on April 15, 1993. The Federal On-Scene Coordinator for the EPA started an assessment investigation in the Rattlesnake Creek and in the soil and groundwater at the site and at three adjacent properties. Six USTs were removed and several soil borings and monitoring wells were installed. Cleanup activities included excavation/disposal of impacted soil, soil vapor extraction and groundwater pump and treat systems. On June 5, 1995 the US-EPA reported the case status as closed. In 2001 the City of Poway Redevelopment Services conducted due diligence during acquisition of the site and performed a Phase I and Phase II subsurface soil investigations. Assessment of soil and groundwater contamination initially included advancing seven borings in June 2001, followed by the installation of five soil borings and nine monitoring wells. Soil contamination has been defined and groundwater plume is delineated. Other investigation activities at the site included evaluation of the vertical hydraulic gradient between groundwater and surface water in the Rattlesnake Creek, design and building of a culvert for a section of the Rattlesnake Creek, conduct a soil gas survey targeted at the soil beneath the office building, prepare human health risk calculation (highest risk of 4.32E-08 for MTBE), evaluate migration potential of the contaminants, prepare a degradation rate model for the contaminants of concern, and prepare a Corrective Action Plan. Total residual impacted soil was calculated to be 8,167 cubic yards with maximum gasoline concentration of 622 mg/kg and diesel of 347 mg/kg. The consultants conclude in their final report dated April 2, 2010, that dissolved TPH gasoline and diesel are non detect in all the monitoring wells. Dissolved benzene is detected only in one monitoring well at low concentration, dissolved MTBE ranges from non detect to low concentration, and overall migration of the dissolved plume is stable. They further conclude that the groundwater quality objectives will be met for MTBE within three to eleven years and for benzene within 44 years. The consultants propose natural attenuation as the cost effective option for corrective action at the site and recommend closure of the case. DEH concurs with this recommendation.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## **STANDARD ENVIRONMENTAL RECORDS**

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

## **EDR HIGH RISK HISTORICAL RECORDS**

### ***EDR Exclusive Records***

#### **EDR MGP: EDR Proprietary Manufactured Gas Plants**

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### USGS TOPOGRAPHIC MAP

Target Property Map:	5622836 POWAY, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

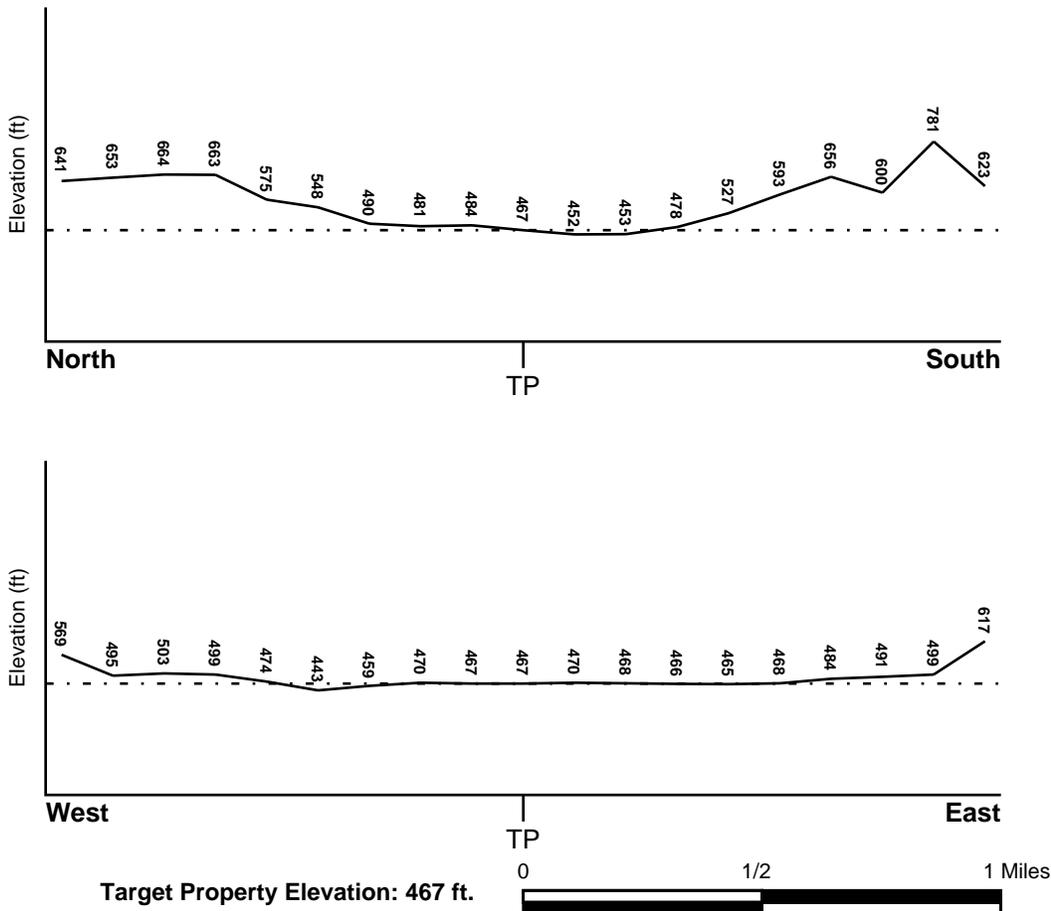

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

# PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

## 1. INTRODUCTION

We have performed a Phase I Environmental Site Assessment (ESA) of the property located at 12623 Oak Knoll Road (the Site) in Poway, California. Lennar (the Client) requested the Phase I ESA to provide information regarding the potential for existing hazardous substances and/or petroleum product impacts at the Site as part of their due diligence prior to purchasing the Site. This report describes the methodology and procedures and present the findings of the Phase I ESA.

