SIGNATURE AND ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1. SUMMARY OF CONCLUSIONS

Ramboll US Consulting, Inc. (Ramboll) was retained by Dedeaux Properties (“Dedeaux” or the “Client”) to perform a Phase I Environmental Site Assessment (ESA) of the Kenyon Plastering (the “Company”) property located at 1514 South Bon View Avenue in Ontario, California (herein referred to as the “facility” or the “site”). Ramboll’s assessment was conducted in connection with a potential purchase of the property). The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International’s *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the “ASTM Standard”), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 7). The scope of work for the Phase I ESA was expanded to include a review of certain items that the ASTM standard considers “non-scope considerations”, namely, a qualitative evaluation of the potential for the on-site existence of asbestos-containing materials, lead-based paint, water intrusion/mold, and radon.

1.1 Site Summary

Kenyon Plastering leases and operates a building materials supplier facility in Ontario, California. The approximately 1.91-acre site is improved with an approximately 1,216-square-foot office building and an approximately 5,000-square foot warehouse building.

The site was developed as farmland with structures since at least 1938, and occupants during that time appear to have included private individuals for residential and agricultural purposes. Agricultural operations ceased and industrial operations had begun at the site by 1985. Vern Anthony Gunitite operated at the site from the 1980s until 2012 for construction business. From 2013 to 2021, Engine Drivetrain Repair Services, Inc (EDRS) operated at the site for autobody repair.

Since at least 1976, the site owners have included Francisco B. Orquin, Anthony S. Lopez Sr. and E.L. Wagner, Vernon L. Anthony Sr. and Beatrice Anthony, and Transition Properties LP. The current owners, Thomas G. McDonald & Eileen Callanan, have owned the site since 2016. Kenyon Plastering has leased the site since approximately 2018 and uses the site for storage of plaster and concrete and an administrative headquarters.

1.2 Recognized Environmental Conditions

Ramboll performed a Phase I ESA of the site at 1514 South Bon View Avenue in Ontario, California in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no RECs in connection with the site.

1.3 Other Findings

Although not considered RECs, Ramboll identified the following notable other findings. The term “other finding” is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **1997 Underground Storage Tank (UST) Closure.** Deep, Inc. prepared a Tank Removal Closure Report on behalf of Vern Anthony Gunitite dated December 1, 1997, and submitted the report to the San Bernardino County Fire Department. Three USTs (two 10,000-gallon diesel USTs and one 6,000-gallon gasoline UST) were excavated and removed in 1998. Based on the figure provided in the closure report, the USTs and a dispenser island were located in the northern portion of the site, between the office building and the warehouse. The USTs were removed on November 6, 1997; the condition of the USTs at the time of removal were not described. Two soil confirmation samples were taken from a depth of two feet below the bottom of each UST; no samples were

collected from the dispenser island because it was located directly above the USTs, which were removed. All soil samples were analyzed for benzene, toluene, ethylbenzene, total xylenes (BTEX) and methyl tertiary butyl ether (MTBE) using United States Environmental Protection Agency (USEPA) Method 8020 and total petroleum hydrocarbons (TPH) using USEPA Method 8015(M). None of the analytes were detected in any of the samples. Based on these results, the County Fire Department issued a No Further Investigation letter on December 8, 1997. The letter states that "further investigation is not warranted at this time," but also notes that additional investigation could be required if site conditions change. Because Ramboll's review did not identify documentation of a current or former release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC. Based on the results of the soil sampling indicating no impacts and the closed regulatory status, Ramboll, characterizes this matter as an "other finding." There does not appear to be any current regulatory requirement to re-evaluate the area, nor was regulatory scrutiny of the site by local agencies identified during this assessment.

- **Past Light Industrial Operations at the Site.** The site was redeveloped for industrial uses around 1985 and was used by former site occupants as an autobody repair shop (EDRS, Inc.) and for a general construction contractor (Vern Anthony Gunitite, Inc.). There is no indication that these operations were chemically intensive or involved the use of significant amounts of petroleum products or other hazardous substances. The site is not listed on any environmental databases indicative of a release or contamination. While Ramboll cannot rule out the possibility that inadvertent spills or releases of chemicals or petroleum products have occurred in the past, no specific contamination concerns were identified (e.g., obvious evidence of contamination, listings indicating past chlorinated solvent use in significant quantities, known releases), and thus this matter is not considered a REC. In addition, Kenyon Plastering, the current occupant, has leased the facility for a short period of time and its operations are not chemically intensive and are unlikely to have caused significant contamination, if any. As such, Ramboll does not consider this finding a REC.

A discussion of *de minimis* conditions identified during this review is presented in Section 6.1 of this report.

1.4 Non-Scope Considerations

Ramboll identified the following findings that relate to non-scope considerations:

- **Asbestos-Containing Materials (ACMs).** The building was constructed before asbestos was generally phased out of use in most building material applications in the 1980s. A formal asbestos survey has not been conducted at the facility. Ramboll conducted limited visual observations in limited areas of the buildings at the site and noted Potentially Asbestos-Containing Materials (PACM) (e.g., ceiling tile in the office building, transite panels lining the warehouse building) and other materials that may contain asbestos (e.g. ceiling tiles, roofing materials). If any demolition or remodeling activities are conducted at the site, suspect materials should be sampled and if found to contain asbestos, managed appropriately.
- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site. According to facility personnel, the facility has not experienced problems with water intrusion.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the of the

eastern office building before 1938, it is possible that lead-based paint was used historically on facility structures. Facility personnel knew of no lead-based paint on structures at the facility. Ramboll observed the paint to be in good condition. If any demolition or remodeling activities are conducted at the site, a lead-based paint assessment should be conducted and if found, managed appropriately.

- **Radon.** Based on information included in the Environmental Data Resources, LLC (EDR) report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, the median radon value for 7 tests surveyed in the same zip code as the site was 0 pCi/L. A USEPA survey conducted in San Bernardino County found that the average radon level of a first-floor room at 18 properties was 0.678 pCi/L. Based on this information, radon is not anticipated to be of concern to the site.

2. INTRODUCTION

2.1 Scope of Work

Ramboll conducted a Phase I ESA of the Kenyon Plastering facility in Ontario, California. The Phase I ESA relied upon the references noted below and included the following tasks:

- A visit to the site by Kelly Chen of Ramboll on March 15, 2022 to observe the exterior and interior features of the site and to identify the uses and conditions specified in Sections 9.4.1 through 9.4.4.7 of the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- A telephone interview with Hunter McDonald, Executive Vice President of Jones Lang LaSalle Brokerage, Inc. (the representative of the owner of the site) on March 21, 2022 regarding general site conditions and site history information. The aforementioned individual is referred to herein as “facility personnel”. The facility personnel interviewed by Ramboll were identified by the Company as having good knowledge of the uses and physical characteristics of the site.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
 - A radius report prepared by EDR (see Appendix B), which presents the results of searches of federal and state databases for the site, as well as properties near the site. The radius searched for each database, as well as the databases themselves, was selected in accordance with the ASTM Standard.
 - The United States Environmental Protection Agency’s (USEPA’s) Envirofacts database, which provides site information contained in multiple USEPA regulatory databases.
 - The California State Water Resources Control Board (SWRCB) GeoTracker database and the Department of Toxic Substances Control’s (DTSC’s) Site Mitigation and Brownfields Reuse Program’s EnviroStor (EnviroStor) database for the site and immediately adjacent properties, which contain information about certain regulated facilities in California.
 - The California Geologic Energy Management Division (CalGEM) website, which provides information regarding the locations of oil and gas wells on and in the vicinity of the site.
- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
 - Readily available historical sources (as identified in Section 4.2 of this report and included as Appendix C) to develop a history of the previous uses of the site and surrounding area.
 - Local building permit information, as obtained via EDR’s Lightbox application
 - Historical and site-specific information obtained from the following local agencies: the City of Ontario Building Department (Building Department), the San Bernardino County Assessor’s Office (Assessment), and the San Bernardino County Fire Department (County Fire Department). Ramboll also requested information from the City of Ontario Fire Department (City Fire Department), but personnel from these agencies reported having no information pertaining to the site.

- Ramboll was provided with the following previous environmental assessment reports, which are included as Appendix D:
 - *Tank Removal Closure Report, Permit # 92028470*, prepared by Deep, Inc., dated December 1, 1997 (the “1997 Tank Removal Closure report”);
 - Letter entitled *Subject: Removal of Three Underground Storage Tanks at 1514 Bon View Avenue, Ontario*, prepared by San Bernardino County Fire Department, dated December 8, 1997 (the “1997 No Further Investigation letter”).
- A review of physical setting sources, as defined in the ASTM Standard, including:
 - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
 - Geologic, hydrogeologic, or hydrologic sources as provided in the environmental database report.

A review of any information provided by the user of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and Dedeaux in March 2022. The standard ASTM scope was expanded to include a limited review of asbestos-containing materials, lead-based paint, water intrusion/mold, and radon.

2.2 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics surface topography. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the site are not considered to represent a significant concern to the subject site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction. There are, however, limits to this interpretation.

2.3 Reliance and General Limitations

This report has been prepared for the exclusive use of Dedeaux and its affiliate, Stockbridge Capital Group, and may not be relied upon by any other person or entity without Ramboll’s prior express written permission.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll’s best professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance.

Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

The scope of work for this assessment did not include an asbestos survey or inspection. According to federal OSHA regulations (29 CFR §1910.1001) and the Model Accreditation Plan (MAP; 40 CFR Part 763, Subpart E, Appendix C), the inspection, testing, evaluation, and/or sampling of suspect asbestos-containing materials must be conducted by an accredited inspector; these activities were not performed as part of this environmental review. Comments in this report regarding the condition of building materials at the site, including presumed or suspect ACM, represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

Other issues considered outside the scope of the ASTM Standard and this review include lead in drinking water, wetlands, polychlorinated biphenyls (PCBs) in building materials, cultural and historic resources, ecological resources, endangered species, fire safety, and high voltage power lines.

3. SITE DESCRIPTION

3.1 Site Setting

Kenyon Plastering leases and operates a building materials supplier facility located at 1514 South Bon View Avenue in Ontario, San Bernardino County, California, (the “site” or the “facility”). The approximately 1.91-acre site is located approximately 1.25 miles from the Ontario International Airport and approximately 35 miles east of Los Angeles, California (Figure 1).

According to the Assessor’s Office, the assessor’s parcel number (APN) for the site is 105-012-104.

The site is developed with an approximately 1,216-square-foot office building located on the eastern portion of the site and an approximately 5,000-square-foot warehouse building located on the western portion of the site. The single-story office building houses administrative operations while the single-story warehouse building houses vehicle and equipment storage operations (Figure 2). Other smaller structures on the site consist of three trailers used for additional storage of miscellaneous items such as plaster mix, tape, and other plaster mixing tools.

The primary site access is via South Bon View Avenue at the eastern site boundary. One cement-paved driveway is present along the northern site boundary. The central area of the site is unpaved and used as a storage area. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

Table 1: Physical Setting and Utility Information		
Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map; Google Earth	Ranges from approximately 897 feet near the western site boundary to 900 feet near the eastern site boundary.
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on-site, with a gentle downward slope to the south-southwest. Regional topography slopes gently downward to the south.
Local Land Use	Visual observations	The facility is located in a mixed industrial land use area. <u>North</u> : Western Pallet Supply facility and warehouse. <u>East</u> : South Bon View Avenue, followed Ontario Montclair School District. <u>South</u> : Bill & Wag’s, Inc towing facility, storage warehouse, and private gas station. <u>West</u> : SBR Express Inc trucking facility. Ramboll did not observe any conditions on adjacent properties that represent a potential contamination concern to the site.
Nearest Residence	Visual observations	Approximately 700 feet west of the site.

Table 1: Physical Setting and Utility Information		
Conditions	Source	Description
Hydrology		
Storm Water Runoff	Visual observations	Percolates into the ground surface at unpaved areas.
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	Cucamonga Creek, located approximately 2.15 miles to the east at its nearest point. The Creek ultimately discharges to the Santa Ana River which leads to the Pacific Ocean.
Flood Plain	FEMA*; Facility personnel	Facility personnel reported no known occurrences of flooding at the site. The site is not located within a 500-year flood zone.
Wetlands	NWI*; Visual observations	There are no federally-designated wetlands on-site. Ramboll did not identify any obvious suspected wetlands at the site during the site visit.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map	Based on the topographic gradient, shallow groundwater likely flows to the south.
Depth to Groundwater	Not readily available	Depth to groundwater was measured between 327 to 337 feet below the top of the casing (toc) ¹ in April 2018 at a property located approximately 0.7 miles north of the site.
On-site Wells	Facility personnel; Visual observations; CalGEM	No production, monitoring, injection, oil, or gas wells on-site.
Nearest Groundwater Supply Wells	Database report	Four federally registered well are present between one mile of the site, located to the east-northeast, northwest, and west-northwest. None are registered as public supply wells. Additionally, approximately 34 state-registered wells that may be used for drinking water are located between one-eighth and one mile of the site in multiple cardinal directions.
Geologic Conditions	NCSS*	Regional soils are somewhat excessively drained gravelly, loamy sand with high infiltration rates.

¹ First 2018 Semi-Annual Soil Vapor, Indoor Air, and Groundwater Monitoring Report: Former Alger Manufacturing Facility, 724 Bon View, Ontario, California, prepared by Geosyntec Consultants, dated August 2018.

Table 1: Physical Setting and Utility Information		
Conditions	Source	Description
Site Utility Information		
Heating and Cooling Equipment	Facility personnel	The office building is cooled by a rooftop packaged air conditioning unit. The warehouse building is not equipped with heating or cooling systems.
Natural Gas Service	Facility personnel	The site is provided with natural gas service.
Use of Fuel Oil for Building Heat	Facility personnel	No known current or former use of fuel oil for building heat.
Foam-based Fire Suppression System	Facility personnel	According to facility personnel, the site is not equipped with a built-in foam-based fire suppression system.
Water Supply	Facility personnel	The facility receives drinking water from the City of Ontario water system.
Sanitary Sewer	Facility personnel	The facility discharges wastewater to the municipal sanitary sewer system.
Septic Systems	Facility personnel	No identified current or former septic systems.
<p>Notes:</p> <p>FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory</p> <p>* - Source was provided in the environmental database report.</p> <p>During the site visit, Ramboll walked or drove by the borders of the properties that are adjacent to the site. Ramboll did not enter the neighboring properties.</p>		

3.2 Current Use of Site

3.2.1 Current Operations

The site is currently used by Kenyon Plastering for equipment storage, including plaster mixes, primers, and finishes, plaster mixing machines, and metal gates, and administrative operations. Kenyon Plastering also maintains a fleet of approximately 4 on-road vehicles and one propane-powered forklift on site. Ancillary operations at the facility include minor vehicle maintenance, such as fluids changes, brake checks, and spot painting (limited to small areas of minor flaking or scratches and without the use of spray booths). There are no hydraulic lifts located at the site. The facility does not maintain any raw materials, other than diesel fuel and propane, and does not conduct any manufacturing or fabrication at the site. Maintenance-related chemicals and janitorial supplies, including lubricants, disinfectants, and sanitizers, are used in small quantities (containers of one gallon and smaller). Wastes stored on site are limited to used oil and general trash. Facility personnel knew of no use of chlorinated solvents by the Company. According to facility personnel, Kenyon Plastering's operations have remained generally consistent during its period of occupancy at the facility.

3.2.2 Waste Management

Hazardous waste generated at the site is limited to used oil, which is classified as hazardous waste in California. The facility was issued a temporary state Hazardous Waste Generator ID number (generator number CAC003162325). The used oil is collected in three 55-gallon drums stored on a spill pallet in the western portion of the warehouse building, awaiting shipment off-site to authorized waste management facilities. Ramboll observed the drum lids were stored in an open position and staining was observed on intact concrete immediately surrounding the used oil drums.

Nonhazardous waste generated at the site consists of general trash. General facility trash is collected in an on-site covered dumpster for removal by the City of Ontario Integrated Waste Department. This dumpster is positioned on pavement on the northeast corner of the site.

3.2.3 Wastewater and Storm Water

Sanitary wastewater, which includes wastewater from bathroom and kitchen areas, is discharged to the municipal sanitary sewer system. The facility does not generate process wastewater. Air compressor condensate is discharged to pavement outside of the warehouse building. Storm water at the site infiltrates into unpaved areas at the site.

3.2.4 Air Emissions

Air emissions from the facility are limited to combustion products from vehicle engines and particulate matter (PM) generated from disturbed dust from operations on unpaved soil.

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in March 2022 to prepare of summary of listings in federal and state agency databases for the site and facilities within applicable radii of the site, as specified by the ASTM standard.² A copy of the environmental database search report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by the third-party database provider (see Appendix B) and also reviewed information available in the California GeoTracker and EnviroStor databases. The site is listed on several environmental databases, as discussed in Table 2.

Table 2: Summary of Environmental Database Listings for the Site	
Summary of Information Contained in Database	Ramboll's Comments
Vern Anthony Gunitite, Inc is listed on the Statewide Environmental Evaluation and Planning System for USTs (SWEEPS UST) for the three USTs on site, two 10,000-gallon diesel fuel USTs and one 6,000-gallon regular unleaded fuel UST. The listing was created and active in 1994. The SWEEPS UST database was last updated in 2005 and is no longer updated or maintained.	All three USTs have been removed and soil confirmation samples revealed no contamination of the subsurface. UST Closure is discussed further in Section 4.4.
Vern Anthony Gunitite, Inc is also listed on the San Bernardino County Permit database as a "Special Generator" permit holder and a "Hazardous Materials Handler 11-25 Employees" permit holder under Facility ID FA0007120. The facility status is listed as inactive, and both permits expired in October 2010.	These listings on databases related to the generation and/or off-site disposal of hazardous waste, by themselves and without indication of a release, are not indicative of a contamination concern and are not further discussed herein.
Thomas G. McDonald is listed on the Resource Conservation and Recovery Act (RCRA) database as a Non-Generator or No Longer Regulated site (NONGEN/NLR). The generator identification number associated with the listing is CAC003137267, a temporary identification number. Based on the listing, the number was created in August 2021 and expired in December 2021. No violations are reported.	This listing is related to recent generation of hazardous waste does not suggest a contamination concern to the site.

² EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

Table 2: Summary of Environmental Database Listings for the Site	
Summary of Information Contained in Database	Ramboll's Comments
<p>Engine Drivetrain Repair Services Inc/EDRS, Inc. is listed on the RCRA NONGEN/NLR, Hazardous Waste Tracking System (HWTS), and Hazardous Waste Information System (HAZNET) databases under generator identification number CAL000368716. The identification number was issued in 2011 and closed in 2021. Based on the listings, the operator generated 0.15 tons of waste in the category "other organic solids" in 2012 and 0.3 tons of waste in the category "unspecified oil-containing waste" in 2018. No violations are reported.</p>	<p>These listings on databases related to the generation and/or off-site disposal of hazardous waste, by themselves and without indication of a release, are not indicative of a contamination concern and are not further discussed herein.</p>
<p>Notes:</p> <p>* The site address (under one or more of the operator names listed above) is also listed on the following databases related to regulatory compliance: Emissions Inventory Data (EMI), Enforcement & Compliance History Information (ECHO), and Facility Index System/Facility Registration System (FINDS). Listings on these databases, by themselves, are not indicative of contamination.</p>	

4.1.2 Database Review for Adjoining Properties

Based on a review of the environmental database search report, Ramboll identified the adjoining properties listed in Table 3 on databases indicative of a potential contamination concern.

