Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database. The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. OBSERVATION: The owner/operator failed to consider the at least one of the following factors when selecting the transfer hose used for transferring isobutane: five-year accident history; accidents/incidents in related industries; or failure scenarios from the process hazard analysis. A review of the offsite consequences analysis report dated August 2017 revealed an alternative release scenario, selected by Aeropres personnel for evaluation, involves the failure of flexible transfer hose during the transfer process, but the decision to select this scenario did not relate to the required aforementioned factors. Violation Description: Failure to develop and implement written operating procedures that provide clear instructions for safely conducting activities involved in each covered process consistent with the process safety information.

Violation Notes: Returned to compliance on 05/08/2018. Observation: The revised Operating Procedure PSM #1 & PSM #2 still contain deficiencies. For example, on section 7.3 of both of these procedures, there is no description of what Temporary Operations entails. On Section 4.2 of these procedures; it s stated that these procedures "will be located in the lounge" or "will be accessed electronically via OC9000". Mr. Reed stated there is no lounge at this site and he does not even know what OC 9000 is. Also, a review of other operating procedures including SD-02-15, SD-02-18, and SD-02-29, revealed the required parameters such as consequences of deviations and safety systems have not been added. Corrective Action: Revise all operating procedures that involve the covered process to correct all deficiencies/inaccuracies and ensure all the required applicable parameters are included on each operating procedure.

Returned to compliance on 05/03/2018. Observation: One recommendation from the 2009 and 2017 Seismic Report Tracking Log which is in regards to Tank car unloading structures need to be strengthened is still outstanding. This recommendation was carried over from the 1999 seismic assessment report. On seismic assessment report dated 12/6/1999, the engineer noted that "our basic recommendation is that the unloading structures be redesigned and reconstructed". Also, the recommendation of Reinforce piers on tank 4 is being noted as being reinforced on 12/5/2017 on the 2017 seismic assessment tracking log. Mr. Reed stated this recommendation has already been corrected but the action items tracking log has not been updated. Corrective Action: Ensure all recommendations from the 1999 and 2009 seismic assessment reports are corrected and provide an updated action items tracking log to show all the recommendations from these reports have been corrected.

Violation Description: Failure to perform a Process Hazard Analysis that is appropriate to the complexity of the process and identifies, evaluates, and controls the hazards involved in the process.

Violation Notes: Returned to compliance on 04/06/2021. OBSERVATION: The owner/operator failed to ensure that the PHA identify, evaluate, and control hazards during unloading flammable regulated substances from tanks of trailers or railcars, transferring flammable regulated substances to storage tanks, sieves, and to cylinder or tank loading equipment. For example, the PHA did not identify, evaluate, and control the hazard of misdirected flow of particular flammable material from a tank of a trailer or railcar at the unloading area through the correct pipe and bulkhead that connects the tank of a trailer or railcar with the appropriate storage tank. A review of Sequence 1.5.0 of Node 1 on the PHA dated December 5, 2017 for the deviation of misdirected flow revealed a cause similar to that of the deviation of reverse (back) flow, as analyzed in Sequence 1.4.0. The identified cause, valve left open, however, did not relate the deviation of misdirected flow to any consequence. Also, there were no safeguards identified as [Truncated]

Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)

Violation Description: Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.

Violation Notes: Returned to compliance on 03/24/2021. OBSERVATION: The owner/operator failed to correctly identify the emergency contact personnel in its consolidated contingency plan. A review of the Emergency Response/Contingency Plan, written on January 2, 2013, and submitted on February 6, 2020, revealed that David Whitlow, Safety Director, was primary emergency contact, and that Ernie Reed, Maintenance Manager, was secondary contact. However, during a telephone conversation, Ron Galla, QC Coordinator, said that Whitlow retired two months ago and Reed left the company two years ago. CORRECTIVE ACTION: Ensure the Consolidated Contingency Plan has correct names, title, and phone numbers for emergency contacts. Submit a corrected consolidated contingency plan to the Los Angeles County CUPA through your CERS #10264297.

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Notes: Returned to compliance on 12/20/2017. Log onto the California Environmental Reporting System (CERS) web site to correct the deficiencies in the HAZARDOUS MATERIALS INVENTORY section. Ensure all reportable hazardous materials (55 gal for liquid, 500 lb for solid, 200 cu. ft for gas) are properly reported to the hazardous materials inventory. Several 5 ft cylinders of oxygen were observed outside of the lab but have not been reported to CERS. Also, ensure the entries are submitted correctly. The fields for the LARGEST CONTAINER for several of the entries are left blank, including the ones for Butane Mix, Dimethyl Ether, and Difluoroethane. Clearly indicate the Chemical Location of each entry, for example, the number of the rail cars or tanks. Owner/operator failed to properly submit hazardous materials inventory to CERS.

