Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. **DO NOT** use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened.** **DO NOT** send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and **DO NOT** reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened.** DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

Installation Restoration Program (IRP) Site 2 was operated as the main landfill at Norton AFB from 1958 to 1980. It accepted general refuse, demolition debris, and industrial waste. It encompassed 35 acres in the northeastern corner of the former base. The landfill was operated as a trench and fill type landfill and received an estimated 1,000,000 cubic yards (cy) of waste. A listing of investigations and reports performed prior to site consolidation and closure: 1982) Records Search for Norton AFB; 1985) Final Phase II, Stage I Technical Report, Problem Confirmation/Quantification Study; 1987) Phase II, Stage 2 Confirmation/Quantification Report; 1989) Final Draft Stage 3 Report; 1992) Remedial Investigation Report, IRP Sites; 1993) Final Technical Memorandum, Additional Fieldwork for Landfills, IRP Sites 2 and 10; 1993) Final Remedial Investigation Report, IRP Sites Operable Unit; 1993) Landfill Gas Report; 1993) Pre-Final Basewide Records Search; 1994) Final IRP Sites 2 and 10 Landfill Investigation Report, Addendum 2 to the IRP Sites Operable Unit RI Report; 1996) Site 2 Landfill Closure Design Fieldwork Report; 1996) Final IRP Site 2, Landfill 2, Landfill Gas Migration

Study Investigation Technical Memorandum; 1996) Final Vapor Extraction Treatability Study; 1996) Engineering Evaluation/Cost Analysis; and 1997) Final Action Memorandum. The landfill cover design was for consolidation of three areas of existing landfill consisting of over 141,000 cy onto the existing landfill and construction of an monolithic soil cover. The cover has a 2-foot-thick soil foundation layer below a 4-foot-thick monolithic soil layer. Monolithic layer is designed to storage and evapotranspiration characteristics to minimize percolation into waste. It has a landfill gas collection, extraction, and treatment system and storm water run off control structures. The following actions were performed in implementation of the landfill closure construction: 1) Designed a landfill closure cap and landfill gas collection and destruction system and prepared engineering drawings; 2) Abandoned groundwater monitoring wells and landfill gas probes within the proposed landfill footprint; 3) Consolidated the existing landfill into a smaller footprint; 4) Backfilled the excavation areas; 5) Constructed the foundation layer and the 4-foot-thick monolithic layer cap; 6) Installed and commissioned landfill gas (LFG) collection and treatment system; 7) Constructed surface slopes and drainage channels at the tow of the cover to convey storm water from the landfill area toward the City Creek channel and the Santa Ana River; 8) Installed neutron probe access tubes and LFG perimeter monitoring probes; 9) Hydroseeded the final cover to provide erosion control; 10) Hydroseeded the backfilled excavated areas; 11) Installed perimeter fencing; 12) Documented construction quality to demonstrate compliance with the landfill closure design; and 13) Prepared a plan for operating, monitoring, and maintaining the landfill closure system. The Closure and Postclosure Plan was issued on January 29, 1998 and the final inspection of following construction was on April 23, 1999. Operations, monitoring, maintenance, and reporting has been ongoing since the completion of the landfill cover. October 2007, a Closure Plan/Post Closure Maintenance Plan (CP/P-CMP) was submitted for redevelopment of the landfill top deck. The proposal was to revise the the majority of the top cover by construct of an asphalt parking lot, and modiifying drainage controls. The CP/P-CMP was approved on January 4, 2008. In March 2010 an asphaltic concrete parking lot was completed on top of the landfill May 2017 Air Force contractor sampled groundwater to determine the presence or absence of PFAS. PFOA and PFOS were detected in groundwater sample at concentrations below USEPA Health Advisory of 70 parts per trillion.

QUARTERLY UPDATE

The Department of Toxic Substances Control (DTSC) received the Closure Certification Report (Report) on December 6, 2019. The closure activities included the inspection and decontamination of the following:

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

- One 11,000-gallon double walled underground storage tank (UST).
 - Two drum washer units (155-gallon capacity each) and the return and fill station.
 - One container storage area with a total waste storage capacity of 4,320 gallons.
 Based on the review of the Report, DTSC confirms that Safety-Kleen Systems Inc. Highland Service Center (Facility) has completed all the closure activities in accordance with the approved Closure Plan and acknowledges that the Facility is now closed.