Table 3: Contamination-Related Database Listings for Adjoining Properties ¹		
Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
<p>Ontario Drums 1516 South Bon View Avenue (Adjoining to the south)</p>	<p>The property, with under identification number CAN000906085, is listed on the Superfund Enterprise Management System (SEMS) database. The status is listed as not on the National Priorities List (NPL), and shows that the property is classified as a "removal only site (no site assessment work needed)." The start and finish dates of activity at the site are listed as May 19, 2004 and May 21, 2004.</p>	<p>These listings are not indicative of environmental contamination.</p>

Table 3: Contamination-Related Database Listings for Adjoining Properties ¹

Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
<p>Bill and Wags, Inc. 1516 South Bon View Avenue (Adjoining to the south)</p>	<p>Bill and Wags, Inc. is listed on the California Environmental Reporting System (CERS), Resource Conservation and Recovery Act – Small Quantity Generator (RCRA-SQG), HWTS, HAZNET, and San Bernardino County Permit databases. The facility generated shipments of hazardous waste between approximately 2001 and 2005 under the generator identification number CAR000068924. According to the HAZNET and RCRA-SQG databases, wastes generated onsite included tetrachloroethylene (PCE)-containing waste (dates and quantities are not clear); oil/water separation sludge; aqueous solution with total organic residues less than 10%; aqueous solution with 10% or more total organic residues; waste oil and mixed oil; unspecified aqueous solution; hydrocarbon solvents (benzene, hexane, stoddard, etc.); other organic solids; off-specification, aged, or surplus organics; unspecified oil-containing waste; and unspecified organic liquid mixture. No violations were identified in the listings.</p>	<p>Ramboll noted historical generation of PCE-containing wastes at this neighboring property. While the type and quantity of such wastes are not clear, Ramboll notes that the facility operated as a SQG and that these wastes appear to have been generated after 2000, at a time when robust environmental regulations were in place. Therefore, this listing is not an environmental concern to the site.</p>
<p>Western States Wholesale Shop 1512 South Bon View Avenue (Adjoining to the north)</p>	<p>The property is listed on the RCRA-SQG and San Bernardino County Permit databases, as well as the HWTS database.</p> <p>The facility generated shipments of hazardous waste under the generator identification number CAR000069914. The generator number was issued in 2001 and appears to remain in use, although it is listed as expired. According to the database, wastes generated onsite included PCE-containing waste (dates and quantities are not clear); unspecified solvent mixture; other inorganic solid waste; oil/water separation sludge; unspecified oil-containing waste; unspecified organic liquid mixture; other organic solids; liquid with halogenated organic compounds; and aqueous solids with organic residues. No current or historic violations or issues of noncompliance are identified.</p>	<p>Ramboll noted historical generation of PCE-containing wastes at this neighboring property. While the type and quantity of such wastes are not clear, Ramboll notes that the facility operated as a SQG and that these wastes appear to have been generated after 2000, at a time when robust environmental regulations were in place. Therefore, this listing is not an environmental concern to the site.</p>

Table 3: Contamination-Related Database Listings for Adjoining Properties ¹		
Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
<p>Notes:</p> <p>¹ Ramboll's analysis of adjoining properties was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table, as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the site.</p> <p>² The RGA databases are EDR proprietary databases that identify prior versions of the database in which a property was listed.</p>		

4.1.3 Database Review for Other Surrounding Properties

There are several listings in the environmental database report for non-adjoining off-site facilities within applicable ASTM search radii. Ramboll identified the following property on databases indicative of potential concern:³

- Keystone Products (also known as Oakwood Interiors) is listed on databases including EnviroStor, Voluntary Cleanup Plans (VCP), Historical Underground Storage Tanks (HIST UST), and Deed Restrictions (DEED). The property is located at 1333 South Bon View Avenue, approximately one-quarter mile north-northeast of the site (anticipated to be hydrologically upgradient of the site). Based on the information available in the EnviroStor database, the 9.8-acre property was formerly used for a variety of uses including automotive manufacturing, including painting and plating operations. The site was investigated under a Voluntary Cleanup Agreement with the Department of Toxic Substances Control (DTSC) in 2000. No referral to the Water Quality Control Board or other indication of groundwater impacts was identified. A soil cap was installed and a land use covenant was put in place in 2008. The property continues to be inspected annually to ensure compliance with the land use covenant. Based on the closed regulatory status and the lack of indications of groundwater impacts, Ramboll does not consider this property likely to have significantly impacted the subsurface at the site.

The database report indicates that poor or inadequate address information was available for several properties located in the vicinity of the site; therefore, these properties could not be readily mapped by the third-party provider. Because the location of these properties with respect to the site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the site from these properties. It was beyond the scope of this review to accurately locate each of the unmapped properties identified by the third-party provider; however, Ramboll reviewed the list of unmapped properties and verified that none appeared to be adjacent to the site.

³ In its evaluation, Ramboll considered only non-adjoining properties listed on databases indicative of contamination, with open status, located potentially upgradient of the site to represent a potential risk for contamination to the site (as the issuance of regulatory closure suggests that impacts to the site from the noted off-site property are unlikely).

4.2 Historical Uses of the Site and Adjacent Properties

4.2.1 Past Uses of the Site

The site was developed as farmland with structures since at least 1938, and occupants during that time appear to have included private individuals for residential and agricultural purposes. Agricultural operations ceased and industrial operations had begun at the site by 1985. Vern Anthony Gunite operated at the site from the 1980s until 2012 for construction business. From 2013 to 2021, Engine Drivetrain Repair Services, Inc., (EDRS) operated at the site for autobody repair.

Since at least 1976, the site owners have included Francisco B. Orquin, Anthony S. Lopez Sr. and E.L. Wagner, Vernon L. Anthony Sr. and Beatrice Anthony, and Transition Properties LP. The current owners, Thomas G. McDonald & Eileen Callanan, have owned the site since 2016. Kenyon Plastering has leased the site since approximately 2018 for storage of plaster and concrete and an administrative headquarters.

A summary of Ramboll’s key observations from the available historical sources is presented in Table 4.

Table 4: Summary of Key Observations from Historical Sources for the Site	
Historical Source	Key Observations Regarding Site History
Aerial Photographs (1938, 1946, 1948, 1953, 1966, 1975, 1985, 1989, 1990, 1994, 2002, 2006, 2009, 2012, and 2016) Satellite Imagery ¹ (1985 to 2021)	The site appears as farmland with structures (possibly associated with a residence and/or agricultural usage) on aerial photographs from 1938 until 1975. The 1985 and subsequent photographs show the site in its approximate present configuration, with one building present on the eastern portion of the site and one building on the western portion of the site. Outdoor storage is visible in other areas of the site, but precise usage is not clear based on the photographs. What appears to be an AST is visible from the 1985 photograph and onward. No concerns are noted.
Topographic Maps (1897 to 2018)	No development is depicted on the maps until 1933. The 1933 map depicts a structure on the eastern portion of the site and remains unchanged until the 1953 map. On the 1953 and subsequent maps, a second structure is depicted on the eastern portion of the site. A third structure is visible on the eastern portion of the site in the 1981 map. No concerns are noted.
City Directory Abstracts (1934, 1940, 1951, 1956, 1960, 1964, 1970, 1975, 1980, 1985, 1990, 1994, 1995, 1999, 2003, 2004, 2008, 2009, 2014, and 2017)	The occupants of the site address are listed as: Lampley E E (1934 and 1940), Nation Perry W (1951 and 1956), Orquin Estaban (1960, 1964, 1970, and 1975), Patrick John & Associates (1985, 1990, and 1994), and Anthony V Gunite Inc (1980-2009), and EDRS Inc (2014 and 2017).
Tax assessor website	Tax assessor records available online indicate that Orquin, Francisco B owned the site until 1976. Lopez, Anthony S. Sr. and E. L. Wagner owned the site from 1976 to 1979. Anthony, Vernon L. Sr. and Beatrice owned the site from 1979 to 2014. Transition Properties LP owned the site from 2014 to 2016. McDonald, Thomas G & Callanan, Eileen acquired the site in 2016. No liens are identified for the site.

Table 4: Summary of Key Observations from Historical Sources for the Site	
Historical Source	Key Observations Regarding Site History
City of Ontario Building Department	The Building Department files indicate that a silo was installed in 1981 by former owner Vernon Anthony for the purpose of holding cement.
<p>Notes:</p> <p>¹ In addition to aerial photographs provided by the third-party provider, Ramboll viewed historical satellite imagery provided via Google Earth. Printed copies were not obtained, and imagery dates were not independently verified.</p> <p>The third-party provider reported that Sanborn fire insurance map coverage is not available for the site.</p>	

4.2.2 Past Uses of Adjacent Properties

The properties in the vicinity of the site were primarily used for agricultural purposes since at least the 1930s through the 1950s. The property to the east was occupied with a school from the 1960s through the 2010s. Around 1975, the properties to the north and south were redeveloped for industrial operations. The property to the west was developed for industrial/warehousing purposes around 2002. Ramboll did not observe obvious indications of concern on the historical sources reviewed.

4.3 Review of Local and State Agency Information

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the site. An overview of the findings of this review is presented in Table 5.

Table 5: Local Agency Information for the Site	
Agency Contacted / Document Reviewed	Information Obtained
San Bernardino County Tax Assessor	According to the Assessor's website, the APN for the site is 1050121040000. The owner of the parcel is listed as Thomas G Mc Donald & Eileen Callanan since May 4, 2016.

Table 5: Local Agency Information for the Site

Agency Contacted / Document Reviewed	Information Obtained
<p>San Bernardino County Fire Department - Fire Protection District – Hazardous Materials Division (County Fire Department)</p>	<p>Ramboll submitted a records request to the County Fire Department requesting information pertaining to USTs, hazardous materials, and hazardous waste at 1514 South Bon View Avenue. Below is a summary of key records included in the response provided:</p> <ul style="list-style-type: none"> • Hazardous Waste Generator Inspection and Underground Storage Tank Inspection reports for former site occupant Vern Anthony Gunite from 1992. Violations include improper labeling and administrative violations. USTs were described as “not in use at this time”. • Hazardous Materials Business Plan for former site occupant Vern Anthony Gunite from 1993 listing 3 USTs and generation of antifreeze and waste motor oil. • UST permits dated 1992 to 1997 and Special Generator and Special Handler permits dated 1992 through 2010 for former site occupant Vern Anthony Gunite. • Tank Closure Report for the removal of three USTs (two 10,000-gallon diesel USTs and one 6,000-gallon gasoline UST) on behalf of former site occupant Vern Anthony Gunite in 1997. Soil confirmation samples were taken and were tested for aromatic volatile compounds and total petroleum hydrocarbons. This matter is further discussed in Section 4.4. • Hazardous Waste Generator and Hazardous Materials Handler Inspection Reports from 2008 and 2012 for former site occupant Vern Anthony Gunite. Violations in both inspections included hazardous waste accumulation/storage, labeling, recordkeeping, and administrative violations. However, no spills or releases were noted. • Closure Facility Information report stating that former site occupant Vern Anthony Gunite facility permanently closed in 2012. • Small Quantity Generator and Hazardous Materials 4-10 Chemicals permits for former site occupant Engine Drivetrain Repair Services, Inc (EDRS) dated 2013 through 2016. • Hazardous Waste Generator and Hazardous Materials Handler Inspection Reports from 2012 and 2016 for EDRS. Violations included hazardous materials management, labeling, and administrative violations. However, no spills or releases were noted. • Certified Unified Program Agency (CUPA) Compliance Inspection reports from 2017 and 2020 for EDRS. Violations included hazardous materials management and administrative violations. However, no spills or releases were noted. • Closure Facility Information report stating that EDRS facility permanently closed in June of 2021.
<p>City of Ontario Fire Department (City Fire Department)</p>	<p>Ramboll requested information from the City Fire Department, but personnel from the City of Ontario Fire Department reported having no information pertaining to the site address and any records concerning the storage of hazardous materials and hazardous waste, hazardous spills and underground storage tanks would be maintained by the County Fire Department.</p>

Table 5: Local Agency Information for the Site	
Agency Contacted / Document Reviewed	Information Obtained
City of Ontario Building Department	<p>Ramboll submitted a records request to the City of Ontario Building Department requesting information pertaining to building permits and certificates of occupancy at 1514 South Bon View Avenue. Below is a summary of the response provided:</p> <ul style="list-style-type: none"> • Building permit to construct a poultry house and aluminum roof for chicken cages in 1953. • Building permit to construct a bathroom addition to the house in 1970. • Building permit for electrical upgrades in 1978. • Building permits for electrical and plumbing upgrades in 1980. • Building permit to construct a cement silo in 1981 by Vern Anthony. • A business license application for American Touchstone Construction dated 1987. A notice of the business license approval being on hold dated 1987. • Building permits for electrical upgrades in 2002.

4.4 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with facility personnel, prior UST closure has been conducted at the site, as summarized below. Pertinent historical and site-related information contained in the prior report has been incorporated into other sections of this report.

- **1997 UST Closure.** Deep, Inc. prepared a Tank Removal Closure Report on behalf of Vern Anthony Guinte dated December 1, 1997, and submitted the report to the County Fire Department. Three USTs (two 10,000-gallon diesel USTs and one 6,000-gallon gasoline UST) were excavated and removed in 1998. Based on the figure provided in the closure report, the USTs and a dispenser island were located in the northern portion of the site, between the office building and the warehouse. The USTs were removed on November 6, 1997; the condition of the USTs at the time of removal were not described. Two soil confirmation samples were taken from a depth of two feet below the bottom of each UST; no samples were collected from the dispenser island because it was located directly above the USTs. All soil samples were analyzed for benzene, toluene, ethylbenzene, total xylenes (BTEX) and methyl tertiary butyl ether (MTBE) using USEPA Method 8020 and total petroleum hydrocarbons (TPH) using USEPA Method 8015(M). None of the analytes were detected in any of the samples above their laboratory detection limits (0.1 mg/kg for benzene, 0.1 mg/kg for toluene, 0.1 mg/kg for ethylbenzene, 0.2 mg/kg for total xylenes, 0.3 mg/kg for MTBE, and 10 mg/kg for TPH). Based on these results, the County Fire Department issued a No Further Investigation letter on December 8, 1997. The letter states that “further investigation is not warranted at this time,” but also notes that additional investigation could be required if site conditions change.

4.5 User-Provided Information

Ramboll provided Dedeaux with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, activity use limitations (AULs), specialized knowledge of the property, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. The user did not provide any information that was not otherwise obtained and reviewed by Ramboll. .

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Ramboll conducted a visit to the site on March 15, 2022. During the site visit, observations of both the interior of the buildings and exterior portions of the site were made to evaluate if any RECs, as defined in Chapter 7, are present. Ramboll did not observe the roof of the buildings.

5.2 General Site Setting and Observations

Ramboll made observations concerning all of the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in Table 6. Additional information regarding observed and historical items is provided in the sections following the table.

Table 6: Summary of Site Reconnaissance Observations		
ASTM Section	Issue	Observation
Interior and Exterior Issues		
9.4.2.1	Current use(s) of the site	See Section 3.2
9.4.2.2	Past use(s) of the site	See Section 4.2
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the property in connection with identified present or past uses	Present (see Section 5.2.1)
9.4.2.4	Storage tanks: Underground storage tanks (fill ports, vent pipes, manholes) Aboveground storage tanks	(see Sections 5.2.2 and 5.2.3) Formerly Present Present
9.4.2.5	Odors (strong, pungent or noxious)	Absent
9.4.2.6	Pools of liquid, standing surface water or sumps	Absent
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes)	Present (see Section 5.2.1)
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses)	Absent
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products	Absent
9.4.2.10	Polychlorinated biphenyls (PCBs) Electrical equipment on-site (e.g., transformers, capacitors) Electrical equipment known or likely to contain PCBs Hydraulic equipment on-site (e.g., elevators, truck dock lifts) Hydraulic equipment known or likely to contain PCBs	(see Section 5.2.4) Present Absent Absent Absent

Table 6: Summary of Site Reconnaissance Observations		
ASTM Section	Issue	Observation
Interior Issues		
9.4.3.1	Heating/cooling systems	Present (see Table 1)
9.4.3.2	Stains or corrosion on interior floors, walls or ceilings (except for staining from water)	Present (see Section 5.2.5)
9.4.3.3	Floor drains and interior sumps	Absent
Exterior Issues		
9.4.4.1	Pits, ponds or lagoons on property or adjacent sites	Absent
9.4.4.2	Stained soil or pavement	Present (see Section 5.2.6)
9.4.4.3	Stressed vegetation (from other than insufficient water)	Absent
9.4.4.4	On-site solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal	Absent
9.4.4.5	Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the site	Present (see Section 3.2.3)
9.4.4.6	Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)	Absent
9.4.4.7	Septic systems or cesspools	Absent
Non-Scope Considerations		
N/A	Asbestos Containing Materials	(see Section 5.2.7)
N/A	Lead-Based Paint	(see Section 5.2.8)
N/A	Water Intrusion	(see Section 5.2.9)
N/A	Radon	(see Section 5.2.10)

Table 6: Summary of Site Reconnaissance Observations		
ASTM Section	Issue	Observation
<p>Notes:</p> <p>Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4.</p> <p>See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section.</p> <p>Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered.</p> <p>N/A – Not applicable.</p>		

5.2.1 Hazardous Substances and Petroleum Products

The primary chemicals used at the site include stucco acrylic-based primer, stucco acrylic finish, paints, diesel oil, and motor oil. Chemical storage at the time of the site visit included:

- Three 55-gallon used oil drums located on secondary containment in the warehouse
- Three 70-gallon new diesel and motor oil tanks in secondary containment in the warehouse and in 5-gallon pails on a wooden pallet outside of the warehouse
- 5-gallon pails of acrylic-based primers, finishers, and paints inside storage trailers and stacked outdoors
- Approximately six 8-gallon propane tanks were stored next to a storage trailer on unpaved ground. These tanks are not viewed as a potential source of environmental contamination given the physical properties of the materials stored in the AST (compressed gases/liquids that exist as gases under typical atmospheric conditions)
- Wastes are collected in a dumpster (general waste and cardboard) positioned on pavement north of the office building and in the used oil drums located in the warehouse building.

Facility personnel knew of no significant spills or releases of materials onsite. Staining is further discussed in Section 5.2.5.

5.2.2 Underground Storage Tanks

A total of three fuel USTs were formerly located at the site and were removed in 1997 under oversight by the County Fire Department. Information related to the closure activities is provided in Section 4.4. The site is not listed on the Leaking Underground Storage Tank (LUST) database. Further information regarding these closure activities is included in Section 4.4.

5.2.3 Aboveground Storage Tanks

An approximately 10,000-gallon abandoned silo is located on the northwest corner of the site on a concrete pad. Facility personnel reported that it has not been used by any of the site occupants during the current ownership and has remained empty. According to a file found in the City of Ontario Building Department records, the silo was installed in 1981 by former owner, Vernon Anthony, for use as a cement silo. Facility personnel knew of no leaks or spills relating to the AST, and Ramboll did not observe evidence of staining or past releases at the time of the site visit.

5.2.4 Polychlorinated Biphenyls (PCBs)

Facility personnel knew of no on-site equipment that is known to contain PCBs. One pad-mounted transformer is present on the site and is owned by Southern California Edison. The unit is not labeled as to its PCB content. Ramboll saw no indication of leaks or releases from electrical equipment observed during the site visit. Because the unit was manufactured in 2012, after the 1979 federal ban on the manufacture of PCBs, it is unlikely that the unit contains PCBs.

5.2.5 Interior Stains or Corrosion

Ramboll observed numerous stains between several inches in diameter and two feet in diameter on both unpaved (west of the warehouse) and paved (east of the warehouse) surfaces where former site occupants had historically preformed auto repairs. Multiple oily stains of similar size were also observed on the interior paved floor of the warehouse around the new oil and used oil tanks. The oil stain around the used oil drums and new oil tanks extended approximately one foot around the secondary containment. The stain on the exterior pavement near the transformer and air compressor was approximately two feet in radius. Concrete floors in the vicinity of the staining in the warehouse appeared to be in good condition, with no visual evidence of cracking. The stains were limited in areal extent, the underlying pavement/flooring appeared to be intact, and no stains appeared to reach floor drains or storm water drains.