### 1.1 Purpose and Objectives

The purpose of the Phase I ESA was to identify evidence or indications of ‘recognized environmental conditions’ (RECs) as defined by the American Society for Testing and Materials (ASTM) *Designation E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. Section 1.1.1 of *ASTM Designation E 1527-13* defines an REC as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.” De minimis conditions are those that generally do not present a threat to human health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies.

*ASTM Designation E 1527-13* also defines ‘Historical’ and ‘Controlled’ RECs. They define an ‘Historical REC’ (HREC) as “A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).” *ASTM* defines a ‘Controlled REC’ (CREC) as “a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).” An HREC is not an REC if a property meets current standards for unrestricted residential use. A CREC remains an REC by definition when the property does not meet the unrestricted residential use requirements unconditionally.

We also conducted the Phase I ESA in general accordance with the requirements of 40 Code of Federal Regulations (CFR) Part 312 titled *Standards and Practices for All Appropriate Inquiries*, as required under Sections 101(35)(B)(ii) and (iii) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The purpose of conducting an all appropriate inquiries investigation into the previous ownership and uses of a property is to meet the provisions necessary for the landowner, contiguous property owner, and/or bona fide prospective purchaser to qualify for certain landowner liability protections under CERCLA.

The following principles are an integral part of ASTM *Designation E1527-13*:

- **“Uncertainty Not Eliminated** - No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property, and this practice recognizes reasonable limits of time and cost.”
- **“Not Exhaustive** - All Appropriate Inquiries does not mean an exhaustive assessment of a property. There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an environmental site assessment and the reduction of uncertainty about unknown conditions resulting from additional information.”
- **“Level of Inquiry is Variable** - Not every property will warrant the same level of assessment. Consistent with good commercial and customary practice, the appropriate level of environmental site assessment will be guided by the type of property subject to assessment, the expertise and risk tolerance of the user, and the information developed in the course of the inquiry.”

## 1.2 Scope of Services

We performed the scope of services outlined in our Proposal No. LE-22151 dated April 6, 2022, with the exception that we did not review Sanborn fire insurance maps, as Environmental Data Resources, Inc. (EDR) indicated that there are none available for the Site or surrounding vicinity. The main components of the Phase I ESA and their objectives, as specified by the referenced standards, include the following:

- **Physical Setting Review:** we reviewed physical setting references for information concerning the topographic, geologic, and hydrogeologic characteristics of the Site and vicinity. Such information may be indicative of pathways (i.e., direction and/or extent) that a contaminant could migrate along in the event of a spill or release.
- **Regulatory Agency Records Review:** we reviewed publicly available Federal, State, and local regulatory agency records for information regarding the use, storage, and disposal of

hazardous substances and/or petroleum products at the Site and facilities and properties adjoining or within ¼ mile of the Site. Such records may identify RECs at or potentially affecting the Site.

- **Site History Review:** we reviewed information regarding the historical uses of the Site and adjoining and nearby facilities and properties back to the Site's and other properties' first use or 1940, whichever is earlier, that could have led to RECs on or near the Site. Historical sources reviewed included aerial photographs, topographic maps, and city directories. In addition, we conducted interviews with persons who were expected to be reasonably knowledgeable about historical and/or current conditions at and uses of the Site.
- **Site Reconnaissance:** we performed a site reconnaissance to observe site conditions and activities for evidence of RECs. The site reconnaissance was for the Site only. We viewed offsite properties and features solely from the vantage of the Site and public thoroughfares.

### 1.3 Report Limitations

We prepared this Phase I ESA report exclusively for the Client. The information obtained is only relevant for the dates of the records reviewed and the latest site visit. Therefore, the information contained herein is only valid as of the date of the report and may require an update after 180 days to reflect updated records and another reconnaissance to assess current site conditions.

The Client should recognize that a Phase I ESA is not a comprehensive site characterization and should not be construed as such. The findings and conclusions presented in this report are predicated on the site reconnaissance, information in the specified regulatory records, and information regarding the historical usage of the Site, as presented in this report. The Client should also understand that wetlands, asbestos-containing building materials, lead-containing paint, lead in drinking water, radon, mercury related to mining activities, methane, and mold surveys were not included in the scope of services for this Phase I ESA. Assessment for potential naturally occurring hazards such as asbestos and arsenic was also not included.

Therefore, the report should only be deemed conclusive with respect to the information obtained. No guarantee or warranty of the results of the Phase I ESA is implied within this report or any subsequent reports, correspondence or consultation, either express or implied. We strived to conduct the services summarized herein in accordance with the local standard of care in the geographic region at the time the services were rendered.

### 1.4 Data Gaps

A data gap is defined by ASTM *Designation E 1527-13* as “a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information.” Data gaps could include such things as insufficient historical information, the inability to interview persons with direct site knowledge (e.g., the owner(s), past owner(s), tenants, workers,

etc.) or the lack of access to all parts of a site during the site reconnaissance. As indicated in Section 1.2, we did not review Sanborn fire insurance maps for the Site and surrounding vicinity because there are none for the Site and vicinity. In addition, we were not granted full access to the residence, storage sheds and rear portion of the yard. We do not consider these items significant data gaps due to other available information and observations made during our reconnaissance.

## **2. SITE DESCRIPTION**

This section provides information regarding the location and physical characteristics of the Site including its size, topography, geologic, soil, and hydrogeologic conditions.

### **2.1 Location and Legal Description**

The 0.2-acre Site is located at 12623 Oak Knoll Road in Poway, California (Figure 1). The Site is situated north of Poway Creek and south of Oak Knoll Road. The San Diego County assessor's parcel number (APN) for the Site is 317-501-02. A copy of the parcel map is in Appendix A.

The Site is depicted in the southeastern quarter of Section 14 of Township 14 South, Range 2 West, San Bernardino Base and Meridian on the United States Geological Survey's (USGS) *Poway, California, 7.5-minute topographic map* (USGS, 2018).

