CITY OF SEAL BEACH
OLD RANCH COUNTRY CLUB SPECIFIC PLAN PROJECT

SECTION 1.0 PROJECT INFORMATION

- 1. Project Title:** Old Ranch Country Club Specific Plan Project
- 2. Lead Agency Name and Address:** City of Seal Beach
Community Development Department
211 Eighth Street
Seal Beach, California 90740
- 3. Contact Person and Phone Number:** Shaun Temple, AICP
Planning Manager
562.431.2527
- 4. Project Location:** 3901 Lampson Avenue
Seal Beach, California 90740
- 5. Project Sponsor's Name and Address:** Old Ranch Development LLC
3700 Wilshire Boulevards, Suite 200
Los Angeles, California 90010
- 6. General Plan Designation:** Open Space Golf
- 7. Zoning:** Recreational Golf (RG)
- 8. Description of the Project:**

The Old Ranch Country Club (ORCC) Specific Plan Project proposes development of new and expansion of existing facilities. The proposed new facilities would include a 116-unit, 4-level (188,500 square feet [SF]) multi-family housing development; a 51-unit (96,955 SF), 3-level senior housing complex including a 25,340-SF medical office facility; a 150-key overnight accommodation (109,015 SF), including a bar and lounge and a specialty restaurant; a relocated maintenance facility (2,650 SF); and a 3-level parking structure with 591 stalls (226,441 SF), including 26 valet spaces and 36 electric vehicle (EV) parking spaces, with 4 tennis courts on the top level. A total of 1,042 parking spaces are proposed.

The expansion of existing uses includes a 3-level clubhouse addition (109,015 SF) consisting of overnight accommodations, indicated above, with pool, restaurant, and bar/lounge. Also, the Project would include new connecting drive aisles/streets, surface parking areas, and landscaping in addition to a reconfigured driving range from two-way to a two-level one-way.

Other improvements related to recontouring of the golf course and changes pertaining to the flood plain easement and drainage reconfiguration would also occur. Exhibit 1, Regional Location and Local Vicinity, illustrates the Project site location. Exhibit 2, Aerial Photograph, shows the Project site's relationship to surrounding land uses.

Project Objectives

Planning and Environmental Design

- Provide for comprehensive land use and infrastructure planning, while respecting the physical and existing ORCC operational constraints of the site.
- Create a cohesive identity for the Specific Plan area, and provide a consistent Project theme, development standards and design guidelines that allow design flexibility to better respond to market needs.
- Promote high quality design and well-ordered spatial relationships among buildings and land uses.
- Unify the Specific Plan area through the implementation of a consistent landscape, architectural and circulation and access program; and create a signage system that includes identification, directional and informational signage, which is appropriate for both the Specific Plan area and the overall community.
- Establish an efficient pattern of local circulation, both vehicular and pedestrian, which will also provide linkage between the Project area and the surrounding community
- Provide for water quality treatment of urban runoff for new development.

Land Use and Development

- Implement the policies of the Seal Beach General Plan for the Project site and vicinity through the Specific Plan process.
- Increase connectivity within the Specific Plan area and provide a planning framework that responds to the physical and market driven aspects of future development opportunities.
- Encourage the expansion of a range of employment opportunities within the City of Seal Beach by combining the country club, overnight accommodations, residential, and medical office land uses in close proximity to similar existing uses.

Fiscal Benefits

- Allow overnight accommodation uses that provide transient occupancy tax opportunities.
- Add to the City's property tax base.

Project Components

The ORCC Specific Plan is divided into two Planning Areas:

Planning Area 1 (PA-1)

Proposed Parking Structure, Drive Connecting Parking Structure to Old Ranch Plaza, Driving Range Re-configuration, New Pool Area, Senior Apartments with Medical Office, Multi-Family Units, and New Maintenance Buildings

PA-1 is designated for a 3-level, 591-space parking structure with tennis courts on the top level that can be used for 26 valet parking spaces, if necessary. There will also be a connecting bridge from the middle level of the structure to the existing clubhouse. The parking structure will have a natural green screen on all four sides. The practice chipping green and sand trap will be relocated to the front of the parking structure.

The two-way driving range will be modified to one direction only. It will have two levels of tee boxes with the second level constructed as part of the parking structure. The number of tee boxes will remain the same.

In front of the western portion of the existing clubhouse a new pool area for club members will be constructed, which will include a spa, cabanas, bocci ball court, pool bar, and an outdoor expansion of the club workout area. PA-1 will also include the connecting drive between the parking structure and the Old Ranch Plaza entrance.

Additionally, PA-1 will include 51 senior apartments and 25,340 SF of medical office with associated parking. The senior apartments and the medical office will have 25 and 71 surface parking spaces, respectively. Also, a total of 10 spaces will be designated for Americans with Disability Act (ADA) and EV spaces and will be shared between the senior apartments and the medical office.

PA-1 will include a 116-unit, 4-level multi-family development. The building will be 88,500 SF and have 158 parking spaces. This planning area will also include an approximately 2,650-SF maintenance building with 6 surface parking spaces. Refer to Exhibit 3, Site Plan.

Existing Clubhouse, Clubhouse Addition, and Golf Course

PA-2 is designated for the expansion of the existing clubhouse. A new wing is proposed to the clubhouse sharing its existing dining and meeting facilities. Included in the addition are overnight accommodations of 150 rooms, a 1,275 SF specialty restaurant, a 1,440 SF bar and lounge, a day spa, a gym, and a third level pool, and multifunction space. Parking is provided by a combination of surface parking and the parking structure in PA-1. The 109,015-SF addition will bring the floor area to a total of 139,015 SF. See Exhibit 4, Parking Allocation.

Landscape Design

The conceptual landscape plan would include a hierarchy of plant materials consisting of trees, low shrubs, low hedge, foundation plantings, and groundcover throughout the Project area. New landscaping will be added to the existing to enhance the aesthetic quality of the site. Overall, eucalyptus trees and palms will be planted along perimeter roads with uplift multi branch olive trees in parking medians. Foundation plantings of various sizes would occur adjacent to the buildings. Tall evergreen wall screen with low growing shrubs will be planted along the parking structure. Evergreen trees will buffer driving range. Specific highlights include:

- **Main Entry.** Main entry will be enhanced by multi branch olive tree with up lighting on both sides of the entry drive and in the median. Hedge border with low growing shrubs will be planted at the base of the trees and the entry sign monument. Queen palms will create a backdrop.
- **Clubhouse Pool.** The clubhouse pool area, which includes pool, spa, extended covered work out area, bocce ball court, cabanas, and bar will be screened by eucalyptus trees

PROPOSED MULTI-FAMILY HOUSING
±116 UNITS, ±188,500 SF AT 4 LEVELS

RELOCATED MAINTENANCE FACILITY

KEY NOTES:

- 1 PROPERTY LINE
- 2 EXISTING TRAFFIC SIGNAL
- 3 MODIFIED ENTRY DRIVE
- 4 FEATURED ENTRY LANDSCAPING AND SIGNAGE
- 5 DECORATIVE LANDSCAPING WALL BUFFER
- 6 ENHANCED PAVING
- 7 FEATURED OVERNIGHT ACCOMMODATION ARRIVAL FOUNTAIN
- 8 OVERNIGHT ACCOMMODATION PORTE-COCHERE / VALET
- 9 GARDEN PLAZA
- 10 MODIFIED DROP-OFF / VALET
- 11 EXISTING PARKING
- 12 NEW LANDSCAPE FINGER
- 13 CONNECTING DRIVE
- 14 NEW PROTECTIVE NET
- 15 EXISTING FLOOD CHANNEL
- 16 EXISTING EUCALYPTUS GROVE
- 17 PARALLEL PARKING
- 18 RECONFIGURED DRIVING RANGE TEE BOXES WITH AN UPPER DECK
- 19 EXISTING DRIVE
- 20 RELOCATED MAINTENANCE STAGING AREA
- 21 GRAVEL SAND, DECOMPOSED
- 22 EXISTING EMERGENCY ACCESS ONLY
- 23 EXISTING GAS PUMP TO BE RELOCATED
- 24 RELOCATED MAINTENANCE FACILITY / WORK YARD
- 25 EXISTING FUEL TANK
- 26 EXISTING FIRE HYDRANT CONTROL VALVE
- 27 EXISTING TRANSFORMER TO BE RELOCATED
- 28 RECONFIGURED DRIVING RANGE
- 29 DRIVING RANGE ACCESS PATH
- 30 BRIDGE CONNECTION FROM PARKING STRUCTURE TO PRO SHOP
- 31 SHORT-TERM BICYCLE PARKING
- 32 LONG-TERM BICYCLE LOCKERS
- 33 REMOVE EXISTING CART PATH
- 34 NEW CART PATH
- 35 NEW ACCESS DRIVE WAY
- 36 NEW DECELERATION RIGHT TURN LANE
- 37 EXISTING PUMP ROOM

Exhibit 4

and Italian Cyprus tees. Multi branched olive trees with up lighting will also be provided. Additionally, foundation plantings of various sizes will be planted adjacent to the building.

- **Senior Housing.** The entry off Lampson Avenue will include monument signage walls with uplit olive trees on each side of the entry drive. The eucalyptus grove along Lampson Avenue fronting the building entry will be enhanced by additional landscaping and low hedge. Scored concrete or pavers will be installed at building drive up, and the median will be landscaped with palms and uplit multi branched olive trees. Foundation plantings of various sizes will be planted adjacent to the building. Additionally, evergreen trees will buffer the driving range from the senior housing complex.
- **Multi-Family Housing.** Similar to the senior housing, the entry into the multi-family housing will include monument signage wall and scored concrete or pavers at building drive up. Low shrubs and ground cover will be planted along street scape. A mix of eucalyptus and evergreen pines will create a buffer along Seal Beach Boulevard. The existing eucalyptus grove will be enhanced with additional landscaping. Additionally, foundation plantings of various sizes will be planted adjacent to the building.

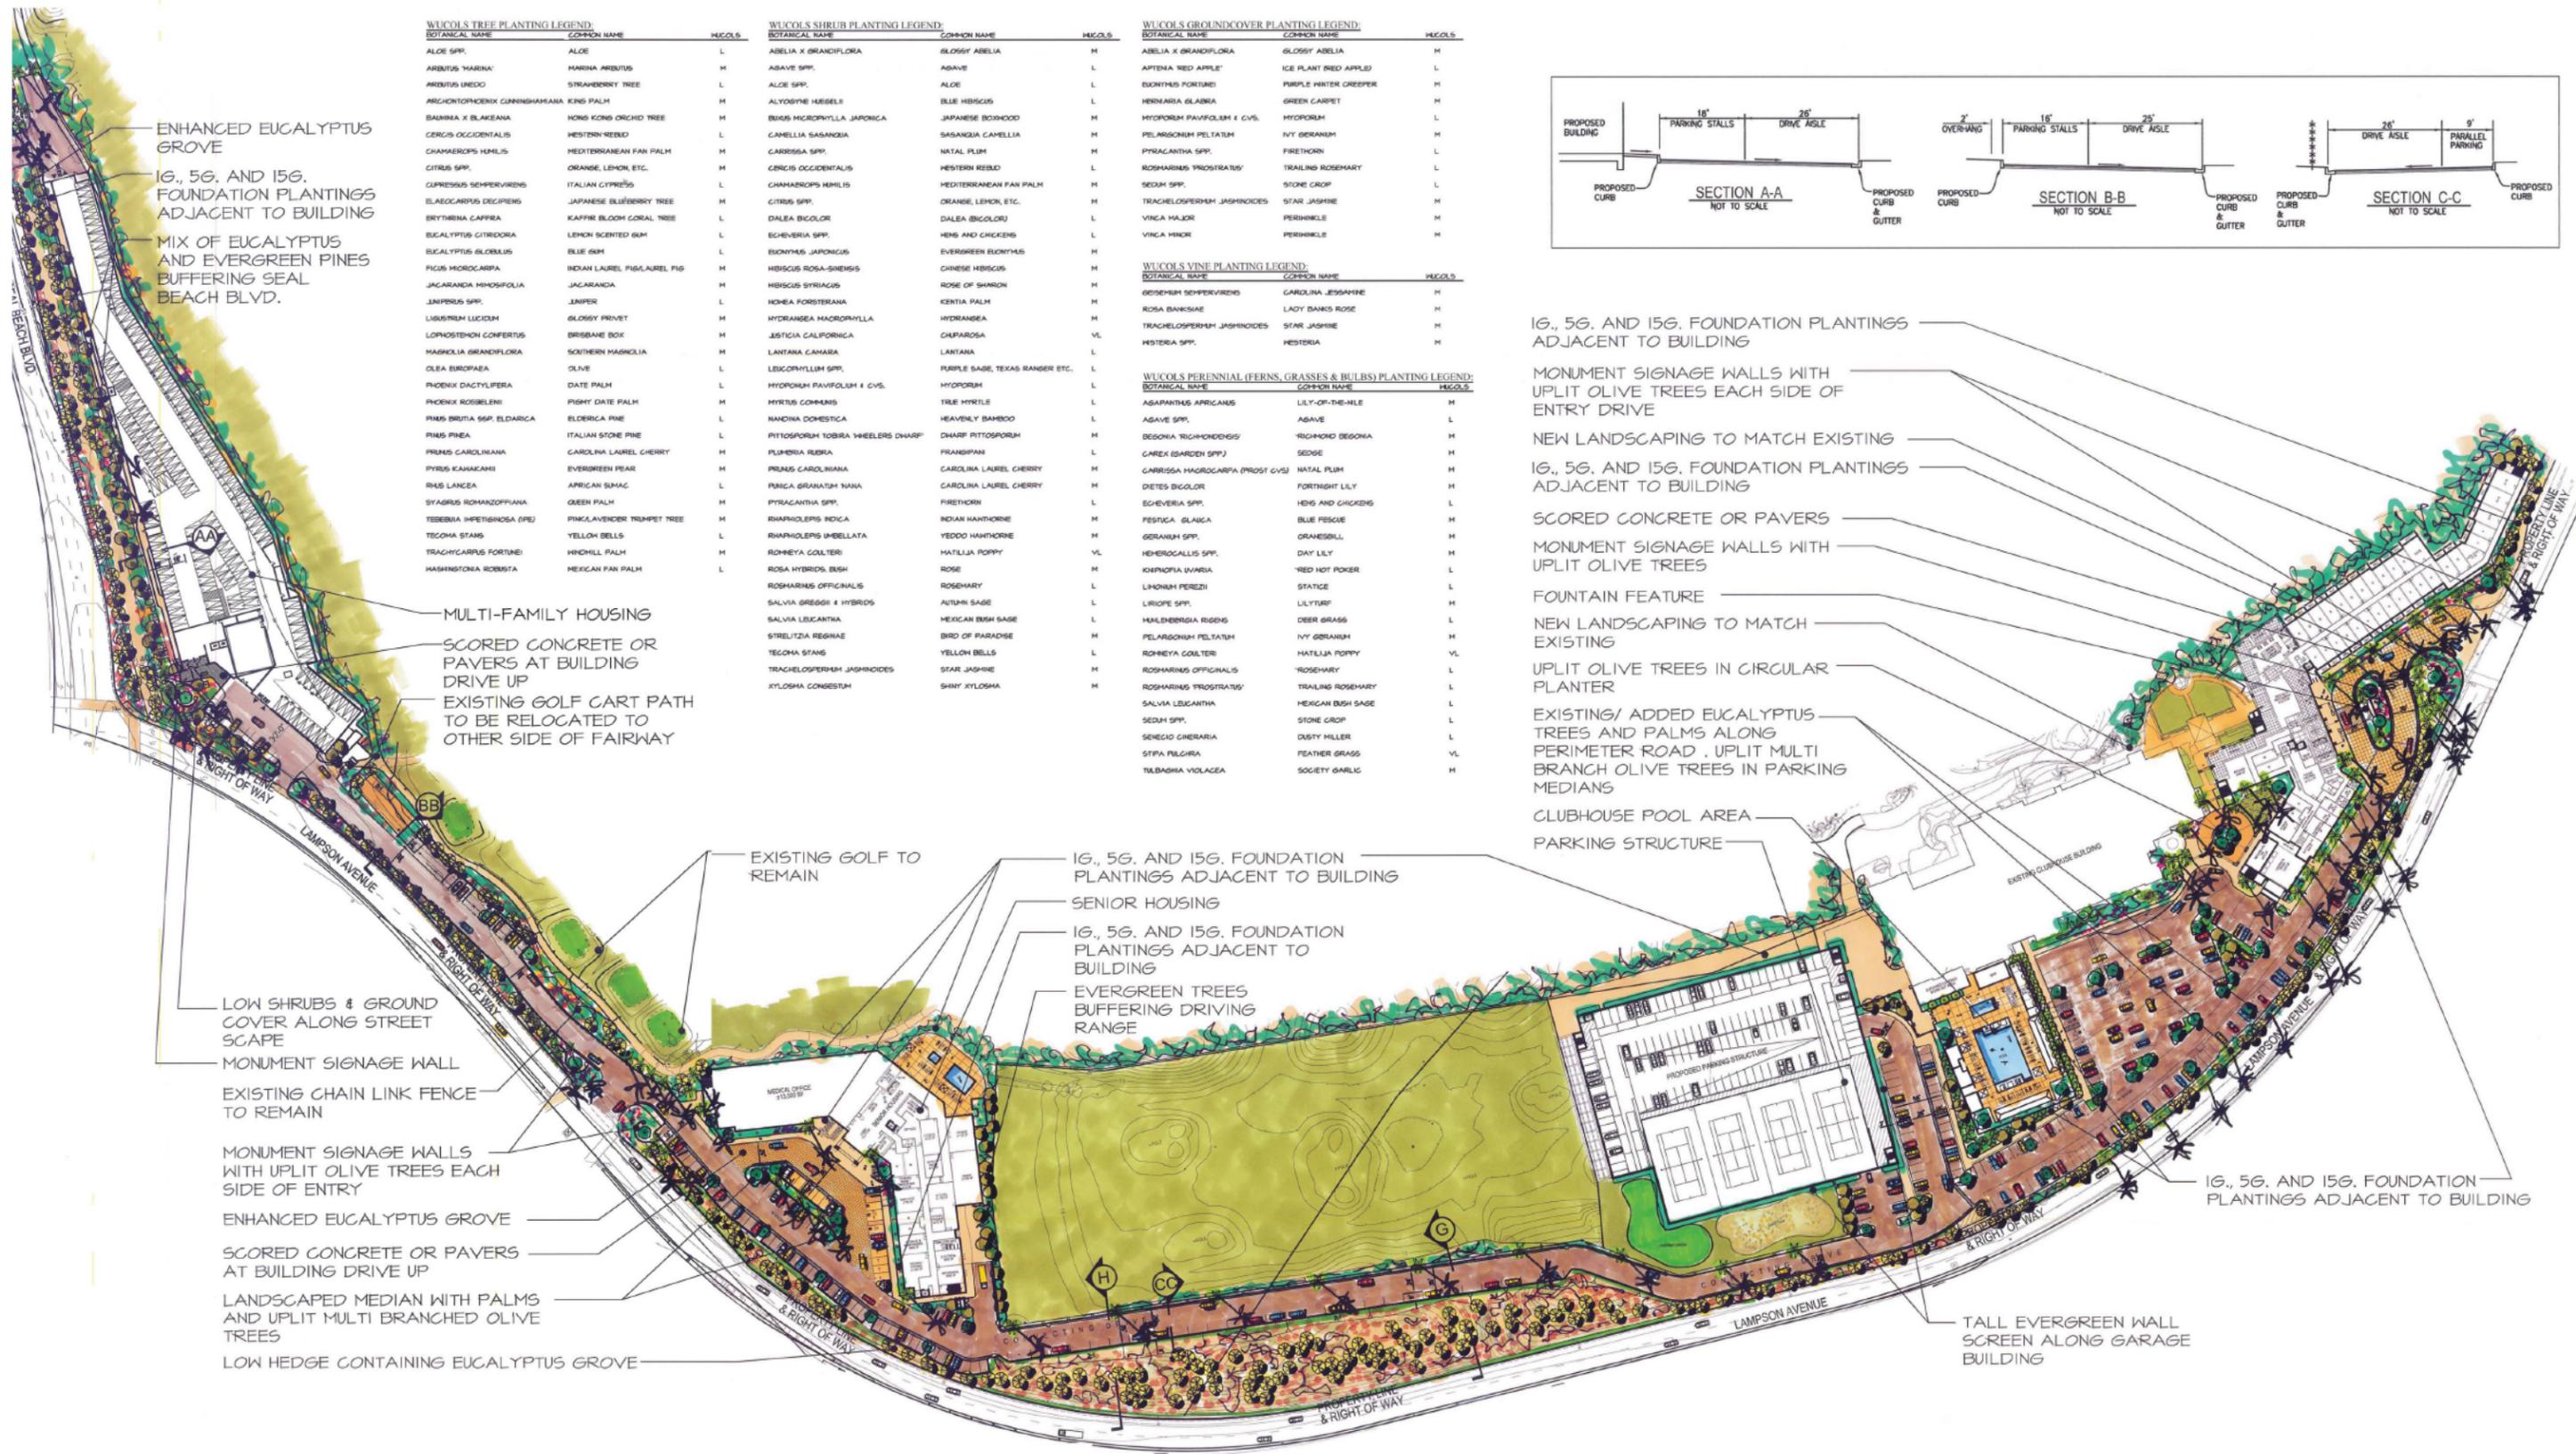

Exhibit 5, depicts the overall conceptual landscape plan.

Phasing Plan

The proposed development will be dictated by market demand and phased accordingly. The conceptual phasing schedule identified below is the best estimate for planning purposes only.

1. **Construct Parking Structure.** To provide adequate parking the parking structure will be constructed first.
2. **Construct New Pool Area.** With adequate parking provided in the parking structure, the pool area will be constructed in the existing surface parking area.
3. **Reconfigure Driving Range.** With the Parking Structure and Pool Area constructed the Driving range will be reconfigured.
4. **Close Basswood Entrance.** The parking area east of the new Pool Area and the Basswood Entrance will be closed to allow for the Clubhouse Addition to be constructed.
5. **Old Ranch Plaza Temporary Main Entrance.** Old Ranch Plaza will be the main entrance during Clubhouse Addition construction.
6. **Construct Clubhouse Addition.** The Clubhouse Addition will be constructed.
7. **Construct Senior Housing and Medical Office.** When the Clubhouse Additional is completed the Basswood Entrance will be reopened and the Senior Housing and Medical Offices constructed.
8. **Construct Multi-Family Units and Maintenance Facilities.** Upon completion of the Senior Housing and Medical Office the multi-family units and new maintenance facilities will be constructed.

Conceptual Landscape Plan

Old Ranch Country Club Specific Plan Project

Source: Architects Orange, 2022

Exhibit 5

Circulation Plan

Access to the ORCC Specific Plan area is provided by Seal Beach Boulevard and Lampson Avenue (Major and Secondary streets, respectively), through the City of Seal Beach and the City of Los Alamitos. Regional access to the site can be provided by San Diego Freeway (405), San Gabriel Freeway (605), Garden Grove Freeway (22), and Pacific Coast Highway (1).

Internal circulation is currently provided by an entrance off Lampson Avenue at Basswood Drive for the country club and clubhouse. The entry drive off Lampson and the drop-off/valet will be modified. Another entrance off Lampson at Old Ranch Plaza provides access to the public driving range and maintenance facilities, and an existing private drive connects the maintenance facility to the driving range. Emergency access will be provided by the existing emergency access only, just east of Seal Beach Boulevard. A new driveway is proposed off Seal Beach Boulevard, which will provide access to the proposed multi-family housing.

The circulation system will adequately serve the projected traffic volumes and accommodate the build-out of the Specific Plan area. Initial street construction and future phased construction or reconstruction will be completed in advance of occupancy of new facility-phased construction.

Old Ranch Country Club Specific Plan

The ORCC Specific Plan establishes the planning concept, design theme, development regulations and administrative procedures necessary to achieve compatible, orderly, and efficient development of the site. The land uses and new development within the Specific Plan area will be consistent with the policies, goals, and objectives of the General Plan.

The ORCC Specific Plan envisions “to create a quality Mixed-Use Country Club with Overnight Accommodations, Senior Apartments with Medical Offices and multi-family units.”

The ORCC Specific Plan establishes the following:

- Identification, location, character and intensities of the country club, overnight accommodations, parking structure, senior apartments, and multi-family units
- Alignment and design of the circulation system
- Identification and location of all public and private facilities and infrastructure necessary to facilitate the Project
- Land use and development standards for country club, overnight accommodations, parking structure, senior apartments, and multi-family units
- A compatible design theme for the Project area, creating continuity within the planned overnight accommodations, parking structure, senior apartments, and multi-family units.