5.2.6 Stained Soil or Pavement

In exterior areas, Ramboll observed an area of staining from an unknown substance on unpaved surface on the western portion of the site that was formerly used for auto maintenance, underneath metal gates stored in the area. Portions of the stain were covered but approximated 12-square feet in surface area. Based on the relatively limited size of the staining, the fact that the nature of the staining was unclear (and could have been caused by water), and that a regulatory agency would be unlikely to require additional action with respect to this area, Ramboll considers this matter to represent a *de minimis* condition.

5.2.7 Asbestos Containing Materials (ACMs)

Although an asbestos inspection and sampling of suspect building materials in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, were beyond our scope of work, Ramboll made limited visual observations⁴ of representative building materials in those areas accessed during the site tour to identify readily apparent PACM and suspect ACM. OSHA's definition of PACM is limited to thermal system insulation (TSI) and surfacing materials present in buildings constructed before 1981. Vinyl floor tiles are not considered PACM, but OSHA nonetheless requires that asphalt and vinyl floor tiles present in buildings constructed before 1981 be treated similarly to PACM. The term suspect ACM is not defined by OSHA but can include numerous building materials manufactured using asbestos currently or in the past (e.g., ceiling tiles, roofing materials, joint compound), as well as TSI, surfacing materials, and flooring materials installed after 1981.

Because the buildings at the site were potentially constructed prior to 1981 and a comprehensive asbestos survey has not been conducted, TSI, surfacing materials and vinyl/asphalt flooring must be treated as PACM. During the site visit, Ramboll did not observe any materials that would be considered PACM. In addition, Ramboll observed other materials potentially considered suspect ACM

⁴ Ramboll did not observe all building materials or formally survey the facility to determine the presence and condition of PACM and suspect ACM.

(e.g., ceiling tile in the office building, transite panels lining the warehouse building). Also, based on the building age, the roofing materials may be considered suspect ACM.

There are no regulatory requirements to remove PACM, suspect ACM and known ACM or to confirm whether building materials contain asbestos, unless the materials are damaged and have the potential to release fibers or the materials have the potential to be disturbed during renovation or demolition activities. Ramboll did not observe any obviously damaged building materials. OSHA requires building owners and employers to identify locations of PACM and confirmed ACM at the facility and comply with certain employee notification, training, labeling and recordkeeping requirements (29 CFR §1910.1001(j)) and housekeeping programs (1910.1001(k)).

5.2.8 Lead-Based Paint

Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the of the eastern office building before 1938, it is possible that lead-based paint was used historically on former facility structures. Facility personnel knew of no lead-based paint on structures at the facility. Ramboll observed the paint to be in good condition.

5.2.9 Water Intrusion

Ramboll did not perform a mold survey at the site. According to facility personnel, the facility has not experienced problems with excessive mold growth or water intrusion.

5.2.10 Radon

Based on information included in the EDR report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 pCi/L. The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, at 7 locations surveyed in the same zip code as the site, radon levels did not exceed 4 pCi/L at any of the properties. A USEPA survey conducted in San Bernardino County found that the average radon level of a first-floor room at 18 properties was 0.678 pCi/L.

6. FINDINGS, OPINION, AND CONCLUSIONS

Ramboll performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the site located at 1514 South Bon View Avenue in Ontario, California in March 2022. The objective of the ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Chapter 7 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 6.2.

6.1 Findings, Opinions, and Conclusions

6.1.1 Recognized Environmental Conditions

Ramboll has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the site located at 1514 South Bon View Avenue in Ontario, California. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

6.1.2 Other Findings

The following additional findings related to potential contamination concerns were identified:

- **1997 UST Closure.** Deep, Inc. prepared a Tank Removal Closure Report on behalf of Vern Anthony Gunite dated December 1, 1997, and submitted the report to the San Bernardino County Fire Department. Three USTs (two 10,000-gallon diesel USTs and one 6,000-gallon gasoline UST) were excavated and removed in 1998. Based on the figure provided in the closure report, the USTs and a dispenser island were located in the northern portion of the site, between the office building and the warehouse. The USTs were removed on November 6, 1997; the condition of the USTs at the time of removal were not described. Two soil confirmation samples were taken from a depth of two feet below the bottom of each UST; no samples were collected from the dispenser island because it was located directly above the USTs. All soil samples were analyzed for benzene, toluene, ethylbenzene, total xylenes (BTEX) and methyl tertiary butyl ether (MTBE) using USEPA Method 8020 and total petroleum hydrocarbons (TPH) using USEPA Method 8015(M). None of the analytes were detected in any of the samples. Based on these results, the County Fire Department issued a No Further Investigation letter on December 8, 1997. The letter states that “further investigation is not warranted at this time,” but also notes that additional investigation could be required if site conditions change. Because Ramboll’s review did not identify documentation of a current or former release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC. Based on the results of the soil sampling indicating no impacts and the closed regulatory status, Ramboll, characterizes this matter as an Other Finding. There does not appear to be any current regulatory requirement to re-evaluate the area, nor was regulatory scrutiny of the site by local agencies identified during this assessment.
- **Past Light Industrial Operations at the Site.** The site was redeveloped for industrial uses around 1985 and was used by former site occupants as an autobody repair shop (EDRS, Inc.) and for a general construction contractor (Vern Anthony Gunite, Inc.). There is no readily available information as to the specific use of chemicals during this time period, but there is no indication that these operations were chemically intensive or involved the use of significant amounts of petroleum products or other hazardous substances. The site is not listed on any environmental databases indicative of a release or contamination. Also, Ramboll notes that most industrial site operations were conducted during the mid to late 1980s and later, a time period when robust environmental regulations were not generally in place regarding chemical handling and waste

management. While Ramboll cannot rule out the possibility that inadvertent spills or releases of chemicals or petroleum products have occurred in the past, no specific contamination concerns were identified (e.g., obvious evidence of contamination, listings indicating past chlorinated solvent use in significant quantities, known releases), and thus this matter is not considered a REC. In addition, the Company has leased the facility for a short period of time and its operations are not chemically intensive and are unlikely to have caused significant contamination, if any. As such, Ramboll does not consider this finding a REC.

6.1.3 *De Minimis* Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll identified the following *de minimis* conditions related to the site:

- **Pavement and Floor Staining.** Ramboll observed multiple areas of exterior pavement and interior flooring where staining was apparent. The oil stain around the used oil drums and new oil tanks extended approximately one foot around the secondary containment. The stain on the exterior pavement near the transformer and air compressor was approximately two feet in radius. The stains were limited in areal extent, the underlying pavement/flooring appeared to be intact, and no stains appeared to reach floor drains or storm water drains. As such, Ramboll considers this matter to represent a *de minimis* condition.
- **Staining on Unpaved Ground.** Ramboll observed an area of darkened staining from an unknown substance on unpaved surface on the western portion of the site, in an area formerly associated with auto repair operations, underneath metal gates stored in the area. Portions of the stain were covered, obscuring visibility, but the area was approximately three to four feet in surface diameter. While the nature of the stain was not clear, the previous use of the western portion of the site was as an autobody repair shop. However, Ramboll considers this minor staining matter unlikely to be the subject of additional investigation if brought to the attention of a regulatory authority and considers this matter to represent a *de minimis* condition.
- **Past Use of Site for Residential Purposes and Agricultural Orchards.** The site was previously used for agricultural purposes, including for orchards, from at least 1938 until 1946. During this time period, a few scattered residences and associated outbuildings were present on the site. The residences and outbuildings may have used aboveground or underground fuel oil tanks for heating purposes and for farm vehicle fueling. Also, past orchard operations may have involved the application of arsenical and lead-based pesticides commonly used on orchards in the first half of the 20th century, or other organic pesticides commonly used on orchards thereafter. Ramboll was not provided with any specific information regarding historical agricultural or residential chemicals use at the site. It is possible that residual concentrations of agricultural or residential chemicals may be present in the subsurface. If residual concentrations of these chemicals are present, or if fuel tanks were used for heating or farm vehicle fueling, it is unlikely that they would be the subject of regulatory scrutiny in the context of a non-residential land use scenario. As such, Ramboll characterizes this finding as a *de minimis* condition, provided the site use remains industrial or commercial and the site is not re-zoned for residential use.

6.1.4 Non-Scope Considerations

Ramboll identified the following findings that relate to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials.** The building was constructed before asbestos was generally phased out of use in most building material applications in the 1980s. The current site buildings were potentially constructed prior to 1981, and a formal asbestos survey has not been conducted at the facility. Ramboll conducted limited visual observations of limited areas of the buildings at the site and noted PACM (e.g., ceiling tile in the office building, transite panels lining the warehouse building) and other materials that may contain asbestos (e.g. ceiling tiles, roofing materials). If any demolition or remodeling activities are conducted at the site, suspect materials should be sampled and if found to contain asbestos, managed appropriately.
- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site. According to facility personnel, the facility has not experienced problems with excessive mold growth or water intrusion.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the of the eastern office building before 1938, it is possible that lead-based paint was used historically on former facility structures. Facility personnel knew of no lead-based paint on structures at the facility. Ramboll observed the paint to be in good condition.
- **Radon.** Based on information included in the EDR report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 pCi/L. The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, at 7 locations surveyed in the same zip code as the site, radon levels did not exceed 4 pCi/L at any of the properties. A USEPA survey conducted in San Bernardino County found that the average radon level of a first-floor room at 18 properties was 0.678 pCi/L.

6.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Facility personnel did not have current contact information for representatives of former site owners/occupants. Ramboll made reasonable attempts to obtain such information, but it was not otherwise readily available. Thus, Ramboll was unable to interview former owners/occupants about historical operations and site conditions. However, Ramboll conducted interviews with representatives of the owner, Thomas G Mc Donald & Eileen Callanan, with tenure at the site dating back to 2021 and reviewed other historical sources regarding former uses of the site.

- During the site visit, Ramboll did not observe the roof of the buildings due to access and safety constraints.
- Historical information, such as aerial photographs, was not readily available to characterize the site from the present back to the site's obvious first developed use or 1938, whichever is earlier. The earliest readily available historical source that would indicate specific site uses is an aerial photograph dated 1938, which shows that at least a portion of the site was already developed for agricultural uses. ASTM defines agricultural site use as a "developed" site use.
- A specific search for environmental liens and activity and use limitations was not included in the scope of work for this ESA. However, based on information obtained from the User Questionnaire and the Environmental Data Resources (EDR) Radius Map Report, no evidence of environmental liens recorded against the site was found. In addition, according to the EDR provided information for the site and other publicly available environmental databases including GeoTracker and EnviroStor, no evidence of institutional controls, land use restrictions and/or engineering control requirements recorded against the site were reported.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps.

7. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

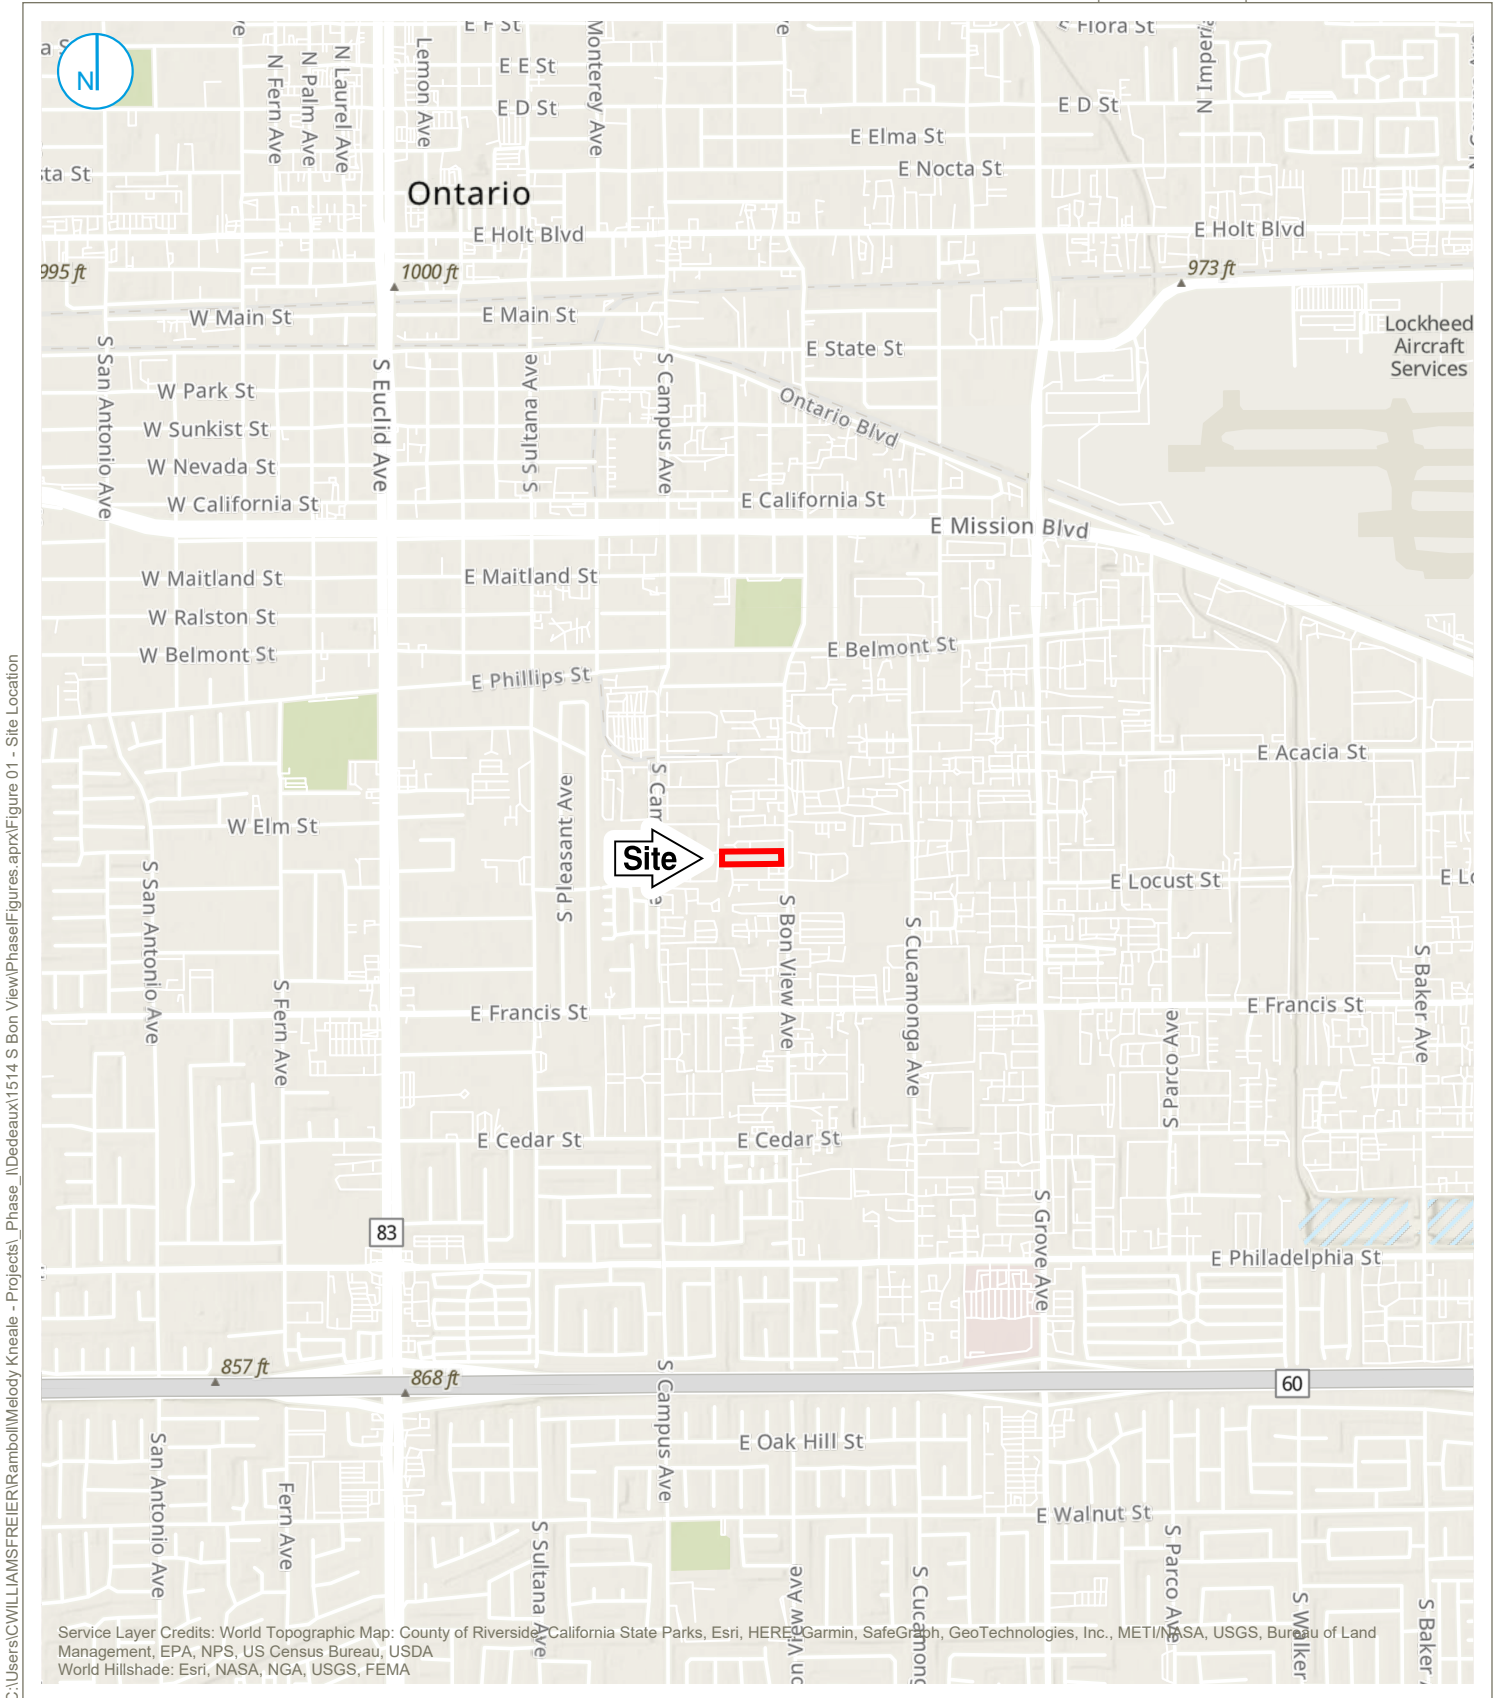

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap/Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

APPENDIX B ENVIRONMENTAL DATABASE REPORT

NOTES ON ENVIRONMENTAL DATABASE REPORT

The third-party provider conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology “approximate minimum search distance” to refer to the radii searched in the environmental database report.

The third-party provider conducted the search of environmental databases in March 2022. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains

EXECUTIVE SUMMARY

data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 01/25/2022 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 11 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/25/2021 has revealed that there are 8 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 4 SWEEPS UST sites within approximately 0.25 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 24 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.25 miles of the target property.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART)
provides California with information on hazardous waste shipments for
generators, transporters, and treatment, storage, and disposal
facilities.

