through it or if the outer paper is damaged.

Asbestos cement sheets were also sometimes used for interior walls. On the outside of older homes, these sheets were used for roofing and siding. Over time, these materials can start wearing out, exposing residents to asbestos.

If a homeowner wants to remodel or needs to do maintenance, they should take precautions before starting on any work in homes built before the 1980s. A professional asbestos abatement company should test the area first.

Asbestos in Popcorn Ceilings and Vinyl Tiles

Popcorn ceilings and vinyl tile floors were popular starting in the 1940s. Both, however, may have asbestos in them.

Builders liked popcorn ceilings because they could hide some imperfections, and they provided some acoustical insulation. These types of ceilings could have 1 – 10% asbestos content. As they began to age and break down, pieces of the covering could flake off and become airborne.

Vinyl tiles provide an easy-to-maintain floor option. They can come in a variety of colors and patterns. However, during the manufacturing process, the vinyl may have been fused with asbestos. The adhesive used to glue the floor down may also have asbestos. If a homeowner ever wants to update the floor or needs to repair it, they risk exposure.

An asbestos abatement professional will be able to test and safely remove both popcorn ceiling and vinyl tiles.

Other Examples of Asbestos Exposure at Home

Insulation on Hot Water Pipes

- Asbestos was commonly used as an insulator.

- The mineral can be found in pipe insulation in older homes.
- Homeowners should not remove or replace pipe insulation on their own in homes built before the 1980s.

Vehicle Repairs in the Home Garage

- Asbestos was often used in friction materials, such as car brakes, made before the 1980s.
- **Brakes or other car parts** from this period should not be repaired in home garages.
- Some foreign car parts may also still contain asbestos and should be handled by a mechanic.

06. HOW TO HANDLE ASBESTOS IN HOMES

What to Do if You Have Asbestos in Your Home

If a homeowner believes their home has asbestos materials, they should contact an asbestos professional to conduct a test. If the home does have asbestos, the homeowner may need to hire a contractor to remove it.

In general, asbestos materials are considered safe when they are in good condition and there are no signs of damage. If the material is damaged or worn, a professional may suggest removing or encapsulating the product. Encapsulation involves covering the materials with a sealant to prevent airborne fibers.

At no point should a homeowner attempt to remove asbestos on their own.

According to the Occupational Safety and Health Administration (OSHA), there is no safe level of asbestos exposure. Improper

asbestos handling could release fibers into the air, creating a health hazard.

Asbestos Safety Dos and Don'ts

Asbestos in the home can be very dangerous if disturbed or damaged. Homeowners need to know what to do if they suspect their home has asbestos.

Homes built before the 1980s may be built with asbestos-containing materials. Suspected asbestos-containing materials should be handled by professionals to avoid dangerous exposure.

How to Approach Asbestos in the Home

- Avoid asbestos-containing materials.
- Do not damage asbestos-containing materials.
- When buying a home, talk to the home inspector and realtor about any known asbestos in the home.
- Hire asbestos abatement professionals to complete all testing, removal or encapsulation of materials.
- If razing a home, have the **home inspected before demolition** to ensure all hazardous materials are handled properly.

How Not to Approach Asbestos in the Home

- Don't sand, saw, scrape, drill or otherwise disturb asbestos-containing materials.
- Don't use a vacuum or broom to clean disturbed asbestos materials.
- Don't attempt to collect samples of suspected asbestos-containing materials for testing.
- Don't have asbestos-containing materials removed by professionals unless encapsulation is impossible.
- Don't throw asbestos-containing materials in your regular trash.

Why You Shouldn't Use an At-Home Asbestos Test Kit

Asbestos materials are dangerous any time fibers are airborne. Unqualified homeowners attempting to test suspected asbestos materials on their own can cause a larger health hazard than undisturbed asbestos materials.

At-home test kits can put homeowners and their families at risk of dangerous exposure. To collect samples for testing, the suspected hazardous materials must be disturbed. This can cause fibers to become airborne. As such, it may be in the best interest of homeowners not to use an at-home asbestos test kit.

If an at-home asbestos test kit must be used, homeowners should:

- ✓ Turn off the heating and cooling system to prevent the fibers from traveling through the home
- ✓ Wear an N95 respirator
- ✓ Wear disposable gloves and wash hands afterward
- ✓ Ensure no one else is in the room
- ✓ Wet the material before testing it
- ✓ Dispose of asbestos material according to state and local laws

*More tips for at-home removal are on the U.S. Consumer Product Safety Commission's website.

Although at-home asbestos test kits may seem more economical than hiring a professional, the costs related to asbestos-related diseases are far greater.

07. ACTIONS TO PROTECT HOMEOWNERS

Preventing Asbestos Exposure in the Home

Preventing asbestos exposure at home is the best course of action homeowners can take to protect themselves and their families.

Homeowners should not attempt to remove asbestos from their homes on their own. Without proper handling and safety precautions, removing asbestos can cause exposure and lead to illness. It is important to hire a trained professional, so the asbestos materials can be handled and disposed of properly.