### **2.2 Site and Vicinity General Characteristics**

The Site is developed with a single-family residence. The surrounding vicinity includes single- and multi-family residences. Figure 2 depicts the site boundaries and features and surrounding properties. Further site description is provided in Sections 2.4 and 6.

#### **2.2.1 Topography**

The topography of the site vicinity consists of a relatively flat-lying area. The Site generally slopes to the south towards Poway Creek. The USGS *Poway, California, 7.5-minute topographic map* (USGS, 2018), depicts the elevation of the Site as approximately 450 feet above mean sea level.

#### **2.2.2 Geologic and Soil Conditions**

The Site is located in the Peninsular Ranges geomorphic province of Southern California (Norris and Webb, 1990). This geomorphic province extends approximately 900 miles from its northern terminus against the Transverse Ranges and Los Angeles Basin, south to the tip of Baja California. In general, the province is characterized by rugged mountains in Mesozoic igneous and metamorphic rocks to the east, with a dissected coastal plain on Cenozoic sediments to the west. The Peninsular Ranges vary in

width from approximately 30 to 100 miles, and are traversed fault zones trending roughly northwest-southeast.

Information concerning the surficial geologic conditions at and in proximity to the Site from the *Geologic Map of the Oceanside 30' X 60' Quadrangle, San Diego County, California* (USGS, 2005) indicates that the Site is underlain by Holocene and late-Pleistocene flood plain deposits, which are typically poorly consolidated, poorly sorted, and permeable.

Information concerning the soil conditions at and in proximity to the Site from the United States Department of Agriculture, Natural Resources Conservation Service, Web Soil Survey (<http://websoilsurvey.nrcs.usda.gov/app/HomePage.htm>) indicates that site soil is Placentia sandy loam and Visalia sandy loam, which are both well drained and have low infiltration rates.

### **2.2.3 Hydrologic and Hydrogeologic Conditions**

Groundwater quality and occurrence information available from the California Department of Water Resources and the California State Water Resources Control Board (SWRCB) indicates that the Site is located in the Poway Hydrologic Area (906.20) of the Penasquitos Hydrologic Unit (906.00). Groundwater in the Poway Hydrologic Area has existing beneficial use designations for municipal, agricultural, and potential beneficial use for industrial supply purposes (SWRCB, 2022).

In an effort to assess local groundwater conditions, we reviewed reports available on the SWRCB's GeoTracker online database (<http://geotracker.waterboards.ca.gov>) for nearby facilities with a groundwater monitoring well array. Nine groundwater monitoring wells were installed west of the Site in 2006 related to assessment of County of San Diego Department of Environmental Health (DEH) Leaking Underground Storage Tank (LUST) case #H05705-001 (described further in Section 4.1.1). The depth to groundwater within these wells was reported to range approximately between 7 feet and 18 feet with groundwater flow towards the west-southwest.

### **2.3 Current and Planned Uses of the Site**

The current use of the Site is residential. The Client reported that they plan to develop the Site for residential use as part of their overall Oak Knoll residential development project. Further description of the Site is provided in Section 6.

### **2.4 Descriptions of Structures, Roads, Other Improvements on the Site**

The Site is improved with a single-family residence and associated improvements. Further description of the Site is provided in Section 6.3.

## **2.5 Current Uses of Adjoining Properties**

Current uses of adjoining properties are primarily single- and multi-family residential. Further information regarding adjoining properties is provided in Section 6.4.

## **3. USER-PROVIDED INFORMATION**

This section summarizes site information provided by the Client – the “user” of this Phase I ESA. Also provided are responses to inquiries to the Client via a “user” questionnaire for information pertaining to the Site. David Shepherd with Lennar completed the questionnaire (Appendix B).

### **3.1 Title, Appraisal and Sale Agreement Records**

Mr. Shepherd provided a Preliminary Title Report (PTR) for the Site prepared by Chicago Title Company and dated March 30, 2022. The PTR indicates that the site parcel is owned by Sherry Anne Urena and Susan Lynn Roschke, Successor Trustees of the Harmon Family Trust Agreement. The PTR identifies no issues regarding the environmental condition of the Site.

### **3.2 Environmental Liens or Activity and Use Limitations**

Mr. Shepherd indicated that he has no knowledge of environmental liens on or activity and use limitations for the Site.

### **3.3 Specialized Knowledge**

Mr. Shepherd indicated he has no specialized knowledge of the Site.

### **3.4 Commonly Known or Reasonably Ascertainable Information**

Mr. Shepherd indicated he is not aware of commonly known or reasonably ascertainable information pertaining to the Site.

### **3.5 Owner, Property Manager, and Occupant Information**

Mr. Shepherd indicated the Site is owned by the Harmon Family Trust Agreement.

### **3.6 Valuation Reduction for Environmental Issues**

According to Mr. Shepherd, he is unaware if the monetary value of the Site has been reduced due to environmental issues.

### 3.7 Reason for Performing the Phase I ESA

The Phase I ESA was requested to provide information regarding the potential for existing hazardous substance and/or petroleum product impacts at the Site for pre-acquisition due diligence purposes.

## 4. RECORDS REVIEW

This section summarizes information we obtained from readily available agency records for the Site and properties and facilities in the surrounding vicinity.

### 4.1 Standard Environmental Record Sources

EDR searched federal, state, and local databases regarding the use, storage, disposal, or release of hazardous substances and/or petroleum products for the Site and area within one mile of the Site. The databases that list the Site and/or properties/facilities within one mile of the Site and the number of properties/facilities listed are summarized in the table below. A copy of *The EDR Radius Map<sup>TM</sup> Report with GeoCheck*, dated April 11, 2022, is in Appendix C.

#### 4.1.1 Site

The Site is not listed on any of the databases searched by EDR.

#### 4.1.2 Offsite Properties

The following table summarizes information provided in the EDR report for listed properties/facilities that are located less than ¼ mile from the Site and are listed on various release-related databases<sup>1</sup>. Properties/facilities located within a ¼ mile and not listed on a release-related database<sup>1</sup> are not included in the table below and are unlikely to have caused an REC at the Site. Distances reported by EDR may differ from actual distances.