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated
Compliance Information System and provides a database that, when
complete, will contain integrated Enforcement and Compliance
information across most of EPA's programs. The vision for ICIS is to
replace EPA's independent databases that contain Enforcement data with
a single repository for that information. Currently, ICIS contains all
Federal Administrative and Judicial enforcement actions. This
information is maintained in ICIS by EPA in the Regional offices and
it Headquarters. A future release of ICIS will replace the Permit

Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Violation Description: Failure to have a properly qualified service technician test leak detection equipment as required every 12 months (vapor, pressure, hydrostatic (VPH) system, sensors, line-leak detectors (LLD), automatic tank gauge (ATG), etc.).

Violation Notes: Returned to compliance on 10/21/2016. UPDATE: THE FAILED SENSOR WAS REPLACED WHILE ON-SITE TO VERIFY OPERABILITY. SENSOR DID NOT REGISTER AN ALARM AT THE PANEL PER REVIEW OF THE ALARM HISTORY; RE-TEST REVEALED THAT THE SENSOR WAS DEFECTIVE. THE NEW SENSOR WAS CERTIFIED DURING THE RE-TEST. -JK OBSERVATIONS: BASED ON REVIEWING THE ALARM HISTORY PRINTOUT FROM 9/15/2016, WHICH WAS ATTACHED TO THE DO REPORT, THE L10 SENSOR FOR THE WASTE OIL SUMP WAS NOT TESTED DURING THE MONITORING TEST ON 7/5/2016. THE LAST ALARM SHOWN FOR THE SENSOR WAS 7/7/2015, WHICH WAS THE DATE OF LAST YEAR S MONITORING CERTIFICATION TEST. COMPLIANCE REQUIREMENT: SCHEDULE WITH OUR DEPARTMENT TO CONDUCT A WITNESSED TEST OF THE L10 SENSOR IN THE WASTE OIL SUMP. IF THERE IS PROOF THAT THE SENSOR WAS TESTED DURING THE TESTING CONDUCTED ON 7/5/2016, THEN DOCUMENTATION MUST BE PROVIDED TO OUR DEPARTMENT BY 10/10/2016.

Violation Date: 08-15-2019
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11

Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violation Notes: Returned to compliance on 09/12/2019. OBSERVATION: Paint booth filters are being managed as solid waste and a hazardous waste determination has not been made. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that the [WASTE] has been properly characterized to determine if it is a hazardous waste. If determined to be hazardous submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage it in the future.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 08/06/2020. OBSERVATION: The Overfill Prevention Equipment inspection should have been conducted beginning in October 2018. There was no record of the Overfill Prevention Equipment testing having been done in 2018-2019. CORRECTIVE ACTION: The Overfill Prevention Equipment inspection was conducted on 08/06/2020. Violation abated.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Evaluation:
Eval General Type: Case Development Inspection
Eval Date: 08-12-2010
Violations Found: No
Eval Type: Industrial Storm Water Enforcement Follow-up
Eval Notes: 2009-2010 Annual Report Notice of 1st Non-Compliance certified mail was returned as undeliverable. Staff visited the site and confirmed that the business was still in operation. Staff delivered the certified mail to the front desk, and obtained a signature for the certified mail return receipt.

Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS,

Eval General Type: Case Development Inspection
Eval Date: 08-24-2009
Violations Found: No
Eval Type: Industrial Storm Water Enforcement Follow-up
Eval Notes: Arrived at 1303: Staff's inspection confirmed that the site is still in business. Staff hand delivered the certified mail to administrative staff for delivery to the appropriate person. Will await for the hard copy to be forwarded from State Board, and log the date in as 8/3/09 for AR submission. 8/25/09: Staff from site forwarded the proof of mailing to Regional Board staff, indicating that the A.R. was delivered to State Board on 8/3/09.

Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-11-2015
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: The facility collects a water sample at a location that does not appear to pick-up stormwater from Buildings 1 and 6. The area between Buildings 1 and 6 contained several wood pallets with corresponding wood debris. The building across the entry way into the complex are leased to two other companies that operate primarily inside their buildings. This area should be re-inspected after the SWPPP is uploaded into SMARTs to insure that the facility sampling point is located to adequately sample discharges from these areas. When the process areas are in operation, Rigo indicated that the outside area around the process is swept 2-3 times per day.

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 10/20/2020. OBSERVATION: The 180 day hazardous waste accumulation time limit has been exceeded for the waste oil and filters found in the maintenance shop. CORRECTIVE ACTION: Dispose of waste oil and filters using a licensed waste hauler and submit a copy of the hazardous waste manifest.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Eval Notes: SWPPP dated 2013 was available for review. The facility is in the process of re-certifying their site themselves and updating the SWPPP. They have already set-up their account and just waiting on completion of the site map and SWPPP update before recertifying. Shift was ending and in process of cleaning up at the end of the shift when inspected. Observed sweeper running in the back area of the facility. Site looked relatively clean.

Violation Notes: the dates, concentrations, amounts, and types of waste treated; and (3) written operating instructions. Returned to compliance on 07/31/2018. OBSERVATION: Records for conducting hazardous waste treatment were not available. CORRECTIVE ACTION: Begin maintaining records for hazardous waste treatment and ensure that they are kept onsite for three years. Submit copies of these records to the CUPA.

Violation Division: San Bernardino County Fire Department
Violation Program: CE
Violation Source: CERS,

Site ID: 57890
Site Name: PRC Composites LLC
Violation Date: 07-25-2018
Citation: HSC 6.5 25201.5(d)(7) - California Health and Safety Code, Chapter 6.5, Section(s) 25201.5(d)(7)

Violation Description: Failure to identify the following information in CERS: all generator information, all Conditionally Exempt treatment units, accurately list number of tanks and containers in each unit, and plot plan/map that shows unit locations are properly identified.

Violation Notes: Returned to compliance on 07/25/2018. OBSERVATION: Owner/Operator failed treatment unit information in CERS. CORRECTIVE ACTION: Submit treatment unit information in CERS.

Violation Division: San Bernardino County Fire Department
Violation Program: CE
Violation Source: CERS,

Site ID: 57890
Site Name: PRC Composites LLC
Violation Date: 07-25-2018
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12

Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.

Violation Notes: Returned to compliance on 09/26/2018. OBSERVATION: The generator generates more than 100 kg of RCRA hazardous waste per month and has not obtained a Federal EPA ID number to manage hazardous waste. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that you have obtained a Federal EPA ID number.

Violation Division: San Bernardino County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 57890
Site Name: PRC Composites LLC
Violation Date: 07-25-2018
Citation: HSC 6.5 25201.5(d)(7) - California Health and Safety Code, Chapter 6.5, Section(s) 25201.5(d)(7)

Violation Description: Failure to submit the signature page for the onsite treatment notification.

Violation Notes: Returned to compliance on 07/25/2018. OBSERVATION: Notification information for treating HW onsite has not been submitted to the CERS. No person may treat HW onsite without submitting notification information sixty (60) days prior to beginning the first treatment of waste. CORRECTIVE ACTION: Immediately submit the required notification information to the CERS for review by the CUPA.

Environmental Interest/Information System:
OSHA ESTABLISHMENT
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

clearly marked with the words "Used Oil", 9) The owner or operator of the business location where the material is located has a business plan that meets the following minimal requirements: emergency response plans and procedures, which specifically address the material or that meets the emergency response and contingency requirements which are applicable to generators of hazardous waste, and 10) The material shall be stored and handled in accordance with all local ordinances and codes.

Violation Notes: Returned to compliance on 09/23/2013.
Violation Division: San Bernardino County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 384636
Site Name: ALLIED MECHANICAL
Violation Date: 02-19-2020
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 03/11/2020. OBSERVATION: Three of the four waste coolant tanks were found missing hazardous waste labels. One tank was found with a non-hazardous waste label. All hazardous waste tanks must have proper hazardous waste labeling. CORRECTIVE ACTION: Submit a signed certificate of compliance to indicate the tanks have been properly labeled.

Violation Division: San Bernardino County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 384636
Site Name: ALLIED MECHANICAL
Violation Date: 02-19-2020
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: Failure to implement the SPCC Plan.

Violation Notes: Returned to compliance on 03/11/2020. OBSERVATION: The SPCC plan was prepared but wasn't implemented. CORRECTIVE ACTION: Implement the SPCC Plan. Submit a signed statement indicating that the SPCC plan has been properly implemented to include recording updates, training, and inspections.

Violation Division: San Bernardino County Fire Department
Violation Program: APSA

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 11/06/2006
Comments: The objective of the SI is to further assess the site for the possible presence of elevated concentrations of various chemical compounds at the site. This SI report describes site investigation activities performed to provide additional subsurface information to supplement previous environmental investigations performed at the Site. Based upon the results of the site investigation, the nature and extent of the contaminants have been delineated such that potential risks to human health and the environment can be conservatively assessed. DTSC's previous comments regarding the SI have been adequately addressed. Therefore, DTSC hereby approves the SI.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HWP:

EPA ID: CAL000827758
Name: LIGHTING RESOURCES LLC
Address: 805 E FRANCIS ST
Cleanup Status: CLOSED
Latitude: 34.04174
Longitude: -117.6393
Facility Type: Historical - Non-Operating
Facility Size: Not reported
Supervisor: Not reported
Site Code: 400467
Senate District: 20
Assembly District: 52
Public Information Officer: Not reported
Commercial Offsite Facility Types: Not reported
Quarterly Update: Lighting Resources LLC (LRL) originally operated under this EPA ID but the County of San Bernardino Fire Department requested LRL to change their ID in 2004. During the same time, they changed their name from Lighting Resources Inc to LLC so they made a Class 1 Permit Modification to reflect these changes and was issued a new permit with the updated name and EPA ID in 2005. Thus, this facility is being tracked under a new EPA ID # CAR000156125.

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CA BOND EXP. PLAN:

Responsible Party: RESPONSIBLE PARTY LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: The responsible party, Isaac Cohen and Son, Inc., is in compliance with an order. DHS has budgeted \$30,000 for oversight/monitoring of the RPs actions. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The RP will pay all costs of investigation and remediation.
Site Description: Isaac Cohen and Son, Inc. has been in business for over 20 years collecting and recycling metals and batteries. Lead and sulfuric acid were recovered from used batteries and recycled.
Hazardous Waste Desc: Hazardous wastes present onsite include sulfuric acid, lead, arsenic, and waste oil. It is estimated that 300 cubic yards of contaminated material is present onsite.
Threat To Public Health & Env: A direct contact threat exists because of the proximity of the site to other businesses and residential areas. There is also a possibility of ground water contamination.

Site Activity Status: The company has complied with past notices of violations issued by San Bernardino County Health Department and DHS. The responsible party has complied with a Section 25359.5 order to post and fence and secure the site. A RAO was issued in August, 1987. A RAP was approved by DHS on March 31, 1988 and is expected to be implemented by March, 1989.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/25/2022	Source: EPA
Date Data Arrived at EDR: 02/03/2022	Telephone: N/A
Date Made Active in Reports: 02/22/2022	Last EDR Contact: 03/02/2022
Number of Days to Update: 19	Next Scheduled EDR Contact: 04/11/2022
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 01/25/2022	Source: EPA
Date Data Arrived at EDR: 02/03/2022	Telephone: 800-424-9346

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/15/2021	Telephone: (415) 495-8895

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/15/2021	Telephone: (415) 495-8895
Date Made Active in Reports: 10/12/2021	Last EDR Contact: 03/02/2022

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/15/2021	Telephone: (415) 495-8895

Number of Days to Update: 27	Next Scheduled EDR Contact: 04/04/2022
	Data Release Frequency: Quarterly

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/15/2021	Telephone: (415) 495-8895

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 11/15/2021	Source: Department of the Navy
Date Data Arrived at EDR: 11/16/2021	Telephone: 843-820-7326
Date Made Active in Reports: 02/08/2022	Last EDR Contact: 02/07/2022
Number of Days to Update: 84	Next Scheduled EDR Contact: 05/23/2022
	Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 11/19/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/19/2021	Telephone: 703-603-0695
Date Made Active in Reports: 02/14/2022	Last EDR Contact: 02/23/2022
Number of Days to Update: 87	Next Scheduled EDR Contact: 06/06/2022
	Data Release Frequency: Varies

US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 11/19/2021	Source: Environmental Protection Agency

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

USGS TOPOGRAPHIC MAP

Target Property Map: 12016009 ONTARIO, CA
Version Date: 2018

East Map: 12015973 GUASTI, CA
Version Date: 2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

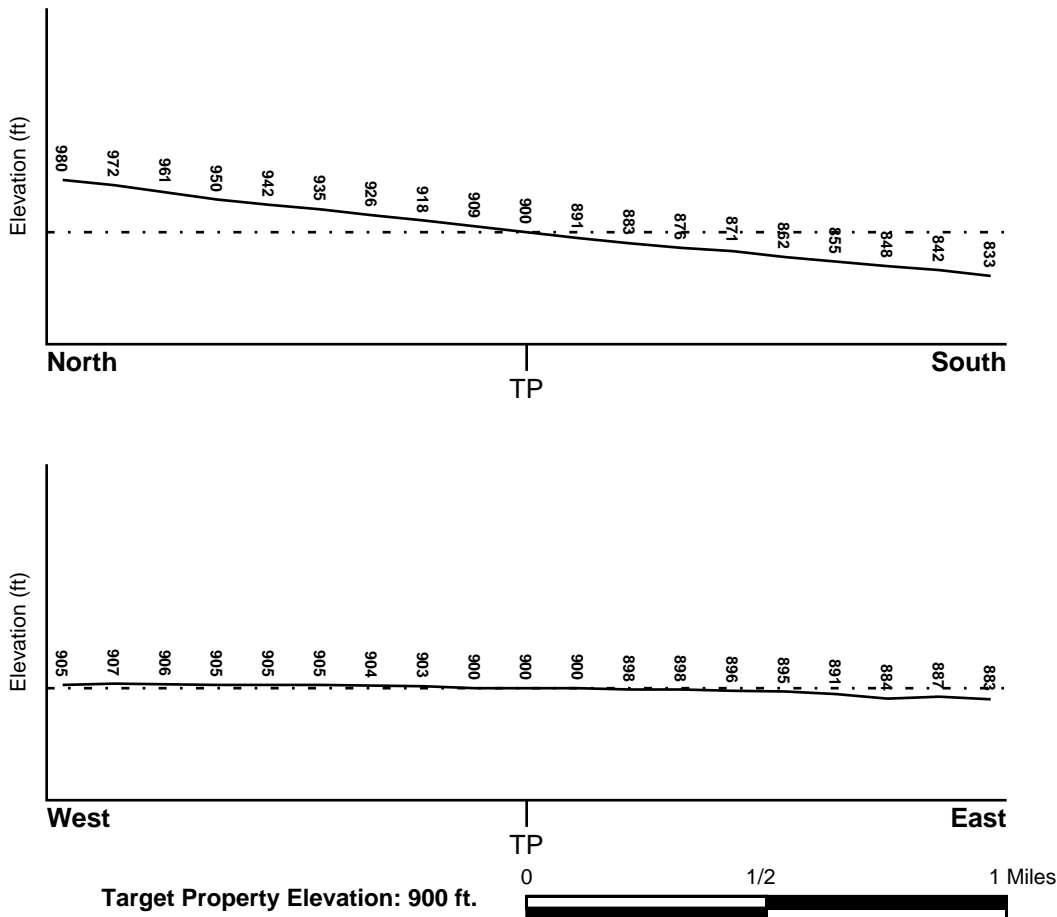

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06037C1750F	FEMA FIRM Flood data

06071C8636J	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
ONTARIO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	18 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
2	18 inches	59 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Ramboll were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

**APPENDIX D
QUALIFICATIONS OF ENVIRONMENTAL
PROFESSIONALS**

LEO REBELE

Principal

Mr. Rebele is a Principal in the Irvine office of Ramboll, with responsibilities that include business development, client liaison, senior oversight and execution on projects involving environmental site investigation, litigation, remediation, environmental permitting and natural resource management. Experience includes the following:

- Supported private industry for more than 25 years by delivering solutions to problems involving real estate due diligence, waterfront and brownfield redevelopment, transit-oriented development, and ports/harbors and watershed-related services. Project experience has been split between managing uplands projects focusing on property transfer/redevelopment and assisting private and port clients with aquatic-related environmental issues.
- Provided high-level strategic redevelopment consulting services to municipalities and private developers in connection with the transfer and redevelopment of contaminated real estate. Clients include residential, commercial and industrial developers, land owners, attorneys, and real estate brokers. Implementing cost recovery actions by providing environmental litigation support services; designing and implementing environmental liability transfer programs including guaranteed fixed-price remediation (GFPR) contracts.
- Provided environmental litigation support services in matters involving cost recovery actions against responsible parties. Deposition and trial experience including a landmark litigation case 3000 E. Imperial v. Robertshaw Controls et al. Routinely conducts environmental forensics analyses with a specialty in compound-specific isotope analysis (CSIA). Develops and applies multi-media video and animation for purposes of trial exhibits and mediation settlement discussions.
- Managed and supervised dozens of Phase I and II environmental site assessments (ESAs) and remediation projects throughout the western United States, Canada, and Mexico; assessed sites affected by landfill materials, chlorinated solvents, heavy metals, petroleum hydrocarbons (including free product), polychlorinated biphenyls (PCBs), and strong acids; prepared site conceptual models; performed remedial investigation/feasibility studies (RI/FSs); managed the completion of human health risk assessments; and evaluated remedial action alternatives under the Comprehensive

Environmental Response, Compensation, and Liability Act (CERCLA) and ensuring compliance with the National Contingency Plan (NCP). Regulatory negotiation/site closure experience with various jurisdictional offices of the Regional Water Quality Control Board (CRWQCB) and the California Department of Toxic Substances Control (DTSC), Orange County (California) Health Care Agency, the City and County Fire Departments of Los Angeles and the San Diego County of Environmental Health.

- Managed and provided oversight for projects involving natural resource management issues, including wetland evaluations and permitting, marine benthological studies, sediment and water quality monitoring, and underwater and eelgrass surveys. Experience has also included developing public outreach materials on behalf of private-sector clients, conducting resource mapping using Global Positioning System (GPS) software and geographic information system (GIS) technology.
- Served as program manager for several environmental impact assessments under National Environmental Policy Act (NEPA) and California Environmental Quality Act. Projects include environmental assessments (EAs) for proposed telecommunication sites on federal land, municipal well installations, private urban infill developments and mega-scale solar facilities located in Los Angeles County and San Bernardino County.

PROJECTS

2016-2017

Environmental Oversight

Mr. Rebele served as the principal-in-charge for the environmental oversight of a sewer line replacement in an area where groundwater impacted by chlorinated volatile organic compounds (cVOCs) associated with a State Superfund site may be encountered by city workers. The scope of work involves navigating concerns of a contentious community group and ensuring the protection of City workers through the development and implementation of a field monitoring program during sewer line construction activities.

2017

Due Diligence and Environmental Compliance Review

Mr. Rebele lead a due diligence and environmental compliance team in support of an acquisition of a 700-acre terminal in the Port of Los Angeles. The work involved a comprehensive assessment of current practices involving the use, storage and disposal of hazardous materials, compliance with air and stormwater regulations, and a review of historical spills and cleanup activities. A Phase I Environmental Site Assessment was conducted as part of the review. A review of California Environmental Quality Act (CEQA) permitting issues was also performed to evaluate the potential for terminal expansion onto an unoccupied portion of the facility.

2017-present

Pilot Testing and Support of Guaranteed Fixed Price Remediation Program

Mr. Rebele is heading a comprehensive site investigation and pilot test to evaluate a proposed groundwater and soil remediation strategy in support of a guaranteed fixed-price remediation (GFPR) strategy. The property, which is being sold to an industrial developer, is impacted by moderated levels of trichloroethylene and perchloroethylene in groundwater, with impacts extending off-site. Concentrations of chlorinated VOCs in soil vapor beneath the manufacturing facility were found to be very high, requiring immediate mitigation. Mr. Rebele is leading the project team to develop a groundwater remedy under a possible GFPR contract option while designing soil vapor extraction and vapor mitigation system that can be implemented in the short term.

