1 EXECUTIVE SUMMARY

This Traffic Impact Analysis (TIA) has been prepared by EPD Solutions, Inc. (EPD) to analyze the potential traffic-related Level of Service (LOS) deficiencies of the proposed Ethanac/Barnett Warehouse project located on the south of Ethanac Road and west of Barnett Road in the City of Menifee. The project site is comprised of two adjacent parcels (APNs – 331-060-036, 331-060-021) totaling an area of 13.89 acres. The existing site is currently vacant.

The development proposes the construction of two speculative buildings totaling 251,133 square feet (SF). For the purpose of this study, the speculative buildings were analyzed as ten percent manufacturing and 90 percent warehouse land use. The proposed project is estimated to generate approximately 506 daily trips, 56 AM peak hour trips, and 59 PM peak hour trips. In terms of Passenger Car Equivalent (PCE), the proposed development is estimated to generate approximately 720 daily PCE trips, 79 AM PCE trips, and 84 PM PCE trips.

The following study area intersections were evaluated during the AM and PM peak hours, which are defined as the hours with the highest traffic volumes during the 7 AM to 9 AM and 4 PM to 6 PM peak commute periods.

1. Murrieta Road/Ethanac Road (Existing)
2. Ethanac Road/Project Driveway 1 (Proposed)
3. Barnett Road-Case Road/Ethanac Road (Existing)
4. Barnett Road/ Project Driveway 2 (Proposed)
5. Barnett Road/ Project Driveway 3 (Proposed)
6. Barnett Road/ Project Driveway 4 (Proposed)
7. I-215 Southbound (SB) Ramps/Ethanac Road (Existing)
8. I-215 Northbound (NB) Ramps/Ethanac Road (Existing)

AM and PM peak hour traffic operations were evaluated for the following scenarios:

- Existing Conditions
- Existing Plus Project Conditions
- Opening Year Cumulative Without Project Conditions
- Opening Year Cumulative With Project Conditions

Existing Plus Project Intersection Analysis Results

The following intersections would result in an unsatisfactory LOS:

3. Barnett Road-Case Road/Ethanac Road (LOS F at AM peak hour and LOS E at PM peak hour)
7. I-215 SB Ramps/Ethanac Road (LOS F at AM/PM peak hour)
8. I-215 NB Ramps/Ethanac Road (LOS F at AM peak hour)

Opening Year Cumulative With Project Intersection Analysis Results

The following intersections would result in an unsatisfactory LOS:

1. Murrieta Road/Ethanac Road (LOS F at AM/PM peak hour)
3. Barnett Road-Case Road/Ethanac Road (LOS F at AM peak hour and LOS E at PM peak hour)
7. I-215 SB Ramps/Ethanac Road (LOS F at AM/PM peak hour)
8. I-215 NB Ramps/Ethanac Road (LOS F at AM/PM peak hour)

Project Improvement and Fair-Share Calculation

The following improvements reduce the LOS to either below the baseline LOS or a satisfactory LOS:

3. Barnett Road-Case Road/Ethanac Road (AM and PM peak hours): Widen and restripe the northbound shared left-thru-right lane to provide an exclusive right-turn lane and a shared thru-left turn lane. To increase intersection safety, it is recommended that cat tracks pavement markers be installed for all the edges of the dual SBL instead of the single cat track currently installed in the middle of the SBL turns. It is also recommended that a "Keep Clear" pavement marking be installed approximately 85 feet beyond the stop line of the 50 feet left turn pocket at Barnett Road/Ethanac Road. This will ensure that the WBL traffic does not block traffic waiting to make a SBL given the staggered nature of this intersection.
7. I-215 SB Ramps/Ethanac Road (AM and PM peak hours): Widen and restripe the southbound (SB) shared thru-left turn lane to provide an exclusive left-turn lane, to remove the SB thru movement and to add a second right-turn lane. Widen and restripe the eastbound (EB) approach to add two thru-lanes and a right-turn lane. Widen and restripe the westbound (WB) approach to add a second left-turn lane. In addition, add overlap right-turn phasing during the SB phase.
8. 215 NB Ramps/Ethanac Road (AM and PM peak hours): Widen and restripe the northbound (NB) shared thru-left turn lane to provide two left-turn lanes, to remove the NB thru movement and a right-turn lane. Widen and restripe the EB approach to add an exclusive left-turn lane and a thru-lane. Widen and restripe the WB approach to add three thru-lanes and an exclusive right-turn lane. In addition, add overlap right-turn phasing during the NB phase.

Improvements at intersections 7 and 8 are part of the Transportation Uniform Mitigation Fee (TUMF) program. The project would be required to pay TUMF fees which would contribute towards the construction of the I-215 and Ethanac Road Interchange. The project would be responsible for 4.22 percent of the improvement cost at the intersection 3. The project would be responsible for 2.48 percent for improvement at Ethanac Road between Case Road and I-215 SB Ramps and 0.31 percent for improvement at Ethanac Road between Murrieta Road and Barnett Road.

2 INTRODUCTION

This Traffic Impact Analysis (TIA) has been prepared by EPD Solutions, Inc. (EPD) to analyze the potential traffic-related Level of Service (LOS) deficiencies of the proposed warehouse project located on the south of Ethanac Road and west of Barnett Road in the City of Menifee. The scope of work for this TIA was reviewed and approved by the City of Menifee and is provided in Appendix A. The TIA was prepared according to the approved scope of work using methodologies and significance criteria consistent as per the City of Menifee LOS Traffic Study Guidelines (October, 2020) and the City General Plan.

2.1 Project Description

The project site is comprised of two adjacent parcels (APNs – 331-060-036, 331-060-021) totaling an area of 13.89 acres. The existing site is currently vacant. The location of the project is shown in Figure 1 and the project site plan is shown in Figure 2. The development proposes the construction of two speculative buildings totaling 251,133 square feet (SF). Ten percent of the total square footage would be allocated for manufacturing and 90 percent would be allocated for warehousing.

The project will be accessible via four driveways, one on Ethanac Road and three on Barnett Road. Project driveway 1 would be accessible to passenger vehicles only and restricted to right-in and right-out movements due to the median on Ethanac Road. Project driveway 2 would be accessible to passenger vehicles and trucks and would also be restricted to right-in and right-out movements due to the planned median on Barnett Road at the time the project is built. Project driveway 3 would be a full access driveway accessible to trucks only, and project driveway 4 would be a full access driveway accessible to passenger vehicles and trucks.

