EXECUTIVE SUMMARY

Alta Environmental DBA NV5 (NV5) has completed a Phase I Environmental Site Assessment (ESA) of the McKinley Elementary School located at 2401 Santa Monica Boulevard, Santa Monica, Los Angeles County, California (Site). The ESA was performed in conformance with the scope and limitations of ASTM E1527-13 standards. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. The assessment was performed to identify conditions indicative of releases and threatened releases of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances on, at, in, or adjacent to the Site. These issues are considered recognized environmental conditions (RECs).

Site Location and Use

The Site is located at 2401 Santa Monica Boulevard in Santa Monica, Los Angeles County, California. The property consists of a single parcel of land that totals approximately 6.5 acres in size. The Site can be identified by Los Angeles County Tax Assessor Parcel Number (APN): 4276-023-900. The Site is located within an area primarily for mixed commercial and residential use. Current uses of adjoining properties include residential developments to the northwest, and mixture of residential and commercial developments to northeast and southwest, and multiple commercial developments to the southeast. Adjoining commercial properties include a dry-cleaner and laundromat (2439-2441 Santa Monica Boulevard) to the northeast, UCLA Parkside Medical Center Complex (2336 to 2428 Santa Monica Boulevard) to the southeast, and a beauty supply store (2307 Santa Monica Boulevard), Mail Center (2309 Santa Monica Boulevard), and Thai Vegan (2311 Santa Monica Boulevard) to the southwest.

At the time of our site reconnaissance, the Site was developed with an elementary school. Improvements consisted of several classroom buildings, paved parking areas, temporary classroom structures (bungalows) and playground areas.

The first known development to the Site was around 1925 when a school was developed on the southern portion of the Site. Several additional school buildings were constructed at the Site sometime between 1928 and 1938. A cafeteria/kitchen was developed on the southwest portion of the Site sometime between 1950 and 1952. Two detached buildings were demolished sometime between 1952 and 1977 and five detached classrooms were developed on the western portion of the Site sometime between 1972 and 1986. A detached building (classroom) was developed on the eastern portion of the Site sometime between 1972 and 1977. Another detached building was developed in the middle of the Site between 1989 and 2002. In addition, the five buildings on the western portion of the Site were demolished and redeveloped with six detached bungalow type classrooms between 1989 and 2002.

Data Gaps

The ASTM Standard defines a data gap as “a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information.” A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps. NV5 did not identify any data gaps during this assessment:

Vapor Encroachment Conditions (VEC)

A Tier 1 vapor encroachment screen (VES) for potential chemicals of concern (COC) was completed for the Site. The assessment was based on the ASTM published Standard Guide E 2600-15. The purpose of the VES was to evaluate for the potential for a vapor encroachment condition (VEC) which is the presence or likely presence of COC vapors in subsurface soils at the Site caused by the release of

vapors from contaminated soil or groundwater on or near the Site. The results of the VES did not identify evidence of a potential VEC in connection with the Site.

Conclusions and Recommendations

No evidence of a REC, Controlled REC, or historic REC in connection with the Site was identified during this assessment, except for the following:

- Regulatory database records and historical records indicate that an on-site drycleaner has operated at the northeast adjoining property located at 2441 Santa Monica Boulevard from at least 1991 to present day. Records indicate that dry-cleaning equipment that utilized perchloroethylene (a chlorinated solvent) was used at this facility. While no violations, leaks, spills, or releases are reported, based on the proximity of this facility to the Site and inherent environmental risk associated with dry-cleaning facilities. These listings are considered to represent a REC.
- Based on the age of the buildings on the Site, there is the possibility for lead-based paint (LBP) residues within the shallow soil. Based on the age of historical and current structures on the Site, arsenic, lead-based paint, asbestos, pesticides, and PCBs in caulking may have been historically used at the Site. As a result, there is a potential for these compounds to be present in the shallow soils onsite.

NV5 recommends that a limited Phase II ESA be conducted to determine if dry-cleaning operations on the northeastern adjoining property have negatively impacted the Site. Additionally, NV5 recommends a limited Phase II subsurface investigation be conducted in areas of proposed soil disturbance to evaluate shallow soil conditions with respect to the chemicals of concern listed above.

1 INTRODUCTION

The purpose of this assessment was to evaluate the environmental condition of the site as part of the District's environmental review standards in order to comply with the California Environmental Quality Act (CEQA) and Title V of the California Education Code. The assessment was performed to the standards to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner, or bona fide prospective purchaser under the federal Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13;
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312); and
3. 42 U.S.C. 9601(40) and 42 U.S.C. 9607(q).

This report was prepared exclusively for use by Santa Monica-Malibu Unified School District. This report may not be relied upon by any other person or entity without NV5's express written permission. The information, conclusions and recommendations described in this report apply to conditions existing at certain locations when services were performed and are intended only for the specific purposes, locations, time frames and project parameters indicated. NV5 cannot be responsible for the impact of any changes in environmental standards, practices, or regulations after performance of services.

1.1 Objectives

NV5's objective for this environmental assessment was to identify conditions indicative of releases and threatened releases of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances on, at, in, or to the Site. The assessment was done to meet ASTM Standard Practice E1527-13.

The assessment provided herein was determined based on the following:

1. Current and past property uses and occupancies;
2. Current and past uses of hazardous substances;
3. Waste management and disposal activities that could have caused releases or threatened releases of hazardous substances;
4. Current and past corrective actions and response activities undertaken to address past and on-going releases of hazardous substances;
5. Engineering controls;
6. Institutional controls; and
7. Evaluation of properties adjoining or located nearby the Site that have environmental conditions that could have resulted in conditions indicative of releases or threatened releases of hazardous substances to the Site.

1.2 Services

NV5 performed the following services to assess the property:

1. Reviewed historical sources of information;
2. Searched for recorded environmental clean-up liens;
3. Reviewed Federal, State, Tribal, and local government records;

4. Visually inspected the site and the adjoining sites;
5. Evaluated any specialized knowledge or experience on the part of the purchaser;
6. Determined commonly known or reasonably ascertainable information about the property; and
7. Evaluated properties adjoining or located nearby the Site that have environmental conditions that could have resulted in conditions indicative of releases or threatened releases of hazardous substances to the Site.

1.3 Assumptions

NV5 has assumed the following for the purposes of this assessment:

1. Information provided during any interview (written or oral) was accurate and correct;
2. Database information reviewed was accurate and correct;
3. Historical information reviewed was accurate and correct;
4. Information reviewed at any governmental agency was accurate and correct;
5. Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data or well data from adjacent sites, are assumed based on contours depicted on the United States Geological Survey (USGS) Topographic Maps; and
6. The property has been correctly and accurately identified by the client, client representatives, property contact, property owner, and/or property representatives.

1.4 Limitations

This assessment is limited to the standards set forth in ASTM Standard Practice E1527-13. This assessment specifically excludes assessment of the following:

1. Asbestos and asbestos-containing building materials;
2. Biological agents;
3. Cultural and historic resources;
4. Ecological resources;
5. Endangered species;
6. Health and safety;
7. Indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment;
8. Industrial hygiene;
9. Lead-Based Paint;
10. Lead in Drinking Water;
11. Mold;
12. Radon;
13. Regulatory compliance; and
14. Wetlands.

Considerations identified by ASTM as beyond the scope of a Phase I Environmental Site Assessment (ESA) may affect business environmental risk at a given property. These environmental issues or conditions may warrant assessment based on the type of property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13; and therefore, not addressed during this assessment.

Per the authorized scope of work, specific client requested items beyond the scope of ASTM E-1527-13 were addressed as part of this assessment (Section 6.0). These items included several items, listed on the following page, that address specific California Department of Education (CDE) requirements for school construction.

The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluation. The conclusions presented in this report are based solely on the services described herein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No subsurface exploratory drilling or sampling of any kind was done under the scope of this work. Unless specifically stated otherwise in the report, no chemical or physical analyses have been performed during this Phase I ESA.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This is subject to the limitations of historical documentation, availability, and accuracy of pertinent records and the personal recollections of those persons contacted. As applicable, NV5 has relied in good faith upon representations and information furnished by individuals with respect to operations and existing property conditions, to the extent that they have not been contradicted by data obtained from other sources. Accordingly, NV5 accepts no responsibility for any deficiencies, omissions, misrepresentations, or fraudulent acts of persons interviewed.

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. NV5 makes no warranty, express or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

This Phase I ESA is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. The assessment is not intended to assure clear title to the property in question. The sole purpose of investigation into property title records is to ascertain a historical basis of prior land use and environmental liens. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property visit. Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

1.5 Terms

The following terms are used in this report:

- “Site” refers to the property within the approximate boundaries described in Section 2;
- “Immediate site vicinity” refers to properties adjacent to the Site that share a common boundary with the Site; and

- “Site vicinity” refers to the area within an approximate 1-mile radius of the property.
- “Recognized Environmental Conditions” (RECs) – The presence or likely presence of any *hazardous substances* or *petroleum products* in, on, at or to a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a *material threat* of a future release to the environment. *De minimis* conditions are not recognized environmental conditions.
- “Controlled Recognized Environmental Condition” (CREC) – A recognized environmental condition resulting from a past release of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property use restrictions, activity and use limitations, institutional controls, or engineering controls*). A condition identified as a *controlled recognized environmental condition* does not imply that the *environmental professional* has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.
- “Historical Recognized Environmental Condition” (HREC) – A past release of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls (for example, *property use restrictions, activity and use limitations, institutional controls, or engineering controls*).
- “Migrate/migration” – For the purposes of this practice, “migrate” and “migration” refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.
- “Hazardous Substances” – The term “hazardous substance” is used here in general accordance with its use as defined in the following regulations:
 - Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, as amended; and
 - Superfund Amendment and Reauthorization Act (SARA) of 1986, as amended.

The terms “material,” “waste,” and “substances” are used interchangeably, and no legal distinction is implied between the terms as used herein. The words “impact” or “impacted” are used to mean the effect or result of a release of a hazardous substance that could result in a hazardous waste being present at the property. Search distances for government agency lists were those designated by the ASTM Standard E 1527-13.

1.6 Environmental Professionals

This document has been prepared by an Environmental Professional as defined by the EPA, 40 CFR Part 312.10. All work performed for this assessment was performed by or under the direct supervision of an Environmental Professional.

2 SITE DESCRIPTION

Mr. Eric Fraske of NV5 conducted a site reconnaissance on January 27, 2022. The descriptions provided herein are based on information provided by the current site representatives and on observations made during that visit. Representative site photographs are included in Appendix A. Site Location and Site

Layout maps depicting the areas and features described in the following sections are also provided in Figures 1 and 2.

2.1 Property Location and Use

2.1.1 Location and Size

The Site is located at 2401 Santa Monica Boulevard in Santa Monica, Los Angeles County, California. The property consists of a single parcel of land that totals approximately 6.5 acres in size. The Site can be identified by Los Angeles County Tax Assessor Parcel Number (APN): 4276-023-900.

2.1.2 Use

At the time of our site reconnaissance, the Site was developed with an elementary school. Improvements consisted of several classroom buildings, paved parking areas, temporary classroom structures (bungalows) and playground areas.

2.2 Utility Service Providers

The utilities servicing the Site are:

Electricity	Southern California Edison
Water	City of Santa Monica
Gas	Southern California Gas Company
Sewer	Santa Monica Public Works
Municipal Waste	City of Santa Monica Santa Monica Public Works Department, Resource and Recycling Division
Hazardous Waste	N/A

No water wells or septic systems were observed or reported to be present at the Site during the site reconnaissance.

2.3 Hazardous Materials and Chemical Storage Areas

Small quantities of household cleaning products were observed and reported to be present at the Site in janitorial closets and storage areas. No evidence of spills, leaks, or releases of these materials was observed during the site reconnaissance. Their presence is not considered to represent a REC.

2.3.1 Drums

No evidence of hazardous materials in drums on the Site was observed.

2.4 Storage Tanks

2.4.1 Aboveground Storage Tanks (ASTs)

No evidence of ASTs at the Site was observed or reported during the site reconnaissance.

2.4.2 Underground Storage Tanks (USTs)

No evidence of USTs at the Site was observed or reported during the site reconnaissance.

2.4.3 Septic Tanks

No evidence of septic tanks was observed onsite or reported during the site reconnaissance.

2.5 Polychlorinated Biphenyls

A pad-mounted electrical transformer was observed on the southern portion of the Site. Additionally, several pole-mounted electrical transformers were observed along the adjoining properties. No evidence of a past release from the transformers was observed or reported during the Site reconnaissance.

2.6 Floor Drains, Sumps, and Clarifiers

No clarifiers or sumps were observed or reported to be on the Site. Floor drains were observed in kitchen and restroom areas, however no evidence of spills or leaks into the floor drain was observed during the site reconnaissance.

2.7 Back-Up Power Generators

No fixed back-up power generators were observed or reported to be on the Site.

2.8 Cooling Towers

No cooling towers were observed or reported to be on the Site.

2.9 Elevators, Lifts and Compactors

A hydraulic passenger elevator is present in the main Site building. A wheelchair lift is present on the side of the stage in the auditorium. The elevator and lift appeared to be in good condition with no evidence of past leaks or releases.

2.10 Odors

No strong, pungent, or noxious odors indicative of a past release of hazardous substances or petroleum products were identified during this assessment.

2.11 Pools of Liquid

No standing surface water or other pits, ponds, or lagoons potentially containing hazardous substances or petroleum products were identified within the Site.

2.12 Surface Staining

No surface staining indicative of a past release of hazardous substances or petroleum products was identified within the Site.

2.13 Stressed Vegetation

No stressed vegetation or other indications of potential release of hazardous substances or petroleum products were observed during the site reconnaissance.

2.14 Solid Waste

No indications of unauthorized dumping of trash, construction or demolition debris, or other solid waste disposal were identified during the site reconnaissance.

2.15 Adjacent Sites

The Site is located within an area of mixed commercial and residential use. The following land use in the near vicinity of the property was observed:

Direction	Property Name	Property Address	Business Operation
Northwest	N/A	2317-2421 Arizona Avenue	Single-Family and Multi-Family Residential
Northeast	N/A	2436 Arizona Ave, 1301-1345 Chelsea Ave	Single-Family and Multi-Family Residential
	Big Waves Laundry	2439 Santa Monica Blvd	Coin Laundry
	TJ Cleaners	2441 Santa Monica Blvd	Dry cleaning
Southeast	Wishing Well Medical Supply	2312 Santa Monica Blvd	Medical Supplies
	Parkside Medical Center	2336 Santa Monica Blvd	Medical Center/Offices
	UCLA Parkside	2428 Santa Monica Blvd	Medical Center/Offices
Southwest	N/A	2304-2308 Arizona Avenue	Multi-Family Residential
	N/A	1303-1347 23 rd Street	Multi-Family Residential
	Beauty Supply Store	2307 Santa Monica Blvd	Beauty Supply Store
	Mail Center	2309 Santa Monica Blvd	Mail Center
	Thai Vegan	2311 Santa Monica Blvd	Restaurant

3 SITE SETTING

3.1 Topographic

The 2018 United States Geological Survey (USGS), [Beverly Hills] 7.5 Minute Topographic Quadrangle map of the Site and surrounding vicinity was reviewed. The elevation of the property is approximately 162 feet above mean sea level. Topography was observed to slope slightly in a south/southeasterly direction during the site reconnaissance. A copy of the USGS 7.5 Minute Topographic Quadrangle Map is included in Appendix B.

3.2 Regional Geology and Hydrology

The following description of regional geology and hydrology was developed based on regional information presented on the EDR GeoCheck report (2022) and Regional Water Quality Control Board's online *Geotracker* database.

According to United States Department of Agriculture (USDA) soil data published in the EDR GeoCheck report, soils underlying the Site are classified as urban land. Soils of this type are a mixture of clayey, silty, sandy, and gravelly loam (Appendix B).

Groundwater data published on the *Geotracker* website for an ongoing groundwater investigation at the Providence Saint John's Health Center located at 2121 Santa Monica Boulevard (approximately 600 feet southwest of the Site) indicated that the shallowest groundwater in the vicinity of the Site is approximately 140 feet below ground surface and flows towards the southeast.

3.3 Flood Plain

According to Federal Emergency Management Agency flood plain data presented in the site-specific Environmental Data Resources (EDR) Geotcheck Report, the Site is not located within a 100-year or 500-year flood zone (EDR, 2021). The EDR Report is presented as Appendix B.

3.4 Wetlands

According to map data published on the United States Department of Fish and Wildlife (USFW) National Wetlands Inventory (<https://www.fws.gov/wetlands/data/mapper.html>), No wetlands are mapped on the subject or adjoining properties (Appendix C).

3.5 Water Bodies

No water bodies were observed on the Site or adjoining properties.

3.6 Oil and Gas Wells

According to the State of California, Department of Conservation, Geologic Energy Management Division (CalGEM) oil and gas well finder map (WellSTAR), no oil/gas wells were identified on the Site.

4 USER-PROVIDED INFORMATION

Information obtained during the interview process is presented in the following sections.

4.1 Title Records

Title records were not provided by the site user representative. Chain of Title Records were obtained by NV5 and are presented in Appendix D. The current owner is listed as Santa Monica-Malibu Unified School District. No vesting deeds prior to 1940 were found during a search of Los Angeles County Recorder's and Assessor's offices.

4.2 Clean-Up Liens

No knowledge of any clean-up liens against the Site was reported by those interviewed. Furthermore, the EDR Environmental Lien and AUL Search report did not identify any environmental liens for the Site (Appendix D).

4.3 Activities and Use Limitations

No knowledge of site-specific activities or use limitations recorded against the Site were reported by those interviewed. Furthermore, according to the EDR Lien and AUL Search report, no Activity and Use Limitations are identified for the Site (Appendix D).

4.4 Specialized Knowledge

No specialized knowledge identifying evidence of a recognized environmental condition was disclosed by those interviewed during this Phase I investigation.

4.5 Commonly Known Information

No commonly known information identifying evidence of a recognized environmental condition was disclosed by those interviewed during this Phase I investigation.

4.6 Previous Environmental Assessments

The client provided NV5 with a copy of a previous Phase I Environmental Screening that was conducted by LFR Inc. (LFR) on May 5, 2008. LFR did not find any on-Site or off-Site releases or environmental concerns, except for the following:

- Due to the presence of current and former structures on the Site, lead and termiticides (chlorinated pesticides) may be in the soil. DTSC typically requires lead sampling anytime a structure that was constructed prior to the ban of LBP in the late 1970s/early 1980s is present at a Site.

This documented is presented in Appendix F.

5 RECORDS REVIEW

5.1 Governmental Databases

NV5 contracted EDR to perform a radius search of governmental databases for this project. The distribution of listed sites with respect to the Site is tabulated and mapped in EDR's Radius Map Report, which can be found in Appendix B. The reader is referred to the table, which can be found near the front of EDR's report.

NV5 conducted a review of the above-referenced database reports and provides the following findings based on sites that have the potential to impact the Site, with respect to the inferred southeasterly groundwater flow direction. Our findings are based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within unsaturated soil for a significant distance. Although a hazardous material can migrate in groundwater in a generally down-gradient direction, there are limitations to this interpretation such as groundwater depth, soil lithology and other subsurface barriers.

5.1.1 Site Database Findings

EDR's report did identify the Site address, as summarized below:

Facility Name & Address	Santa Monica-Malibu USD/McKinley Elementary 2401 Santa Monica Boulevard Santa Monica, California	Site
Database(s) Listed: ECHO, HWTS, HWTS HAZNET, FINDS, RCRA NONGEN/NLR		
The Site address was listed on the ECHO database; however, no violations were reported. According to the two HWTZ HAZNET database listings, this facility disposed of; 25.3 tons of asbestos containing waste in 1993, 0.105 tons of inorganic solid waste in 2007, 0.84 tons of waste in 2001, 0.035 tons of inorganic solid waste in 2014, 0.07 tons of inorganic solid waste in 2014, and 0.04 tons of inorganic solid waste in 2008. The FINDS and RCRA NONGEN/NLR database listings show that this facility is not listed as a handler of nonhazardous or hazardous waste.		

5.1.2 Adjoining Property Database Findings

EDR's report identified multiple adjoining properties. The details of these listings are presented below.

Facility Name & Address	United Property Management Services/EZ Shell 1405 Cloverfield Boulevard Santa Monica, California	Southeastern Adjoining Property
Database(s) Listed: HIST AUTO		
This facility is located across Santa Monica Boulevard from the Site on the location of the present-day Parkside Medical Center. This former facility is listed on the EDR HIST AUTO database since a gasoline and automobile service station occupied the property from at least 1972 to 1975. Based on the down-gradient position of this facility with respect to the Site, subsequent redevelopment, and the lack of a reported release from this facility, these listings are not considered to represent an REC.		
Facility Name & Address	Suzan K Vigil DDS 2336 Santa Monica Boulevard Santa Monica, California	Southeastern Adjoining Property
Database(s) Listed: RCRA NONGEN/NLR		
According to the RCRA NONGEN/NLR database, this facility was reported to not be a generator of hazardous waste as of December of 2008.		
Facility Name & Address	Southern California Medical Gastroenterology Group 2336 Santa Monica Boulevard Santa Monica, California	Southeastern Adjoining Property
Database(s) Listed: RCRA NONGEN/NLR		
According to the RCRA NONGEN/NLR database, this facility was reported to not be a generator of hazardous waste as of July of 2018.		
Facility Name & Address	UCLA Health Hematology Oncology Parkside 2336 Santa Monica Boulevard Santa Monica, California	Southeastern Adjoining Property
Database(s) Listed: RCRA NONGEN/NLR		
According to the RCRA NONGEN/NLR database, this facility was reported to not be a generator of hazardous waste as of March of 2018.		
Facility Name & Address	Fertility & Surgical Med Association of CA INC DBA FERT 2428 Santa Monica Boulevard Santa Monica, California	Southeastern Adjoining Property
Database(s) Listed: RCRA NONGEN/NLR		
According to the RCRA NONGEN/NLR database, this facility was reported to not be a generator of hazardous waste as of August of 2015.		

Facility Name & Address	The Angeles Clinic & Research Institute Radiation 2428 Santa Monica Boulevard Santa Monica, California	Southeastern Adjoining Property
Database(s) Listed: RCRA NONGEN/NLR		
According to the RCRA NONGEN/NLR database, this facility was reported to not be a generator of hazardous waste as of June of 2016.		

Facility Name & Address	TJ Cleaner’s, Remedios Masangcay, DBA/ Performance Cleaner’s, Frederick X Olin/ Ardmor Co Inc, Thrifty Clean/ TJ Cleaner’s, Theodore Albert Masangcay 2441 Santa Monica Boulevard Santa Monica, California	Northeastern Adjoining Property
Database(s) Listed: DRYCLEANERS, HWTS, RCRA-SQG, FINDS, ECHO, HAZNET, EDR HIST CLEANER		
This facility is located across Chelsea Avenue from the Site and is topographically and hydraulically upgradient to the Site. According to these databases, an on-site dry cleaner has operated at the northeastern adjoining property since at least 1991. Records indicate that dry-cleaning equipment that utilized perchloroethylene (a chlorinated solvent) was used at this facility. While no violations, leaks, spills, or releases are reported, based on the proximity of this facility to the Site and inherent environmental risk associated with dry-cleaning facilities. These listings are considered to represent a REC.		

5.1.3 General Vicinity Database Findings

EDR’s report identified multiple off-site facilities within applicable ASTM search radii. NV5 considered all of the listed sites unlikely to impact the subject site, based upon factors including (but not limited to):

- The nature of the listing;
- The use of the site;
- When the site was listed and its current listed status;
- The developmental density of the setting;
- The distance between the listed and subject sites as related to the distance that releases are likely to migrate based on local surface and subsurface drainage conditions;
- The presence of intervening drainage divides; and/or
- The inferred groundwater movement.

5.2 Regional Agency Offices

NV5 submitted information requests to the various county and regional agencies that may have records with regard to environmentally-oriented concerns affecting the Site, in accordance with ASTM E1527-13 requirements. Should significant records be identified at a later date, an addendum to this report will be issued. Documentation obtained from regulatory agency requests is presented in Appendix C.

Agency	Records Summary
California Division of Geologic Energy Management (CalGEM)	No oil or gas wells were identified on the Site or adjoining properties.

Agency	Records Summary
Regional Water Quality Control Board – GEOTRACKER	<u>Site</u> No records identified. <u>Adjoining Property</u> No records identified.
Department of Toxic Substances Control – ENVIROSTOR	<u>Site</u> No records identified. <u>Adjoining Property</u> No records identified.
Santa Monica Fire Department	No records identified.
City of Santa Monica Building and Safety Department	Records identified multiple building, construction, and fire sprinkler permits related to the construction and renovation of the existing school buildings that were dated between 1914 and 1973.

5.3 Historical Records

NV5 used USGS Topo maps, aerial photographs, fire insurance maps, and historical street directories to provide information about the history of the Site and its surroundings. The resources NV5 reviewed are tabulated below and presented in Appendix E.

Historical Resources		
Source Type	Years Reviewed	Source
USGS Topo Maps	1894, 1896, 1898, 1900, 1902, 1920, 1921, 1925, 1934, 1950, 1966, 1972, 1981, 1994, 1995, 2012, 2015, 2018	USGS/EDR

5.4 Past Uses – Site

Our interpretation of past uses of the property, based on the historical data sources listed above, are tabulated below.

Date	Interpreted Property Use
1894 to 1921	USGS Topo maps, Sanborn maps, and an aerial photograph depict the Site as vacant and undeveloped.
1925 to 2022	<p>USGS Topo maps and aerial photographs show that several smaller detached buildings were constructed on the Site sometime between 1925 and 1938. A Sanborn map from 1950 shows the Site to be occupied by classrooms, an auditorium, office space, a detached restroom, and two additional detached buildings labeled as a toy shop and classrooms. Sometime between 1950 and 1952, a building labeled as cafeteria/kitchen was developed on the southwest portion of the Site. The toy shop and adjacent classroom building on the southwest portion of the Site was demolished sometime between 1952 and 1977. Five additional detached buildings (classrooms) were developed on the western portion of the Site sometime between 1972 and 1986. A detached building (classroom) was developed on the eastern portion of the Site sometime between 1972 and 1977. Another detached building was developed in the middle of the Site between 1989 and 2002. In addition, the five buildings on the western portion of the Site were demolished and redeveloped with six detached bungalow type classrooms between 1989 and 2002. The Site was remained the same configuration since 2002.</p> <p>Historic city directories identified the tenant of the property as:</p> <p><u>2401 Santa Monica Boulevard</u></p> <ul style="list-style-type: none"> • McKinley School (1928 to 2014) • Santa Monica Unified School District (1954 to 1991) • A Hunstein Henry EX (1954) • B Wallace Robt (1954) • Santa Monica City College (1958) • Gymboree of West LA (1985) • More than Music for Children-Karen Vinje (1985) • Sdc a e Sit (1991) • Santa Monica Unit Indenture Cab Taxi Santa Monica (1991) • Santa Monica Malibu Unified School District (1999 to 2014) • McKinley Elementary SC Child Center (2000) • Childrens CT (2006)

5.5 Past Uses – Adjoining Properties

Our interpretation of past uses of the adjoining properties, based on the historical data sources listed above, are tabulated below.