Soil sampling in April of 1991 revealed TPH levels at 11.1 ppm at 7' below grade in the former tank excavation area. Concentrations of BTXE, PCB, and organic lead in soil were all below the laboratory detection limits. Depth to groundwater was reported to be between 16-17 feet below grade.  The closed regulatory status of the LUST case indicate that this facility is unlikely to have caused an REC at the Site.

<sup>1</sup> "Release" refers to an unauthorized release of a petroleum product or hazardous substance to the environment - i.e. the ground surface, soil, soil vapor, groundwater, or surface water on a property. "Release-related database" refers to those which provide information regarding an unauthorized release. "Non-release-related database" refers to those that may report use, storage, or disposal of hazardous substances and/or petroleum products or other environmental conditions, but do not report releases of such.

Soil samples taken after the removal of the tanks revealed petroleum hydrocarbons near the excavation area. Groundwater monitoring and soil sampling was performed on the Site from 1999 to 2015 when the California Regional Water Quality Control Board granted case closure. The HMMD listing provides information regarding inspection violations at this facility including failure of the pressurized piping to meet one or more of the regulatory requirements, failure of the leak detection equipment to be properly programmed or properly operated, failure to notify the CUPA the prescribed number of hours prior to testing, and failure to properly label hazardous waste accumulation containers with the required information.</p> <p>The distance from the Site and the closed regulatory status of the LUST case suggest that this facility is unlikely to have caused an REC at the Site.</p>

Information provided suggest that the contamination at this facility likely originated from four other off-site USTs listed under case numbers #H20710-001 and #H13170-001. No on-site uses of contaminants of concern are noted. The closed regulatory status of the LUST case and lack of evidence of contamination originating from this facility suggest that it is unlikely to have caused an REC at the Site.</p>

Other properties and facilities within 1/4-mile of Site are listed on various non-release-related databases<sup>1</sup> and therefore are not anticipated to have caused an REC at the Site.

### **4.1.3 Orphan Summary**

EDR's Orphan Summary identifies properties with incomplete address information and therefore cannot be accurately plotted. Four properties are listed but because none are listed on any release-related databases<sup>1</sup>, none are suspected of having caused an REC at the Site.

## **4.2 Additional Environmental Record Sources**

This section summarizes information from additional, readily available environmental record sources regarding the Site and properties/facilities within one mile from the Site.

### **4.2.1 GeoTracker and EnviroStor Databases**

We reviewed GeoTracker and the California Department of Toxic Substance Control's (DTSC) EnviroStor online database (<http://www.envirostor.dtsc.ca.gov/public/>) for information regarding the Site and nearby properties/facilities that are within ¼ mile of the Site. GeoTracker lists three LUST properties/facilities within ¼ mile of the Site all three of which have been granted regulatory closure. Information regarding these three LUST facilities is summarized in Section 4.1.2. EnviroStor lists one facility within ¼ mile of the Site, which is summarized in Section 4.1.2.

### **4.2.2 State of California Department of Conservation, Geologic Energy Management Division**

We reviewed the California Geologic Energy Management Division (CalGem) website (<https://maps.conservation.ca.gov/doggr/wellfinder>) to evaluate the potential for existing/former oil, gas, or geothermal wells on the Site or properties proximal to the Site. CalGem information indicates that no former or current wells are or were located within one mile of the Site.

### **4.2.3 County of San Diego Department of Agriculture, Weights and Measures**

We submitted a request to the County of San Diego, Department of Agriculture, Weights and Measures (DAWM), Pesticide Use Enforcement Division regarding possible use of restricted pesticides/herbicides at the Site. That office maintains such records for approximately 4 years. The DAWM indicated that no record of restricted pesticide/herbicide use was reported for the site APNs for the period of 2017 through 2022.

### **4.2.4 San Diego Air Pollution Control District**

We submitted a request to the San Diego Air Pollution Control District (APCD) for records pertaining to the Site. The APCD indicated that no records are on file for the site APNs.

#### 4.2.5 County of San Diego Department of Environmental Health

We submitted a request to the DEH for records pertaining to the Site. The DEH indicated that no records are on file for the site APNs.

#### 4.2.6 San Diego Gas and Electric Company

No transformers were observed onsite or were likely on the Site previously. Therefore, San Diego Gas & Electric Company was not contacted as part of this assessment.

### 5. HISTORICAL USE

This section summarizes information obtained from a variety of sources regarding the historical uses of the Site in an effort to identify those uses that could have led to RECs. The sources of information included historical aerial photographs, historical topographic maps, and an abstract of city directories provided by EDR.

#### 5.1 Aerial Photographs

We reviewed historical aerial photographs for the years 1939, 1949, 1953, 1964, 1966, 1970, 1979, 1985, 1989, 1996, 2002, 2005, 2009, 2012 and 2016 (Appendix D) for indications of past land uses that had the potential to have impacted the Site through the use, storage or disposal of hazardous substances and/or petroleum products. The following table summarizes our observations of the Site and adjacent properties.

Year	Observations	
	Site	Adjacent Properties
1939 (1" = 500')	The Site appears to have been undeveloped land.	The adjacent properties to the northeast and east appear to have been used for agricultural purposes. Poway Creek is adjacent to the south of the Site, with undeveloped land adjacent to the west.
1949 (1" = 500')	Conditions appear to have been similar to those observed on the 1939 aerial photograph.	Conditions appear to have been similar to those observed on the 1939 aerial photograph with the exception that the agricultural use of the adjacent properties to the northeast and east appear to have ceased. A single structure is now present on the adjacent property to the east of the Site.
1953 (1" = 500')	Conditions appear to have been similar to those observed on the 1949 aerial photograph.	Conditions appear to have been similar to those observed on the 1949 aerial photograph.