Discretionary Actions by the City

Implementation of the Project would require the following discretionary approvals by the City of Seal Beach:

- Adoption of the ORCC Specific Plan
- Certification of the ORCC Specific Plan Environmental Impact Report

- Approval of the Development Agreement
- Zoning Code Amendment for Building Height
- Public Street Tree Removal Approval, including a Eucalyptus Tree Permit
- Design Review
- Vesting Tentative Tract Map or Tentative Tract Map Approval

9. Surrounding Land Uses and Setting:

A mix of land uses, including commercial, residential, flood control, and military uses surround the Project site. The table below identifies the land uses adjacent to the site.

**TABLE 1-1
SURROUNDING LAND USES**

Surrounding Land Uses	
North	Joint Forces Training Base (JFTB) Los Alamitos, Old Ranch Town Center, Old Ranch Homes
Northwest	Rossmoor Center
South	405 Freeway, Naval Weapons Station
East	College Park East
West	Rossmoor
Southwest	Old Ranch Plaza, The Ranch Office Park

Additionally, the ORCC Specific Plan Project area is accessed by Seal Beach Boulevard and Lampson Avenue (arterial and primary highways, respectively), through the City of Seal Beach and City of Los Alamitos. The Project is located in proximity to the California freeway system. Freeways in the immediate vicinity include:

- The San Diego Freeway (405) is located adjacent to Lampson Avenue to the south.
- The San Gabriel Freeway (605) is located approximately 1 mile to the northwest.
- The Garden Grove Freeway (22) is located approximately 1.5 miles to the northeast. Pacific Ocean Orange County
- Pacific Coast Highway (1), the primary arterial along the coast, is located approximately 3 miles to the south.

10. Other public agencies whose approval is required:

- Los Angeles Regional Water Quality Control Board (National Pollutant Discharge Elimination System [NPDES] permitting) and
- Los Angeles County Metropolitan Transportation Authority (for construction within 100 feet of a Metro light rail line).

11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resource Code Section 21080.3.1? If so, has consultation begun?

Consultation pursuant to Section 21080.3.1 of the *Public Resources Code* and Assembly Bill (AB) 52 and Senate Bill (SB 18) was initiated and is ongoing with the California Native American tribes affiliated with the City of Seal Beach and who have requested consultation and the consultation process is ongoing. Refer to Section 2.18, Tribal Cultural Resources, of this IS for further information.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- | | | |
|---|--|---|
| <input type="checkbox"/> Aesthetics | <input type="checkbox"/> Greenhouse Gas Emissions | <input type="checkbox"/> Public Services |
| <input type="checkbox"/> Agriculture and Forestry Resources | <input type="checkbox"/> Hazards and Hazardous Materials | <input type="checkbox"/> Recreation |
| <input type="checkbox"/> Air Quality | <input type="checkbox"/> Hydrology and Water Quality | <input type="checkbox"/> Transportation |
| <input type="checkbox"/> Biological Resources | <input type="checkbox"/> Land Use and Planning | <input type="checkbox"/> Tribal Cultural Resources |
| <input type="checkbox"/> Cultural Resources | <input type="checkbox"/> Mineral Resources | <input type="checkbox"/> Utilities and Service Systems |
| <input type="checkbox"/> Energy | <input type="checkbox"/> Noise | <input type="checkbox"/> Wildfire |
| <input type="checkbox"/> Geology and Soils | <input type="checkbox"/> Population and Housing | <input type="checkbox"/> Mandatory Findings of Significance |

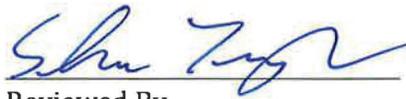

DETERMINATION: (to be completed by the Lead Agency)

On the basis of this initial evaluation:

I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.	
I find that, although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because the mitigation measures described on an attached sheet have been added to the project. A MITIGATED NEGATIVE DECLARATION will be prepared.	
I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.	X
I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.	
I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

EVALUATION OF ENVIRONMENTAL IMPACTS:

- 1) A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect is significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an EIR is required.
- 4) “Negative Declaration: Less Than Significant With Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Unless Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Impact” to a “Less than Significant Impact.” The Lead Agency must describe the mitigation measures and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section 21, “Earlier Analysis,” may be cross-referenced).
- 5) Earlier analysis may be used where, pursuant to the tiering, program Environmental Impact Report (EIR), or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. See CEQA Guidelines Section 15063(c)(3)(D). Earlier analyses are discussed in Section 21 at the end of the checklist.
 - a) Earlier Analysis Used. Identify and state where they are available for review.
 - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c) Mitigation Measures. For effects that are “less than Significant with Mitigation Measures Incorporated,” describe the mitigation measures which were incorporated or refined from the earlier documents and the extent to which address site-specific conditions for the project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 8) The explanation of each issue should identify:
 - a) The significance criteria or threshold, if any, used to evaluate each question; and
 - b) The mitigation measure identified, if any, to reduce the impact to less than significant.

SECTION 2.0 ENVIRONMENTAL CHECKLIST FORM

2.1 AESTHETICS

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The Project site is developed and is not located in an area considered to contain a scenic resource or vista. As documented in the City of Seal Beach General Plan, the coastal waterfront, including shoreline and marshlands, is one of the City’s most valuable assets. The Project site is at least 3.5 miles from the waterfront scenic area, and 2.0 miles northeast of the Seal Beach National Wildlife Refuge, which contains the marshlands and ecological areas. The Project site and the surrounding area are relatively flat. Prominent viewpoints, other than the surrounding buildings, are limited. Views from the Project site are primarily of surrounding urban development, including commercial, residential, flood control and military uses. Therefore, the Project would not affect a scenic vista, as none exists in the vicinity. Impacts would be less than significant, and this issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Impact Analysis

There are no state-designated scenic highways in the City of Seal Beach. In Orange County, the only State-designated scenic highway is State Route (SR) 91 between SR 55 to the Anaheim city limit (Caltrans 2022). The distance between the designated segment of SR 91 and the Project site is over 14 miles, and therefore the site is not within the viewshed of an identified scenic highway. Eligible State Scenic Highways that are not officially designated include: SR 57 from SR 90 to SR 60 near the City of Industry, SR 74 from Interstate 5 (I-5) near San Juan Capistrano to the I-111, and SR 91 from Route 55 near Santa Ana Canyon to I-15 near Corona (Caltrans 2022). Additionally, Pacific Coast Highway (PCH) is also considered an Eligible State Scenic Highway by Caltrans, but it is located over 2.8 miles south/southwest of the Project site. Views of the site are completely obstructed by distance and intervening development. The Project site is greater than 14 miles from the nearest designated freeway/State Route segment and over 2.8 miles from the Eligible State Scenic Highway. There would be no impact, and this issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The Project site is an existing golf course located in an urbanized part of the City. As proposed, the Project would result in development of new and expansion of existing facilities. The site is currently zoned Recreational Golf (RG), which allows for golf courses and associated club houses, maintenance facilities, accessory concession sales, and related plant nurseries. The ORCC Specific Plan provides opportunities for expansion of the clubhouse to include overnight accommodations; addition of senior housing with medical offices; multi-family units; a parking structure; and implementation of other improvements including landscaping. While the ORCC Specific Plan incorporates design guidelines and development regulations that would assure development compatibility with adjacent land uses, the proposed Project would change the existing views of the site during short-term construction activities and long-term operation. As such this issue will be evaluated in greater detail in the Draft EIR; potential impacts analyzed; and mitigation measures identified, as necessary.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

Existing sources of light include streetlights, vehicle headlights, building and security lights, and parking lot lights. As proposed, the Project would result in development of new and expansion of existing facilities. New sources of light and glare could increase above existing conditions, potentially resulting in adverse impacts to daytime or nighttime views. Therefore, potential impacts related to light and glare will be further evaluated in the Draft EIR.

2.2 AGRICULTURE AND FORESTRY RESOURCES

<p>In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state’s inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board.</p>	<p>Potentially Significant Impact</p>	<p>Less than Significant with Mitigation</p>	<p>Less than Significant Impact</p>	<p>No Impact</p>
<p>Would the project:</p>				
<p>a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p>b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p>c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220[g]), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104[g])?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p>d) Result in the loss of forest land or conversion of forest land to non-forest use?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p>e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Impact Analysis

The Project site is in an urban area and would not convert farmland to a non-agricultural use. According to the Farmland Mapping and Monitoring Program of the California Resources Agency (FMMP 2017), the Project site is designated as “Urban and Built-Up Land.” The parcel located adjacent to the Project site to the north-northeast is designated as “Prime Farmland.” Additionally, the parcel to the south of the Project site across Interstate (I)-405 freeway is also designated as “Prime Farmland.” These sites are currently vacant and undeveloped. However, the Project site itself is not being used, nor anticipated to be used or zoned for agricultural purposes. The site is not subject to a Williamson Act contract, and it does not contain Prime Farmland or Farmland of Statewide Importance. Therefore, the proposed Project would not result in the conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural uses.

Additionally, the Project site does not contain designated forest land or timberland, as defined in the California Public Resources Code (Section 12220[g] and 4526, respectively), and there is no forest land in the surrounding area. Therefore, no impacts to agricultural resources, forest land, or timberland would result from Project implementation, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

2.3 AIR QUALITY

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The City is within the South Coast Air Basin (SCAB). On March 3, 2017, the South Coast Air Quality Management District (SCAQMD) adopted the 2016 Air Quality Management Plan (AQMP), which is a regional and multi-agency effort (SCAQMD, California Air Resources Board, Southern California Association of Governments [SCAG], and U.S. Environmental Protection Agency [USEPA]). The 2016 AQMP incorporates the latest scientific and technical information and planning assumptions, including the 2016–2040 Regional Transportation Plan/Sustainable Communities Strategy; updated emission inventory methodologies for various source categories; and SCAG’s latest growth forecasts.

Short-term construction and long-term operation of the Project would result in a net increase in stationary and mobile source criteria air pollutants emissions in the SoCAB compared to the existing uses on the site. Therefore, consistency with the 2016 AQMP will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The SoCAB is an airshed that is designated a non-attainment area for selected criteria pollutants. As stated in Threshold 2.3(a), construction and operation of the Project would result in a net increase in air pollutants. The Project’s potential to result in a cumulatively considerable increase in those pollutants for which the SoCAB is in non-attainment, when considered in combination with other development planned in the SoCAB, will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Expose sensitive receptors to substantial pollutant concentrations?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

Land uses surrounding the Project site include commercial, residential, flood control, and military uses. The nearest sensitive receptors are residential land uses located along Lampson Avenue approximately 120 feet (ft) to the east. While it is unlikely that construction and operation of the Project would adversely affect these receptors due to distance, the potential to expose any nearby sensitive receptors to substantial pollutant concentrations will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

According to the SCAQMD’s *CEQA Air Quality Handbook*, land uses associated with odor complaints typically include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding (SCAQMD 1993). The Project does not propose to operate any of these land uses and would not otherwise be expected to produce objectionable odors.

Short-term construction equipment and activities would generate odors, such as diesel exhaust emissions from construction equipment and paving activities. However, these odors would be temporary and would dissipate rapidly from the source with an increase in distance. Therefore, the impacts would be short-term and would not be objectionable to a substantial number of people. There would be a less than significant impact, and no mitigation is required. This topic will not be further evaluated in Draft EIR.

2.4 BIOLOGICAL RESOURCES

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modification, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The Project site is located in an urbanized area of the city and is currently developed with a golf course, club house building, wedding venues, driving range, and maintenance facility. There are existing trees and vegetation throughout the golf course, around the periphery of the site, and within the surface parking lots. Existing groundcovers, shrubs, and trees within the development site would be removed during Project construction. There is potential for the site to support habitat for candidate, sensitive, or special status species in local or regional plans, policies, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service. Therefore, this issue will be further evaluated in the Draft EIR. Tree removals are discussed further below under Threshold 2.4(e).

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

As discussed above in Threshold 2.4(a), the Project site is in a highly urbanized area. However, there is potential for riparian or other sensitive natural vegetation communities to be located on the site, including the golf course area. Therefore, this issue will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Have a substantial adverse effect on State or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

As discussed above in Threshold 2.4(a), the Project site is located in a highly urbanized area. However, there is potential for substantial adverse effect on State or federally protected wetlands (including, but not limited to, marsh, vernal pool, etc.) through direct removal, filling, hydrological interruption, or other means. Therefore, this issue will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

Wildlife corridors and habitat linkages are features that promote habitat connectivity and are generally characterized as undisturbed canyon and riverine stream habitat areas. The Project site does not serve as a key wildlife movement corridor due to its disturbed and developed nature and the presence of roads and urban development around the Project site. As stated previously, the Project site is currently developed with a golf course, club house building, wedding venues, driving range, and maintenance facility. Seal Beach Boulevard and Lampson Avenue, bordering the eastern, western, and southern site boundaries, respectively, are primary and arterial highways in the city. The developed and disturbed character of the Project site and major transportation corridors on three site boundaries impede wildlife movement through the Project site. As a result, the Project site supports the movement of almost exclusively local, urban-adapted wildlife (i.e., amphibians, reptiles, and small mammals), that also readily use surrounding areas.

Construction activities would create dust and noise within and adjacent to the work areas. During active construction, wildlife movement may be deterred by noise and human activity; however, most wildlife movement in the Project area would occur at night while construction activities would occur during the day. Thus, construction noise would not affect nocturnal species (i.e., those active at night) or wildlife movement that occurs at night. Direct and indirect impacts, such as noise pollution and human activity, are considered adverse but less than significant since the inability to use the site or immediately surrounding areas for local movement during construction activities would affect a small number of individuals representing an extremely small percentage of the overall regional

populations. It should also be noted that there is currently ambient noise due to the existing development in the area and traffic noise, and as such wildlife species in the area are expected to be relatively urban-tolerant. As a result, there would not be a substantial adverse effect on regional wildlife movement or regional wildlife populations. Therefore, the Project would not substantially affect the movement of any native resident or land-based wildlife species.

The Migratory Bird Treaty Act (MBTA) prohibits activities that result in the direct take (defined as killing or possession) of a migratory bird. Additionally, Sections 3503 and 3503.5 of the *California Fish and Game Code* make it unlawful to take, possess, or destroy the nests and eggs of birds of prey. Section 3513 of the *California Fish and Game Code* duplicates the federal protection of migratory birds and prohibits the taking and possession of any migratory non-game bird, as designated in the MBTA.

If construction activities are initiated during the non-breeding season, there would be no potential impact to nesting birds and raptors. However, if construction occurs during breeding season, with implementation of the following Regulatory Requirement (RR), potential impacts to nesting migratory birds and raptors during their breeding season would be less than significant, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

RR BIO-1 If construction is initiated during the breeding season for nesting birds (i.e., March 1–September 15) and nesting raptors (i.e., January 1–July 31), the Project Applicant shall perform, or direct the performance of, a pre-construction survey by a qualified Biologist for nesting birds and/or raptors within three days prior to any construction activities on the Project site and in the immediately surrounding area (i.e., perform survey within 300 ft for nesting birds and within 500 ft for nesting raptors). The qualified Biologist shall be knowledgeable and experienced in conducting nesting bird surveys within Southern California and in determining appropriate buffer size to prevent bird nesting failure. If the Biologist does not find any active nests in or immediately adjacent to the Project site, construction work shall be allowed to proceed, and no further action is required.

If the Biologist finds an active nest in or immediately adjacent to the Project site and determines that the nest may be impacted or breeding activities substantially disrupted due to planned construction activities, the Biologist shall delineate an appropriate buffer zone around the nest depending on the sensitivity of the species and the nature of the construction activity. Any nest found during survey efforts shall be mapped on the construction plans. The active nest shall be protected until nesting activity has ended. To protect any nest site, the following restrictions to construction activities shall be required until nests are no longer active, as determined by the qualified Biologist: (1) construction limits shall be established within a buffer around any occupied nest (the buffer shall be 25–100 ft for nesting birds and 300–500 ft for nesting raptors), unless otherwise determined by the qualified Biologist and (2) access and surveying shall be restricted within the buffer of any occupied nest, unless otherwise determined by the qualified Biologist. Encroachment into the buffer area around a known nest shall only be allowed if the Biologist determines that the proposed activity would not disturb the nest occupants. Construction in a buffer area can proceed when the qualified Biologist has determined that fledglings have left the nest, or the nest has failed.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

Chapter 9.40 of the Seal Beach Municipal Code (SBMC) addresses tree protection and replacement requirements for the city trees and eucalyptus trees. As several trees may be removed as part of the Project, this issue will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Impact Analysis

The County of Orange Central/Coastal Subregion Natural Community Conservation Plan/Habitat Conservation Plan (NCCP/HCP) does not include the Project site or surrounding areas. This is the nearest NCCP or HCP to the Project site; therefore, no impact from conflicts with an applicable plan would occur. This issue will not be further evaluated in the Draft EIR.

2.5 CULTURAL RESOURCES

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

To be considered a historical resource as defined in California Code of Regulations (CCR) Section 15064.5, a district, site, building, or structure must be significant for their traditional, cultural, and/or historical associations. The analysis will be conducted based on the records search results and included as part of the EIR to determine whether the site has the potential to contain historical resources. Potential impacts to historical resources will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The Project site is a developed area and has been previously graded and disturbed. Therefore, no surface archaeological resources are expected to be present. However, excavation into underlying native (i.e., undisturbed) soils has the potential to encounter unknown archaeological resources. The analysis will be conducted based on the records search results and included as part of the EIR to determine whether the site has the potential to contain archaeological resources. Potential impacts to archaeological resources will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Disturb any human remains, including those interred outside of formal cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

As discussed under Threshold 2.5(b) above, Project construction would involve excavation into native soils. Project-related earth disturbance in native soils always has the potential to unearth

previously undiscovered remains, resulting in a potentially significant impact. If human remains are encountered during Project construction, those remains would require proper treatment, in accordance with applicable laws. Sections 7050.5 through 7055 of the California Health and Safety Code describe the general provisions for human remains. Specifically, Section 7050.5 of the California Health and Safety Code describes the protocols to be followed if human remains are accidentally discovered during excavation of a site. In addition, the requirements and procedures set forth in Section 5097.98 of the California Public Resources Code would be implemented. With implementation of the following Regulatory Requirement (RR), potential impacts would be less than significant. This issue will not be further evaluated in the Draft EIR.

RR CULT-1 Procedures of conduct following the discovery of human remains on non-federal lands have been mandated by California Health and Safety Code Section 7050.5, PRC Section 5097.98 and the California Code of Regulations (CCR) Section 15064.5(e). In the event of the discovery of human remains during ground-disturbing activities, the following shall occur:

According to the provisions in CEQA, should human remains be encountered, all work in the immediate vicinity of the burial shall cease, and any necessary steps to ensure the integrity of the immediate area shall be taken. The Orange County Coroner shall be immediately notified. The Coroner must then determine whether the remains are Native American. If the Coroner determines the remains are Native American, the Coroner has 24 hours to notify the NAHC, who shall, in turn, notify the person they identify as the most likely descendent (MLD) of any human remains. Further actions shall be determined, in part, by the desires of the MLD. The MLD has 48 hours to make recommendations regarding the disposition of the remains following notification from the NAHC of the discovery. If the MLD does not make recommendations within 48 hours, the owner shall, with appropriate dignity, reinter the remains in an area of the property secure from further disturbance. Alternatively, if the owner does not accept the MLD's recommendations, the owner or the descendent may request mediation by the NAHC.

2.6 ENERGY

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The Project would result in a net increase in energy demand compared to the existing condition, and construction of the Project would require use of energy as fuel and electricity. The Project’s short-term and long-term use of energy will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Conflict with or obstruct a State or local plan for renewable energy or energy efficiency?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

As discussed in Threshold 2.6(a), the Project would result in new construction- and operation-related demands for energy. The Project’s consistency with applicable plans and policies related to renewable energy and/or energy efficiency will be further evaluated in the Draft EIR.

2.7 GEOLOGY AND SOILS

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
ii) Strong seismic ground shaking?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The numerous existing faults in Southern California include active, potentially active, and inactive faults. The criteria for these major groups are developed by the California Geological Survey (CGS) for the Alquist-Priolo Earthquake Fault Zone Program. The Project site is located in the seismically active southern California region and could be subjected to moderate to strong ground shaking in the event of an earthquake on one of the many active or potentially active faults. This topic will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
iii) Seismic-related ground failure, including liquefaction?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
iv) Landslides?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The occurrence of landslides is part of the continuous, natural process of the downhill movement of soil, rock debris. The speed at which these earth materials move down slope can range from imperceptible creep of soils to sudden mass movements of an entire hillside. The size of a landslide can range from several square feet in an area to several square miles. Slide thickness may range from less than a foot to several hundred feet. It is important to remember that the complex arrangement of earth and rock units sometimes results in one piece of land having a sound and stable geologic

foundation while another piece immediately adjacent, perhaps on the same lot, may be entirely different and potentially unstable. It is therefore necessary to study each development proposal individually.

During strong earthquakes, unconsolidated and water-saturated sediments may experience bulk densification leading to an instantaneous rise in sediment pre-water pressure. During this extremely short period, the load within the soil mass is carried by the water, and the soil acquires the mechanical consistency of a suspension; for a short, but critical period, the soil becomes fluid. This process of consistency changes from solid to fluid is called liquefaction. According to the Figure S-6, Seismic Hazards/Liquefaction Zones, of the City of Seal Beach General Plan, the Project site is located within an Earthquake-Induced Landslide area. This topic will further be evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The largest source of erosion and topsoil loss, particularly in a developed environment, is uncontrolled drainage during construction activities. Grading and other earthwork associated with Project construction may temporarily expose soils on the Project site to wind and/or water erosion. Since the Project area of earth disturbance is greater than one acre, compliance with the State Water Resources Control Board’s (SWRCB’s) National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with the Construction and Land Disturbance Activities¹ (Construction General Permit) would be required. Pursuant to the Construction General Permit, the City would be required to prepare, or have prepared by the Construction Contractor, a Storm Water Pollution Prevention Plan (SWPPP) that would include erosion-control Best Management Practices (BMPs). There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in onsite or offsite landslide, lateral spreading, subsidence, liquefaction, or collapse?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

¹ Order No. 2009-0009-DWQ, NPDES No. CAS000002, adopted by the SWRCB on September 2, 2009 (effective for all project sites on July 1, 2010) and most recently amended by Order No. 2012-0006-DWQ on July 17, 2012.

Impact Analysis

Secondary seismic hazards related to the underlying geologic unit include several types of ground failure that can occur due to severe ground shaking. The probability for each type of ground failure depends on the severity of the earthquake, the site’s distance from the fault, the local topography, and subsoil and groundwater conditions, among other factors. In addition, there can be soil engineering characteristics inherent in the underlying sediments on a site that can adversely affect structures if not appropriately managed during construction, including subsidence, hydro-consolidation, and other forms of collapse. Liquefaction and landslides are addressed above under Thresholds 2.7(a)(iii) and 2.7(a)(iv). Lateral spreading is a phenomenon related to liquefaction. As stated previously, the Project site is located within an Earthquake-Induced Landslide area. This topic will further be evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The proposed Project will be constructed on existing engineered fill that was graded and prepared when the existing golf course was constructed on the Project site. All grading and construction-related activities would be conducted in accordance with the California Building Code. A Geotechnical Investigation will be prepared, and this topic will further be evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of wastewater?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Impact Analysis

The Project would not involve the use of septic tanks or alternative wastewater disposal systems. There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

		Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:					
f)	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The Project site is a developed area and has been previously graded and disturbed. However, excavation into underlying native (i.e., undisturbed) soils has the potential to encounter unknown paleontological resources. The analysis will be conducted based on the records search results and included as part of the EIR to determine whether the site has the potential to contain paleontological resources. Potential impacts to paleontological resources will be further evaluated in the Draft EIR.

2.8 GREENHOUSE GAS EMISSIONS

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The Project would result in a net increase in the generation of greenhouse gas (GHG) emissions associated with land uses on the site and associated increased trips. The Project’s short-term and long-term GHG emissions will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

As discussed in Threshold 2.8(a), the Project would result in increased GHG emissions. Several plans and policies have been adopted to reduce GHG emissions in the southern California region, including the State’s 2017 Scoping Plan, and Southern California Association of Government’s (SCAG’s) 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). The proposed Project’s consistency with applicable plans and policies related to reduction of GHG emissions will be further evaluated in the Draft EIR.