2016-present

Implementation of Mitigation Monitoring, New Residential Development

Mr. Rebele served as principal-in-charge for a project involving implementing mitigation monitoring requirements for biological and cultural resources under California Environmental Quality Act (CEQA). Work included conducting ongoing monitoring for cultural and biological resources during disturbance of native soils during grading for a new residential development. Challenges included working with changing client schedules and interfacing with regulatory personnel to keep the project on-track on-schedule.

2016-present

Redevelopment of former ITT Site into new Industrial Complex

Lead consultant for a high-profile industrial redevelopment project in Santa Ana, California. The project involves assisting the prospective developer with the pre-bid due diligence during the seller's auction, evaluating seller's proposed remedial strategy in the context of the proposed development, performing Phase I and II environmental assessments, regulatory agency negotiation, and the design of a vapor mitigation system. Complexities in the due diligence activities include the integration of a polychlorinated biphenyl (PCB) cap into the proposed development and integrating the proposed electrical resistance heating/steam injection remedial program with client's development plans.

2016-2017

Implementation of Soil Management Plan and Soil Stockpile Profiling for Residential Development Project

Mr. Rebele served as client services manager for a project involving the redevelopment of a former foundry and iron works facility. The soils beneath the property were identified through a combined Phase I/II Environmental Site Assessment to be impacted with Cal-Hazardous levels of lead. A combination of field screening using a portable X-Ray Fluorescence (XRF) meter and confirmation soil sampling with formal laboratory analysis in order to profile soils to be exported and to establish residual concentrations in soils. Cost effective management of soils was achieved through carefully interfacing with the client's grading contractor and project phasing.

2015-present

Innovative In-Situ Remediation of Chlorinated Solvents

Account manager for Griffon Corporation to remediate a chlorinated VOC plume in groundwater which is commingled with chlorinated solvent plumes on adjacent properties. The remediation is confounded by access restrictions associated with a storm channel and two sewer lines. In addition two distinct groundwater mounds resulting from leaks in the sewer lines are affecting the groundwater flow and distribution of the contamination. Mr. Rebele is overseeing the forensic evaluation of sources of VOCs, general strategy, remedial approach and is leading regulatory negotiations.

2015-2017

In-situ Capping of Heavy Metal Impacted Soils

For this former tool manufacturing facility (Union Fork and Hoe Company) in upstate New York, Mr. Rebele served as project principal and client service manager. The site, which has been under the

oversight of the New York State Department of Environmental Conservation (NYSDEC) and Department of Environmental Health. Mr. Rebele helped Griffon negotiate a capping remedy of the heavy metals impacted soil. A significant component of the work has been negotiating with NYSDEC and DOH to eliminate a mature wooded area from the remediation area and to reduce the long-term groundwater monitoring obligations.

2005->>>

Ongoing Brownfield Advisory and Consulting Services

Serves in a strategic consulting role on behalf of the City for the remediation and brownfield planning of a 170-acre downtown core area targeted for redevelopment. Work to date has included federal and state brownfield grant procurement and execution, brownfield inventory, development of a GIS system, development of an area-wide brownfield remediation strategy, Phase I and II Environmental Site Assessments, development of multiple remedial action plans under the oversight of the Department of Toxic Substances Control, litigation support for cleanup cost recovery, and waste to energy (WTE) consulting.

2007->>>

Alameda Triangle Redevelopment

Provided oversight and consulting services for an 11.2 acre project comprised of 5 parcels with multiple ownerships and a history of manufacture use dating to World War II. The property uses identified including a former Witco chemical facility located on Caltrans property, a Magnetek transformer repair and refurbishment business, two auto-wrecking yards, a former railroad right-of-way, and a variety of other uses involving the manufacture and use of various chemical materials. The chemicals detected on-site during Gannett Fleming and other site investigations included organochlorine pesticides, PCBs, free product petroleum hydrocarbons in groundwater and soil, chlorinated VOCs in soil and soil vapor, heavy metals and polynuclear aromatic hydrocarbons. The City is in the process of marketing the site for development. Following a multi-media investigation involving substantial site access coordination, Gannett Fleming prepared a Site Investigation Report, Feasibility Study and a Remedial Action Plan (RAP) for the entire Site. The reports were submitted to Department of Toxic Substances Control (DTSC) for review. Gannett Fleming is working with city's environmental counsel to develop a cost recovery strategy.

2017

Economic Development Department

Mr. Rebele is working with the City of South Gate Economic Development Department and their economic development consultant, Rosenow Spivasek Group (RSG,) in addressing environmental impacts associated with a historical gasoline service station. Mr. Rebele and his team were retained to take over all aspects of the assessment and cleanup activities from a prior consultant due to a stalled remedial program.

2015-2016

Operational Transition/Environmental Compliance

Project Principal for an operational transition project involving all aspects of environmental compliance as Bombardier took over rail service and maintenance responsibilities for all rail facilities from the prior operators of the North County Transit District (NCTD) facilities at the Escondido and Oceanside yards. Work involved initial consultation, environmental compliance audits, permitting, preparation of spill prevention control and countermeasure (SPCC) plans, stormwater pollution prevention plans (SWPPS) and environmental compliance plans for ongoing rail operations and facility maintenance.

2014->>>

Remediation of Organochlorine Pesticide Impacted Soils in Support of Residential Development

Mr. Rebele serves as the principal-in-charge for a residential development project involving the remediation of organochlorine pesticides (OCPs) and closure of historical underground storage tanks

(USTs), irrigation wells and low-level volatile organic compounds (VOCs). In his role, Mr. Rebele is served in a strategic capacity to result in a fast-track review and approval of a remedial action plan by transferring the open case file from a local oversight agency to the Santa Ana Regional Water Quality Control Board.

2014-present

Remediation of Groundwater at Logistically Constrained Shopping Center

Mr. Rebele has been serving as principal-in-charge for a complex gasoline remediation project involving very high concentrations of gasoline at a commercial shopping center where site access precludes implementation of many traditional remedies. Mr. Rebele serves as senior technical advisor to the client's environmental counsel and is working to reduce the environmental liabilities of the property owner. Mr. Rebele helped devise a two-part strategy aimed at protecting the current tenants against indoor air intrusion through the development of vapor mitigation systems while conducting an aggressive groundwater remedial program consisting of trenching/product removal followed by in-situ chemical oxidation of groundwater.

2014-present

Environmental Remediation Consulting in Support of Residential Development

Mr. Rebele served in a strategic consulting role for New Urban West, Inc. (NUWI) to support the redevelopment of infill properties throughout southern California. Projects have included former nursery/greenhouse areas, manufacturing operations and properties and areas impacted by fill materials. Currently executing several cleanup programs under a California Land Reuse and Revitalization Act (CLRRRA) agreement with the Department of Toxic Substances Control.

2014-2017

Redevelopment Consulting and Remediation

Mr. Rebele serves as the project principal for a residential redevelopment project at a former Teledyne research and development facility and historical agricultural operation. Work has involved several phases of soil, soil vapor and groundwater investigation that included multiple degreaser locations, additional potential source areas of metals and petroleum hydrocarbons and organochlorine pesticides associated with the historical agricultural use. A soil vapor extraction (SVE) was implemented to reduce elevated concentrations of PCE to acceptable levels in order to prepare the Site for residential occupancy. The site is currently undergoing redevelopment.

MELISSA HENRY-LUNA

Senior Consultant

Melissa Henry-Luna is a Senior Consultant at Ramboll with fourteen years of experience. Since joining Ramboll (formerly ENVIRON) in 2007, Melissa has taken on a variety of assignments including due diligence projects, investigations and remediation, environmental compliance support and auditing, storm water management, and litigation support.

EDUCATION

2008-2010

MS, Environmental Engineering

University of California - Irvine, Irvine, California, United States

2003-2007

BS, Environmental Studies

Tufts University, Medford, Massachusetts, United States

EXPERIENCE

Environmental Due Diligence

Prepared more than 100 ASTM Phase I Environmental Site Assessment reports, including site visits, personnel interviews, historical site investigation data review, agency records reviews, and aerial photograph reviews for various industrial, manufacturing, residential, agricultural, and vacant properties.

Interpreted complex historical issues such as solvent, metals, and petroleum hydrocarbon impacts from historical aerospace, electroplating, fueling, foundries, petroleum production, and other operations. Reviewed and evaluated prior Phase II sampling work. Assisted clients in understanding environmental conditions in the context of property transactions and redevelopment scenarios.

Phase II Investigations and Field Experience

Coordinated and conducted groundwater monitoring, remedial activities, and operations and maintenance at various residential, commercial, and industrial properties to characterize movement of chromium, volatile organic compounds, and other chemicals.

Conducted Phase II field investigations involving collection of sediment, soil, water, and soil vapor samples. Performed additional fieldwork including rock coring, river sediment coring, groundwater sampling, lake sampling and well development. Sampled lake water and coordinated necropsies and bacteriological sampling to identify the cause of an avian die-off in a manmade lake.

United States of America

Environmental Compliance Support

Provided on-site compliance support for several months at a terminal at the Port of Los Angeles.

Provided timely compliance with a Notice of Violation from USEPA. Prepared storm water compliance programs, including development of a Storm Water Pollution Prevention Plan (SWPPP), creation and presentation of storm water awareness trainings for employees, and development of best management practices. Prepared a hazardous waste management manual and trained employees regarding disposal of hazardous and universal waste. Created compliance calendars to ensure the facility's compliance with air emissions permits.

Created SWPPPs for several facilities including two terminals at the Port of Los Angeles and a machining facility. Updated SWPPPs to incorporate requirements of California's 2015 Industrial General Permit for two facilities in the electronics industry, and prepared one Level 1 ERA report.

Prepared and submitted storm water annual reports for several industrial facilities in California.

Evaluated waste disposal practices and prepared and conducted hazardous and universal waste management training for employees at facilities including a machining facility, a plastic extrusion facility, and a winery.

Audited outgoing waste from two chain retail stores. Compiled applicable compliance information regarding appropriate waste disposal to respond to a possible enforcement action.

Prepared Spill Prevention Control and Countermeasure (SPCC) plans for nine industrial facilities, including a flavoring manufacturer and a truck fueling station.

Evaluated chemical inventories for numerous industrial facilities and prepared Hazardous Material Business Plans (HMBPs) for submission to the local Certified Unified Program Agency (CUPA).

Prepared SB-14 waste reduction programs for three facilities, including a chemical manufacturer.

Environmental Compliance Auditing

Prepared full environmental compliance audit reports. Audits have included aerospace manufacturing, research and development of electronics, ink blending, cosmetics manufacturing, and a winery in California. Prepared a targeted air emissions audit for a metal parts manufacturer.

Completed findings reports, including regulatory citations and recommendations for issue resolution. Cited areas where permitting, recordkeeping, or management deficiencies were found.

Evaluated facility compliance with South Coast Air Quality Management District (SCAQMD), California Air Resources Board (CARB), Department of Toxic Substances Control (DTSC), California Water Resources Control Board (WRQCB), United States Environmental Protection Agency (USEPA) local municipal sewer system, and other regulatory agency requirements.

Environmental Compliance for Mergers & Acquisitions

Evaluated environmental compliance at more than 50 manufacturing and other industrial properties and prepared limited compliance review reports in preparation for mergers and acquisitions. Facilities have included aerospace facilities, biotechnology laboratories, foundries, electroplating, food manufacturing (including bakeries, dairy, produce, and nutritional supplements), animal feed processing, a cogeneration plant, radioactive pharmaceuticals manufacturing, gravel mining, and other facilities throughout the United States and Mexico.

Areas evaluated include chemical inventory reporting, storm water, waste water, hazardous and non-hazardous waste, air emissions, greenhouse gas emissions, drinking water withdrawal.

Litigation Support

Provided support in two litigation cases involving perchlorate and trichloroethene contamination. Assisted in the development of testifying expert opinions and critique of opposing expert opinions through analysis and presentation of contamination data.

Provided support in litigation involving benzene and hydrocarbon contamination to evaluate a punitive damages claim. Analyzed and interpreted historical and technical documents.

Mold and Indoor Air Quality

Conducted mold and indoor air quality sampling at a variety of commercial and residential properties. Performed pre- and post-remediation testing, evaluated test results, and assessed effectiveness of remedial activities.

SIGNATURE AND ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the site. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1. SUMMARY OF CONCLUSIONS

Ramboll US Consulting, Inc. (Ramboll) was retained by Dedeaux Properties ("Dedeaux" or the Client") to perform a Phase I Environmental Site Assessment (ESA) of the Fleet Sales and Consulting, Inc. ("Fleet" or the "Company")-occupied site located at 1516 South Bon View Avenue, Ontario, California, (herein referred to as the "facility" or the "site;" see Figures 1 and 2). Ramboll's assessment was conducted in connection with a potential purchase of the site. The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of American Society for Testing and Materials (ASTM) International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 7).

1.1 Site Summary

The site is used as a vehicle tow yard facility. The approximately 5-acre site is improved with an approximately 36,7000-square-foot warehouse building located on the northern portion of the site, an approximately 2,800-square-foot office building located on the northeastern portion of the site, and two approximately 4,000-square-foot and 2,600-square-foot canopies on the northwest portion of the site.

The site was developed by 1933 (and possibly earlier) for residential and agricultural purposes. The southwestern portion of the site was an orchard in the 1930s and 1940s. The site was developed for commercial and light industrial operations by the early 1970s (and possibly earlier), at the time the present-day warehouse and two canopies were constructed. Since then, the site has been occupied by a modular building systems company and a mobile products company (early 1970s), an insulation supply company (mid-1970s to the mid-1980s), and for vehicle parts manufacturing and sales (1990s). The modular building systems company occupied the site through 1994, the year the current owner, Robertson G.W. and R.L Trust, purchased the site. The site has been used as a vehicle tow yard since 1994.

1.2 Recognized Environmental Conditions

Ramboll has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 of the Fleet site located at 1516 South Bon View Avenue in Ontario, California. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no REC in connection with the site, except for the following:

- **Potential Impacts from Historical Site Uses and Current Tow Yard Operations.** From at least the 1990s, the site has been used for vehicle parts manufacturing (1990s) and tow yard operations (1994 to present). Additionally, the site was used for various light industrial operations in the 1970s and 1980s, during a time-period when robust environmental regulations were not generally in place regarding chemical handling and waste management. Historical chemical storage and use at the facility is not known and these former industrial operations may have included the use of petroleum products, degreasers, solvents, and/or other chemicals. Ramboll's research indicates that hazardous wastes were generated and improperly stored at the site. The Environmental Data Resources, Inc. (EDR) database report (EDR report) includes Hazardous Waste Information System (HAZNET) listings at the site for a variety of wastes, including tetrachloroethylene (or perchloroethene, PCE) as a waste in 2000. San Bernardino County Fire Department (County Fire Department) records include several hazardous materials and hazardous waste storage violations at the site including improper storage of hazardous materials such as

open waste containers stored on exterior portions of the site. Ramboll observed two containers of waste liquid stored on exterior portion of the site, one of which was stored on unpaved soil with adjacent soil staining. In addition, Ramboll observed numerous oily stains on both unpaved soil and pavement where Fleet stored impounded vehicles. Stains observed during the site visit varied in size up to 20 square feet. Pavement in the vicinity of the observed staining appeared to be deteriorated with visual evidence of cracking. Ramboll also observed various staining in these areas on aerial photographs dating to as early as 2003. Ramboll was not provided with an interview with Fleet nor responses from Fleet to questions related to these matters. No subsurface characterization or remediation activities are known to have been conducted at the site. Based on (i) the historical uses of the site for industrial purposes since the 1970s, (ii) the widespread staining observed on the site on both unpaved and paved surfaces, some of which were visibly deteriorated, and (iii) historical County Fire Department violations pertaining to hazardous materials and hazardous waste storage issues, Ramboll considers this issue to be a REC.

A discussion of *de minimis* conditions identified during this review is presented in Section 6.1 of this report.

1.3 Non-Scope Considerations

Ramboll identified the following findings that relate to non-scope considerations:

- **Asbestos-Containing Materials (ACMs).** The buildings were constructed before asbestos was generally phased out of use in most building material applications in the early 1980s. A formal asbestos survey has not been conducted at the facility. Ramboll conducted limited visual observations of limited areas of the buildings at the site and noted suspect ACMs (e.g., roofing materials and transite panels). Notably, the site was occupied by an insulation supply company in the mid-1970s to mid-1980s and it is not known if the insulation materials contained asbestos. Ramboll was unable to confirm the specific operations performed by the insulation supply company, or if any surveys or asbestos abatement was performed during or after its tenure at the site. If any demolition or remodeling activities are conducted at the site, suspect materials should be sampled and, if found to contain asbestos, managed appropriately.
- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site. According to site personnel, the facility has not experienced problems with water intrusion. Based on this information, mold is not anticipated to be of concern to the site.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the warehouse, office, and canopies in early 1970s, it is possible that lead-based paint was used historically on facility structures. Site personnel knew of no lead-based paint on structures at the facility. Ramboll observed the paint to be in good condition. If any demolition or remodeling activities are conducted at the site, suspect paint should be managed appropriately.
- **Radon.** Based on information included in the EDR report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 pCi/L. The United States Environmental Protection Agency's (USEPA's) continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, the median radon value for 7 tests surveyed in the same zip code

as the site was 0 pCi/L. A USEPA survey conducted in San Bernardino County found that the average radon level of a first-floor room at 18 properties was 0.678 pCi/L. Based on this information, radon is not anticipated to be of concern to the site.

2. INTRODUCTION

2.1 Purpose

Ramboll was retained by Dedeaux to conduct a Phase I ESA of the Fleet-occupied site located at 1516 South Bon View Avenue, Ontario, California (Figure 1). Ramboll's assessment was conducted in connection with a potential purchase of the site. The purpose of the assessment was to identify RECs, which are defined in the ASTM Standard as:

"The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions."

2.2 Scope of Work

Ramboll conducted a Phase I ESA of the Fleet-occupied facility in Ontario, California. The Phase I ESA relied upon the references noted below and included the following tasks:

- A visit to the site by Darcy VanDervort of Ramboll on July 21, 2021 to observe the exterior and interior features of the site and to identify the uses and conditions specified in Sections 9.4.1 through 9.4.4.7 of the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during the site visit with Caroline Ignacio, Realtor at PAWs Realty, and a telephone interview on July 27, 2021 with Rita Robertson with Robertson, G.W. and R.L Trust, the current owner of the site since 1994, regarding general site conditions and site history information. The aforementioned individuals are referred to herein as "site personnel." The site personnel interviewed by Ramboll were identified as having good knowledge of the uses and physical characteristics of the site. Note: No one was interviewed from Fleet as part of this assessment.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
 - A radius report prepared by EDR (see Appendix B), which presents the results of searches of federal and state databases for the site, as well as properties near the site. The radius searched for each database, as well as the databases themselves, was selected in accordance with the ASTM Standard.
 - The USEPA's Envirofacts database, which provides site information contained in multiple USEPA regulatory databases.
 - California's statewide EnviroStor, GeoTracker, and Hazardous Waste Tracking System (HWTS) databases, which provide information from the Department of Toxic Substances Control (DTSC), the State Water Resources Control Board (SWRCB), and hazardous waste manifest documents, respectively.
 - A review of the California Geologic Energy Management Division (CalGEM) website, which provides information regarding the locations of oil and gas wells on and in the vicinity of the site.