Year	Observations	
	Site	Adjacent Properties
1964 (1" = 500')	Conditions appear to have been similar to those observed on the 1953 aerial photograph with the exception that a single-family residence is now present at the Site.	Conditions appear to have been similar to those observed on the 1949 aerial photograph with the exception that the property adjacent to the north-northwest of the Site appears to have begun development for future use. Multiple residences are now present on the adjacent property to the northeast of the Site. The adjacent properties to the south beyond Poway Creek appear to have been developed for single-family residences.

## 5.2 Topographic Maps

We reviewed historical topographic maps for the years 1903, 1930, 1942, 1952, 1967, 1975, 1996, 2012, 2015, and 2018 (Appendix E). The following table summarizes observations of the Site and adjacent properties on the historical topographic maps.

The historical topographic maps depict no conditions, structures, or uses on the Site or adjacent properties that would suggest the presence of RECs.

### **5.3 City Directories**

EDR prepared an abstract of city directories including city, cross-reference, and telephone directories summarized in the *EDR-City Directory Image Report* dated April 14, 2022. The directories were reviewed at approximately 5-year intervals, if available, from 1971 to 2017. A copy of the EDR city directory abstract including information regarding offsite facilities is in Appendix F. The Site and adjacent properties are all listed under various residential names from the year 1971 to 2017. No nearby businesses listed are suspected of having caused an REC at the Site.

## 6. SITE RECONNAISSANCE

This section summarizes observations of the Site and surrounding properties made during the site reconnaissance.

### 6.1 Methodology and Limiting Conditions

Troy Reist, Senior Geologist with Geocon, performed the site reconnaissance unaccompanied on May 17, 2022, by walking the Site. Mr. Reist performed the offsite survey by observing adjacent properties from the Site and adjacent public streets. Weather on the day of the site reconnaissance was clear with temperatures in the mid-70s. Photographs of various site features and offsite properties are appended. Figure 2 is a Site Plan illustrating selected site features.

### 6.2 General Site Setting

The Site is located in an area of predominantly residential use. The Site is adjacent to Poway Creek to the south and a vacant parcel to the west.

### 6.3 Onsite Survey

The Site is relatively flat, which slopes gently to the south towards Poway Creek and is developed with a single-family residence (Photographs 1 through 5). Several storage sheds and shade structures were observed in the rear portion of the yard. (Photographs 6 and 7). We were not provided access to the residence, storage sheds or rear portion of the Site at the time of our reconnaissance, which is considered a data gap. Therefore, our observations were made along the perimeter of the Site. If access is granted in the future, this report can be updated accordingly, if necessary.

We observed no odors, pools of liquid, significantly stained soil or distressed vegetation on the Site. We observed no evidence of RECs on the Site.

### 6.4 Offsite Survey

Properties, improvements and/ or features within the site vicinity include:

- **North:** Oak Knoll Road, beyond which are single and multi-family residences (Photograph 8).
- **South:** Poway Creek, beyond which are single-family residences (Photograph 9).
- **East:** Single-family residences (Photograph 10).
- **West:** Vacant parcel, beyond which are multi-family residences (Photograph 11).

We observed no evidence of RECs on the surrounding properties.

## 7. INTERVIEWS

The current property owner, Sherry Urena, reported via a site owner/occupant questionnaire (Appendix B) that the Site is currently used as a rental house and has been used as such since their parents purchased it in approximately 1968. Ms. Urena indicated that she has never occupied the Site, but reported that there are two existing structures on the property, a small cottage and a shed. The property is currently on sewer via the City of Poway, but Ms. Urena is unsure if a septic tank has existed on the property in the past. The owner/occupant questionnaire identifies no environmental concerns.

## 8. SUMMARY OF FINDINGS

The following table summarizes our findings and opinions regarding the Site, including known or suspect RECs, CRECs, HRECs, and de minimis environmental conditions.

**Recommended Action:**

AA = Additional action recommended.

NFA = No further action required at this time.

DM = De minimis condition where additional activities do not appear warranted at this time.

We observed no evidence of RECs or de minimis environmental conditions at the Site.

## 9. CONCLUSIONS AND RECOMMENDATIONS

We have performed a Phase I ESA, in general conformance with the scope and limitations of ASTM E 1527-13, of the 0.2-acre property located at 12623 Oak Knoll Road in Poway, California. The San Diego County APN for the Site is 317-501-02.

This Phase I ESA identified no evidence of RECs in connection with the Site. Therefore, additional environmental assessment does not appear to be warranted at this time.

If soil staining or petroleum odors are observed during grading observations, we recommend retaining Geocon to observe and possibly sample areas of potential impact to determine if further action is warranted. Additionally, any undocumented subsurface structures or areas of apparent contamination encountered during site redevelopment activities including septic tanks, USTs, wells, etc. should be properly abandoned/removed in accordance with San Diego County regulatory requirements. In addition, we were not provided access to the residence, storage sheds or rear portion of the Site at the time of our reconnaissance, which is considered a data gap. If access is granted in the future, this report can be updated accordingly, if necessary.