Figure 1: Project Location

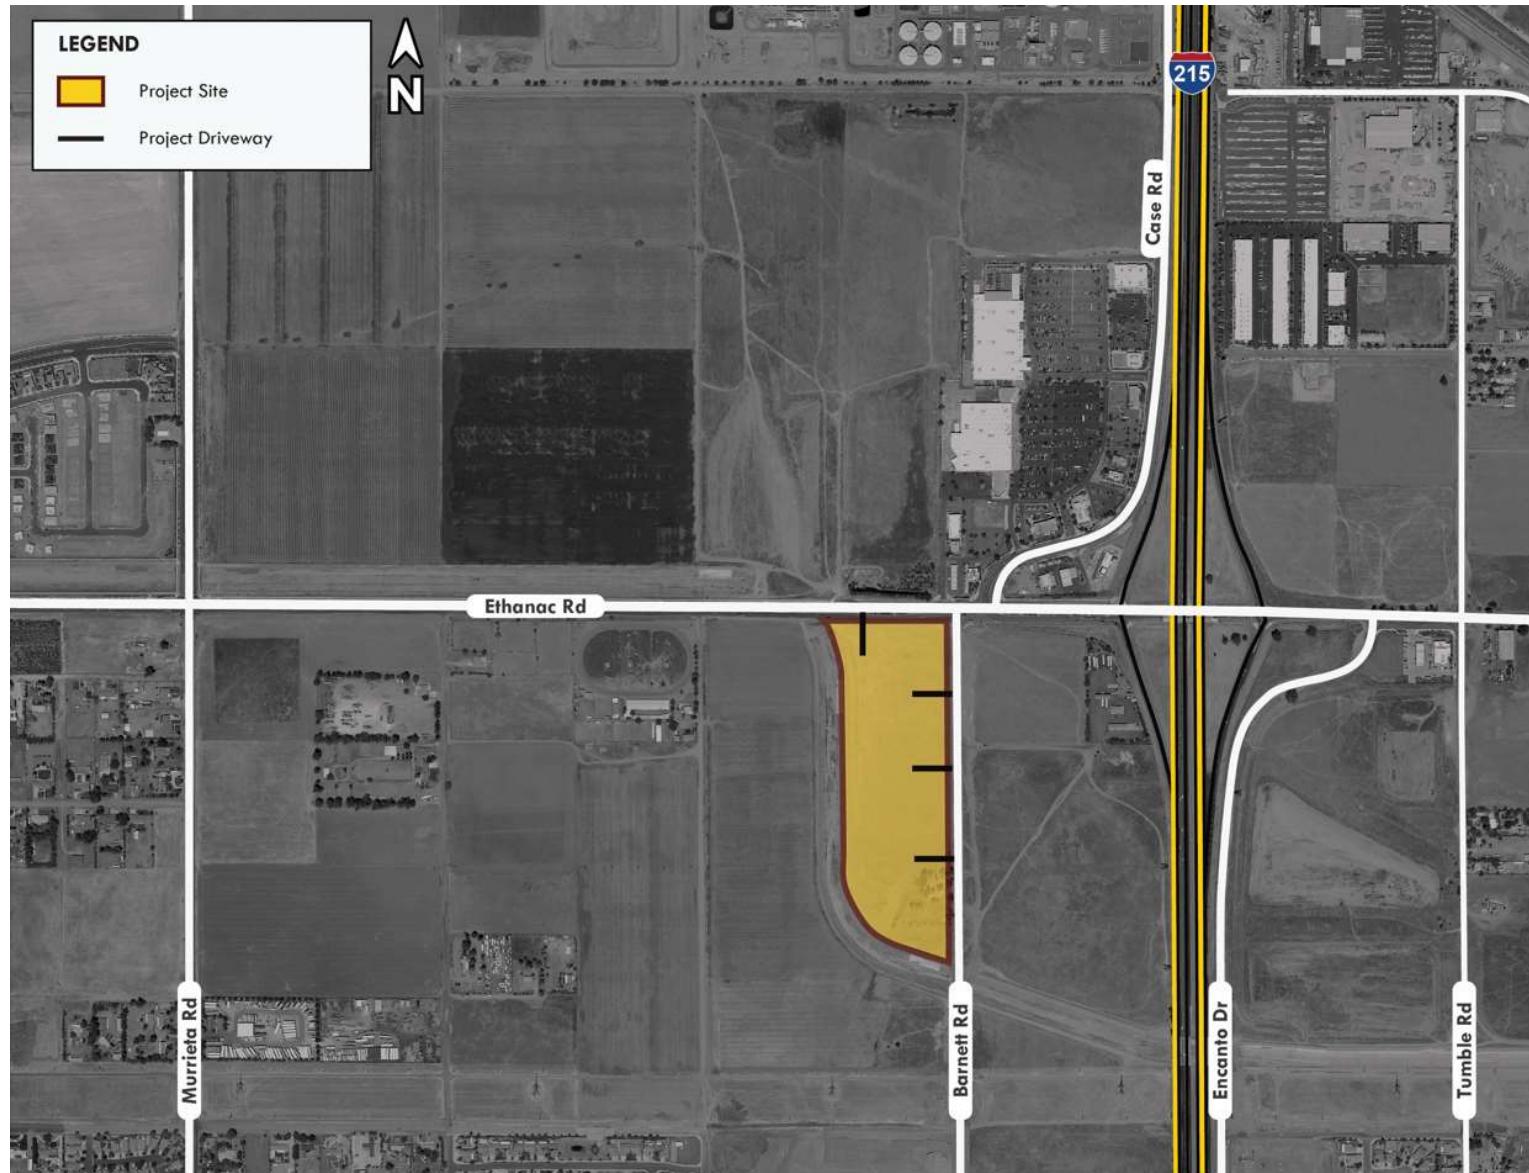

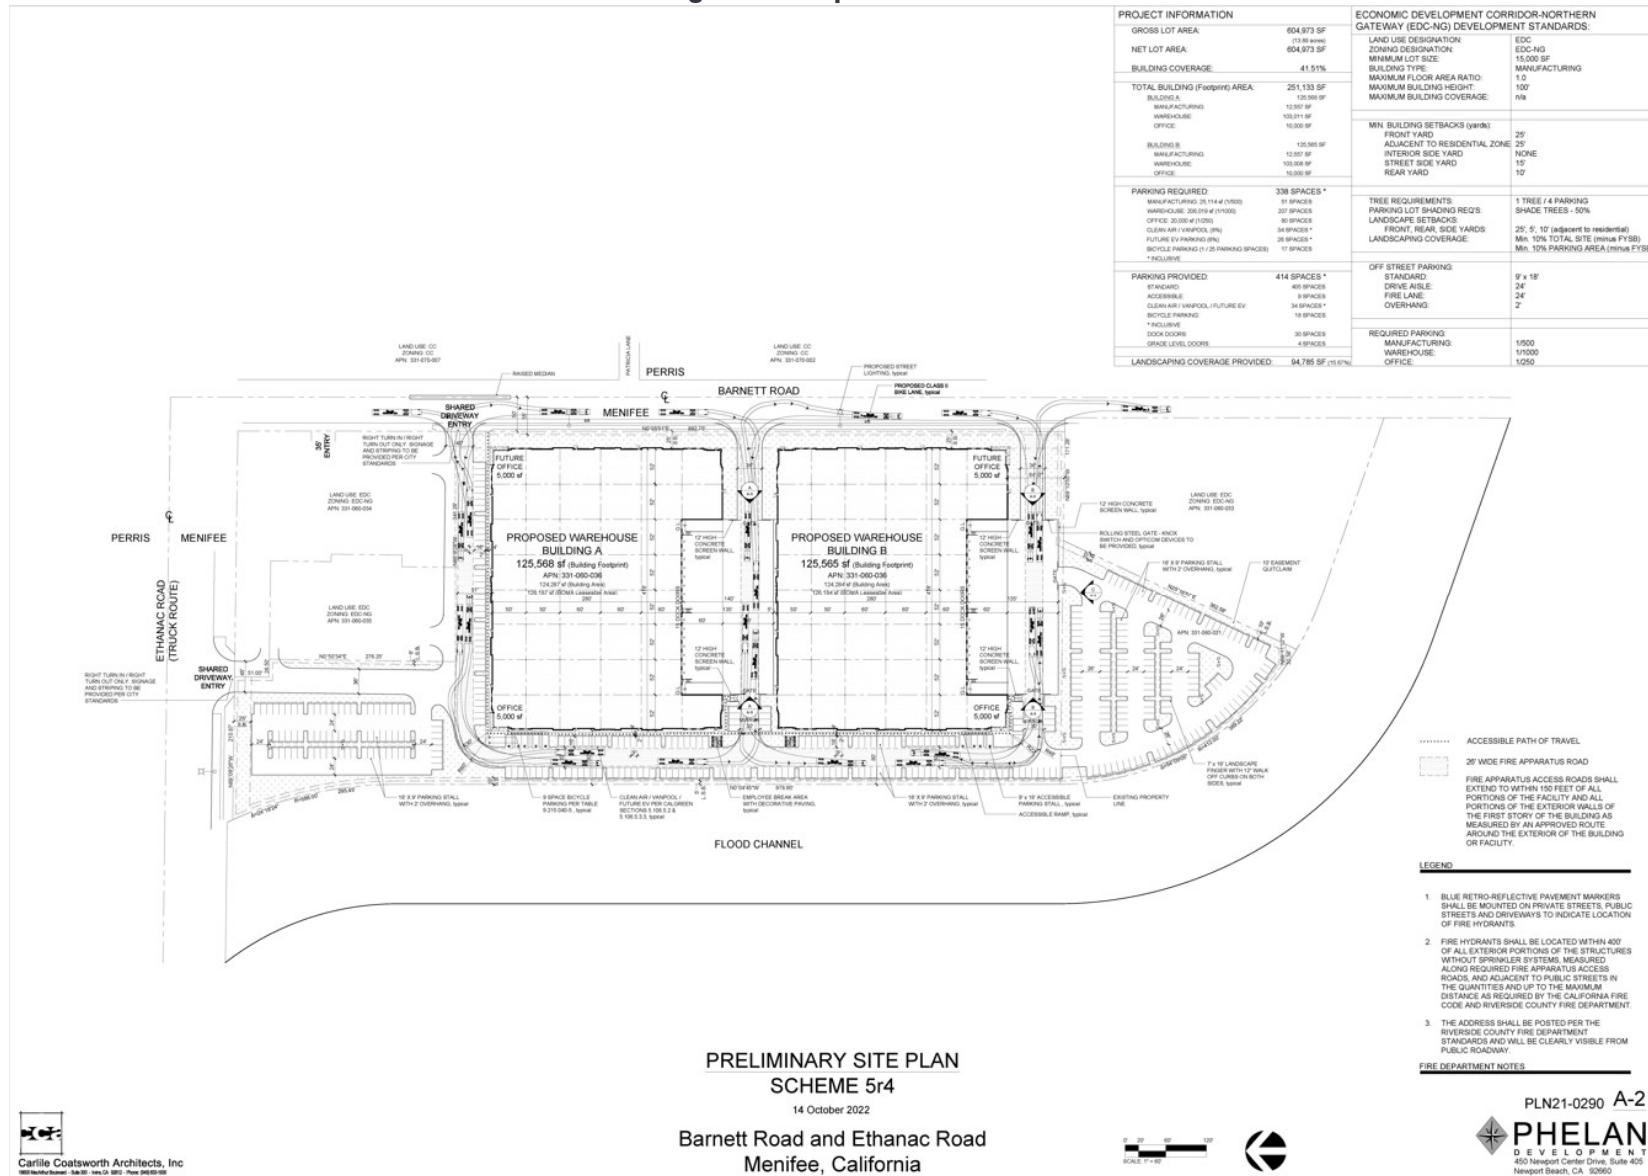

Figure 2: Project Site Plan

2.2 Study Area and Analysis Scenarios

The City of Menifee LOS Traffic Study (TS) Guidelines requires that the traffic and circulation deficiencies of proposed warehouse project be analyzed. The study area was selected to include intersections at which the project would add 50 or more peak hour trips. This TIA includes the analysis of signalized intersections and two-way stop-control (TWSC) intersections. The following intersections were included in the analysis:

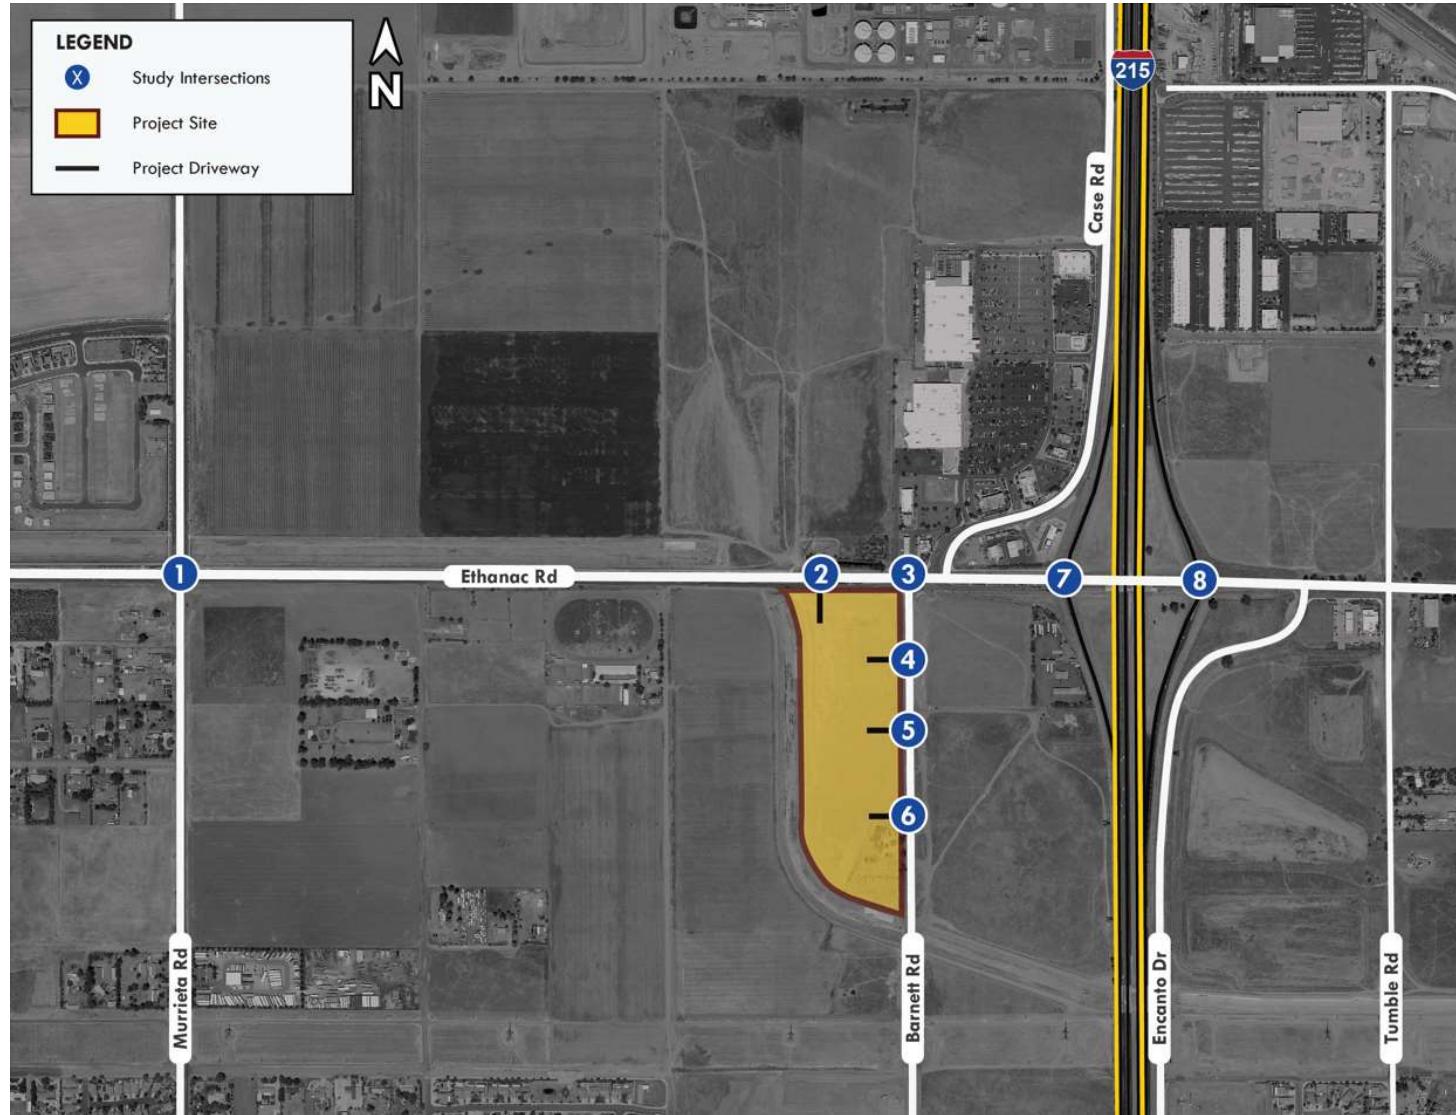

1. Murrieta Road/Ethanac Road (Existing – Signalized)
2. Ethanac Road/Project Driveway 1 (Proposed – TWSC)
3. Barnett Road-Case Road/Ethanac Road (Existing – Signalized)
4. Barnett Road/ Project Driveway 2 (Proposed – TWSC)
5. Barnett Road/ Project Driveway 3 (Proposed – TWSC)
6. Barnett Road/ Project Driveway 4 (Proposed – TWSC)
7. I-215 SB Ramps/Ethanac Road (Existing – Signalized)
8. I-215 NB Ramps/Ethanac Road (Existing – Signalized)