Date	Description
Northwest Adjoining Properties	
1894 to 1918	USGS Topo maps and aerial photographs depict the properties to be vacant and undeveloped, with the exception of one single family home.
1928 to 2022	USGS Topo Maps, aerial photographs, and Sanborn maps depict the property to be developed with residential homes. Historic city directories identified the tenants of the property as: <u>2317 Arizona Avenue</u> <ul style="list-style-type: none"> • No listings <u>2411 Arizona Avenue</u> <ul style="list-style-type: none"> • Various residential tenants/owners (1928 through 2014) <u>2415 Arizona Avenue</u> <ul style="list-style-type: none"> • Various residential tenants/owners (1940 through 2014)
Northeast Adjoining Property	
1894 to 1918	USGS Topo maps and Sanborn maps depict the property to be vacant and undeveloped.
1925 to 2022	USGS Topo maps, aerial photographs, and Sanborn maps depict the properties to be developed with multi-family and single-family residences. LA County current tax assessor records indicate that the properties were developed with these residences between 1925 and 1959. One commercial building with a parking lot on the northern corner of the intersection Chelsea Avenue and Santa Monica Boulevard was developed in 1948. The buildings have remained unchanged since initial development.

5.6 Interviews

NV5 interviewed parties potentially having information about current and/or former conditions at the Site. The parties and their affiliation are tabulated on the following page.

Interviews		
Name	Affiliation	Role
Julian Capata	SMMUSD	Client/User
Matthew Smith	SMMUSD	Site Contact/Site Representative

No evidence of a REC in connection with the Site was disclosed during the abovementioned interviews. Pertinent information collected during these interviews has been incorporated throughout the report where appropriate. Interview records are presented in Appendix F.

6 NON-SCOPE CONSIDERATIONS

Per the authorized scope of work, items beyond the scope of ASTM E-1527-13 were addressed as part of this assessment. These items included several items, listed on the following page, that address specific California Department of Education (CDE) requirements for school construction.

Table 1 CDE Requirements	
Regulation/Code	Description
Ed. Code § 17213 (a)	The school district, as the lead agency, as defined in Section 21067 of the Public Resources Code, determines that the property purchased or to be built upon is not any of the following:
Ed. Code § 17213 (a)(1)	The site of a current or former hazardous waste disposal site or solid waste disposal site, unless if the site was a former solid waste disposal site, the governing board of the school district concludes that the wastes have been removed.
Source: Envirostor https://www.envirostor.dtsc.ca.gov/public/ GeoTracker https://geotracker.waterboards.ca.gov/	Historical records reviewed during the Phase I ESA and regulatory records reviewed on the Envirostor and GeoTracker website did not identify the Site as a hazardous waste disposal site or solid waste disposal site.
Ed. Code § 17213(a)(2)	A hazardous substance release site identified by the Department of Toxic Substances Control in a current list adopted pursuant to Section 25356 of the Health and Safety Code for removal or remedial action pursuant to Chapter 6.8 (commencing with Section 25300) of Division 20 of the Health and Safety Code.
Source: Envirostor https://www.envirostor.dtsc.ca.gov/public/ GeoTracker https://geotracker.waterboards.ca.gov/	Historical records reviewed during the Phase I ESA and regulatory records reviewed on the Envirostor and GeoTracker website did not identify the Site as a hazardous substance release site.

Table 1 CDE Requirements	
Regulation/Code	Description
Ed. Code § 17213(a)(3)	A site that contains one or more pipelines, situated underground or aboveground, that carries hazardous substances, extremely hazardous substances, or hazardous wastes, unless the pipeline is a natural gas line that is used only to supply natural gas to that school or neighborhood.
Source: Phase I ESA Report National Pipeline Mapping System https://pvnpm.phmsa.dot.gov/PublicViewer/	Site interviews and regulatory records reviewed during the Phase I ESA and regulatory records reviewed on the National Pipeline Mapping System website did not identify the presence of pipelines that carry hazardous substances or wastes at the Site.
5 CCR § 14010	All districts shall select a school site that provides safety and that supports learning. The following standards shall apply:
5 CCR § 14010(c)	The property line of the site even if it is a joint use agreement as described in subsection (o) of this section shall be at least the following distance from the edge of respective power line easements: (1) 100 feet for 50-133 kV line. (2) 150 feet for 220-230 kV line. (3) 350 feet for 500-550 kV line.

Table 1 CDE Requirements	
Regulation/Code	Description
5 CCR § 14010(d)	If the proposed site is within 1,500 feet of a railroad track easement, a safety study shall be done by a competent professional trained in assessing cargo manifests, frequency, speed, and schedule of railroad traffic, grade, curves, type and condition of track need for sound or safety barriers, need for pedestrian and vehicle safeguards at railroad crossings, presence of high pressure gas lines near the tracks that could rupture in the event of a derailment, preparation of an evacuation plan. In addition to the analysis, possible and reasonable mitigation measures must be identified.
Source: Phase I ESA Report OpenRailwayMap https://www.openrailwaymap.org/	Regulatory records reviewed during the Phase I ESA and regulatory records reviewed on the Open Railway Map website did not identify the presence of a railroad track within 1,500 feet of the Site.
5 CCR § 14010(f)	Pursuant to Ed. Code §§ 17212 and 17212.5, the site shall not contain an active earthquake fault or fault trace.

Prepared by Leighton Consulting, Inc. Dated November 19, 2021.</i>	According to the Client provided geotechnical report, <i>“Based on our site reconnaissance and review of available geologic literature and aerial photographs, we find no evidence that suggests active faults have been mapped across the site, and the site is not located within a currently established Alquist-Priolo (AP) Earthquake Fault Zone (Bryant and Hart, 2007, CGS, 2018).”</i>
5 CCR § 14010(g)	Pursuant to Ed. Code §§ 17212 and 17212.5, the site is not within an area of flood or dam flood inundation unless the cost of mitigating the flood or inundation impact is reasonable.

Review of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM), Map Number 06037C1590G, effective date April 21, 2021, from the Map Service Center (MSC) viewer, indicates that the site is designated as Zone "X", "Area of minimal flood hazard".
5 CCR § 14010(h)	The site shall not be located near an above-ground water or fuel storage tank or within 1,500 feet of the easement of an above ground or underground pipeline that can pose a safety hazard as determined by a risk analysis study, conducted by a competent professional, which may include certification from a local public utility commission.
Source: Phase I ESA Report National Pipeline Mapping System https://pvnpm.phmsa.dot.gov/PublicViewer/	Site reconnaissance and regulatory records reviewed during the Phase I ESA did not identify the presence of above-ground water or fuel storage tanks on adjacent properties. Regulatory records reviewed on the National Pipeline Mapping System website indicated that a pipeline that carries a hazardous liquid is present along 26 th Street, which is approximately 725 feet northeast of the northeastern Site boundary. According to information received from the California State Fire Marshall, this pipeline (the Ventura 10-inch System) is a 10-inch underground crude oil pipeline operated by Crimson Pipeline. This pipeline is regular inspected by personnel from the CAL FIRE Office of the State Fire Marshall. Inspection reports are presented in Appendix C. The most recent inspection conducted in 2021 did not identify evidence of a release from this line.
5 CCR § 14010(i)	The site is not subject to moderate to high liquefaction or landslides.

The potential for seismically induced landslides to affect the site is low."</i></p>
5 CCR § 14010(m)	Existing or proposed zoning of the surrounding properties shall be compatible with schools in that it would not pose a potential health or safety risk to students or staff in accordance with Ed. Code § 17213 and Gov. Code § 65402 and available studies of traffic surrounding the site.
Phase I ESA City of Santa Monica SaMoMap https://samomap.santamonica.gov/Html5Viewer/index.html?viewer=SaMoMAPPublic.Viewer	The type of on-site land uses would not change over existing conditions. The Project is consistent with the City of Santa Monica zoning designation of the Project site, which is R-2 (Two-Unit Residential) with a Public Lands Overlay District, as well as the General Plan designation of Public Land.
5 CCR § 14010(r)	Easements on or adjacent to the site shall not restrict access or building placement.
Appendix D EDR Chain of Title Report	NV5 subcontracted EDR to obtain title documentation from the Los Angeles County Recorder's Office. According to this information, no property easements are recorded at the Site.
5 CCR § 14010(s)(2)	The cost and complications of the following shall be considered in the site selection process and should not result in undue delays or unreasonable costs consistent with State Allocation Board standards: Site preparation including grading, drainage, demolition, hazardous cleanup, including cleanup of indigenous material such as serpentine rock, and off-site development of streets, curbs, gutters, and lights.

Code § 17213.
Source: Appendix C South Coast Air Quality Management District – April 19, 2022, Response Letter	NV5 submitted a Grid Search Request to the South Coast Air Quality Management District (SCAQMD) to identify all AQMD permitted facilities with the potential to emit hazardous air pollutants located within ¼ mile of the Site. The SCAQMD responded to the request in a letter dated April 19, 2022, indicating that eleven permitted facilities were identified within ¼ mile of the Site. These facilities included two nearby dry cleaners, a nearby gasoline station, restaurants that operate charbroilers, and commercial facilities that maintain and operate emergency electrical power generators. A table and map identifying the locations of these businesses are included in the SCAQMD letter.

Regulation/Code	Description
5 CCR § 14011(j)	For purposes of Environmental Site Assessment, school districts shall comply with Ed. Code §§ 17210.1, 17213.1, and 17213.2.
Phase I ESA	A Phase I ESA report of the Site has been prepared in accordance with the requirements described in the Ed. Code.
5 CCR § 14011(k)	Follow the recommendations of the State Superintendent of Public Instruction report based upon the Department of Transportation, Division of Aeronautics, findings, if the proposed site is within two miles of the center line of an airport runway or proposed runway as required by Ed. Code § 17215.

7 VAPOR ENCROACHMENT SCREENING

ASTM E1527-13 requires the Environmental Professional to evaluate the potential for vapor encroachment of chemicals of concern (COC) onto the Site, and to determine if such vapor encroachment constitutes evidence of a REC on the Site. The E1527-13 Standard Practice does not specifically state the methods that must be used to screen for potential vapor encroachment issues. However, ASTM has developed a separate Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (ASTM E2600-15), which outlines an ASTM E1527-13-compliant methodology to conduct vapor encroachment screening.

7.1 VES Methodology

The goal of conducting Vapor Encroachment Screening (VES) is to identify a vapor encroachment condition (VEC), which is defined as the presence or likely presence of chemicals of concern (COC) vapors in the vadose zone of the Site caused by the release of vapors from contaminated soil and/or groundwater either on or near the Site. If a VEC is identified, the environmental professional must determine whether the VEC represents evidence of a REC on the Site under the context of the Phase I ESA Standard Practice. It should be noted that the identification of a VEC on the Site does not necessarily indicate that a potential for migration of vapors into existing or proposed structures on the Site is likely. The environmental professional will identify the VEC as a REC where the potential for vapor migration into structures is considered likely, or where the contaminant concentrations in the soil, groundwater, or soil vapors on the Site are significant and likely to result in enforcement against on-site or off-site responsible parties.

The VES utilizes information regarding the potential presence of releases on or near the Site that were collected as a normal part of the Phase I ESA process, such as governmental database records, review of governmental files, historical data sources, etc. The VES Standard Guide requires the environmental professional to search for potential sites of concern within specific search radii. The area of concern search radius is 1,760 feet (1/3 mile) for non-petroleum contaminated sites and 528 feet (1/10 miles) for petroleum contaminated sites. The default search distances may be expanded or reduced in the upgradient, downgradient, or cross-gradient directions by the environmental professional based on experience in the local area and applying professional judgment to factors such as where a well-defined regional groundwater flow direction is identified, or whether other geologic features such as low permeability soils or hydrogeologic boundaries such as rivers or streams exist which would tend to limit the potential for migration of groundwater or vapors in a particular direction.

7.2 VES Search Results

NV5 identified several sites of potential concern within the VES search radii, based on our review of governmental database records, regulatory agency files, and historical resources referenced in Section 5.3. However, based on our review of available information, none of these sites appear to represent a VEC in connection with the Site.

8 FINDINGS

Based on the site reconnaissance, review of historical and available documents, and interviews, NV5 finds the following:

8.1 Current Site Activities

At the time of our site reconnaissance, the Site was developed with an elementary school. Improvements consisted of several classroom buildings, paved parking areas, temporary classroom structures (bungalows) and playground areas.

8.2 Historical Site Activities

The first known development to the Site was around 1925 when a school was developed on the southern portion of the Site. Several additional school buildings were constructed at the Site sometime between 1928 and 1938. A cafeteria/kitchen was developed on the southwest portion of the Site sometime between 1950 and 1952. Two detached buildings were demolished sometime between 1952 and 1977 and five detached classrooms were developed on the western portion of the Site sometime between 1972 and 1986. A detached building (classroom) was developed on the eastern portion of the Site sometime between 1972 and 1977. Another detached building was developed in the middle of the Site between 1989 and 2002. In addition, the five buildings on the western portion of the Site were demolished and redeveloped with six detached bungalow type classrooms between 1989 and 2002. The Site was remained the same configuration since sometime between 1989 and 2002.

8.3 Off-Site Activities

The Site is located within an area primarily for mixed commercial and residential use. Current uses of adjoining properties include residential developments to the northwest, northeast, and southwest, and multiple commercial developments to the southeast. Adjoining commercial properties include a dry-cleaner and laundromat (2439-2441 Santa Monica Boulevard), UCLA Parkside Medical Center (2336 to 2428 Santa Monica Boulevard), a beauty supply store (2307 Santa Monica Boulevard), Mail Center (2309 Santa Monica Boulevard), and Thai Vegan (2311 Santa Monica Boulevard).

8.4 Data-Gaps

The ASTM Standard defines a data gap as “a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information.” A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps. NV5 did not identify any significant data gaps during this assessment.

9 CONCLUSIONS AND RECOMMENDATIONS

NV5 completed a Phase I ESA of the Site located at 2401 Santa Monica Boulevard in Santa Monica, California. The ESA was performed in conformance with the scope and limitations of ASTM E1527-13 standards. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. The assessment was performed to identify conditions indicative of releases and threatened releases of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances on, at, in, or to the Site.

No evidence of a REC, Controlled REC, or historic REC in connection with the Site was identified during this assessment, except for the following:

- Regulatory database records and historical records indicate that an on-site drycleaner has operated at the northeast adjoining property located at 2441 Santa Monica Boulevard from at least 1991 to present day. Records indicate that dry-cleaning equipment that utilized perchloroethylene (a chlorinated solvent) was used at this facility. While no violations, leaks, spills, or releases are reported, based on the proximity of this facility to the Site and inherent environmental risk associated with dry-cleaning facilities. These listings are considered to represent a REC.
- Based on the age of the buildings on the Site, there is the possibility for lead-based paint (LBP) residues within the shallow soil. Based on the age of historical and current structures on the Site, arsenic, lead-based paint, asbestos, pesticides, and PCBs in caulking may have been historically used at the Site. As a result, there is a potential for these compounds to be present in the shallow soils onsite.

NV5 recommends that a limited Phase II ESA be conducted to determine if dry-cleaning operations on the northeastern adjoining property have negatively impacted the Site. Additionally, NV5 recommends a limited Phase II subsurface investigation be conducted in areas of proposed soil disturbance to evaluate shallow soil conditions with respect to the chemicals of concern listed above.

10 QUALIFICATIONS AND SIGNATURE

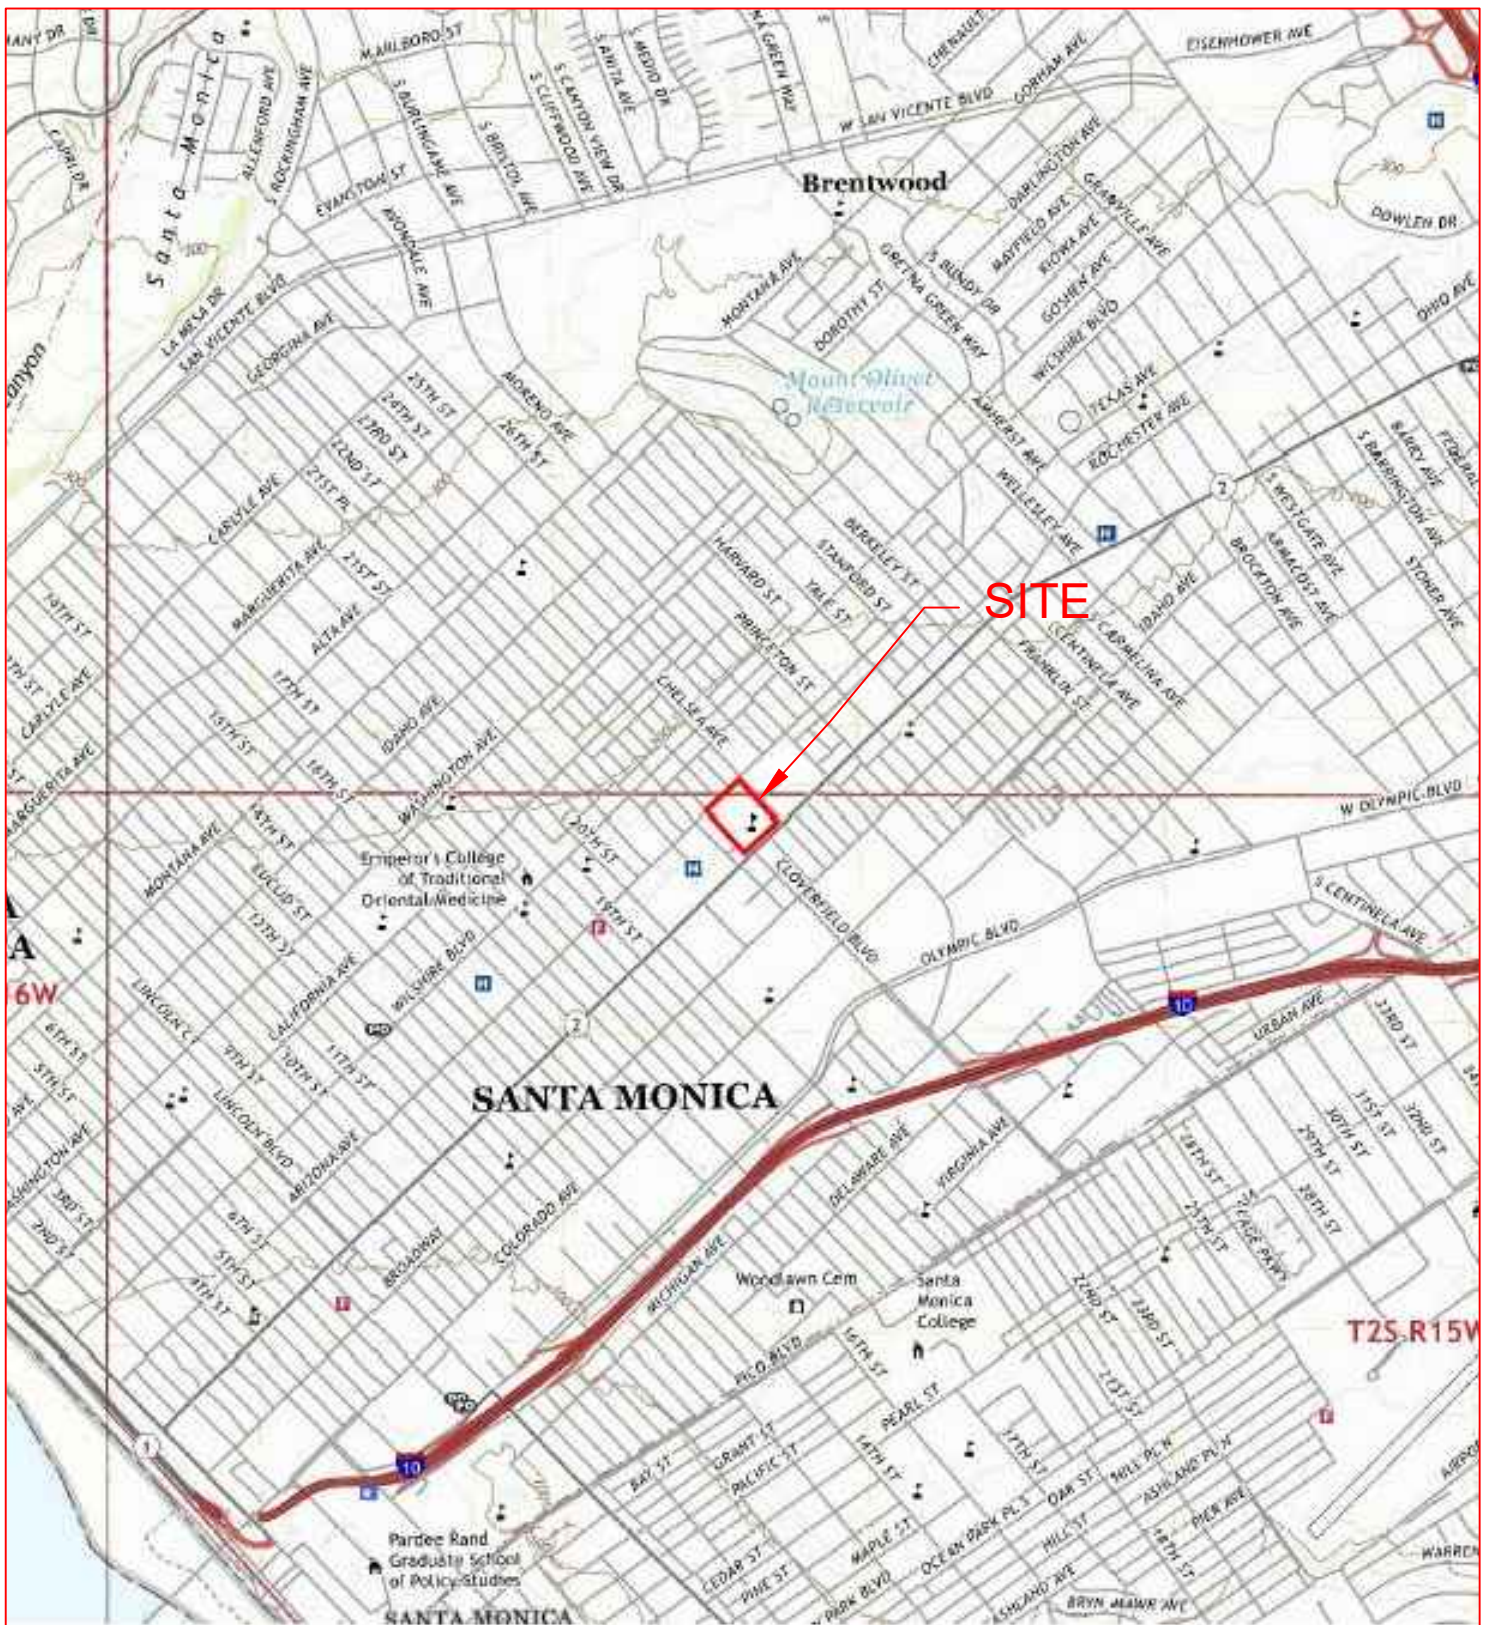

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental professional as defined in 40 CFR 312.10. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. I have developed and performed the All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 10/20/2021 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/20/2021 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 13 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal (Superfund) equivalent sites

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, has revealed that there is 1 CA RESPONSE site within approximately 1 mile of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to,

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 60 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CA LOS ANGELES CO LF METHANE: This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

A review of the CA LOS ANGELES CO LF METHANE list, as provided by EDR, and dated 10/12/2021 has revealed that there are 2 CA LOS ANGELES CO LF METHANE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 7 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CA BOND EXP. PLAN:

Responsible Party: BACKLOG SITE CLEANUP PLANNING REPORT
 Project Revenue Source Company: Not reported
 Project Revenue Source Addr: Not reported
 Project Revenue Source City,St,Zip: Not reported
 Project Revenue Source Desc: This site is projected for cleanup by responsible parties with reimbursement to DHS for staff and related costs. However, if the responsible parties fail to provide funding for cleanup, another source of funds will need to be established.

Site Description: This site is a former "burn dump", which operated until the early 1950's. In later years, the facility apparently accepted inert materials.

Hazardous Waste Desc: During core drilling prior to construction at the former "burn dump" site, elevated levels of organic material and lead were encountered in the soil and in the upper saturated zone. It is believed most of the contaminated soil has been removed from the site and properly disposed of, in accordance with State regulations.

Threat To Public Health & Env: The threat from this site is believed to be minimal. It is believed that most of the contamination has already been removed from the site. The upper aquifer in the area is generally contaminated by organic solvents and is not used as a public water supply.