Permit Activity:

The current Permit was issued on 6/23/07 and expired on 6/23/17. This facility has two permitted units.

Unit 1: Underground Storage Tank and the Return and Fill Unit

Unit 2: Drum/container Storage Area

A Call in letter for next permit renewal application was issued on December 2, 2015. Pre-application meeting occurred on June 30, 2016. Currently the Facility is preparing Part A and B in order to submit the Application in Fall 2016. In May 2017, the application was withdrawn and facility initiated closure of the facility.

FACILITY DESCRIPTION/ HISTORY

The facility is located at 7979 Palm Avenue in Highland, San Bernardino County, California, and is categorized as a small storage facility. Safety-Kleen Systems, Inc. (Safety-Kleen) began operation in 1968 to provide solvent reclamation and supply service for customers primarily engaged in automotive repair, industrial maintenance, and dry cleaning. The facility provides customers with parts cleaner services, which involve small parts degreasing units consisting of a sink affixed to the top of a 16- or 30-gallon drum of cleaner solvent at the customer's location. The facility distributes parts washing cleaners and immersion cleaners (carburetor cleaner) for use in the degreasing units. Safety-Kleen's truck operators replace the drum of spent or used cleaner solvent with a drum of virgin or recycled cleaner solvent at the customer's location, and transports the hazardous wastes back to the facility. The hazardous wastes at the facility are eventually transported to the Safety-Kleen Recycle Center or another permitted facility for recycling, treatment and/or disposal.

The facility stores and transfers hazardous wastes in drums/containers and in underground tank. The facility provides the following services which lead to the off-site generation of hazardous waste that they transport back to the facility.

PERMITTING REGULATORY DESCRIPTION/ HISTORY

Safety-Kleen was issued the first permit in 1993. In the year 1994, Safety-Kleen revised the previously submitted application. The permit was issued by DTSC on September 17, 1994 effective through September 14, 2004.

The first Permit Renewal was issued on June 23, 2007 effective through June 23, 2017.

Since the first permit was issued in 1994, Safety-Kleen, Highland has made no Permit Modifications.

There are currently no corrective action/cleanup activities being conducted by DTSC or the Regional Water Quality Control Board at the facility.

Site History:

Entered 11/01/07. Safety-Kleen Systems, Inc. Highland Service Center is located at 7979 Palm Avenue in Highland, San Bernardino County, California (Facility). The Facility is zoned industrial by the city of Highland. Safety-Kleen Systems, Inc. (Safety-Kleen) began operation in 1968 to provide solvent reclamation and supply service for customers engaged in automotive repairs, industrial maintenance, and dry cleaning. The facility has been operating as a hazardous waste storage facility since June 1977. On September 17, 1994, DTSC issued a Hazardous Waste Facility Permit to the Permittee. The Permit expired on September 17, 2004, and the Permit was renewed with an effective date of June 23, 2007. The Facility has been handling hazardous wastes which include Petroleum-Based Cleaners (Mineral Spirits), Aqueous-Based Parts Washing Solution, Used Oil, Antifreeze, Freon, Paint Waste/Lacquer Thinner and Dry Cleaning solvents. Safety-Kleen owns the land and structure at the Facility. The Department of Toxic Substances Control (DTSC) prepared a Resource Conservation and Recovery Act (RCRA) Facility Assessment (RFA) Report for the Facility in March 1992. The RFA identified four Solid Waste Management Units (SWMUs) and two Areas of Concerns (AOCs) The SWMUs and AOCs are as follows: SWMU #1 - Drum Storage Area, SWMU #2 - 10,000 Gallon Waste Mineral Spirits Underground Storage Tank (UST), SWMU #3 - 1,000 Gallon Waste Mineral Spirits UST, SWMU #4 - Return and Fill Area, AOC #1 - 10,000 Gallon Product Mineral Spirits UST, AOC #2 - Empty Drum Storage Area. SWMUs 2, 3, 4 and AOCs 1 and 2 underwent partial closure in 1993. The Permittee conducted Phase I RCRA Facility Investigation (RFI) activities to characterize the presence and extent of contaminants (Mineral spirits and Volatile Organic Compounds) and to operate a pilot test of a soil vapor extraction (SVE) system. The Permittee also conducted Phase II RFI to evaluate potential groundwater impacts and for full scale operation of the SVE system. The Phase II RFI Report suggested that the groundwater had not been affected by releases of constituents at the Facility. DTSC approved the Phase II Report in 2000. The Permittee submitted a Corrective Measures Study Workplan (CMS Workplan) to DTSC in October 2002 which proposes additional subsurface investigation activities to evaluate the effectiveness of previously completed corrective measures. DTSC is currently reviewing the CMS Workplan. A Corrective Action Consent Agreement was signed by both DTSC and Safety-Kleen, and it became effective on November 15, 2007. Updated 3/18/08 - On February 19, 2008, DTSC provided comments to Safety-Kleen on the facility's revised RCRA Corrective Measures Study (CMS) Workplan. Updated 8/07/08 - After discussions with Safety-Kleen, DTSC provided revised comments on the facility's revised CMS Workplan in a letter dated July 7, 2008. Updated 11/19/08 - DTSC accepted Safety-Kleen's responses to DTSC comments dated August 18, 2008. In a letter dated October 28, 2008 DTSC requested Safety-Kleen to submit a final CMS Work Plan incorporating DTSC comments. Updated 3/4/09 - On February 9, 2009, DTSC sent a letter to safety-Kleen, approving the Revised RCRA Corrective Measures Study Work Plan for the Facility, dated December 1, 2008.