The locations of the study area intersections are shown in Figure 3. Study area intersections were evaluated during the AM and PM peak hours, which are defined as the hour with the highest traffic volumes during the 7 AM to 9 AM and 4 PM to 6 PM peak commute periods. AM and PM peak hour traffic operations were evaluated for the following scenarios:

- Existing Conditions
- Existing Plus Project Conditions
- Opening Year Cumulative Without Project Conditions
- Opening Year Cumulative With Project Conditions

EPD collected counts for the study intersections on Tuesday, May 10th, 2022. The counts were taken while schools were in session. As per the City of Menifee LOS TS Guidelines, forecast traffic volumes for the Opening Year (2024) conditions were developed by applying a growth rate of 2 percent per year to the existing (2022) traffic counts and adding traffic from nearby cumulative development projects (approved and not yet built and those under review). Because the proposed development is located in proximity to the boundary of the City of Perris, cumulative projects provided by the City of Menifee and City of Perris are included in the Cumulative analysis. All traffic count data are provided in Appendix B. EPD obtained the signal timing plan for intersection 3: Barnett Road-Case Road/Ethanac Road from the City of Perris and it is provided in Appendix C. All signalized intersections use 120 seconds cycle length as suggested by the City of Menifee Traffic Engineer. As per the Manual on Uniform Traffic Control Devices (MUTCD) Section 4D.26 Guidance 14. ‘A yellow change interval should have a minimum duration of 3 seconds and a maximum duration of 6 seconds. The longer intervals should be reserved for use on approaches with higher speeds’, because the City of Menifee Traffic Engineer did not provide the length of the yellow change, this TIA uses 3 second yellow change for all signalized intersections except intersection 3.

Figure 3: Project Study Area

2.3 Methodology

Intersection operations are evaluated using Level of Service (LOS), which is a measure of the delay experienced by drivers on a roadway facility. LOS A indicates free-flow traffic conditions and is generally the best operating conditions. LOS F is an extremely congested condition and is the worst operating condition from the driver's perspective. In this report, LOS at signalized and unsignalized intersections is calculated using the *Highway Capacity Manual* (HCM), 7th Edition methodology.

LOS at signalized intersections is defined in terms of the weighted average control delay for the intersection as a whole. Control delay is a measure of the increase in travel time that is experienced due to traffic signal control and is expressed in terms of average control delay per vehicle (in seconds). Control delay is determined based on the intersection geometry and volume, signal cycle length, phasing and coordination along the arterial corridor. Table 1 shows the relationship between control delay and LOS.

Table 1: Relationship between Control Delay and LOS at a Signalized Intersection

LOS	Delay (Seconds per Vehicle)
A	≤ 10
B	$>10 - 20$
C	$>20 - 35$
D	$>35 - 55$
E	$>55 - 80$
F	>80

Unsignalized intersections are categorized as either all-way stop control (AWSC) or two-way stop control (TWSC). LOS at AWSC intersections is determined by the weighted average control delay of the overall intersection. The HCM TWSC intersection methodology calculates LOS based on the delay experienced by drivers on the minor (stop-controlled) approaches to the intersection. For TWSC intersections, LOS is determined for each minor-street movement, as well as the major-street left-turns. The relationship between delay and LOS at Unsignalized intersections is shown in Table 2.

Table 2: Relationship between Delay and LOS at an Unsignalized Intersection

LOS	Delay (seconds)
A	0-10
B	$>10 - 15$
C	$>15 - 25$
D	$>25 - 35$
E	$>35 - 50$
F	>50

The roadway segment analysis would be performed by comparing the Average Daily Traffic (ADT) on a roadway segment with the Roadway Capacity and Level of Service table provided in Appendix D.

2.4 Significance Criteria

City of Menifee

The City of Menifee LOS Traffic Study (TS) Guidelines identifies LOS D as the threshold for acceptable operating conditions for intersections except at constrained intersections and roadway segments in close proximity to I-215, where LOS E is accepted during peak hours.

As per the TS guidelines, a project would not meet the LOS standard under the following conditions:

1. If the pre-Project condition at an intersection or roadway segment is at or better than the minimum acceptable LOS (LOS D, or LOS E at constrained locations near I-215) and the addition of project trips results in unacceptable LOS (LOS E or LOS F), a significant impact is forecast to occur. This type of impact would be considered a “direct” project impact in which the project would be fully responsible for mitigating the impact.
2. If the pre-Project condition is LOS E or F and the Project adds 50 or more peak hour trips to the intersection or roadway segment, then a significant impact is forecast to occur. This type of impact would be considered a “cumulative” project impact in which the project would be required to contribute a fair share payment toward mitigating the impact.

City of Perris

The City of Perris LOS Standards and Significance Criteria for Traffic Studies identifies LOS D as the threshold for acceptable operating conditions for intersections except at constrained intersections and roadway segments in close proximity to State Route (SR) 74, the Ramona-Cajalco Expressway, or at I-215 freeway ramps, where LOS E is accepted during peak hours.

As per the TIA guidelines, a project would not meet the LOS standard under the following conditions:

1. A project-related impact is considered direct and significant when a study intersection operates at an acceptable Level of Service for existing conditions (without the project) and the addition of 50 or more a.m. or p.m. peak hour project trips causes the intersection to operate at an unacceptable Level of Service for existing plus project conditions.
2. A project-related impact is considered direct and significant when a study intersection operates at an unacceptable Level of Service for existing conditions (without the project) and the addition of 50 or more a.m. or p.m. peak hour project trips causes the intersection delay to increase by 2 seconds or more.
3. A cumulative impact is considered significant when a study intersection is forecast to operate at an unacceptable Level of Service with the addition of cumulative/background traffic and 50 or more a.m. or p.m. peak hour project trips.

California Department of Transportation (Caltrans)

The Caltrans Guide for the Preparation of Traffic Impact Studies (December 2002) required that State Highway facilities be analyzed when project traffic was added to the facility. As per the guidelines, LOS D is the required standard at intersections under the jurisdiction of Caltrans.

However, Caltrans states the following: “*Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS.*”

In response to implementation of SB743, Caltrans released the *Vehicle Miles Traveled-Focused Transportation Impact Study Guide*, May 20, 2020. According to the latest guide, “*With this guidance, the Department will transition away from requesting LOS or other vehicle operations analyses of land use projects.*”

3 BASELINE CONDITIONS

This section discusses the baseline (without project) conditions. Baseline conditions are those conditions that exist within the study area in the existing condition and that are forecast to occur in the future, without the proposed project.