Site Activity Status: DHS has required and the developer has provided a waste management plan for dealing with hazardous substances during excavation. The proposed depth of the excavation would remove the majority of residual wastes from the landfill. Materials exceeding DHS's standards are hazardous wastes and will be handled as Class 1 wastes; marginally contaminated waste will be taken to an appropriate landfill.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Document Type: Site Screening
Completed Date: 08/29/1994
Comments: Site Screening conducted. It had been reported that the City of Santa Monica was the lead on this site and that RWQCB was involved, but neither agency has overseen the remediation. The developer said they had a letter from Alternative Technology approving the solidification technology used at this site, but DTSC, Region 3 has no file on this site. The developer has self directed the cleanup of 85,000 cubic yards of lead contaminated soil. Staff recommends a site inspection and a PEA.

generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Site History: The site has had several uses. Southern Pacific owned the site starting in 1894. Railroad spur tracks were present and industrial railroad cars sat at the site from time to time. A public transit rail line ran immediately north of the site. A passenger istation serving that line was on the property. Expanded building on the site began in the 1960's, and a roofing materials manufacturer used the site. By the early 1970's six buildings occupied the site and the western 5.4 acres and four buildings were used by American Appliance Manufacturing Corporation to manufacture water heaters. At that time the remaining eastern portion was an insurance claim processing office of Penn Life Insurance. The area between the six buildings was asphalt paved. American Appliance and Penn Life had six underground fuel tanks, ranging from 5,000 to 10,000 gallon capacity. Contents included unleaded gasoline and diesel fuel. Clay quarries that were use as landfills after clay removal are to the north south and southwest of the site. The site is currently occupied by art galleries.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Site History: As of 2015, the southern portion of the former Gillette/PaperMate, Santa Monica Facility (Buildings 1 and 3, on Assessor Parcels 4268-001-040 and 4268-001-048) is owned by CSHV Pen Factory LLC, and is being redeveloped. Since the third quarter of 2011, all groundwater monitoring reports for the CSHV Pen Factory (southern portion of the Gillette/PaperMate) site and vicinity can be found at the City of Santa Monica Corporation Yard case on Geotracker (a closed Water Board Case) - The City of Santa Monica Corporation Yard Geotracker Global ID is T0603799303. Through a Settlement Agreement the City of Santa Monica has legal responsibility for control and remediation of all contamination, originating from the CSHV Pen Factory (Gillette/PaperMate) site, now present in the B zone and C zone aquifers. Documents for the Gillette/PaperMate, Santa Monica case are available at GeoTracker Global ID SLT0603799303, with groundwater monitoring reports available since the third calendar quarter of 2011 at GeoTracker Global ID T0603799303 The City is required to monitor selected monitoring wells on the Gillette property as part of this groundwater monitoring program. The City of Santa Monicas quarterly monitoring reports will serve to replace the monitoring reports previously submitted separately by Gillette and the City of Santa Monica. The Gillette Corporation (Gillette) conducting shallow zone groundwater remediation at the Gillette site under specific requirements of a modified CAO. The CSHV Pen Factory LLC portion of the former Paper Mate facility (Site) is located on approximately 7.1 acres of land immediately north of Olympic Blvd. between Stewart Street on the east and 26th Street to the west, in Santa Monica. This area is designated as an Industrial Corridor by the City of Santa Monica. Prior to the mid-1950s, the area near the site was used for clay quarrying and brick firing. After the clay quarries were depleted they were used as landfills by the Cities of Santa Monica and Beverly Hills. No records describing the material

deposited in the landfill have been provided to the Regional Board. As these were city landfills, it can be expected that the predominant material deposited in the landfills is local household and industrial solid waste. VOCs have been detected in the subsurface soil, soil vapor, and groundwater underlying the Gillette Site. In addition, VOCs have been detected in groundwater beneath Olympic Blvd., immediately south of the site. In 1957, Paper Mate began manufacturing operations in Building I. Operations included machining, electroplating, metal processing, degreasing, injection molding, and ink manufacturing. Hazardous materials and hazardous waste were also stored in and adjacent to Building I. Wastewater was generated, treated and discharged to the sanitary sewer. Numerous underground and above ground tanks were used at Building I. The underground tanks were installed in about 1982 and removed in 1993. Manufacturing operations began in Building II in 1968. Operations included extrusion of plastic pen parts, sintering and grinding, ink manufacturing, product assembly, nickel plating, and plant maintenance. Building III was first occupied by PaperMate in 1972. It was used for packaging, warehousing, and shipping products. In 1994, manufacturing began in Building III. Building III manufacturing included extrusion, molding, and assembly. Facility maintenance also occurred in the building. Chemicals used included hydraulic oil, lubricants, grease, fluid coolant, antifreeze, adhesives, primers, paints, cutting fluids. Hazardous materials were stored in designated areas within Building III. There were no ASTs or USTs near Building III. Industrial wastewater was not produced at Building III. Building IV was first occupied by Gillette in 1982. It was used for general storage and product storage. In 2002, operations ceased in Building II and equipment maintenance moved to Building IV. Maintenance involved rinsing processing equipment brought from other parts of the building. The equipment was rinsed with water, glycols, and n-propanol. The rinse liquid was handled as industrial wastewater. The hazardous materials noted above were stored in designated areas within Building IV. There were no ASTs or USTs near Building IV. Industrial wastewater was not produced at Building IV. Assessment activities have taken place intermittently since 1986. Manufacturing ended in 2006. In Situ Thermal Treatment was used to remove VOCs from soil and shallow groundwater from December 2009 to December 2011. Focused soil excavation was conducted before and after the In Situ Thermal Treatment, to remove soil with more elevated VOC concentrations. Site contamination and the proximity of the Site to City of Santa Monica domestic water supply wells are the primary conditions requiring assessment and remediation. Site contamination includes PCE and TCE in shallow groundwater beneath the Site at concentrations as high as 21,000 a%g/L and 1,400 a%g/L, respectively. Deep groundwater beneath the Site is contaminated with TCE at concentrations as high as 979 a%g/L. There are significant sources of PCE and TCE in Site soil as indicated by detections of PCE and TCE in soil vapor at concentrations as high as 28,000 a%g/L and 4,904 a%g/L, respectively, and in soil at concentrations as high as 2,500,000 a%g/kg and 170 a%g/kg, respectively. There are three City of Santa Monica water supply wells near the site. Well SM-7 (not operating in 2016) is immediately south of the east end of the Site, well SM-4 is approximately 700 feet east of the Site, and well SM-3 is approximately 1600 feet east of the Site. Volatile organic compounds including PCE and TCE have been detected in the City of Santa Monica water supply wells.

Comments: U.S. EPA completed a Site Inspection Prioritization and recommended a

Monica to implement remediation of soil contamination. The site
consists of approximately 10 acres which includes four buildings.
Building I is used for metal fabrication, assembly, and parts
molding processes. Building II is used for packaging, ink
formulation, and additional product assembly. Building III is used for
warehousing and packaging and Building IV is used for storage of
machine parts and furniture. The site is entirely covered by
buildings or pavement and completely fenced. In 1985 in response to
the City of Santa Monica's requirements RP tested the pressure of
18 USTs and excavated and removed VOC contaminated soil from the
site. In Feb 1992 metal contaminated soil beneath the plating room
floor of Building I was excavated and removed. In June 1993, six USTs
were removed from the vicinity of Building I and soil contaminated

Post removal soil samples indicated the presence of 1,2-dichloroethane 57 ug/kg, 1,1-dichloroethane 180 ug/kg, 1,1,1-trichloro- ethane 450 ug/kg, tetrachloroethene 100 ug/kg, trichloro- ethene 30 ug/kg, and 1,1-dichloroethene 440 ug/kg. The City of Santa Monica is currently working with Papermate to implement a remediation technique for the VOC contamin- ated soil in the vicinity of Building II.

Gillette Corporation (Gillette) is currently conducting shallow zone groundwater remediation at the Gillette site under specific requirements of a modified CAO. The former Paper Mate facility (Site) is located on 10.5 acres of land immediately north of Olympic Blvd. between Stewart Street on the east and 26th Street to the west, in Santa Monica. This area is designated as an Industrial Corridor by the City of Santa Monica. There are four main buildings (Building I through IV) covering approximately 295,000 square feet. The buildings are on two adjacent properties. The northern property is currently owned by the Higgins Trusts (Higgins) and the southern property is currently owned by Hines 26th Street LLC (Hines). Buildings I, III, and IV are on the Hines property and Building II is on the Higgins property. Prior to 2007, the Hines property was owned by the Stahl Trust (Stahl). Regional Board staff believe, because these were city landfills, that the predominant material deposited in the landfills is local household and industrial solid waste. Site contamination includes PCE and TCE in shallow groundwater beneath the Site at concentrations as high as 21,000 a%g/L and 1,400 a%g/L, respectively. Deep groundwater beneath the Site is contaminated with TCE at concentrations as high as 979 a%g/L. There are significant sources of PCE and TCE in Site soil as indicated by detections of PCE and TCE in soil vapor at concentrations as high as 28,000 a%g/L and 4,904 a%g/L, respectively, and in soil at concentrations as high as 2,500,000 a%g/kg and 170 a%g/kg, respectively. There are three City of Santa Monica water supply wells near the site. Well SM-7 (not operating) is immediately south of the east end of the Site, well SM-4 is approximately 750 feet east of the Site, and well SM-3 is approximately 1600 feet east of the Site. Volatile organic compounds including PCE and TCE have been detected in the City of Santa Monica water supply wells. In a modified CAO, issued on November 10, 2010 acknowledged a Settlement and Release Agreement among the City of Santa Monica, The Gillette Company, and the Proctor & Gamble Company that specified their

obligations, regarding the restoration and replacement of groundwater from the Olympic Sub-Basin, including funds to the City of Santa Monica from the Gillette Company for the extraction of impacted groundwater and the construction and operation of groundwater treatment facilities. The City of Santa Monica remains obliged to conclusively demonstrate capture of all Gillette contamination plumes (B and C Zone aquifers). On May 3, 2019, A "Soils Only" No Further Action (NFA) letter was issued to Gillette for the Building 2 location. The "Soils Only" NFA includes a Land Use Covenant/Deed Restriction.

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

	Property History:	The 86,160 square feet of land underlying the Santa Monica Housing Project was leased by the Department of Interior on April 23, 1943 from the property owner, C. U. Whiffen. The subject site was used by the War Relocation Authority (WRA) for temporary housing. In a letter to the War Assets Administration (WAA), the WRA declared the buildings and fixtures on the site surplus real property and indicated that the site would be vacated between May 7, and May 15, 1946. The buildings and fixtures on the site were assigned to the WAA for disposition. During the course of the research conducted for this site, no information was obtained to indicate that it was ever owned or operated by a DOD entity.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Site History

Originally the site was a clay quarry, the site was later used by the cities of Santa Monica and Beverly Hills as a landfill from the late 1940s to the late 1950s. After the clay pit was filled the area was used by light industry until Welton Becket Associates entered into an agreement with the city of Santa Monica for the construction of a development projec that contain shops, offices restaraunts and a day care center. For geotechnical reasons the site was found not to be adequate for tall building construction. The area was excavated and filled in three different phases until 1989.

RE: PUBLIC RECORDS REQUEST of January 13, 2022, Reference # R014525-011322

Dear Project Manager Eric Fraske,

The City of Santa Monica received a public records request from you on **January 13, 2022**. Your request mentioned:

“CUPA HAZMAT and UST records for McKinley Elementary School for a Phase I ESA”

After a careful review of our files, the Fire Department has NO record of underground tank or hazardous materials activity for the referenced address..

If you have any questions, or wish to discuss this further, you may reply to this email or submit a new request.

Sincerely,

City of Santa Monica

Reference: AB3205 – Request to Identify Facilities within a 0.25 Mile Radius
of a School Site

Dear Mr. Fraske:

Thank you for your request to the South Coast Air Quality Management District to identify facilities with the potential to emit hazardous or acutely hazardous air pollutants located within one-quarter (1/4) mile radius of McKinley Elementary School located at 2401 Santa Monica Boulevard, Santa Monica, CA 90404.

In response to your request, South Coast AQMD staff performed a database search and conducted a field inspection survey of the area surrounding the school site. In accordance with the provisions of Public Resource Code 21151.8(a)(2), enclosed is a map showing all facilities with South Coast AQMD permits or pending applications that are located within a ¼- mile radius of the school site along with a spreadsheet listing such facilities. **Based upon our database search and field evaluation, there are 11 facilities with active or pending permits within the ¼-mile radius of the school site, as follows:**

Inspection IU(s) Description:

Crimson has 4 Inspection Unit in the City of Long Beach and City of Santa Paula. The company has three Break Out Tank (BOT) and operates 75 pipelines: 42 pipelines are active; 33 of those are out of service (filled with water or Nitrogen):

Crimson 0025E: 3 Pipelines; 3 Active.

OSFM #0025E-0042: is 12" diameter pipeline that was built to carry crude oil from Packard LACTs Inglewood ships to Centinela Vault (.89 to ESR is Chev). The pipeline is 2.83 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 720 psi.

OSFM #0025E-0334: is 10" diameter pipeline that was built to carry crude oil from Ventura Pump Station to Refinery @ Alameda St. & Lomita Blvd. The pipeline is 87.43 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 1440 psi.

OSFM #0025E-0455: is 12" diameter pipeline that was built to carry crude oil from Torrey Pump Sta V-268 to Torrance TF V-408. The pipeline is 43.82 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 724 psi.

OSFM Insp IU 0025F: 5 Pipelines; 5 Active.

OSFM #0025E-0021: is 16" diameter pipeline that was built to carry crude oil from Belridge Sta to Kettleman Sta. The pipeline is 6.02 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 798 psi.

OSFM #0025E-0022: is 8,10" diameter pipeline that was built to carry crude oil from Midway to Belridge. The pipeline is 10.99 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 968 psi.

OSFM #0025E-0526: is 6" diameter pipeline that was built to carry crude oil from 27G Sta to Taft. The pipeline is 5.00 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 693 psi.

OSFM #0025E-0831: is 10" diameter pipeline that was built to carry crude oil from Taft Cahn 3 oil plant near Lost Hills to CPL B/K 16" at Brown Material Rd. The pipeline is 5.27 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 882 psi.

OSFM #0025E-1262: is 8" diameter pipeline that was built to carry crude oil from 18G to 27G. The pipeline is 4.57 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 1480 psi.

OSFM Insp IU 0025G: 4 Active pipelines:

OSFM #0025G-0018: is 18" diameter pipeline that was built to carry crude oil from Kettleman to Los Banos. The pipeline is 96.35 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 900 psi.

OSFM #0025G-0076: is 12" diameter pipeline that was built to carry crude oil from Los Medanos to Vinehill. The pipeline is 16.00 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 1286 psi.

OSFM #0025G-0499: is 18, 20" diameter pipeline that was built to carry crude oil from KLMR to Los Banos to Los Medanos. The pipeline is 82.08 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 706 psi.

OSFM #0025G-1225: is 12" diameter pipeline that was built to carry crude oil from KLM to Valero. The pipeline is 1.68 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 1200 psi.

OSFM Insp IU 0025H: 1 Active pipeline.

OSFM #0025H-1226: is 6" diameter pipeline that was built to carry crude oil from Pacific Energy Pico Lease to Thums 8". The pipeline is .41 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 728 psi.

Records review: Reviewed records, operator qualifications, field observations and cathodic protection readings. Note that no O&M procedures were inspected during this inspection.

Field Inspection: Cathodic protection readings, ROW inspection of entire line sections.

Finding(s): Issues noted during this inspection included:

Pipeline 0025G-0018 at Contua creek passing coating has sign of atmospheric corrosion. PSE Dan Le mentioned the concern with Crimson. On October 30, 2018 Peter Curtis, Corrosion leader from Crimson informed PSE Dan Le that the line had 3 year atmospheric corrosion inspection per third party and the pipeline ILI run on 12/01/2016 didn't find any metal lost at the location. Per Peter the pipeline doesn't have atmospheric corrosion.

Other than that no violation found

The pipeline is 2.83 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 720 psi.

OSFM #0025E-0334: is 10" diameter pipeline that was built to carry crude oil from Ventura Pump Station to Refinery @ Alameda St. & Lomita Blvd. The pipeline is 87.43 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 1440 psi.

OSFM #0025E-0455: is 12" diameter pipeline that was built to carry crude oil from Torrey Pump Sta V-268 to Torrance TF V-408. The pipeline is 43.82 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 724 psi.

OSFM Insp IU 0025F: 5 Pipelines; 5 Active.

OSFM #0025E-0021: is 16" diameter pipeline that was built to carry crude oil from Belridge Sta to Kettleman Sta. The pipeline is 6.02 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 798 psi.

OSFM #0025E-0022: is 8,10" diameter pipeline that was built to carry crude oil from Midway to Belridge. The pipeline is 10.99 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 968 psi.

OSFM #0025E-0526: is 6" diameter pipeline that was built to carry crude oil from 27G Sta to Taft. The pipeline is 5.00 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 693 psi.

OSFM #0025E-0831: is 10" diameter pipeline that was built to carry crude oil from Taft Cahn 3 oil plant near Lost Hills to CPL B/K 16" at Brown Material Rd. The pipeline is 5.27 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 882 psi.

OSFM #0025E-1262: is 8" diameter pipeline that was built to carry crude oil from 18G to 27G. The pipeline is 4.57 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 1480 psi.

OSFM Insp IU 0025G: 4 Active pipelines:

OSFM #0025G-0018: is 18" diameter pipeline that was built to carry crude oil from Kettleman to Los Banos. The pipeline is 96.35 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 900 psi.

OSFM #0025G-0076: is 12" diameter pipeline that was built to carry crude oil from Los Medanos to Vinehill. The pipeline is 16.00 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 1286 psi.

OSFM #0025G-0499: is 18, 20" diameter pipeline that was built to carry crude oil from KLMR to Los Banos to Los Medanos. The pipeline is 82.08 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 706 psi.

OSFM #0025G-1225: is 12" diameter pipeline that was built to carry crude oil from KLM to Valero. The pipeline is 1.68 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 1200 psi.

OSFM Insp IU 0025H: 1 Active pipeline.

OSFM #0025H-1226: is 6" diameter pipeline that was built to carry crude oil from Pacific Energy Pico Lease to Thums 8". The pipeline is .41 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 728 psi.

Records review: Reviewed records, operator qualifications, field observations and cathodic protection readings. Note that no O&M procedures were inspected during this inspection.

Field Inspection: Cathodic protection readings, ROW inspection of entire line sections.

Finding(s): Issues noted during this inspection included:

Pipeline 0025G-0018 at Contua creek passing coating has sign of atmospheric corrosion. PSE Dan Le mentioned the concern with Crimson. On October 30, 2018 Peter Curtis, Corrosion leader from Crimson informed PSE Dan Le that the line had 3 year atmospheric corrosion inspection per third party and the pipeline ILI run on 12/01/2016 didn't find any metal lost at the location. Per Peter the pipeline doesn't have atmospheric corrosion.

Other than that no violation found

Inspection Summary

- **Activity Report:** 20180501DNL1

Date: June 7, 2018

Inspector: Dan Le - Lead

Operator Inspected: Crimson

Units Address: Crimson, 1050 N Lincoln St, Taft, CA 93268

OSFM Insp IU: 0025 E, F, G and H

OSFM Lines ID: Listed below

Unit Type: Intrastate Hazardous Liquid

Inspection Type: Pipeline Annual Inspection

Record Location: 3780 Kilroy Airport Way Suite #400, Long Beach, CA 90806

Inspection Dates: April 30, May 1,2,3,4

Inspectors: Dan Le, Malek Itani

AFOD: 10 Days (Dan 5 days, Malek 5 days)

Inspection IU(s) Description:

Crimson has 4 Inspection Unit in the City of Long Beach and City of Santa Paula. The company has three Break Out Tank (BOT) and operates 75 pipelines: 42 pipelines are active; 33 of those are out of service (filled with water or Nitrogen):

Crimson 0025E: 3 Pipelines; 3 Active.

OSFM #0025E-0042: is 12" diameter pipeline that was built to carry crude oil from Packard LACTs Inglewood ships to Centinela Vault (.89 to ESR is Chev). The pipeline is 2.83 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 720 psi.

OSFM #0025E-0334: is 10" diameter pipeline that was built to carry crude oil from Ventura Pump Station to Refinery @ Alameda St. & Lomita Blvd. The pipeline is 87.43 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 1440 psi.

OSFM #0025E-0455: is 12" diameter pipeline that was built to carry crude oil from Torrey Pump Sta V-268 to Torrance TF V-408. The pipeline is 43.82 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 724 psi.

OSFM Insp IU 0025F: 5 Pipelines; 5 Active.

OSFM #0025E-0021: is 16" diameter pipeline that was built to carry crude oil from Belridge Sta to Kettleman Sta. The pipeline is 6.02 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 798 psi.

OSFM #0025E-0022: is 8,10" diameter pipeline that was built to carry crude oil from Midway to Belridge. The pipeline is 10.99 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 968 psi.

OSFM #0025E-0526: is 6" diameter pipeline that was built to carry crude oil from 27G Sta to Taft. The pipeline is 5.00 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 693 psi.

OSFM #0025E-0831: is 10" diameter pipeline that was built to carry crude oil from Taft Cahn 3 oil plant near Lost Hills to CPL B/K 16" at Brown Material Rd. The pipeline is 5.27 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 882 psi.

OSFM #0025E-1262: is 8" diameter pipeline that was built to carry crude oil from 18G to 27G. The pipeline is 4.57 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 1480 psi.

OSFM Insp IU 0025G: 4 Active pipelines:

OSFM #0025G-0018: is 18" diameter pipeline that was built to carry crude oil from Kettleman to Los Banos. The pipeline is 96.35 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 900 psi.

OSFM #0025G-0076: is 12" diameter pipeline that was built to carry crude oil from Los Medanos to Vinehill. The pipeline is 16.00 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 1286 psi.

OSFM #0025G-0499: is 18, 20" diameter pipeline that was built to carry crude oil from KLMR to Los Banos to Los Medanos. The pipeline is 82.08 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 706 psi.

OSFM #0025G-1225: is 12" diameter pipeline that was built to carry crude oil from KLM to Valero. The pipeline is 1.68 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 1200 psi.

OSFM Insp IU 0025H: 1 Active pipeline.

OSFM #0025H-1226: is 6" diameter pipeline that was built to carry crude oil from Pacific Energy Pico Lease to Thums 8". The pipeline is .41 miles long, has direct current cathodic protection and hydrotest was used to establish the pipeline maximum operating pressure (MOP) of 728 psi.

Records review: Reviewed records, operator qualifications, field observations and cathodic protection readings. Note that no O&M procedures were inspected during this inspection.

Field Inspection: Cathodic protection readings, ROW inspection of entire line sections.

Finding(s): Issues noted during this inspection included:

Pipeline 0025G-0018 at Contua creek passing coating has sign of atmospheric corrosion. PSE Dan Le mentioned the concern with Crimson. On October 30, 2018 Peter Curtis, Corrosion leader from Crimson informed PSE Dan Le that the line had 3 year atmospheric corrosion inspection per third party and the pipeline ILI run on 12/01/2016 didn't find any metal lost at the location. Per Peter the pipeline doesn't have atmospheric corrosion.

Other than that no violation found

Report Parameters: Results: Unsat, Concern

Inspection documentation, including completed protocol forms, summary reports, executive summary reports, and enforcement documentation are for internal use only by federal or state pipeline safety regulators. Some inspection documentation may contain information which the operator considers to be confidential. In addition, supplemental inspection guidance and related documents in the file library are also for internal use only by federal or state pipeline safety regulators (with the exception of documents published in the federal register, such as advisory bulletins). Do not distribute or otherwise disclose such material outside of the state or federal pipeline regulatory organizations. Requests for such information from other government organizations (including, but not limited to, NTSB, GAO, IG, or Congressional Staff) should be referred to PHMSA Headquarters Management.

Inspection Summary

[IA Inspection Summary](#)

[Crimson Pipeline, LLC – All Inspection Units](#)

[Operations Maintenance and Emergency Inspection \(OM&E\)](#)

Activity Report Number:

20180821BDJ1

Inspection Rationale:

This is an Operations Maintenance and Emergency (OM&E) Headquarters Inspection. The Standard OM&E IA questions were used for this OM&E Inspection. There is a total of 138 procedural questions and 3 records questions for this inspection.

Description of Facilities Inspected:

On October 8 and 9, 2018, Pipeline Safety Engineer (PSE) Bob Jamison (Lead), along with PSE Mark McCaleb and PSE (RA) Chuck Mac Donald conducted an OM&E inspection of Crimson Pipeline, LLC located at Crimson's headquarters in Long Beach, CA.

Inspection encompassed all of Crimson's Pipeline assets regulated by CAL FIRE Office of the State Fire Marshal, which included 8 inspection units, 106 pipelines, 18 facilities, and 3 breakout tanks.

Inspection Findings:

Unsatisfactory Items-NONE

Synopsis of Concerns:

There was one concern:

External Corrosion - Cathodic Protection

Does the process give sufficient direction for the monitoring of external corrosion on buried pipelines that are not protected by cathodic protection?

Crimson Pipeline has the following pipelines currently isolated from active systems and not being used to transport crude oil. These pipelines will be listed as 'Active' pending further evaluation for waiver status by OSFM. Once OSFM has approved Crimson's submitted documentation presented for each of these lines, Crimson will submit a letter to the OSFM and NPMS requesting to change the commodity from crude oil to other (inert gas).

These pipelines are as listed below;

OSFM # 0339, Brea Crude Line East, 10.84 miles long.

OSFM # 0862, Piru Gathering Line 653, 10.63 miles long.

OSFM # 0177, Vernon 8", 9.00 miles long.

OSFM # 0219, POC 10", 2.50 miles long.

OSFM # 0339, Brea Crude Line West, 10.84 miles long.

OSFM # 0447, Line 700 Norwalk to Carson, 18.31 miles long.

OSFM # 0703, Newhall to Fillmore, 22.98 miles long.

OSFM # 0757, Dominguez Estates, 1.06 miles long.

OSFM # 0859, Del Amo Gathering, .4 miles long.

OSFM # 0938, Howard Park, 7.81 miles long.

There are three separate lines that do not have OSFM appointed jurisdictional numbers:

Montebello Kern Line, 6.64 miles long.

Norwalk 2B, 1.30 miles long.

Idle 4" Line, .09 miles long.

These pipeline segments are currently purged and filled with an inert gas, they are also isolated from active protected cathodic protection (CP) systems and do not have CP capabilities. Crimson is maintaining Right of Ways, Patrols, Signage, and Atmospheric monitoring where applicable. These listed pipeline segments are in evaluation process by OSFM personnel. This question will be listed as a 'concern' at this time, pending the evaluation outcome by OSFM.

Recommended Follow-up Actions:

Provide operator with a Post Inspection Notice Letter- No Violations Observed.

Question Text *Does the process give sufficient direction for the monitoring of external corrosion on buried pipelines that are not protected by cathodic protection?*

Assets Covered 86369 (0025G), 86370 (0025H), 86363 (0025A), 86364 (0025B), 86365 (0025C), 86366 (0025D), 86367 (0025E), 86368 (0025F)

Result Issue Summary Crimson Pipeline has the following pipelines currently isolated from active systems and not being used to transport crude oil. These pipelines will be listed as 'Active' pending further evaluation for waiver status by OSFM. Once OSFM has approved Crimson's submitted documentation presented for each of these lines, Crimson will submit a letter to the OSFM and NPMS requesting to change the commodity from crude oil to other (inert gas).

These pipelines are as listed below;

OSFM # 0339, Brea Crude Line East, 10.84 miles long.

OSFM # 0862, Piru Gathering Line 653, 10.63 miles long.

OSFM # 0177, Vernon 8", 9.00 miles long.

OSFM # 0219, POC 10", 2.50 miles long.

OSFM # 0339, Brea Crude Line West, 10.84 miles long.

OSFM # 0447, Line 700 Norwalk to Carson, 18.31 miles long.

OSFM # 0703, Newhall to Fillmore, 22.98 mile long.

OSFM # 0757, Dominguez Estates, 1.06 miles long.

OSFM # 0859, Del Amo Gathering, .4 miles long.

OSFM # 0938, Howard Park, 7.81 miles long.

There are three separate lines that do not have OSFM appointed jurisdictional numbers at this time.

Montebello Kern Line, 6.64 miles long.

Norwalk 2B, 1.30 miles long.

Idle 4" Line, .09 miles long.

The listed pipeline segments are currently in the evaluation process by OSFM personnel. This question will be listed as a 'concern' at this time, pending the evaluation outcome by OSFM.

Result Notes

Section 3.0 Routine Maintenance Operations and Maintenance Manual Crimson Pipeline, LLC 3-8 August 2017 Whenever the pipe transitions the soil-air interface, not only should potentials-to-soil be obtained, but visual observations must be made of any perceived deficiencies in the coating at the interface. Given the soil and pipe stresses at the interface and casual or incidental contact by workers, coating frequently get damaged at the interface. Other locations to inspect are under thermal insulation, under disbonded coatings, at pipe supports, in splash zones if applicable, any deck penetrations, and at over-water spans. If atmospheric corrosion inspection finds evidence of corrosion, implement steps to mitigate per 49 CFR 195.581 except where corrosion is a light, surface oxide or will not affect the safe operation of the pipeline prior to the next inspection (.581.c). Atmospheric corrosion monitoring will be done once every 3 years but not intervals exceeding 39 months. Inspection pipe at soil-to-air interfaces, under thermal insulation, under disbonded coatings, at pipe supports, in splash zones, at deck penetrations, and in spans over water. In the event that pitting or general or local corrosion has resulted in a reduction in wall thickness, the RSTRENG method shall be used where appropriate to calculate the remaining strength of

the pipe and determine a new MOP. Replace or repair the pipe by a method that reliable engineering tests and analyses show can permanently restore the serviceability of the pipe. Coatings shall be inspected by a holiday detector prior to submerging or lowering a pipe into the ditch (or backfilling, where appropriate). Holiday detector shall be set based on coating type and measured coating thickness per industry standards.

