Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR PROGRAM

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Violation Notes: Returned to compliance on 01/14/2016. Failure to complete hazardous waste labels (CCR 66262.34(f)(3)) All containers and tanks used to store a hazardous waste must be labeled or marked with the words hazardous waste and include the following information: generator name and address, hazardous properties of the waste, composition and physical state of the waste, and the accumulation start date. Observed (1) 55 gallon drum of lead paint chip waste and (1) 55 gallon drum of PCB waste with incomplete hazardous waste labels. The violation was corrected onsite at the time of inspection. Operator provided new complete hazardous waste labels to the drums of lead paint chip waste and PCB waste.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and

it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Site History: The BNSF Railyard dates back to the 1890s, and was used as a maintenance and fueling point for locomotives since before the 1940s. The 54-acre Site is bounded by River Road and the Rivers Edge Golf Course on the north and 1101thwest; by the Rivers Edge Golf Course on the east; and by BNSF Railroad tracks, Front Street, and the City of Needles on the south and southwest. The fueling facilities, which included multiple aboveground storage tanks (ASTs) and underground storage tanks (USTs) to store diesel, bunker fuel, and heavy oil, were removed during the 1970s. The Site is now used primarily for offices, right-of-way maintenance crews, and as a crew change location. Environmental investigations and remediation activities have been ongoing since the 1980s in connection with Cleanup and Abatement Order (CAO) 88-126 dated June 25, 1988, issued by the RWQCB. The CAO was issued to address removal of heavy oil from the

groundwater associated with a historical fuel pipeline leak known as the Former Pipeline Leak Area. Two additional soil remediation projects that have been completed at the Railyard - n 1959, a diesel fuel storage tank located near the Former Roundhouse Area was dismantled and diesel impacted soil was identified in the surrounding area. The principal source of the diesel fuel release was a partially welded elbow joint in a fuel unloading pipeline installed by an outside contractor during World War II. As a result, this area has historically been referred to as the Former Pipeline Leak Area. A recovery system was established to reclaim fuel from the subsurface. The recovery system consisted of a trench filled with rock in the saturated zone then backfilled with soil to the surface. Oil was skimmed from a collection sump installed at one end of the trench. Records of the operation of the oil recovery system indicate that approximately 310,000 gallons of diesel oil were reclaimed. The recovery sump eventually filled in with silt, and the operation was abandoned. From 1981 to 1988, BNSF completed investigations to evaluate the nature and extent of the impacted soil and groundwater to determine if further oil recovery was feasible. These investigation included Installation of 27 groundwater monitoring wells (MW-A through MW-Y, MW-AA, and MW-BB); Installation of three recovery wells (RW-1, RW-2, and RW-3); Installation of three oil recovery trenches with 14 oil collection sumps (N-1 through N-7, S-1 through S-4, and W-1 through W-3) (discussed further below); and Proper abandonment of six groundwater monitoring wells (MW-A, MW-G, MW-J, MW-L, MW-T, and MW-BB).