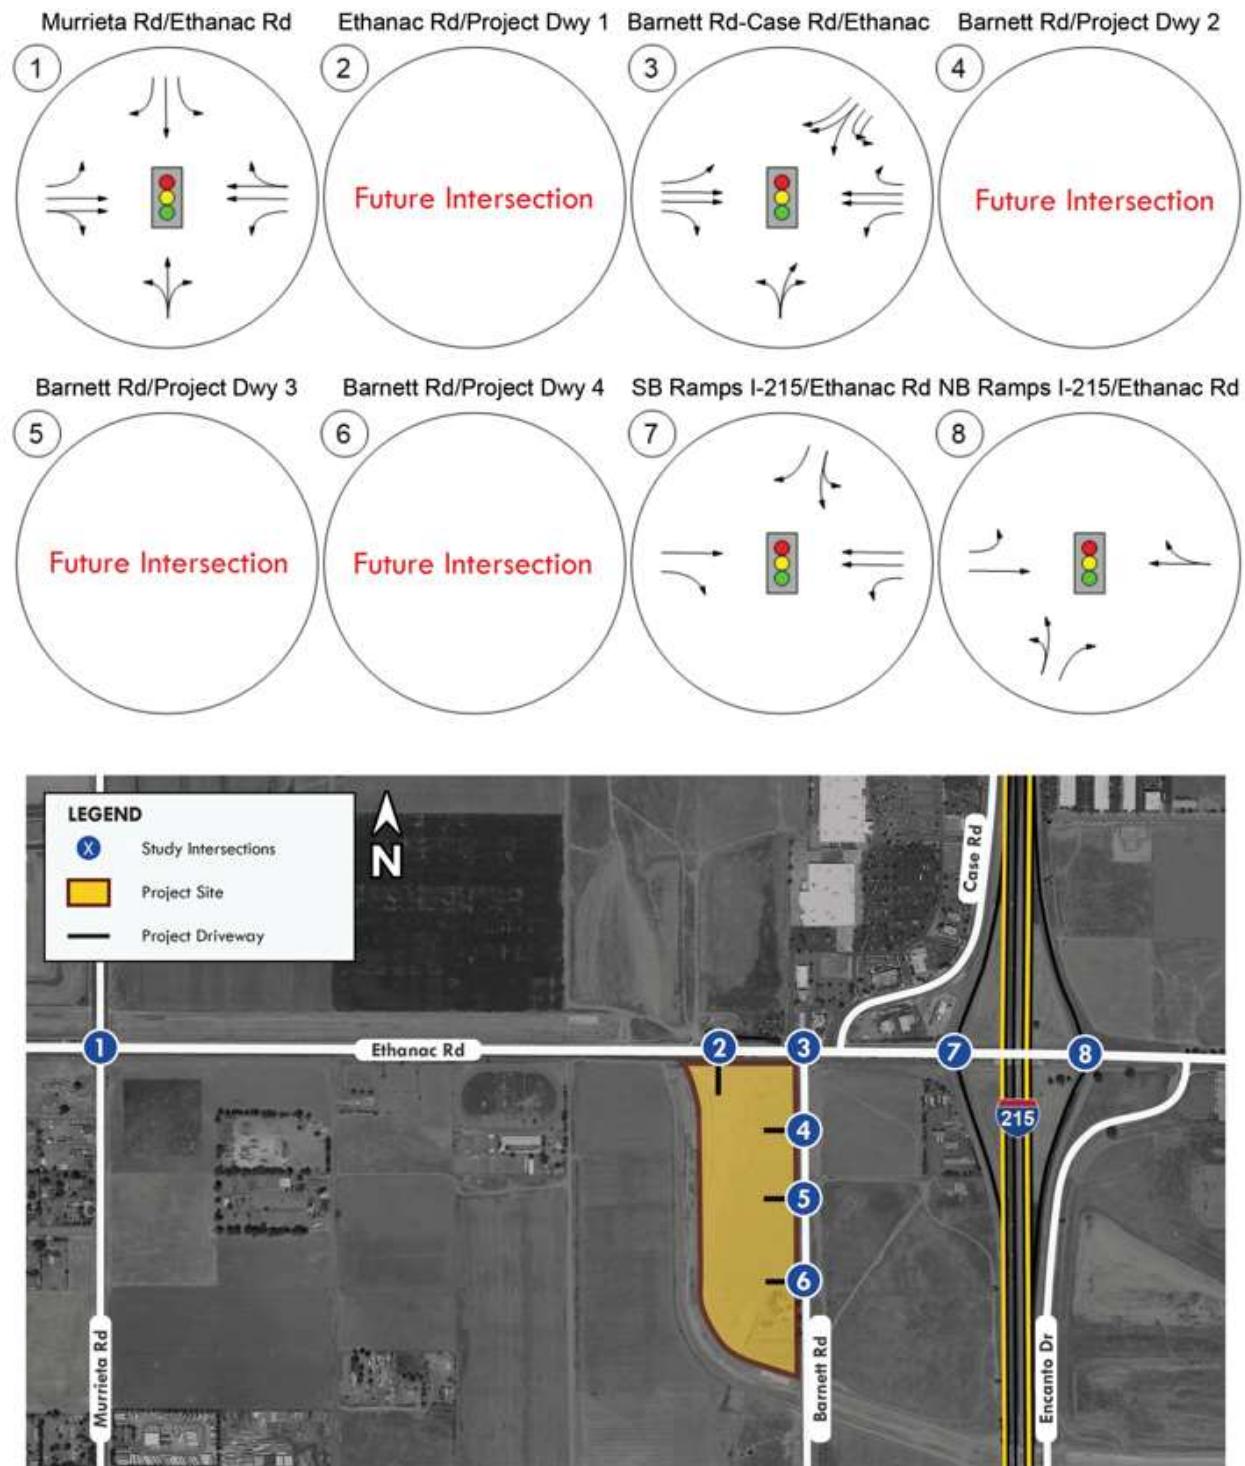

3.1 Existing Transportation System and Access

The proposed Ethanac/Barnett Warehouse Project is located on the south of Ethanac Road and west of Barnett Road in the City of Menifee. Roadways providing access to the project site include I-215, Ethanac Road Murrieta Road and Barnett Road. The characteristics of each roadway are discussed below:

- Regional access is provided to the project via interstate highway I-215 which provides connections between Riverside County, San Bernardino County, Los Angeles County and San Diego County.
- Ethanac Road is designated as a six-lane divided expressway as per the City of Menifee General Plan and the City of Perris General Plan. In the vicinity of the project, the existing Ethanac Road is a four-lane divided arterial.
- Murrieta Road is designated as a four-lane undivided secondary as per the City of Menifee General Plan and a four-lane divided secondary arterial as per the City of Perris General Plan. However, Murrieta Road is currently a four-lane divided secondary arterial on the north of Ethanac Road and a two-lane collector on the south of Ethanac Road under existing conditions.
- Barnett Road is designated as a four-lane undivided secondary as per the City of Menifee General Plan but it is currently a two-lane collector.

There are existing bike lanes on the north side of Ethanac Road between Murrieta Road and Barnett Road. There are existing sidewalks on the north side of Ethanac Road between Murrieta Road and southbound of I-215 ramps. The closest bus stop is located approximately nine hundred feet away from the proposed project site on Case Road at Perris Crossing.

The existing traffic control and intersection geometrics at study area intersections are shown in Figure 4.

Figure 4: Existing Lane Geometries and Traffic Control

3.2 Existing Traffic Volumes and Intersection Operations

Existing AM and PM peak hour traffic volumes at the study area intersections are shown in Figures 5 and 6. The existing Levels of Service at the study area intersections were determined using the HCM methodology, described previously in section 2.3. Table 3 shows the existing AM and PM peak hour levels of service at study intersections. All LOS calculations are provided in Appendix E. As shown in Table 3, the following intersections would operate at an unsatisfactory LOS:

- 3. Barnett Road-Case Road/Ethanac Road (LOS F at AM peak hour and LOS E at PM peak hour)
- 7. I-215 SB Ramps/Ethanac Road (LOS F at AM/PM peak hour)
- 8. I-215 NB Ramps/Ethanac Road (LOS F at AM peak hour)

Table 3: Existing AM and PM Peak Hour Level of Service

Intersection	Jurisdiction	Traffic Control	AM Peak		PM Peak		Threshold of Significance
			Delay ¹	LOS ²	Delay ¹	LOS ²	
1. Murrieta Rd/Ethanac Rd	City of Menifee/Perris	Signal	32.2	C	35.4	D	D