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### ***Lists of state- and tribal hazardous waste facilities***

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/25/2021 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Gasoline  
Site History: This case was opened on February 28, 1994, following the discovery of dissolved phase gasoline constituents in a monitoring well (MW-16) installed in the sidewalk adjacent to the Chevron station by Shell Oil Company. The Shell station (Case H03181-001) is located south and down-gradient of the Chevron station at 12365 Poway Road. Soil samples were collected from soil borings, nine monitoring well borings, and from beneath the product line trenches during station upgrade activities. The soil data indicated that contaminated soil is present at the location of the former western dispenser area, near the current underground storage tanks (USTs) and at the former UST area and dispenser area in the southwest corner of the site. The contaminated soil is present at depths of 14 to 22 feet below ground surface (bgs). The consultant estimated that 318 cubic yards of contaminated soil remain onsite. Nine monitoring wells (four onsite and five offsite) were installed as part of the site investigation between 1996 and 2011. Groundwater monitoring began on April 24, 1996 and continued until April 26, 2012. Free product was observed in Shell well MW-16, located in the sidewalk adjacent to the Chevron Station from 4/20/1996 to 10/8/1996. Free product was not detected in any other site monitoring wells. Dissolved gasoline, benzene, ethylbenzene, toluene, xylenes, methyl tertiary butyl ether (MTBE) and tert butyl alcohol were detected in the groundwater in the source area monitoring wells (MW2 and/or MW3) and down-gradient (MW5). MTBE was also detected in offsite well MW7. Tert butyl alcohol (TBA) was detected in well MW2, MW3 and down-gradient well MW5. The consultant stated that the dissolved benzene and ethyl benzene plumes appeared to originate at the former UST and dispenser area at the southwest corner of the site. The benzene plume may extend offsite to well MW7. The MTBE and TBA plumes appear to have originated in the vicinity of the former western dispenser area. The MTBE plume has migrated offsite to well MW5 and was also detected in offsite well MW7. The plumes appear to be delineated and stable or decreasing in concentration. Groundwater in the area of the site is designated as having beneficial uses for municipal/domestic supply and agriculture, with potential beneficial use for industrial service supply. The depth to water has ranged from 7.0 to 18.19 feet below the top of casing. The calculated hydraulic gradient in April 2012 was 0.06 with groundwater flow to the west-southwest. The consultant contacted the City of Poway regarding potential water supply wells within one mile of the site. Mr. Howard from the City of Poway stated that the City of Poway does not operate any public supply wells. Active remediation of the soil or groundwater has not occurred at the site. A sensitive

receptor survey conducted for the site identified sixteen wells from the USGS and Department of Water Resources databases located within a one-mile radius of the site. However, the consultant was not able to field verify the existence of any of these wells. An unnamed tributary to Poway Creek is located approximately 610 feet west of the site. The consultant stated that the creek is unlikely to be impacted from the site based on the distance. Other receptors including two ponds and several schools were eliminated from further consideration as sensitive receptors based on their distance from the site. The Meadowbrook Ecological Reserve is located approximately 1500 feet northwest of the site (up-gradient). The consultant stated that the Meadowbrook Ecological Reserve could be eliminated from consideration based on the distance from the site and the extent of the hydrocarbon plumes. Several subsurface utilities such as gas, electric, water, sewer and telecommunication lines were identified in the site vicinity. The consultant reported that a high pressure gas line is located beneath Pomerado Road at estimated depths of two to four feet. Electrical supply lines are located along the south side of Poway Road (estimated depths of two to four feet). Water supply lines are located beneath Poway Road at estimated depths of three to six feet. Storm drains are located directly south of the site on Poway Road. Two sewer lines are located in the site vicinity, one on Pomerado Road and one on Poway Road. The consultant estimated that the depth of the sewer lines is eight to ten feet bgs. Cox Communication and AT&T have cable lines along Pomerado Road. The consultant stated that the depth to groundwater in the wells closest to the utilities ranged from 10 to 17 feet. The consultant stated that the potential for migration of contaminants within the sewer line trenches does not appear to have significantly contributed to plume migration. The consultant prepared a Corrective Action Plan for the site which recommended remediation by natural attenuation. Trend analyses conducted by the consultant indicate that the concentrations of benzene should decay by natural attenuation to reach the MCL of 1 microgram per liter (ug/l) in 37 years, ethylbenzene should reach the MCL of 300 ug/l in 60 years, MTBE should reach the MCL of 13 ug/l in 22 years, and that concentrations of TBA should be below the State Notification limit in 60 years. The site is an active gas station and health risks due to vapor intrusion did not warrant soil vapor sampling. The consultant has recommended no further action for the site and destruction of all monitoring wells given that the plumes are stable and/or decreasing, groundwater in the immediate vicinity of the site is not being used for municipal or domestic supply and there do not appear to be any sensitive receptors that will be impacted by the site. DEH concurs with this recommendation.

Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Gasoline  
Site History:

The Site is a former Circle K service station in the City of Poway, on the northwestern corner of the intersection of Pomerado Road and Oak Knoll Road. The station consisted of one 10,000-gallon gasoline underground storage tank (UST), one 6,000-gallon gasoline UST, two product dispensers at one island, and a convenience store building. In July 1999, the UST system, including dispensers, piping and vent lines, were removed. The convenience store building was not demolished and still exists as an operating store at the Site. During UST system removal activities, soil samples were collected from the UST cavity and the dispenser island under the direction of the San Diego County Department of Environmental Health (DEH). Soil impacts were noted beneath the USTs and dispenser. Free product was observed on top of the soil in the tank cavity at approximately 13 feet below ground surface (bgs). However, groundwater was not observed. Based on this information, Authorized Release Case H20709-003 was opened. Limited over-excavation of soils in the tank cavity was performed down to approximately 14 feet bgs in order to remove the product-saturated soils. Approximately 143 tons of soil generated during removal of USTs, products lines, and dispenser was properly disposed. In August and September 2004, TRC conducted feasibility