Violation Description: Failure to develop and implement written operating procedures that provide clear instructions for safely conducting activities involved in each covered process consistent with the process safety information.

Violation Notes: Returned to compliance on 05/08/2018. Observation: The revised Operating Procedure PSM #1 & PSM #2 still contain deficiencies. For example, on section 7.3 of both of these procedures, there is no description of what Temporary Operations entails. On Section 4.2 of these procedures; it s stated that these procedures "will be located in the lounge" or "will be accessed electronically via OC9000". Mr. Reed stated there is no lounge at this site and he does not even know what OC 9000 is. Also, a review of other operating procedures including SD-02-15, SD-02-18, and SD-02-29, revealed the required parameters such as consequences of deviations and safety systems have not been added. Corrective Action: Revise all operating procedures that involve the covered process to correct all deficiencies/inaccuracies and ensure all the required applicable parameters are included on each operating procedure.

Violation Description: Failure to address the following in the Process Hazard Analysis: 1. Establish a system to address the teams findings and recommendations; 2. Assure that the recommendations are resolved and documented; 3. Document what actions are to be taken; 4. Develop a written schedule of when these actions are to be completed; 5. Communicate the actions to operating, maintenance and other employees whose work assignments are in the process and who may be affected by the recommendations or actions.
Violation Notes: Returned to compliance on 05/03/2018. Observation: One recommendation from the 2009 and 2017 Seismic Report Tracking Log which is in regards to Tank car unloading structures need to be strengthened is still outstanding. This recommendation was carried over from the 1999 seismic assessment report. On seismic assessment report dated 12/6/1999, the engineer noted that "our basic recommendation is that the unloading structures be redesigned and reconstructed". Also, the recommendation of Reinforce piers on tank 4 is being noted as being reinforced on 12/5/2017 on the 2017 seismic assessment tracking log. Mr. Reed stated this recommendation has already been corrected but the action items tracking log has not been updated. Corrective Action: Ensure all recommendations from the 1999 and 2009 seismic assessment reports are corrected and provide an updated action items tracking log to show all the recommendations from these reports have been corrected.

Violation Description: Failure to perform a Process Hazard Analysis that is appropriate to the complexity of the process and identifies, evaluates, and controls the hazards involved in the process.
Violation Notes: Returned to compliance on 04/06/2021. OBSERVATION: The owner/operator failed to ensure that the PHA identify, evaluate, and control hazards during unloading flammable regulated substances from tanks of trailers or railcars, transferring flammable regulated substances to storage tanks, sieves, and to cylinder or tank loading equipment. For example, the PHA did not identify, evaluate, and control the hazard of misdirected flow of particular flammable material from a tank of a trailer or railcar at the unloading area through the correct pipe and bulkhead that connects the tank of a trailer or railcar with the appropriate storage tank. A review of Sequence 1.5.0 of Node 1 on the PHA dated December 5, 2017 for the deviation of misdirected flow revealed a cause similar to that of the deviation of reverse (back) flow, as analyzed in Sequence 1.4.0. The identified cause, valve left open, however, did not relate the deviation of misdirected flow to any consequence. Also, there were no safeguards identified as [Truncated]

Violation Notes: Returned to compliance on 03/24/2021. OBSERVATION: The owner/operator failed to correctly identify the emergency contact personnel in its consolidated contingency plan. Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Site History:	<p>The former Occidental Research Corporation (ORC), a subsidiary of Occidental Petroleum Corporation, operated a research facility at the site from approximately 1966 to 1986. ORC used the facility to conduct research and development of various chemicals, synthetic fuel, coal gasification, municipal waste incineration, fertilizer processing, mineral processing, etc. Available documents indicate that chlorinated solvents, like trichloroethene (TCE) and perchloroethylene (PCE), were stored and used for the research operations. TCE was reportedly mixed with dry ice and used as a coolant during the coal conversion process. For its research operations, ORC constructed various buildings and pilot plants and installed sumps, an underground storage tank (UST), septic tanks, evaporation ponds, seepage pits, wash tanks and a clarifier at the facility. Prior to 1972, the facility was not connected to municipal sewer system and its waste discharge was allowed to seep into the ground from evaporation ponds. ORC installed a sewer line in 1972, which ran along the southern and eastern boundaries of the facility to be connected to the City of La Verne sewer line north of the facility. After termination of its operations in 1979, ORC decommissioned the facility and hauled off approximately 4,000 drums of chemical waste from the facility, out of which 1,300 drums contained some form of hazardous waste. In addition, 42,000 gallons of diluted liquid waste was removed and disposed of at a local landfill. In 1986, ORC divided the property and sold a small parcel to Gainey Ceramics located adjacent to the western boundary of the property. The remaining portion of the property was sold to private parties in the same year. In 1989, Mr. Mike Brown and Mrs. Nancy Brown purchased the property to use it for grand stand storage. Between 1989 and 2000, Mike Brown Grandstands, which was a subsidiary of UPS, operated a business on the property, providing a variety of services for rental and set-up of staging equipment, roofing systems, grandstands, bleachers and stages. In December, 2000, the University of La Verne (ULV) acquired the property from Brown Family Trust. ULV planned to re-develop the site into an Athletic Complex and construct buildings for Graduate School Program. According to site investigation reports submitted to the Regional Board from 1981 to 2002, the soil and groundwater beneath the site are contaminated with PCE, TCE and other VOCs. Site investigations are still underway to identify the source and define the extent of the soil and groundwater contamination.</p>