- The Superfund Enterprise Management System (SEMS) database which contains Superfund Site data.
- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
 - Readily available historical sources (as identified in Section 4.2 of this report and included as Appendix C) to develop a history of the previous uses of the site and surrounding area.
 - Local building permit information, as obtained via EDR's Lightbox application
 - Historical and site-specific information pertaining to 1516 South Bon View Avenue obtained from the following local agencies: The City of Ontario Building Department (Building Department), the San Bernardino County Assessor's Office (Assessor), and the County Fire Department. Ramboll also requested records for 1518 South Bon View Avenue and a response from the Building Department and County Fire Department has not yet been received at the time of this report. Ramboll also requested information from the City of Ontario Fire Department (City Fire Department), but personnel from the City Fire Department reported having no information pertaining to the site and indicated that any records concerning the storage of hazardous materials/waste, hazardous spills and underground storage tanks would be maintained by the County Fire Department.
- A review of physical setting sources, as defined in the ASTM Standard, including:
 - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
 - Geologic, hydrogeologic, or hydrologic sources as provided in the EDR report.
- An ALTA Commitment for Title Insurance issued by First American Title Insurance Company for the site dated June 21, 2021.
- A review of any information provided by the User of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report.

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and Dedeaux in the Master Environmental Consulting Services Agreement dated February 28, 2018.

2.3 Significant Assumptions and Exceptions

In conducting this review, no significant assumptions or exceptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics surface topography. Therefore, in evaluating potential onsite impacts from offsite sources, those offsite facilities not located adjacent to or within one-quarter mile upgradient of the site are not considered to represent a significant environmental concern to the site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous

material can migrate in the groundwater in a generally downgradient direction. There are, however, limits to this interpretation.

- Because Ramboll was not allowed direct interview access to Fleet personnel, Ramboll made significant assumptions regarding Fleet operations onsite based on visual observations during the site visit and review of site documents contained in environmental databases, historical sources, and agency records.
- During the site visit, Ramboll was unable to observe the interior of the AT&T building located in the southwest corner of the site due to site personnel not having access to this portion of the site. This area was observed from the exterior. In addition, Ramboll did not observe the roofs of the buildings due to access and safety constraints.
- Due to confidentiality reasons, Ramboll was not allowed to inspect the interior of the shed used for Police Department storage located south of the canopies on the western portion of the site or the interior of impounded motor vehicles stored onsite. However, according to site personnel, no hazardous chemicals are stored in these areas of the site. Based on the information provided by site personnel regarding the use of the shed, this issue is not considered to have affected analysis of this site.
- Due to confidentiality reasons, Ramboll was not allowed to enter the office building occupied by Fleet. However, according to site personnel, no hazardous chemicals are stored in the office. Based on the information provided by site personnel regarding the use of the office, this issue is not considered to have affected analysis of this site.

2.4 Reliance and General Limitations

This report has been prepared for the exclusive use of Dedeaux and its affiliate, Stockbridge Capital Group, and may not be relied upon by any other person or entity without Ramboll's prior express written permission.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll's professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the Client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the Client in identifying the risks of such latent conditions.

Other issues considered outside the scope of the ASTM Standard and this review include regulatory compliance, lead in drinking water, wetlands, polychlorinated biphenyls (PCBs) in building materials, cultural and historic resources, ecological resources, endangered species, fire safety, and high voltage power lines.

3. SITE DESCRIPTION

3.1 Site Setting

Fleet leases and operates a vehicle tow yard located at 1516 South Bon View Avenue, Ontario, San Bernardino County, California. The approximately 5-acre site is located approximately 1.25 miles from the Ontario International Airport (Figure 1).

According to the Assessor’s website, the assessor’s parcel numbers (APNs) for the site are 1050121050000 and 1050211080000.

The site is developed with an approximately 36,7000-square-foot warehouse building located on northern portion of the site, an approximately 2,800-square-foot office building located on the northeastern portion of the site, and two approximately 4,000-square-foot and 2,600-square-foot canopies on the northwest portion of the site. The warehouse houses tow vehicle storage and vehicle maintenance operations. Other smaller structures on the site consist of an approximately 1,440-square-foot shed leased to the Ontario Police Department (Police Department) for storage located on the western portion of the site, and an approximately 330-square-foot building leased to AT&T for cellular tower-related equipment located on the southwest corner of the site.

The primary site access is via South Bon View at the eastern site boundary. Asphalt-paved areas are present on the northern portion of the site. The southern portion of the site is unpaved. There are no onsite surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

Table 1: Physical Setting and Utility Information		
Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map; Google Earth	Ranges from approximately 880 feet near the southwest corner of the site to 890 feet near the northeast corner of the site.
Topographic Gradient	USGS topographic map; Visual observations	Relatively flat onsite, with a gentle downward slope to the south-southwest. Regional topography slopes gently downward to the south.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Local Land Use	Visual observations	The facility is located in a mixed industrial, residential, and commercial land use area. <u>North</u> : Kenyon Plastering and Engine Drivetrain Repair Services, Inc. (EDRS, Inc.) beyond which is South Pacific Truck and Trailer Repair. An aboveground storage tank (AST) of unknown contents is located approximately 100 feet north of the northwestern corner of the site. <u>East</u> : South Bon View Avenue beyond which is Robert Hardy Professional Development Center, Nadine Griff Mack Nutrition Center, and a vacant lot covered in vegetation. <u>South</u> : Valley Power Services commercial vehicle repair beyond which is Inland Powder Coating Corp. <u>West</u> : Two logistics companies (SBR Express, Inc. and Nationwide Logistics) beyond which is a video production company (Cade Brazil).
Nearest Residence	Visual observations	Approximately 700 feet west of the site.
Hydrology		
Storm Water Runoff	Visual observations	Percolates into the ground surface at unpaved areas.
Nearest Surface Water Body to the Site	USGS topographic map; Google Earth; EDR report	Deer Creek, located approximately 2.15 miles to the east at its nearest point. The Creek ultimately discharges to the Santa Ana River which leads to the Pacific Ocean.
Flood Plain	FEMA*; Site personnel	Site personnel reported no known occurrences of flooding at the site. The site is not located within a 500-year flood zone.
Wetlands	NWI*; Visual observations	There are no federally-designated wetlands onsite.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map	Based on the topographic gradient, shallow groundwater likely flows to the south.
Depth to Groundwater	Not readily available	Depth to groundwater was measured between 327 to 337 feet below the top of the casing (toc) ¹ in April 2018 at a property located approximately 0.7 miles north of the site.

¹ First 2018 Semi-Annual Soil Vapor, Indoor Air, and Groundwater Monitoring Report: Former Alger Manufacturing Facility, Ontario, California, prepared by Geosyntec Consultants, dated August 2018.

Table 1: Physical Setting and Utility Information		
Conditions	Source	Description
Onsite Wells	Site personnel; Visual observations; CalGEM	No production, monitoring, or oil or gas wells.
Nearest Groundwater Supply Wells	EDR report	One federally registered well is present between one-quarter mile and one-half mile east-northeast of the site, and three federally registered wells are present between one-half and one mile northwest and west-northwest of the site; none are registered as public supply wells.
Geologic Conditions	NCSS*	Regional soils are well-drained to excessively drained, gravelly, loamy sand underlain by loamy sand made up of coarse-grained soils, sands, sands with fines, and silty sand.
Site Utility Information		
Heating and Cooling Equipment	Visual observation; Site personnel	Office rooms in the warehouse are cooled with window air conditioning units.
Natural Gas Service	Site personnel	Site personnel did not know if the site is provided with natural gas service.
Use of Fuel Oil for Building Heat	Site personnel	No known current or former use of fuel oil for building heat. The site was used for residential purposes since as early as the 1930s, and the residences and outbuildings may have used fuel oil ASTs or USTs for heating purposes and for farm vehicle fueling. This matter is further discussed in Section 6.
Foam-based Fire Suppression System	Site personnel	According to site personnel, the site is not equipped with a built-in foam-based fire suppression system.
Water Supply	Site personnel	The facility receives drinking water from the Ontario water system.
Sanitary Sewer	Site personnel	The facility discharges wastewater to the municipal sanitary sewer system.
Septic Systems	Site personnel	No identified current or former septic systems.
<p>Notes:</p> <p>FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey+; NWI = National Wetlands Inventory</p> <p>* - Source was provided in the EDR report.</p> <p>During the site visit, Ramboll walked or drove by the borders of the properties that are adjacent to the site. Ramboll did not enter the neighboring properties.</p>		

3.2 Current Use of Site

3.2.1 Current Operations

The site is currently occupied by Fleet (doing business as [dba] Bill & Wags Towing) for vehicle tow yard operations. Information on Fleet operations included in this report was based on visual observations made during the site visit and review of site documents contained in environmental databases, historical sources, and agency records. As indicated previously, Ramboll was not allowed access to any Fleet personnel regarding site operations before, during, or after the site visit, and apart from the broker who had minimal knowledge regarding the site, was largely unaccompanied on the site visit.

Ancillary operations at the facility appear to include administrative activities, vehicle maintenance, vehicle fueling, vehicle washing, operation of one parts washer unit containing an aqueous alkaline degreaser and building maintenance activities. Primary raw materials used at the site include motor oil, Frutalose L90, ArmaKleen aqueous alkaline degreaser, gasoline, diesel fuel, diesel exhaust fluid, antifreeze, transmission fluid, welding gases, and propane. Primary wastes observed onsite at the time of the site visit include waste motor oil, waste oil filters, and spent ArmaKleen degreaser. Maintenance-related chemicals, including white gas, architectural coatings, lubricants, surface cleaners, grease, sealant, gear oil, and acetone appear to be used in small quantities (containers of one gallon and smaller). Site personnel knew of no use of chlorinated solvents by the Company. According to site personnel, Fleet's operations have remained generally consistent during its period of occupancy at the facility.

3.2.2 Waste Management

According to documents reviewed, hazardous wastes generated at the site include waste motor oil, waste oil filters, and spent ArmaKleen degreaser. The facility is considered a small quantity generator (SQG) of hazardous waste under the Resource Conservation and Recovery Act (RCRA). Waste oil is stored in a 55-gallon drum and in several 5-gallon buckets located on a spill pallet. Ramboll observed several 5-gallon buckets stored open, without lids, and staining on intact concrete in the vicinity of the waste oil area. Waste oil filters are stored in cardboard boxes in the vehicle maintenance area located in the northwestern portion of the warehouse. Spent ArmaKleen degreaser is collected in a 55-gallon container located under the parts washer unit.

Nonhazardous waste generated at the site consists of general trash. General facility trash is collected in two onsite uncovered dumpsters for removal by the City of Ontario Integrated Waste Department. These dumpsters are positioned on unpaved land and pavement located south of the warehouse.

3.2.3 Wastewater and Storm Water

Sanitary wastewater, which includes wastewater from bathroom and kitchen areas, is discharged to the municipal sanitary sewer system.

Process wastewater generated by the facility consists primarily of vehicle washwater. Vehicle washing operations are conducted on concrete in the western portion of the warehouse. Ramboll observed washwater that was dark in color pooled on concrete inside the warehouse during the site visit. The pools of water covered an estimated 100 square-foot area. The concrete in the area appeared to be intact with no visible cracks present.

Storm water at the site infiltrates into unpaved areas.

3.2.4 Air Emissions

Air emissions from the facility are limited to volatile organic compounds (VOCs) from vehicle combustion engines and vehicle fueling operations, particulate matter (PM) generated from disturbed dust from operations on unpaved soil, and welding emissions from minor maintenance welding operations.

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in July 2021 to prepare a summary of listings in federal and state agency databases for the site and facilities within applicable radii of the site, as specified by the ASTM standard.² A copy of the EDR report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by EDR (see Appendix B) and also reviewed information available in the California GeoTracker and EnviroStor databases. The site is listed on several environmental databases, as discussed in Table 2.

Table 2: Summary of Environmental Database Listings for the Site	
Summary of Information Contained in Database	Ramboll's Comments
Ontario Drums (EPA ID: CAN000906085) is listed on the SEMS database as a removal only site in May 2004, which indicates that no site assessment work is needed. The site is not included on the National Priorities List (NPL).	This matter is further discussed in Section 4.3.
Bill and Wags, Inc. is listed on the California Environmental Reporting System (CERS), RCRA-SQG, HWTS, HAZNET, and San Bernardino County Permit databases as a SQG of hazardous waste between 1994 and 2017. According to the database, wastes generated onsite include PCE; oil/water separation sludge; aqueous solution with total organic residues less than 10%; aqueous solution with 10% or more total organic residues; waste oil and mixed oil; unspecified aqueous solution; hydrocarbon solvents (benzene, hexane, stoddard, etc.); other organic solids; off-specification, aged, or surplus organics; unspecified oil-containing waste; and unspecified organic liquid mixture. No current or historic violations or issues of noncompliance were identified.	Wastes generated at the site are further discussed in Section 3.2.2 and Section 5.2.1.
Fleet Sales and Consulting, Inc. is listed on the HWTS and HAZNET databases as a generator of hazardous waste between 2018 and 2021. According to the database, wastes generated onsite include waste oil and mixed oil. Fleet is also listed as a RCRA non-generator of hazardous waste in 2018. No current or historic violations or issues of noncompliance are identified.	This listing does not necessarily suggest a contamination concern to the site. Wastes generated at the site are further discussed in Section 3.2.2.
The Federal Environmental Protection Agency (USEPA) is listed on the HWTS and HAZNET databases as a generator of hazardous waste between 2004 and 2006. According to the databases, wastes generated onsite include other inorganic solid waste, unspecified solvent mixture, unspecified aqueous solution, laboratory waste chemicals, other inorganic solid waste organics, and detergent and soap. The USEPA is also listed as a RCRA non-generator of hazardous waste in 2004. No current or historic violations or issues of noncompliance are identified.	This listing does not necessarily suggest a contamination concern to the site. Wastes generated at the site are further discussed in Section 3.2.2.

² EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

Table 2: Summary of Environmental Database Listings for the Site	
Summary of Information Contained in Database	Ramboll's Comments
The site (no business name reported) is listed on the Clandestine Drug Lab (CDL) database, which indicates that illegal drug lab materials may have been present at the site. The listing indicates that a mobile drug lab (a vehicle or other mode of transportation where illegal drug lab equipment or materials were found) was identified onsite in September 1997 and April 2002.	Ramboll did not observe visual evidence of mobile drug labs onsite during the site visit. Because there is no indication of a release in the listing, this matter does not suggest an environmental concern to the site.
<p>Notes:</p> <p>* The site is also listed on the following databases related to regulatory compliance: Facility Index System/Facility Registration System (FINDS) and Enforcement and Compliance History Online (ECHO). Listings on these databases, by themselves, are not necessarily indicative of contamination.</p> <p>The EDR report includes listings for past site occupants that may indicate past use or storage of chemicals or petroleum products.</p>	

4.1.2 Database Review for Adjoining Properties

Based on a review of the EDR report, Ramboll identified the adjoining properties listed in Table 3 on databases indicative of a potential contamination concern.

Table 3: Contamination-Related Database Listings for Adjoining Properties ¹		
Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
Vern Anthony Gunite, Inc. Engine Drivetrain Repair Services, Inc. (EDRS) 1514 Bon View Avenue (Adjoining to the north)	<p>The property as Vern Anthony Gunite, Inc. is listed on the Statewide Environmental Evaluation and Planning System (SWEEPS) underground storage tank (UST) database with active status in 1994 for two 10,000-gallon diesel fuel USTs and one 6,000-gallon regular unleaded gasoline UST located on the property.</p> <p>The property is also listed on the San Bernardino County Permit database for a hazardous materials handler permit and a special generator of hazardous waste permit. The San Bernardino County Permit database indicates that the permit is inactive since 2010.</p> <p>EDRS is listed on the San Bernardino County Permit database for a hazardous materials handler - chemicals permit and a large quantity generator (LQG) of hazardous waste permit. The listing shows an active status with an expiration date of January 2021.</p>	<p>During the site visit, Ramboll observed an unlabeled AST on the adjacent property located approximately 100 feet north of the northwestern corner of the site.</p> <p>These listings are not indicative of environmental contamination.</p>

Table 3: Contamination-Related Database Listings for Adjoining Properties ¹		
Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
Valley Power Services, Inc. Bausman & Company 1520 South Bon View Avenue (Adjoining to the south)	<p>The property (Valley Power Services, Inc.) is listed on the AST database.</p> <p>Bausman & Company is listed on the San Bernardino County Permit database for a hazardous materials handler- chemicals special permit with active status (expiration date of May 2021), an Aboveground Petroleum Storage Act (APSA) permit for a 1,320-10,000-gallon AST with inactive status as of May 2019, a LQG of hazardous waste permit with inactive status as of May 2019, and a conditionally exempt small quantity generator (CESQG) of hazardous waste with inactive status as of May 2006.</p> <p>Bausman & Company is also listed on the CERS database as a chemical storage facility. An inspection dated May 2018 noted compliance-related violations relating to hazardous materials business plan (HMBP) submission that were returned to compliance in August 2018.</p>	<p>The EDR report does not contain information on the contents, length of time on the property, or volume of AST(s) on the adjacent property.</p> <p>The listing does not indicate the type of hazardous materials and hazardous waste present on the adjacent property. During the site visit, Ramboll did not observe any ASTs on the adjoining property.</p> <p>These listings are not indicative of environmental contamination.</p>
<p>Notes:</p> <p>¹ Ramboll's analysis of adjoining properties was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for offsite listings as presented in the EDR report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table, as Ramboll considers it unlikely that offsite properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the site.</p> <p>² The Recovered Government Archive (RGA) databases are EDR proprietary databases that identify prior versions of the database in which a site was listed.</p>		

4.1.3 Database Review for Other Surrounding Properties

There are several listings in the EDR report for non-adjoining offsite properties within applicable ASTM search radii; however, Ramboll has not identified any properties that are likely to represent a potential contamination concern to the site.³

The EDR report indicates that poor or inadequate address information was available for several properties located in the vicinity of the site; therefore, these sites could not be readily mapped by

³ In its evaluation, Ramboll considered only non-adjoining properties listed on databases indicative of contamination, with open status, located potentially upgradient of the site to represent a potential risk for contamination to the site (as the issuance of regulatory closure suggests that impacts to the site from the noted offsite property are unlikely).

EDR. Because the location of these properties with respect to the site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the site from these properties. It was beyond the scope of this review to accurately locate each of the unmapped properties identified by EDR; however, Ramboll reviewed the list of unmapped properties and verified that none appeared to be adjacent to the site.

4.2 Historical Uses of the Site and Adjacent Properties

4.2.1 Past Uses of the Site

The site was developed by 1933 (and possibly earlier) for residential and agricultural purposes. The southwestern portion of the site was an orchard in the 1930s and 1940s. The was developed for commercial and light industrial operations by the early 1970s (and possibly earlier), at the time the present-day warehouse and two canopies were constructed. Since then, the site has been occupied by a modular building systems company and a mobile products company in the early 1970s, an insulation supply company from the mid-1970s to the mid-1980s, and for vehicle parts manufacturing and sales in the 1990s. The modular building systems company occupied the site through 1994, the year the current owner, Robertson G.W. and R.L Trust, purchased the site. The site has been used as a vehicle tow yard since 1994.

A summary of Ramboll’s key observations from the available historical sources is presented in Table 4.