²Level of Service

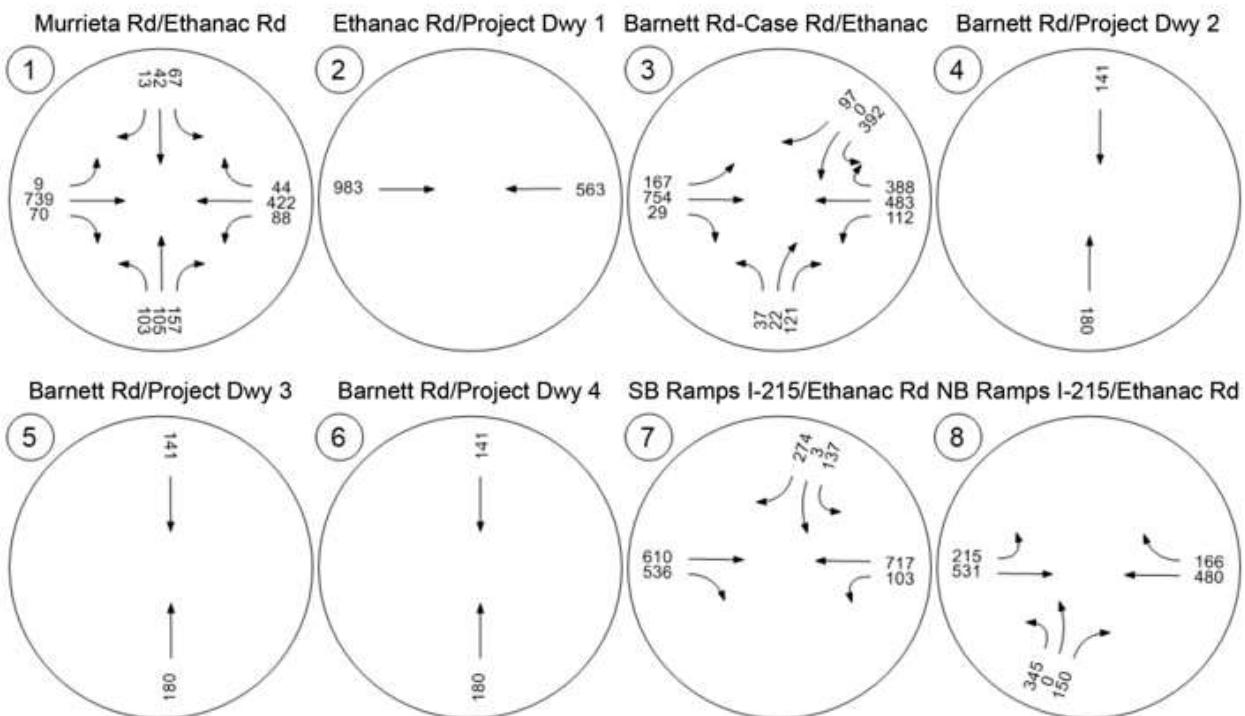

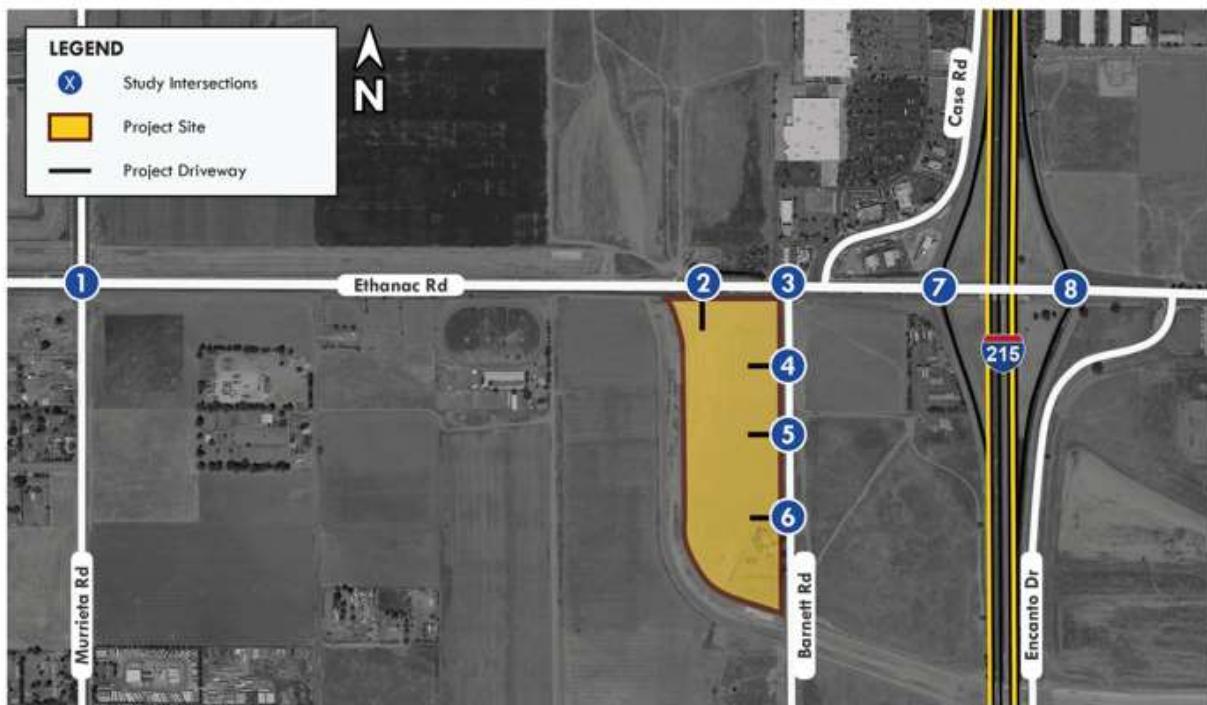

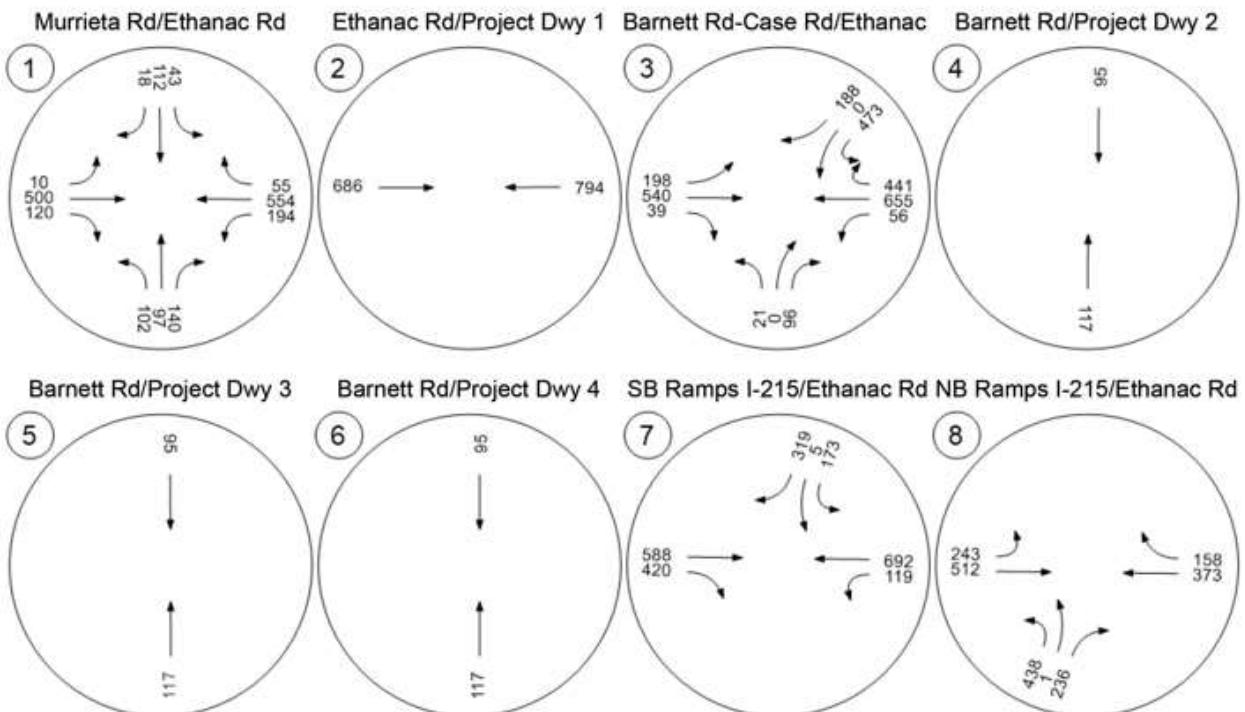

Figure 5: Existing AM Peak Hour Traffic Volumes

Figure 6: Existing PM Peak Hour Traffic Volumes

3.3 Opening Year Traffic Volumes and Intersection Operations

Opening Year Baseline (2024) traffic volumes were developed by applying a growth rate of two percent per year to the existing (2022) traffic volumes and adding traffic generated by other approved and pending development projects. A total of 24 cumulative development projects are included in the Opening Year Baseline traffic volumes. Out of the 24 cumulative projects, 9 projects are located in the City of Perris, 15 are located in the City of Menifee. The project trip generation for each cumulative project was calculated using trip rates from the Institute of Transportation Engineers (ITE), *Trip Generation Manual*, 11th Edition. The location of the cumulative projects is shown in Figure 7. The Opening Year (2024) Baseline traffic volumes are illustrated in Figures 8 and 9. Table 4 below shows the Opening Year AM and PM peak hour levels of service at study intersections. Table 5 shows the trip generation for each cumulative project, and the cumulative assignment can be found in Appendix F. As shown in Table 4, the following intersections would operate at an unsatisfactory LOS:

1. Murrieta Road/Ethanac Road (LOS F at AM/PM peak hour)
3. Barnett Road-Case Road/Ethanac Road (LOS F at AM peak hour and LOS E at PM peak hour)
7. I-215 SB Ramps/Ethanac Road (LOS F at AM/PM peak hour)
8. I-215 NB Ramps/Ethanac Road (LOS F at AM/PM peak hour)

Table 4: Opening Year AM and PM Peak Hour Level of Service

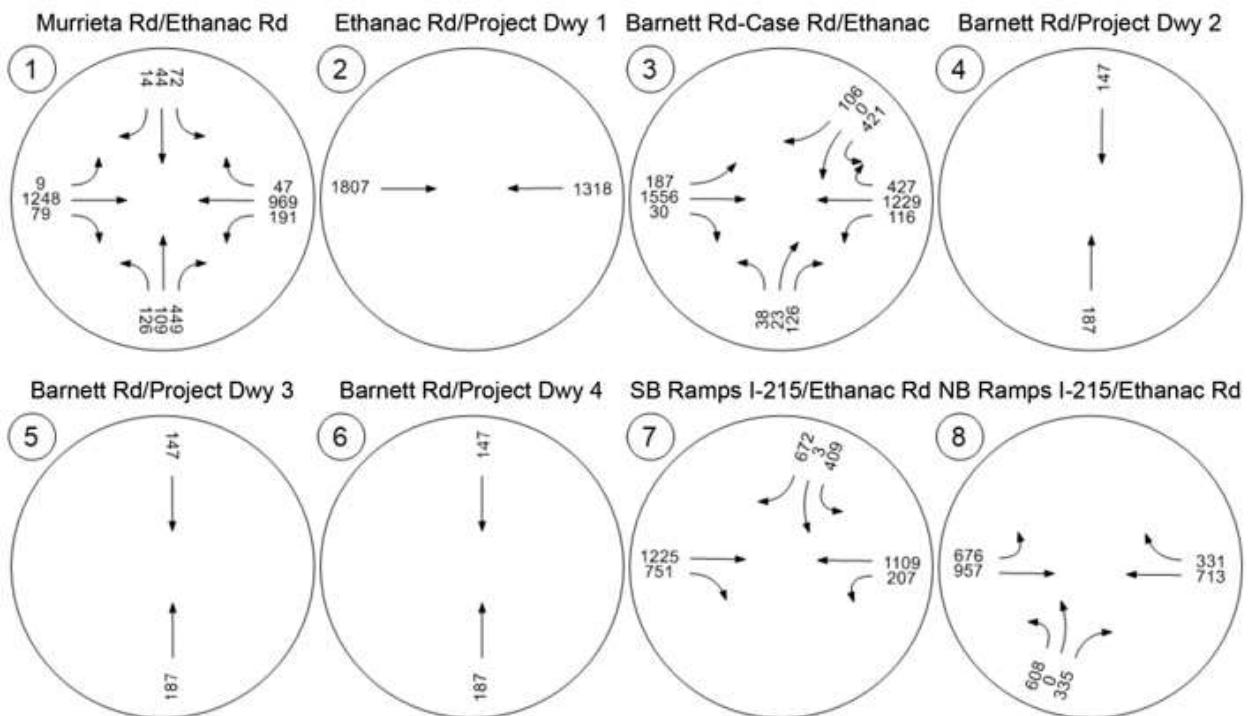

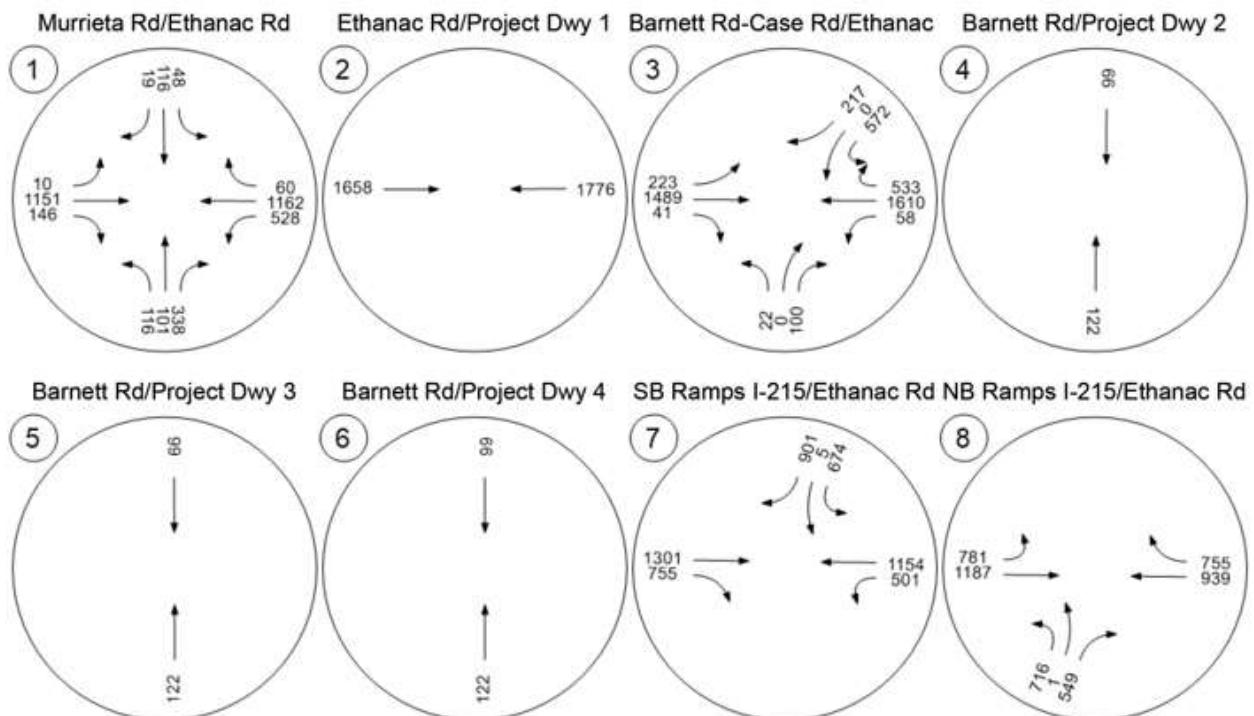

Figure 8: Opening Year AM Peak Hour Volumes

Figure 9: Opening Year PM Peak Hour Volumes

4 PROPOSED PROJECT

The project site is comprised of two adjacent parcels (APNs – 331-060-036, 331-060-021) totaling an area of 13.89 acres. The existing site is currently vacant. The location of the project is shown in Figure 1 and the project site plan is shown in Figure 2. The development proposes the construction of two speculative buildings totaling 251,133 square feet (SF). Ten percent of the total square footage would be allocated for manufacturing and 90 percent would be allocated for warehousing.

The project will be accessible via four driveways, one on Ethanac Road and three on Barnett Road. Project driveway 1 would be accessible to passenger vehicles only and restricted to right-in and right-out movements due to the median on Ethanac Road. Project driveway 2 would be accessible to passenger vehicles and trucks and would also be restricted to right-in and right-out movements due to the planned median on Barnett Road at the time the project is built. Project driveway 3 would be a full access driveway accessible to trucks only, and project driveway 4 would be a full access driveway accessible to passenger vehicles and trucks. The project will install truck turn restriction signs for both project driveways 3 and 4 on Barnett Road to restrict trucks from traveling south on Barnett Road. The project will install truck probation sign beyond the project site to prohibit truck traveling south of the Barnett Road.

4.1 Project Trip Generation

Vehicle trips were generated for the project using trip rates for the manufacturing and warehouse land use from the ITE *Trip Generation Manual*, 11th Edition. The project trip generation is shown in Table 6. The proposed Ethanac/Barnett Warehouse Project would generate a total of 506 daily trips, 56 AM peak hour trips and 59 PM peak hour trips. Upon the application of a Passenger Car Equivalent (PCE) factor, the proposed development would generate a total of 720 daily trips, 79 AM peak hour trips and 84 PM peak hour trips.

4.2 Project Trips

Project trips were distributed to the study area intersections based on the location of the project and logical routes of travel to and from the site. Project trips were assigned to the study area intersections by multiplying the project trip generation by the trip distribution percent at each location. The project trip distribution for the passenger vehicles and trucks is shown in Figures 10 and 11 respectively. The distribution for passenger vehicles and trucks on project driveways is logically redistributed as per the project site plan. The project peak hour trip assignment for passenger vehicles is shown in Figures 12 and 13 respectively. The project peak hour trip assignment for trucks is shown in Figures 14 and 15 respectively. The project peak hour trip assignment for passenger vehicles and trucks in terms of PCE is shown in Figures 16 and 17 respectively.