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Results

The table below presents the results of the Vehicle Miles Travelled (VMT) Analysis of the San Dimas Downtown Secondary Plan (DTSP).

TAZ	Population + Employment		Total VMT		Total VMT per Capita	
	2045 Base	2045 Base with DTSP	2045 Base	2045 Base with DTSP	2045 Base	2045 Base with DTSP

22410300	5,100	8,623	152,760	237,097	30.0	27.5
22415200	5,296	7,624	162,255	215,695	30.6	28.3
Total	16,477	24,610	496,164	691,395	30.1	28.1

This table contains the total population and employment, the total VMT, and total VMT per capita by two scenarios: '2045 Base' and '2045 Base with DTSP' and by traffic area zone (TAZ). The '2045 Base' scenario refers to the 2045 horizon year scenario with planned infrastructure changes produced by the modelling team at Southern California Association of Governments (SCAG) and serves as a basis for this VMT analysis. The '2045 Base with DTSP' scenario is the same as the '2045 Base' scenario, but also includes the San Dimas DTSP build out. Between the two scenarios, there are no major roadway network changes. The four TAZs, outlined and labelled in black, are shown in the following map in addition to the new San Dimas LRT station:

The map shows the San Dimas DTSP area in gray overlaid on the four zones; please note that the DTSP doesn't cover the four zones fully. Outside of the DTSP area, 2045 population and employment within each of the four zones are kept the same. Within the DTSP area, 2045 population and employment targets were provided by Interwest and incorporated to produce the 'Population + Employment' columns in the table.

The total VMT for each zone consists of all trips starting and all trips ending at the corresponding zone and using a vehicular mode (e.g. driving a vehicle, taxi). Trips that start and end within the same corresponding zone are only counted once to avoid double-counting. The following bullet list describes examples of these trip types.

1. Examples of trips starting at the corresponding zone would be an employee working in zone 22410300 and returning home or a resident living in 22410100 and travelling from their home to do shopping.
2. An example of a trip ending at the corresponding zone would be an employee living in Claremont and going to zone 22415200 for work.

3. An example of a trip starting and ending at the same corresponding zone would be a person travelling from zone 22410200 to the same zone for lunch.

The total VMT per capita is the total VMT over the total population and employment.

Method

The method used to produce the VMT results involves sampling trips. Downtown San Dimas is planning to transform into a transit-oriented development in conjunction with the L Line extension; sampling trips from the four TAZs described in the Results section would not be appropriate as the 2045 Base doesn't include the San Dimas DTSP build out. Instead zones within a half-mile radius of transit stations with similar land use characteristics to San Dimas with the DTSP in place are sampled for trips. These peer transit stations are Arcadia, Monrovia, and Allen stations.

For residents living in the San Dimas DTSP, a trip rate is calculated of residents who live in zones within a half-mile of the peer transit stations which is applied to the residents residing in the DTSP for each of the four TAZs. This produces a trip target for each of the four zones which is the number of trips to be sampled from the peer transit stations' zones.

Non-residents of the DTSP area will also be making trips to the DTSP for work and/or discretionary purposes like shopping. With regard to employment, a peer transit station rate is calculated where residents live and work within the same zone. This is applied to the DTSP employment; the remaining employment serves as a trip target for non-resident work trips to and from the DTSP. For non-resident discretionary trips, a non-resident discretionary trip rate is calculated from the peer transit stations' zones and applied to total population and employment of San Dimas DTSP; the resulting trip targets are sampled from the peer transit stations' zones.

To calculate VMT for the 2045 Base scenario, the VMT of each trip made with a vehicle and coming from and going to the four zones are combined by zone using the SCAG model outputs. VMT for the 2045 Base scenario with DTSP includes the VMT of the new trips being generated to and from the four zones due to the DTSP.

Discussion

The results show that the inclusion of the DTSP slightly reduces total VMT per capital. Sampling trips of the peer transit stations acts as a proxy for the new DTSP population and employment to take more sustainable modes like transit and active transportation to make their trip in lieu of vehicle-based modes. Mode share for vehicle-based trips of the 2045 Base is 66% whereas it is 57% for trips made to and from the DTSP.