Many cities and states have regulations in place for the proper disposal of asbestos and materials containing asbestos. It is important to understand these asbestos regulations to protect anyone in the home, workers and neighbors from exposure.

Federal Regulations to Help Protect Homeowners From Asbestos Exposure

Federal regulations have reduced the amount of asbestos used in construction and manufacturing. In 1973, the United States used more than 800,000 tons of asbestos, compared to only a few hundred tons today. However, there is no full **ban on asbestos**.

Reducing asbestos use has helped, but homeowners are still at risk. **It is imperative for homeowners to understand:**

- Where asbestos-containing materials are most likely to be found
- What common products may contain the mineral
- How to protect themselves and others should they come into contact with asbestos

The EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP) help protect air quality and reduce health risks presented by various contaminants, such as asbestos. These regulations create safety standards for many home projects, including renovations. NESHAP also covers asbestos waste transportation and disposal.

The U.S. Consumer Product Safety Commission also has several bans in place related to certain asbestos-containing materials, such as artificial ashes and embers found in gas fireplaces. The asbestos in artificial ashes and embers glowed red when heated to give the fake logs the illusion of burning. Both were banned in 1978.

Asbestos in the home can be serious. Asbestos regulations are an important part of safety.

[Learn More About Asbestos Regulations >](#)

What to Do if You Think You Have Been Exposed to Asbestos in the Home

Anyone who believes they have been exposed to asbestos while working on a project at home should consult their doctor. A doctor can help monitor for signs and [symptoms of mesothelioma](#) or other asbestos-related diseases.

Monitoring for mesothelioma may include regular imaging tests, such as X-rays or CT scans. Early detection may allow patients to have more treatment options, which may impact [life expectancy](#).

Prevention is the best protection against asbestos exposure. Homeowners who have a house built before the 1980s may want to speak with an asbestos abatement professional. Homeowners should also consult with a professional before undertaking repairs or a remodel of their older homes.

CHILDHOOD LEAD POISONING PREVENTION BRANCH

Testing Your Home for Lead

Why should I test my home for lead?

If you have children, lead in your home can cause serious long term health and behavior problems for them. Lead is a hazard to children under 6 years of age in particular. Lead in paint, dust, and soil is a problem for children because it gets in their bodies when they put their fingers, toys, or paint chips or dust into their mouths. Lead can also harm a pregnant woman and her developing fetus.

You should consider testing for lead if there are children in your home and:

- Your house was built before 1978, or
- Your house is near a freeway or busy roadway where leaded gasoline and its exhaust may have polluted the soil with lead.

If your house was built before 1978, it is especially important to test for lead if:

- Your house has peeling or chipping paint.
- Your house has bare soil in the yard where children play.
- You plan to repaint, remodel, or renovate the house.
- A child living in the house has had a blood lead test result indicating lead exposure.
- Your house was built before 1950 - such homes almost always have some lead-based paint.

If you are buying or renting a home:

- Federal laws require the seller to give you an informational pamphlet and to tell you about any known lead hazards in the home. (These federal laws also give home buyers 10 days to inspect for lead. The law does not require landlords to allow a renter to inspect for lead.)
- Contact the National Lead Information Center at 1-800-424-LEAD for information and materials about real estate disclosure laws and for the EPA pamphlet Protect Your Family from Lead in Your Home.

Where should I test for lead?

The most important areas to test for lead are those areas where children spend a lot of time, such as bedrooms, playrooms, kitchens, and play-yards. It is especially important to test these areas if there is bare soil or if paint is peeling or chipping.

You should also test places where you plan to repaint or remodel. Test several different spots. If you are testing paint, test each different paint color. If you are testing soil, test different bare soil areas.

Some good places to test for lead-based paint are:

- Window frames and sills
- Doors, door jambs, and thresholds
- Trim and siding
- Kitchen cabinets
- Painted children's furniture
- Baseboards

Some good places to test for lead-contaminated soil are:

- Around the foundation of the house

- Where children play
- Unpaved pathways
- Under windows or walls with peeling or chipping paint
- Where pets play or rest
- Areas near traffic

How do I test for lead?

There are two recommended ways to test your home for lead. Whenever you test for lead, it is important to find out how much lead is in the paint or soil you test.