3.2.1 Cathodic Protection- Crimson has cathodic protection systems installed on all of the Company's jurisdictional pipelines.

3.2.4 Pipe Inspection Whenever the pipe is exposed for any reason, the outside surface must be inspected. The inspection should be per regulations and should include but not be limited to pipe-to-soil potentials, visual coating inspection, and visual pit inspection (if coating is damaged or removed). When pipe is physically removed, the internal pipe surfaces of the remaining pipe and the removed portion should be inspected for signs of corrosion. You must inspect the pipeline circumferentially and longitudinally beyond where the pipe was removed by visual examination, indirect methods or both to determine if additional corrosion requiring remedial action exists in the vicinity.

Inspection documentation, including completed protocol forms, summary reports, executive summary reports, and enforcement documentation are for internal use only by federal or state pipeline safety regulators. Some inspection documentation may contain information which the operator considers to be confidential. In addition, supplemental inspection guidance and related documents in the file library are also for internal use only by federal or state pipeline safety regulators (with the exception of documents published in the federal register, such as advisory bulletins). Do not distribute or otherwise disclose such material outside of the state or federal pipeline regulatory organizations. Requests for such information from other government organizations (including, but not limited to, NTSB, GAO, IG, or Congressional Staff) should be referred to PHMSA Headquarters Management.

Inspection Summary

Activity Report: 20190603XLN1

Operator: Crimson Pipeline LLC

Unit Address: 210 North 12th Street, Santa Paula, CA 93060

OSFM Inspection Units: 0025C, 0025E, and 0025H

OSFM Line IDs: IU 0025C has 13 pipelines (9 Active and 4 out of service). IU 0025E has 3 Active pipeline, IU 0025H has 1 out of service (OOS) pipeline.

Unit Type: Intrastate Hazardous Liquid

Inspection Type: Standard Annual Pipeline Inspection

Record Location: Santa Paula, California

Assisting Inspectors: None

Inspection Dates: June 3-7, 11-12, 2019

AFOD: 6.5 day; Xuan (6.5 day),

Field OQ: 0.5 days Activity # 20190603XLN2

Inspection Unit #0025C Active Pipeline.

OSFM #0025C-0459: is 8" diameter pipeline constructed in 1947 with 700 psi MOP. It's carrying crude oil from Santa Paula Station to Torrey Station. The pipeline is 18.5 miles long, has direct current cathodic protection.

OSFM #0025C-0460: is 8" diameter pipeline constructed in 1951 with 1160 psi MOP. It's carrying crude oil from Ventura to Santa Paula. The pipeline is 16.0 miles long, has direct current cathodic protection.

OSFM #0025C-0868: is 8" diameter pipeline constructed in 1982 with 727 psi MOP. It's carrying crude oil from Mandalay to Ventura. The pipeline is 3.10 miles long, has direct current cathodic protection.

OSFM #0025C-1204: is 4" diameter pipeline constructed in 2002 with 284 psi MOP. It's carrying crude oil from Grubb Lease to San Miguelito Junction. The pipeline is 1 mile long, has direct current cathodic protection.

OSFM #0025C-1205: is 4" diameter pipeline constructed in 1991 with 281 psi MOP. It's carrying crude oil from C&D Block Lateral to Filmore Pipeline. The pipeline is 0.96 mile long, has direct current cathodic protection.

OSFM #0025C-1206: is 8" diameter pipeline constructed in 1991 with 284 psi MOP. It's carrying crude oil from Taylor lease to D&L Manifold (In the Dely Plant). The pipeline is 0.77 mile long, has direct current cathodic protection.

OSFM #0025C-1207: is 8" diameter pipeline constructed in 1991 with 281 psi MOP. It's carrying crude oil from the Mohawk Manifold to Ventura Manifold. The pipeline is 0.22 mile long, has direct current cathodic protection.

OSFM #0025C-1210: is 4,6" diameter pipeline constructed in 1949 with 284 psi MOP. It's carrying crude oil from San Miguelito Junction to Taylor Lease. The pipeline is 2.71 mile long, has direct current cathodic protection.

OSFM #0025C-1267: is 8" diameter pipeline constructed in 2009 with 274 psi MOP. It's carrying crude oil from D&N lease to Ventura Manifold. The pipeline is 0.56 mile long, has direct current cathodic protection.

Inspection Unit #0025E Active Pipeline

OSFM #0025E-0042: is 12" diameter pipeline constructed in 1966 with 720 psi MOP. It's carrying crude oil from Inglewood to Centinela Vault. The pipeline is 2.83 mile long, has direct current cathodic protection.

OSFM #0025E-0334: is 10" diameter pipeline constructed in 1941 with 1440 psi MOP. It's carrying crude oil from Ventura Pump Station to Phillips 66 Refinery. The pipeline is 87.43 mile long, has direct current cathodic protection.

OSFM #0025E-0455: is 12" diameter pipeline constructed in 1955 with 724 psi MOP. It's carrying crude oil from Torrey Pump Station to Torrance TF. The pipeline is 63.70 mile long, has direct current cathodic protection.

Inspection Unit #0025H Active Pipeline

- Unit #0025H has no active pipeline.

All of the pipeline right-of-ways in the above mention units were inspected.

Findings: *Recommending observation notes during close out the inspection:*

Records:

-Review line CSFM # 0868 showing the valve inspection records begins dated 12/14/17, 8/02/18, and 4/10/19. It's exceeding 7/1/2 months interval each calendar year.

-During the records review, Crimson informed OSFM that some pipelines within Units 025C,E, & H are not operated. It would be considered as out-of-service (OoS) pipelines. However, Crimson have not submitted the OoS letter to OSFM for requesting to defer certain activities of its OoS pipelines. OSFM encourages that Crimson needs to submit out-of-service letter to OSFM as soon as possible. Until the OSFM acknowledges the OoS letter for defer certain activities from Crimson, OSFM considers those pipelines as active pipelines. Therefore, Crimson must follow all the applicable requirements in accordance with Part 195.

-During the records review, it was noted that Crimson haven't maintained Cathodic Protection (CP) of its OoS pipelines. However, Crimson have not submitted the OoS letter to defer certain activities of its OoS pipelines. OSFM is concerned that Crimson have not maintained CP of its OOS pipelines.

Field Observation:

CSFM #0412 at approximately mile post 15.6 pipeline right of way (ROW) showing overgrown vegetation, brush, and tree that obscured the view of pipeline right of way.

PD.SN: Facilities Signage and Security

8. Question Result, ID, References **NA, FS.FG.IGNITION.R, 195.404(c) (195.438)** (also presented in: FS.FG)
 Question Text *Do records show precautions taken to prevent ignition sources in areas with a potential for accumulating flammable vapors or leaking hazardous liquids?*
 Assets Covered **86365 (0025C), 86367 (0025E), 86370 (0025H)**
 Result Notes **No such event occurred, or condition existed, in the scope of inspection review. No hot work in 2018**

RPT.SP: Special Permits

9. Question Result, ID, References **NA, RPT.SP.SPWAIVER.R, 190.341(d)(2) (Special Permit)**
 Question Text *Do the records indicate that the operator has complied with all reporting requirements contained within its Special Permit or waiver?*
 Assets Covered **86365 (0025C), 86367 (0025E), 86370 (0025H)**
 Result Notes **No such event occurred, or condition existed, in the scope of inspection review.**

TD.CPMONITOR: External Corrosion - Cathodic Protection Monitoring

10. Question Result, ID, References **NA, TD.CPMONITOR.INTFRCURRENT.R, 195.589(c) (195.577(a))**
 Question Text *Do records document that the operator has an effective program in place to minimize the detrimental effects of interference currents on their pipeline system, and is minimizing detrimental effects of interference currents from their CP systems on other underground metallic structures?*
 Assets Covered **86365 (0025C), 86367 (0025E), 86370 (0025H)**
 Result Notes **No such event occurred, or condition existed, in the scope of inspection review. No interference current effect.**

TD.ICP: Internal Corrosion - Preventive Measures

11. Question Result, ID, References **NA, TD.ICP.INHIBITOR.R, 195.589(c) (195.579(b)(1), 195.579(b)(2), 195.579(b)(3))**
 Question Text *Do records document that corrosion inhibitors have been used in sufficient quantity?*

Assets Covered 86365 (0025C), 86367 (0025E), 86370 (0025H)

Result Notes No such event occurred, or condition existed, in the scope of inspection review. No corrosion inhibitor used

12. Question Result, ID, References NA, TD.ICP.INHIBITOR.O, 195.579(b)

Question Text *Are internal corrosion monitoring devices placed in appropriate locations?*

Assets Covered 86365 (0025C), 86367 (0025E), 86370 (0025H)

Result Notes No such event occurred, or condition existed, in the scope of inspection review.

OSFM reviewed the following 2019 Valve Inspection Records:

0025E-0042 - Inglewood - 8" & 12" Crude Oil Line

0025E-0334 - Ventura 10" Crude Pipeline

0025D-0339 - Brea Crude Line

0025D-0342 - THUMS 10"

0025D-0415 - THUMS 8"

0025D-0447 - Line 700A2 Norwalk to Carson (Norwalk Trunk Line)

0025D-0458 - Line 700A1 Stewart to Norwalk

0025E-0455 - Line 600A Torrey to Torrance

0025D-0631 - Las Cienegas Line 656

0025D-0748 - Beta 12-inch

0025D-1252 - Warren Townlot Lateral (WTU Lateral)

0025D-1254 - Beta - Chemoil 12" Lateral

0025D-1256 - Warren North Wilmington Lateral

0025D-1317 - Line 700 Wilmington/Realty to V-468

17. Question Result, ID, References Sat, MO.LM.VALVEMAINT.O, 195.420(a) (195.420(c)) (also presented in: MO.LM)

Question Text *Do the pipeline system valves appear to be in good working order and are they protected from unauthorized operation?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, the pipeline system valves appear to be in good working order and are they protected from unauthorized operation.

Lovrien, Shenan - Pipeline Operations Specialist - OQ20 - Valve Inspection - Last Completion: 03/18/2019 - Due Date: 03/18/2022

OSFM observed an operator performing inspections of main line valves.

OSFM verified that the person inspecting the valve followed the procedure.

OSFM verified that this person is qualified.

Yes, the person operated the valve to verify its operability during an emergency, using the position locator to verify the 100% operated

Observe remote valve locations.OSFM verified that Crimson checks remote valve locations to ensure that valves are protected from unauthorized operation and vandalism according to the procedure.

OSFM verified by observation that the operator of the valve ensures that the task does not upset pipeline operations.

OSFM verified that upon completion, the valve is returned to its original position and is secured.

OSFM verified that the locks, fences, lighting are adequate to provide a level of security.

MO.LO: Liquid Pipeline Operations

18. Question Result, ID, References Sat, MO.LO.OMMANUALREVIEW.R, 195.402(a)

Question Text *Do records indicate annual reviews of the written procedures in the manual were conducted as required?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, records indicate annual reviews of the written procedures in the manual were conducted as required.

MO.LOOPER: Liquid Pipeline Startup and Shutdown Operations

19. Question Result, ID, References Sat, MO.LOOPER.PRESSURELIMIT.R, 195.404(b) (195.402(c)(7))

Question Text *Do records indicate the operator assured that pressure limitations on the pipeline were not exceeded during startups or shut-ins?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, records indicate that the operator assured that pressure limitations on the pipeline were not exceeded during startups or shut-ins.

If the pipelines were to exceeded pressure during startups or shut-ins it would have triggered an AOC Alarms. There were no AOC's during startups or shut-ins in 2019 under these inspection units 0025D & 0025E.

MO.LMOPP: Liquid Pipeline Overpressure Protection

20. Question Result, ID, References Sat, MO.LMOPP.PRESSREGTEST.R, 195.404(c) (195.428(a)) (also presented in: FS.PS)

Question Text *Do records indicate inspection and testing of each overpressure safety device on its non-HVL pipelines at intervals not to exceed 15 months, but at least once each calendar year?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, records indicate inspection and testing of each overpressure safety device on its non-HVL pipelines at intervals not to exceed 15 months, but at least once each calendar year.

Question Text *Are inspections of overpressure safety devices adequate (including HVL lines)?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, inspections of overpressure safety devices adequate.

OSFM witnessed the operator perform an inspection and test of an overpressure device. OSFM#: 1256 - PRV-3 - Pressure Relief on Pig Launcher, Inspected on 3/15/2019, Inspected by: SDL & TS, FOUND:762, PSIG, SET: 720 PSIG, LEFT AT 723 PSIG.

Lovrien, Shenan - Pipeline Operations Specialist - OQ24 - Inspect, Test, and Calibrate Pressure Limiting Devices - Last Completion: 06/16/2020 - Due Date: 06/16/2023.

OSFM verified that the inspection is done in accordance with the operator's procedures.

OSFM verified that the overpressure device is functioning properly.

OSFM verified that the overpressure device is in good mechanical condition.

OSFM verified that the overpressure device is adequate from the standpoint of capacity and reliability for the intended service.

22. Question Result, ID, References **Sat, MO.LMOPP.LAUNCHRECVRELIEF.O, 195.426** (also presented in: FS.PS)

Question Text *Are launchers and receivers equipped with relief devices?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, launchers and receivers equipped with relief devices.

OSFM verified that the operator has equipped its launchers and receivers with pressure relieving devices capable of safely relieving pressure in the barrel before insertion or removal of scrapers or spheres.

OSFM verified that a suitable device is present to indicate pressure has been relieved, or that a means is employed to prevent insertion or removal of scrapers or spheres if pressure has not been relieved in the barrel.

Question Text *Do records indicate ROW surface conditions and crossings under navigable waterways were inspected, and reporting and appropriate mitigation performed?*

Assets Covered **86366 (0025D), 86367 (0025E)**

Result Notes **Yes, records indicate ROW surface conditions and crossings under navigable waterways were inspected, and reporting and appropriate mitigation performed in 2019**

Yes, surface conditions on or adjacent to each ROW been inspected at appropriate frequency intervals

Yes, surface conditions been inspected using acceptable methods

Yes, there has been appropriate follow-up on findings associated with conditions noted on inspection reports?

Yes, the conditions on the waterways were handled appropriate

Yes, the patrolling methods used is appropriate for the ROW being patrolled for heavily vegetated or forested ROWs,

Yes, there has been appropriate follow-up on findings associated with conditions noted on inspection reports

Yes, the records indicate that actions have been taken to address findings of the patrols

Question Text *Are line markers placed and maintained as required?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, line markers placed and maintained as required.

Yes, line markers placed and maintained over pipeline in sufficient number,

Yes, line markers placed and maintained at public road and railroad crossings

Yes, line markers located at above ground locations accessible to public

Yes, line markers display content required by regulation

Yes, line marker content presented in format required by regulation

MO.LM: Liquid Pipeline Maintenance

28. Question Result, ID, References Sat, MO.LM.VALVEMAIN.T.O, 195.420(a) (195.420(c)) (also presented in: FS.VA)

Question Text *Do the pipeline system valves appear to be in good working order and are they protected from unauthorized operation?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, the pipeline system valves appear to be in good working order and are they protected from unauthorized operation.

Lovrien, Shenan - Pipeline Operations Specialist - OQ20 - Valve Inspection - Last Completion: 03/18/2019 - Due Date: 03/18/2022

Question Text *Do records indicate that liaison has been established and maintained with appropriate fire, police, public officials, and utility owners?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, records indicate that liaison has been established and maintained with appropriate fire, police, public officials, and utility owners. OSFM verified Crimson's 2019 Spill Drill Records and fire, police, public officials, and utility owners Public Awareness Mailers.

Yes, the types of pipeline emergencies for which those various officials will be notified have been identified and communicated.

Yes, operator emergency response plans have been made available, as appropriate, to affected emergency response officials.

Yes, the operator has identified and documented the emergency response responsibilities, capabilities and resources of each jurisdiction, and if those capabilities are considered in emergency response plans.

Yes, mutual response and assistance in the event of a pipeline emergency has been coordinated with each affected jurisdiction.

Yes, training sessions have been conducted for affected emergency responders and identify how the operator will communicate the information to emergency responders that did not attend the training.

Question Text *Is aboveground pipe that is exposed to atmospheric corrosion protected?*
Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, aboveground pipe that is exposed to atmospheric corrosion protected

OSFM verified by observation that pipe is protected from atmospheric corrosion giving particular attention to:

1. Pipe at soil-to-air interfaces,
2. Under disbonded coatings,
3. At pipe supports
4. In spans over water.

TD.CP: External Corrosion - Cathodic Protection

Question Text *Are measures performed to ensure electrical isolation of each buried or submerged pipeline from other metallic structures unless they electrically interconnect and cathodically protect the pipeline and the other structures as a single unit?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, measures are performed to ensure electrical isolation of each buried or submerged pipeline from other metallic structures unless they electrically interconnect and cathodically protect the pipeline and the other structures as a single unit.

OSFM verified by observation that any or all of the following measures are taken to electrically isolate pipelines from other metallic structures:

Installation of isolation devices where installation of such devices is required to facilitate CP.

Installation of isolation devices in a manner to prevent arcing in areas where a flammable atmosphere may exist.

Inspection and electrical testing of each electrical isolation to assure the isolation is adequate.

Inspection of casings to determine if the casing is shorted to the carrier pipe and if so were appropriate actions taken.

TD.CPMONITOR: External Corrosion - Cathodic Protection Monitoring

41. Question Result, ID, References Sat, TD.CPMONITOR.TESTLEADMAINT.O, 195.567(c)

Question Text *Are CP test lead wires properly maintained?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, CP test lead wires properly maintained.

OSFM verified by observation that test leads are maintained in a condition that enables the operator to obtain electrical measurements to determine whether cathodic protection criteria has been met.

42. Question Result, ID, References Sat, TD.CPMONITOR.MONITOR.O, 195.571

Question Text *Do the methods for taking CP monitoring readings allow for the application of appropriate CP monitoring criteria?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, the methods for taking CP monitoring readings allow for the application of appropriate CP monitoring criteria.

OSFM verified by observation that the operator is using CP monitoring methods that allow for the application of one of more of the following CP monitoring criteria.

A negative (cathodic) potential of at least 850 mV with the cathodic protection applied with consideration for IR drop "on".

A negative polarized "off" potential of at least 850 mV relative to a saturated copper/copper sulfate reference electrode "instant off".

A minimum of 100 mV of cathodic polarization between the structure surface and a stable reference electrode contacting the electrolyte. 100mV shift from "instant off" and static.

43. Question Result, ID, References Sat, TD.CPMONITOR.TEST.R, 195.589(c) (195.573(a)(1))

Question Text *Do records adequately document required tests have been done on pipe that is cathodically protected?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, records adequately document required tests have been done on pipe that is cathodically protected.

OSFM reviewed the following Annual CP Surveys:

0025E-0042 - Inglewood - 8" & 12" Crude Oil Line

0025E-0334 - Ventura 10" Crude Pipeline

0025D-0339 - Brea Crude Line

0025D-0342 - THUMS 10"

0025D-0415 - THUMS 8"

Question Text *Do records document adequate electrical checks of rectifiers, interference bonds, diodes, and reverse current switches and at the required intervals?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, records document that adequate electrical checks of rectifiers, interference bonds, diodes, and reverse current switches and at the required intervals.

OSFM verified records provide sufficient detail of electrical checks for proper performance each of the following devices at the intervals indicated:

Rectifier: Six times each calendar year, but with intervals not exceeding 2.5months.

Reverse current switch: Same as above (six times each calendar year, but with intervals not exceeding 2.5 months).

Diode: Same as above (six times each calendar year, but with intervals not exceeding 2.5 months).

Interference bond whose failure would jeopardize structural protection: Same as above (six times each calendar year, but with intervals not exceeding 2.5 months).

Other interference bond: At least once each calendar year, but with intervals not exceeding 15 months.

Question Text *Are rectifiers, interference bonds, diodes, and reverse current switches properly maintained and are they functioning properly?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, rectifiers, interference bonds, diodes, and reverse current switches properly maintained and are they functioning properly

OSFM verified by observing electrical checks of rectifiers, reverse current switches, diodes, critical bonds and/or other interference bonds to ensure that these CP devices are functioning properly,

46. Question Result, ID, References Sat, TD.CPMONITOR.INTFRCURRENT.R, 195.589(c) (195.577(a))

Question Text *Do records document that the operator has an effective program in place to minimize the detrimental effects of interference currents on their pipeline system, and is minimizing detrimental effects of interference currents from their CP systems on other underground metallic structures?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, records document that the operator has an effective program in place to minimize the detrimental effects of interference currents on their pipeline system, and is minimizing detrimental effects of interference currents from their CP systems on other underground metallic structures.

Crimson conducts On/Off surveys and when interference currents are found bonds are installed minimizing detrimental effects of interference currents.

47. Question Result, ID, References Sat, TD.CP.MONITOR.INTFRCURRENT.O, 195.577(a)

Question Text *Are areas of potential stray current identified, and if found, the detrimental effects of stray currents minimized?*

Assets Covered 86366 (0025D), 86367 (0025E)

Result Notes Yes, areas of potential stray current identified, and if found, the detrimental effects of stray currents minimized.

OSFM verified by observing areas that could have stray currents and then see if the operator has done the following in those areas:

Testing for interference currents,Mitigated any interference currents found.

Crimson conducts On/Off surveys and when interference currents are found bonds are installed minimizing detrimental effects of interference currents.

Except as required to be disclosed by law, any inspection documentation, including completed protocol forms, summary reports, executive summary reports, and enforcement documentation are for internal use only by federal or state pipeline safety regulators. Some inspection documentation may contain information which the operator considers to be confidential. In addition, supplemental inspection guidance and related documents in the file library are also for internal use only by federal or state pipeline safety regulators (with the exception of documents published in the federal register, such as advisory bulletins). Do not distribute or otherwise disclose such material outside of the state or federal pipeline regulatory organizations. Requests for such information from other government organizations (including, but not limited to, NTSB, GAO, IG, or Congressional Staff) should be referred to PHMSA Headquarters Management.

Plan Rational:

This is an Annual Operator inspection. The purpose of Annual Operator inspection is to ensure that the operator maintains the records of all applicable requirements in accordance with Part 195, Subpart B.

Portion of System Inspected

The inspection has been created to conduct the Annual Operator inspection. The inspection was conducted virtually.

The inspection includes Unit IDs 0025A, 0025B, 0025C, 0025E, 0025F, 0025G, 0025H,0025J, 0025K, 0025L, 0025M, 0025N, 0025O, 0025P, 0025Q

Synopsis of Concerns and Unsatisfactory Items:

UNSAT

1. For accident occurred on 9-2-2020 in Coalinga (Harris Ranch), Crimson missed the 30 days PHMSA Original Report submission by 4 days and submitted on 10-06-2020
2. Crimson did not report their gravity lines in Part K-1 of the Annual Report form. During the inspection, Crimson stated they have gravity lines in California but treat the same as regulated pipelines.
3. Crimson did not report their regulated gathering lines in Part K-2 of the Annual Report form. During the inspection, Crimson stated they have regulated gathering lines in California but treat the same as regulated pipelines.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Subject: Phase I Environmental Screening, McKinley Elementary School,
2401 Santa Monica Boulevard, Santa Monica, California

Dear Ms. Hyatt:

LFR Inc. (LFR) is pleased to present this Phase I environmental screening letter for the above-referenced property (“the Site”). The information presented in this letter is based on the results of information obtained from a site inspection, interviews with personnel familiar with the Site, local regulatory agency review, Santa Monica Malibu Unified School District (SMMUSD) files, and review of a database report compiled by Environmental Data Resources, Inc. (EDR).

Site Description

McKinley Elementary School is located at the northwest corner of the intersection of Chelsea Avenue and Santa Monica Boulevard in Santa Monica. The Site consists of six relocatable classrooms and an asphalt-paved playground on the southwest side of the school campus. The approximately 8,600-square-foot Site is proposed to be developed with a new, two-story classroom building.

A site vicinity map and site location map have been included as Attachment A. Additionally, photographs collected during site reconnaissance activities conducted on November 14, 2007 by LFR representative Shauna Head are presented in Attachment B.

Current Use

The Site consists of six relocatable classrooms and an asphalt-paved playground located on the southwest side of the McKinley Elementary School campus.

Historical Research

To evaluate historical use of the property, LFR reviewed Sanborn fire insurance maps, aerial photographs, topographic maps, and city directories (included as Attachment C).

Sanborn Maps

LFR reviewed Sanborn maps obtained from EDR dated 1918, 1950, 1965, and 1986. A brief summary of these maps is provided below.

The 1918 map depicts the Site as undeveloped land. The majority of the properties surrounding the Site are also undeveloped; however, scattered residential buildings are depicted on the map. McKinley Public School is depicted approximately 0.20 mile southwest of the Site.

The 1950 map depicts classrooms and a toy shop at the southwest end of the Site, which is part of the McKinley Elementary School campus. School related buildings are depicted east and southeast of the Site. Properties surrounding the Site are either developed with residential buildings or are vacant. St. Johns Hospital is depicted approximately 0.10 mile southwest of the Site.

The 1965 map appears relatively unchanged from the previous map; however, a kitchen and cafeteria are depicted adjacent to the southwest of the Site.

The 1986 map depicts three classrooms on the Site. The structures previously depicted on the McKinley Elementary School campus remain visible. Properties surrounding the Site include residential and commercial buildings.

With the exception of current and former structures on the Site which may contain or may have contained lead-based paint (LBP) (as they were present prior to the ban of LBP in the late 1970s/early 1980s) and termiticides (as they were present prior to the ban of chlorinated pesticides in the late 1980s), no environmental concerns were identified during a review of Sanborn maps.

Aerial Photographs

LFR reviewed aerial photographs of the Site that were received from EDR for the years 1928, 1938, 1947, 1956, 1965, 1976, 1989, 1994, and 2002. A brief summary of these photographs is provided below.

The 1928 photograph depicts the Site as undeveloped land located on what appears to be a school campus. School related buildings are depicted east and southeast of the Site. The surrounding properties appear to be either residential or vacant lots.

The 1938 and 1947 photographs depict two structures located at the west end of the Site. Several buildings are depicted on the school property to the east and southeast of the Site. Surrounding land use remains relatively unchanged.