5 BASELINE PLUS PROJECT CONDITIONS

5.1 Existing Plus Project Traffic Volumes and Intersection Operations

The Existing plus Project traffic volumes were developed by adding the project trips to the Existing traffic volumes. The Existing plus Project traffic volumes are shown in Figures 16 and 17. LOS at the study area intersections was determined using the HCM methodology, described previously in Section 2.3. Table 7 shows the Existing plus Project AM and PM peak hour levels of service at the study area intersections. All LOS calculations are provided in Appendix E. As shown in Table 7, the following intersections would operate at an unsatisfactory LOS:

- 3. Barnett Road-Case Road/Ethanac Road (LOS F at AM peak hour and LOS E at PM peak hour)
- 7. I-215 SB Ramps/Ethanac Road (LOS F at AM/PM peak hour)
- 8. I-215 NB Ramps/Ethanac Road (LOS F at AM peak hour)

Table 7: Existing Plus Project AM and PM Peak Hour Level of Service

²Level of Service

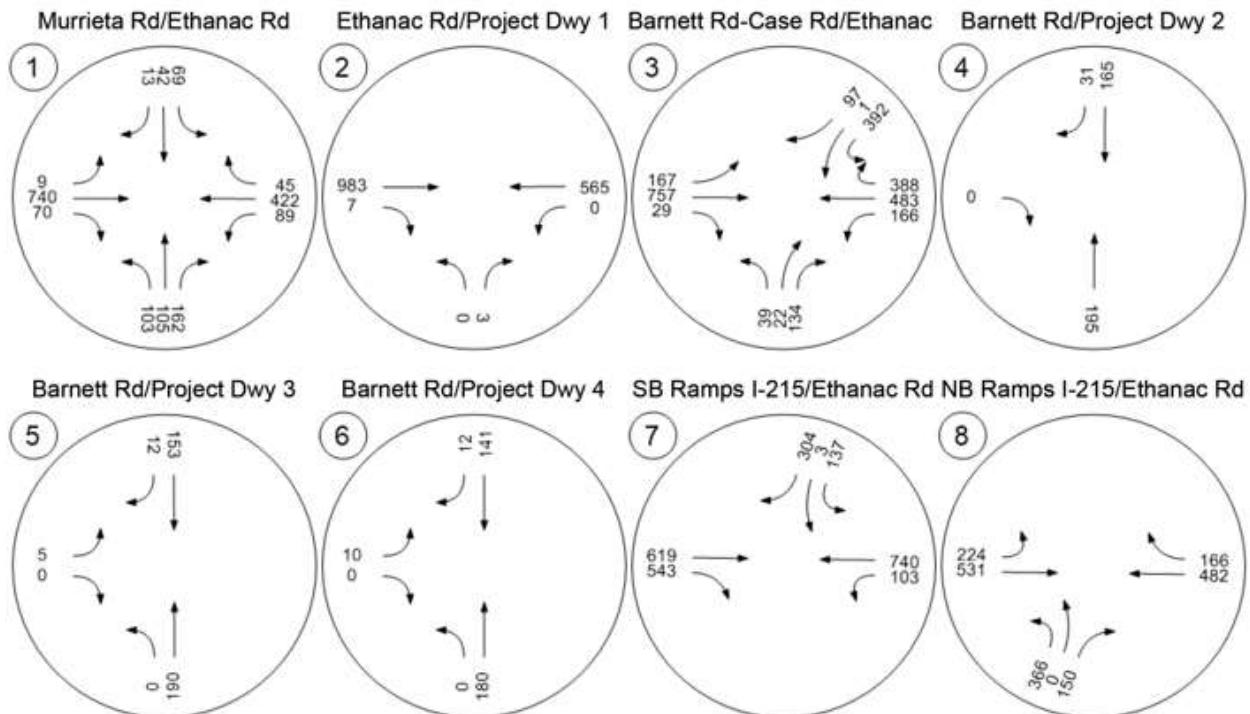

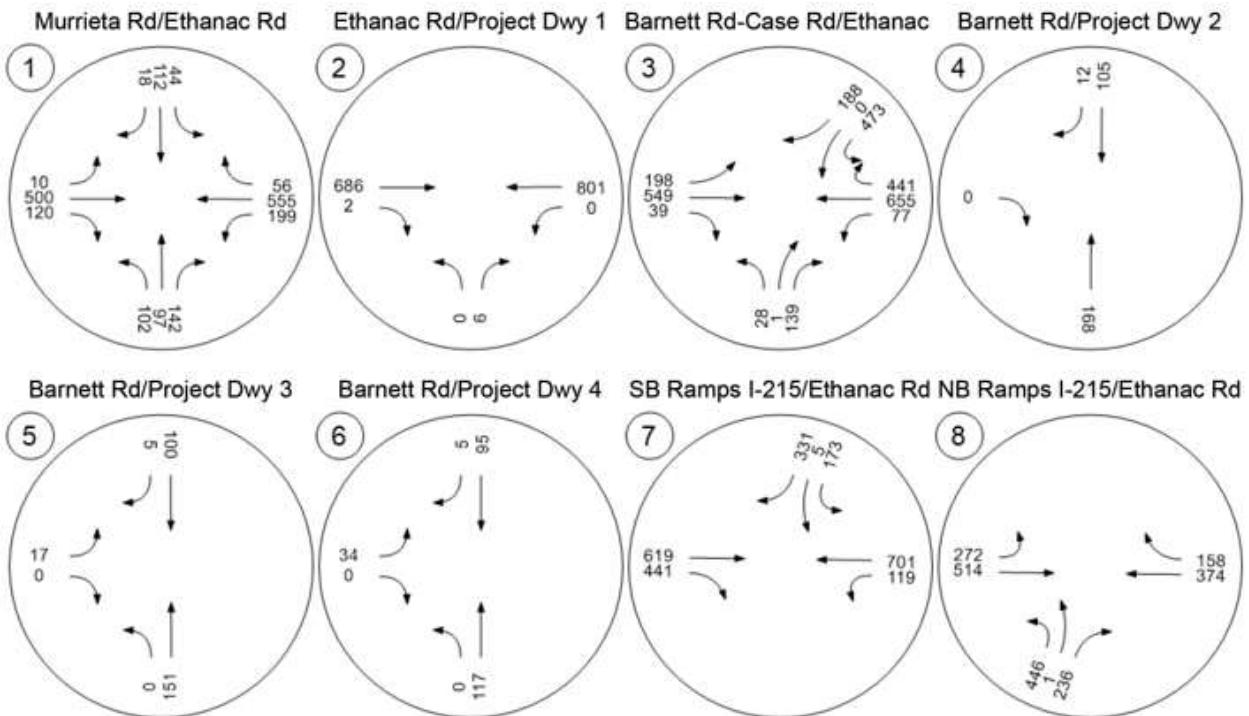

Figure 18: Existing Plus Project AM Peak Hour Volumes

Figure 19: Existing Plus Project PM Peak Hour Volumes

5.2 Existing Roadway Segment Capacity Analysis

As discussed in Section 3.1, Ethanac Road is designated as a six-lane divided expressway as per the City of Menifee General Plan. In the vicinity of the project, the existing Ethanac Road is a four-lane divided arterial. EPD collected roadway segment counts for the study roadway segment on Wednesday, September 21, 2022. All traffic count data are provided in Appendix B. Existing roadway segment capacity analysis is shown in Table 8.

Table 8: Existing Year Roadway Segment Capacity Analysis

Roadway Segment	Type of Roadway	Threshold of Significance	Threshold Capacity	Existing Roadway ADT	Project Volume on Roadway Segment	Existing Roadway ADT + Project Volume	Over Capacity?
1. Ethanac Rd between Case Rd and I-215 SB Ramps	4-Lane Arterial	LOS E	37,000	27,581	642	28,223	No
2. Murrieta Rd and Barnettt Rd	4-Lane Arterial	LOS D	33,400	19,557	81	19,638	No

5.3 Opening Year Cumulative With Project Traffic Volumes and Intersection Operations

Opening Year Cumulative with Project traffic volumes were determined by adding the project trips to Opening Year traffic volumes. The Opening Year Cumulative with Project traffic volumes are shown in Figures 18 and 19. LOS at the study area intersections were determined using the HCM methodology, described previously in Section 2.3. Table 9 shows the Opening Year plus Project AM and PM peak hour LOS at the study area intersections. All LOS calculations are provided in Appendix E. As shown in Table 9, the following intersections would operate at an unsatisfactory LOS:

1. Murrieta Road/Ethanac Road (LOS F at AM/PM peak hour)
3. Barnett Road-Case Road/Ethanac Road (LOS F at AM peak hour and LOS E at PM peak hour)
7. I-215 SB Ramps/Ethanac Road (LOS F at AM/PM peak hour)
8. I-215 NB Ramps/Ethanac Road (LOS F at AM/PM peak hour)

As stated in the City of Menefee LOS TS Guidelines, a project that adds 50 trips to an intersection that operates at an LOS F in the base line scenario would result in a cumulative deficiency. For Intersection 1: Murrieta Road/Ethanac Road, the project adds 10 AM and 10 PM peak hour trips to the intersection; therefore, the project would not result in a significant deficiency. Intersection 3: Barnett Road-Case Road/Ethanac Road would operate at LOS F during AM peak hour and LOS E during PM peak hour and would result in an increase of delay more than 2 seconds after the proposed project is constructed. Therefore, the project would have a significant deficiency at Intersection 3: Barnett Road-Case Road/Ethanac Road. Improvements for the intersection are discussed in Section 6 Project Improvements and Fair Share. Intersections 7 and 8: I-215 SB Ramps/NB Ramps and Ethanac Road would operate at LOS F during AM and PM peak hour and would result in an increase of delay more than 2 seconds after the proposed project is constructed. Therefore, the project would have a significant deficiency at Intersections 7 and 8: I-215 SB Ramps/NB Ramps and Ethanac Road. Improvements for the intersection are discussed in Section 6 Project Improvements and Fair Share.