Table 4: Summary of Key Observations from Historical Sources for the Site	
Historical Source	Key Observations Regarding Site History
Aerial Photographs (1938, 1946, 1948, 1953, 1959, 1966, 1975, 1980, 1985, 1989, 1990, 1994, 2002, 2005, 2006, 2009, 2010, 2012, 2014, 2016, 2018) Satellite Imagery ¹ (1994 to 2021)	The 1938 and 1946 aerial photographs depict an orchard in the southwestern portion of the site and along the southern site boundary, four structures on the southeast portion of the site, and three structures on the northeast portion of the site. The remaining portions of the site appear undeveloped. The orchard appears to have been cleared prior to the 1948 aerial photograph, with approximately a dozen trees remaining onsite. The 1959 aerial photograph shows seven long, parallel structures located in the southwestern portion of the site, all of which appear to have been demolished prior to the 1966 aerial photograph. The three structures in the northeast portion of the site appear to have been demolished prior to the 1975 aerial photograph. The 1975 aerial photograph shows the current site buildings (2 canopies, warehouse, and office) on the northern portion of the site surrounded by pavement, and several smaller structures and objects appear scattered across the central portion of the site. The 1975 aerial photograph also shows several unpaved access roads that appear to be crossing the southern portion of the site. The 1980 aerial photograph shows two additional structures located on the western portion of the site and several small structures and objects scattered along the southern portion of the site. The four structures located on the southeast portion of the site appear to have been demolished prior to the 1985 aerial photograph. The 1985 aerial photograph shows the southern portion of the site cleared with several trailer-sized objects located in the southeastern corner of the site. The two structures that first appeared on the western portion of the site in the 1980 aerial photograph appear to have been demolished prior to the 1989 aerial photograph. The 1989 and 1990 aerial photographs show dozens of trailer-sized objects located on the southern and central portions of the site. The 2002 and subsequent photographs show storage of numerous vehicles and trailers stored in various configurations throughout the paved areas of the site. The 2006 aerial photograph shows the addition of a small structure on the southwest portion of the site. Various locations of surficial staining appear on the 2003, 2007, and subsequent aerial photographs.

Table 4: Summary of Key Observations from Historical Sources for the Site

Historical Source	Key Observations Regarding Site History
Topographic Maps (1897 to 2012)	No development is depicted on the maps until 1933. The 1933 through 1981 maps depict two structures on the east of the site. The 1973 map shows the addition of two structures located on the northern and southwestern portions of the site. The 1976 map depicts the site as urban land. The 1981 map shows the addition of two structures on the northwestern and southeastern portion of the site.
City Directory Abstracts (1922, 1923, 1926, 1930, 1931, 1934, 1936, 1938, 1940, 1941, 1942, 1945, 1946, 1949, 1950, 1951, 1955, 1956, 1960, 1961, 1964, 1965, 1970, 1975, 1980, 1981, 1985, 1990, 1991, 1994, 1995, 1996, 1999, 2002, 2003, 2004, 2008, 2009, 2014, 2017)	The occupants of the site are listed as: West W D (1923), Shaw ver C C (1926), Maners Aug (1926), Barclay R C (1926 to 1934), O'Neill W N (1926 to 1934), Durhus F C (1946), Cox Ross Myrtle (1956 to 1964), Mini TE Space Corp (1970), Com Struct Leasing, Inc. (1975), Insko, Inc (1975 to 1985), Bill & Wags, Inc. (1999 to 2017), Robertson Garvin (2003), A & A Towing (2003), Antonio Roman (2004), United Road Services, Inc. (2009 to 2014). Bill and Wags, Inc. is also listed at 1518 South Bon View Avenue (1995).
Assessor's Website	The owner of both parcels is listed as Robertson, G.W. and R.L Trust (11-17-81). The joint owner is listed as Rita Lee Robertson, Trustee.
County Fire Department	County Fire Department records indicate ATCO Space Rentals (office trailers and classrooms leasing and sales company) occupied the site in 1992-1993. County Fire Department records indicate Modular Structures, Inc. occupied the site in 1994.
Building Department	The Building Department files indicate that Modular Building Systems and Mission Mobile Products occupied the site in 1973. The Building Department files indicate that Parts-R-Parts, a vehicle parts manufacturing and sales company occupied the site in 1991. The Building Department files indicate that L.A. Cellular occupied the site in 1995.
EDR Report	The FINDS, ECHO, HWTS, HAZNET, SEMS, and RCRA databases indicate that the following other entities have operated at the site address: Ontario Drums, Fleet, Federal EPA, and United Towing, Inc.
Title search report	According to an ALTA Commitment for Title Insurance issued by First American Title Insurance Company, no environmental liens or activity use limitations (AULs) were identified for the site.

Table 4: Summary of Key Observations from Historical Sources for the Site	
Historical Source	Key Observations Regarding Site History
Site Personnel	Site personnel indicated that Rita Robertson purchased the site in 1994, and the site was occupied by Fleet since 1994.
Notes: ¹ In addition to aerial photographs provided by EDR provider, Ramboll viewed historical photographs via www.historicaerials.com and historical satellite imagery provided via Google Earth. Printed copies were not obtained, and imagery dates were not independently verified. EDR reported that Sanborn fire insurance map coverage is not available for the site.	

4.2.2 Past Uses of Adjacent Properties

The properties in the vicinity of the site have been used for agricultural purposes in the 1930s through the 1950s. The property to the east was occupied by a school from the 1960s through the 2010s. The property to the north appears to be used for commercial/industrial purposes since as early as the 1980s and notably was used for heavy duty diesel fuel engine rebuilding since at least the 2010s. The properties to the south and west of the site have been used for industrial purposes since as early as the 1980s. Notably, Valley Power Systems, Inc. occupied the property to the south of the site in the 2000s and 2010s.

4.3 Review of Local and State Agency Information

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the site. An overview of the findings of this review is presented in Table 5.

Table 5: Local Agency Information for the Site	
Agency Contacted / Document Reviewed	Information Obtained
Assessor' Website	According to the Assessor's website, the APNs for the site are 1050121050000 and 1050211080000. The owner of both parcels are listed as Robertson, G.W. and R.L. Trust (11-17-81). The joint owner is listed as Rita Lee Robertson, Trustee.
Building Department	Building Department records for 1516 South Bon View Avenue included the following: <ul style="list-style-type: none"> • A commercial construction permit dated 1973 for a 60x72-foot metal structure for Mission Mobile Products. • A building permit dated 2006 for the installation of a pre-fabricated 30x48-foot metal building to be used as evidence storage for the Police Department. Ramboll also requested records for 1518 South Bon View Avenue and a response from the Building Department has not yet been received at the time of this report.
County Fire Department	Ramboll submitted a records request to the San Bernardino County Fire Protection District – Hazardous Materials Division requesting information pertaining to USTs, hazardous materials, and hazardous waste at 1516 South Bon View Avenue. Below is a summary of the response provided:

Table 5: Local Agency Information for the Site

Agency Contacted / Document Reviewed	Information Obtained
<p>County Fire Department (cont)</p>	<ul style="list-style-type: none"> • ATCO Space Rentals Occupied the site in the early 1990s. ATCO Space Rentals is listed with an inactive Hazardous Materials Handler Permit. ATCO Space Rentals operated a 300 to 500-gallon propane AST formerly located south of the warehouse used for forklift fueling. • A San Bernardino County Department of Environmental Health Services record indicates that Dennis D. Rock Construction requested to inspect records in April 1994 for the purposes of a Phase I ESA. This matter is further discussed in Section 4.4. • A complaint dated May 2004 indicated that drums of unknown waste were abandoned adjacent Bon View Avenue. One 55-gallon drum contained approximately 30 gallons of waste oil, and the other 55-gallon drum contained approximately 15 gallons of waste oil with flammable liquid. According to the records, the drums were contained, and the complaint was closed. • County Fire Department records include Special Generator and Special Handler permits for Bill & Wags, Inc. dated 1998 through 2002. Bill & Wags, Inc. is listed with an inactive Hazardous Materials 11-30 Chemical Handler Permit as of June 2015, which was active between 2002 and 2015. County Fire Department records include several hazardous waste manifests between 2005 and 2008 indicating that Bill & Wags, Inc. generated waste oily absorbent, diesel water, ethylene glycol, used oil filters, empty containers, and used oil. A hazardous waste generator and hazardous materials handler inspection report dated March 2008 noted several violations including open waste containers stored on exterior portions of the site, incomplete or missing hazardous waste labels, emergency contingency plan not submitted, failure to complete weekly hazardous waste inspections, unlawful management of used oil filters, and manifest recordkeeping. All 2008 inspection violations were corrected by April 2008. A hazardous waste generator and hazardous materials handler inspection report dated May 2011 noted several violations including fire hazard due to a pool of waste oil located in the secondary containment, incomplete or missing hazardous waste labels, hazardous waste managed unlawfully, improper used oil management, used oil filters managed unlawfully, and hazardous materials business plan not submitted. A 125-gallon propane AST is noted onsite in an emergency response plan dated 2011. A hazardous waste generator and hazardous materials handler inspection report dated November 2013 noted several violations including improper and missing hazardous waste labels, open waste containers, use of inactive Environmental Protection Agency Identification Number (EPA ID), and storage of contaminated empty containers outdoors. The 2013 inspection report also noted the presence of two 55-gallon drums of degreaser and one 55-gallon drum of waste degreaser onsite; degreaser specifications or type not listed. A hazardous waste generator and hazardous materials handler inspection report dated August 2017 indicated that the company changed ownership, but was still operating under Bill & Wags, Inc. The 2017 inspection report indicated that no reportable hazardous materials were onsite, and no violations were noted. • AT&T Mobility Downtown Ontario (AT&T, 1516 South Bon View Avenue) has an active permit for Hazardous Materials 1-3 Chemicals Special Handler Permit – unstaffed remote facility. A site map of the AT&T building indicates that lead acid batteries are stored in the western portion of the building. According to the HMBP chemical inventory, the total amount of sulfuric acid from lead acid batteries onsite is 98 gallons. Several hazardous waste generator and hazardous materials

Table 5: Local Agency Information for the Site	
Agency Contacted / Document Reviewed	Information Obtained
County Fire Department (cont)	<p>handler inspection reports are included in the County Fire Department records; no violations are noted.</p> <ul style="list-style-type: none"> • There are no records pertaining to USTs or site remediation associated with the site. <p>Ramboll also requested records for 1518 South Bon View Avenue and a response from the County Fire Department has not yet been received at the time of this report.</p>
City Fire Department	<p>Ramboll requested information from the City Fire Department, but personnel from the City Fire Department reported having no information pertaining to the site and any records concerning the storage of hazardous materials and hazardous waste, hazardous spills and underground storage tanks would be maintained by the County Fire Department.</p>

4.4 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with site personnel, no prior Phase I ESA or sampling activities have been conducted at the site, with the possible exception of a 1994 Phase I ESA. A San Bernardino County Department of Environmental Health Services record indicates that Dennis D. Rock Construction requested to inspect records in April 1994 for the purposes of a Phase I ESA. However, Ramboll was not provided with a copy of this report and site personnel reported having no knowledge of prior environmental assessments performed for the site.

4.5 User-Provided Information

Ramboll provided Dedeaux with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, activity use limitations (AULs), specialized knowledge of the site, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. The User completed and returned the User Questionnaire but did not provide any information that was not otherwise obtained and reviewed by Ramboll.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Ramboll conducted a visit to the site on July 21, 2021. During the site visit, observations of both the interior of the buildings and exterior portions of the site were made to evaluate if RECs, as defined in Chapter 7, are present. Ramboll did not observe the roofs of the buildings, the interior of the Police Department storage shed, and adjacent trailer located on the southwest portion of the site, the interior of the office building located on the northeast portion of the site, the interior of the AT&T building located in the southwest corner of the site, and the interior of motor vehicles stored onsite.

5.2 General Site Setting and Observations

Ramboll made observations concerning the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in Table 6. Additional information regarding observed and historical items is provided in the sections following the table.

Table 6: Summary of Site Reconnaissance Observations		
ASTM Section	Issue	Observation
Interior and Exterior Issues		
9.4.2.1	Current use(s) of the site	See Section 3.2
9.4.2.2	Past use(s) of the site	See Section 4.2
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated onsite in connection with identified present or past uses	Present (see Section 5.2.1)
9.4.2.4	Storage tanks: Underground storage tanks (fill ports, vent pipes, manholes) Aboveground storage tanks	Absent Present (see Section 5.2.2)
9.4.2.5	Odors (strong, pungent or noxious)	Absent
9.4.2.6	Pools of liquid, standing surface water or sumps	Present (see Section 3.2.3)
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes)	Present (see Section 5.2.1)
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses)	Absent
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products	Present (see Section 5.2.1)

Table 6: Summary of Site Reconnaissance Observations		
ASTM Section	Issue	Observation
9.4.2.10	Polychlorinated biphenyls (PCBs) Electrical equipment onsite (e.g., transformers, capacitors) Electrical equipment known or likely to contain PCBs Hydraulic equipment onsite (e.g., elevators, truck dock lifts) Hydraulic equipment known or likely to contain PCBs	(see Section 5.2.3) Present Possible Absent Absent
Interior Issues		
9.4.3.1	Heating/cooling systems	Present (see Table 1)
9.4.3.2	Stains or corrosion on interior floors, walls or ceilings (except for staining from water)	Present (see Section 5.2.4)
9.4.3.3	Floor drains and interior sumps	Absent
Exterior Issues		
9.4.4.1	Pits, ponds, or lagoons onsite or adjacent properties	Absent
9.4.4.2	Stained soil or pavement	Present (see Section 5.2.4)
9.4.4.3	Stressed vegetation (from other than insufficient water)	Absent
9.4.4.4	Onsite solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal	Absent
9.4.4.5	Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the site	Absent
9.4.4.6	Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)	Absent
9.4.4.7	Septic systems or cesspools	Absent
Non-Scope Considerations		
N/A	Asbestos Containing Materials	(see Section 5.2.5)
N/A	Lead-Based Paint	(see Section 5.2.6)
N/A	Water Intrusion	(see Section 5.2.7)

Table 6: Summary of Site Reconnaissance Observations		
ASTM Section	Issue	Observation
N/A	Radon	(see Section 5.2.8)
<p>Notes:</p> <p>Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4.</p> <p>See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section.</p> <p>Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered.</p> <p>N/A – Not applicable.</p>		

5.2.1 Hazardous Substances and Petroleum Products

Several hazardous materials and hazardous wastes are stored at the site:⁴

- Motor oil stored in three approximately 275-gallon ASTs (see Section 5.2.2 for additional details on ASTs), one located in the northern canopy and two located in the northwestern portion of the warehouse. Motor oil is also stored in one 55-gallon drum located in the northwestern portion of the warehouse. Ramboll observed staining on intact concrete in the vicinity of the motor oil ASTs located in the northwestern portion of the warehouse.
- Diesel exhaust fluid is stored in one 275-gallon tote located in the western portion of the warehouse.
- Diesel fuel and gasoline are stored in small containers 5-gallons or less located in the vehicle maintenance area and the storage cage located in the northern portion of the warehouse.
- Spent ArmaKleen aqueous, alkaline degreaser associated with the Safety Kleen parts washer located in the northwestern portion of the warehouse is stored in one 55-gallon waste container. Ramboll observed staining on concrete located near the aqueous Safety Kleen parts washer inside the warehouse. Concrete floors in the vicinity of the staining appeared to be in good condition, with no visual evidence of cracking. No floor drains were observed in the vicinity.
- Fructose L90 is stored in two 275-gallon totes located in the western portion of the warehouse. It is not known to Ramboll what this product is used for at the site.
- Transmission fluid and antifreeze are stored in 5-gallon buckets on pallets and concrete in the vehicle maintenance area in the northwestern portion of the building.
- Propane tanks associated with operation of the forklift are approximately 5-gallons in size and are stored outdoors to the south of the warehouse.
- Compressed welding gases (oxygen, acetylene, and argon) are stored in the northern canopy and in mobile dollies in the vehicle maintenance area in the northwestern portion of the building.

⁴ Only major, designated storage locations included. Other storage takes place on an *ad hoc* basis near points of use/generation throughout the facility. Additionally, retail-sized containers of household-type maintenance or cleaning chemicals and cylinders of compressed gases are also stored at the site; the storage of these materials is not expected to pose a significant contamination concern.

- Lead-acid vehicle batteries are stored on pallets on concrete in the northern canopy and on cement in the vehicle maintenance area of the warehouse.
- An unlabeled 275-gallon tote is located in the southern portion of the warehouse. The tote is outfitted with what appears to be a vehicle fueling pump. Ramboll requested information from Fleet regarding the contents of this tote and its use and has not yet received a response.
- Maintenance-related chemicals, including white gas, architectural coatings, lubricants, surface cleaners, grease, sealant, gear oil, acetone, are used in small quantities (containers of one gallon and smaller). Maintenance-related chemicals stored throughout the site but are primarily stored in the vehicle maintenance area and the storage cage located in the northern portion of the warehouse.
- Waste oil is stored in a 55-gallon drum and in several 5-gallon buckets located on a spill pallet. Ramboll observed several 5-gallon buckets are stored open, without lids, and visible staining on intact concrete in the vicinity of the waste oil area.
- Waste oil filters are stored in cardboard boxes in the vehicle maintenance area located in the northwestern portion of the warehouse.
- Two open containers (approximately 10-gallons and less than 1-gallon) of what appeared to be oil are stored on exterior portions of the site on unpaved ground and on pavement, respectively. Ramboll observed an approximately 2-square-foot stain on the soil adjacent the 10-gallon container.

Site personnel knew of no significant spills or releases of materials onsite. Staining is further discussed in Section 5.2.4.

5.2.2 Aboveground Storage Tanks

Several ASTs are maintained at the site, as summarized in the table below. Site personnel knew of no leaks or spills relating to the tanks, and Ramboll did not observe visible evidence of staining or past releases at the time of the site visit, except as otherwise noted in the table below. Site personnel were unaware of any current or former underground transfer lines used to convey the materials from the tanks.

Table 7: Aboveground Chemical and Petroleum Storage Tanks and Bulk Containers				
Location	# of tanks	Contents	Sizes	Observations
Warehouse	2	Motor Oil	Approximately 275 gallons	Staining was observed on concrete in the vicinity of the ASTs. Concrete appeared to be intact and no floor drains were noted.
North canopy	1	Motor Oil	Approximately 275 gallons	No visual evidence of spills or releases observed.
South of the warehouse	1	Former Propane	300-500 gallons	According to County Fire Department records, ATCO Space Rentals operated this AST for forklift fueling in the early 1990s. Ramboll did not observe a propane tank south of the warehouse during the site visit.

Table 7: Aboveground Chemical and Petroleum Storage Tanks and Bulk Containers				
Location	# of tanks	Contents	Sizes	Observations
Unknown	1	Former Propane	125 gallons	Noted onsite in an emergency response plan dated 2011. Ramboll did not observe a 125-gallon propane tank onsite during the site visit.

5.2.3 Polychlorinated Biphenyls

Site personnel knew of no onsite equipment that is known to contain PCBs. One pad-mounted transformer is present onsite and is owned by Southern California Edison. The unit is not labeled as to its PCB content. Ramboll saw no visual indication of leaks or releases from electrical equipment observed during the site visit.

Because the unit was likely installed at the time of the construction of the buildings in the early 1970s, before the 1979 federal ban on the manufacture of PCBs, it is possible that the transformer oils contain PCBs.

Because the buildings were constructed prior to the 1979 federal ban on the manufacture of PCBs, it is possible that hydraulic oils, or other types of electrical equipment, such as capacitors or light ballasts, contain PCBs.

Ramboll observed no visual indication of leaks or releases from electrical equipment during the site visit.

5.2.4 Stained Soil, Pavement and Interior Floors

Ramboll observed numerous oily stains on both unpaved (southern half of the site) and paved (central and northwestern portion of the site) surfaces where Fleet stored impounded vehicles. Stains observed during the site visit varied in size up to 20 square feet. Pavement in the vicinity of the observed staining appeared to be deteriorated with visual evidence of cracking. Ramboll also observed various staining in these areas on aerial photographs since as early as 2003.

Ramboll observed staining on concrete located near the aqueous Safety Kleen parts washer inside the warehouse. Concrete floors in the vicinity of the staining appeared to be in good condition, with no visual evidence of cracking.