On the 1956 and 1965 photographs, the Site appears unchanged from the previous photograph. A grass field is depicted north of the Site; asphalt-paved basketball courts are visible northeast of the Site; and a cafeteria is depicted adjacent to the southwest of the Site. Olympic Boulevard is depicted approximately 0.40 mile southeast of the Site. Commercial properties are visible north of Olympic Boulevard, approximately 0.30 mile southeast of the Site.

The 1976 photograph depicts the Site as undeveloped land. A building is depicted adjacent to the northwest of the Site.

The 1986 photograph depicts three classrooms on the Site. The structures previously depicted at McKinley Elementary School remain visible. The properties surrounding the Site include residences and commercial buildings.

In the 1994 photograph, the Site appears similar to the previous photograph. The structure previously depicted adjacent to the northwest of the Site is no longer visible. Properties surrounding the Site remain relatively unchanged from previous photographs.

The 2002 photograph depicts the Site developed with six relocatable classrooms and an asphalt-paved playground. A garden is visible northwest of the Site; a grass field is depicted adjacent to the north of the Site; classrooms are located adjacent to the northeast and east of the Site; a cafeteria is depicted southwest of the Site; and an alley is depicted west of the Site.

With the exception of current and former structures mentioned previously, no environmental concerns were identified during a review of the aerial photographs.

Topographic Maps

LFR reviewed the following U.S. Geological Survey (USGS) topographic maps: the 1900 Los Angeles, California, 15-Minute Series; the 1934 Beverly Hills, California, 6-Minute Series; and the 1966 (with 1972 and 1981 photorevisions) and 1995 Beverly Hills, California, 7.5-Minute Series. A brief summary of these maps is provided below.

The 1900 map depicts the Site as undeveloped land; however, the site vicinity appears to be developed with residential streets. The Pacific Ocean is depicted approximately 2.0 miles west of the Site.

The 1934 map depicts the Site similar to the 1900 map, except the Site now appears to be a portion of a school campus. School related buildings are located east and southeast of the Site. The area surrounding the Site appears to be developed with residences, although some lots remain vacant.

The 1966 and 1972 maps depict the Site as undeveloped land; however, based on a review of historic Sanborn maps and aerial photographs, two structures were located on the Site at this time. St. Johns Hospital is depicted approximately 0.10 mile southwest of the Site. The area surrounding the Site is relatively similar to the previous map; however, what appears to be an industrial area is depicted approximately 0.25 mile southeast of the Site.

The 1981 and 1995 maps depict the Site as undeveloped land; however, based on a review of historic Sanborn maps and aerial photographs, three classrooms were located on the Site in the 1980s, and six classrooms were located on the Site in the 1990s. The areas surrounding the Site remain relatively unchanged from the previous maps.

No environmental concerns were identified during a review of the topographic maps.

City Directories

LFR reviewed a historical city directory abstract from EDR that spans the years from 1920 to 2006 at approximately five-year intervals. There are no listings at the Site address prior to 1954, when the Santa Monica Unified School District and two individuals are listed at the Site address. In addition to the Santa Monica Unified School District, McKinley School is listed at the Site address in 1965. Gymboree of West Los Angeles is listed at the Site address in 1985. McKinley Elementary School Child Center and Santa Monica-Malibu School are listed at the Site address in 2000.

Nearby address listings include numerous individuals, commercial properties, and various medical buildings.

Neighboring Properties

The Site is bounded on the north and northeast by a grass field and an asphalt-paved playground; on the east by classrooms; on the south by a cafeteria; on the west by an alley; and on the northwest by a garden. Local overhead electric lines, including two pole mounted transformers, were observed along the alley adjacent to the west of the Site.

Local Agency Review

LFR requested and/or reviewed records for the school address from the following local regulatory agencies, and also reviewed records for the Site at the SMMUSD office.

California Regional Water Quality Control Board, Los Angeles Region (RWQCB)

LFR reviewed information from the State Water Resources Control Board (SWRCB) maintained for the state's RWQCBs on the Internet at <http://www.geotracker.swrcb.ca.gov>. The Site address is not listed. In addition, LFR received correspondence from the RWQCB's Spills, Leaks, Investigations, and Cleanup (SLIC) Unit stating that they did not have any records pertaining to investigations at the Site address.

Department of Toxic Substance Control (DTSC)

LFR requested information from the DTSC regarding the Site address. According to the DTSC, there are no records for the Site.

Los Angeles County Department of Environmental Health, Public Health Investigations (PHI)

LFR requested information from the PHI regarding the Site. According to the PHI, there are no records for the Site.

City of Santa Monica, Environmental Programs Division (EPD)

LFR requested files for the Site address from the EPD. According to the EPD, there are no files for the Site address.

Santa Monica Malibu School District Files (SMMUSD)

LFR reviewed files for the Site at the SMMUSD offices in Santa Monica. No environmental documents relevant to the Phase I environmental screening were found.

EDR Database Review

An environmental database report prepared by EDR was reviewed for local, state, and federal listings for properties within the site vicinity. Regulatory database lists were reviewed for cases pertaining to leaking USTs and aboveground storage tanks (ASTs), hazardous waste sites, and abandoned sites within the specified radii of standards established by the American Society for Testing and Materials (ASTM).

Onsite

McKinley Elementary is listed on the RCRA-SQG and FINDS databases. No violations are listed on the RCRA-SQG database, and the FINDS database is a pointer to other databases with more complete information and does not include any information.

Santa Monica-Malibu Unified School District is listed on the HAZNET database, which includes information obtained from copies of hazardous waste manifests received each year by the DTSC. The database lists asbestos-containing waste and is likely related to an abatement program conducted in the 1990s. No further information is provided.

Offsite

This section discusses sites that, based on proximity and/or location relevant to groundwater flow direction, may have the potential to impact the subject Site. No off-site facilities listed in the EDR report are listed as having had a release which would be anticipated to pose an environmental concern to the Site at this time.

Vicinity Review of Naturally Occurring Asbestos

Asbestos deposits can be found in many parts of California. The closest mapped rock outcrops that are likely to contain naturally occurring asbestos are located approximately 65 to 80 miles northwest of the Site in Santa Barbara County (DOC 2000, USGS 1969).

Based on the maps reviewed, outcrops of naturally occurring asbestos rocks are well beyond the 10-mile criterion, a distance criterion defined in the “Interim Guidance, Naturally Occurring Asbestos (NOA) at School Sites” (DTSC 2004).

It should be noted that certain rocks, which sometimes have associated asbestos when metamorphosed, are shown within 10 miles of the Site on the *Geologic Map of the Topanga and Canoga Park (South ½) Quadrangles* (Dibblee 1992). However, these rocks are described as intrusive dikes and sills, and are not indicated as metamorphosed. Due to the lack of metamorphism, these rocks have a low probability of associated asbestos.

Based on these observations, the potential for naturally occurring asbestos to be present on the Site is considered low.

Opinion

Onsite

No evidence of specific on-site releases was identified during this Phase I environmental screening. However, LFR identified the following Site and school feature from past activities that may have the potential to impact the Site:

- Based on the original date of construction for the site buildings, the potential exists for LBP, termiticides, and/or asbestos-containing materials (ACMs) to be present at the Site. It should be noted, however, that the Site was part of an asbestos abatement program conducted in the 1990s.

Offsite

This section discusses sites that, based on proximity and/or location relevant to groundwater flow direction, may have the potential to impact the subject Site. No off-site facilities listed in the EDR report are anticipated to pose an environmental concern to the Site at this time.

Conclusions and Recommendations

LFR has performed a Phase I environmental screening of the Site in accordance with our proposal to SMMUSD dated September 17, 2007. The findings and conclusions provided herein are based on information obtained from a site inspection, interviews with personnel familiar with the Site,

local regulatory agency review, SMMUSD files, and review of a database report compiled by EDR.

This Phase I environmental screening has identified one recognized environmental condition (REC) that would appear to require additional investigation prior to the Site being approved for school use:

- Due to the presence of current and former structures on the Site, DTSC will likely require sampling for lead and chlorinated pesticides in soil. DTSC typically requires lead sampling anytime a structure that was constructed prior to the ban of LBP in the late 1970s/early 1980s is present at a site, as well as termiticide sampling anytime a structure that was constructed prior to the ban of chlorinated pesticides in the late 1980s is present at a site.

This Phase I environmental screening identified the above condition that would appear to require additional investigation prior to the Site being approved for the proposed classroom construction. However, DTSC typically allows for sampling of these particular contaminants as part of a Phase I Addendum, thereby foregoing the traditional Preliminary Environmental Assessment (PEA) process.

If SMMUSD would like to continue considering this Site for potential school use, we recommend completion of a full Phase I Environmental Site Assessment (ESA) for the property, including collection of soil samples to address the potential for LBP and termiticides (in accordance with DTSC guidance) and forwarding the ESA and sampling results to the DTSC for their review and approval.

LFR appreciates this opportunity to provide consulting services to the SMMUSD. If you have any questions concerning this project, or would like to discuss other environmental concerns, please contact either of the undersigned at (714) 444-0111.

**Subject: Geotechnical Exploration Report
New Classroom
McKinley Elementary School
2401 Santa Monica Boulevard
Santa Monica, Los Angeles County, California**

Per our April 4, 2021 proposal, authorized on October 5, 2021; Leighton Consulting, Inc. (Leighton) is pleased to present this geotechnical exploration report for the subject project. This report is intended to meet requirements of Section 1803A.2 of the 2019 California Building Code (CBC) and the CGS's Note 48 checklist for review of engineering geology and seismology reports for California public schools.

This site is **not** located within a currently designated Alquist-Priolo Special Studies Zone for surface fault rupture. This site is **not** located within a currently designated liquefaction hazard zone. As is the case for most of Southern California, strong ground shaking has and will occur at this site.

Specific recommendations for site grading, foundations, and other geotechnical aspects of the project are presented in this report.

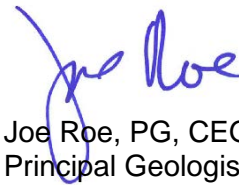

We appreciate this opportunity to be of service. If you have any questions regarding this report or if we can be of further service, please call us at your convenience at **(866) LEIGHTON**, directly at the phone extensions or e-mail addresses listed below:

1.0 INTRODUCTION

1.1 Site Description and Proposed Development

McKinley Elementary is an active K through 5th grade school located at 2401 Santa Monica Boulevard in the City of Santa Monica, situated within a densely developed residential and commercial neighborhood. The school campus location (latitude 34.0324°, longitude -118.4768°) and immediate vicinity are shown on Figure 1, *Site Location Map*.

The campus is a rectangular parcel of land developed with one to two story classroom buildings, a playfield, asphalt concrete (AC) blacktop, and a parking lot fronting Chelsea Avenue. Overall, the campus is bounded on the northwest by Arizona Avenue, the northeast by Chelsea Avenue, the southeast by Santa Monica Boulevard, and the southwest by 23rd Court. According to the United States Geological Survey (USGS) 7.5-Minute Beverly Hills Quadrangle (USGS, 1981), the site surface is relatively flat with an approximate elevation (El.) of ±155 to El.170 feet mean sea level (msl).

Our understanding of the proposed development is based on review of your *Request for Qualifications/Proposal for Geotechnical Services, SMMUSD Elementary and Middle School Assessment Projects* issued on July 15, 2021; and the associated *Existing Site Plan Sheet A1.01* prepared by Johnson Favaro, dated January 20, 2021. As currently conceived, the project consists of the construction of a new 2-story, 12,500-square-foot classroom building with outdoor classrooms, proposed in the northeastern region of the overall school campus site. No subterranean levels are currently planned. The footprint of the proposed new classroom building is shown on Figure 2, *Exploration Location Map*.

1.2 Purpose and Scope of Exploration

The purpose of our geotechnical exploration was to evaluate the soil and groundwater conditions at the new classroom site through review of available data and subsurface explorations in order to provide geotechnical recommendations to aid in design and construction for the project as currently proposed (see Section 1.1). The scope of this geotechnical exploration included the following tasks:

- **Background Review** – A background review was performed of readily available and relevant geotechnical, civil, and geological documents pertinent

to the project site. References reviewed in preparation of this report are listed in Section 8.0.

- **Field Exploration** – Our field exploration was performed October 6, 2020 and consisted of three (3) hollow-stem auger borings (designated LB-1 through LB-3) drilled to approximate depths ranging from of 31½ feet to 51½ feet below ground surface (bgs). In addition, six (6) cone penetrometer test (CPT) soundings (designated CPT-1 through CPT-5 and CPT-3A) were each advanced to an approximate depth of 50 feet bgs.

Prior to the field exploration, the borings and CPT's were marked and Underground Service Alert (USA) was notified for utility clearance. In addition, a private utility locator was utilized to locate any unknown or unmarked utilities in the areas of the proposed boring locations prior to drilling.

During drilling of the hollow-stem auger borings (LB-1 through LB-3), bulk and relatively undisturbed drive samples were obtained from the borings for geotechnical laboratory testing. Relatively undisturbed samples were collected from the borings using a Modified California Ring sampler conducted in accordance with ASTM Test Method D3550. Standard Penetration Tests (SPT) were also performed within the hollow-stem auger borings in accordance with ASTM Test Method D1586. The samplers were driven for a total penetration of 18 inches, unless practical refusal was encountered, using a 140-pound automatic hammer falling freely for 30 inches. The number of blows per 6 inches of penetration was recorded on the boring logs.

The borings were logged in the field by a member of our technical staff. Each soil sample collected was reviewed and described in accordance with the Unified Soil Classification System (USCS). The samples were sealed and packaged for transportation to our laboratory. After completion of drilling, all of the borings were backfilled with excess soils generated during the exploration. The boring logs are presented in Appendix A, *Field Exploration Logs*. The approximate locations of the explorations are shown on Figure 2, *Exploration Location Map*.

- **Laboratory Testing** – Geotechnical laboratory tests were conducted on selected bulk and undisturbed soil samples obtained from our borings. This laboratory testing program was designed to evaluate geotechnical (physical) characteristics of site soil. A description of geotechnical laboratory test-

procedures and results are presented in Appendix B, *Laboratory Test Results*. The following laboratory tests were performed:

- In-situ Moisture Content and Dry Density (ASTM D2216 and ASTM D2937);
- Expansion Index (ASTM D4829);
- Modified Proctor Compaction Test (ASTM D1557);
- Direct Shear (ASTM D 3080);
- R Value (DOT CA Test 301);
- Consolidation (ASTM D2435); and
- Corrosivity (Soluble Sulfate ASTM C1580, Soluble Chloride ASTM C1411-09, pH ASTM D4972, and Resistivity ASTM G187-12a).

The in-situ moisture and density of soil samples at depths are shown on the borings logs included in Appendix A. The results of the remaining laboratory tests are presented in Appendix B.

- **Engineering Analysis** – Data obtained from field explorations and geotechnical laboratory testing was evaluated and analyzed to develop geotechnical conclusions and provide recommendations in accordance with the 2019 California Building Code and the California Geological Survey's (CGS) Note 48 (November 2019 version). Geologic cross sections prepared for this campus presented on Plate 1, *Geotechnical Cross Sections AA' and BB'* (in pocket).
- **Shear Wave Velocity** - Shear wave velocities were profiled at 5-foot intervals to a depth of 50 feet bgs in CPT-3 (Figure 2) to estimate average S-wave velocities of the upper 100 feet (V_{s100}) and 30 meters (V_{s30}). The average shear wave velocity recorded onsite is approximately 1238 feet per second (ft/sec). The shear wave velocity report is included in Appendix A. Based on collected velocities and in accordance with the 2019 California Building Code, the soils at this site classified as Seismic Site Class D.
- **Report Preparation** - Results of our geologic hazards review and geotechnical exploration have been summarized in this report, presenting our findings, conclusions and geotechnical design recommendations for design and construction of the new McKinley Elementary School Classroom as currently proposed. *Once building loads are known and bearing pressure diagrams prepared they should be provided to Leighton Consulting, Inc. (Leighton) for*

review to ensure our recommendations remain appropriate for the project as currently proposed.

It should be noted that the recommendations in this report are subject to the limitations presented in Section 7.0 of the report.

2.0 GEOTECHNICAL FINDINGS

2.1 Geologic Setting

The site is in the Santa Monica Plain, an uplifted and inclined alluvial surface within the southwestern block of the Los Angeles Basin (Hoots, 1931; Poland and Piper, 1956). The Los Angeles Basin (Basin), a structural trough, is a northwest-trending, alluviated lowland plain approximately 50 miles long and 20 miles wide. Mountains and hills that generally expose Late Cretaceous to Late Pleistocene-age sedimentary and igneous rocks bound the Basin along the north, northeast, east and southeast (Yerkes, 1965). The Basin is part of the Peninsular Ranges geomorphic province of California characterized by sub parallel blocks sliced longitudinally by young, steeply dipping northwest-trending fault zones. The Basin, located at the northerly terminus of the Peninsular Ranges, is the site of active sedimentation and the strata are interpreted to be as much as 31,000 feet thick in the center of the synclinal trough of the Central Block of the Los Angeles Basin.

The Santa Monica Plain formed during the Pleistocene epoch by continental aggradation and has since been uplifted and heavily incised by both current and former drainage patterns (Hoots, 1931). As shown on Figure 3, *Regional Geology Map*, the area of the Santa Monica Plain where the McKinley Elementary School campus is located is mapped as being underlain by Quaternary old alluvial fan deposits and infilled with Holocene age alluvial deposits.

2.2 Local Geologic Units and Subsurface Conditions

Presented below are brief descriptions of the geologic units encountered in the exploratory borings completed at the site by Leighton. Detailed descriptions of the geologic units encountered are presented on the boring logs in Appendix A. Geotechnical conditions described on the logs represent the conditions at the actual exploratory excavation locations. Other variations may occur beyond and/or between the excavations. Lines of demarcation between the geologic units and the various earth materials on the logs represent approximated boundaries, and (unless otherwise noted) actual transitions may be gradual. The locations of the subsurface explorations are shown on Figure 2, *Exploration Location Map* and a subsurface profile based on data obtained and interpreted from the borings and CPTs is shown on Plate 1, *Geotechnical Cross-Section A-A' and B-B'*.

Artificial fill (Afu) materials were encountered underlying existing pavements within the exploratory borings and interpreted in the CPTs. Local geology was interpreted

from published regional geologic maps of the area (Yerkes and Campbell, 2005; Dibblee, 1991). Figure 3, *Regional Geology Map*, illustrates the approximate distribution of geologic units at the site. Native geologic units underlying the artificial fill materials consist of Quaternary young alluvial valley deposits age (map symbol: Qya) overlying Quaternary old alluvial fan deposits (map symbol: Qof), correlative to Dibblee's (DF-31, 1991) Quaternary Old Marine and in part non marine sediments derived from the Santa Monica Mountains. Existing site improvement likely removed the thin veneer of younger alluvium at the site as these deposits were not encountered within our borings.

Undocumented Artificial Fill: (Map Symbol: Afu): Artificial fill materials were encountered to a depth of approximately 4 feet. Fill, as encountered, is characterized as medium reddish brown sandy lean clay and clay. No documentation or records related to fill placement was available at the time of this report preparation. Therefore, for purposes of this report, all fill encountered onsite and anticipated in future explorations is considered undocumented and unsuitable for support of new improvements in its current condition.

Quaternary Old Alluvial Fan Deposits (Map Symbol: Qof): The Pleistocene alluvial fan deposits encountered directly beneath the artificial fill materials generally consist of reddish brown to dark reddish brown, stiff to hard, silty to sandy lean clay with gravel, with interbeds of medium dense to dense silty sand and varying amounts of Jurassic age slaty gravels.

The stratigraphy of the subsurface soils encountered in each soil boring is presented in the boring logs (Appendix A). The general subsurface conditions across the site, interpreted from the boring and CPT data are shown on Plate 1.

2.3 **Corrosion**

Corrosion: In general, soil resistivity, which is a measure of how easily electrical current flows through soils, is the most influential factor for ferrous corrosivity. Based on findings of studies presented in the American Society for Testing and Materials (ASTM) STP 1013 titled "Effects of Soil Characteristics on Corrosion" (February, 1989), an approximate relationship between soil resistivity and soil corrosiveness was developed as shown in Table 1 below.

Table 1 - Soil Corrosivity as a Function of Resistivity

Soil Resistivity (ohm-cm)	Classification of Soil Corrosiveness
0 to 900	Very severe corrosion
900 to 2,300	Severely corrosive
2,300 to 5,000	Moderately corrosive
5,000 to 10,000	Mildly corrosive
10,000 to >100,000	Very mildly corrosive

Sulfate Exposure: Sulfate ions in the soil can lower the soil resistivity and can be highly aggressive to Portland cement concrete by combining chemically with certain constituents of the concrete, principally tricalcium aluminate. This reaction is accompanied by expansion and eventual disruption of the concrete matrix. A potentially high sulfate content could also cause corrosion of reinforcing steel in concrete. Section 1904A of the 2019 California Building Code (CBC) defers to the American Concrete Institute's (ACI's) ACI 318-14 for concrete durability requirements. Table 19.3.1.1 of ACI 318-14 lists "*Exposure categories and classes,*" including sulfate exposure as follows:

Table 1A - Sulfate Concentration and Exposure

Soluble Sulfate in Water (parts-per-million)	Water-Soluble Sulfate (SO ₄) in soil (percentage by weight)	ACI 318-14 Sulfate Class
0-150	0.00 - 0.10	S0 (negligible)
150-1,500	0.10 - 0.20	S1 (moderate*)
1,500-10,000	0.20 - 2.00	S2 (severe)
>10,000	>2.00	S3 (very severe)

*or seawater

A representative composite, near surface (0-5 feet) bulk soil sample collected from LB-2 was tested to evaluate corrosion potential. The chemical analysis test results for the onsite soil from our geotechnical exploration are included in Appendix B of this report and are summarized below.

Table 2 - Corrosivity Test Results

Test Parameter	Test Results	General Classification of Hazard
	LB-2 0-5'	
Water-Soluble Sulfate-SO ₄ in Soil (ppm)	177	Negligible sulfate exposure to buried concrete
Percent by Weight SO ₄	0.0177	
Water-Soluble Chloride in Soil (ppm)	80	Non-corrosive to buried concrete (per Caltrans Specifications)
Percent by Weight (Cl ⁻)	0.0080	
pH	8.47	Mildly alkaline
Minimum Resistivity (saturated, ohm-cm)	1149	Severely Corrosive to buried ferrous pipes

Additional corrosion testing should be performed upon completion of grading to confirm the findings and conclusions presented above.

2.4 Expansive Soils

Expansion Index (EI) testing of one representative bulk sample collected from boring LB-2 within the upper 5 feet indicates an expansion index (EI) of 42, corresponding to a low potential for expansion. Given the clayey nature of the near surface soils expansion potential is anticipated to vary, and for purposes of this report, the expansion properties of the soil below the proposed new classroom should be considered as medium (EI=51 to 90). Additional testing of soils upon completion of grading should be performed to confirm the results of the initial testing.

Based on geotechnical laboratory testing performed on selected soil samples collected from the site and review of previous laboratory test results, a synopsis of geotechnical properties of the site soils is provided in Table 3 below. Geotechnical laboratory testing results are presented in Appendix B, *Laboratory Test Results*.

Table 3 – Soil Geotechnical Properties Synopsis

Parameters	Soil Properties
In-situ Moisture:	Dry to very moist
In-situ Density:	Stiff to hard/Medium dense to dense
Swell/Expansion Potential:	swell/expansion potential is low to medium .
Collapse Potential:	Not susceptible to collapse when wetted
Strength:	Adequate to provide structural support
Corrosivity:	No sulfate attack of concrete but severely corrosive to ferrous metals .

2.5 Groundwater

Groundwater was not encountered in our borings or CPTs to the maximum depth explored of 51½ feet bgs. Historic groundwater levels, as interpreted from the Beverly Hills 7.5 Minute Quadrangle, Los Angeles County, California (CGS, 1998) indicate historic high groundwater was at a level of approximately 40 feet below ground surface.

Review of environmental data reported through the State Water Resources Control Board (see <http://geotracker.waterboards.ca.gov/>) shows that a series of eight monitoring wells were installed in association with a leaking underground storage tank remediation at Providence St. Johns medical Center; located approximately 600 feet southwest of the project site. Groundwater levels as measured within these monitoring wells was documented at depths ranging from approximately 110 to 132 feet bgs. Groundwater is not expected to pose a constraint to the proposed development as currently planned.

3.0 GEOLOGIC/SEISMIC HAZARDS

Geologic and seismic hazards include surface fault rupture, seismic shaking, liquefaction, seismically-induced settlement, lateral spreading, seismically-induced landslides, flooding, seismically-induced flooding, seiches and tsunamis. The following sections discuss these hazards and their potential impact at the project site.

3.1 Faulting

Based on our site reconnaissance and review of available geologic literature and aerial photographs, we find no evidence that suggests active faults have been mapped across the site, and the site is **not** located within a currently established *Alquist-Priolo (AP) Earthquake Fault Zone* (Bryant and Hart, 2007, CGS, 2018). The limit of the AP Zone for the Santa Monica Fault Zone (SMFZ), as mapped by CGS (2018), is located approximately 370 feet northwest of the proposed classroom building footprint. The AP Zone was established based on recommendations provided in the Fault Evaluation Report 259 (FER 259) prepared by CGS and dated June 28, 2017 (CGS, 2017). Therefore, a fault hazard assessment is not mandated by the State for the proposed development.

The site is, however, located within a City of Santa Monica Fault Hazard Management Zone (City Safety Element, Leighton 1994). The City Fault Hazard Management Zone is defined roughly as the area located between the active Northern strand and inactive Southern strand (Dolan and Pratt, 1997) of the Santa Monica Fault Zone. The campus is located approximately 1,300 feet northwest of the mapped Southern strand, characterized as a structurally inverted Miocene normal fault that was active as a reverse fault during Miocene and latest Pliocene time (circa 1.5 to 5 mya); Quaternary strata are not deformed by this strand (Wright, 1991, Tsutsumi et al, 2000). Conversely, the campus is located approximately 3,300 feet southeast of the mapped Northern strand, which is considered active, the location of which is presented in the Safety Element of the City of Santa Monica (1994).

Investigations by academia (Dolan, J.F., Sieh, K., and Rockwell, T.K., 2000) have mapped the 40-km long, oblique left-lateral reverse Santa Monica fault zone as extending through Los Angeles, Santa Monica and offshore paralleling the Malibu coastline. Their work indicates the SMFZ has undergone at least six surface ruptures in the past 50 k.y. Based on poorly constrained soil age estimates, at least two or three probable events are interpreted to have occurred after burial of a well-dated prominent paleosol circa 16-16 k.a. This data led academia researchers to

assign a 7-8 k.y Pleistocene-Holocene recurrence interval for large surface rupture events, which is much longer than the hypothetical 1.9-3.3 k.y recurrence interval calculated for a 6.9-7.0 Mw event generated by rupture of the entire SMFZ. The younger recurrence interval is predicated on a postulated fault (F4 in Dolan et al., 2000) that does not break Holocene soil or offset buried paleosols, however this interpreted fault was obscured by a utility trench during fault trenching operations. It is highly likely given the steep dip angle of the faults recorded both at the Veterans Hospital (Dolan, et al., 2000) and at University High School (Mactec, 2004) are upper plate faults and not the actual Santa Monica Fault proper. Not all researchers agree as to the activity of various segments. Investigations conducted along the north branch suggest the north branch, which may be a series of upper plate boundary faults may be active. Investigations conducted on the southern branch have either concluded lack of faulting or Pleistocene faulting capped by unbroken soils of middle to early Pleistocene age.