2.9 HAZARDS AND HAZARDOUS MATERIALS

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

Construction activities for the proposed Project would involve the use of chemical substances such as solvents, paints, fuel for equipment, and other potentially hazardous materials. Hazards to the environment or the public would typically occur with the transport, use, storage, or disposal of hazardous materials. Demolition and construction activities would be relatively short-term and the transport, use, and disposal of hazardous materials as part of these activities would be temporary. The contractor would be required to comply with existing regulations for the transport, use, storage, and disposal of hazardous materials to prevent public safety hazards. These regulations include the Hazardous Materials Transportation Act, Resource Conservation and Recovery Act (RCRA), California Hazardous Waste Control Act (HWCA), and California Accidental Release Prevention Program (CalARPP), among others.

Once constructed, the proposed new and expanded facilities would use hazardous materials (e.g., paint, pesticides, cleansers, and solvents) for maintenance activities. However, the future uses would not utilize, store, or generate hazardous materials or wastes in quantities that would pose a significant hazard to the public. Impacts would be less than significant, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

Construction of the Project would involve the use of common hazardous materials such as gasoline, oil, paints, thinners, solvents, acids, curing compounds, grease, and other chemicals that could pose risks to construction workers or lead to soil and groundwater contamination, if not properly stored, used, or disposed. Standard construction practices would be observed such that any materials released are appropriately contained and remediated as required by local, State, and federal law. These materials are common to typical construction activities, and compliance with existing hazardous material regulations on the storage, use, and disposal of hazardous materials at

construction sites would prevent hazards to the public or environment through reasonably foreseeable upset or accident conditions.

Project implementation includes demolition of some existing structures onsite. Given the age of the structures (dating back to 1960s), demolition activities could result in potential impacts pertaining to asbestos-containing materials (ACMs) and lead-based paint (LBP), which may be present within interior and/or exterior materials and surfaces. Therefore, this issue will be further evaluated and analyzed in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter-mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Impact Analysis

The nearest school to the Project site is Francis Hopkinson Elementary School, located 0.8 miles west of the site. There are no schools within 0.25 mile of the Project site. The proposed Project would not present substantial hazards during construction that would affect schools. Long-term, the Project does not include any activities that would result in emitting hazardous emissions or ongoing handling of hazardous or acutely hazardous materials impacting schools. No impacts would occur, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

An EDR Radius Map™ with Geocheck® Report was prepared for the Project by Environmental Data Resources, Inc. (EDR 2022). Search parameters were based on a one-mile radius of the Project site and consisted of a search of federal, State, local, tribal, and other databases. The complete list of databases and additional information can be found in Appendix A. The following sites listed in Table 2-1 are located within ¼-mile of the Project site.

One of these sites identified as the Lampson Avenue Well, located at 4307 Lampson Avenue, is within the Project site boundaries. This is a cluster of four sites listed in the Resource Conservation and Recovery Act (RCRA) non generators (NonGen/NLR), California Environmental Reporting System

(CERS), and Per- and Polyfluorinated Substances (PFAS) databases. According to the EDR report, six violations were found; two of which were returned to compliance.

Based on review of the Cortese List data resources, the Project site is not located on the State of California Hazardous Waste and Substances Sites List of sites published by CalEPA and compiled pursuant to Section 65962.5 of the *California Government Code* (referred to as the Cortese List). Multiple Leaking Underground Storage Tank (LUST) Cleanup Sites are located in the vicinity of the Project site along Lampson Avenue and Seal Beach Boulevard; however, the status of these sites is Completed – Case Closed (CalEPA 2022).. Potential impacts related to hazardous materials site would be less than significant, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
e) For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project result in a safety hazard or excessive noise for people residing or working in the Project area?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The Project site is adjacent to and to the south of the Joint Forces Training Base (JFTB) Los Alamitos; however, this airfield is not open to the public. The Orange County Airport Land Use Commission (ALUC) has adopted the Airport Environs Land Use Plan for the JFTB Los Alamitos. There are two easements associated with the JFTB operations recorded on the Project area, neither of which places any restriction on the proposed Project design. However, this issue will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The City of Seal Beach Emergency Operations Plan (EOP) is intended to provide a comprehensive plan to the City of Seal Beach for managing any emergency situations, including natural disasters, homeland security emergencies, and technical fault incidents. The EOP contains a hazard analysis and a description of preparedness measures intended to protect the health and lives of community members and minimize damage. It describes procedures for activating the City of Seal Beach’s emergency response organization (ERO), responding to emergency situations, and conducting recovery operations to restore the community after a disaster. The EOP provides an overview of concepts which are integral to the City’s emergency response, including the National Incident Management System (NIMS), the Standardized Emergency Management System (SEMS), and the Incident Command System (ICS). The plan also includes a discussion of the responsibilities of federal, State, regional, and county-level government agencies (Seal Beach 2017). Additionally, an Emergency Operations Center (EOC) has been established at the Seal Beach Police Department to manage community-wide or neighborhood emergencies.

The following possible evacuation routes were identified in the EOP: Interstate 405, providing access to communities northwest and southeast of Seal Beach; Interstate 605, providing access to communities to the north of Seal Beach; State Route 22, providing access to communities east of Seal Beach (it also provides access to the City of Long Beach to the west, albeit as a surface road rather

than a limited access freeway); State Route 1, an arterial surface road providing access to communities northwest and southeast of Seal Beach (roughly paralleling Interstate 405, but closer to the coast); Westminster Boulevard, a major arterial road running east-west across Seal Beach; and Seal Beach Boulevard, a major arterial road running north-south across Seal Beach. Construction and operation of the Project is not anticipated to place any permanent or temporary physical barriers on any existing public streets, including Seal Beach Boulevard as identified above. As such, the proposed Project would not obstruct any emergency evacuation or response activities. Construction staging would not interfere with circulation along Lampson Avenue, Seal Beach Boulevard, or any other nearby roadways. Among the COA for the Project, the Applicant would be required to submit a Construction Staging and Traffic Management Plan to the Community Development Department and no construction truck idling or staging, material storage, or construction trailer are allowed in the public right-of-way (COA provided in Section 2.17, Transportation). For these reasons, the proposed Project would not interfere with any emergency response or emergency evacuation plans. Potential impacts would be less than significant, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
h) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Impact Analysis

The Project site and surrounding area is not within a Very High Fire Hazard Severity Zone (VHFHSZ) (CAL FIRE 2022). Implementation of the Project would not expose people or structures to wildfire risks. This issue will not be further evaluated in the Draft EIR.

2.10 HYDROLOGY AND WATER QUALITY

Information in this section is derived in part from the *Preliminary Hydrology Report, Old Ranch Country Club, Seal Beach, California* (Hydrology Report) and the *Preliminary Water Quality Management Plan (WQMP), Old Ranch Country Club, Seal Beach, California* (PWQMP), prepared by Fuscoe Engineering and dated July 2021 (Fuscoe Engineering 2021a, b). The Hydrology Report and the PWQMP are included as Appendices B-1 and B-2, respectively, in the EIR.

Existing Conditions

The Project site is relatively flat, with mild slopes throughout. Storm water runoff from the approximately 15-acre Project site currently flows onto the golf course area. The Project site does not receive any off-site storm water flows from the remainder of the Country Club property. Most of the Country Club property is a golf course with several lakes that function as a large detention system for storm flows from the surrounding area in addition to the Country Club property and irrigation water. This is considered a type of “harvest and reuse” best management practice (BMP) for purposes of the PWQMP. Specifically, harvest and reuse BMPs are low impact development (LID) BMPs that capture and store storm water runoff for later use. These BMPs are engineered to store a specified volume of water and have no design surface discharge until this volume is exceeded. The existing drainage pattern generally flows south with one existing point of connection at Seal Beach Boulevard. Runoff from the existing clubhouse area is routed to a storm drain main that collects stormwater from off site and brings it to an on-site golf course lake. All runoff from the existing golf course exits from the Country Club property to the Lampson Avenue connection through a culvert located south of the existing driving range and through the eucalyptus grove (Fuscoe 2021b). Specifically, on the southerly side of the site, adjacent to State Route 22 (SR-22), a double 8-foot-wide by 5-foot-high reinforced concrete box (RCB) conveys flow under SR-22 to a County of Orange drainage channel. This channel is County facility C01S06 and is a concrete-lined 12-foot by 7-foot trap (Fuscoe 2021a).

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The Project site is within the jurisdiction of the Santa Ana Regional Water Quality Control Board (SARWQCB) (Region 8). The Project could result in short-term, construction-related impacts to surface water quality from grading and other construction activities (e.g., erosion, spills, and leaks from construction equipment). Compliance with non-storm water management and pollution-control BMPs, as outlined in the Storm Water Pollution Prevention Plan (SWPPP) required for the Project consistent with the National Pollution Discharge Elimination System (NPDES) General Permit for Storm Water Associated with Construction Activities, would ensure the pollutant levels in runoff during construction do not violate water quality standards. Because the Project site is over one acre, Construction General Permit requirements would include the preparation of a SWPPP, implementation and monitoring of BMPs, implementation of best available technology for toxic and non-conventional pollutants, implementation of best conventional technology for conventional pollutants, and periodic submittal of performance summaries and reports to the SARWQCB.

According to the Model WQMP and Orange County Drainage Area Management Plan (OC DAMP), since the proposed Project includes the addition and replacement of more than 5,000 square feet of impervious surfaces on an already developed site, the Project is considered a “Priority Project” and was analyzed in the PWQMP accordingly. All runoff from the Country Club ultimately drains to the San Gabriel River then into the San Pedro Bay (Fuscoe 2021b).

In the post development condition, the site would have an impervious surface area of 80 percent compared to 35 percent in the existing condition (Fuscoe 2021b). The Hydrology Study prepared for the Project determined that there would be a minor increase in rate of storm water discharges from the site (Fuscoe 2021a). Table 2-2, Pre- and Post-Development Storm Water Discharges, summarizes the rate of runoff discharges for 2-year and 100-year storm events.

**TABLE 2-2
PRE- AND POST-DEVELOPMENT STORM WATER DISCHARGES**

Drainage Area	Event	Existing (cfs)	Proposed (cfs)	Difference (cfs)	Change (%)
A	2 Year	2.18	2.64	+0.46	+21.1
B	2 Year	4.27	4.84	+0.57	+13.3

C	100 Year	3.51	3.59	+0.08	+2.3
<i>Total Change</i>	—	<i>5.35</i>	<i>5.80</i>	<i>+0.45</i>	<i>+8.4</i>
af: acre-feet Source: Fuscoe Engineering 2021a.					

The proposed Project would maintain the existing drainage pattern and continue to discharge runoff onto the golf course. Runoff would be collected in three new on-site storm drain systems that would outlet to existing lakes within the golf course. Catch basins would be located at various points within the site to capture subarea flows. As shown in Table 2.10-1, the proposed Project would result in an increase in discharge of 1.4 cfs (approximately 2.6 percent) and 0.45-acre feet (af) (approximately 8.4 percent) for a 100-year storm. The Hydrology Report concluded that these increases due to the Project would have a negligible effect on the functioning and maximum water surface of the lakes/detention basins on the golf course (Fuscoe 2021a).

For water quality purposes, the PWQMP concluded it is feasible to reuse the 85th percentile water quality volume from the Project site of 31,202 cubic feet (cf) for irrigation of the golf course via the existing lakes (Fuscoe 2021b). Therefore, implementation of the Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The Project would not involve direct or indirect withdrawals of groundwater. Domestic water service would be provided by the City of Seal Beach. As discussed above, storm water runoff from the site would continue to be directed to the existing lakes on the golf course, which serve as a detention system and for irrigation. Although there would be an increase in runoff volumes of approximately 0.45 acre-feet for a 100-year storm from the Project site (Fuscoe 2021a), there would be no net loss of infiltration from the Country Club property as the Hydrology Report and PWQMP concluded the additional runoff volumes can be accommodated by the golf course’s system of detention basins. As such, implementation of the Project would not deplete groundwater supplies or interfere substantially with groundwater recharge. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course or a stream or river or through the addition of impervious surfaces, in a manner that would:	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
i) Result in substantial erosion or siltation on- or off-site?				

Impact Analysis

As discussed under Threshold 2.10(a) above, the Project would be required to obtain a NPDES permit for construction activities or coverage under the NPDES Construction General Permit. The Construction General Permit requires preparation of a SWPPP and implementation of erosion control, sediment control, tracking, waste management, and construction site maintenance BMPs to reduce the potential for soil and wind erosion during construction activities. With compliance with these regulations, construction-related erosion and/or siltation would not be substantial on- or off-site.

As discussed, the proposed Project would maintain the existing drainage pattern on the site wherein runoff would be collected by new on-site storm drainage systems for discharge into existing lakes/detention basins on the golf course. The PWQMP concluded it is feasible to reuse the water quality volume (31,202 cf) from the Project site for irrigation of the golf course via the existing lakes (Fusco 2021b). The site is not located in proximity to a stream or other drainage. However, there are downstream drainages identified as susceptible to hydromodification. The PWQMP concluded that as the hydromodification volume of 6,098 cf (the volume that needs to be retained for hydromodification control) is less than the water quality volume required by the Model WQMP and OC DAMP, hydromodification requirements are also satisfied with the proposed storm drainage plan.

As such, construction and operation of the Project would not substantially alter the existing drainage pattern of the site or area, resulting in substantial erosion or siltation on- or off-site. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course or a stream or river or through the addition of impervious surfaces, in a manner that would:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?				
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

As discussed under Threshold 2.10(c)(i) above, Project would be required to obtain a NPDES permit for construction activities or coverage under the NPDES Construction General Permit. Through compliance with the requirements of the Construction General Permit, storm water runoff would be managed during construction activities such that there would not be flooding or sources of polluted storm water on- or off-site.

As discussed under Threshold 2.10(b) above, implementation of the Project would not substantially alter the existing drainage pattern of the site or area, nor alter the course of a stream or river. As discussed further under Threshold 2.10(a), proposed Project would maintain the existing drainage pattern by collecting and discharging storm water runoff onto the golf course and into the system of detention basins. The proposed Project would increase the rate of runoff discharging from the site by 1.4 cfs and the volume of runoff from the site by 0.45 ac-ft for the 100-year event. The Hydrology Report concluded these increases would have a negligible effect on the functioning and maximum water surface of the detention basins on the golf course (Fuscoe 2021a); and the PWQMP concluded it is feasible to reuse the water quality volume from the Project site for irrigation of the golf course via the existing lakes (Fuscoe 2021b). Therefore, construction and operation of the Project would not substantially increase the rate or amount of surface runoff such that on- or off-site flooding would occur nor create or contribute runoff that would exceed storm water drainage capacity or provide substantial additional sources of polluted runoff. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course or a stream or river or through the addition of impervious surfaces, in a manner that would:	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv) Impede or redirect flood flows?				

Impact Analysis

According to the Federal Emergency Management Agency (FEMA), the Project site is in Flood Zone AE (Fusco 2021a), which is defined as a high-risk zone where a flood has one percent chance of occurring within a year. The base flood elevation in the detention basin on the Flood Insurance Rate Map (FIRM) is 14 feet above mean sea level (msl). Accordingly, the proposed buildings would be constructed outside the limits of the 100-year floodplain and have minimum finish floor elevations of approximately 17 to 24 feet above msl. Therefore, implementation of the Project would not impede or redirect flood flows. There would be less than significant impacts, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

According to the Seal Beach General Plan Safety Element, seismically induced seiches are not considered a potential hazard in the city (Seal Beach 2003). Additionally, the potential for tsunami hazard is considered low for distant locations from the ocean. Given the Project site’s location in a completely urbanized area of the city and more than 2.8 miles from the Pacific Ocean, impacts would be less than significant, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

As discussed under Threshold 2.10(a) above, through conformance with applicable regulatory standards and implementation of applicable BMPs, the Project would not substantially degrade water quality, and therefore the Project would not conflict with or obstruct implementation of the applicable water quality control plan. In terms of sustainable groundwater management plans, as noted above under Threshold 2.10(b), the Project would not have the potential to adversely affect groundwater supplies or the management of groundwater basins in the area. As such, the Project would not result in any conflicts with or affect implementation of such plans. There would be less than significant impacts, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

2.11 LAND USE AND PLANNING

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Impact Analysis

The Project would not physically divide an existing community, as the Project would involve the development of new and expansion of existing facilities. The entire site is currently developed with a golf course, including a club house building, wedding venues, driving range, and maintenance facility. Local access to the Project site is provided by Lampson Avenue and Seal Beach Boulevard. No residential uses currently occur on the Project site that would be impacted or divided by development of the proposed Project. Additionally, the Project would not divide or disrupt the physical arrangement of the existing adjacent residential neighborhoods. No impact would occur on an established community, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The City of Seal Beach General Plan identifies the ORCC Specific Plan area for “Open Space Golf.” The site has been designated for “Open Space Golf” land uses since the mid-1960’s when the Bixby Ranch Company initially developed the site. The existing General Plan has no specific recommendations for the Old Ranch Country Club. The ORCC Specific Plan meets the intent of the General Plan for Open Space Golf in that a modern Mixed Use Country Club with associated overnight accommodations, senior residential uses with related medical office, and multi-family housing is proposed for the property. However, the ORCC Specific Plan accommodates the proposed development and is necessary for the following reasons:

- To clarify that overnight accommodations are permitted as an associated use for the club.
- To clarify that a parking structure is permitted.
- To clarify that senior apartments are permitted similar to multi-family being a permitted use in conjunction with the Golf Course in the City’s current Zoning Code.
- To allow medical office as a permitted use.

- To supplement the General Plan designation of “Open Space Golf” with Specific Plan Regulation, S.P.R zoning, thereby requiring the preparation of the ORCC Specific Plan.

The ORCC Specific Plan area is presently zoned Recreational Golf (RG). The purpose of this designation as stated in the Code of the City of Seal Beach is to allow golf courses and associated club houses, maintenance facilities, accessory concession sales, and related plant nurseries.

The ORCC Specific Plan is proposed under a Mixed-Use Country Club planning concept with the Specific Plan as the mechanism or tool that would assure compatibility, preserve the general health, safety, and welfare of the community, and create a cohesive, quality design for the Project.

The adoption of the ORCC Specific Plan would supersede the existing zoning and establish a new set of development regulations and design guidelines for the site. The zoning designation would change from the existing RG designation to S.P.R., which the ORCC Specific Plan would implement.

The ORCC Specific Plan permits opportunities for expansion of the clubhouse to include overnight accommodations and add senior housing with medical offices and multi-family units currently not specifically identified in the RG zone. The ORCC Specific Plan allows the upgrading of the Old Ranch Country Club to a contemporary Mixed Use Country Club concept. The ORCC Specific Plan further incorporates design guidelines and development regulations that would assure development compatibility with adjacent land uses.

Consistency with the applicable local and regional plans and policies (i.e., Seal Beach General Plan and Southern California Association of Governments [SCAG] plans) will be further evaluated in the Draft EIR, with a focus on plans, policies, or regulations adopted for the purpose of avoiding or mitigating an environmental effect.

2.12 MINERAL RESOURCES

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Impact Analysis

Mineral resources in the City of Seal Beach include oil extraction at Esther Island within the tidelands, oil extraction along the Newport-Inglewood Fault on the Hellman Ranch property, and an oil lease site in the National Wildlife Refuge (City of Seal Beach 2003). The Project site is not within these identified resource areas. The Project site is an existing golf course located in a developed area of Seal Beach. The site is not used for mineral extraction and does not contain any known or designated mineral resources. The physical distance between the Project site and the nearest oil extraction site is approximately 2.0 miles. Implementation of the Project would not result in the loss of availability of any known mineral resources. There will be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

2.13 NOISE

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The proposed Project would generate noise from construction activity and operational mobile (e.g., cars, trucks) and stationary noise sources (e.g., idling vehicles and heating, ventilating, and air conditioning ([HVAC] equipment). Potential impacts from temporary construction and permanent operational noise generation will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Generation of excessive groundborne vibration or groundborne noise levels?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

Depending on the type of construction equipment employed, construction of the Project could generate groundborne vibration that could affect nearby buildings. Potential impacts related to generation of vibration will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The Project site is located 5.6 miles southeast of the Long Beach Airport and adjacent to and to the south of the Joint Forces Training Base (JFTB) Los Alamitos; however, this airfield is not open to the public. The Project site is not within the adopted Airport Comprehensive Land Use Plan for the Long Beach Airport (Los Angeles County Airport Land Use Commission 2003). The Orange County Airport Land Use Commission (ALUC) has adopted the Airport Environs Land Use Plan for the JFTB Los Alamitos. There are two easements associated with the JFTB operations recorded on the Project area, neither of which places any restriction on the proposed Project design. However, this issue will be further evaluated in the Draft EIR.

2.14 POPULATION AND HOUSING

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through the extension of roads or other infrastructure)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The ORCC Specific Plan Project proposes development of new and expansion of existing facilities, including a 116-unit multi-family housing development and a 51-unit senior housing complex, which would result in a new resident population on the Project site. While it is unlikely that all residents of the senior housing complex would relocate to the city, for purposes of this analysis it is assumed that persons occupying the units would be new residents.

The proposed medical office facility, the 150-key overnight accommodations, and additional restaurants and bars are anticipated to result in new employees.

The current (as of September 2022, the most recent published data) unemployment rate in the City of Seal Beach is 3.4 percent and in the County of Orange was 3.0 percent in August 2022, up from a revised 2.8 percent in July 2022, and below the year-ago estimate of 6.0 percent (EDD 2022a, 2022b). Therefore, most or all of new employment positions generated by the Project are anticipated to be filled by the local labor pool in the region and would not require relocation to the city such that unplanned population growth exceeding projections would occur. However, this issue will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Impact Analysis

The Project site does not contain any existing dwelling units, and there are no persons currently residing at the site. Therefore, the proposed Project would not displace people or housing. There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

2.15 PUBLIC SERVICES

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
i) Fire protection?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
ii) Police protection?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
iii) Schools?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
iv) Parks?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
v) Other public facilities?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

As discussed in Section 2.14, Population and Housing, above, the Project would result in direct population growth in the City. There would be increased demand for fire protection and police protection services related to both the increased population and development on the site. The Project's resident population would also generate an increased demand for schools, parks, and other public facilities, such as libraries. The increased demand for these public services and whether the Project would result in the need for new or expanded facilities that could result in environmental impacts will be further evaluated in the Draft EIR.

2.16 RECREATION

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

As discussed in Section 2.14, Population and Housing, above, the Project would result in direct population growth in the City. The Project’s resident population would generate an increased demand for recreational facilities in the City even though the Project would include existing and expanded amenities. Additionally, the increased demand for the existing neighborhood and regional recreational facilities and whether the Project would result in the deterioration of these facilities will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

As discussed in Section 2.14, Population and Housing, above, the Project would result in direct population growth in the City. There would be increased demand for recreational facilities related to both the increased population and development on the site. The increased demand for recreation facilities and whether it would result in the need for expanded recreational facilities that could result in environmental impacts will be further evaluated in the Draft EIR.

2.17 TRANSPORTATION

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The City of Seal Beach has adopted thresholds of significance for development projects and land use plans to determine transportation and traffic impacts under CEQA. The CEQA thresholds are consistent with the City’s adopted General Plan and SB 743 and include Vehicle Miles Traveled (VMT) per capita and VMT per employee. Therefore, consistency of the Project with the City’s plans, ordinances, and policies addressing the circulation system, specifically the City’s General Plan will be further evaluated in the Draft EIR. Additionally, the Project’s plans in terms of transit, roadway, bicycle, and pedestrian system will be discussed in the Draft EIR and compared for consistency with the City’s General Plan goals and policies.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)(1)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

Section 15064.3(b)(1) of the State CEQA Guidelines refers to evaluating transportation impacts using VMT for land use projects. The City’s TIA guidelines were prepared to reflect the requirements of Senate Bill (SB) 743. The City of Seal Beach Transportation Services will prepare a transportation analysis based on the requirements of SB 743 and determined whether there would be transportation impacts pursuant to CEQA. Specifically, the objective of this analysis is to assess the impact the development would have on the City’s transportation system by estimating incremental changes in VMT per capita, VT per capita, the Project’s impact on service population proximity access to transit and bike facilities and walk accessibility score. The results of this analysis will be presented for further evaluation in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Impact Analysis

Internal circulation for the Project site is currently provided by an entrance off Lampson Avenue at Basswood Drive for the country club and clubhouse. Another entrance off Lampson at Old Ranch Plaza provides access to the public driving range and maintenance facilities. An existing private drive connects the maintenance facility to the driving range. The existing primary access points from Lampson Avenue would remain. The existing non signalized access off Lampson Avenue to the maintenance facility is being reserved for emergency access only. A second right turn in and out access point to the multi-family units will be provided from Seal Beach Boulevard. All these driveways/internal roadways would comply with the Specific Plan policies and standards in addition to the City of Seal Beach applicable design standards in Chapter 10.15, Design and Improvement Requirements, of the SBMC to ensure safe circulation to and from, and within, the Project. The new driveway approaches and associated curb and gutter would be built to City standards as a condition of approval. Therefore, the Project would not increase hazards due to a geometric design feature or incompatible use. The potential impacts would be less than significant, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Result in inadequate emergency access?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The proposed Project would not involve any alterations to existing public or private roadways and would not result in the elimination of a through-route or the narrowing of any roadways outside the boundaries of the site. An existing private drive connects the maintenance facility to the driving range. The existing primary access points from Lampson Avenue would remain. The existing non signalized access off Lampson to the maintenance facility is being reserved for emergency access only. A second right turn in and out access point to the multi-family units will be provided from Seal Beach Boulevard. Overall, the Project would result in a greater intensity of land uses on the site, including medical office and senior housing that would require emergency vehicles to visit on a regular basis. Therefore, the emergency access for the Project site and adjacent areas will be further evaluated in the Draft EIR.

