**Project Description:** (please use a separate page if necessary)

The proposed project is a response to the growing rate of wildfires in California, which has been exacerbated by hazardous excess fuel loads in forests, and the need to promote economic activity within California's rural counties. The proposed project would improve the resiliency of California's forestlands by sustainably procuring and processing excess biomass into a pelletized fuel source for use in renewable energy generation overseas. The proposed project components include the vegetation treatment activities (feedstock source); the transportation and storage of feedstock, and subsequent processing at two pellet processing facilities (one in the foothills of the Central Sierra Nevada Mountain range (Tuolumne facility) and one in the Modoc Plateau of Northern California (Lassen facility); and the transportation of the finished product to a storage and shipping facility at the Port of Stockton, California, for export to international markets.

Note: The State Clearinghouse will assign identification numbers for all new projects. If a SCH number already exists for a project (e.g. Notice of Preparation or previous draft document) please fill in.