Based on our review of geologic literature (references) and subsurface exploration, the potential for surface fault rupture at the site is considered low. Plate 1, *Geotechnical Cross-Sections A-A' & B-B'*, presents our interpretation of the subsurface stratigraphy. Based predominantly on the CPT transect, our interpretation of subsurface stratigraphy shows multiple laterally continuous stratum extending across the footprint of the new classroom footprint within the underlying Pleistocene age alluvial fan deposits.

Several active and potentially active faults are mapped within approximately 10 km (6.2 miles) of the site. Figure 4, *Regional Fault and Historical Seismicity Map*, shows the proximity of known active and potentially active faults within the region.

Santa Monica Fault: The State of California Geological Survey (CGS, 2018) has zoned the Santa Monica Fault, which is the closest known fault to the site, at a distance of approximately 800 feet (0.15 miles) northeast of the site. The SMFZ is considered, but not proven to be active, mapped as being located primarily north of Santa Monica Boulevard. This fault zone trends southeast-northwest along the southern boundary of the Santa Monica Mountains for more than 24.8 miles (40 km) and is included as part of the Transverse Ranges Southern Boundary fault system, which consists of east-west trending, left-lateral and oblique-reverse movements along several active faults. The SMFZ consists of one or more strands, is about 40 km (24.8 miles) in length, and is one of a series of reverse, left-lateral oblique-slip structures that extend more than 200 km (125 miles) across southern California and accommodate westward motion of the Transverse Ranges

(Dolan *et al.*, 1997). Pleistocene or Holocene movement has been postulated, but not directly proven along some upper plate secondary fault segments related to the SMFZ (Dolan *et al.*, 2000). Recurrence interval and recency of movement along many fault segments are neither well documented nor understood, mainly because intense urbanization has modified or destroyed any surface traces of the fault (Hill *et al.*, 1979). Southern California Earthquake Center (SCEC) identifies the most recent rupture as Late Quaternary with intervals between events unknown.

The State of California Geological Survey (CGS, 2018) has established an Earthquake fault Zone based on the criteria of “sufficiently active” and “well defined” (Bryant and Hart, 2007) in their FER 259 dated June 28, 2017.

Malibu Coast Fault: Located approximately 2.8 miles (4.5 km) northeast of the project site. The fault exhibits left-lateral oblique displacement, with a reported vertical slip rate component of about 0.4 millimeters per year (Lajoie *et al.*, 1979) and a horizontal slip rate component of 0.3 millimeters per year (Petersen *et al.*, 1996). The entire 23-mile-long fault zone is considered to be a potential source in the present statewide probabilistic seismic hazard model and is considered capable of generating a maximum magnitude earthquake of 6.7 (Petersen *et al.*, 1996).

Newport-Inglewood Fault: The onshore southeast-trending Newport-Inglewood fault zone (NIFZ) is discontinuous at the surface, consisting of a series of primarily left-stepping *en echelon* fault strands, each up to 6.5 km (4 miles) long that extend from near Beverly Hills south to Newport Beach, a distance of approximately 65 km (41 miles). At Newport Beach, the fault continues offshore where it lines up with the deeply incised Newport Submarine Canyon and is comprised of five strands and three step overs. To the south, back onshore, the fault continues as the Rose Canyon fault, extending in a southeasterly direction through San Diego and the international border to Baja California, where it continues as the Agua Blanca fault. Overall, from Beverly Hills to Baja California, the fault zone is more than 300 km (185 miles) long. At least five earthquakes of magnitude 4.9 or larger have been associated with the NIFZ since 1920 (Barrows, 1974). Estimated maximum deterministic magnitude earthquake is generally modeled between magnitude 6.5 and 7.5.

Hollywood Fault: Located approximately 5.4 miles (8.7 km) northeast of the site, the Hollywood Fault begins near the Los Angeles River and eastern edge of the

Santa Monica Mountains and extends westward for approximately 9½ miles where it is thought to shift its locus of active deformation to the area near the West Beverly Hills Lineament (WBHL), where faulting takes a left step to the Santa Monica Fault. The Hollywood Fault is deemed capable of producing a magnitude 6.4 to 6.6 earthquake (Dolan et al., 1997). Investigators have estimated the lateral slip rate to be about 1.0 ± 0.5 mm/year, with a vertical slip rate to be 0.25 mm/year (Dolan et al., 1997). Conversely, a lower slip rate of 0.04 - 0.4 mm/year (Ziony and Yerkes, 1985) leads to a long return period.

Recent detailed geologic and geotechnical studies have provided cumulative physical evidence for Holocene displacements resulting in an Alquist-Priolo Special Study Zone being established for the Hollywood Fault (CGS, 2014). Exposures identified in prior explorations (Crook and Proctor, 1992), coupled with bulk-soil radiocarbon ages provide scant evidence for an early to mid-Holocene age for the most recent surface rupture approximately 6,000 years to 11,000 years ago; suggesting a long period of quiescence between surface rupturing on the Hollywood Fault (Dolan, 1997, 2000) (Ziony and Yerkes, 1985).

Palos Verdes Fault: The main trace of the onshore Palos Verde Hills (PVH) fault is recognized as a general topographic escarpment along the northeast margin of Palos Verdes Hills, based on the presence of linear drainages, saddles, and tilted or uplifted surfaces (Fischer and others, 1987). The PVH fault is reportedly a high-angle southwest-dipping dextral oblique fault (with reverse component) which forms the southwestern boundary of the Los Angeles basin at the Palos Verdes uplift (Wright, 1991, McNeilan and others, 1996). The sense of movement is dominantly right-lateral as interpreted by Stephenson et.al. (1995). The ratio of horizontal to vertical offset is on the order of 7:1 to 8:1, as estimated by McNeilan and others (1996). Most of the PVH section may have a larger reverse component than the other sections due to the change in strike of the fault.

The PVFZ is classified as a Class A Fault (No. 128b) by the California Geological Survey (CGS) (Treiman, 2015). Class A Faults are defined as those exhibiting geologic evidence for Quaternary tectonic offset, whether exposed or inferred from liquefaction or other deformational features. 3.

3.2 **Historical Seismicity**

An evaluation of historical seismicity from significant past earthquakes related to the site was performed (see Figure 4, *Regional Fault and Historical Seismicity*

Map). Peak ground accelerations (PGA) at the site resulting from significant past earthquakes between 1800 to 2018, with magnitudes 4.0 or greater, were estimated using the EQSEARCH computer program (Blake, 2000) with 2018 updates. This historical seismicity search was performed for a 100-kilometer (62-mile) radius from the project site, and is included in Appendix C, *Seismicity Data*. The largest earthquake magnitude found in the search was the magnitude 7.7 earthquake, known as the Arvin-Tehachapi quake that occurred on July 21, 1952 approximately 74 miles (118 kilometers) from the site producing an estimated PGA of approximately 0.05g at the site. The largest estimated PGA found in the search was approximately 0.2g from the 1994 magnitude 6.7 Northridge Earthquake located approximately 13 miles (20 kilometers) north of the site.

Review of additional data publicly available from the Center for Engineering Strong Motion Data (CESMD) website (<http://strongmotioncenter.org/>) was reviewed for stations near the project site. The data reviewed indicates that a site (CSMIP Station 24202-Providence St. Johns Hospital) less than ¼ mile to the southwest of the project site experienced a PGA of 0.03g from the magnitude 5.4 Chino Hills Earthquake on July 29, 2008. Another station (CGS Station 24048) located near the corner of 19th Street and Wilshire, approximately 0.4 mile southwest of the project site, experienced a PGA of 0.15g from the March 17, 2014 magnitude 4.4 Encino Earthquake. We are unaware of any reported damage to this campus as a result of earthquakes occurring over the last century.

3.3 **Liquefaction and Lateral Spreading**

Liquefaction is the loss of soil strength due to a buildup of excess pore-water pressure during strong and long-duration ground shaking. Liquefaction is associated primarily with loose (low density), saturated, relatively uniform fine- to medium-grained, clean cohesionless soils. As shaking action of an earthquake progresses, soil granules are rearranged and the soil densifies within a short period. This rapid densification of soil results in a buildup of pore-water pressure. When the pore-water pressure approaches the total overburden pressure, soil shear strength reduces abruptly and temporarily behaves similar to a fluid. For liquefaction to occur there must be:

- (1) loose, clean granular soils,
- (2) shallow groundwater, **and**
- (3) strong, long-duration ground shaking.

Review of both the Beverly Hills Quadrangle Seismic Hazard Zone Map (CGS, 1999) and the City of Santa Monica Geologic Hazards map (City of Santa Monica, 2014) indicates that the site is not within an area potentially susceptible to liquefaction (Figure 5, *Seismic Hazard Map*). The site is mapped within an area identified on the City of Santa Monica Geologic Hazards as a low to medium Liquefaction Risk.

The site is underlain by stiff to hard clays interbedded with medium dense to dense sand and silty sand and groundwater is anticipated below a depth of 50 feet. Given these factors, the potential for liquefaction and lateral spreading to affect the site is considered low.

3.4 Seismically-Induced Settlement

Seismically-induced settlement consists of dry dynamic settlement (above groundwater) and liquefaction-induced settlement (below groundwater). These settlements occur primarily within loose to moderately dense sandy soil due to reduction in volume during and shortly after an earthquake event.

Based on our analysis, the total seismically-induced settlement is expected to be on the order of ½ inch or less. Accordingly, seismically-induced differential settlement is expected to be on the order of ¼ inch over 40 feet.

3.5 Seismically-Induced Landslides

The proposed project site is not located in an area mapped as potentially susceptible to seismically-induced landslides (Figure 5, *Seismic Hazard Map*). No landslides are mapped or known to exist at the project site or vicinity. The site is relatively flat and is not located adjacent to a significant slope. The potential for seismically induced landslides to affect the site is low.

3.6 Flooding

As shown on Figure 6, *Flood Hazard Zone Map*, the site is located outside of areas recognized by the Federal Emergency Management Agency (FEMA) to within 0.2% annual flood potential (FEMA, 2008). Earthquake-induced flooding can be caused by failure of dams or other water-retaining structures as a result of an earthquake. As shown on Figure 7, *Dam inundation Map*, the site is located outside of a dam inundation area due to the absence of such structures near the

site, therefore the potential for earthquake-induced flooding at the site is considered low.

3.7 Seiches and Tsunamis

Seiches are large waves generated in enclosed bodies of water in response to ground shaking. Tsunamis are sea waves generated by large-scale disturbance of the ocean floor that induces a rapid displacement of the water column above. The most frequent causes of tsunamis are shallow underwater earthquakes and submarine landslides.

The site is not located within the tsunami run up area as mapped on the Los Angeles Tsunami Hazard: Maximum Run-up map (CalEMA, 2010). The run up area indicates zones along the Pacific Coast below an elevation of 42 feet (msl) are susceptible to tsunami inundation. The project site is topographically at least 120 feet above the areas identified to have a potential for Tsunamis impact. In addition, the site is not located within a tsunami inundation area as mapped by the State of California (CGS, 2009).

Based on the site's elevation of approximately 160 feet above sea level and the lack of nearby enclosed water bodies, the risks associated with tsunamis and seiches are considered negligible.

4.0 FINDINGS AND CONCLUSIONS

Presented below is a summary of findings and conclusions based upon the results of our evaluation of the project site:

- This site is **not** located within a currently designated Alquist-Priolo Special Studies Zone (CGS, 2018) for surface fault rupture and is also **not** within a designated (March 25, 1999) liquefaction hazard zone. The site is not located in any geologic or seismic hazard zone that could preclude the development of the proposed project. As is the case for most of Southern California, strong ground shaking has and will occur at this site.
- The site is underlain by undocumented artificial fill to a depth of approximately 4 feet overlying native alluvial valley deposits generally consisting of stiff to hard clays interbedded with medium dense to dense sands; with varying proportions of predominantly slate gravels.
- Groundwater was not encountered during the current exploration. Groundwater is not expected to pose a constraint to construction. The historic high groundwater level at the site was reported to be on the order of 40 feet bgs.
- The potential for liquefaction and liquefaction-induced ground failure to occur at the site is considered low.
- The potential seismically-induced settlement at the site is estimated to be on the order of ½ inch or less.
- Based on our observations and testing, the onsite soils that will be in contact with the planned structures are expected to have a low to moderate expansion potential. Additional testing is recommended during design stage or at completion of grading. For purposes of design we recommend using a moderate expansion index EI=51 to 90.
- Concrete in contact with the onsite soil is expected to have negligible exposure to water-soluble sulfates and low exposure to chloride in the soil. The onsite soil, however, is considered severely corrosive to ferrous metal.
- The subsurface materials are anticipated to be readily excavated using conventional earthmoving equipment in good working condition.

-
- The proposed improvements may be supported on conventional spread footings established on engineered fill or undisturbed natural soils.

Based on the results of this study, it is our opinion that the subject site is suitable for the proposed project from a geotechnical viewpoint. Geotechnical recommendations for the proposed development are presented in the following sections and are intended to provide sufficient geotechnical information to develop the project plans in accordance with the 2019 edition of the California Building Code (CBC) requirements.

5.0 RECOMMENDATIONS

The following recommendations have been developed based on the exhibited engineering properties of the onsite soils and their anticipated behavior during and after construction. Recommendations are specifically provided for design of foundations, seismic design considerations, floor slabs, retaining structures, paving, and grading. The proposed structure may be supported on spread-type shallow footing foundation systems established on engineered fill or undisturbed natural soils. Leighton should review the grading plan, foundation plans, shoring plans and specifications when they are available to verify that the recommendations presented in this report have been properly interpreted and incorporated.

Loading and bearing pressure diagrams should be provided for our review once prepared to confirm recommendations and settlement estimates remain valid for the project as currently proposed.

5.1 Grading

Project earthwork is expected to include complete demolition/removal of existing surface pavements, landscaping, utilities and complete overexcavation and recompaction of any remaining undocumented fill soils below new improvement footprints as described in the following subsections.

5.1.1 Site Preparation

After the site is cleared, the soils should be carefully observed for the removal of all unsuitable deposits. We recommend that after removal of pavements, hardscape, and existing utilities, all undocumented fill soils should be removed and recompacted within the proposed improvement footprint. Undocumented fill was encountered as deep as 4 feet bgs in our borings. Deeper fill may be encountered between boring locations.

This overexcavation bottom should extend horizontally either the thickness of fill below spread footings or at least 5 feet horizontally beyond the outside edges of proposed footings, whichever is deeper. Overexcavation is not required for footings established directly on undisturbed natural soils. Any underground obstructions encountered should be removed. Utility lines should be removed or rerouted where interfering with proposed construction. *It is essential that excavation not undermine foundations of the existing buildings and structures that will remain in place along the*

boundaries project. As-Built details of any structure to remain should be provided to Leighton and the structural engineer prior to incorporation into the new design.

Areas outside the classroom footprint limits, planned for new asphalt and/or concrete pavement, should be over-excavated to a minimum depth of 24 inches below existing or finish grade, or 18 inches below proposed pavement sections; whichever is deeper.

Resulting removal excavation bottom-surfaces should be observed by Leighton prior to placement of any backfill or new construction. After these over-excavations are completed, and prior to fill placement, exposed surfaces should be scarified to a minimum depth of 8 inches, moisture-conditioned to 2 percent above optimum moisture content, and recompacted (proof rolled) to a minimum 90 percent relative compaction as determined by ASTM D 1557 (modified Proctor compaction curve).

5.1.2 Earthwork Observation and Testing

Leighton Consulting, Inc. should observe and test all grading and earthwork, to check that the site is properly prepared, the selected fill materials are satisfactory, and that placement and compaction of fills has been performed in accordance with our recommendations and the project specifications. Sufficient notification to us prior to earthwork is essential. Project plans and specifications should incorporate recommendations contained in the text of this report.

Variations in site conditions are possible and may be encountered during construction. To confirm correlation between soil data obtained during our field and laboratory testing and actual subsurface conditions encountered during construction, and to observe conformance with approved plans and specifications, it is essential that we be retained to perform continuous or intermittent review during earthwork, excavation and foundation construction phases. Therefore, conclusions and recommendations presented in this report are contingent upon us performing construction observation services.

5.1.3 Fill Placement and Compaction

Onsite soils free of organics, debris and oversized material (greater-than 6 inches in largest dimension) are suitable for use as compacted structural fill. However, any soil to be placed as fill, whether onsite or imported material, should be first viewed by Leighton and then tested if and as necessary, prior to approval for use as compacted fill. All structural fill must be free of hazardous materials.

All fill soil should be placed in thin, loose lifts, moisture-conditioned, as necessary, to 2 percent above optimum moisture content and compacted to a minimum 90% relative compaction as determined by ASTM D 1557 standard test method (modified Proctor compaction curve) within building footprints. Aggregate base for pavement sections should be compacted to a minimum of 95% relative compaction. At least the upper 12 inches of the exposed soils in roadways and access drives, parking lots and (concrete – paver) flatwork areas, should be compacted to at least 95 percent relative compaction based on ASTM Test Method D 1557.

Fill Materials: The onsite soils, less any deleterious material or organic matter, can be used in required fills. Cobbles larger than 6 inches in largest diameter should not be used in the fill. Any required import material should consist of relatively non-expansive soils with a very low Expansion Index ($EI < 20$). All proposed import materials should be approved by the geotechnical engineer of record prior to being placed at the site.

Surface Drainage: Water should not be allowed to pond or accumulate anywhere except in detention basins. Pad drainage should be designed to collect and direct surface water away from structures to approved drainage facilities. Hardscape drains should be installed and drain to storm water disposal systems. Drainage patterns approved at the time of fine grading should be maintained throughout the life of proposed structures. Irrigation and/or percolation should not be allowed for at least 10 feet horizontally around buildings.

5.1.4 Reuse of Concrete and Asphalt in Fill

Pulverized demolition concrete free of rebar and other materials and demolished asphalt pavement can be pulverized to particles no-larger-than (\leq) 3-inches and mixed with site soils for use in compacted fill. Blended pulverized concrete and asphalt should be mixed with at least 25% soils by weight. Such materials must be free of and segregated from any hazardous materials and/or organic material of any kind.

5.1.5 Temporary Excavations

All temporary excavations, including utility trenches, retaining wall excavations, and other excavations should be performed in accordance with project plans, specifications and all State of California Occupational Safety and Health Administration (CalOSHA) requirements.

No surcharge loads should be permitted within a horizontal distance equal to the height of cut or 5 feet, whichever is greater from the top of the slope, unless the cut is shored appropriately. Excavations that extend below an imaginary plane inclined at 45 degrees below the edge of any adjacent existing site foundations should be properly shored to maintain support of these structures.

Temporary excavations should be treated in accordance with CalOSHA excavation regulations. The sides of excavations should be shored or sloped accordingly. CalOSHA allows the sides of unbraced excavations, up to a maximum height of 20 feet, to be cut to a $\frac{3}{4}$:1 (horizontal:vertical) slope for Type A soils, 1:1 for Type B soils, and $1\frac{1}{2}$:1 for Type C soils.

The onsite soils within the proposed structural depths generally conform to CalOSHA Type C soils. CalOSHA regulations are applicable in areas with no restriction of surrounding ground deformations. Shoring should be designed for areas with deformation restrictions. The soil type should be verified or revised based on geotechnical observation and testing during construction, as soil classifications may vary over short horizontal distances. Heavy construction loads, such as those resulting from stockpiles and heavy machinery, should be kept a minimum distance equivalent to the excavation height or 5 feet, whichever is greater, from the excavation unless the excavation is shored and these surcharges are considered in the design of the shoring system.

5.1.6 Trench Backfill

Pipeline trenches should be backfilled with compacted fill in accordance with this report, and applicable *Standard Specifications For Public Works Construction* (Greenbook), current edition standards. Backfill in and above the pipe zone should be as follows:

- **Pipe Zone:** Any proposed pipe should be placed on properly placed bedding materials. Pipe bedding should extend to a depth in accordance to the pipe manufacturer's specification. The pipe bedding should extend to least 1 foot over the top of the conduit. The bedding material may consist of compacted free-draining sand, gravel, or crushed rock. If sand is used, the sand should have a sand equivalent greater than 30. As an alternate, the pipe bedding zone can be backfilled with Controlled Low Strength Material (CLSM) consisting of at least one sack of Portland cement per cubic-yard of sand, conforming to Section 201-6 of the 2021 Edition of the Standard Specifications for Public Works Construction (Greenbook). CLSM bedding should be placed to 1 foot over the top of the conduit, and vibrated. CLSM should not be jetted.

Where granular backfill is used in utility trenches adjacent moisture sensitive subgrades and foundation soils, we recommend that a cut-off "plug" of impermeable material be placed in these trenches at the perimeter of buildings, and at pavement edges adjacent to irrigated landscaped areas. A "plug" can consist of a 5-foot long section of clayey soils with more than 35-percent passing the No. 200 sieve, or a Controlled Low Strength Material (CLSM) consisting of one sack of Portland-cement plus one sack of bentonite per cubic-yard of sand. CLSM should generally conform to Section 201-6 of the "Greenbook". This is intended to reduce the likelihood of water permeating trenches from landscaped areas, then seeping along permeable trench backfill into the building and pavement subgrades, resulting in wetting of moisture sensitive subgrade earth materials under buildings and pavements.

- **Over Pipe Zone:** Above the pipe zone, trenches can be backfilled with excavated on-site soils free of debris, organic and oversized material larger than 3 inches in largest dimension. As an option, the whole trench can be backfilled with one-sack CLSM same as presented above for the

pipe bedding zone. Native soil backfill over the pipe-bedding zone should be placed in thin lifts, moisture conditioned, as necessary, and mechanically compacted using a minimum standard of 90% relative compaction relative to the ASTM D 1557 laboratory maximum dry density within building footprints. The upper 12-inches under hardscape, parking, paver etc. should be compacted to 95% relative compaction. Backfill above the pipe zone should **not** be jetted. In any case, backfill above the pipe zone (bedding) should be observed and tested by Leighton.

5.1.7 Corrosion Protection Measures

Water-soluble sulfates in soil can react adversely with concrete. As referenced in the 2019 California Building Code (CBC), Section 1904A, concrete subject to exposure to sulfates shall comply with requirements set forth in ACI 318. Based on laboratory testing results of the onsite soils from subsurface explorations, concrete structures in contact with the onsite soil will likely have “**negligible**” exposure to water-soluble sulfates in the soil. Therefore, common Type II Portland cement may be used for concrete construction in contact with site soils. Subgrade soil should be tested for water-soluble sulfate content prior to final design of the concrete structures once grading is complete. Import fill soil should be geotechnically tested for corrosivity and sulfate attack before import to the site. Further testing of import soils should include analytical testing for chemicals of concern prior to import and acceptance.

Based on corrosivity test results, the onsite soil is considered severely corrosive to ferrous metals. Therefore, based on these results, ferrous pipe buried in moist to wet site earth materials should be avoided by using high-density polyethylene (HDPE), polyvinyl chloride (PVC) and/or other non-ferrous pipe when possible. Ferrous pipe can also be protected by polyethylene bags, tap or coatings, di-electric fittings or other means to separate the pipe from on-site soils.

5.2 Foundations

The proposed new structures may be supported on a shallow spread footing foundation system established on engineered fill or undisturbed natural soils.

5.2.1 Shallow Spread Footings

Footings for proposed structures should have a minimum embedment of 3 feet and have a minimum width of 18 inches. Footings for proposed temporary structures may be supported directly on grade.

Bearing Value: Footings or post-tensioned concrete slabs with thickened edges established on engineered fill or undisturbed natural soils may be designed to impose an allowable bearing pressure of 3,000 pounds per square foot (psf).

The excavations should be deepened as necessary to extend into satisfactory soils.

The ultimate bearing capacity can be taken as 9,000 psf. This value does not incorporate a factor of safety and may only be used for an ultimate bearing capacity check with appropriate factored loads.

The recommended bearing value is a net value, and the weight of concrete in the footings can be taken as 50 pounds per cubic foot (pcf); the weight of soil backfill can be neglected when determining the downward loads.

Settlement: The above recommended allowable bearing capacities are generally based on a total post-construction settlement of about ½ inch for column loads not exceeding 300 kips.

Differential settlement due to static loading is generally estimated at ¼ inch over a horizontal distance of 40 feet. Once developed by the structural engineer, we should review total dead and sustained live loads for each column including plan location and span distance, to evaluate if differential settlements between dissimilarly loaded columns will be tolerable. Excessive differential settlement can be mitigated with the use of reduced bearing pressures, deeper footing embedment, possibly changing overexcavation schemes and using imported base material under spread footings, or possibly other methods.

Lateral Resistance: Soil resistance available to withstand lateral loads on a shallow foundation is a function of the frictional resistance along the base of the footing and the passive resistance that may develop as the face of the structure tends to move into the soil. The frictional resistance between the base of the foundation and the subgrade soil may be computed using a

coefficient of friction of 0.35. The passive resistance may be computed using an equivalent fluid pressure of 300 pounds-per-cubic-foot (pcf), assuming there is constant contact between the footing and undisturbed soil. The passive resistance can be increased by one-third when considering short-duration wind or seismic loads. The friction resistance and the passive resistance of the soils can be combined without reduction in determining the total lateral resistance.

Uplift Resistance: To evaluate uplift resistance provided by the dead weight of soils above the footing, the frustum of soil above the footing may be estimated by a 30 degree outward projection from vertical. A unit weight of 120 pcf may be used for the soil volume within the frustum.

To evaluate uplift resistance provided by the shear resistance soils above the footing, an allowable shear value of 75 psf may be used along vertical shear planes from the bottom of the footing to the ground surface along the perimeter the footings. A factor of safety of 3 was used to develop the allowable shear value.

5.2.2 Modulus of Subgrade Reaction

For foundations established in undisturbed natural soil or engineered fill, an initial unit modulus of subgrade reaction (k_1) value of 150 pounds per cubic inch (pci) may be used.

The k_1 value presented herein, which corresponds to a 1-foot-square footing, should be reduced as shown below to incorporate foundation size effects:

$$k = k_1 \left(\frac{B+1}{2B} \right)^2$$

where B is the square footing width.

Leighton should review the resulting foundation deformation contours developed by the structural engineer for conformance with geotechnical settlement estimates.

5.2.3 Flagpole-Type Foundations

Canopy structures, light poles, and fencing may be supported on flagpole-type foundations. Flagpole-type foundations may be designed to impose an allowable vertical bearing pressure of 3,000 psf and an allowable lateral bearing pressure of 600 psf per foot below grade. The allowable vertical and lateral bearing pressures may be increased by one-third for short-duration loading such as wind or seismic loading. The recommended bearing value is a net value, and the weight of concrete in the flagpole footings can be taken as 50 pounds per cubic foot.