2.18 TRIBAL CULTURAL RESOURCES

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The Project is subject to compliance with Assembly Bill (AB) 52, which requires consideration of impacts to “tribal cultural resources”, defined in Section 21074 of the *Public Resources Code*, as part of the CEQA process. AB 52 requires the City to notify any groups (who have requested notification) who are traditionally or culturally affiliated with the geographic area of a project for which a Negative Declaration, Mitigated Negative Declaration, or an EIR is required pursuant to CEQA. Additionally, the Project complies with Senate Bill (SB) 18 agency-to-agency requirements for a Specific Plan.

The AB 52 and SB 18 processes were initiated in October 2022. Tribal representatives have 30 days and 90 days to request consultation upon receipt of AB 52 and SB 18 notifications letters, respectively. The said consultation processes remain ongoing at the time this IS was circulated. Therefore, the potential for the Project to cause a substantial adverse change to a listed or eligible tribal cultural resource will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

As discussed under Threshold 2.18(a), the AB 52 and SB 18 processes were initiated in October 2022 and remain ongoing. Therefore, the potential for the Project to cause a substantial adverse change to a significant tribal cultural resource will be further evaluated in the Draft EIR.

2.19 UTILITIES AND SERVICE SYSTEMS

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities the construction or relocation of which could cause significant environmental effects?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The Project would increase demand for potable water, solid waste, electricity, natural gas, and telecommunications facilities and would increase the generation of wastewater. Existing water lines and facilities would be extended, and new facilities would be constructed as part of the proposed Project. Additionally, the proposed Project would include additional wastewater facilities, including service lines, force mains, lift stations, and/or modification to the existing City lift stations. In terms of storm drainage, the proposed Project would require the recontouring of the golf course to accommodate a change in the flood plain easement and reconfiguration of the drainage basin serving College Park East to accommodate the proposed structures.

Potential impacts related to the need for new or expanded water, wastewater, storm drainage, and dry utilities whose construction could result in environmental impacts will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The Project would increase demand for potable water. Although the Project does not meet the thresholds to require a Water Supply Assessment (WSA), pursuant to SB 610 (Sections 10910 et. seq. of the California Water Code), the potential impacts related to the sufficiency of water supplies for the Project will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

The Project would increase the generation of wastewater. The sewerage facilities in Seal Beach are composed of shared, public pipelines and related facilities, which collect and transport wastes from individual homes or businesses, treat the waste and then dispose of it. Collection and treatment of sewerage in Seal Beach is accomplished by a combination of City and County facilities. This includes pipes, pump stations and treatment plants, all of which have the capacity to serve development of properties within the ORCC Specific Plan area. Local wastewater is collected and conveyed through Seal Beach facilities to the Orange County Sanitation District Plant (OCS D) No. 2 in Huntington Beach where it is treated. The treated effluent is then disposed of through the existing ocean outfall. The ORCC Specific Plan is located within District 3 of the OCS D. Existing ORCC facilities connect into the City's lift station at Westminster Avenue. Potential impacts to Sanitation Districts' facilities from the Project will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

Construction of the Project would generate a finite volume of waste. Chapter 9.65 of the SBMC addresses recycling and diversion of construction and demolition (C&D) waste. The Project would be subject to these diversion requirements and therefore would need to divert at least 75 percent of all concrete and asphalt C&D debris and 50 percent of all other C&D debris. Solid waste generated by the ORCC Specific Plan would be disposed of at County landfills. Within the City of Seal Beach, solid waste is currently picked up and recycled and/or disposed of by a private company selected by the City. Operation of the Project would result in increased long-term generation of municipal (non-hazardous) solid waste and biowaste. Potential impacts related to landfill space, biowaste disposal, and compliance with applicable solid waste regulations will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
e) Comply with federal, State, and local management and reduction statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Impact Analysis

All local, State, and federal guidelines regarding solid waste will be complied with during Project construction and operation. Therefore, no impacts would occur as a result of the proposed Project. This issue will not be further evaluated in the Draft EIR.

2.20 WILDFIRE

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
If located in or near State Responsibility Areas or lands classified as Very High Fire Hazard Severity Zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Impact Analysis

The Project site and surrounding area is not within or near State Responsibility Areas or a VHFHSZ (CAL FIRE 2022). Implementation of the Project would not expose people or structures to wildfire risks. This issue will not be further evaluated in the Draft EIR.

2.21 MANDATORY FINDINGS OF SIGNIFICANCE

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Does the project:				
a) Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

As discussed in Section 2.4, Biological Resources, the Project would not significantly impact biological resources. The Project site is fully developed and highly disturbed, with ornamental vegetation on the site. The Project would not degrade the quality of the environment; would not substantially reduce the habitat of fish or wildlife species; would not cause a fish or wildlife population to drop below self-sustaining levels; would not threaten to eliminate a plant or animal community; and would not reduce the number of or restrict the range of a Rare or Endangered plant or animal.

As discussed in Section 2.5, Cultural Resources, and Section 2.18, Tribal Cultural Resources, the potential for the Project to impact the unknown historic (buried), archaeological, tribal cultural, and/or paleontological resources will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

Within the City of Seal Beach, there may be planned, ongoing, and proposed projects that may cumulatively increase environmental impacts in the Project area. These impacts may be potentially significant and will be further evaluated in the Draft EIR. The Draft EIR will evaluate cumulative impacts for the Project based on related projects in the area or buildout of the City's General Plan as the basis of growth projections.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Impact Analysis

Construction and operation of the Project could have the potential to generate significant adverse impacts on human beings, either directly or indirectly. The Draft EIR will provide analyses of the potential impacts related to aesthetics, air quality, biological resources, cultural resources, energy, geology and soils including paleontological resources, greenhouse gas emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, noise, population and housing, public services and recreation, transportation, tribal cultural resources, and utility and service systems.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to,

EXECUTIVE SUMMARY

identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/25/2022 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

CERS TANKS: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs.

A review of the CERS TANKS list, as provided by EDR, and dated 07/18/2022 has revealed that there are 2 CERS TANKS sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/20/2022 has revealed that there are 51 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Database: DRYCLEANERS, Date of Government Version: 08/27/2021				
EPA Id: CAD980889315				

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2021 has revealed that there is 1 HAZNET site within approximately 0.001 miles of the target property.

Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Other/Unknown
Eval Date: 11-21-2018
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: The following documents submitted to CERS on 11/7/18 & 11/9/18 have been received and ACCEPTED: - Business Activities - Business Owner/Operator Information - Hazardous Materials Inventory - Site Map - Emergency Response/Training Plan Violations I208 and I463 have been corrected. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds of 55 gallons for liquids, 500 pounds for solids, & 200 cubic feet for gases. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change. REMINDER: Re-submit your annual HMBEP for 2019 between January 1st - March 1st at <http://cers.calepa.ca.gov/>.

Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-16-2014
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: New Hazardous Materials Storage site. The City of Seal Beach Water Well 4307 Lampson Ave. Seal Beach CA 90740 Seal Beach Public Works contact is Luis Estevez (562-431-2527 ext 1433) The Deputy Director of the Seal Beach Public Works. An on site hazardous materials inspection was conducted today. The facility is a water well and pump station site The facility has the following Hazardous Substances stored at the facility that must be included in the Electronic HMBEP submittal: - 2 x 4000 gallon 0.8% Sodium Hypochlorite tanks - a pallet of 40 lbs bags of NaCl (salt) - 200 gallon brine tank - 660 gallon diesel fuel tank for a generator Ensure that all hazardous materials and hazardous wastes, which are above the disclosure thresholds. Reporting thresholds for hazardous substances stored at the facility are 500 pounds of solids or 55 gallons of liquid or 200 cubic feet of gas. Hazardous substances should not include an annual waste amount. Hazardous wastes [Truncated]

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

containers shall be closed at all times except when adding or removing waste. Immediately close these containers and ensure all hazardous waste containers are closed when not adding or removing waste.

Violation Division: Orange County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 139820
Site Name: Old Ranch Country Club
Violation Date: 12-27-2021
Citation: 23 CCR 16 2716(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(f)

Violation Description: Failure to maintain on-site, or off-site at a readily available location if approved by the UPA, copies of Designated Operator inspection records as follows: Designated operator monthly inspection records for inspections performed before October 1, 2018 must be kept for 12 months from the month of inspection. For inspections performed on or after October 1, 2018, copies of the "Designated Underground Storage Tank Operator Visual Inspection Report" must be kept for 36 months from the month of inspection.

Violation Notes: OBSERVATION: Monthly DO report for October 2021 was not on site and available for review. Facility must keep all DO reports on site for review. DO must inspect sites within 30 days and complete a detailed report of the tank system on site. CORRECTIVE ACTIONS: Send completed and signed DO report for October 2021 to the agency/inspector within 30 days of this report.

Violation Division: Orange County Environmental Health
Violation Program: UST
Violation Source: CERS,

Site ID: 139820
Site Name: Old Ranch Country Club
Violation Date: 03-04-2021
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 03/04/2021. One 55 gallon drum of Used Oil located in the hazardous waste storage area was observed without a hazardous waste label. Mr. Alford affixed a completed hazardous waste oil to the drum during the inspection. No further action required.

Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violation Notes: Returned to compliance on 03/04/2021. The following wastes were observed behind the shipping container lot in which the facility contact, Ben Alford, stated that he did not know whether they were hazardous or not: - (15-18) blue 55 gallon drums, some open and accumulating rain water - (2) rusted 55 gallon drums containing an unknown substance - (1) 275 gallon tote containing an unknown substance at an unknown volume - Several open paint cans stacked on top of the above mentioned tote bin accumulating rain water - Several open 5 gallon buckets containing an unknown substance and accumulating rainwater Please determine whether containers are hazardous wastes. Do not dispose of the above mentioned substances until it has been determined whether they are hazardous or not. Submit the determination to this Agency within 30 days. If the wastes are determined to be hazardous, then they must be managed as hazardous waste. If they are determined to be non-hazardous, the waste will not be regulated [Truncated]

Eval Notes: INSPECTOR COMMENT: A routine Hazardous Materials Business Plan inspection was conducted on 12/08/2017 for this facility. Facility has been identified to store hazardous materials on site over the reporting threshold of 55 gallons for a liquid, 500 pounds for a solid, or 200 cubic feet for a compressed gas. The following hazardous materials were noted on the 12/08/2017 report to be missing from the electronic disclosure inventory: - Liquid Ironman (150 gallons) - Rewet (250 gallons) - Calcium Nitrate & other fertilizers (5000 pounds) - Waste Oil (160 gallons) Report noted to remove Nitrogen, Dithiopyr, and Antifreeze. Facility has been previously notified that an accurate electronic disclosure of the Hazardous Materials Business Plan (HMBP) must be submitted via the California Environmental Reporting System (CERS) via cers.calepa.ca.gov. The following violations are still outstanding and must be corrected IMMEDIATELY: I169 - Adequate completion and [Truncated]

Eval Notes: On site to conduct routine UST inspection. The Monitoring System Certification testing was conducted by Djerl Shultz (ICC 8020127 exp 6/29/15; VR B36436 exp 4/7/16) of JDS Tank Testing and Repairs. The Veeder-Root TLS-300C monitoring panel displayed "all functions normal" and audible and visual alarms were demonstrated operational. The panel was noted marked with a sticker from the most recent monitoring certification (12/4/13). The facility has a single UST with 2 compartments of Diesel and 87 grade fuel. The site uses Safe Suction from the dispenser. The following Observations were made: The test boots of the piping was pulled back allowing the interstitial space of the piping to be monitored by the STP sump sensor. As per the tester, all sensors passed testing and the spill bucket passed testing. The following documents were available for review on this date: - Permit - Monitoring plan (4/30/10) - Monitoring plot plan - Designated operator [Truncated]

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
UORS (California - Used Oil Recycling System). California Integrated Waste Management Board (CIWMB) helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date: 05-27-2020
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 07/07/2020. One 55 gallon drum of Waste Anti-freeze with an accumulation start date of 9/12/2018 was observed full in the waste accumulation area. Review of hazardous waste manifests indicates that the last pickup date for this waste was 10/1/2019 which exceeds the allotted accumulation time frame of 180 days. Please dispose of this hazardous waste through a registered hazardous waste hauler and provide a copy of manifests to this Agency within 30 days.

Eval Notes: On site to conduct a hazardous waste inspection. A change of ownership was conducted on 11/20/2021 from H&S Energy Products LLC to the new owner Ben Phan. The inspection was conducted with John Ahrndt, Office Manager. Also present was Susan Berg (OCHCA). Facility is a small quantity generator, and the following hazardous waste streams were observed: - used oil filters (paper and metal) - waste coolant - parts washer fluid - used oil (Underground Storage Tank) Observed the facility, hazardous waste storage area, perimeter, and dumpster area. No indication of hazardous waste spillage, runoff, or illegal disposal was observed. Used paper oil filters and waste coolant containers were labeled with the required information during the inspection. The emergency response plan was reviewed, and no manifests were available for review as hazardous waste has not been hauled off as of this date. A copy of this report will be sent to phanbensd@yahoo.com

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 04/11/2019. OBSERVATION: Facility failed to test overfill prevention equipment at least once as of 10/13/2018 and every 36 months thereafter. CORRECTIVE ACTION: Overfill prevention equipment was tested on 2/14/2019. All components passed. Violation abated this date.

Violation Date: 05-19-2016
Citation: HSC 6.75 25299.30-25299.34 - California Health and Safety Code, Chapter 6.75, Section(s) 25299.30-25299.34
Violation Description: Failure to submit and maintain complete and current Certification of Financial Responsibility or other mechanism of financial assurance.
Violation Notes: Returned to compliance on 08/12/2016. The current CFR on site and online is passed due. Please submit a current Certification of Financial Responsibility, with supporting documents, to an approved electronic reporting database within 30 days. UST documents must be submitted online via the California Electronic Reporting System (CERS).

Veeder-Root TLS-350 monitoring panel displayed "all functions normal" and audible and visual alarms were demonstrated operational. The panel was noted marked with a sticker from the most recent monitoring certification (5/21/15). The following Observations were made: The facility has 4 single walled USTs (87 grade, 91 grade, Diesel Fuel and a waste oil UST). All sensors tested received a pass. The ESO, Fail Safe and Sensor out triggered shut down of the turbines. The 87, 91, and Diesel leak detectors passed testing. The test boots of the piping was pulled back allowing the interstitial space of the piping to be monitored by the STP sump sensor. Fail Safe and Sensor were tested and passed. NOTE: [Truncated]

CERS:

Name: RALPHS GROCERY #604
Address: 12470 SEAL BEACH BLVD.
City,State,Zip: SEAL BEACH, CA 90740
Site ID: 146319
CERS ID: 10160405
CERS Description: Chemical Storage Facilities

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-27-2022
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine hazardous waste inspection, and the following hazardous waste streams were observed: - Universal waste (batteries) - Flammable consumer product waste - Aerosol Hazardous Waste - Bleaches consumer product - Toxic consumer product waste - Corrosives Acids consumer product waste Observed the facility, hazardous waste storage area, perimeter, and dumpster area. Hazardous waste containers were stored closed and properly labeled. No indication of hazardous waste spillage, runoff, or illegal disposal was observed. Manifests and the emergency response plan were reviewed. A copy of this report will be sent to david.naley@stores.ralphs.com
Eval Division: Orange County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Other/Unknown
Eval Date: 08-13-2016
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: The following documents were reviewed and ACCEPTED on CERS: - Facility information - Hazardous Materials Inventory (4) - Site Map - Emergency response plan
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-12-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct hazardous materials chemical inventory and business emergency plan inspection this date, consent to enter, inspect and take photographs was given by Teri Larson The facility has the following hazardous materials that exceed the required disclosure quantities: -- Helium -- Propane --R401 --R407 Note: Please review the maximum amount of each chemical that is onsite. Also review the average daily amount and revise it so that it reflects the amount of each chemical that is typically onsite. Reporting thresholds are 500 pounds of solid or 55 gallons of liquid or 200 cubic feet of gas.

Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine Hazardous Materials Business Emergency Plan inspection. Consent to inspect, take photos and samples was provided by the Manager Brian Street. A walk through of the facility was conducted. The following Hazardous Substances were observed being stored at above the reporting threshold: HM - Propane - Helium - R410a - R22 NOTE: Refrigerant gasses on the roof and not observed. This facility is responsible for identifying all hazardous materials and hazardous wastes, which are above the following disclosure thresholds: Solids > 500 pounds. Liquids > or = 55 gallons Gas > or = 200 cubic feet Hazardous wastes should have a separate disclosure. Site map appears to be accurate. Employee training and new employee training conducted annually and refresher training specific to the HMBEP is online. Electronic Reporting has been submitted and completed using the CERS.

Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-22-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site for routine hazardous materials and business emergency plan inspection. The inspection was conducted with Dave Naley, Assistant Store Manager. Observed the facility and inspected hazardous materials storage. The following materials were observed in amounts that meet or exceed the minimum volumes required for disclosure: - Propane - Helium - Refrigerant Gases The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds of 55 gallons for liquids, 500 pounds for solids, & 200 cubic feet for gases. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change. Hazardous Materials documents can be submitted via the California Environmental Reporting System (CERS) located at <http://cers.calepa.ca.gov/>.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-21-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a Hazardous Waste Inspection. Met with Cherry and Danny who explained the process, escorted me through the site and gave consent to enter/inspect. Facility contains: cubic yard box of universal/electronic waste, totes of flammables, corrosives, oxidizers and toxic Hazardous waste containers are properly labeled and covered. All containers storing hazardous waste must be labeled with the following information: 1. The words HAZARDOUS Waste 2. Waste (name) 3. Hazardous property of the waste (e.g. toxic, flammable, corrosive, etc.) 4. Physical state of the waste (liquid or solid) 5. Name and address of the business. 6. Accumulation date (date the first drop of waste has been placed in container) Documents Available for review: 1. Hazardous waste Manifest/Receipts (keep a copy on site for three

Eval General Type: Other/Unknown
Eval Date: 08-08-2014
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: This is an in-office inspection report. An email from Kristine Russo Begley, Legal Counsel for Bed Bath & Beyond Inc. [(908) 855-4509 ; kristine.begley@bedbath.com] was received today. The email included a letter from Jessica Wolterstorff the Key Account Manger II of Bissel Homecare Inc. indicating the Powerglide Pet Vacuum 3863-1 does not contain a circuit board. This is proof that the vacuum cleaner disposed of to the municipal dumpster is not a Universal Waste and therefore violation W044 is abated. Violation W004 was also abated when the Flammable waste "Gray Away" was removed from the municipal dumpster and sampled under a chain of custody by this agency and stored at this agency. Thank you .

Eval Date: 08-06-2014
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: This is an in-office inspection report. A signed copy of the inspection report from 7-17-14 was received. The report was signed by Katherine Sloss, Esq, Senior Counsel for Bed Bath and Beyond Inc. She also stated in her email that she contacted Bissel regarding the inquiry of a circuit board in the Powerglide vacuum cleaner referenced in the inspection report. She indicated that Bissel confirmed that the powerglide vacuum does not have a circuit board. A letter from Bissel will be sent to confirm the statement. Once the letter from Bissel is received, violation W044 will be abated . A copy of manifest # 000672855PSC with the final destination signature was received and reviewed. This is proof of compliance regarding W038 therefore violation W038 is abated. .

Eval Notes: During the routine Hazardous Waste Inspection conducted at Bed Bath and Beyond #412 in Seal Beach on 7/17/14 I Brian Erdman, Hazardous Waste Specialist III, discovered a flammable waste in the municipal dumpster. The dumpster is under the control of the Bed Bath and Beyond facility. The manager Mr. Joseph Angulo unlocked the dumpster and a Powerglide Pet Bagged Rewind Vacuum 38631 vacuum cleaner and container of "Gray Away" was observed in the dumpster. A violation was issued on the inspection report. The waste was removed and the flammable "Gray Away" spray container was sampled under a Chain of Custody. As per Mr. Angulo, the "Gray Away" was authorized to be disposed of to the trash by the computer program used to verify the waste management of damaged items. The computer waste management verification process was accessed for the "Gray Away" during this inspection and the results indicated "deduct and dispose, no authorization needed", which Mr. Angulo stated means the [Truncated]

 CERS Description: Chemical Storage Facilities

Evaluation:

Eval General Type: Compliance Evaluation Inspection
 Eval Date: 01-26-2016
 Violations Found: No
 Eval Type: Routine done by local agency
 Eval Notes: On site to conduct a routine Hazardous Materials Business Emergency Plan inspection. Consent to inspect and take photos was provided by the Manager Rick Reyes (rick.reyes@target.com). A walk through of the facility was conducted. The following Hazardous Substances were observed being stored at above the reporting threshold: HM -Propane is stored in 7 small 6 gallon cylinders and a large 100 gallon tank. - CO2 large tank - Refrigerant gases This facility is responsible for identifying all hazardous materials and hazardous wastes, which are above the following disclosure thresholds: Solids > 500 pounds. Liquids > or = 55 gallons Gas > or = 200 cubic feet Hazardous wastes should have a separate disclosure. Site map appears to be accurate.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CERS HAZ WASTE:

Name: BANFIELD PET HOSPITAL #2267
Address: 12341 SEAL BEACH BLVD
City,State,Zip: SEAL BEACH, CA 90740
Site ID: 374804
CERS ID: 10644295
CERS Description: Hazardous Waste Generator

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-02-2022
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine hazardous waste inspection. Facility is a small quantity generator, and the following hazardous waste streams were observed: - Flammable Liquid (Gram Stain & dip quick) - Toxic RX items (Expired RX Waste - Vaccine Vials) Observed the facility, hazardous waste storage area, perimeter, and dumpster area. Hazardous waste containers were stored closed and properly labeled. No indication of hazardous waste spillage, runoff, or illegal disposal was observed. Manifests and the emergency response information were reviewed. A copy of this report will be mailed to the facility's mailing address.

CERS HAZ WASTE:
 Name: ULTA BEAUTY #604 (SEAL BEACH, CA)
 Address: 12339 SEAL BEACH BLVD
 City,State,Zip: SEAL BEACH, CA 90740
 Site ID: 374636
 CERS ID: 10686706
 CERS Description: Hazardous Waste Generator

Evaluation:
 Eval General Type: Compliance Evaluation Inspection
 Eval Date: 02-04-2020
 Violations Found: No
 Eval Type: Routine done by local agency
 Eval Notes: On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by Katlin Heideman, Sales Manager. Walked throughout the facility. Observed hazardous waste storage areas. Containers were closed and properly labeled. Manifests were available and reviewed. Employees are reported to be trained. Emergency plan is posted near hazardous waste storage area. No hazardous waste or universal waste observed in the dumpster/enclosure area. No hazardous waste violations were observed this date.

CERS HAZ WASTE:
 Name: HOMEGOODS 0250
 Address: 12343 SEAL BEACH BLVD
 City,State,Zip: SEAL BEACH, CA 90740
 Site ID: 517207
 CERS ID: 10485979
 CERS Description: Hazardous Waste Generator

Violations:

Site ID: 517207
 Site Name: Homegoods 0250
 Violation Date: 05-28-2021
 Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
 Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
 Violation Notes: Returned to compliance on 05/28/2021. Observed the following bins located in the back room hazardous waste storage area which did not have the required physical state and accumulation start date marked on the hazardous waste labels: - Toxics (x2) - Corrosive Acids - Corrosive Bases - Universal Waste - Aerosols/Flammables - Oxidizers
 Employee Mylene Tabion added the required information to the labeling during the inspection. No further action required.
 Violation Division: Orange County Environmental Health

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-28-2021
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by Mylene Tabion, Asst Store Manager. Walked throughout the facility and observed hazardous waste storage areas. - Containers were closed. - Manifests were available and reviewed. - Employees are reported to be trained. - Emergency plan is posted in the office. - No hazardous waste or universal waste observed in the dumpster/enclosure area. Discussed labeling requirements with Ms. Tabion.