testing of dual-phase extraction (DPE) as a remedial alternative. Approximately 198 pounds (33 gallons) of vapor-phase hydrocarbons and 450 gallons of groundwater were recovered during the DPE test. Remediation wells DPE-1 through DPE-6 were installed during fourth quarter 2008. The DPE system was installed at the Site during second quarter 2009; the system was subsequently started-up on February 3, 2010. In response to a December 4, 2013 letter from the CSDDEH, the DPE system was shut down indefinitely on December 10, 2013. To date, the soil vapor extraction portion of the DPE system has operated for a total of 23,671 hours, and has removed approximately 52,930 pounds of vapor-phase hydrocarbons, while the groundwater extraction portion of the DPE system has extracted, treated, and disposed of approximately 296,952 gallons of groundwater. On May 7, 2014, limited shallow soil vapor sampling activities was conducted at the site. The data collected suggested a vapor intrusion risk to the site building did not exist. On February 16, 2015, sub-slab vapor probes SSGP-1 through SSGP-4 were installed at the site. Two rounds of vapor probe sampling were conducted; the results of which suggested a potential vapor intrusion risk to the site building does not exist. Based on the collected soil data, residual petroleum hydrocarbon impact to soil appears to be present at the location of the former UST basin, and is primarily confined to soil at depths of greater than 12 feet, but less than 16 feet bgs. On May 23, 2016, five profile soil borings (PB-1 through PB-5) were advanced at the Site to collect additional soil data to aid in the design of an injection program for the BOS 200 injections. Between October 18 and 25, 2016, ATC supervised BOS 200 injections. The completed scope of work included the injection of 8,425 pounds of BOS 200, 650 pounds of gypsum, 12.5 gallons of RPI s bacteria concentrate, and 3,850 gallons of potable water into the subsurface at 36 temporary injection point locations (IP-1 through IP-36). It was concluded that the BOS 200 injections performed at the site during October 2016 have had a positive and long-lasting effect on dissolved-phase petroleum hydrocarbons beneath the site; particularly in source-area wells MW-1 and MW-3, and to a lesser extent in remediation wells DPE-2, DPE-4, and DPE-5. The amount of TPH-impacted soil remaining in the subsurface and in the vicinity of the former USTs is estimated to be less than cubic yards. It is estimated that there is approximately 1,612 pounds of residual TPH. Based on a trend analysis, the time for benzene to reach the maximum contaminant level (MCL) of 1.0 part per billion is approximately 5 years in groundwater monitoring well DPE-5. The time for MTBE to reach the primary maximum contaminant level (MCL) of 13 parts per billion is approximately 50 years in groundwater monitoring well DPE-1. It was recommended that the County DEH grant regulatory closure of the case. DEH concurs with closure of Unauthorized Release Case H20709-003. The monitoring wells were destroyed under permit DEH2017-LSAM-00. The closure of the case is based on the current use of the property as a store and parking lot. The case was evaluated under the State s Low-Threat Underground Storage Tank Case Closure Policy (the Policy). Current and historical soil and groundwater data indicate that the secondary source has been adequately removed and a stable to decreasing plume remains. DEH concurs that the case qualifies for a low-risk closure designation. Case closure notification was completed per the Policy. ANY CONTAMINATED SOIL EXCAVATED AS PART OF SUBSURFACE CONSTRUCTION WORK MUST BE MANAGED IN ACCORDANCE WITH THE LEGAL REQUIREMENTS AT THAT TIME.

 Potential Media Affect: Aquifer used for drinking water supply  
 Potential Contaminants of Concern: Gasoline  
 Site History: During the fall of 1988, the City of Poway was excavating a trench for a sewer line extension along the western side of Pomerado Road when they discovered gasoline saturated soil next to the Shell station. Based on the City's observations, case H03181-001 was opened on July 19, 1989. The groundwater has been monitored and sampled since March 1992. In August 1992, free product was discovered in MW-8. To date (4 Qtr 2009) free product still exists in MW-8. Free product has also been detected in MW-16 (located adjacent to upgradient Chevron) between April 1996 and December 2000, at a thickness ranging from 0.02 to 0.06 feet; trace free product detected in MW-6 in August 1992; 0.01 foot free product detected in MW-10 in December 2000. In November 2004, MW-16 and MW-17 were destroyed because they were located upgradient next to the Chevron and 76

stations, respectively. MW-16 and MW-17 were essentially duplicating data from the upgradient cases. In June 2004, three USTs, product piping, and dispensers were removed and replaced with two 20k-gallon (gasoline) and one 8k-gallon (diesel) USTs. Approximately 366 cubic yards of impacted soil was excavated and treated offsite. In November 2004, a soil vapor survey was conducted to evaluate potential health risks for soil vapor intrusion. The consultant concluded that the calculated risk is acceptable (less than 1E-6). For site specific data, refer to ESI Tab.

**Site History:**

This Voluntary Assistance Program (VAP) case was opened to evaluate a former gas station property for the construction of slab-on-grade, two-story affordable housing for adults comprising 54 apartments units with at-grade parking. This Site is a 3.18-acre parcel of land and was most recently developed with an office building and sheds on the western portion of the property. In addition, the eastern portion of the Site was an asphalt-paved parking lot with two concrete building foundations. The southwestern portion of the Site is transected by Poway Creek. From 1942 to 1998, the San Diego County Department of Public Works Road Station occupied the Site. In 1994, three underground storage tanks (USTs) were removed, resulting in the opening of Local Oversight Program (LOP) Case H20708-002, which was closed in July 2004. Due to the potential of vapor intrusion from the former LOP Case the consultant, SCS Engineers (SCS), conducted a soil vapor survey on October 29, 2015. Results for Volatile Organic

Compounds (VOCs) were non detect (ND), with the exception of benzene with soil gas concentrations of up to 0.14 ug/l. Based on this, benzene was calculated to have an excess carcinogenic risk of  $1.55 \times 10^{-8}$ , which is less than the acceptable  $1.0 \times 10^{-6}$  excess carcinogenic risk. Therefore, SCS indicated that there was no risk from vapor intrusion. On March 15, 2019, SCS submitted a Soil Management Plan (SMP) and a Community Health and Safety Plan (CHSP) for the excavation and export of soil with elevated concentrations of lead and petroleum hydrocarbons encountered during grading activities. The SMP and CHSP were approved on March 28, 2019. Excavating and grading occurred from May 13 through May 17, 2019, with approximately 305 tons of petroleum-impacted soil and 88.5 tons of lead-impacted soil exported offsite and disposed at an appropriate facility. Trace amounts of organochlorine pesticides (i.e. DDD, Chlordane, etc.) were also removed. SCS States that the removal of petroleum hydrocarbon and lead-bearing soil with residual concentrations below Mitigation Criteria is judged to be protective of water resources at the Site, and protective of human health and the environment, considering the proposed use of the Site as a multi-family residential development. DEH concurs.