5.3 Seismic Design Parameters

To accommodate effects of ground shaking produced by regional seismic events, seismic design can be performed by the project structural engineer in accordance with the 2019 CBC. The table below, *2019 CBC Mapped Seismic Parameters*, lists seismic design parameters based on the 2019 CBC, Section 1613A.3 (ASCE 7-16) methodology:

Table 4 - 2019 CBC Mapped Seismic Parameters

Categorization/Coefficients	Code-Based ⁽¹⁾ ⁽²⁾
Site Longitude (decimal degrees) West	-118.4768
Site Latitude (decimal degrees) North	34.0324
Site Class	D
Mapped Spectral Response Acceleration at 0.2s Period, S_s	1.955
Mapped Spectral Response Acceleration at 1s Period, S_1	0.698

Long Period Site Coefficient at 1s Period, F_v	null*
Adjusted Spectral Response Acceleration at 0.2s Period, S_{MS}	1.955
Adjusted Spectral Response Acceleration at 1s Period, S_{M1}	null*
Design Spectral Response Acceleration at 0.2s Period, S_{DS}	1.303
Design Spectral Response Acceleration at 1s Period, S_{D1}	null*
Design Peak Ground Acceleration, PGA_M	0.918

1. All were derived from the SEA web page: <https://seismicmaps.org/>
2. All coefficients in units of g (spectral acceleration)
3. See Appendix C for details of the seismic evaluation.
4. *Requires C_s calculation, see below.

Based on the 2019 CBC Table 1613.2.3(2), the long period site coefficient should be determined in accordance with Section 11.4.8 of ASCE 7-16 since the mapped spectral response acceleration at 1 second is greater than 0.2g for Site Class D. In accordance with Section 11.4.8 of ASCE 7-16, a site-specific seismic analysis is required; however, the values provided herein may be utilized if design is performed in accordance with exception (2) in Section 11.4.8 of ASCE 7-16, with special requirements for the seismic response coefficient (Cs). The project structural engineer should review the seismic parameters.

The 2019 CBC site-specific seismic design parameters are summarized below. Details, including the site-specific response spectra are presented in Appendix C.

Table 5 - Site-Specific 2019 CBC Seismic Design Parameters

Categorization/Coefficients	Design Value
Adjusted Spectral Response Acceleration at 0.2s Period, S_{MS}	2.305g
Adjusted Spectral Response Acceleration at 1s Period, S_{M1}	1.531g
Design Spectral Response Acceleration at 0.2s Period, S_{DS}	1.537g
Design Spectral Response Acceleration at 1s Period, S_{D1}	1.02g
Design Peak Ground Acceleration, PGA_M	0.93g

5.4 Slabs-on-Grade

Concrete slabs-on-grade should be designed by the structural engineer in accordance with 2019 CBC requirements for soils with a moderate expansion potential. More stringent requirements may be required by the structural engineer and/or architect; however, slabs-on-grade should have the following minimum recommended components:

- Subgrade:** The near-surface soils are characterized as lean clay, are expansive and will shrink and swell with changes in the moisture content. Therefore, floor slabs-on-grade and adjacent concrete flatwork should be underlain by at least 24 inches of relatively non-expansive fill ($EI < 20$). Slab-on-grade subgrade soil should be moisture conditioned to 2% over optimum moisture content, to a minimum depth of 18 inches within building footprints and compacted to 90% of the modified proctor (ASTM D 1557) laboratory maximum density prior to placing either a moisture barrier, steel and/or concrete. Onsite soil may be suitable for this use; however additional

expansion testing should be performed upon completion of grading to verify expansive properties of onsite soil.

- **Moisture Barrier:** A moisture barrier consisting of at least 15-mil-thick Stego-wrap vapor barriers (see: http://www.stegoindustries.com/products/stego_wrap_vapor_barrier.php), or equivalent, should then be placed below slabs where moisture-sensitive floor coverings or equipment will be placed.
- **Reinforced Concrete:** A conventionally reinforced concrete slab-on-grade with a thickness of at least 5 inches within the building footprint and 6-inches for exterior SOG be placed in pedestrian areas without heavy loads. Reinforcing steel should be designed by the structural engineer, but as a minimum should be No. 3 rebar placed at 18 inches on-center, each direction (perpendicularly), mid-depth in the slab. A modulus of subgrade reaction (k) as a linear spring constant, of 75 pounds-per-square-inch per inch deflection (pci) can be used for design of heavily loaded slabs-on-grade, assuming a linear response up to deflections on the order of $\frac{3}{4}$ inch.

Minor cracking of concrete after curing due to expansion, drying and shrinkage is normal and will occur. However, cracking is often aggravated by a high water-to-cement ratio, high concrete temperature at the time of placement, small nominal aggregate size, and rapid moisture loss due to hot, dry, and/or windy weather conditions during placement and curing. Cracking due to temperature and moisture fluctuations can also be expected. The use of low-slump concrete or low water/cement ratios can reduce the potential for shrinkage cracking

5.4.1 Utilities and Trenches

Open or backfilled trenches paralleling any new or existing footings to remain shall not be below a 1:1 projection from outer lowest edge of footings or slab on grade. Where pipes cross under footings the footings shall be specifically designed by the engineer in charge. Pipe sleeves shall be provided where pipes cross through footings or footing walls and sleeve clearances shall be designed to account for potential settlement of not less than 1 inch around the pipe. Alternate and approved clearances can be provided by the design professional in charge of the utility.

5.5 Lateral Earth Pressures

Recommended lateral earth pressures are provided as equivalent fluid unit weights, in psf/ft. or pcf. These values do not contain an appreciable factor of safety, so the structural engineer should apply the applicable factors of safety and/or load factors during design.

On-site soils may be suitable to be used as retaining wall backfill due to its low expansion potential (Appendix B), however, field and laboratory verification are recommended before use. Site soils can be variable in composition and expansive characteristics, See Section 2.4. Should site soil be desired for reuse behind retaining walls the material should be tested to ensure Expansion potential is less than 20 ($EI < 20$). Recommended lateral earth pressures for retaining walls backfilled with sandy soils with drained conditions as shown on Figure 8 are as follows:

Table 6 - Retaining Wall Design Earth Pressures

Retaining Wall Condition (Level Backfill)	Equivalent Fluid Pressure (pounds-per-cubic-foot)*
Active (cantilever)	35
At-Rest (braced)	55
Passive Resistance (compacted fill)	300
Seismic Increment (add to active pressure)	30

*Only for level and drained properly compacted backfill

Walls that are free to rotate or deflect may be designed using active earth pressure. For walls that are fixed against rotation, the at-rest pressure should be used. For seismic condition, the pressure should be distributed as an inverted triangular distribution and the dynamic thrust should be applied at a height of 0.6H above the base of the wall.

Retaining Wall Surcharges: In addition to the above lateral forces due to retained earth, surcharge due to above grade loads on the wall backfill, such as existing building foundations, should be considered in design of retaining walls.

Vertical surcharge loads behind a retaining wall on or in backfill within a 1:1 (horizontal:vertical) plane projection up and out from the retaining wall toe, should

be considered as lateral and vertical surcharge. Unrestrained (cantilever) retaining walls should be designed to resist one-third of these surcharge loads applied as a uniform horizontal pressure on the wall. Braced walls should also be designed to resist an additional uniform horizontal-pressure equivalent to one-half of uniform vertical surcharge loads. Consideration should be given to underpinning existing structures to remain in this zone, to reduce surcharge loads on the wall and to reduce the potential for inducing damaging settlement within these existing buildings, due to soil movement within the wall influence zone.

In areas where autos and pickup trucks will drive, we suggest assuming a uniform vertical surcharge of 300 psf, which would result in active and at-rest horizontal surcharges of 100 psf and 150 psf, respectively. This should be doubled in areas of heavy construction traffic (such as concrete trucks, heavy equipment delivery-trucks, etc.). If crane outrigger loads or other point load sources are applied as wall surcharge, this will require additional analyses based on load source and location relative to the wall.

5.5.1 Sliding and Overturning Total depth of retained earth for design of walls and for uplift resistance, should be measured as the vertical height of the stem below the ground surface at the wall face for stem design, or measured at the heel of the footing for overturning and sliding. A soil unit weight of 120 pcf may be assumed for calculating the actual weight of the soil over the wall footing, if drained, or 60 pcf if submerged, for properly compacted backfill.

5.5.2 Drainage

Adequate drainage may be provided by a subdrain system positioned behind the walls. Typically, this system consists of a 4-inch minimum diameter perforated pipe placed near the base of the wall (perforations placed downward). The pipe should be bedded and backfilled with pervious backfill material described in Section 300-3.5.2 of the Standard Specifications for Public Works Construction (Green Book), 2021 Edition. This pervious backfill should extend at least 2 feet out from the wall and to within 2 feet of the outside finished grade. This pervious backfill and pipe should be wrapped in filter fabric, such as Mirafi 140N or equivalent, placed as described in Section 300-8.1 of the Standard Specifications for Public Works Construction (Green Book), 2021 Edition. The subdrain outlet should be connected to a free-draining outlet or sump.

Miradrain, Geotech Drainage Panels, or Enkadrain drainage geocomposites, or similar, may be used for wall drainage as an alternative to the Class 2 Permeable Material or drain rock backfill, particularly where horizontal space is limited adjacent to shoring (where walls are cast against shoring). These drainage panels should be connected to the perforated drainpipe at the base of the wall.

5.6 **Pavement Design**

To provide support for paving, the subgrade soils should be prepared as recommended in Section 5.1, Grading. Compaction of the subgrade, including trench backfills, to at least 90 to 95 percent as recommended relative compaction based on ASTM Test Method D 1557 and achieving a firm, hard and unyielding surface will be important for paving support. The upper 12-inches of pavement subgrade should be compacted to 95% relative compaction. The preparation of the paving area subgrade should be performed immediately prior to placement of the base course. Proper drainage of the paved areas should be provided since this will reduce moisture infiltration into the subgrade and increase the life of the paving.

5.6.1 **Base Course**

The base course for both asphalt concrete and Portland Cement Concrete paving should meet the specifications for Class 2 Aggregate Base as defined in Section 26 of the latest edition of the State of California, Department of Transportation, and Standard Specifications. Alternatively, the base course could meet the specifications for untreated base as defined in Section 200-2 of the latest edition of *Standard Specifications for Public Works Construction* (Greenbook). Crushed Miscellaneous Base (CMB) may be used for the base course provided the geotechnical consultant evaluates and tests it before delivery to the site.

5.6.2 **Asphalt Concrete**

The required asphalt paving and base thicknesses will depend on the expected wheel loads and volume of traffic (Traffic Index or TI). Assuming that the paving subgrade will consist of the onsite or comparable soils with an R-value of at least 10 (Appendix B) compacted to at least 90 percent relative compaction based on ASTM Test Method D 1557 below 12-inches

and 95% relative compaction in the upper 12 inches, the minimum recommended paving thicknesses are presented in the following table:

Area	Traffic Index	Asphalt Concrete (inches)	Base Course (inches)
Light Truck	5	4	8
Heavy Truck	6	4	10½
Main Drives	7	5	12½

The asphalt paving sections were determined using the Caltrans design method. We can determine the recommended paving and base course thicknesses for other Traffic Indices if required. Careful inspection is recommended to verify that the recommended thicknesses or greater are achieved, and that proper construction procedures are followed.

5.6.3 Portland Cement Concrete Paving

Portland Cement Concrete (PCC) paving and walks supported on clayey onsite soils should be underlain by at least 18 inches of engineered fill consisting of relatively non-expansive ($EI < 20$) soils. We have assumed that such a subgrade will have an R-value of at least 40, which will need to be verified during grading. Onsite soils are anticipated to have an $EI > 20$, therefore, we expect that relatively non-expansive ($EI < 20$) will need to be imported for PCC paving.

PCC paving sections were determined in accordance with procedures developed by the Portland Cement Association. Concrete paving sections for a range of Traffic Indices are presented in the table below. We have assumed that the PCC will have a compressive strength (f'_c) of at least 3,000 pounds per square inch (psi).

Area	Traffic Index	Portland Cement Concrete (inches)	Base Course (inches)
Light Truck	5	6	4
Heavy Truck	6	6½	4
Main Drives	7	7	4

The paving should be provided with expansion joints at regular intervals no more than 15 feet in each direction. Load transfer devices, such as dowels

or keys, are recommended at joints in the paving to reduce possible offsets. The paving sections in the above table have been developed based on the strength of unreinforced concrete. Steel reinforcing may be added to the paving to reduce cracking and to prolong the life of the paving.

6.0 CONSTRUCTION CONSIDERATIONS

6.1 Excavations

Based on our field observations, caving of cohesionless strata and loose fill soils will likely be encountered in unshored excavations. To protect workers entering excavations, excavations should be performed in accordance with OSHA and Cal-OSHA requirements, and the current edition of the California Construction Safety Orders, see:

<http://www.dir.ca.gov/title8/sb4a6.html>

Contractors should be advised that fill soils should be considered Type C soils as defined in the California Construction Safety Orders. As indicated in Table B-1 of Article 6, Section 1541.1, Appendix B, of the California Construction Safety Orders, excavations less-than (<) 20 feet deep within Type C soils should be sloped back no steeper than 1½:1 (horizontal:vertical), where workers are to enter the excavation. This may be impractical near adjacent existing utilities and structures; so shoring may be required depending on trench depth and locations. Stiff undisturbed native clays will stand steeper.

During construction, soil conditions should be regularly evaluated to verify that conditions are as anticipated. The contractor is responsible for providing the "competent person" required by OSHA standards to evaluate soil conditions. Close coordination between the competent person and Leighton Consulting, Inc. should be maintained to facilitate construction while providing safe excavations.

Excavations must not undermine foundations for existing buildings. Excavations must not encroach within a 1:1 (horizontal:vertical) wedge extending down and out from existing shallow footings to remain. Shoring or underpinning of existing building foundations may be required depending upon final footprint and floor elevations.

6.2 Geotechnical Services During Construction

Our geotechnical recommendations are contingent upon Leighton Consulting, Inc., providing geotechnical observation and testing services during earthwork and foundation construction. There is a potential for encountering deeper undocumented fill, underground obstructions or otherwise unacceptable existing soils between or beyond our boring locations. We are unaware of any existing fill placement documentation for this site. Therefore, inconsistent existing fill

materials may be encountered during construction, possibly requiring revised geotechnical recommendations.

Our geotechnical recommendations provided in this report are based on information available at the time the report was prepared and may change as plans are developed. Additional geotechnical exploration, testing and/or analysis may be required based on final plans. Leighton Consulting, Inc. should review site grading, foundation, and shoring plans when available, to comment further on geotechnical aspects of this project and check to see general conformance of final project plans to recommendations presented in this report.

Leighton Consulting, Inc. should be retained to provide geotechnical observation and testing during excavation and all phases of earthwork. Our conclusions and recommendations should be reviewed and verified by us during construction and revised accordingly if geotechnical conditions encountered vary from our findings and interpretations. Geotechnical observation and testing should be provided:

- During all excavation,
- During compaction of all fill materials,
- After excavation of all footings and prior to placement of concrete,
- During utility trench backfilling and compaction,
- During pavement subgrade and base preparation, and/or
- If and when any unusual geotechnical conditions are encountered.

7.0 LIMITATIONS

Leighton's work was performed using the degree of care and skill ordinarily exercised, under similar circumstances, by reputable geotechnical consultants practicing in this or similar localities. No other warranty, express or implied, is made as to the conclusions and professional opinions included in this report. As in many projects, conditions revealed in excavations may be at variance with our current findings. If this occurs, the changed conditions must be evaluated by the geotechnical consultant and additional recommendations be obtained, as warranted.

The identification and testing of hazardous, toxic or contaminated materials were outside the scope of Leighton's work. Should such materials be encountered at any time, or their existence is suspected, all measures stipulated in local, county, state and federal regulations, as applicable, should be implemented.

This report is issued with the understanding that it is the responsibility of the owner or a duly authorized agent acting on behalf of the owner, to ensure that the information and recommendations contained herein are brought to the attention of the necessary design consultants for the project and incorporated into the plans; and that the necessary steps are taken to see that the contracts carry out such recommendations in the field.

The findings of this report are considered valid as of the present date. However, changes in the condition of a property can occur with the passage of time, whether due to natural processes or the work of man on the subject or adjacent properties. In addition, changes in standards of practice may occur from legislation or the broadening of knowledge. Accordingly, the findings of this report may at some future time be invalidated wholly or partially by changes outside Leighton's control.

The conclusions and recommendations in this report are based in part upon data that were obtained from a necessarily limited number of observations, site visits, excavations, samples and testes. Such information can be obtained only with respect to the specific locations explored, and therefore may not completely define all subsurface conditions throughout the site. The nature of many sites is that differing geotechnical and/or geological conditions can occur within small distances and under varying climatic conditions. Furthermore, changes in subsurface conditions can and do occur over time. Therefore, the findings, conclusions, and recommendations presented in this report should be considered preliminary if unanticipated conditions are encountered and additional explorations, testing and analyses may be necessary to develop alternative recommendations.

This report has been prepared for the express use of Santa Monica Malibu Unified School District and its design consultants, and only as related expressly to the assessment of the geotechnical constraints of developing the subject site and for construction purposes. This report may not be used by others or for other projects without the express written consent of Santa Monica - Malibu Unified School District and our firm.

If parties other than Leighton are engaged to provide construction geotechnical services, they must be notified that they will be required to assume complete responsibility for the geotechnical phase of the project by concurring with the findings and recommendations in this report or by providing alternative recommendations. Any persons using this report for bidding or construction purposes should perform such independent investigations as they deem necessary to satisfy themselves as to the surface and/or subsurface conditions to be encountered and the procedures to be used in the performance of work on the subject site.

Important Information about This

Geotechnical-Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes.

While you cannot eliminate all such risks, you can manage them. The following information is provided to help.

The Geoprofessional Business Association (GBA) has prepared this advisory to help you – assumedly a client representative – interpret and apply this geotechnical-engineering report as effectively as possible. In that way, you can benefit from a lowered exposure to problems associated with subsurface conditions at project sites and development of them that, for decades, have been a principal cause of construction delays, cost overruns, claims, and disputes. If you have questions or want more information about any of the issues discussed herein, contact your GBA-member geotechnical engineer. Active engagement in GBA exposes geotechnical engineers to a wide array of risk-confrontation techniques that can be of genuine benefit for everyone involved with a construction project.

Understand the Geotechnical-Engineering Services Provided for this Report

Geotechnical-engineering services typically include the planning, collection, interpretation, and analysis of exploratory data from widely spaced borings and/or test pits. Field data are combined with results from laboratory tests of soil and rock samples obtained from field exploration (if applicable), observations made during site reconnaissance, and historical information to form one or more models of the expected subsurface conditions beneath the site. Local geology and alterations of the site surface and subsurface by previous and proposed construction are also important considerations. Geotechnical engineers apply their engineering training, experience, and judgment to adapt the requirements of the prospective project to the subsurface model(s). Estimates are made of the subsurface conditions that will likely be exposed during construction as well as the expected performance of foundations and other structures being planned and/or affected by construction activities.

The culmination of these geotechnical-engineering services is typically a geotechnical-engineering report providing the data obtained, a discussion of the subsurface model(s), the engineering and geologic engineering assessments and analyses made, and the recommendations developed to satisfy the given requirements of the project. These reports may be titled investigations, explorations, studies, assessments, or evaluations. Regardless of the title used, the geotechnical-engineering report is an engineering interpretation of the subsurface conditions within the context of the project and does not represent a close examination, systematic inquiry, or thorough investigation of all site and subsurface conditions.

Geotechnical-Engineering Services are Performed for Specific Purposes, Persons, and Projects, and At Specific Times

Geotechnical engineers structure their services to meet the specific needs, goals, and risk management preferences of their clients. A geotechnical-engineering study conducted for a given civil engineer

will not likely meet the needs of a civil-works constructor or even a different civil engineer. Because each geotechnical-engineering study is unique, each geotechnical-engineering report is unique, prepared *solely* for the client.

Likewise, geotechnical-engineering services are performed for a specific project and purpose. For example, it is unlikely that a geotechnical-engineering study for a refrigerated warehouse will be the same as one prepared for a parking garage; and a few borings drilled during a preliminary study to evaluate site feasibility will not be adequate to develop geotechnical design recommendations for the project.

Do not rely on this report if your geotechnical engineer prepared it:

- for a different client;
- for a different project or purpose;
- for a different site (that may or may not include all or a portion of the original site); or
- before important events occurred at the site or adjacent to it; e.g., man-made events like construction or environmental remediation, or natural events like floods, droughts, earthquakes, or groundwater fluctuations.

Note, too, the reliability of a geotechnical-engineering report can be affected by the passage of time, because of factors like changed subsurface conditions; new or modified codes, standards, or regulations; or new techniques or tools. *If you are the least bit uncertain* about the continued reliability of this report, contact your geotechnical engineer before applying the recommendations in it. A minor amount of additional testing or analysis after the passage of time – if any is required at all – could prevent major problems.

Read this Report in Full

Costly problems have occurred because those relying on a geotechnical-engineering report did not read the report in its entirety. Do not rely on an executive summary. Do not read selective elements only. *Read and refer to the report in full.*

You Need to Inform Your Geotechnical Engineer About Change

Your geotechnical engineer considered unique, project-specific factors when developing the scope of study behind this report and developing the confirmation-dependent recommendations the report conveys. Typical changes that could erode the reliability of this report include those that affect:

- the site's size or shape;
- the elevation, configuration, location, orientation, function or weight of the proposed structure and the desired performance criteria;
- the composition of the design team; or
- project ownership.

As a general rule, *always* inform your geotechnical engineer of project or site changes – even minor ones – and request an assessment of their impact. *The geotechnical engineer who prepared this report cannot accept*

responsibility or liability for problems that arise because the geotechnical engineer was not informed about developments the engineer otherwise would have considered.

Most of the “Findings” Related in This Report Are Professional Opinions

Before construction begins, geotechnical engineers explore a site’s subsurface using various sampling and testing procedures. *Geotechnical engineers can observe actual subsurface conditions only at those specific locations where sampling and testing is performed.* The data derived from that sampling and testing were reviewed by your geotechnical engineer, who then applied professional judgement to form opinions about subsurface conditions throughout the site. Actual sitewide-subsurface conditions may differ – maybe significantly – from those indicated in this report. Confront that risk by retaining your geotechnical engineer to serve on the design team through project completion to obtain informed guidance quickly, whenever needed.

This Report’s Recommendations Are Confirmation-Dependent

The recommendations included in this report – including any options or alternatives – are confirmation-dependent. In other words, they are not final, because the geotechnical engineer who developed them relied heavily on judgement and opinion to do so. Your geotechnical engineer can finalize the recommendations *only after observing actual subsurface conditions* exposed during construction. If through observation your geotechnical engineer confirms that the conditions assumed to exist actually do exist, the recommendations can be relied upon, assuming no other changes have occurred. *The geotechnical engineer who prepared this report cannot assume responsibility or liability for confirmation-dependent recommendations if you fail to retain that engineer to perform construction observation.*

This Report Could Be Misinterpreted

Other design professionals’ misinterpretation of geotechnical-engineering reports has resulted in costly problems. Confront that risk by having your geotechnical engineer serve as a continuing member of the design team, to:

- confer with other design-team members;
- help develop specifications;
- review pertinent elements of other design professionals’ plans and specifications; and
- be available whenever geotechnical-engineering guidance is needed.

You should also confront the risk of constructors misinterpreting this report. Do so by retaining your geotechnical engineer to participate in prebid and preconstruction conferences and to perform construction-phase observations.

Give Constructors a Complete Report and Guidance

Some owners and design professionals mistakenly believe they can shift unanticipated-subsurface-conditions liability to constructors by limiting the information they provide for bid preparation. To help prevent the costly, contentious problems this practice has caused, include the complete geotechnical-engineering report, along with any attachments or appendices, with your contract documents, *but be certain to note*

conspicuously that you’ve included the material for information purposes only. To avoid misunderstanding, you may also want to note that “informational purposes” means constructors have no right to rely on the interpretations, opinions, conclusions, or recommendations in the report. Be certain that constructors know they may learn about specific project requirements, including options selected from the report, *only* from the design drawings and specifications. Remind constructors that they may perform their own studies if they want to, and *be sure to allow enough time* to permit them to do so. Only then might you be in a position to give constructors the information available to you, while requiring them to at least share some of the financial responsibilities stemming from unanticipated conditions. Conducting prebid and preconstruction conferences can also be valuable in this respect.

Read Responsibility Provisions Closely

Some client representatives, design professionals, and constructors do not realize that geotechnical engineering is far less exact than other engineering disciplines. This happens in part because soil and rock on project sites are typically heterogeneous and not manufactured materials with well-defined engineering properties like steel and concrete. That lack of understanding has nurtured unrealistic expectations that have resulted in disappointments, delays, cost overruns, claims, and disputes. To confront that risk, geotechnical engineers commonly include explanatory provisions in their reports. Sometimes labeled “limitations,” many of these provisions indicate where geotechnical engineers’ responsibilities begin and end, to help others recognize their own responsibilities and risks. *Read these provisions closely.* Ask questions. Your geotechnical engineer should respond fully and frankly.

Geoenvironmental Concerns Are Not Covered

The personnel, equipment, and techniques used to perform an environmental study – e.g., a “phase-one” or “phase-two” environmental site assessment – differ significantly from those used to perform a geotechnical-engineering study. For that reason, a geotechnical-engineering report does not usually provide environmental findings, conclusions, or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. *Unanticipated subsurface environmental problems have led to project failures.* If you have not obtained your own environmental information about the project site, ask your geotechnical consultant for a recommendation on how to find environmental risk-management guidance.