- Get a laboratory analysis: For \$25 - \$50, you can have a paint chip or soil sample tested by an accredited laboratory and get reliable results in 24 - 48 hours. Call the laboratory for details before you mail them your samples. Keep a sketch or list of the locations where you take samples.
 - *Taking A Paint Sample* : Tape a clean, plastic sandwich bag underneath some paint you want to test. Use a clean, sharp chisel or scraper to scrape a tablespoon size amount of paint into the bag. Try to scrape off all the layers of paint, not just the top coats - lead is often in the bottom layer of paint. Try not to scrape off any of the wood or plaster that is under the paint. Seal the bag and label it. On the label, write where the sample was taken (example: Sample #1 - kitchen window sill). Wash your hands and the scraper with soap and water after each paint sample you take.
 - *Taking A Soil Sample* : Using a clean trowel or large spoon, scoop about half a cup of soil from the top inch of the bare soil you want to test. Try not to scoop up plant leaves, roots, or other large pieces of debris. If there are paint chips in the soil, it is OK to include them in the sample. Place the soil into a clean, plastic sandwich bag. Seal the bag and label it. On the label, write where the sample was taken (example: Sample # 2 - under children's swing set). Wash your hands and the spoon with soap and water after each soil sample you take.
- Hire a Certified Inspector/Assessor: You can hire a State-certified Inspector/Assessor to inspect your home for lead. Obtain at least two or three bids for a cost estimate of the work. Ask the Inspector/Assessor to write you a risk assessment report that will tell you if the lead levels in your home represent a hazard and what options you have for dealing with it.

The certified Inspector/Assessor can test your paint with an XRF (x-ray fluorescence) machine, for immediate results. He or she can also send paint, dust, and soil samples to a laboratory for testing. Make sure the Inspector/Assessor gives you a sketch or a description of where the samples were taken.

For a list of State-certified Inspector/Assessors, go to the State-certified Inspector/Assessor page on this site.

How can I tell if I have lead above the hazard level in my paint or soil?

The table below shows hazard levels of lead in paint, soil and dust, as determined by the California Department of Public Health (CDPH). The U.S. Environmental Protection Agency (EPA) and the U.S. Department of Housing & Urban Development (HUD) may have different hazard level definitions.

Lead in Paint Hazard Levels	Lead in Bare Soil Hazard Levels	Lead in Dust Hazard Levels
<ul style="list-style-type: none"> • Lab test results of 5,000 ppm (parts per million) or more, or 0.5% or more (by weight) • XRF test results of 1.0 milligrams of lead per square centimeter (1.0 mg/cm²) or more 	<ul style="list-style-type: none"> • Lab test results of 400 ppm or more in bare soil in areas where children play • Lab test results of 1,000 ppm or more in all other areas 	<ul style="list-style-type: none"> • Dust from interior floors with 40 micrograms of lead per square foot (40 mcg/ft²) or more • Dust from interior horizontal surfaces with 250 micrograms of lead per square foot (250 mcg/ft²) or more

		<ul style="list-style-type: none"> • Dust from exterior floors and exterior horizontal window surfaces with 400 micrograms of lead per square foot (400 mcg/ft²) or more
--	--	--

Important: No matter what your test results are, the condition of your house's paint and soil is important. If the soil is covered by grass, bushes or permanent ground coverings, even high levels of lead in the soil may not be hazardous to children. If you are not planning to remodel and the paint is in good condition - not chipping or peeling - it may not be a lead hazard, even if it contains high levels of lead. If the paint is peeling or chipping, if it is on doors and windows where normal wear and tear causes chipping, or if you plan to remodel the area, you should take steps to prevent the lead from poisoning your children.

Warning: Lead test results are only as good as your testing procedures. The results will not tell you about the lead content of painted surfaces or soil that you did not test. Hire a State-certified Inspector/Assessor to make sure you get accurate testing results.

Can I just use a lead test kit from a paint store?

Kits for testing paint and ceramics are available at most paint and hardware stores for \$8 - 10. They have chemicals that change color when rubbed against a surface that contains lead.

- These kits can only tell you if there is lead in the paint you tested.
- They will not tell you how much lead is in the paint or if it is a hazard.
- You can not use them to test for lead in soil.

If you decide to use a lead test kit to test your paint, follow the directions on the package very carefully. Be sure to test the bottom layers of paint. To do this, use a sharp knife to cut a slanted notch through all the paint layers on the spot you want to test. Test all the layers of paint in the notch. Look for the color change indicated by the test kit.

If your house was built before 1978 and your lead test kit comes out negative (does not change color), you should have an accredited lab test the paint to make sure the lead test kit worked properly. Paint on structures built prior to 1978 is legally presumed to be lead-based, unless a state-certified Inspector/Assessor has quantitative testing to show otherwise.

What should I do next?

If the lead in your paint or soil exceeds the hazard levels listed above, you should:

- Contact your family doctor or your local health department and get blood lead tests for your children who are 6 years of age or under. Discuss whether other family members should be tested.
- Find out about everyday things you can do to prevent lead poisoning.
- Consider hiring a State-certified lead Inspector/Assessor to inspect your home for lead.
- Hire a State-certified lead contractor to reduce the lead hazards in your home and yard.
- If you plan to repaint or remodel your home, hire a State-certified lead contractor. If you plan to do the work yourself, get the EPA's free how-to booklet, Reducing Lead Hazards When Remodeling Your Home (PDF) and contact your local health department to find out about lead-safe work practices to prevent poisoning yourself or your children.

If you are concerned about unsafe lead work creating a hazard, contact your local building department (PDF) or local health department lead program.