Local Case Number: H03459-002  
Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Diesel, Gasoline  
Site History: On January 1, 1991, diesel fuel was reported to be seeping into the Rattlesnake Creek near the site. US-EPA was notified of the release on April 15, 1993. The Federal On-Scene Coordinator for the EPA started an assessment investigation in the Rattlesnake Creek and in the soil and groundwater at the site and at three adjacent properties. Six USTs were removed and several soil borings and monitoring wells were installed. Cleanup activities included excavation/disposal of impacted soil, soil vapor extraction and groundwater pump and treat systems. On June 5, 1995 the US-EPA reported the case status as closed. In 2001 the City of Poway Redevelopment Services conducted due diligence during acquisition of the site and performed a Phase I and Phase II subsurface soil investigations. Assessment of soil and groundwater contamination initially included advancing seven borings in June 2001, followed by the installation of five soil borings and nine monitoring wells. Soil contamination has been defined and groundwater plume is delineated. Other investigation activities at the site included evaluation of the vertical hydraulic gradient between groundwater and surface water in the Rattlesnake Creek, design and building of a culvert for a section of the Rattlesnake Creek, conduct a soil gas survey targeted at the soil beneath the office building, prepare human health risk calculation (highest risk of 4.32E-08 for MTBE), evaluate migration potential of the contaminants, prepare a degradation rate model for the contaminants of concern, and prepare a Corrective Action Plan. Total residual impacted soil was calculated to be 8,167 cubic yards with maximum gasoline concentration of 622 mg/kg and diesel of 347 mg/kg. The consultants conclude in their final report dated April 2, 2010, that dissolved TPH gasoline and diesel are non detect in all the monitoring wells. Dissolved benzene is detected only in one monitoring well at low concentration, dissolved MTBE ranges from non detect to low concentration, and overall migration of the dissolved plume is stable. They further conclude that the groundwater quality objectives will be met for MTBE within three to eleven years and for benzene within 44 years. The consultants propose natural attenuation as the cost effective option for corrective action at the site and recommend closure of the case. DEH concurs with this recommendation.

## **STANDARD ENVIRONMENTAL RECORDS**

### ***Lists of Federal NPL (Superfund) sites***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

### ***Local Brownfield lists***

#### **US BROWNFIELDS: A Listing of Brownfields Sites**

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

## DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### USGS TOPOGRAPHIC MAP

Target Property Map:	11993864 POWAY, CA
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

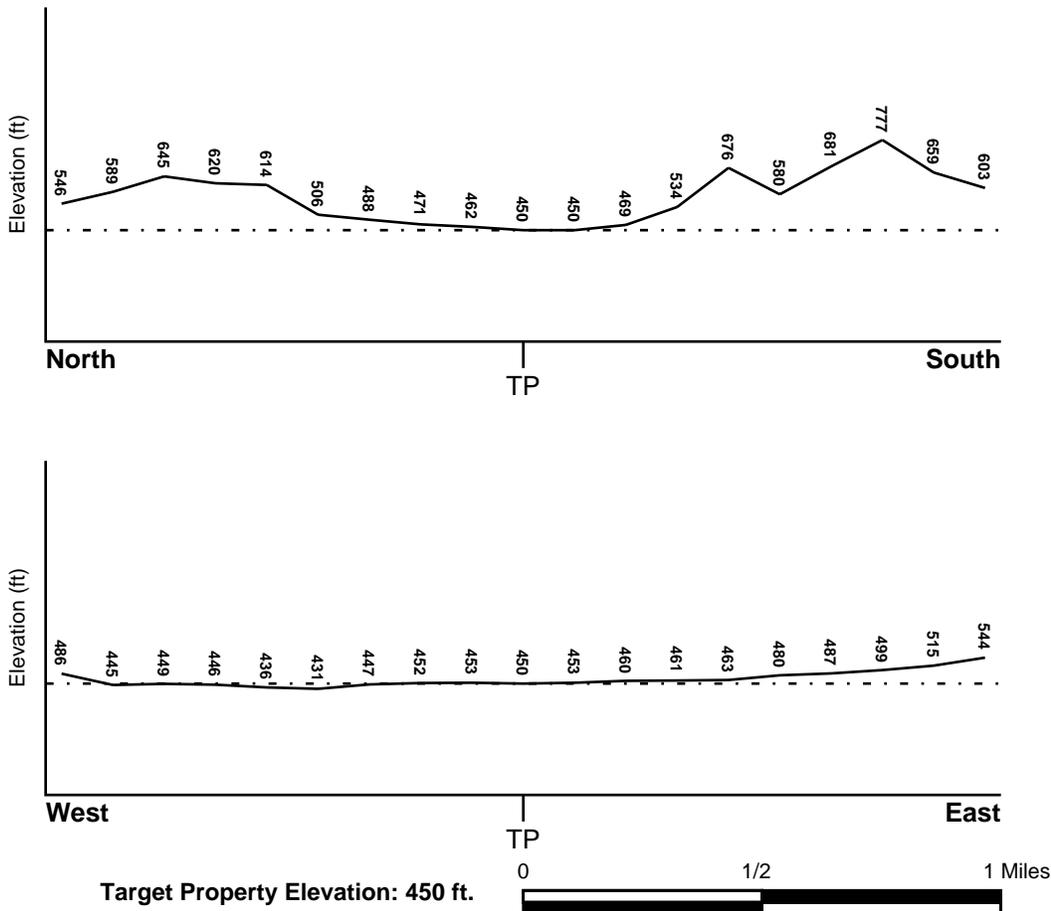

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## **AQUIFLOW®**

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: PLACENTIA

Soil Surface Texture: sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