5.2.5 Asbestos Containing Materials

Although an asbestos inspection and sampling of suspect building materials in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, were beyond our scope of work, Ramboll made limited visual observations⁵ of representative building materials in those areas accessed during the site tour to identify readily apparent potential asbestos-containing material (PACM) and suspect ACM. OSHA's definition of PACM is limited to thermal system insulation (TSI) and surfacing materials present in buildings constructed before 1981. Vinyl floor tiles are not considered PACM, but OSHA nonetheless requires that asphalt

⁵ Ramboll did not observe all building materials or formally survey the facility to determine the presence and condition of PACM and suspect ACM.

and vinyl floor tiles present in buildings constructed before 1981 be treated similarly to PACM. The term suspect ACM is not defined by OSHA but can include numerous building materials manufactured using asbestos currently or in the past (e.g., ceiling tiles, roofing materials, joint compound), as well as TSI, surfacing materials, and flooring materials installed after 1981.

Because the buildings at the site were constructed prior to 1981 and a comprehensive asbestos survey has not been conducted, TSI, surfacing materials and vinyl/asphalt flooring must be treated as PACM. During the site visit, Ramboll did not observe materials that would be considered PACM. In addition, Ramboll observed other materials potentially considered suspect ACM (e.g., transite panels located on the roof and walls of the canopies on the northwest portion of the building). Also, based on the building age, the roofing materials of the office may be considered suspect ACM.

Notably, the site was occupied by an insulation supply company in the mid-1970s to mid-1980s and it is not known if the insulation materials contained asbestos. Ramboll was unable to confirm the specific operations performed by that company, or if any surveys or asbestos abatement was performed after its tenure at the site.

There are no regulatory requirements to remove PACM, suspect ACM, and known ACM or to confirm whether building materials contain asbestos, unless the materials are damaged and have the potential to release fibers or the materials have the potential to be disturbed during renovation or demolition activities. Ramboll observed certain building materials that were deteriorating, specifically the transite panels located on the canopies on the northwest portion of the building. OSHA requires building owners and employers to identify locations of PACM and confirmed ACM at the facility and comply with certain employee notification, training, labeling and recordkeeping requirements (29 CFR §1910.1001(j)) and housekeeping programs (1910.1001(k)).

5.2.6 Lead-Based Paint

Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the warehouse, office, and canopies in early 1970s, it is possible that lead-based paint was used historically on facility structures. Site personnel knew of no lead-based paint on structures at the facility. Ramboll observed the paint to be in good condition.

5.2.7 Water Intrusion

Ramboll did not perform a mold survey at the site. According to site personnel, the facility has no experienced problems with water intrusion.

5.2.8 Radon

Based on information included in the EDR report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 pCi/L. The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, the median radon value for 7 tests surveyed in the same zip code as the site was 0 pCi/L. A USEPA survey conducted in San Bernardino County found that the average radon level of a first-floor room at 18 properties was 0.678 pCi/L. Based on this information, radon is not anticipated to be of concern to the site. Findings, Opinions, and Conclusions

Ramboll performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the Fleet-occupied site located at 1516 South Bon View Avenue in Ontario, California in July 2021. The objective of the ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Section 7 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 6.2.

6. FINDINGS, OPINIONS, AND CONCLUSIONS

Ramboll performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the Fleet-occupied site located at 1516 South Bon View Avenue in Ontario, California in July 2021. The objective of the ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Section 7 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 6.2.

6.1 Findings, Opinions, and Conclusions

6.1.1 Recognized Environmental Conditions

Ramboll has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the Fleet-occupied site located at 1516 South Bon View Avenue in Ontario, California. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed the following REC in connection with the site:

- **Potential Impacts from Historical Site Uses and Current Tow Yard Operations.** From at least the 1990s, the site has been used for vehicle parts manufacturing (1990s) and tow yard operations (1994 to present). Additionally, the site was used for various light industrial operations in the 1970s and 1980s, during a time-period when robust environmental regulations were not generally in place regarding chemical handling and waste management. Historical chemical storage and use at the facility is not known and these former industrial operations may have included the use of petroleum products, degreasers, solvents, and/or other chemicals. The EDR database report includes HAZNET listings at the site for a variety of wastes, including PCE as a waste in 2000. County Fire Department records include several hazardous materials and hazardous waste storage violations at the site including improper storage of hazardous materials such as open waste containers stored on exterior portions of the site. Ramboll observed two containers of waste liquid stored on exterior portion of the site, one of which was stored on unpaved soil with adjacent soil staining. In addition, Ramboll observed numerous oily stains on both unpaved soil and pavement where Fleet stored impounded vehicles. Stains observed during the site visit varied in size up to 20 square feet. Pavement in the vicinity of the observed staining appeared to be deteriorated with visual evidence of cracking. Ramboll also observed various staining in these areas on aerial photographs dating to as early as 2003. Ramboll was not provided with an interview with Fleet nor responses from Fleet to questions related to these matters. As a result, information on Fleet operations included in this report was based on visual observations during the site visit and review of site documents contained in environmental databases, historical sources, and agency records. No subsurface characterization or remediation activities are known to have been conducted at the site. Based on (i) the historical uses of the site for industrial purposes since the 1970s, (ii) the widespread staining observed on the site on both unpaved and paved surfaces, some of which were visibly deteriorated, and (iii) historical County Fire Department violations pertaining to hazardous materials and hazardous waste storage issues, Ramboll considers this issue to be a REC.

6.1.2 *De Minimis* Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll identified the following *de minimis* condition related to the site:

- **Past Use of Site for Residential Purposes and Agricultural Orchards.** The site was previously used for agricultural purposes, including for orchards, from at least 1938 until 1946. During this time period, a few scattered residences and associated outbuildings were present on the site. The residences and outbuildings may have used aboveground or underground fuel oil tanks for heating purposes and for farm vehicle fueling. Also, past orchard operations may have involved the application of arsenical and lead-based pesticides commonly used on orchards in the first half of the 20th century, or other organic pesticides commonly used on orchards thereafter. Ramboll was not provided with any specific information regarding historical agricultural or residential chemicals use at the site. It is possible that residual concentrations of agricultural or residential chemicals may be present in the subsurface. If residual concentrations of these chemicals are present, or if fuel tanks were used for heating or farm vehicle fueling, it is unlikely that they would be the subject of regulatory scrutiny in the context of a non-residential land use scenario. As such, Ramboll characterizes this finding as a *de minimis* condition, provided the site use remains industrial or commercial and the site is not re-zoned for residential use.

6.1.3 Non-Scope Considerations

Ramboll identified the following findings that relate to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials.** The buildings were constructed before asbestos was generally phased out of use in most building material applications in the early 1980s. A formal asbestos survey has not been conducted at the facility. Ramboll conducted limited visual observations of limited areas of the buildings at the site and noted suspect ACM (e.g., roofing materials and transite panels). Notably, the site was occupied by an insulation supply company in the mid-1970s to mid-1980s and it is not known if the insulation materials contained asbestos. Ramboll was unable to confirm the specific operations performed by the insulation supply company, or if any surveys or asbestos abatement was performed during or after its tenure at the site. If any demolition or remodeling activities are conducted at the site, suspect materials should be sampled and if found to contain asbestos, managed appropriately.
- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site. According to site personnel, the facility has not experienced problems with water intrusion. Based on this information, mold is not anticipated to be of concern to the site.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the warehouse, office, and canopies in early 1970s, it is possible that lead-based paint was used historically on facility structures. Site personnel knew of no lead-based paint on structures at the facility. Ramboll observed the paint to be in good condition. If any demolition or remodeling activities are conducted at the site, suspect paint should be managed appropriately.
- **Radon.** Based on information included in the EDR report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 pCi/L. The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, the median radon value for 7 tests surveyed in the same zip code as the site was 0 pCi/L. A USEPA survey conducted in San

Bernardino County found that the average radon level of a first-floor room at 18 properties was 0.678 pCi/L. Based on this information, mold is not anticipated to be of concern to the site.

6.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as “a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information.” A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Site personnel did not have current contact information for representatives of former site owners or occupants. Thus, Ramboll was unable to interview former owners or occupants about historical operations and site conditions. Due to extended age of the site, it was not possible to interview representatives dating back to the site’s first developed use in the 1930s. However, Ramboll conducted interviews with representatives of the site with tenure dating back to 1994 and reviewed other historical sources regarding former uses of the site.
- Ramboll was not allowed direct interview access to Fleet personnel regarding site operations. Ramboll has requested site-related information, but not yet received a response, from Fleet. Information on Fleet operations included in this report was based on visual observations during the site visit and review of site documents contained in environmental databases, historical sources, and agency records.
- Historical information, such as aerial photographs, was not readily available to characterize the site from the present back to the site’s obvious first developed use or 1940, whichever is earlier. The earliest readily available historical source that would indicate specific site uses is a historic aerial photograph dated 1938, which shows that at least a portion of the site was already developed for agricultural uses. ASTM defines agricultural site use as a “developed” site use.
- During the site visit, Ramboll was unable to observe the interior of the AT&T building located in the southwest corner of the site due to site personnel not having access to this portion of the site. This area was observed from the exterior. In addition, Ramboll did not observe the roofs of the buildings due to access and safety constraints.
- Due to confidentiality reasons, Ramboll was not allowed to inspect the interior of the shed used for Police Department storage located south of the canopies on the western portion of the site or the interior of impounded motor vehicles stored onsite. However, according to site personnel, no hazardous chemicals are stored in these areas of the site. Based on the information provided by site personnel regarding the use of the shed, this issue is not considered to have affected analysis of this site.
- Due to confidentiality reasons, Ramboll was not allowed to enter the office building occupied by Fleet. However, according to site personnel, no hazardous chemicals are stored in the office. Based on the information provided by site personnel regarding the use of the office, this issue is not considered to have affected analysis of this site.
- As it is a User requirement, Ramboll did not conduct a review of records to identify whether any environmental liens or AULs have been imposed on the site.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps, except that Ramboll was not provided an interview with or site-related information from the current facility tenant, Fleet. The effect of this significant data gap on Ramboll's conclusions with respect to conditions at the site is discussed in Section 6.1.

7. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the site and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the site to any required controls.

***De minimis* Condition:**

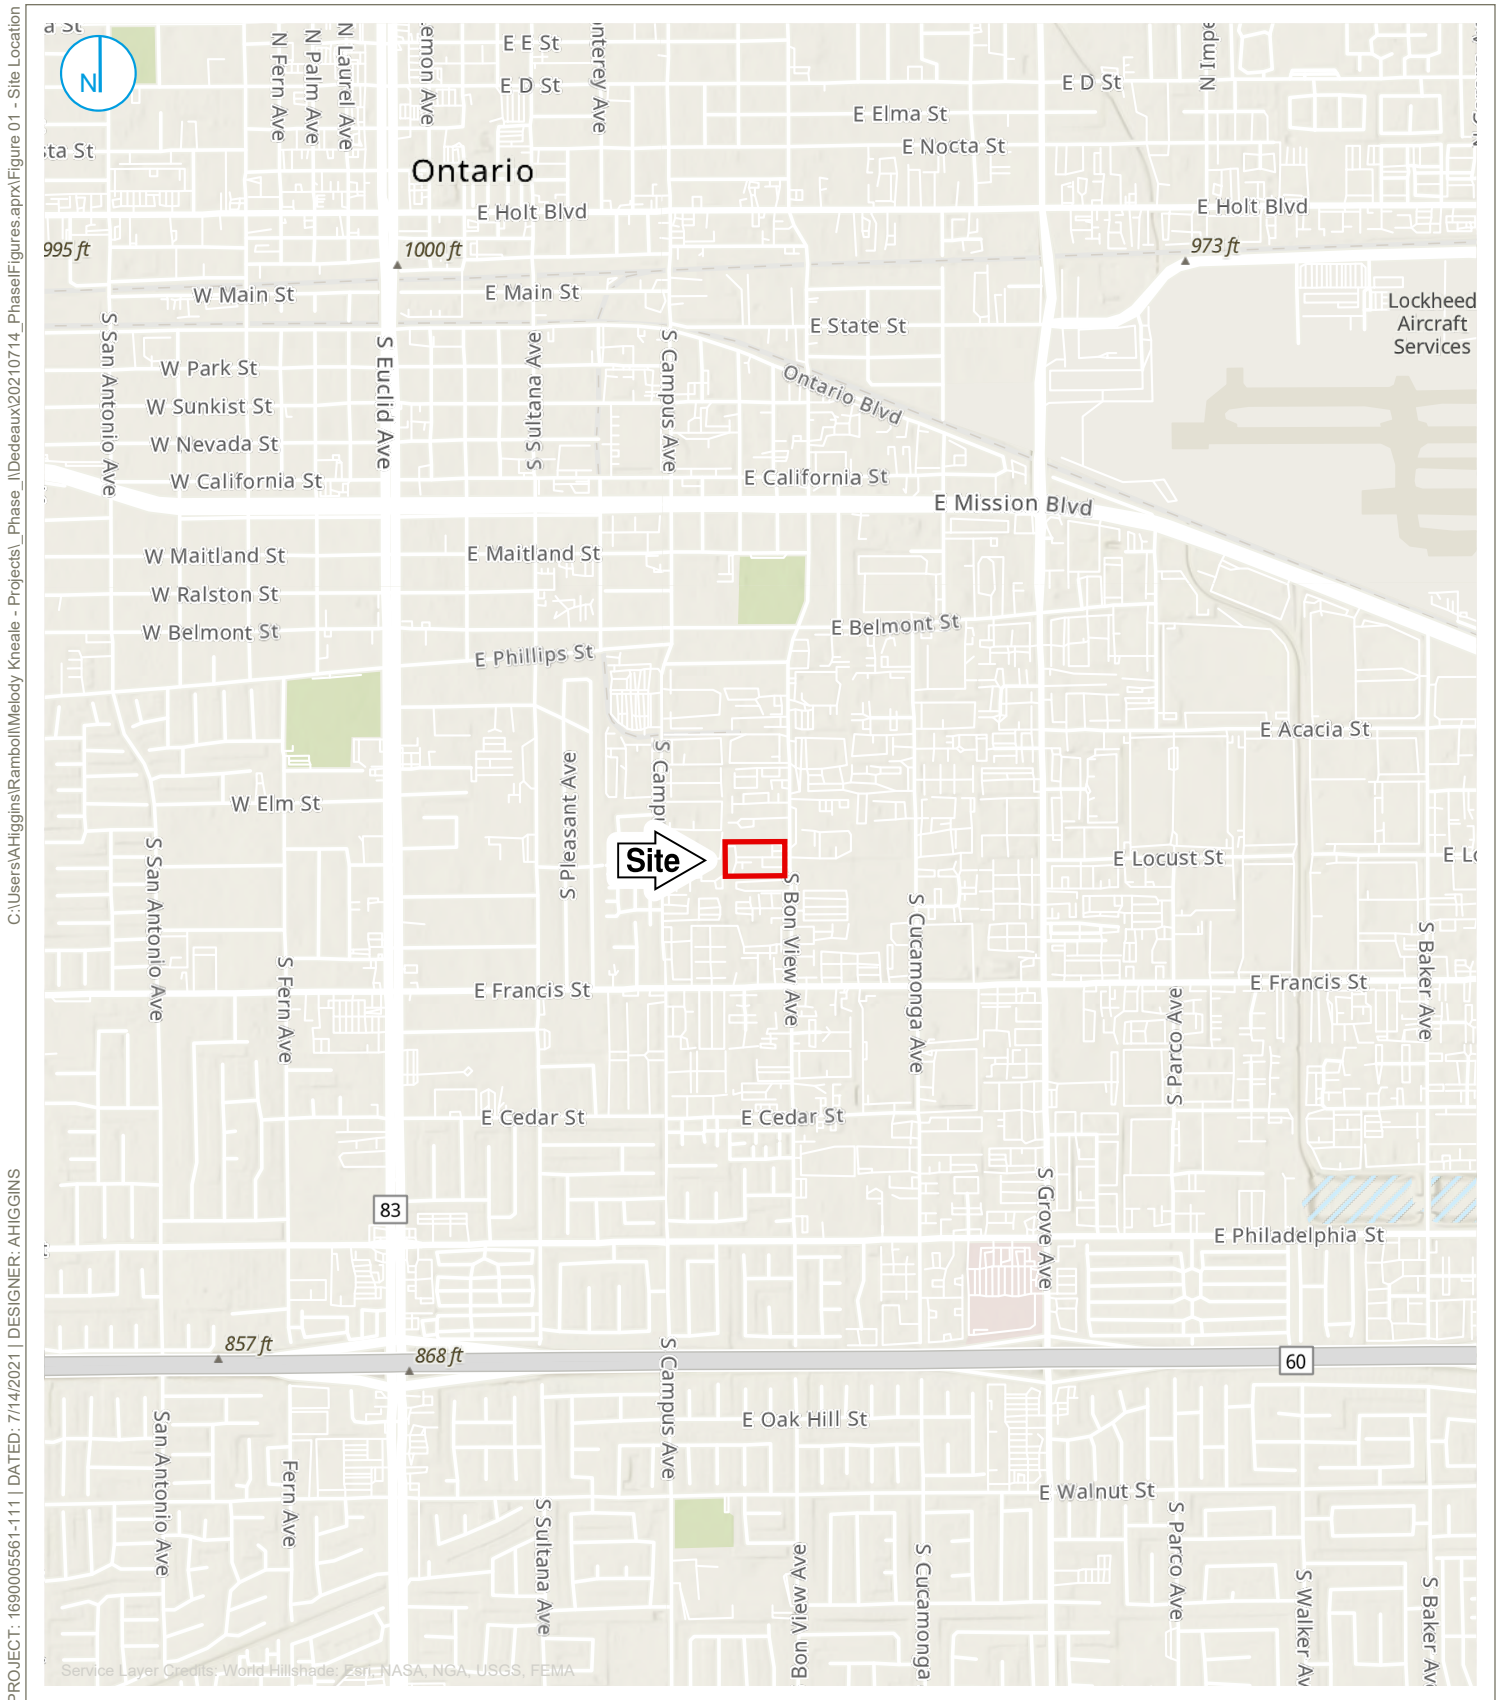

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap / Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

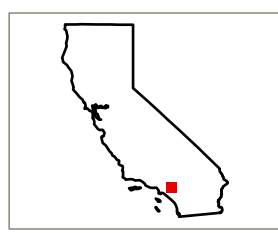

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

APPENDIX B ENVIRONMENTAL DATABASE REPORT

NOTES ON ENVIRONMENTAL DATABASE REPORT

EDR conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology “approximate minimum search distance” to refer to the radii searched in the EDR report.

EDR conducted the search of environmental databases in July 2021. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 12 RCRA-SQG sites within approximately 0.25 miles of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 04/23/2021 has revealed that there are 7 CA ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 5 CA LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 2 CA UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 6 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that

EXECUTIVE SUMMARY

there are 30 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

 Environmental Interest/Information System:
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
 SUPERFUND (NON-NPL)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violations Found: No

Eval Type: Industrial Storm Water Compliance Evaluation

Eval Notes: The facility collects a water sample at a location that does not appear to pick-up stormwater from Buildings 1 and 6. The area between Buildings 1 and 6 contained several wood pallets with corresponding wood debris. The building across the entry way into the complex are leased to two other companies that operate primatilly inside their buidings. This area should be re-inspected after the SWPPP is uploaded into SMARTs to insure that the facility sampling point is located to adequately sample discharges from these areas. When the process areas are in operation, Rigo indicated that the outside area around the process is swept 2-3 times per day.

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 10/20/2020. OBSERVATION: The 180 day hazardous waste accumulation time limit has been exceeded for the waste oil and filters found in the maintenance shop. CORRECTIVE ACTION: Dispose of waste oil and filters using a licensed waste hauler and submit a copy of the hazardous waste manifest.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

ALLIED MECHANICAL PRODUCTS (Continued)

1001967345

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