CERS HAZ WASTE:

Name: MARSHALLS 1088
 Address: 12325 SEAL BEACH BLVD
 City,State,Zip: SEAL BEACH, CA 90740
 Site ID: 517244
 CERS ID: 10488391
 CERS Description: Hazardous Waste Generator

Violations:

Site ID: 517244
 Site Name: Marshalls 1088
 Violation Date: 05-26-2021
 Citation: HSC 6.5 25160(b)(3) - California Health and Safety Code, Chapter 6.5, Section(s) 25160(b)(3)

Violation Description: Failure to determine the status of any hazardous waste if a signed copy of the manifest isn't received within 35 days of the date the waste was accepted by the initial transporter and/or to submit an Exception Report to DTSC if a signed copy of the manifest isn't received within 45 days of the date the waste was accepted by the initial transporter.

Violation Notes: Returned to compliance on 08/11/2021. The business failed to determine the status of a uniform hazardous waste manifested shipment within 35 days from the date the waste was shipped, and/or to submit an exception report to DTSC if a signed copy of the manifest isn't received within 45 days of the date the waste was accepted by the initial transporter. Immediately obtain a copy of hazardous waste manifests signed by the designated facility from the last 36 months and/or submit an exception report to DTSC if signed copies of manifests have not been received from the designated facility. Provide copies of documentation to this Agency within 30 days.

Violation Division: Orange County Environmental Health
 Violation Program: HW
 Violation Source: CERS,

Site ID: 517244
 Site Name: Marshalls 1088
 Violation Date: 05-26-2021
 Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
 Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-26-2021
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by Elizabeth Mejorado, Assistant Manager. Walked throughout the facility and observed hazardous waste storage areas. - Containers were closed. - Manifests were available and reviewed. - Employees are reported to be trained. - Emergency plan is posted inside the office. - No hazardous waste or universal waste observed in the dumpster/enclosure area. Discussed proper labeling and manifesting requirements with Ms. Mejorado.

Eval Division: Orange County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-04-2022
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine hazardous waste inspection, and the following hazardous waste streams were observed: - Toxic Waste - Corrosive Waste - Aerosol and Flammable Waste - Universal Waste solids Observed the facility, hazardous waste storage area, perimeter, and dumpster area. Hazardous waste containers were stored closed and properly labeled. No indication of hazardous waste spillage, runoff, or illegal disposal was observed. The emergency response plan was reviewed. The following manifests were missing a destination facility signed copy and were obtained during the inspection: - August 31, 2021 (Manifest #016234872FLE) - December 20, 2021 (Manifest #200035089CLE) - February 1, 2022 (Manifest #200069789CLE) A copy of this report will be sent to emm00084@fjx.com and mailed to the facility.

Eval Division: Orange County Environmental Health

Eval General Type: Other/Unknown
Eval Date: 08-04-2021
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: This is an off site inspection to follow up on the outstanding violation cited during the routine inspection on 5/26/2021. The following violation remains outstanding and must be corrected immediately: - I584: Failure to determine the status of any hazardous waste if a signed copy of the manifest isn't received within 35 days of the date the waste was accepted by the initial transporter and/or to submit an Exception Report to DTSC if a signed copy of the manifest isn't received within 45 days of the date the waste was accepted by the initial transporter. Please obtain signed copies of hazardous waste manifests from the designated facility for the past 12 months and provide to this Agency within 30 days.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Potential Media Affected: Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Benzene, Toluene, Xylene, Gasoline
Site History: Site Background The Goodyear Tire Store occupied the site between 1994 and June 2004. Waste materials were stored in a dumpster area located south of the former building and west of the Parasol building, which was occupied by a restaurant. Goodyear personnel also used this area to work on cars, and stored containers of waste

materials along the buildings wall. The pavement in this area was reported to be degraded. The property was redeveloped, and the Goodyear building was demolished in 2006. Investigation Activities A soil boring was drilled for geotechnical purposes, at a location several feet east of the dumpster and waste storage area. Vapor measurements detected hydrocarbons in the soil samples. In October 2004, WEI was contracted by the property owner, Century National Properties, Inc. (CNP), to investigate the site. WEI staff drilled two soil borings, P-S and P-GW. Soil samples were collected from soil boring P-S at five foot intervals, to a depth of 20 feet below ground surface (bgs). The soil samples were analyzed for total petroleum hydrocarbons as gasoline (TPH-G) and volatile organic compounds (VOCs). TPH-G was detected in all four soil samples, ranging from 6.0 milligrams/kilogram (mg/kg) to 5,000 mg/kg. Benzene was also detected in all four samples, ranging from 0.063 mg/kg to 22 mg/kg. Elevated concentration of toluene, ethylbenzene, and xylene were also detected. Methyl tert-butyl ether (MTBE) or other oxygenate compounds were not detected in the soil samples. Groundwater was encountered at 23 feet bgs in boring P-GW. A water sample was collected using a Hydropunch sampler, and submitted for laboratory analysis for VOCs. The analytical results of the groundwater sample showed high concentrations of benzene at 12,000 microgram/liter (a%g/l), toluene at 18,000 a%g/l, ethylbenzene at 5,500 a%g/l, xylene at 31,000 a%g/l, 1,2-dichloroethane (1,2-DCA) at 480 a%g/l and naphthalene at 1,200 a%g/l. MTBE or other oxygenate compounds were not detected in the groundwater sample. A probe for collection of soil vapor sample was also installed in the area. No VOCs were detected in the soil vapor sample. In November 2004, WEI drilled eight additional soil borings (IR-1 through IR-4 and OR-1 through OR-4) for collection of soil and groundwater samples. The soil samples were analyzed for TPH and VOCs. TPH concentrations ranged from <5 mg/kg to 1,200 mg/kg (10 foot sample from boring IR-1). Benzene concentrations ranged from <0.0018 mg/kg to 4.6 mg/kg (10 foot sample from boring IR-1). Toluene, ethylbenzene, xylene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene were also detected in the soil samples. Laboratory analysis of the groundwater samples found concentrations of benzene ranging from <2 to 180 a%g/l, 1,2-DCA ranging from <2.0 a%g/l to 13 a%g/l, and other VOCs. No VOCs were detected in the water samples from borings IR-4, OR-1, or OR-3. In 2006, SECOR International, Inc. (SECOR) was retained by Goodyear to evaluate the site. Eleven soil borings were drilled to determine the extent of petroleum contaminated soil. Benzene concentrations in the soil ranged from 0.004 mg/kg to 25 mg/kg. TPH-G ranged from <0.39 mg/kg to 23,000 mg/kg. Three of the eleven soil borings were drilled at an angle under the Parasol building. Concentrations of TPH-G (4,800 mg/kg) and TPH-diesel (210 mg/kg) were detected only in boring PO-01 in the 10 foot soil sample (8.7 feet bgs). No VOCs were detected. SECOR also installed two nested pairs of groundwater monitoring wells (MW-1 and MW-2). The wells were screened in two zones (upper 7 to 20 feet bgs and lower 25 to 40 feet bgs). Two additional boreholes were drilled and constructed as single cased wells VE-1 and VE-2. The wells were constructed of 4-inch PVC and screened at 25 to 40 feet bgs (VE-1) and 7 to 20 feet bgs (VE-2). SECOR conducted vapor extraction and dual phase extraction tests using these wells. The tests produced very low recoveries of soil vapor and groundwater and SECOR determine that the method was not a feasible remediation method. Soil Excavation September 2006, WEI was contracted by CNP to perform

MAP FINDINGS

GOODYEAR (FORMER) WASTE DUMPSTER AREA AT ROSSMOOR CENTER (Continued)

S108201221

remedial activities at the Site. WEI selected excavation and offsite disposal as the initial remedial method. Soil was excavated to a depth of 20 to 22 feet to remove contaminated soil. Very moist soil was encountered at 18 feet bgs. The excavation could not be extended beyond 22 feet bgs do to slumping and caving of the moist sandy soil. Approximately 567 cubic yards of soil was removed from the excavation. The excavated soils were transported offsite to U. S. Ecology, Inc. in Beatty, Nevada for treatment and recycling. No confirmation soil or water samples were collected from the excavation, because soil vapor and groundwater extraction and treatment were expected to remove the residual concentrations of VOCs and petroleum compounds. The excavation was backfilled with pea gravel from 22 feet bgs to approximately 10 feet bgs. An impermeable plastic liner was placed on top of the gravel. Clean soil was placed on top of the liner to grade surface. Soil Vapor and Groundwater Extraction In October 2006, WEI installed three soil vapor and groundwater extraction wells (MW-3-W, MW-4-W and MW-5-W) in the former excavation. The boreholes were drilled to between 39 and 50 feet bgs. The wells were constructed of 4-inch diameter, schedule 40 PVC casing and slotted screen. The screens were set from the bottom of each borehole to between 9 and 12 feet bgs. Groundwater samples were collected and analyzed for TPH-G and VOCs. TPH-G concentrations ranged from 26,000 to 54,000 a%g/l (MW-5-W). Benzene concentrations ranged from 4,700 to 28,000 a%g/l (MW-4-W). Concentrations of 1,2-DCA ranged from 4.9 to 53.0 a%g/l (MW-3-W). Napthalene concentrations ranged from <1 to 500 a%g/l (MW-5-W). Toluene, ethylbenzene, xylene, 1,2,4 trimethylbenzene and 1,3,5 trimethylbenzene were also detected in the groundwater samples. WEI installed a soil vapor and groundwater extraction and treatment system. The wells that were installed in the former excavation area (MW-3-W, MW-4-W and MW-5-W) were hooked up to the treatment system. Extracted soil vapor was treated with a portable electric thermal/catalytic oxidizer. The extracted groundwater was placed in a 4,000-gallon above ground tank, and then was batch treated by passing it through activated carbon vessels before discharging it to the sanitary sewer. The SVE system was started on October 13, 2006, and the groundwater pump-and-treat system was brought on line on October 19, 2006. WEI collected soil vapor samples at the start of the SVE operation. Soil vapor at each well was initially screened with a Huruba Organic Vapor Analyzer, and the results were 1,200 parts per million by volume (ppmv) (MW-3-W), 1,500 ppmv (MW-4-W), and 800 ppmv (MW-5-W). On October 19, 2006, soil vapor samples were collected and submitted to a laboratory for analysis. The TPH-G vapor concentrations ranged from 110 ppmv (MW-5-W) to 1,200 ppmv (MW-4-W). Benzene vapor concentrations ranged from 0.62 ppmv (MW-5-W) to 9.20 ppmv (MW-4-W). Both treatment systems were shut down by January 11, 2007. Soil vapor and groundwater samples were collected from the three wells just prior to shut-down. TPH-G concentrations in soil vapor ranged from 26 to 69 ppmv and benzene concentrations ranged from non-detect to 0.62 ppmv. Analytical results for the groundwater samples also showed significant decreases in concentrations of benzene (ranging from 21 to 380 a%g/l) and TPH-G (ranging from 330 to 4,300 a%g/l). WEI estimated that the treatment system recovered and treated approximately 1,399 pounds of hydrocarbon vapor, and discharged 1,730,000 gallons of treated groundwater to the sanitary sewer. Verification sampling On February 9, 2007, WEI drilled three soil borings (VB-1 through 3), installed six soil vapor sampling points

GOODYEAR (FORMER) WASTE DUMPSTER AREA AT ROSSMOOR CENTER (Continued)

S108201221

(SG-1 through 6), and advanced a boring (HP-1) for collection of a groundwater sample with a Hydropunch sampler. Soil vapor and groundwater samples were analyzed onsite at a mobile lab. The samples were analyzed for TPH-G by EPA method 8015m and VOCs by EPA method 8260B. Soil borings were advanced to approximately 30 feet bgs adjacent to the former excavation. Soil samples were collected at five foot intervals, starting at 10 feet. Analytical results for the soil samples showed concentrations of TPH-G and benzene in all of the samples. Benzene concentrations ranged from <1 to 50.3 mg/kg (VB-2). The deepest sample with the maximum benzene concentration of 6.6 mg/kg was collected at 30 feet from boring VB-2. TPH-G concentrations ranged from <0.200 to 48,000 mg/kg (VB-2). Six soil vapor probes were installed through the floor of the Parasol building to collect vapor samples at 5 feet bgs. The probes were completed with a sampling tube and a filter stone at the bottom. Soil gas samples were collected 24 hours after installation of the probes, and analyzed at an onsite mobile laboratory. VOCs and TPH-G were not detected above their respective detection limits. One additional boring was advanced inside the building, to a depth of 30 feet bgs, and a single groundwater sample was collected using a Hydropunch sampler. Benzene was detected at 3,510 a%g/l in the groundwater sample. WEI collected groundwater samples from all of the wells at the site in February and October 2007, and submitted them for laboratory analysis. In February the maximum benzene concentration detected was 7,810 a%g/l (VE-2) and in October the maximum benzene concentration detected was 8,800 a%g/l (MW-1L). In April 2007, WEI install three additional sets of nested groundwater monitoring wells (MW-6-W-U/L, MW-7-W-U/L, and MW-8-W-U/L) to the southwest, south and southeast of the former excavation. The initial groundwater samples were collected in October 2007, and only 1,2-DCA at 2.2 a%g/l was detected in well MW-6-W-U. Groundwater wells were monitored quarterly in 2009. In September 2009, benzene concentrations in the groundwater ranged from less than the detection limit (<1 a%g/l) to 17,000 a%g/l (MW-1L). Ozone Sparging Feasibility Test On October 13, 2009, an ozone sparging (OS) test was started. The purpose of the test was to assess the feasibility of using the OS methodology to treat the dissolved benzene in the groundwater under the site. Prior to conducting the test, WEI staff installed ozone injection points in the bottom of the upper (approximately 18 feet bgs) and bottom of the lower (approximately 38 feet bgs) screened zones of the groundwater monitoring well MW-1. Ozone gas and air were injected for 30-minute intervals, alternating between the upper and lower screened zones of well MW-1. The flow rate was between 1.0 to 1.5 cubic feet per minute, and the applied pressure was between 16 and 45 pounds per square inch. The OS system was monitored bi-weekly for applied pressure, flow rate, and pressure at the test well. Dissolved oxygen levels were monitored in wells MW3-W, MW-4W, MW5-W, VE-1, VE-2, MW-2-WU, MW-2-WL, MW-6-WU and MW-6WL approximately every two weeks. The test ended on January 12, 2010. The results of the test showed increased dissolved oxygen concentrations in groundwater monitoring well MW-4-W, located approximately 15 feet east of well MW-1. Increased dissolved oxygen concentration were also observed in the lower part of the screened zone of well MW-5-W, located approximately 15 feet to the west of well MW-1. Decreases in benzene concentrations were observed in well MW-4-W. Two rounds of groundwater monitoring have taken place since the end of the OS test. Groundwater samples were collected January 1 and March 18, 2010. Benzene and other VOC concentrations have decreased in all the wells

except VE-1. Benzene concentrations in March ranged from less than the detection limit to 4,000 a%g/l. TPH-G concentrations have also decreased, except in well VE-1. TPH-G concentration in March ranged from less than the detection limit to 37,000 a%g/l. Groundwater samples collected in March from well MW-1U showed an increase in TPH-G and benzene concentrations. Ozone sparging points installed in six wells upper and lower zones of wells MW-1, MW-9-W and MW-10-W. Full scale ozone sparging system was operated from September 3, 2010 to March 1, 2012. After shut of the sparging system the verification monitoring of the groundwater was performed between March 2012 and June 2014. Soil vapor and soil matrix samples were collected in January 2013. No VOC were detected in the soil vapor samples. Two direct-push borings were advanced to between 84 and 90 feet bgs and groundwater samples were collected in four depths from each boring. Low concentrations less than 5 ppb benzene, toluene ethylbenzene, 1,2,4 trimethylbenzene and 1,3,5 trimethylbenzene were detected at approximately 50 and 70 feet bgs. May 18, 2016 No Further Action letter

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 05/03/2019. OBSERVATION: Overfill Prevention Equipment Inspection, dated 10/10/2018, shows 87 and Diesel product tanks did not pass the overfill prevention test. The following discrepancies were found on the report dated 10/10/2018: the overfill prevention equipment checked off does not correspond to the comments, site observations, and CERS monitoring plan. CORRECTIVE ACTION: Maintain overfill prevention system to comply with all overfill requirements. Submit documentation showing overfill prevention is properly functioning and the correct method of overfill for this site is noted on the report within 30 days.

Violation Date: 10-05-2020
Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)

Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violation Notes: Returned to compliance on 10/22/2020. 1) The designated operator failed to note the correct test dates for the Secondary Containment testing and Overfill Prevention testing on all designated operator monthly inspection report(s) for the last 12 months. Please update reports with the correct dates within 30 days and provide an updated copy of each DO report to this Agency: - Secondary Containment testing: 9/3/2019 - Overfill Prevention testing: 1/9/2019 2) The designated operator visual inspections have not been completed at least once every 30 days. The following inspections were conducted past the 30 day time frame: - 11/19/19 - 2/25/20 - 5/26/20 - 8/19/20 Ensure the October DO visual inspection report is completed within 30 days of the September visual inspection report and provide a copy to this Agency within 30 days.

Eval Type: Routine done by local agency
Eval Notes: On site to conduct routine UST inspection. The Monitoring System Certification testing was conducted by Francisco Castro of Tanknology (ICC 8026747 exp 8-16-15; VR B37663 exp 3-1-15) The Veeder-Root TLS-350 monitoring panel displayed "all functions normal" and audible and visual alarms were demonstrated operational. The panel was noted marked with a sticker from the most recent monitoring certification (12/4/13). The following Observations were made: The test boots of the piping was pulled back allowing the interstitial space of the piping to be monitored by the STP sump sensor. The facility utilizes a Flapper Valve for overflow prevention. The Tester indicated that all sensors tested today received a pass. The leak detectors all passed testing. The tanks are single walled fiberglass and the daily 0.2 leak tests were available for review and all passed. The following documents were available for review on this date: - Permit - Monitoring plan - [Truncated]

Eval Notes: On site to conduct a routine UST inspection and to witness the monitoring system certification. I discussed with the operator that today's testing will remain as the annual testing date. Consent to inspect the facility was provided by Russel Conkle the operator. The Monitoring System Certification testing was conducted by Alfonso of Tanknology. The Veeder-Root TLS-350 monitoring panel displayed "all functions normal" and audible and visual alarms were demonstrated operational. The following Observations were made: The facility has three single-walled fuel tanks and one double-walled waste oil tank monitored by Veeder Root. The monitor is operational using audible and visual alarms. Panel display reads all functions normal. Positive shutdown and fail safe programming were verified. Flapper valves are used for overflow prevention. The sensors in the fuel tank turbine sumps and fill sumps shutdown the turbine when submerged in fuel. The dispensers have Bravo [Truncated]

Eval Notes: On site for routine UST inspection, monitoring system certification and spill bucket testing. The facility has three single walled fiberglass tanks (87, 91, D) and one double walled tank (waste oil) monitored by a TLS350. Positive shutdown and fail safe programming were verified. Fill tube valves are used for overfill prevention. The site has double-walled pressurized piping with mechanical line leak detectors. Line leak detectors were tested and determined to be functional. The turbine and fill sensors were tested hydrostatically. The turbine and UDC sensors shut down the turbines when submerged in fluid. Fuel tanks are single walled and CSLD tapes report passing for the last 12 months. Waste oil tank annular sensor alarmed when tested hydrostatically. UDCs are monitored by float and chain assembly and shut off flow at dispenser when triggered for all 8 dispensers. The spill buckets were visually tested for one hour and all passed. Overfill prevention [Truncated]

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/26/2022	Source: EPA
Date Data Arrived at EDR: 08/02/2022	Telephone: N/A
Date Made Active in Reports: 08/22/2022	Last EDR Contact: 10/05/2022
Number of Days to Update: 20	Next Scheduled EDR Contact: 01/09/2023
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/26/2022	Source: EPA
Date Data Arrived at EDR: 08/02/2022	Telephone: N/A
Date Made Active in Reports: 08/22/2022	Last EDR Contact: 10/05/2022
Number of Days to Update: 20	Next Scheduled EDR Contact: 01/09/2023
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 07/26/2022	Source: EPA
Date Data Arrived at EDR: 08/02/2022	Telephone: 800-424-9346

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/20/2022	Source: Environmental Protection Agency

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/20/2022	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/21/2022	Telephone: (415) 495-8895

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 04/30/2022	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 05/24/2022	Telephone: 202-307-1000

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

OLD RANCH COUNTRY CLUB
3901 LAMPSON AVENUE
SEAL BEACH, CA 90740

TARGET PROPERTY COORDINATES

Latitude (North):	33.778698 - 33° 46' 43.31"
Longitude (West):	118.066593 - 118° 3' 59.73"
Universal Transverse Mercator:	Zone 11
UTM X (Meters):	401243.3
UTM Y (Meters):	3737936.2
Elevation:	13 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	11997954 LOS ALAMITOS, CA
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

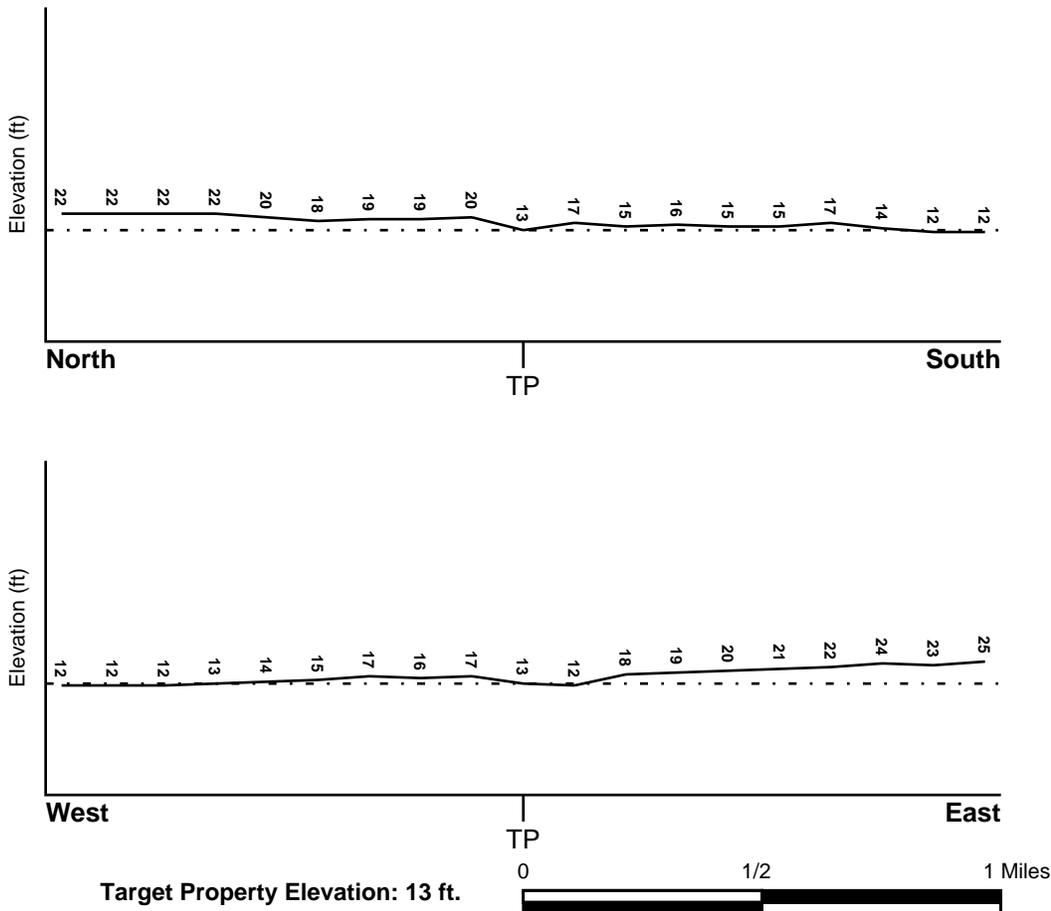

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06037C1990F	FEMA FIRM Flood data

06037C2000F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
LOS ALAMITOS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: BOLSA

Soil Surface Texture: silty clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	silty clay loam	Not reported	Not reported	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9
2	11 inches	68 inches	silt loam	Not reported	Not reported	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: BOLSA

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information

1	0 inches	11 inches	silt loam	Not reported	Not reported	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9
2	11 inches	68 inches	silty clay loam	Not reported	Not reported	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9

Soil Map ID: 3

Soil Component Name: Water

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

1.0 INTRODUCTION

1.1 GEOGRAPHIC SETTING

The project site is located within the City of Seal Beach in north central Orange County, California. The project site generally located north of State Route 22 and east of Seal Beach Blvd. The project site designated address is currently 3901 Lampson Avenue, Seal Beach, CA. Adjacent land uses include Navy property to the south, Los Alamitos Naval Air Station to the north and residential properties to the west and east.