Obtain Professional Assistance to Deal with Moisture Infiltration and Mold

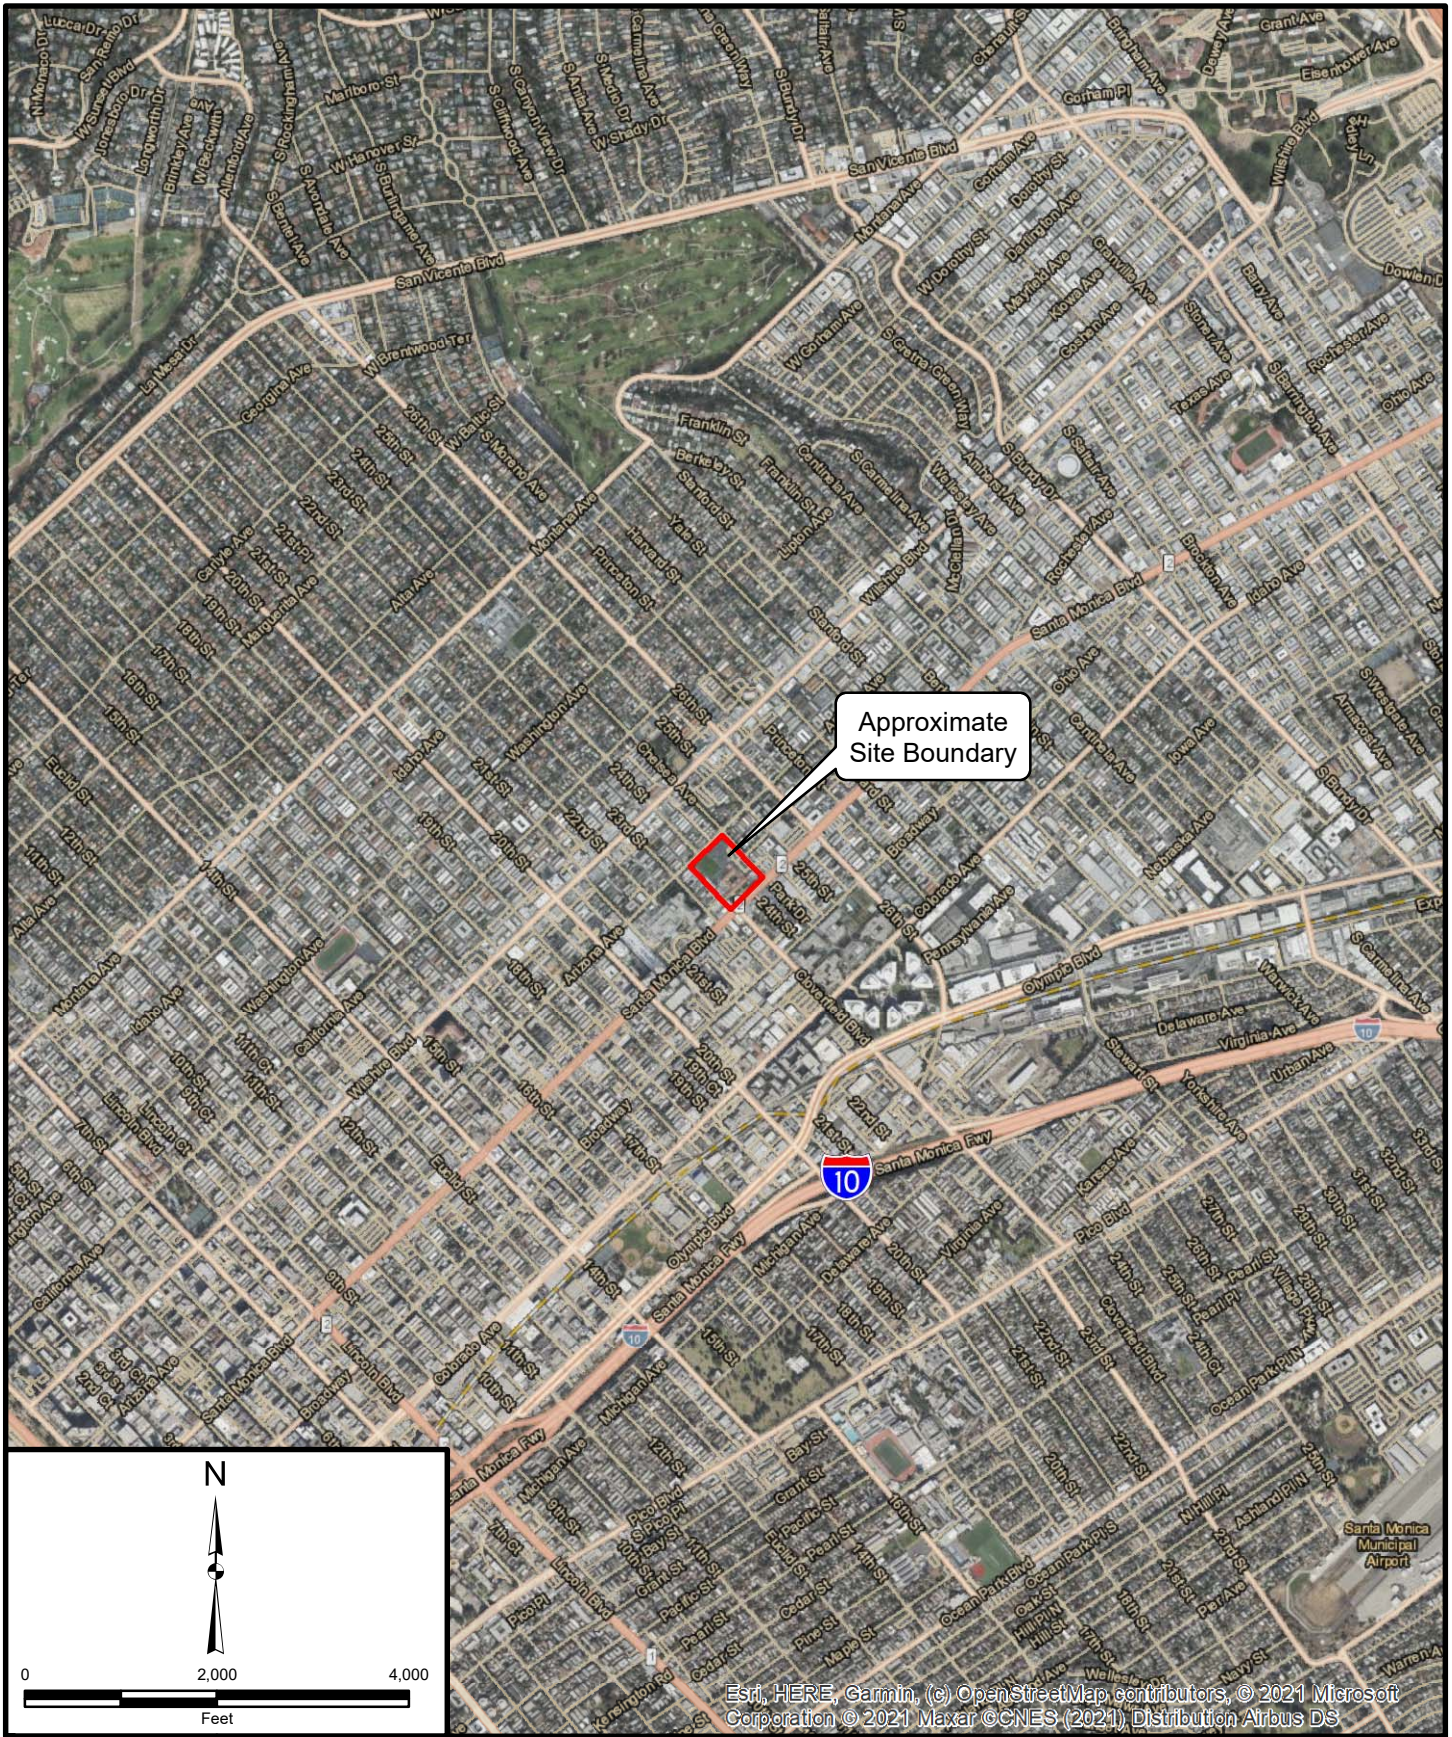

While your geotechnical engineer may have addressed groundwater, water infiltration, or similar issues in this report, the engineer’s services were not designed, conducted, or intended to prevent migration of moisture – including water vapor – from the soil through building slabs and walls and into the building interior, where it can cause mold growth and material-performance deficiencies. Accordingly, *proper implementation of the geotechnical engineer’s recommendations will not of itself be sufficient to prevent moisture infiltration.* **Confront the risk of moisture infiltration** by including building-envelope or mold specialists on the design team. **Geotechnical engineers are not building-envelope or mold specialists.**

SUBDRAIN OPTIONS AND BACKFILL WHEN NATIVE MATERIAL HAS EXPANSION INDEX OF >50

NOTE: AS AN ALTERNATE TO CLEAN SAND BACKFILL, CLEAN GRAVEL MAY BE UTILIZED WITH APPROVED FILTER FABRIC. A SECOND ALTERNATE IS TO UTILIZE AN AGGREGATE BASE MATERIAL COMPACTED TO 90% RELATIVE COMPACTION. A SAMPLE OF THE PROPOSED BASE MUST BE APPROVED BY THE GEOTECHNICAL CONSULTANT PRIOR TO BACKFILL FOR SUITABILITY. COMPACTION SHOULD BE ACHIEVED WITHOUT DAMAGING THE WALL.

GENERAL NOTES:

- * Waterproofing should be provided where moisture nuisance through the wall is undesirable.
- * Water proofing of the walls is not under purview of the geotechnical engineer
- * All drains should have a gradient of 1 percent minimum
- * Outlet portion of the subdrain should have a 4-inch diameter solid pipe discharged into a suitable disposal area designed by the project engineer. The subdrain pipe should be accessible for maintenance (rodding)
- * Other subdrain backfill options are subject to the review by the geotechnical engineer and modification of design parameters.

Notes:

- 1) Sand should have a sand equivalent of 30 or greater and may be densified by water jetting.
- 2) 1 Cu. ft. per ft. of 1/4- to 1 1/2-inch size gravel wrapped in filter fabric
- 3) Pipe type should be ASTM D1527 Acrylonitrile Butadiene Styrene (ABS) SDR35 or ASTM D1785 Polyvinyl Chloride plastic (PVC), Schedule 40, Armco A2000 PVC, or approved equivalent. Pipe should be installed with perforations down. Perforations should be 3/8 inch in diameter placed at the ends of a 120-degree arc in two rows at 3-inch on center (staggered)
- 4) Filter fabric should be Mirafi 140NC or approved equivalent.
- 5) Weephole should be 3-inch minimum diameter and provided at 10-foot maximum intervals. If exposure is permitted, weepholes should be located 12 inches above finished grade. If exposure is not permitted such as for a wall adjacent to a sidewalk/curb, a pipe under the sidewalk to be discharged through the curb face or equivalent should be provided. For a basement-type wall, a proper subdrain outlet system should be provided.
- 6) Retaining wall plans should be reviewed and approved by the geotechnical engineer.
- 7) Walls over six feet in height are subject to a special review by the geotechnical engineer and modifications to the above requirements.

SUMMARY OF CONE PENETRATION TEST DATA

1. INTRODUCTION

This report presents the results of a Cone Penetration Test (CPT) program carried out for the McKinley Elementary School project located in Santa Monica, California. The work was performed by Kehoe Testing & Engineering (KTE) on September 16, 2021. The scope of work was performed as directed by Leighton Consulting personnel.

2. SUMMARY OF FIELD WORK

The fieldwork consisted of performing CPT soundings at six locations to determine the soil lithology. A summary is provided in **TABLE 2.1**.

LOCATION	DEPTH OF CPT (ft)	COMMENTS/NOTES:
CPT-1	50	
CPT-2	50	
CPT-3	50	
CPT-3A	50	
CPT-4	50	
CPT-5	50	

TABLE 2.1 - Summary of CPT Soundings

3. FIELD EQUIPMENT & PROCEDURES

The CPT soundings were carried out by **KTE** using an integrated electronic cone system manufactured by Vertek. The CPT soundings were performed in accordance with ASTM standards (D5778). The cone penetrometers were pushed using a 30-ton CPT rig. The cone used during the program was a 15 cm² cone with a cone net area ratio of 0.83. The following parameters were recorded at approximately 2.5 cm depth intervals:

- Cone Resistance (qc)
- Sleeve Friction (fs)
- Dynamic Pore Pressure (u)
- Inclination
- Penetration Speed

At location CPT-3, shear wave measurements were obtained at approximately 5-foot intervals. The shear wave is generated using an air-actuated hammer, which is located inside the front jack of the CPT rig. The cone has a triaxial geophone, which recorded the shear wave signal generated by the air hammer.

The above parameters were recorded and viewed in real time using a laptop computer. Data is stored at the KTE office for up to 2 years for future analysis and reference. A complete set of baseline readings was taken prior to each sounding to determine temperature shifts and any zero load offsets. Monitoring base line readings ensures that the cone electronics are operating properly.

4. CONE PENETRATION TEST DATA & INTERPRETATION

The Cone Penetration Test data is presented in graphical form in the attached Appendix. These plots were generated using the CPeT-IT program. Penetration depths are referenced to ground surface. The soil behavior type on the CPT plots is derived from the attached CPT SBT plot (Robertson, "Interpretation of Cone Penetration Test...", 2009) and presents major soil lithologic changes. The stratigraphic interpretation is based on relationships between cone resistance (q_c), sleeve friction (f_s), and penetration pore pressure (u). The friction ratio (R_f), which is sleeve friction divided by cone resistance, is a calculated parameter that is used along with cone resistance to infer soil behavior type. Generally, cohesive soils (clays) have high friction ratios, low cone resistance and generate excess pore water pressures. Cohesionless soils (sands) have lower friction ratios, high cone bearing and generate little (or negative) excess pore water pressures.

The CPT data files have also been provided. These files can be imported in CPeT-IT (software by GeoLogismiki) and other programs to calculate various geotechnical parameters.

It should be noted that it is not always possible to clearly identify a soil type based on q_c , f_s and u . In these situations, experience, judgement and an assessment of the pore pressure data should be used to infer the soil behavior type.

If you have any questions regarding this information, please do not hesitate to call our office at (714) 901-7270.

Sincerely,

KEHOE TESTING & ENGINEERING

APPENDIX B
Laboratory Test Results

APPENDIX B - GEOTECHNICAL LABORATORY TESTING

Our geotechnical laboratory testing program was directed toward a quantitative and qualitative evaluation of physical and mechanical properties of soils underlying this campus at proposed improvements, and to aid in verifying soil classification. This geotechnical testing was performed at our Irvine laboratory (DSA LEA 63).

Modified Proctor Compaction Curve: Laboratory modified Proctor compaction curves (ASTM D 1557) were established for bulk soil-samples to determine sample-specific modified Proctor laboratory maximum dry density and optimum moisture content. Results of these tests are presented on the following “*Modified Proctor Compaction Test*” sheets in this appendix.

Direct Shear Tests: Direct shear tests were performed, in general accordance with ASTM Test Method D 3080, on remolded soil samples remolded to 90% of the ASTM D 1557 laboratory maximum density. Remolded specimens were soaked for a minimum of 24 hours under a surcharge equal to the applied normal force during testing. After transfer of the sample to the shear box, and reloading the sample, pore pressures set up in the sample due to the transfer were allowed to dissipate for a period of approximately 1 hour prior to application of shearing force. These specimens were tested under various normal loads with a motor-driven, strain-controlled, direct-shear testing apparatus at a strain rate of 0.05 inches per minute (depending upon the soil type). Test results are presented on the *Direct Shear Test Results* sheets which follow in this appendix.

Consolidation: Consolidation tests on relatively undisturbed drive samples from our borings were performed in accordance with ASTM D 2435. Results are included in this appendix on the *One-Dimensional Consolidation Properties of Soils* sheets.

Corrosivity Tests: To evaluate corrosion potential of subsurface soils at the site, we tested a bulk sample collected during our subsurface exploration for pH, electrical resistivity (CTM 532/643), soluble sulfate content (CTM 417 Part II) and soluble chloride content (CTM 422) testing. Results of these tests are enclosed at the end of this appendix.

R-Value Tests: Selected samples were tested in accordance with DOT CA Test 301. The R-Value test measures the response of a compacted sample of soil or aggregate to a vertically applied pressure under specific conditions. This test is used by Caltrans for pavement design, replacing the California bearing ratio test. The R-value of a material is determined when the material is in a state of saturation such that water will be exuded from the compacted test specimen when a 16.8 kN load (2.07 MPa) is applied to test a

series of specimens prepared at different moisture contents. R-Value is used in pavement design, with the thickness of each layer dependent on the R-value of the layer below and the expected level of traffic loading, expressed as a Traffic Index. Results of these tests are enclosed at the end of this appendix.

Expansion Tests: In accordance with ASTM D 4829 the specimen is compacted into a metal ring so that the degree of saturation is between 40 and 60 % and the specimen and the ring are placed in a consolidometer. A vertical confining pressure of 1 psi is applied to the specimen and then the specimen is inundated with distilled water. The deformation of the specimen is recorded for 24 hours or until the rate of deformation becomes less than 0.005 mm/hour. The Expansion Index, EI, is used to measure a basic index property of soil and therefore, the EI is comparable to other indices such as the liquid limit, plastic limit, and plasticity index of soils. Results of these tests are enclosed at the end of this appendix.

Procedure A
 Soil Passing No. 4 (4.75 mm) Sieve
 Mold : 4 in. (101.6 mm) diameter
 Layers : 5 (Five)
 Blows per layer : 25 (twenty-five)
 May be used if + #4 is 20% or less

Procedure B
 Soil Passing 3/8 in. (9.5 mm) Sieve
 Mold : 4 in. (101.6 mm) diameter
 Layers : 5 (Five)
 Blows per layer : 25 (twenty-five)
 Use if + #4 is >20% and +3/8 in. is 20% or less

Procedure C
 Soil Passing 3/4 in. (19.0 mm) Sieve
 Mold : 6 in. (152.4 mm) diameter
 Layers : 5 (Five)
 Blows per layer : 56 (fifty-six)
 Use if +3/8 in. is >20% and +3/4 in. is <30%

Unified Hazard Tool

Please do not use this tool to obtain ground motion parameter values for the design code reference documents covered by the [U.S. Seismic Design Maps web tools](#) (e.g., the International Building Code and the ASCE 7 or 41 Standard). The values returned by the two applications are not identical.

Definition of Parameters

- Damping ratio** = Viscous damping ratio (%) See Sanaz et al. (2012) PEER Report
- PSA** = Pseudo-absolute acceleration response spectrum (g)
- PGA** = Peak ground acceleration (g)
- PGV** = Peak ground velocity (cm/s)
- S_a** = Relative displacement response spectrum (cm)
- M_w** = Moment magnitude
- R_{RUP}** = Closest distance to coseismic rupture (km), used in ASK13, CB13 and CY13. See Figures a, b and c for illustration
- R_{JB}** = Closest distance to surface projection of coseismic rupture (km). See Figures a, b and c for illustration
- R_X** = Horizontal distance from top of rupture measured perpendicular to fault strike (km). See Figures a, b and c for illustration
- R_{y0}** = The horizontal distance off the end of the rupture measured parallel to strike (km)
- V_{s30}** = The average shear-wave velocity (m/s) over a subsurface depth of 30 m
- U** = Unspecified-mechanism factor: 1 for unspecified; 0 otherwise
- F_{RV}** = Reverse-faulting factor: 0 for strike slip, normal, normal-oblique; 1 for reverse, reverse-oblique and thrust
- F_{NM}** = Normal-faulting factor: 0 for strike slip, reverse, reverse-oblique, thrust and normal-oblique; 1 for normal
- F_{HW}** = Hanging-wall factor: 1 for site on down-dip side of top of rupture; 0 otherwise
- Dip** = Average dip of rupture plane (degrees)
- Z_{TOR}** = Depth to top of coseismic rupture (km)
- Z_{HYP}** = Hypocentral depth from the earthquake
- Z_{1.0}** = Depth to Vs=1 km/sec
- Z_{2.5}** = Depth to Vs=2.5 km/sec
- W** = Fault rupture width (km)
- V_{s30Flag}** = 1 for measured, 0 for inferred Vs30
- F_{AS}** = 0 for mainshock; 1 for aftershock
- Region** = Specific regions considered in the models, Click on Region to see codes
- ΔDPP** = Directivity term, direct point parameter; uses 0 for median predictions
- PGA_r (g)** = Peak ground acceleration on rock (g), this specific cell is updated in the cell for BSSA14 and CB14, for others it is taken account for in the macros
- Z_{BOR} (km)** = The depth to the bottom of the seismicogenic crust
- Z_{BOR} (km)** = The depth to the bottom of the rupture plane
- SS** = 1 for strike slip, automatically updated in the cell

Definition of Parameters

Damping ratio = Viscous damping ratio (%) See Sanaz et al. (2012) PEER Report
PSA = Pseudo-absolute acceleration response spectrum (g)
PGA = Peak ground acceleration (g)
PGV = Peak ground velocity (cm/s)
S_d = Relative displacement response spectrum (cm)
M_w = Moment magnitude
R_{RUP} = Closest distance to coseismic rupture (km), used in ASK13, CB13 and CY13. See Figures a, b and c for illustration
R_{JB} = Closest distance to surface projection of coseismic rupture (km). See Figures a, b and c for illustration
R_X = Horizontal distance from top of rupture measured perpendicular to fault strike (km). See Figures a, b and c for illustration
R_{y0} = The horizontal distance off the end of the rupture measured parallel to strike (km)
V_{s30} = The average shear-wave velocity (m/s) over a subsurface depth of 30 m
U = Unspecified-mechanism factor: 1 for unspecified; 0 otherwise
F_{RV} = Reverse-faulting factor: 0 for strike slip, normal, normal-oblique; 1 for reverse, reverse-oblique and thrust
F_{NM} = Normal-faulting factor: 0 for strike slip, reverse, reverse-oblique, thrust and normal-oblique; 1 for normal
F_{HW} = Hanging-wall factor: 1 for site on down-dip side of top of rupture; 0 otherwise
Dip = Average dip of rupture plane (degrees)
Z_{TOR} = Depth to top of coseismic rupture (km)
Z_{HYP} = Hypocentral depth from the earthquake
Z_{1.0} = Depth to Vs=1 km/sec
Z_{2.5} = Depth to Vs=2.5 km/sec
W = Fault rupture width (km)
V_{s30Flag} = 1 for measured, 0 for inferred Vs30
F_{AS} = 0 for mainshock; 1 for aftershock
Region = Specific regions considered in the models, Click on Region to see codes
ΔDPP = Directivity term, direct point parameter; uses 0 for median predictions
PGA_r (g) = Peak ground acceleration on rock (g), this specific cell is updated in the cell for BSSA14 and CB14, for others it is taken account for in the macros
Z_{BOR} (km) = The depth to the bottom of the seismicogenic crust
Z_{BOR} (km) = The depth to the bottom of the rupture plane
SS = 1 for strike slip, automatically updated in the cell

Definition of Parameters

- Damping ratio** = Viscous damping ratio (%) See Sanaz et al. (2012) PEER Report
- PSA** = Pseudo-absolute acceleration response spectrum (g)
- PGA** = Peak ground acceleration (g)
- PGV** = Peak ground velocity (cm/s)
- S_d** = Relative displacement response spectrum (cm)
- M_w** = Moment magnitude
- R_{RUP}** = Closest distance to coseismic rupture (km), used in ASK13, CB13 and CY13. See Figures a, b and c for illustration
- R_{JB}** = Closest distance to surface projection of coseismic rupture (km). See Figures a, b and c for illustration
- R_x** = Horizontal distance from top of rupture measured perpendicular to fault strike (km). See Figures a, b and c for illustration
- R_{y0}** = The horizontal distance off the end of the rupture measured parallel to strike (km)
- V_{s30}** = The average shear-wave velocity (m/s) over a subsurface depth of 30 m
- U** = Unspecified-mechanism factor: 1 for unspecified; 0 otherwise
- F_{RV}** = Reverse-faulting factor: 0 for strike slip, normal, normal-oblique; 1 for reverse, reverse-oblique and thrust
- F_{NM}** = Normal-faulting factor: 0 for strike slip, reverse, reverse-oblique, thrust and normal-oblique; 1 for normal
- F_{HW}** = Hanging-wall factor: 1 for site on down-dip side of top of rupture; 0 otherwise
- Dip** = Average dip of rupture plane (degrees)
- Z_{TOR}** = Depth to top of coseismic rupture (km)
- Z_{HYP}** = Hypocentral depth from the earthquake
- Z_{1.0}** = Depth to Vs=1 km/sec
- Z_{2.5}** = Depth to Vs=2.5 km/sec
- W** = Fault rupture width (km)
- V_{s30Flag}** = 1 for measured, 0 for inferred Vs30
- F_{AS}** = 0 for mainshock; 1 for aftershock
- Region** = Specific regions considered in the models, Click on Region to see codes
- ΔDPP** = Directivity term, direct point parameter; uses 0 for median predictions
- PGA_r (g)** = Peak ground acceleration on rock (g), this specific cell is updated in the cell for BSSA14 and CB14, for others it is taken account for in the macros
- Z_{BOT} (km)** = The depth to the bottom of the seismicogenic crust
- Z_{BOR} (km)** = The depth to the bottom of the rupture plane
- SS** = 1 for strike slip, automatically updated in the cell

Calculated Variables/Flags	
ΔDPP	Always 0 for median calcs.
0	
PGA_r (g)	
0.433	
Z_{BOT} (km) (CB14)	Enter for default W calcs

Note: Based on ASCE 7-16 Section 21.4, the parameter S_{DS} shall be taken as 90% of the maximum spectral acceleration, S_a , obtained from the site-specific spectrum, at any period within the range from 0.2 to 5 s, inclusive. The parameter S_{D1} shall be taken as the maximum value of the product, $T S_a$, for periods from 1 to 2 s for sites with $V_{S30} > 1,200$ ft/s ($V_{S30} > 365.76$ m/s) and for periods from 1 to 5 s for sites with $V_{S30} \leq 1,200$ ft/s ($V_{S30} \leq 365.76$ m/s). The design S_a shall not be less than 80% of 2/3 of the general procedure (ASCE 7-16 Sec 11.4.6)

COMMENTS:

BOUNDARY LINES... WERE ESTABLISHED FROM RECOVERED CITY, COUNTY AND/OR PRIVATE SURVEY MONUMENTS WHOSE CHARACTER AND SOURCE ARE SO NOTED ON THE SURVEY.
LEGAL DESCRIPTION... THE LEGAL DESCRIPTION SHOWN HEREON IS PER THE TITLE COMMITMENT NOTED BELOW, AND WAS USED TO PLOT THE PROPERTY BOUNDARIES SHOWN HEREON. SAID LEGAL DESCRIPTION CONTAINS NO GAPS, GORES OR OVERLAPS RELATED TO THE SUBJECT PARCEL.
EASEMENTS... PLOTTABLE EASEMENTS ARE SHOWN FROM THE TITLE COMPANY SUPPLIED TITLE REPORT AS NOTED BELOW. NON-PLOTTABLE ONES ARE NOTED ON THE SURVEY AS HAVING "EFFECT OF", BECAUSE OUR SERVICE IS LIMITED TO REPORTING ON EASEMENT LOCATIONS WE STRONGLY RECOMMEND LEGAL COUNSEL BE RETAINED TO REPORT ON TITLE PAPERS IN THEIR ENTIRETY.
TITLE REPORT... CHICAGO TITLE COMPANY ORDER NO. 00155311-997-BM5-M7, DATED JULY 9, 2021.
HORIZONTAL CONTROL... STATE PLANE COORDINATES, CALIFORNIA COORDINATE SYSTEM ZONE 5 BASED ON NAD83 (CORS96) (EPOCH: 2002.0000) REFERENCE FRAME. THE HORIZONTAL COORDINATE VALUES SHOWN HEREON ARE BASED UPON LOCAL CONTROL POINTS AND DERIVED FROM THE GPS STATIC OBSERVATIONS THAT WERE POST-PROCESSED USING ON-LINE POSITIONING USER SERVICE (OPUS) PROVIDED BY THE US NATIONAL GEODETIC SURVEY.
VERTICAL CONTROL... VERTICAL VALUES ARE BASED UPON NORTH AMERICAN VERTICAL DATUM OF 1988 USING US NATIONAL GEODETIC SURVEY BENCHMARKS LISTED BELOW.