Site Summary: Alabama Septage Pits (T10000008984) WDID: 8362039002 HISTORICAL BACKGROUND The five former Alabama Septage Pits are located at 8203 Alabama Street on approximately 8.5 acres of land. Their designations are: A, B, C, C-1, and D. The pits were used for disposal of septage pumping (domestic waste from septic tanks) from the 1920s until 1986. From 1964 to 1985, the pits were used exclusively to deposit household septic tank and cesspool wastes. The area was permitted by the State of California and County of San Bernardino Department of Health. The ponds were then operated by private companies under a lease agreement with the City of Redlands from 1971 to 1986. From 1971 to 1979, use of the septage ponds by Tri-City Concrete Company was regulated by Regional Board-issued waste discharge requirements (WDRs) Order No. 71-1. The ponds were operated by Livingston-Graham, Inc. (a division of Gulf & Western Industries) from 1979 to 1986, as allowed under revised WDRs, Order No. 79-124. The Tri-City Concrete Company and Livingston-Graham, Inc. also used the septage ponds for some of the facility's dewatering discharge and for discharge of gravel mining wash water from 1973 to 1989. The discharge of pumped groundwater and wash water was formerly regulated under Order No. 73-55 and then under Order No. 81-169. Because the discharge of groundwater and wash water to the ponds ceased in 1988, Order No. 81-169 was rescinded by the Regional Board on July 14, 1989 under Order No. 89-38. On April 4, 2003, the Regional Board also rescinded WDR Order No. 79-124 under Order No. 03-0051. Site Summary: Alabama Septage Pits (T1000008984)
WDID: 8362039002

HISTORICAL BACKGROUND

The five former Alabama Septage Pits are located at 8203 Alabama Street on approximately 8.5 acres of land. Their designations are: A, B, C, C-1, and D.

The pits were used for disposal of septage pumping (domestic waste from septic tanks) from the 1920s until 1986. From 1964 to 1985, the pits were used exclusively to deposit household septic tank and cesspool wastes. The area was permitted by the State of California and County of San Bernardino Department of Health. The ponds were then operated by private companies under a lease agreement with the City of Redlands from 1971 to 1986.

From 1971 to 1979, use of the septage ponds by Tri-City Concrete Company was regulated by Regional Board-issued waste discharge requirements (WDRs) Order No. 71-1. The ponds were operated by Livingston-Graham, Inc. (a division of Gulf & Western Industries) from 1979 to 1986, as allowed under revised WDRs, Order No. 79-124.

The Tri-City Concrete Company and Livingston-Graham, Inc. also used the septage ponds for some of the facility's dewatering discharge and for discharge of gravel mining wash water from 1973 to 1989. The discharge of pumped groundwater and wash water was formerly regulated under Order No. 73-55 and then under Order No. 81-169. Because the discharge of groundwater and wash water to the ponds ceased in 1988, Order No. 81-169 was rescinded by the Regional Board on July 14, 1989 under Order No. 89-38. On April 4, 2003, the Regional Board also rescinded WDR Order No. 79-124 under Order No. 03-0051.