Table 9: Opening Year Cumulative With Project AM and PM Peak Hour Level of Service

¹Delay in Seconds²Level of Service

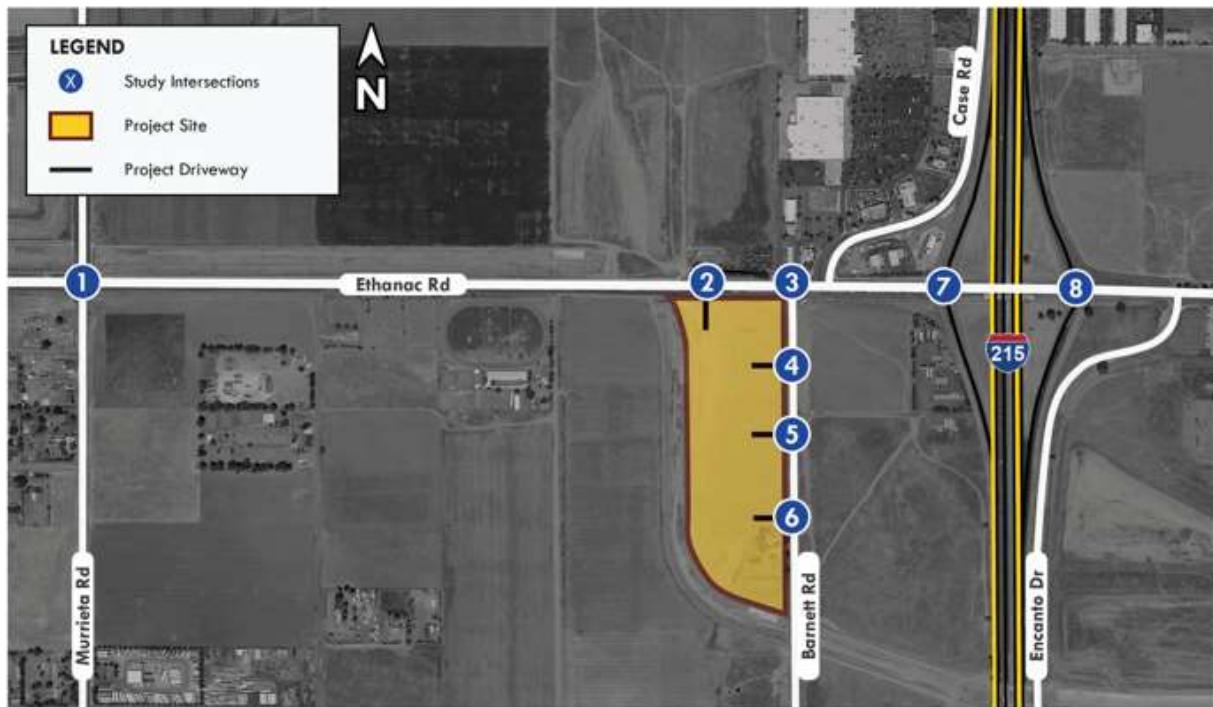

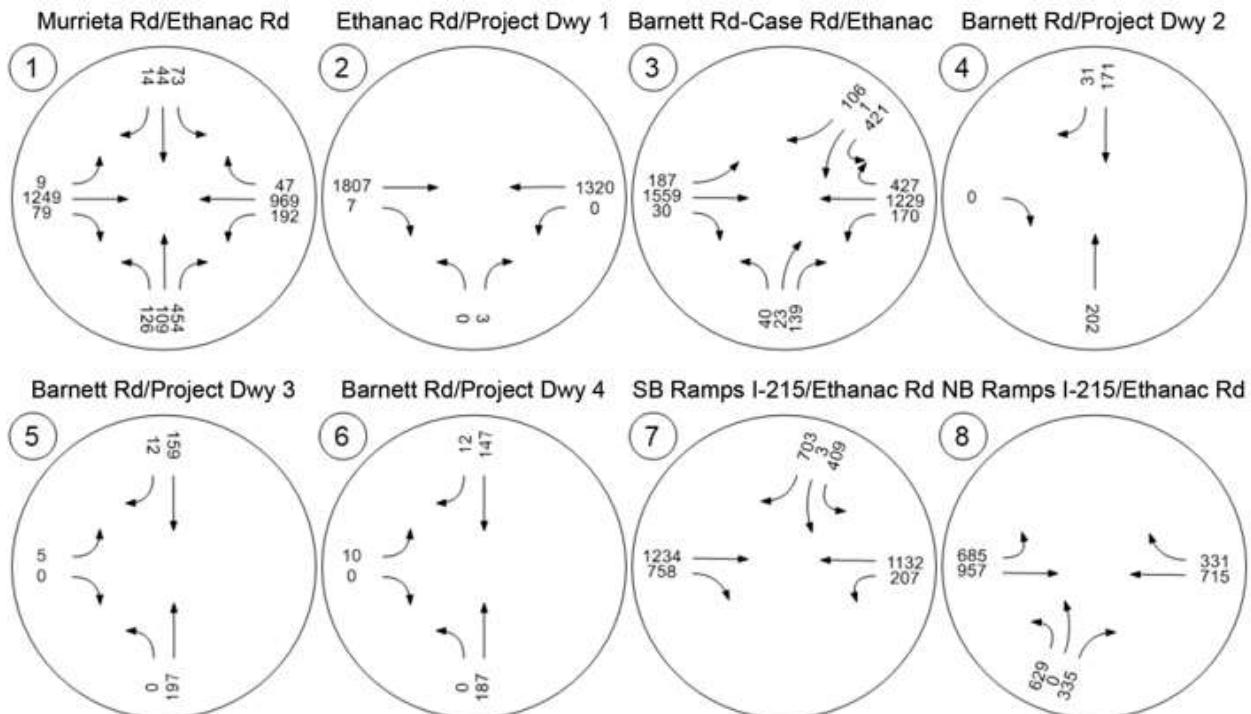

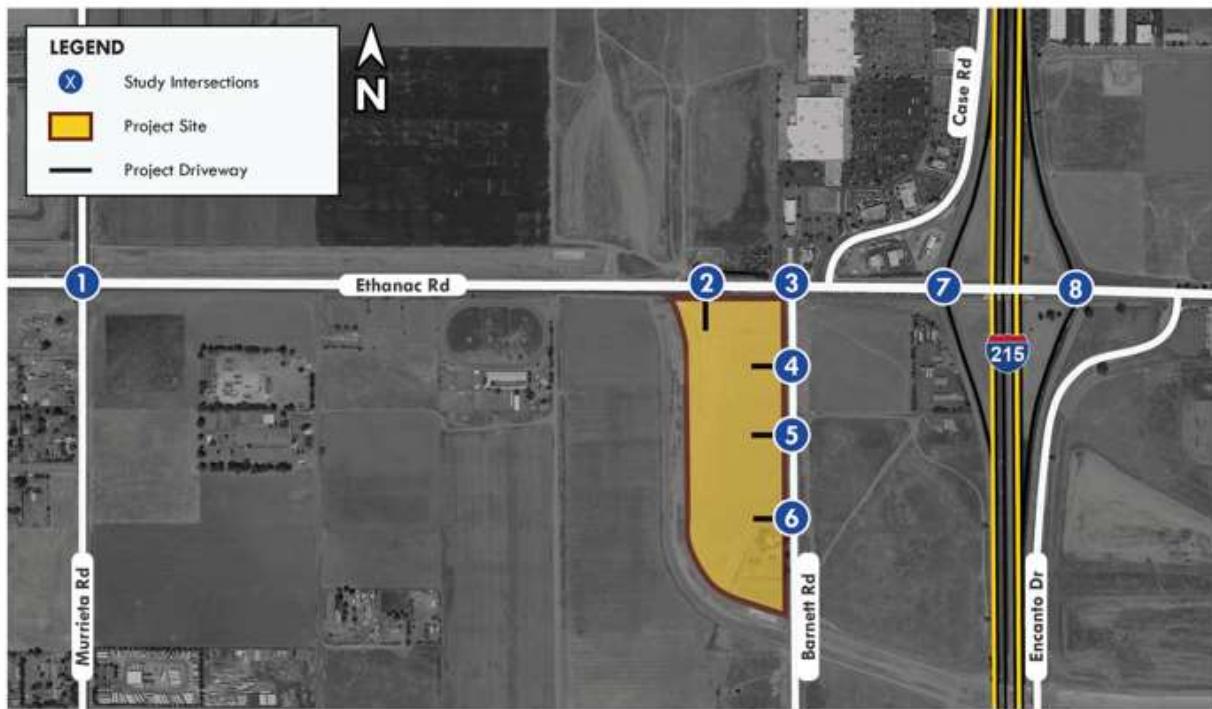

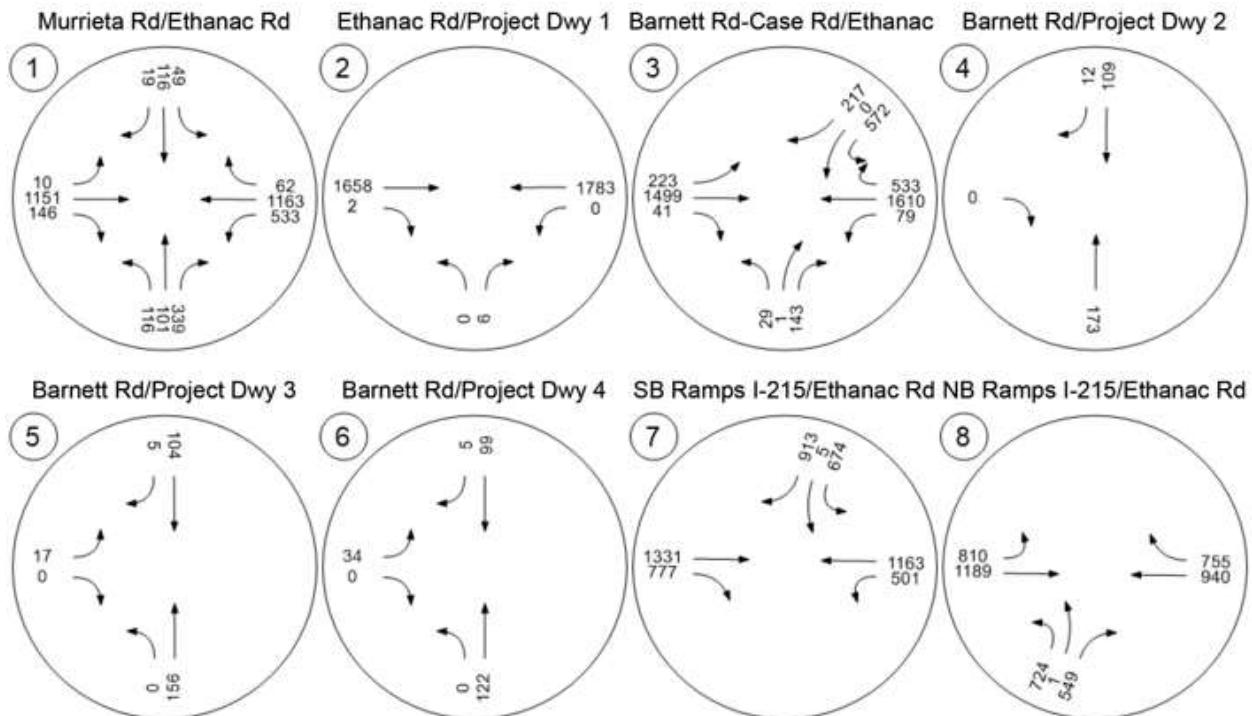

Figure 20: Opening Year Cumulative With Project AM Peak Hour Volumes

Figure 21: Opening Year Cumulative With Project PM Peak Hour Volumes

5.4 Opening Year Roadway Segment Capacity Analysis

As discussed in Section 3.1, - Ethanac Road is designated as a six-lane divided expressway as per the City of Menifee General Plan. In the vicinity of the project, the existing Ethanac Road is a four-lane divided arterial. A two percent growth rate was applied to the existing Average Daily Traffic (ADT) to obtain opening year roadway segment volumes. Opening year roadway segment capacity analysis is shown in Table 10. It is to be noted that the opening year roadway ADT includes cumulative projects.