The project site is currently occupied by the Old Ranch Country Club facilities and golf course. The entire property encompasses approximately 160 acres.

The proposed project is approximately 15 acres and consists of additional County Club facilities as well as a hotel site with additional associated parking facilities.

1.3 PURPOSE OF THIS REPORT

The purpose of this report is to accomplish the following objectives:

To determine storm water discharges generated within the project area for determination of design feasibility and constructability. (See Appendix 1-4).

To demonstrate that the "storm water" and "flood" protection goals as outlined in Addendum No. 1 to the O.C. Design Manual can be met.

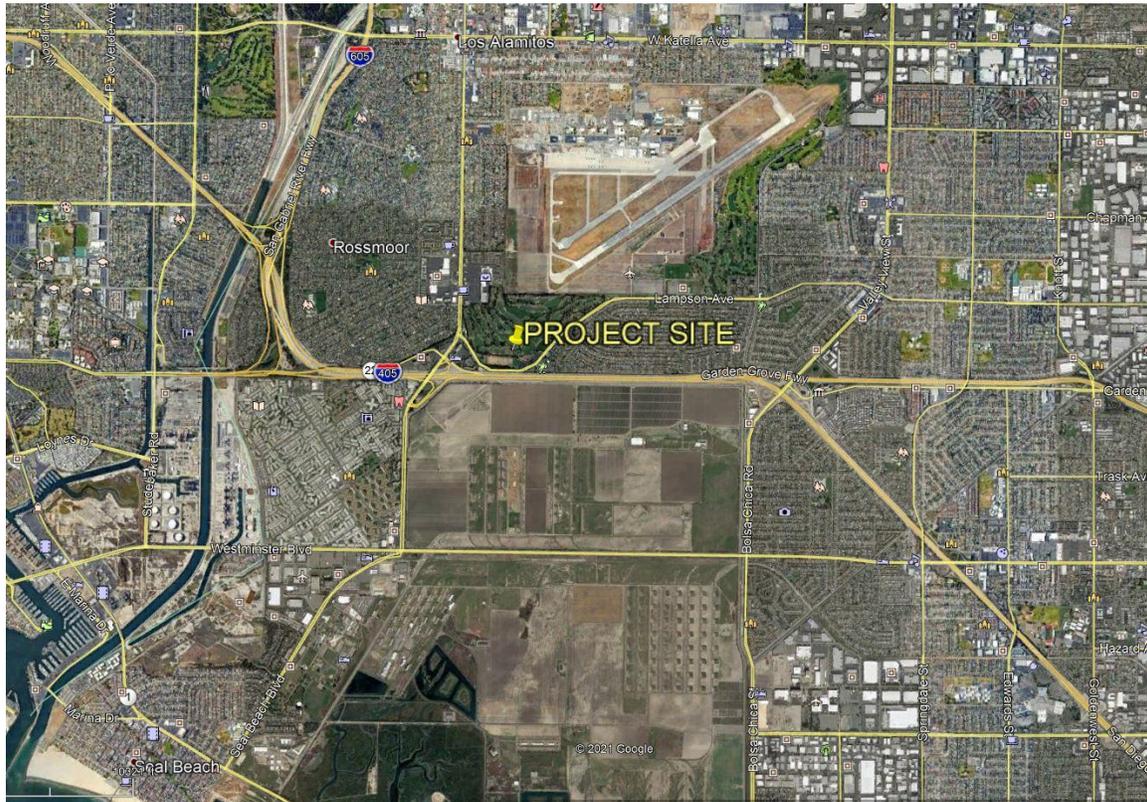

To determine the increase in discharge and runoff volume for the project.

To illustrate the planning level design concept and analysis for the proposed project that will be included in the Preliminary Plan processing for the project.

1.4 REFERENCES

- Orange County Hydrology Manual, 1986
- Orange County Local Drainage Manual, 1986
- AES Hydrology Software

Project Site Location Map

2.0 EXISTING TOPOGRAPHIC & HYDROLOGIC CONDITIONS

2.1 EXISTING TOPOGRAPHY

The site generally flows toward southerly toward State Route 22.

2.2 EXISTING ON-SITE DRAINAGE PATTERN AND FACILITIES

The existing site drainage generally flows from the north to the south. The majority of the property is a golf course with a number of lakes that are used for irrigation. The approximately 15 ac project area flows into the golf course area. The golf course and lake system functions as a detention system for storm flows. On the southerly of the site, adjacent to State Route 22, a double 8' (w) x 5' (h) reinforced concrete box (RCB) conveys flow under Route 22 to a County of Orange drainage channel. This concrete lined 12'x7' trap channel is facility County facility C01S06.

3.0 PROPOSED STORM DRAIN FACILITIES

The proposed development will maintain the existing drainage pattern and drain to the golf course. The site flows will be collected in three on site storm drain systems and directed to the golf course. These systems will outlet to lakes within the golf course. Catch basins will be located at various points within the site to capture subarea flows.

3.1 DETENTION

The existing golf course functions as a large detention system for storm flows from the project area as well as surrounding areas.

4.0 HYDROLOGY STUDY

4.1 STORM FREQUENCY

This study is intended to determine discharges for use in the design of storm drain lines. The 100 year event was chosen as the design criteria as required by the Orange County Hydrology Manual. The 2 year event was also analyzed to determine the need for hydro modification as discussed the Water Quality Management Report (WQMP). Overflow paths will also provide, due to the need to ensure site improvements are protected during the 100 year event.

4.2 METHODOLOGY

This study was prepared in conformance with the Orange County Hydrology Manual.

The project site 100 year event Inflow Hydrographs were calculated for the pre and post development conditions using the small area hydrograph method.

A.E.S. Computer Software was utilized to compile the hydrologic data and to determine the peak discharges and hydrographs.

Copies of the computer print-outs for hydrologic results and hydrograph generation are included within this report for the 100 year and 2 year return frequency storm. (Appendix 5-8)

Hydrology maps showing sub area boundaries, flow paths and discharges for the pre and post development conditions are included in this report. (Appendix 10-13)

4.3 EXISTING DRAINAGE & FLOOD PLAIN STUDIES

The project is located in Flood Zone AE per Flood Insurance Rate Map (FIRM) Number 06059C0114k, revised March 21, 2019. The base flood elevation in the detention basin is 14 per the map panel. The project construction will be outside the limits of the 100 year flood plain with minimum finish floor elevations of approximately 17 to 24.

5.0 DESIGN CRITERIA

The proposed storm drain system will be designed to be consistent with the following goals and guidelines as presented in the Orange County Hydrology and the Orange County Local Drainage Manuals. Some items listed below may not apply to this project.

All habitable buildings shall be protected from flooding during a 100-year frequency storm.

Offsite design storm frequency, subject to individual review by the controlling authority, should be in accordance with the O.C. Hydrology Manual.

Velocity should not exceed 20 FPS in a standard wall R.C.P.

On local streets, flow should not exceed top of curb, for a 10-year storm event, and in sump conditions, a 25-year storm event shall be used.

Maximum W.S. in CB's for design conditions shall be 0.5' below inlet (FL.) elevation.

Once water is picked up in a storm drain, it should remain in the system.

Pipe size may not be decreased downstream without the City's approval.

Branching of flow is not allowed.

Junction structures should be designed according to the Orange County Local Drainage Manual.

Fill Less Than 20 Feet over structures unless special design is approved.

6.0 RESULTS AND CONCLUSIONS

6.1 SUMMARY OF EXISTING AND PROPOSED FLOWS

Pre & Post Conditions Comparisons Acreage

Drainage Area	Existing (ac)	Proposed (ac)	Difference (ac)	Change (%)
A	2.19	2.19	0	0
B	3.77	3.55	-0.22	-5.8
C	9.12	9.34	+0.22	+2.4

A	2 Year	8.3	8.6	+0.3	+3.6
B	2 Year	13.6	10.9	-2.7	-19.8
C	2 Year	12.4	10.2	-2.2	-17.7
Drainage Area	Event	Existing (min)	Proposed (min)	Difference (min)	Change (%)
A	100 Year	8.3	8.2	-0.1	-1.2
B	100 Year	13.6	10.5	-3.1	-22.8
C	100 Year	12.4	9.7	-2.7	-21.8

Pre & Post Conditions Comparisons

Run Off Volume

Drainage Area	Event	Existing (ac-ft)	Proposed (ac-ft)	Difference (ac-ft)	Change (%)
A	2 Year	0.13	0.24	+0.11	+84.6
B	2 Year	0.29	0.49	+0.20	+69.0
C	2 Year	1.28	1.20	-0.08	-6.3
Drainage Area	Event	Existing (ac-ft)	Proposed (ac-ft)	Difference (ac-ft)	Change (%)
A	100 Year	0.50	0.72	+0.22	+44.0
B	100 Year	1.34	1.49	+0.15	+11.2
C	100 Year	3.51	3.59	+0.08	+2.3

6.2 CONCLUSIONS

The analysis provided in this report provides the following conclusions:

1. The project can be constructed and meet all requirements of the City of Seal Beach and the County of Orange with the construction of appropriate drainage facilities.
2. Overflow protection, flowing to the golf course is provided for protection of structures within the project.

STORM WATER DETENTION

All project storm flows will be directed to the golf course lake system. As described in this report the golf course functions as a large detention system. The minor increase in discharge of 1.4 cfs and run off volume of 0.45 ac-ft for the 100 year event, as a result of the project, will have a negligible effect on the functioning and maximum water surface of the detention basin.

This Water Quality Management Plan (WQMP) has been prepared for OLD RANCH COUNTRY CLUB, LLC by FUSCOE ENGINEERING, INC. The WQMP is intended to comply with the requirements of the County of Orange NPDES Stormwater Program requiring the preparation of the plan.

The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan , including the ongoing operation and maintenance of all best management practices (BMPs), and will ensure that this plan is amended as appropriate to reflect up-to-date conditions on the site consistent with the current Orange County Drainage Area Management Plan (DAMP) and the intent of the non-point source NPDES Permit for Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the incorporated Cities of Orange County within the Santa Ana Region. Once the undersigned transfers its interest in the property, its successors-in-interest shall bear the aforementioned responsibility to implement and amend the WQMP. An appropriate number of approved and signed copies of this document shall be available on the subject site in perpetuity.

SECTION I DISCRETIONARY PERMITS AND WATER QUALITY CONDITIONS

PROJECT INFORMATION			
Permit/Application No.:	PENDING	Grading or Building Permit No.:	PENDING
Address of Project Site (or Tract Map and Lot Number if no address) and APN:	3901 Lampson Avenue, Seal Beach, CA. 90740 APN: 130-012-58, 130-012-55, AND 130-012-54		
WATER QUALITY CONDITIONS OF APPROVAL OR ISSUANCE			
Discretionary Permit(s):	Pending – to be provided in Final WQMP		
Water Quality Conditions of Approval or Issuance applied to this project: (Please list verbatim.)	Pending – to be provided in Final WQMP		
WATERSHED-BASED PLAN CONDITIONS			
Applicable conditions from watershed - based plans including WIHMPs and TMDLs:	Hydromodification susceptibility San Gabriel River: Abnormal Fish Histology, Ammonia as Nitrogen, Copper, Dioxin, Nickel, Dissolved Oxygen San Pedro Bay: Chlordane, Chromium, Copper, DDT, PAHs, PCBs, Sediment Toxicity, Zinc		

SECTION II PROJECT DESCRIPTION

II.1 PROJECT DESCRIPTION

The proposed Old Ranch Country Club project site encompasses approximately 21.3 acres in the City of Seal Beach. The project site is bounded by Seal Beach Boulevard on the west and Lampson Avenue along the southern to eastern portion. The northern project site is bounded by a golf course owned by the Owner. A Vicinity Map is included in Section VI.

Under existing conditions, the project site is a country club with associated parking lots, storage, a driving range, and pool. Adjacent land uses include a golf course, a gas station, tennis courts, residential areas, a hotel, banks, a restaurant, and spa.

The table below summarizes the proposed project.

DESCRIPTION OF PROPOSED PROJECT	
Development Category (Model WQMP, Table 7.11-2; or 7.11-3):	<p>6. Parking lots 5,000 square feet or more including associated drive aisle, and potentially exposed to urban stormwater runoff. A parking lot is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce.</p> <p>8. All significant redevelopment projects, where significant redevelopment is defined as the addition or replacement of 5,000 or more square feet of impervious surface on an already developed site. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of the facility, or emergency redevelopment activity required to protect public health and safety.</p> <p>Since the proposed project includes the addition and replacement of more than 5,000 square feet of impervious surfaces on an already developed site, the project is considered a "Priority Project" in accordance with the Model WQMP and OC DAMP.</p>
Project Area (ft²):	656,885 ft ² (15.08 acres) – Project site redevelopment and run-on areas from existing structures to remain. Does not include 6.22 acres of existing driving range.
# of Dwelling Units:	<p>Proposed Assisted Living: 105 units</p> <p>Proposed Senior Housing: 66 units</p> <p>Proposed Hotel: 150 keys</p>
SIC Code:	7011 & 8361
Narrative Project Description:	The project proposes additional development at the existing Old Ranch Country Club Site. An assisted living building, senior housing with a medical office, maintenance buildings, a parking structure, a resort pool, a hotel, landscaping, sidewalks, and roads will be added and the clubhouse and driving range will remain.

DESCRIPTION OF PROPOSED PROJECT				
Project Area:	Pervious Area	Pervious Area Percentage	Impervious Area	Impervious Area Percentage
Pre-Project Conditions:	15.08 ac	65%	5.3 ac	35%
Post-Project Conditions:	15.08 ac	20%	12.1 ac	80%
Drainage Patterns/ Connections:	<p>Existing drainage pattern generally flows south with one existing point of connection at Seal Beach Boulevard. Runoff from the existing clubhouse area is routed to a storm drain main that collects stormwater from offsite and brings it to an onsite gold course lake. All runoff from the existing golf course exits from the property to Lampson Avenue connection through a culvert located south of the existing driving range and through the eucalyptus grove.</p> <p>All proposed runoff will be routed to the existing onsite lakes at the golf course north of the project area. The existing lakes serve for irrigation of the golf course. Details for drainage to lakes as well as operation will be determined in final engineering. In final engineering, adequate capacity to store DCV and hydromodification volumes and ensuring adherence to health codes are followed based on the irrigation type of captured stormwater will be discussed.</p>			

PROJECT FEATURES																						
Building Summary:	<table border="1"> <thead> <tr> <th>Building Type</th> <th>Units/Unit Types</th> <th>Area (sf)</th> </tr> </thead> <tbody> <tr> <td>Proposed Assisted Living</td> <td>105 units</td> <td>83,400 [3 levels]</td> </tr> <tr> <td>Proposed Senior Housing</td> <td>66 units</td> <td>96,955 [3 levels] (including 13,000 medical office)</td> </tr> <tr> <td>Proposed Parking Structure</td> <td>589 spaces</td> <td>73,150 [3 levels]</td> </tr> <tr> <td>Proposed Resort Pool</td> <td>NA</td> <td>21,000</td> </tr> <tr> <td>Proposed Hotel</td> <td>150 keys</td> <td>104,365 [3 levels]</td> </tr> </tbody> </table>	Building Type	Units/Unit Types	Area (sf)	Proposed Assisted Living	105 units	83,400 [3 levels]	Proposed Senior Housing	66 units	96,955 [3 levels] (including 13,000 medical office)	Proposed Parking Structure	589 spaces	73,150 [3 levels]	Proposed Resort Pool	NA	21,000	Proposed Hotel	150 keys	104,365 [3 levels]			
	Building Type	Units/Unit Types	Area (sf)																			
	Proposed Assisted Living	105 units	83,400 [3 levels]																			
	Proposed Senior Housing	66 units	96,955 [3 levels] (including 13,000 medical office)																			
	Proposed Parking Structure	589 spaces	73,150 [3 levels]																			
	Proposed Resort Pool	NA	21,000																			
Proposed Hotel	150 keys	104,365 [3 levels]																				

PROJECT FEATURES	
Amenities:	<p>The existing clubhouse building provides facilities for banquets, a restaurant, a bar and lounge, a pro shop, offices, golf, and a driving range.</p> <p>The proposed hotel will include a grand lobby, specialty restaurant, a bar and lounge, a kitchen, and a new resort pool and spa.</p> <p>A proposed senior housing will include a medical office, a pool and spa, retail area, fitness center, lounge, dining room, kitchen, conference room, and storage spaces.</p> <p>A proposed assisted living building provides an outdoor gathering space, a kitchen, offices, a library, a lounge, retail shop, a maintenance building, and a rehabilitation center.</p>
Landscaped Areas:	<p>The project site will include landscaping such as islands within the parking lot, along the street frontage, driveway, and surrounding the new buildings. Under proposed conditions, approximately 5.3 acres within the limit of work (daylight line) will be landscaped.</p>
Parking Facilities:	<p>The proposed parking facilities include that for the existing clubhouse building, the proposed hotel, a proposed three level parking structure, the proposed senior housing, and the proposed assisted living. The total number of proposed parking spaces provided is 911.</p>
Other Project Features:	<p>Trash enclosures will be provided at the project site and amounts/locations will be determined in final design. The trash enclosure will be walled on 3 sides with an access gate comprising the remaining side and covered to preclude precipitation and runoff consistent with local design standards. The site will not have any outdoor storage areas, vehicle/ community car wash racks, or vehicle/equipment wash areas.</p>
Outdoor Activities:	<p>Outdoor areas throughout the site will be used for recreational and open space purposes. The recreation areas will include pools, spas, a driving range, a eucalyptus grove, and open lawn areas. All other outdoor areas will be used for walkways, common areas and landscaping, and other recreational purposes.</p>
Materials Stored:	<p>Materials anticipated to be stored on-site include those associated with residential buildings and a hotel (i.e. cleaning products, storage, etc.); however, no hazardous wastes will be stored on-site. No outdoor storage of materials is anticipated (materials will be stored indoors).</p>
Wastes Generated:	<p>The project is not anticipated to generate any wastes other than landscape clippings, typical trash, debris and refuse from the tenants. Outdoor trash receptacles will be provided throughout the common areas of the site for the tenants to dispose of their refuse in a proper manner, and property maintenance will provide trash and waste material removal to maintain a trash-free property. All wastes shall be collected and properly disposed of off-site.</p>

II.2 POTENTIAL STORM WATER POLLUTANTS

The table below, derived from Table 2 of the Countywide Model WQMP Technical Guidance Document (December 2013), summarizes the categories of land use or project features of concern and the general pollutant categories associated with them.

ANTICIPATED & POTENTIAL POLLUTANTS GENERATED BY LAND USE TYPE								
Priority Project Categories and/or Project Features	General Pollutant Categories							
	Suspended Solid/Sediments	Nutrients	Heavy Metals	Pathogens (Bacteria/Virus)	Pesticides	Oil & Grease	Toxic Organic Compounds	Trash & Debris
Detached Residential Development	E	E	N	E	E	E	N	E
Attached Residential Development	E	E	N	E	E	E ⁽²⁾	N	E
Commercial/Industrial Development	E ⁽¹⁾	E ⁽¹⁾	E ⁽⁵⁾	E ⁽³⁾	E ⁽¹⁾	E	E	E
Automotive Repair Shops	N	N	E	N	N	E	E	E
Restaurants	E ⁽¹⁾⁽²⁾	E ⁽¹⁾	E ⁽²⁾	E	E ⁽¹⁾	E	N	E
Hillside Development >5,000 ft ²	E	E	N	E	E	E	N	E
Parking Lots	E	E ⁽¹⁾	E	E ⁽⁴⁾	E ⁽¹⁾	E	E	E
Streets, Highways, & Freeways	E	E ⁽¹⁾	E	E ⁽⁴⁾	E ⁽¹⁾	E	E	E
Retail Gasoline Outlets	N	N	E	N	N	E	E	E
<p>Notes:</p> <p>E = expected to be of concern N = not expected to be of concern</p> <p>(1) Expected pollutant if landscaping exists on-site, otherwise not expected.</p> <p>(2) Expected pollutant if the project includes uncovered parking areas, otherwise not expected.</p> <p>(3) Expected pollutant if land use involves food or animal waste products, otherwise not expected.</p> <p>(4) Bacterial indicators are routinely detected in pavement runoff.</p> <p>(5) Expected if outdoor storage or metal roofs, otherwise not expected.</p> <p>Source: County of Orange. (2013, December 20). Technical Guidance Document for the Preparation of Conceptual/ Preliminary and/or Project Water Quality Management Plans (WQMPs). Table 2.1.</p>								

Priority Project Categories and/or Features: Project includes residential, commercial, restaurant, street, and parking lot features.

POLLUTANTS OF CONCERN		
Pollutant	E = Expected to be of concern N = Not Expected to be of concern	Additional Information and Comments
Suspended Solid/ Sediment	E	303(d) listed impairment/TMDL
Nutrients	E	303(d) listed impairment/TMDL
Heavy Metals	E	303(d) listed impairment/TMDL
Pathogens (Bacteria/Virus)	E	303(d) listed impairment/TMDL
Pesticides	E	303(d) listed impairment/TMDL
Oil & Grease	E	
Toxic Organic Compounds	E	303(d) listed impairment/TMDL
Trash & Debris	E	

II.3 HYDROLOGIC CONDITIONS OF CONCERN

The purpose of this section is to identify any hydrologic conditions of concern (HCOC) with respect to downstream flooding, erosion potential of natural channels downstream, impacts of increased flows on natural habitat, etc. As specified in Section 2.3.3 of the 2011 Model WQMP, projects must identify and mitigate any HCOCs. A HCOC is a combination of upland hydrologic conditions and stream biological and physical conditions that presents a condition of concern for physical and/or biological degradation of streams.

In the North Orange County permit area, HCOCs are considered to exist if any streams located downstream from the project are determined to be potentially susceptible to hydromodification impacts and either of the following conditions exists:

- Post-development runoff volume for the 2-yr, 24-hr storm exceeds the pre-development runoff volume for the 2-yr, 24-hr storm by more than 5 percent

or

- Time of concentration (T_c) of post-development runoff for the 2-yr, 24-hr storm event exceeds the time of concentration of the pre-development condition for the 2-yr, 24-hr storm event by more than 5 percent.

If these conditions do not exist or streams are not potentially susceptible to hydromodification impacts, an HCOC does not exist and hydromodification does not need to be considered further. In the North Orange County permit area, downstream channels are considered not susceptible to hydromodification, and therefore do not have the potential for a HCOC, if all downstream conveyance channels that will receive runoff from the project are engineered, hardened, and regularly maintained to ensure design flow capacity, and no sensitive habitat areas will be affected.

Is the proposed project potentially susceptible to hydromodification impacts?

Yes **No (show map)**

According to Figure XVI-3a within the Technical Guidance Document, the proposed project falls within an area susceptible to hydromodification impacts. All runoff from the site ultimately drains to the San Gabriel River, which is maintained by the Los Angeles County Flood Control District, then San Pedro Bay. A copy of Figure XVI-3a is included in Appendix A.

Note: The following drainage areas are based on the hydrology analysis. See attached Hydrology Report for more details.

2-YEAR, 24-HOUR STORM SUMMARY					
Condition	Drainage Area	Acreage	Tc (min)	Peak Runoff (cfs)	Volume (ac-ft)
Pre-development	DMA A	2.19	8.3	2.18	0.13
	DMA B	3.77	13.6	4.27	0.29
	DMA C	9.12	12.4	12.69	1.28
Proposed	DMA A	2.19	8.6	2.64	0.24
	DMA B	3.55	10.9	4.84	0.49
	DMA C	9.34	10.2	12.26	1.2
Difference	DMA A	0	0.3	0.46	0.11
	DMA B	-0.22	-2.7	0.57	0.20
	DMA C	0.22	-2.2	-0.43	-0.08
% Change	DMA A	0	3.6%	21.1%	84.6%
	DMA B	-5.8	-19.8%	13.3%	69%
	DMA C	2.4	-17.7%	-3.4%	-6.3%

Based on the information summarized in the previous table, the total existing runoff volume is 1.7 ac-ft and the total proposed volume of 2.01 ac-ft, with a difference of 0.31 ac-ft. Since there is a 15.1% average decrease in Tc and an average 13.5% increase in total runoff volume between existing and proposed across the three DMAs, hydromodification is required due to the percent change in runoff volume being greater than 5%. The volume that needs to be retained by hydromodification is 0.14 ac-ft (6,098 cf).