SITE GEOLOGY/HYDROGEOLOGY

The site is located within the San Bernardino Valley, bounded to the north by the San Bernardino Mountains and to the south by Crafton Hill and the badlands. The San Bernardino Valley is formed by a series of coalescing alluvial fans and is underlain primarily by alluvial fan deposits of late Tertiary to Recent age. The geology is characterized by shallow fluvial deposits, younger alluvium, older alluvium, and underlying Tertiary continental rock and Pre-Tertiary rock.

The surface drainage from the former Sunwest facility, including potential overflow from the septage ponds, flows directly into Reach 4 of the Santa Ana River. The groundwater beneath the ponds is a part of the Bunker Hill II Subbasin and is encountered at approximately 110 feet below ground surface (bgs). The groundwater flow direction was reported to be to the south/southwest

CURRENT LAND USE

Land use in the vicinity is primarily manufacturing and processing facilities to the north with open space to the south. The majority of the site is unpaved. There are two occupational businesses about 850 feet northwest of the septage pits: Robertson's Ready Mix and CEMEX Construction Materials, Inc. Land use changes would be difficult as the site is located in a designated floodplain.

While the City of Redlands owns the pits' land parcel, the former occupant of the property adjacent to the septage ponds was C.L. Pharris Sand and Gravel, Inc., also historically known as The Pharris Group, dba Sunwest Materials. Its current iteration is CEMEX Construction Materials, Inc. Currently, the septage ponds are leased by the City of Redlands to CEMEX Construction Materials, Inc.

ENVIRONMENTAL IMPACTS, ACTION TAKEN BY WATERBOARD OR OTHER AGENCIES

Environmental impacts of the sludges include lead, petroleum hydrocarbons, volatile organic compounds, excessive salinity, acidity, and total organic carbon concentration.

TIMELINE

- 1920s: the Alabama Septage Pits are first utilized
- 1971 to 1986: the pits are leased for use by private companies
- 1987: Regional Board directs C.L. Pharris Sand & Gravel, Inc. to collect and analyze sludge samples from each of the five ponds and to submit the analytical results with a site closure plan. The reports were submitted, but the proposed closure design was deemed inadequate
- 1988 and 1989: C.L. Pharris submits a Solid Waste Water Quality Assessment Test (SWAT) proposal. Groundwater monitoring wells are installed as part of the SWAT investigation
- May 1989 through June 1991: groundwater monitoring continues for eight consecutive quarters, submitted by C.L. Pharris to the Regional Board. Initial monitoring results from 1989 suggest the possibility of groundwater contamination, however analysis conducted from 1990-1991 seem to refute the initial data
- July 14, 1989: WDR Order No. 81-169 rescinded under Order No. 89-38
- 1994 and 1996: C.L. Pharris Sand & Gravel, Inc. (doing business as Sunwest Materials) coordinates two site investigations performed by consultants Jorgensen Environmental, Inc. (JEI) and Woodward-Clyde International, respectively. Sludge and soil samples are taken from the ponds and surrounding areas, and groundwater monitoring wells are installed and sampled. Laboratory analysis of samples indicate that the groundwater is probably not contaminated by the sludge
- November 1995: Regional Board advises the City of Redlands to close the ponds. The City authorizes a risk assessment study, conducted by a private consulting firm
- October 1997: The City submits a feasibility study of seven site closure alternatives. Board staff gives the City preliminary approval to develop a plan which implements any of four acceptable alternatives for final closure of the septage ponds.
- March 2003: Board staff issues letters to the City and Cemex. The septage waste does not pose a threat to groundwater as long as it remains in-place and not disturbed. Board staff requests the abandonment of monitoring wells.
- April 3, 2003: WDR Order No. 79-124 rescinded under Order No. 03-0051; discharges have been eliminated and the remaining material is deemed to present no threat to water quality
- June 10, 2008: Match Corporation submits a proposed workplan to mine aggregates beneath the former septage ponds. Access to aggregate resources requires that the residuals from the former septage ponds must be removed and, as a result, redispersed. The preferred method of removal and redispersion is to mix the sludges with other site soils as a soil amendment and place the mixture in previously disturbed areas as part of the mine site reclamation
- July 21, 2008: Regional Board rejects the proposed workplan submitted by Match Corporation; the sludges' high lead content limits its ability to be legally removed and redispersed, making it incompatible with the workplan