Table 10: Opening Year Roadway Segment Capacity Analysis

Roadway Segment	Type of Roadway	Threshold of Significance	Threshold Capacity	Opening Roadway ADT*	Project Volume on Roadway Segment	Opening Roadway ADT + Project Volume	Project Traffic Percentage	Over Capacity?
1. Ethanac Rd between Case Rd and I-215 SB Ramps	4-Lane Arterial	LOS E	37,000	52,782	642	53,423	1.20%	Yes
2. Murrieta Rd and Barnettt Rd	4-Lane Arterial	LOS D	33,400	45,740	81	45,821	0.18%	Yes

* 2% Growth Rate applied to existing ADT - Cumulative Projects Included

6 PROJECT IMPROVEMENT AND FAIR SHARE

6.1 Recommended Improvements

The development of the proposed project would cause an increase in delay at the following intersections. It should be noted that these three intersections already operate with unsatisfactory LOS in the existing conditions.:

3. Barnett Road-Case Road/Ethanac Road (LOS F at AM peak hour and LOS E at PM peak hour)
7. I-215 SB Ramps/Ethanac Road (LOS F at AM/PM peak hour)
8. 215 NB Ramps/Ethanac Road (LOS F at AM/PM peak hour)

The following improvements improve the intersection LOS to satisfactory LOS or better:

3. Barnett Road-Case Road/Ethanac Road (AM and PM peak hours): Widen and restripe the northbound shared left-thru-right lane to provide an exclusive right-turn lane and a shared thru-left turn lane. To increase intersection safety, it is recommended that cat tracks pavement markers be installed for all the edges of the dual SBL instead of the single cat track currently installed in the middle of the SBL turns. It is also recommended that a "Keep Clear" pavement marking be installed approximately 85 feet beyond the stop line of the 50 feet left turn pocket at Barnett Road/Ethanac Road. This will ensure that the WBL traffic does not block traffic waiting to make a SBL given the staggered nature of this intersection.
7. I-215 SB Ramps/Ethanac Road (AM and PM peak hours): Widen and restripe the southbound (SB) shared thru-left turn lane to provide an exclusive left-turn lane, to remove the SB thru movement and to add a second right-turn lane. Widen and restripe the eastbound (EB) approach to add two thru-lanes and a right-turn lane. Widen and restripe the westbound (WB) approach to add a second left-turn lane. In addition, add overlap right-turn phasing during the SB phase.
8. 215 NB Ramps/Ethanac Road (AM and PM peak hours): Widen and restripe the northbound (NB) shared thru-left turn lane to provide two left-turn lanes, to remove the NB thru movement and a right-turn lane. Widen and restripe the EB approach to add an exclusive left-turn lane and a thru-lane. Widen and restripe the WB approach to add three thru-lanes and an exclusive right-turn lane. In addition, add overlap right-turn phasing during the NB phase.

As seen in Table 11, all affected intersections improve to a satisfactory LOS with the recommended improvements. All proposed improvement LOS calculations are provided in Appendix E. It should be noted that the ultimate planned configuration of Ethanac Road is that of a six-lane roadway. The roadway expansion would help reduce the delay experienced at the intersections of I-215 SB Ramps/NB Ramps and Ethanac Road. To improve the LOS to satisfactory, it is only feasible to remove thru movement on I-215 ramps and add overlap phasing with SB movement and NB movement on I-215 ramps. Removing thru movement can also improve safety and thru movements on freeway ramps are low volume movements.

Additionally, the project would add traffic to the already over-capacity segment of Ethanac Road between Case Road and I-215 SB Ramps and between Murrieta Road and Barnett Road. Widening of Ethanac Road to its General Plan designation would result in satisfactory operations. Fair share for these improvements is discussed in the next section.

Table 11: Opening Year Cumulative With Project Improvement AM and PM Peak Hour Level of Service

Intersection		Opening Year				Opening Year Plus Project				Recommended Improvements	Opening Year Plus Project IMP				Threshold of Significance	Significant?			
		AM Peak		PM Peak		AM Peak		PM Peak			AM Peak		PM Peak

In addition, add overlap right-turn phasing during the NB phase.	35.0	D	36.4	D	E	No			

=Unsatisfactory Level of Service

¹Delay in Seconds²Level of Service

NB = Northbound, SB = Southbound, EB = Eastbound, WB = Westbound

6.2 Project Fair Share

Improvements at intersections 7 and 8 are part of the Transportation Uniform Mitigation Fee (TUMF) program. The project would be required to pay TUMF fees which would contribute towards the construction of the I-215 and Ethanac Road Interchange. For the LOS deficiency at intersection 3 Barnett Road-Case Road/Ethanac Road which does not have any improvements as a part of the TUMF program, a project fair share percentage was calculated. The project's fair share percentage for the recommended improvements is identified in Table 12 below.

Table 12: Project Fair Share for Intersection Improvement

Intersection	AM Peak				PM Peak			
	Project Trips	Existing Traffic Volume	Opening Year Cumulative with Project Volume	Fair Share ¹	Project Trips	Existing Traffic Volume	Opening Year Cumulative with Project Volume	Fair Share ¹
3. Barnett Rd-Case Rd/Ethanac Rd	73	2602	4332	4.22%	81	2707	4947	3.62%

¹Fair share contribution percentage for improvements where the project is not directly responsible is calculated by the formula: Fair Share Percentage = Project Trips/(Opening Year Cumulative with Project Volume - Existing Traffic Volume)

As shown in Table 12, the project would be responsible for 4.22 percent of the improvement cost at the intersection 3.

As discussed in Section 5.4, Ethanac Road at opening year is over the roadway segment capacity with cumulative traffic and project traffic. As shown at Table 13, the project would be responsible for 2.48 percent for improvement at Ethanac Road between Case Road and I-215 SB Ramps and 0.31 percent for improvement at Ethanac Road between Murrieta Road and Barnett Road.

Table 13: Project Fair Share for Roadway Segment

Roadway Segment	Project Trips	Existing Traffic Volume	Opening Year Cumulative with Project Volume	Fair Share ¹
1. Ethanac Rd between Case Rd and I-215 SB Ramps	642	27,581	53,423	2.48%
2. Ethanac Rd between Murrieta Rd and Barnett Rd	81	19,557	45,821	0.31%

¹Fair share contribution percentage for improvements where the project is not directly responsible is calculated by the formula: Fair Share Percentage = Project Trips/(Opening Year Cumulative with Project Volume - Existing Traffic Volume)

Site: Ethanac and Barnett Warehouse

Subject: PLN21-0290 Ethanac and Barnett Warehouse TIA Scoping Agreements – Response to Comments

EPD is in receipt of the City's comments, on the scoping agreement submitted on March 22, 2022. A response to each comment is provided below and a copy of the comments is attached.

LOS Analysis Scope

Comment 1: Ethanac Rd between Murrieta Rd and Barnett Rd was included in the list of study roadway segments.

Comment 2: The trip generation table has been revised to

- Include 186,912 SF of Warehouse and Office area
- Include 65,000 SF of Manufacturing area
- Ensure rounding errors in trip generation calculations are not present
- Add a row showing the total of truck trips only (both actual and PCE)

Comment 3: East on Ethanac Rd has been reduced to 5% whereas south of Murrieta has been increased to 15 %

Comment 4: Truck percentage on I-215 was increased to 60% (northbound) and 40% (southbound).

Comment 5: Automobile and Truck trip percentages at project driveways have been added to the trip distribution figures.

Comment 6: It is premature to determine if any driveways along Barnett Rd will be signalized since the LOS analysis has not been conducted yet. Furthermore, the results of the LOS analysis will determine if signalization is required on any of the driveways along Barnett Rd.

VMT Analysis Scope

Comment 1: A VMT assessment will be conducted. This analysis will include project generated VMT and project effect on VMT estimates for the project TAZ under the following scenarios:

- Baseline conditions
- Baseline plus project
- Cumulative conditions
- Cumulative plus project

Comment 2: EPD acknowledges the comment.

**CITY OF MENIFEE
MEMORANDUM
PUBLIC WORK/ENGINEERING DEPARTMENT**

DATE: May 12, 2022
TO: Meghan Macias, EPD Solutions
FROM: Stephen Manganiello, Contract Traffic Engineer
Rob Blough, City Traffic Engineer
CC: Chet Robinson, Senior Engineer
SUBJECT: PLN21-0290 Ethanac and Barnett Warehouse TIA Scoping Agreements – Review 1

Traffic Engineering has completed the review for the Ethanac and Barnett Warehouse TIA Scoping Agreements for LOS analysis and VMT analysis and has the following comments.

LOS Analysis Scope

1. Please include Ethanac Rd between Murrieta Rd and Barnett Rd in the study.
2. Table 1-Trip Generation:
 - The site plan shows total manufacturing area of 65,000 square-feet and total warehouse and office area of 186,912 square-feet. However, different square footages were used for the trip generation calculation. Please revise calculations for consistency with latest site plan.
 - Please check the totals for all calculations, as some do not add up correctly (check both the In & Out totals and the total trip generation).
 - Add a row showing the total of truck trips only (both actual and PCE).
3. Figure 1-Automobile Trip Distribution: 15% east of Ethanac Rd may be high. Reduce to 5%. Increase south of Murrieta Rd to 15%.
4. Figure 2-Truck Trip Distribution: In the year 2024, Ethanac Rd east of I-215 will not be connected to SR-74. Hence trucks will not be able to travel along Ethanac Rd east of I-215. Increase truck percentage on I-215 from 45% to 60% (NB) and from 35% to 40% (SB).
5. Trip Distribution: Please provide trip percentages at each driveway.
6. Please specify if any of the driveways along Barnett Road will be signalized for safety reasons and to facilitate trucks to enter/exit the site.

VMT Analysis Scope

1. As indicated by the output provided from the WRCOG VMT screening tool, the project does not appear to screen out. Therefore, a VMT assessment is required. This analysis should include project generated VMT and project effect on VMT estimates for the project TAZ under the following scenarios:
 - Baseline conditions
 - Baseline plus project
 - Cumulative conditions
 - Cumulative plus project
2. The applicant proposes to use the WRCOG VMT calculator tool as an alternative to forecasting VMT through the RIVCOM model. Per the City's updated TIA Guidelines for VMT (January 2022), the applicant will need to demonstrate that the project is a "routine" project similar in nature to other land uses within the project TAZ to justify use of the VMT tool. The output from the VMT tool provided in the scoping agreement demonstrates the project is consistent with the projected socioeconomic data for the TAZ. Therefore, the applicant may use the WRCOG VMT calculator tool to perform the VMT assessment for the project.

Should you have any questions please contact Stephen Manganiello, Contract Traffic Engineer, at stephen.manganiello@stctrain.com.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Murrieta Rd/Ethanac Rd	Signalized	HCM 7th Edition	EB Right	0.972	101.2	F
2	Ethanac Rd/Project Dwy 1	Two-way stop	HCM 7th Edition	EB Thru	0.019	0.0	A
3	Barnett Rd-Case Rd/Ethanac Rd	Signalized	HCM 7th Edition	EB Left	0.846	82.3	F
4	Barnett Rd/Project Dwy 2	Two-way stop	HCM 7th Edition	NB Thru	0.002	0.0	A
5	Barnett Rd/Project Dwy 3	Two-way stop	HCM 7th Edition	NB Thru	0.002	0.0	A
6	Barnett Rd/Project Dwy 4	Two-way stop	HCM 7th Edition	NB Thru	0.002	0.0	A
7	SB Ramps I-215/Ethanac Rd	Signalized	HCM 7th Edition	EB Thru	1.281	339.4	F
8	NB Ramps I-215/Ethanac Rd	Signalized	HCM 7th Edition	WB Thru	1.536	282.7	F

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Murrieta Rd/Ethanac Rd

Control Type:	Signalized	Delay (sec / veh):	101.2
Analysis Method:	HCM 7th Edition	Level Of Service:	F
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.972