II.4 POST DEVELOPMENT DRAINAGE CHARACTERISTICS

All proposed runoff will be routed to the existing onsite lakes at the golf course north of the project area. The existing lakes currently serve for irrigation of the golf course. Details for drainage to lakes as

well as operation will be determined in final engineering. For water quality purposes, it is currently feasible to reuse the water quality volume from the project site for irrigation of the golf course via the existing lakes as described in more detail in Section IV.3.3. In final engineering, adequate capacity to store DCV and hydromodification volumes as well as meet drawdown requirements will be confirmed. In addition, the final WQMP will ensure adherence to health codes are followed based on the irrigation type of captured stormwater and reuse will be discussed.

II.5 PROPERTY OWNERSHIP/MANAGEMENT

PROPERTY OWNERSHIP/MANAGEMENT	
Public Streets:	NA
Private Streets:	Owner
Landscaped Areas:	Owner
Open Space:	Owner
Easements:	Flood Plain Easement: City of Seal Beach Electrical Easements: Southern California Edison Storm Drain Easements: Unknown
Buildings:	Owner
Structural BMPs:	Owner

The Owner, Old Ranch Country Club, LLC shall assume all BMP maintenance and inspection responsibilities for the proposed project. Inspection and maintenance responsibilities are outlined in Section V of this report.

SECTION III SITE DESCRIPTION

III.1 PHYSICAL SETTING

Planning Area/ Community Name:	Old Ranch Country Club
Address:	3901 Lampson Avenue, Seal Beach, CA. 90740
Project Area Description:	The project site is bounded by Seal Beach Boulevard on the west and Lampson Avenue along the southern to eastern portion. The northern project site is bounded by a golf course of the Owner.
Land Use:	Open space and recreation
Zoning:	Recreation/Golf
Acreage:	15.08 – Project footprint 21.2 – Total property area
Predominant Soil Type:	C
Impervious Conditions:	Existing Impervious: 35% (65% Pervious) Proposed Impervious: 80% (20% Pervious)

III.2 SITE CHARACTERISTICS

Precipitation Zone:	0.8
Topography:	The project site is relatively flat, with mild slopes scattered throughout. The runoff generally drains south but is routed north to the golf course lakes.
Existing Drainage Patterns/ Connections:	Existing drainage pattern generally flows south with one existing point of connection at Seal Beach Boulevard. Runoff from the existing clubhouse area is routed to a storm drain main that collects stormwater from offsite and brings it to an onsite lake. All runoff from the existing golf course exits from the property to Lampson Avenue connection through a culvert located south of the existing driving range and through the eucalyptus grove.

Proposed Drainage Patterns/ Connections:	All proposed runoff will be routed to the existing onsite lakes at the golf course north of the project area. The existing lakes currently serve for irrigation of the golf course. Details for drainage to lakes as well as operation will be determined in final engineering. For water quality purposes, it is currently feasible to reuse the water quality volume from the project site for irrigation of the golf course via the existing lakes as described in more detail in Section IV.3.3. In final engineering, adequate capacity to store DCV and hydromodification volumes as well as meet drawdown requirements will be confirmed. In addition, the final WQMP will ensure adherence to health codes are followed based on the irrigation type of captured stormwater and reuse will be discussed.
Soil Type, Geology, and Infiltration Properties:	A geotechnical study was performed for the site in 2000 by Diaz-Yourman & Associates. Soils within the vicinity of the project site generally consist of artificial fill materials and moist, soft to hard, lean clay and silt to the depths explore, 16.5 feet. Artificial fill was encountered at depths varying from 0 to 14.5 feet. The soil profile from 16.5 feet to 38 feet were assumed to be moist to wet, firm, lean clay from previous brings. The soils from 38 to 50 feet were assumed to consist of wet, loose to dense, silty sands. In addition, the study found that some of the on-site soils are subject to liquefaction during seismic events, thus infiltration is not feasible.
Hydrogeologic (Groundwater) Conditions:	During the geotechnical study conducted, depths to groundwater varied on-site from unencountered at 16.5 feet to 9 feet bgs.
Geotechnical Conditions (relevant to infiltration):	The geotechnical report indicated the site is subject to liquefaction due to the presence of clay soils, and so infiltration of runoff is not considered feasible.
Off-Site Drainage:	The project site does not receive any off-site storm water flows onto the property.
Utility and Infrastructure Information:	There are several easements on the project site for utilities (storm drain, water, electricity, etc.) ingress/egress, flight clearance control, flood plain, and other public utility maintenance purposes. Refer to the Easement Exhibit in Section VI for the location of the easement on the project site.

III.3 WATERSHED DESCRIPTION

Receiving Waters:	The route of runoff is from public storm drain line C01SO4 to C01SO3 to C01 to Los Alamitos Retarding Basin to San Gabriel River to the Pacific Ocean at San Pedro Bay.
303(d) Listed Impairments:	San Gabriel River: Copper, Dioxin, Nickel, Dissolved Oxygen San Pedro Bay: Chlordane

Applicable TMDLs:	San Gabriel River: Abnormal Fish Histology, Ammonia as Nitrogen, Copper, Dioxin, Nickel, Dissolved Oxygen San Pedro Bay: Chlordane, Chromium, Copper, DDT, PAHs, PCBs, Sediment Toxicity, Zinc
Pollutants of Concern for the Project:	Per Section II.2 <ul style="list-style-type: none"> • Suspended Solids/Sediment • Nutrients • Heavy Metals • Pathogens • Pesticides • Oil & Grease • Toxic Organic Compounds • Trash & Debris
Hydrologic Conditions of Concern (HCOCs):	The proposed project falls within an area susceptible to hydromodification impacts.
Environmentally Sensitive and Special Biological Significant Areas:	There are no Environmentally Sensitive Areas (ESAs) or Areas of Special Biological Significance (ASBS) within the project site or within the project's vicinity.

SECTION IV BEST MANAGEMENT PRACTICES (BMPs)

IV.1 PROJECT PERFORMANCE CRITERIA

Is there an approved WIHMP or equivalent for the project area that includes more stringent LID feasibility criteria or if there are opportunities identified for implementing LID on regional or sub-regional basis?

Yes No

PROJECT PERFORMANCE CRITERIA	
<p>Hydromodification Control Performance Criteria: (Model WQMP Section 7.II-2.4.2.2)</p>	<p>If a hydrologic condition of concern (HCOG) exists, priority projects shall implement onsite or regional hydromodification controls such that:</p> <ul style="list-style-type: none"> ▪ Post-development runoff volume for the two-year frequency storm does not exceed that of the predevelopment condition by more than five percent, and ▪ Time of concentration of post-development runoff for the two-year storm event is not less than that for the predevelopment condition by more than five percent. <p>Where the Project WQMP documents that excess runoff volume from the two-year runoff event cannot feasibly be retained and where in-stream controls cannot be used to otherwise mitigate HCOGs, the project shall implement on-site or regional hydromodification controls to:</p> <ul style="list-style-type: none"> ▪ Retain the excess volume from the two-year runoff event to the MEP, and ▪ Implement on-site or regional hydromodification controls such that the post-development runoff two-year peak flow rate is no greater than 110 percent of the predevelopment runoff two-year peak flow rate.
<p>LID Performance Criteria: (Model WQMP Section 7.II-2.4.3)</p>	<p>Infiltrate, harvest and use, evapotranspire, or biotreat/biofilter, the 85th percentile, 24-hour storm event (Design Capture Volume).</p> <p>LID BMPs must be designed to retain, on-site, (infiltrate, harvest and use, or evapotranspire) storm water runoff up to 80 percent average annual capture efficiency.</p>
<p>Treatment Control BMP Performance Criteria: (Model WQMP Section 7.II-3.2.2)</p>	<p>If it is not feasible to meet LID performance criteria through retention and/or biotreatment provided on-site or at a sub-regional/regional scale, then treatment control BMPs shall be provided on-site or offsite prior to discharge to waters of the US. Sizing of treatment control BMP(s) shall be based on either the unmet volume after claiming applicable water quality credits, if appropriate.</p>

PROJECT PERFORMANCE CRITERIA	
LID Design Storm Capture Volume:	$DCV = C \times d \times A \times 43560 \text{ sf/ac} \times 1/12 \text{ in/ft}$ <p>Where:</p> <p>DCV = design storm capture volume, cu-ft C = runoff coefficient = $(0.75 \times \text{imp} + 0.15)$ Imp = impervious fraction of drainage area (ranges from 0 to 1) d = storm depth (inches) A = tributary area (acres)</p> <p>Imp = 0.80 d = 0.80 inches A = 15.08 acres</p> $DCV = (0.75 \times 0.80 + 0.15) \times 0.80 \text{ inches} \times 15.08 \text{ ac} \times 43560 \text{ sf/ac} \times 1/12 \text{ in/ft}$ $= 32,844.2 \text{ cu-ft}$ <p><i>Refer to Section IV.2.2 for specific Drainage Manage Area (DMA) breakdown and Appendix A for detailed calculations (Worksheet B).</i></p>

IV.2 SITE DESIGN AND DRAINAGE PLAN

The following section describes the site design BMPs used in this project and the methods used to incorporate them. Careful consideration of site design is a critical first step in storm water pollution prevention from new developments and redevelopments.

IV.2.1 Site Design BMPs

Minimize Impervious Area

Impervious surfaces have been minimized by incorporating landscaped areas throughout the site surrounding the proposed building. Landscaping will be provided throughout the site within the common areas as well as around the perimeter of the building.

Maximize Natural Infiltration Capacity

Infiltration is not recommended for the project site due to liquefaction potential. Refer to Section IV.3.2 for details.

Preserve Existing Drainage Patterns and Time of Concentration

Runoff from the site will continue to flow into the existing golf course, to be retained onsite at existing lakes and used for irrigation.

Disconnect Impervious Areas

Landscaping will be provided adjacent to sidewalks and between the proposed buildings. Low-flows and first-flush runoff will drain to the existing golf course lakes to be retained and used for irrigation. Refer to Section IV.3.4 for further details.

Protect Existing Vegetation and Sensitive Areas, and Revegetate Disturbed Areas

There are no existing vegetated or sensitive areas to preserve on the project site. All disturbed areas will either be paved or landscaped.

Xeriscape Landscaping

Xeriscape landscaping is not proposed for the project. However, native and/or tolerant landscaping will be incorporated into the site design consistent with City guidelines.

IV.2.2 Drainage Management Areas

In accordance with the MS4 permit and the 2011 Model WQMP, the project site has been divided into Drainage Management Areas (DMAs) to be utilized for defining drainage areas and sizing LID and other treatment control BMPs. DMAs have been delineated based on the proposed site grading patterns, drainage patterns, storm drain and catch basin locations.

The design capture volumes (DCV) and treatment flow rates (Q_{Design}) for each DMA are summarized in the table below. These have been derived utilizing the “Simple Method” in accordance with the TGD Section III.1.1. Actual BMP sizing requirements, including 80 percent capture design volumes, flow rates, depths, and other design details for the specific BMPs proposed are provided in Sections IV.3.3 below. Location of the DMA and associated LID and treatment BMPs are identified on the exhibits in Section VI. Additional calculations and TGD Worksheets are provided in Appendix A.

DRAINAGE MANAGEMENT AREAS (DMAs)								
DMA/ Drainage Area ID ⁽¹⁾	Tributary Drainage Area (ft ²)	Tributary Drainage Area (ac)	% Imp.	Design Storm Depth ⁽²⁾ (in)	Estimated Tc (min) ⁽⁶⁾	Rainfall Intensity ⁽³⁾ (in/hr)	Simple Method DCV ⁽⁴⁾ (ft ³)	Q_{Design} ⁽⁵⁾ (cfs)
DMA 1	656,885	15.08	80	0.80	10.1	0.24	32,844.2	2.714
Notes:								
1. Refer to exhibits in Section VI for locations of each DMA.								
2. Per Figure XVI-1 of the Technical Guidance Document, dated December 20, 2013. See also Appendix A.								
3. Per Figure III.4 of the Technical Guidance Document, dated December 20, 2013. See also Appendix A.								
4. Per Section III.1.1 of the Technical Guidance Document.								
5. Per Section III.3.3 and Worksheet D of the Technical Guidance Document.								
6. Per Hydrology Report.								

IV.3 LID BMP SELECTION AND PROJECT CONFORMANCE ANALYSIS

Low Impact Development (LID) BMPs are required in addition to site design measures and source controls to reduce pollutants in storm water discharges. LID BMPs are engineered facilities that are designed to retain or biotreat runoff on the project site. The 4th Term MS4 Storm Water Permit (Order

R8-2009-0030) requires the evaluation and use of LID features using the following hierarchy of treatment: infiltration, evapotranspiration, harvest/reuse, and biotreatment. The following sections summarize the LID BMPs proposed for the project in accordance with the permit hierarchy and performance criteria outlined in Section IV.1.

IV.3.1 Hydrologic Source Controls (HSCs)

Hydrologic source controls (HSCs) can be considered to be a hybrid between site design practices and LID BMPs. HSCs are distinguished from site design BMPs in that they do not reduce the tributary area or reduce the imperviousness of a drainage area; rather they reduce the runoff volume that would result from a drainage area with a given imperviousness compared to what would result if HSCs were not used.

HYDROLOGIC SOURCE CONTROLS		
ID	Name	Included?
HSC-1	Localized on-lot infiltration	<input type="checkbox"/>
HSC-2	Impervious area dispersion (e.g. roof top disconnection)	<input type="checkbox"/>
HSC-3	Street trees (canopy interception)	<input type="checkbox"/>
HSC-4	Residential rain barrels (not actively managed)	<input type="checkbox"/>
HSC-5	Green roofs/Brown roofs	<input type="checkbox"/>
HSC-6	Blue roofs	<input type="checkbox"/>
HSC-7	Impervious area reduction (e.g. permeable pavers, site design)	<input type="checkbox"/>

HSCs were not incorporated into the project's design at this stage in the project's development. Any HSC's will be accounted for during final design and the cumulative volume of the HSC's will be subtracted from the required treatment volume in the Final WQMP.

IV.3.2 Infiltration BMPs

Infiltration BMPs are LID BMPs that capture, store and infiltrate storm water runoff. These BMPs are engineered to store a specified volume of water and have no design surface discharge (underdrain or outlet structure) until this volume is exceeded. Examples of infiltration BMPs include infiltration trenches, bioretention without underdrains, drywells, permeable pavement, and underground infiltration galleries.

INFILTRATION		
ID	Name	Included?
INF-3	Bioretention Without Underdrains	<input type="checkbox"/>

INFILTRATION		
ID	Name	Included?

	Permeable Concrete Pavers	<input type="checkbox"/>
	Other:	<input type="checkbox"/>

No infiltration BMPs are proposed within the project. As discussed in Section III.2, the site is subject to liquefaction due to the presence of clay soils, and so infiltration of runoff is not considered feasible. See Appendix F for further details.

IV.3.3 Evapotranspiration & Rainwater Harvesting BMPs

Evapotranspiration (ET) BMPs are a class of retention BMPs that discharges stored volume predominately to ET, though some infiltration may occur. ET includes both evaporation and transpiration, and ET BMPs may incorporate one or more of these processes. BMPs must be designed to achieve the maximum feasible ET, where required to demonstrate that the maximum amount of water has been retained on-site. Since ET is not the sole process in these BMPs, specific design and sizing criteria have not been developed for ET-based BMPs.

--	Biotreatment BMPs, see Section VI.3.4	<input type="checkbox"/>

EVAPOTRANSPIRATION		
ID	Name	Included?
	Other:	<input type="checkbox"/>

Since harvest and reuse will be utilized for retaining the design capture volume on-site, evapotranspiration BMPs were not incorporated into the project's design.

Harvest and use (aka. Rainwater Harvesting) BMPs are LID BMPs that capture and store storm water runoff for later use. These BMPs are engineered to store a specified volume of water and have no design surface discharge until this volume is exceeded. Harvest and use BMPs include both above-ground and below-ground cisterns. Examples of uses for harvested water include irrigation, toilet and urinal flushing, vehicle washing, evaporative cooling, industrial processes and other non-potable uses.

HU-2	Underground detention	<input type="checkbox"/>
--	Other:	<input type="checkbox"/>

In order to quantify harvested water demand for the common areas of the project, the Modified Estimated Applied Water Use (EAWU) method was used, consistent with Appendix X of the Model WQMP's Technical Guidance Document (TGD), dated December 20, 2013.

The Modified EAWU method is modified from the OC Irrigation Code (County Ordinance No. 09-010) to account for the wet season demand and storm events (assuming that no irrigation would be applied for approximately 30% of the days in the wet season).

The equation used to calculate the Modified EAWU is:

$$\text{Modified EAWU} = \frac{(ET_{O_{wet}} \times K_L \times LA \times 0.015)}{IE}$$

Where:

Modified EAWU = estimated daily average water use during wet season

ET_{O_{wet}} = average reference ET from November through April (inches per month) per Table X.2 of the TGD

K_L = landscape coefficient (Table X.4 of the TGD)

LA = landscape area irrigated with harvested water (square feet)

IE = irrigation efficiency (assumed at 90%)

Note: In the equation, the coefficient (0.015) accounts for unit conversions and shut down of irrigation during and for three days following a significant precipitation event.

For a system to be considered “feasible”, the system must be designed with a storage volume equal to the DCV from the tributary area and achieve more than 40% capture. The system must also be able to drawdown in 30 days to meet the 40% capture value. In addition, Table X.6 of the Technical Guidance Document sets forth the demand thresholds for minimum partial capture.

TABLE X.6: HARVESTED WATER DEMAND THRESHOLDS FOR MINIMUM PARTIAL CAPTURE	
Design Capture Storm Depth, inches	Wet Season Demand Required for Minimum Partial Capture, gpd per impervious acre
0.60	490
0.65	530
0.70	570
0.75	610
0.80	650
0.85	690
0.90	730
0.95	770
1.00	810

The following table summarizes the estimated applied water use for the common area landscaping of the project. The golf course is assumed to have turf conditions and thus that landscape coefficient will be applied.

ESTIMATED APPLIED WATER USE (EAWU) FOR COMMON AREA LANDSCAPING									
Landscape Type	Total Area (ac)	% Impervious	Impervious Tributary (ac)	Irrigated LS Area (ac)	ET_{OWet}⁽¹⁾ (in/mo)	K_L⁽²⁾	Modified EAWU (gpd)	Modified EAWU per impervious acre (gpd/ac)	Minimum Capture Threshold⁽³⁾ (gpd/ac)
Turf	15.08	65	9.80	120	2.75	0.7	167,475	17,089	650
Design Capture Volume (gal)				245,678	Drawdown (days)				0.68
Notes:									
1 Per Table X.2 for Laguna Beach Region (similar climate type), Model WQMP Technical Guidance Document, dated December 20, 2013.									
2 Per Table X.4 of the Model WQMP Technical Guidance Document, dated December 20, 2013.									
3 Per Table X.6 of Model WQMP Technical Guidance Document, dated December 20, 2013.									

As shown above, the project site has sufficient water demand during the wet season to support harvest and reuse. The project meets the minimum capture threshold of 650 gallons per day/acre with its Modified EAWU or estimated daily average water usage during the wet season. Therefore, the DCV will be fully utilized and emptied for the next storm event. Drawdown of the DCV is anticipated to take approximately 1.25 days by the landscape’s water demand usage, which is less than the maximum drawdown time of 30 days.

EAWU was calculated based on the entire golf course wet weather irrigation. The evapotranspiration assumed to be that of the wet season average for Laguna Beach due to the project’s proximity to the coast. The irrigation efficiency was assumed to 90 percent, and the landscape coefficient used for the entire irrigation area is for active turf throughout the entire golf course area. As the lakes are interconnected and utilized to irrigate the entire property, it is assumed that the water quality volume routed to the lakes can also serve this purpose. Final operations of the lakes to ensure drawdown requirements and public health code regulations will be confirmed in final engineering.

IV.3.4 Biotreatment BMPs

Biotreatment BMPs are a broad class of LID BMPs that reduce storm water volume to the maximum extent practicable, treat storm water using a suite of treatment mechanisms characteristic of biologically active systems, and discharge water to the downstream storm drain system or directly to receiving waters. Treatment mechanisms include media filtration (though biologically-active media), vegetative filtration (straining, sedimentation, interception, and stabilization of particles resulting from shallow flow through vegetation), general sorption processes (i.e., absorption, adsorption, ion-exchange, precipitation, surface complexation), biologically-mediated transformations, and other processes to address both suspended and dissolved constituents. Examples of biotreatment BMPs include bioretention with underdrains, vegetated swales, constructed wetlands, and proprietary biotreatment systems.

BIOTREATMENT		
ID	Name	Included?
BIO-1	Bioretention with underdrains	<input type="checkbox"/>
	Storm Water planter boxes with underdrains	<input type="checkbox"/>
	Rain gardens with underdrains	<input type="checkbox"/>
BIO-5	Constructed wetlands	<input type="checkbox"/>
BIO-2	Vegetated swales	<input type="checkbox"/>
BIO-3	Vegetated filter strips	<input type="checkbox"/>
BIO-7	Proprietary vegetated biotreatment systems	<input type="checkbox"/>
BIO-4	Wet extended detention basin	<input type="checkbox"/>
BIO-6	Dry extended detention basins	<input type="checkbox"/>
--	Other:	<input type="checkbox"/>

Since harvest and reuse will be utilized for retaining the design capture volume on-site, biotreatment BMPs were not incorporated into the project's design.

IV.3.5 Hydromodification Control BMPs

The onsite lakes will be utilized for hydromodification control. Stormwater runoff will be routed and retained at the existing onsite lakes north of the project site. The volume that needs to be retained by hydromodification is 0.14 ac-ft (6,098 cf). As this volume is less than the 85th percentile water quality volume of 31,202 cubic feet, and the irrigation demand can drawdown the water quality volume within 48 hours, hydromodification requirements are also satisfied as the HCOC volume is less. It is assumed that the storage within the several lakes on the property that are interconnected can provide adequate capacity to store these volumes and be operated appropriately. Details for storage volume and lake operations will be provided in final design.

HYDROMODIFICATION CONTROLS	
BMP Name	BMP Description
Retaining Lake	The golf course has existing onsite lakes that are utilized for irrigation. The water quality and hydromodification volumes will be directed to these lakes and retained.

IV.3.6 Regional/Sub-Regional LID BMPs

Not applicable. LID BMPs (harvest and reuse) will be utilized for water quality treatment on-site in accordance with the MS4 Permit hierarchy identified at the beginning of this Section.

IV.3.7 Treatment Control BMPs

Treatment control BMPs can only be considered if the project conformance analysis indicates that it is not feasible to retain the full design capture volume with LID BMPs.

TREATMENT CONTROL BMPs		
ID	Name	Included?

N15	Street Sweeping Private Streets and Parking Lots	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
N16	Retail Gasoline Outlets	<input type="checkbox"/>	<input checked="" type="checkbox"/>	No retail gasoline outlets proposed.

N1, Education for Property Owners, Tenants and Occupants

Educational materials will be provided to tenants, including brochures and restrictions to reduce pollutants from reaching the storm drain system. Examples include tips for pet care, household tips, and proper household hazardous waste disposal. Tenants will be provided with these materials by the property management prior to occupancy, and periodically thereafter. Refer to Section VII for a list of materials available and attached to this WQMP. Additional materials are available through the County of Orange Stormwater Program website (<http://ocwatersheds.com/PublicEd/>) and the California Stormwater Quality Association's (CASQA) BMP Handbooks (<http://www.cabmphandbooks.com/>).

N2, Activity Restrictions

The Owner shall develop ongoing activity restrictions that include those that have the potential to create adverse impacts on water quality. Activities include, but are not limited to: handling and disposal of contaminants, fertilizer and pesticide application restrictions, litter control and pick-up, and vehicle or equipment repair and maintenance in non-designated areas, as well as any other activities that may potentially contribute to water pollution.

N3, Common Area Landscape Management

Management programs will be designed and implemented by the Owner to maintain all the common areas within the project site. These programs will cover how to reduce the potential pollutant sources of fertilizer and pesticide uses, utilization of water-efficient landscaping practices and proper disposal of landscape wastes by the owner/developer and/or contractors.