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Formerly Utilized Sites Remedial Action Program:

DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List:

NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Dec 30, 2021

National Priority List - Proposed:

PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Dec 30, 2021

Deleted NPL:

DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Dec 30, 2021

SEMS List 8R Active Site Inventory:

SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Dec 30, 2021

Inventory of Open Dumps, June 1985:

ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites:

[SEMS ARCHIVE](#)

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: Dec 30, 2021

Comprehensive Environmental Response, Compensation and Liability Information System -

[CERCLIS](#)

CERCLIS:

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands:

[IODI](#)

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned:

[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens:

[CERCLIS LIENS](#)

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

RCRA CORRACTS-Corrective Action:

[RCRA CORRACTS](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Nov 17, 2021

RCRA non-CORRACTS TSD Facilities:

[RCRA TSD](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Nov 17, 2021

RCRA Generator List:

[RCRA LQG](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Nov 17, 2021

RCRA Small Quantity Generators List:

[RCRA SQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Nov 17, 2021

RCRA Very Small Quantity Generators List:

[RCRA VSQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Nov 17, 2021

RCRA Non-Generators:

[RCRA NON GEN](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Nov 17, 2021

RCRA Sites with Controls:

[RCRA CONTROLS](#)

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Nov 17, 2021

Federal Engineering Controls-ECs:

[FED ENG](#)

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Dec 30, 2021

Federal Institutional Controls- ICs:

[FED INST](#)

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Dec 30, 2021

Land Use Control Information System:

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 04/27/2021 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/27/2021 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2021 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/22/2021 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 01/25/2021 has revealed that there are 3 CA ENVIROSTOR sites within approximately 1 mile of the target property.

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 09/30/2017 has revealed that there is 1 2020 COR ACTION site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Summary Details:

Conditions at proposal October 15, 1984): Norton Air Force Base covers approximately 2,036 acres 58 miles east of Los Angeles near the City of San Bernardino, San Bernardino County, California. It is in a low-lying alluvial plain surrounded on the north and east by the San Bernardino Mountain Range. The base began operations in 1942 and has served as a major overhaul center for jet engines and the general repair of aircraft. Since 1962, the facility has served as a Military Airlift Command Base. In addition, Norton formerly had the responsibility for providing maintenance and logistics for liquid-fuel intercontinental ballistic missiles. Past hazardous waste management practices may have contributed to existing contamination problems throughout the base. The practices include burial of drums and other unspecified materials; disposal of waste oils, solvents, and paint residues into landfills, unlined pits, ponds, and drying beds; storage in leaking

underground tanks; and spills of AVGAS, oils, solvents, PCBs, and acidic plating solutions. Industrial solvents have been used extensively on the base. Unknown quantities of spent solvents were disposed of in several base landfills. A well on the base has been contaminated with trichloroethylene (TCE). The well water is currently being used in a blended system and is sampled quarterly to ensure that TCE is below the California State action level. The water is used by approximately 11,000 people who live and/or work on the base. Norton Air Force Base is participating in the Installation Restoration Program (IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from hazardous materials. The Air Force has completed Phase I records search). Phase II remedial investigation) is underway. Status July 22, 1987): In November 1986, the California Regional Water Quality Control Board issued a Cleanup and Abatement Order requiring Norton to clean up one on-base area, the Industrial Waste Water Treatment Plant Sludge Drying Beds. Phase II-Stage 2 of the IRP was completed in December 1986. It focused on characterization of the contamination at 18 on-base areas. More than 22 areas have been identified to date. Additional areas will be studied in Stage 3, scheduled to begin in the fall of 1987. Within the boundaries of this Federal facility, there are areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act (RCRA). However, no such areas were included in scoring this specific site. Therefore, this Federal facility site is being placed on the Federal section of the NPL under the NPL/RCRA policy announced on September 8, 1983 (48 FR 40662).