N4, BMP Maintenance

The Owner will be responsible for the implementation and maintenance of each applicable non-structural BMP, as well as scheduling inspections and maintenance of all applicable structural BMP facilities through its staff, landscape contractor, and/or any other necessary maintenance contractors. Details on BMP maintenance are provided in Section V of this WQMP, and the O&M Plan is included in Appendix D.

N7, Spill Contingency Plan

Any facilities that store liquid materials or wastes shall maintain procedures for spill response and cleanup activities. Emergency spill kits shall be kept on-site at all times. Spill kits shall include, at a minimum, dry adsorbent material such as kitty litter, mats or pillows, containment booms, wipes, goggles, gloves and disposal bags. Minor spills shall be cleaned up immediately using dry methods, consistent with measures identified in the fact sheets attached to this WQMP. Activities will be coordinated between the respective departments and the Police and Fire departments in the event of a spill. Procedures shall be maintained on an ongoing basis.

N11, Common Area Litter Control

The Owner will be responsible for performing trash pickup and sweeping of littered common areas on a weekly basis or whenever necessary. Responsibilities will also include noting improper disposal materials by the public and reporting such violations for investigation.

N12, Employee Training

All employees of the Owner and any contractors will require training to ensure that employees are aware of maintenance activities that may result in pollutants reaching the storm drain. Training will include, but not be limited to, spill cleanup procedures, proper waste disposal, housekeeping practices, etc.

N14, Common Area Catch Basin Inspection

All on-site catch basin inlets and drainage facilities shall be inspected and maintained by the Owner at least once a year, prior to the rainy season, no later than October 1st of each year.

N15, Street Sweeping Private Streets and Parking Lots

The Owner shall be responsible for sweeping all on-site streets, drive aisles, and covered/uncovered parking areas within the project on a quarterly basis.

IV.3.9 Structural Source Control BMPs

The table below indicates all BMPs to be incorporated in the project. For those designated as not applicable (N/A), a brief explanation why is provided.

STRUCTURAL SOURCE CONTROL BMPs				
ID	Name	Included?	Not Applicable?	If Not Applicable, Provide Brief Reason
S1 SD-13	Provide storm drain system stenciling and signage	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
S2 SD-34	Design and construct outdoor material storage areas to reduce pollution introduction	<input type="checkbox"/>	<input checked="" type="checkbox"/>	No outdoor material storage areas are proposed as part of the project.
S3 SD-32	Design and construct trash and waste storage areas to reduce pollution introduction	<input checked="" type="checkbox"/>	<input type="checkbox"/>	

STRUCTURAL SOURCE CONTROL BMPs				
ID	Name	Included?	Not Applicable?	If Not Applicable, Provide Brief Reason
S4 SD-12	Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
S5	Protect slopes and channels and provide energy dissipation	<input type="checkbox"/>	<input checked="" type="checkbox"/>	There are no slopes or channels on the project site.
S6 SD-31	Properly Design: Dock areas	<input type="checkbox"/>	<input checked="" type="checkbox"/>	No outdoor below grade loading docks are proposed.
S7 SD-31	Properly Design: Maintenance bays	<input type="checkbox"/>	<input checked="" type="checkbox"/>	No maintenance bays are proposed.
S8 SD-33	Properly Design: Vehicle wash areas	<input type="checkbox"/>	<input checked="" type="checkbox"/>	No vehicles wash areas proposed.
S9 SD-36	Properly Design: Outdoor processing areas	<input type="checkbox"/>	<input checked="" type="checkbox"/>	No outdoor processing areas are proposed.
S10	Properly Design: Equipment wash areas	<input type="checkbox"/>	<input checked="" type="checkbox"/>	No separate equipment wash racks are proposed.
S11 SD-30	Properly Design: Fueling areas	<input type="checkbox"/>	<input checked="" type="checkbox"/>	No fueling areas are proposed as part of the project
S12 SD-10	Properly Design: Hillside landscaping	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Project site is not located on a hillside.
S13	Properly Design: Wash water control for food preparation areas	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
S14	Properly Design: Community car wash racks	<input type="checkbox"/>	<input checked="" type="checkbox"/>	No community car wash racks are proposed.

S1/SD-13, Provide storm drain system stenciling and signage

The phrase "NO DUMPING! DRAINS TO OCEAN", or an equally effective phrase approved by the City, will be stenciled on all major storm drain inlets within the project site to alert the public to the destination of pollutants discharged into storm water. Stencils shall be in place prior to release of certificate of occupancy. Stencils shall be inspected for legibility on an annual basis and re-stenciled as necessary.

S3/SD-32, Design and construct trash and waste storage areas to reduce pollution introduction

All trash and waste shall be stored in containers that have lids or tarps to minimize direct precipitation into the containers. A to be determined number of trash enclosures will be located onsite. The trash

storage areas will be designed to City standards, and will be walled, roofed, have gates and proper drainage per City standards.

S4/SD-12, Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control

The Owner will be responsible for the installation and maintenance of all common landscape areas utilizing similar planting materials with similar water requirements to reduce excess irrigation runoff. The Owner will be responsible for implementing all efficient irrigation systems for common area landscaping including, but not limited to, provisions for water sensors and programmable irrigation cycles. This includes smart timers, rain sensors, and moisture shut-off valves. The irrigation systems shall be in conformance with water efficiency guidelines. Systems shall be tested twice per year, and water used during testing/flushing shall not be discharged to the storm drain system.

S13, Properly Design: Wash water control for food preparation areas

All wash water from food prep areas will be controlled and proper staff training conducted by the site operator. Food preparation facilities shall meet all health and safety, building and safety and any other applicable regulations, codes requirements, including installation of a grease interceptor where required. Sinks shall be contained with sanitary sewer connections for disposal of wash waters containing kitchen and food wastes.

IV.4 ALTERNATIVE COMPLIANCE PLAN

IV.4.1 Water Quality Credits

Local jurisdictions may develop a water quality credit program that applies to certain types of development projects after they first evaluate the feasibility of meeting LID requirements on-site. If it is not feasible to meet the requirements for on-site LID, project proponents for specific project types can apply credits that would reduce project obligations for selecting and sizing other treatment BMPs or participating in other alternative programs.

WATER QUALITY CREDITS	
Credit	Applicable?
Redevelopment projects that reduce the overall impervious footprint of the project site.	<input type="checkbox"/>
Brownfield redevelopment, meaning redevelopment, expansion, or reuse of real property which may be complicated by the presence or potential presence of hazardous substances, pollutants or contaminants, and which have the potential to contribute to adverse ground or surface water quality if not redeveloped.	<input type="checkbox"/>
Higher density development projects which include two distinct categories (credits can only be taken for one category): those with more than seven units per acre of development (lower credit allowance); vertical density developments, for example, those with a Floor to Area Ratio (FAR) of 2 or those having more than 18 units per acre (greater credit allowance)	<input type="checkbox"/>

WATER QUALITY CREDITS	
Credit	Applicable?
Mixed use development, such as a combination of residential, commercial, industrial, office, institutional, or other land uses which incorporate design principles that can demonstrate environmental benefits that would not be realized through single use projects (e.g. reduced vehicle trip traffic with the potential to reduce sources of water or air pollution).	<input type="checkbox"/>
Transit-oriented developments, such as a mixed use residential or commercial area designed to maximize access to public transportation; similar to above criterion, but where the development center is within one half mile of a mass transit center (e.g. bus, rail, light rail or commuter train station). Such projects would not be able to take credit for both categories, but may have greater credit assigned	<input type="checkbox"/>
Redevelopment projects in an established historic district, historic preservation area, or similar significant city area including core City Center areas (to be defined through mapping).	<input type="checkbox"/>
Developments with dedication of undeveloped portions to parks, preservation areas and other pervious uses.	<input type="checkbox"/>
Developments in a city center area.	<input type="checkbox"/>
Developments in historic districts or historic preservation areas.	<input type="checkbox"/>
Live-work developments, a variety of developments designed to support residential and vocational needs together – similar to criteria to mixed use development; would not be able to take credit for both categories.	<input type="checkbox"/>
In-fill projects, the conversion of empty lots and other underused spaces into more beneficially used spaces, such as residential or commercial areas.	<input type="checkbox"/>

Not applicable. Water quality credits will not be applied for the project. LID BMPs will be utilized for water quality treatment on-site in accordance with the MS4 Permit hierarchy identified at the beginning of this Section.

IV.4.2 Alternative Compliance Plan Information

Not applicable. LID BMPs (harvest and reuse) will be utilized for water quality treatment on-site in accordance with the MS4 Permit hierarchy identified at the beginning of this Section.

SECTION V INSPECTION/MAINTENANCE RESPONSIBILITY FOR BMPs

It has been determined that the Owner shall assume all BMP inspection and maintenance responsibilities for the Old Ranch Country Club project.

Contact Name:	Kyung Cho
Title:	Owner
Company:	Old Ranch Country Club, LLC
Address:	3901 Lampson Avenue, Seal Beach, CA. 90740
Phone:	
Fax:	
Email:	

Should the maintenance responsibility be transferred at any time during the operational life of Old Ranch Country Club, such as when an HOA or POA is formed for a project, a formal notice of transfer shall be submitted to the City of Seal Beach at the time responsibility of the property subject to this WQMP is transferred. The transfer of responsibility shall be incorporated into this WQMP as an amendment.

The Owner shall verify BMP implementation and ongoing maintenance through inspection, self-certification, survey, or other equally effective measure. The certification shall verify that, at a minimum, the inspection and maintenance of all structural BMPs including inspection and performance of any required maintenance in the late summer / early fall, prior to the start of the rainy season. A form that may be used to record implementation, maintenance, and inspection of BMPs is included in Appendix D.

The City of Seal Beach may conduct verifications to assure that implementation and appropriate maintenance of structural and non-structural BMPs prescribed within this WQMP is taking place at the project site. The Owner shall retain operations, inspections and maintenance records of these BMPs and they will be made available to the City or County upon request. All records must be maintained for at least five (5) years after the recorded inspection date for the lifetime of the project.

Long-term funding for BMP maintenance will be provided by Old Ranch Country Club, LLC.

The Operations and Maintenance (O&M) Plan can be found in Appendix D.

BMP INSPECTION & MAINTENANCE RESPONSIBILITY MATRIX

	BMP	Inspection/Maintenance Activities	Minimum Frequency	Responsible Party
HARVEST & USE BMPs				
HU-1	Above-ground basin	Trash and debris should be collected and prevented from entering system and lakes. The water level of the lakes must be monitored regularly, and especially after a heavy storm.	Before and After Storm Events	Old Ranch Country Club, LLC

NON-STRUCTURAL SOURCE CONTROL BMPs				
N1	Education for Property Owners, Tenants and Occupants	Not Applicable		
N2	Activity Restrictions	The Owner will prescribe activity restrictions to protect surface water quality, through lease terms or other equally effective measure, for the property. Restrictions include, but are not limited to, prohibiting vehicle maintenance or vehicle washing outside of designated wash areas.	Ongoing	Old Ranch Country Club, LLC
N3	Common Area Landscape Management	Maintenance shall be consistent with City requirements. Fertilizer and/or pesticide usage shall be consistent with County Management Guidelines for Use of Fertilizers (OC DAMP Section 5.5) as well as local requirements. Maintenance includes mowing, weeding, and debris removal on a weekly basis. Trimming, replanting, and replacement of mulch shall be performed on an as-needed basis to prevent exposure of erodible surfaces. Trimmings, clippings, and other landscape wastes shall be properly disposed of in accordance with local regulations. Materials temporarily stockpiled during	Monthly	Old Ranch Country Club, LLC

		maintenance activities shall be placed away from water courses and storm drain inlets.		
N4	BMP Maintenance	Maintenance of structural BMPs implemented at the project site shall be performed at the frequency prescribed in this WQMP (Appendix D). Records of inspections and BMP maintenance shall be kept by the Owner and shall be available for review upon request.	Ongoing	Old Ranch Country Club, LLC
N5	Title 22 CCR Compliance (How development will comply)	Not Applicable		
N6	Local Industrial Permit Compliance	Not Applicable		
N7	Spill Contingency Plan	Spill contingency measures shall be implemented on an ongoing basis by the Owner. Inspect/verify contingency plan and associated documentation is being followed on an annual basis. Verify spill kits are adequately stocked and placed at key locations in the food preparation area and storage areas.	Ongoing	Old Ranch Country Club, LLC
N8	Underground Storage Tank Compliance	Not Applicable		
N9	Hazardous Materials Disclosure Compliance	Not Applicable		
N10	Uniform Fire Code Implementation	Not Applicable		
N11	Common Area Litter Control	Litter patrol, violations investigations, reporting and other litter control activities shall be performed on a weekly basis and in conjunction with routine maintenance activities.	Weekly	Old Ranch Country Club, LLC
N12	Employee Training	Educate all new employees/ managers on storm water pollution prevention, particularly good housekeeping practices, prior to the start of the rainy season (October 1). Refresher courses shall be conducted on an as needed basis.	Annually	Old Ranch Country Club, LLC
N13	Housekeeping of Loading Docks	Sweep area routinely and before October 1 each year. Keep area clean of trash and debris at all	Weekly	Old Ranch Country Club, LLC

		times. Spills shall be cleaned up immediately using dry methods.		
N14	Common Area Catch Basin Inspection	Catch basin inlets and other drainage facilities shall be inspected after each storm event and once per year. Inlets and other facilities shall be cleaned prior to the rainy season, by October 1 each year.	Annually	Old Ranch Country Club, LLC
N15	Street Sweeping Private Streets and Parking Lots	Drive aisles & parking areas must be swept at least quarterly (every 3 months), including prior to the start of the rainy season (October 1).	Quarterly	Old Ranch Country Club, LLC
N16	Retail Gasoline Outlets	Not Applicable		
STRUCTURAL SOURCE CONTROL BMPs				
S1 SD-13	Provide storm drain system stenciling and signage	Storm drain stencils shall be inspected for legibility, at minimum, once prior to the storm season, no later than October 1 each year. Those determined to be illegible will be re-stenciled as soon as possible.	Annually	Old Ranch Country Club, LLC
S2 SD-34	Design and construct outdoor material storage areas to reduce pollution introduction	Not Applicable		
S3 SD-32	Design and construct trash and waste storage areas to reduce pollution introduction	Not Applicable		
S4 SD-12	Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control	In conjunction with routine maintenance activities, verify that landscape design continues to function properly by adjusting properly to eliminate overspray to hardscape areas, and to verify that irrigation timing and cycle lengths are adjusted in accordance with water demands, given time of year, weather, and day or night time temperatures. System testing shall occur twice per year. Water from testing/flushing shall be collected and properly disposed to the sewer system and shall not discharge to the storm drain system.	2x per year	Old Ranch Country Club, LLC
S5	Protect slopes and channels and provide energy dissipation	Not Applicable		

S6 SD-31	Properly Design: Dock areas	Sweep area routinely and before October 1 each year. Keep area clean of trash and debris at all times. Spills shall be cleaned up immediately. See also BMP N13.	Weekly	Old Ranch Country Club, LLC
S7 SD-31	Properly Design: Maintenance bays	Not Applicable		
S8 SD-33	Properly Design: Vehicle wash areas	Sweep area at least once per week and before October 1 of each year to remove solid debris. Clean up spills immediately. Maintain spill kits in accordance with BMP N7.	Weekly	Old Ranch Country Club, LLC
S9 SD-36	Properly Design: Outdoor processing areas	Not Applicable		
S10	Properly Design: Equipment wash areas	Not Applicable		
S11 SD-30	Properly Design: Fueling areas	Not Applicable		
S12 SD-10	Properly Design: Hillside landscaping	Not Applicable		
S13	Properly Design: Wash water control for food preparation areas	Inspection / maintenance shall occur at least once in the late summer / early fall, prior to the start of the rainy season. Maintenance includes using dry cleanup methods for cleaning (i.e., sweeping), keeping spill kits on-site and stocked, properly storing and hauling used oil and grease, and disposing wash water to sanitary sewer. Wash water shall not discharge to storm drain system. Mats shall be cleaned indoors or with dry cleaning methods only.	Annually	Old Ranch Country Club, LLC
S14	Properly Design: Community car wash racks	Not Applicable		

Any waste generated from maintenance activities will be disposed of properly. Wash water and other waste from maintenance activities is not to be discharged or disposed of into the storm drain system. Clippings from landscape maintenance (i.e. prunings) will be collected and disposed of properly off-site, and will not be washed into the streets, local area drains/conveyances, or catch basin inlets.

SECTION VI SITE PLAN AND DRAINAGE PLAN

The exhibits provided in this section are to illustrate the post construction BMPs prescribed within this WQMP. Drainage flow information of the proposed project, such as general surface flow lines, concrete or other surface drainage conveyances, and storm drain facilities are also depicted. All structural source control and treatment control BMPs are shown as well.

XIV.4. Harvest and Use BMP Fact Sheets (HU)

HU-1: Above-Ground Cisterns

Cisterns are large rain barrels. While rain barrels are less than 100 gallons, cisterns range from 100 to more than 10,000 gallons in capacity. Cisterns collect and temporarily store runoff from rooftops for later use as irrigation and/or other non-potable uses. The following components are generally required for installing and utilizing a cistern: (1) pipes that divert rooftop runoff to the cistern, (2) an overflow for when the cistern is full, (3) a pump, and (4) a distribution system to supply the intended end uses.

Feasibility screening consideration, opportunity criteria, design criteria, etc. for this BMP are listed below under HU-2: Underground Detention.

HU-2: Underground Detention

Underground detention facilities are subsurface tanks, vaults, or oversized pipes that store stormwater runoff. Similar to cisterns, underground detention facilities can store water for later use as irrigation and/or other non-potable uses.

Above-Ground Cisterns
Source: Sunset Publishing Corporation

Underground detention tank
Source: www.webtecgeos.com

Feasibility Screening Considerations

- The primary feasibility considerations for harvest and use systems for stormwater management is the presence of consistent and reliable demand that is sufficient to drain the systems relatively quickly between storms. [Appendix X](#) provides guidance for calculating harvested water demand.
- Use of harvested water should not conflict with applicable plumbing and health codes at the time of project application.

Opportunity Criteria

- Cisterns may collect rooftop runoff, and if located underground, may collect ground-level runoff.
- Cisterns may be installed in any type of land use provided space is available and adequate water demand exists.
- Stored water may supply non-potable water use demands such as irrigation and toilet flushing.
- Cisterns and underground detention facilities may also be used for peak flow control if active storage volume and hydraulic controls are provided above the retained storage or systems are operated with advanced controllers.

OC-Specific Design Criteria and Considerations for Above-Ground Cisterns

- Cistern systems should include prescreening in the form of screens on gutters and downspouts to remove vegetative debris and sediment from the runoff prior to entering the cistern.

SECTION VII EDUCATIONAL MATERIALS

The educational materials included in this WQMP are provided to inform people involved in future uses, activities, or ownership of the site about the potential pitfalls associated with careless storm water management. "The Ocean Begins at Your Front Door" provides users with information about storm water that is/will be generated on site, what happens when water enters a storm drain, and its ultimate fate, discharging into the ocean. Also included are activities guidelines to educate anyone who is or will be associated with activities that have a potential to impact storm water runoff quality, and provide a menu of BMPs to effectively reduce the generation of storm water runoff pollutants from a variety of activities. The educational materials that may be used for the proposed project are included in Appendix C of this WQMP and are listed below.

APPENDIX A

SUPPORTING CALCULATIONS

Worksheet C: Capture Efficiency Method for Volume-Based, Constant Drawdown BMPs

Project: Old Ranch Country Club

Date: 07/02/2021

			Total Site
Step 1: Determine the design capture storm depth used for calculating volume			
1	Enter design capture storm depth from Figure III.1, d (inches)	$d=$	0.80
2	Enter calculated drawdown time of the proposed BMP based on equation provided in applicable BMP Fact Sheet, T (hours)	$T=$	16.40
3	Using Figure III.2, determine the "fraction of design capture storm depth" at which the BMP drawdown time (T) line achieves 80% capture efficiency, X_1	$X_1=$	0.95
4	Enter the effect depth of provided HSCs upstream, d_{HSC} (inches) (Worksheet A)	$d_{HSC}=$	0
5	Enter capture efficiency corresponding to d_{HSC} , Y_2 (Worksheet A)	$Y_2=$	0%
6	Using Figure III.2, determine the fraction of "design capture storm depth" at which the drawdown time (T) achieves the equivalent of the upstream capture efficiency (Y_2), X_2	$X_2=$	0
7	Calculate the fraction of design volume that must be provided by BMP, $fraction = X_1 - X_2$	$fraction=$	0.95
8	Calculate the resultant design capture storm depth (inches), $d_{fraction} = fraction \times d$	$d_{fraction}=$	0.7600
Step 2: Calculate the DCV			
1	Enter Project area tributary to BMP(s), A (acres)	$A=$	15.080
2	Enter Project Imperviousness, imp (unitless)	$imp=$	80.0%
3	Calculate runoff coefficient, $C= (0.75 \times imp) + 0.15$	$C=$	0.750
4	Calculate runoff volume, $V_{design} = (C \times d_{fraction} \times A \times 43560 \times (1/12))$	$V_{design}=$	31,202.0
Supporting Calculations			
Provide drawdown time calculations per applicable BMP Fact Sheet:			
$HU-1$ Drawdown Time = $EAWU/DCV$			
Drawdown (T) = 16.40			

Modified EAWU (estimated daily average water usage during wet season) = 167475 gal/day

ETO_{WET} (Average reference ET from November through April (inches per month) = 2.75

K_L (Landscape Coefficient) = 0.70

LA (Landscape Area (sf)) = 5.227×10^6 [120 ac]

IE (Irrigation Efficiency - assumed 90% for demand calculations) = 0.90

$EAWU = ETO_{WET} \times K_L \times LA \times 0.015 / IE$

$167475 \text{ gal/day} = 2.75 \times 0.70 \times 5.227 \times 10^6 \text{ sf} \times 0.015 / 0.90$

Worksheet J: Summary of Harvested Water Demand and Feasibility

1	What demands for harvested water exist in the tributary area (check all that apply):			
2	Toilet and urinal flushing			
3	Landscape irrigation		X	
4	Other: _____			
5	What is the design capture storm depth? (Figure III.1)	d	0.80	inches
6	What is the project size?	A	15.08	ac
7	What is the acreage of impervious area?	IA	3.02	ac
For projects with multiple types of demand (toilet flushing, irrigation demand, and/or other demand)				
8	What is the minimum use required for partial capture? (Table X.6)		NA	gpd
9	What is the project estimated wet season total daily use (Section X.2)?		NA	gpd
10	Is partial capture potentially feasible? (Line 9 > Line 8?)		NA	
For projects with only toilet flushing demand				
11	What is the minimum TUTIA for partial capture? (Table X.7)		NA	
12	What is the project estimated TUTIA?		NA	
13	Is partial capture potentially feasible? (Line 12 > Line 11?)		NA	
For projects with only irrigation demand				
14	What is the minimum irrigation area required based on conservation landscape design? (Table X.8)		0.48	ac
15	What is the proposed project irrigated area? (multiply conservation landscaping by 1; multiply active turf by 2)		240	ac
16	Is partial capture potentially feasible? (Line 15 > Line 14?)		Yes	
<p>Provide supporting assumptions and citations for controlling demand calculation:</p> <p>Approximate landscape area – 120 ac; Line 15 = 120 x 2 = 240</p> <p>Golf course landscape type assumed to all be active turf area [$K_L = 0.7$]</p>				

Table X.6: Harvested Water Demand Thresholds for Minimum Partial Capture

Design Capture Storm Depth ¹ , inches	Wet Season Demand Required for Minimum Partial Capture, gpd per impervious acre
0.60	490
0.65	530
0.70	570
0.75	610
0.80	650
0.85	690
0.90	730
0.95	770
1.00	810

1- Based on isopluvial map (See XIV.1)

Table X.8: Minimum Irrigated Area for Potential Partial Capture Feasibility

NOTICE OF TRANSFER OF RESPONSIBILITY

NOTICE OF TRANSFER OF RESPONSIBILITY

WATER QUALITY MANAGEMENT PLAN

Old Ranch Country Club
APN: 130-012-58, 130-012-55, AND 130-012-54

Submission of this Notice Of Transfer of Responsibility constitutes notice to the City of Seal Beach that responsibility for the Water Quality Management Plan ("WQMP") for the subject property identified below, and implementation of that plan, is being transferred from the Previous Owner (and his/her agent) of the site (or a portion thereof) to the New Owner, as further described below.

I. Previous Owner/ Previous Responsible Party Information

Company/ Individual Name:		Contact Person:	
Street Address:		Title:	
City:	State:	ZIP:	Phone:

II. Information about Site Transferred

Name of Project (if applicable):	
Title of WQMP Applicable to site:	
Street Address of Site (if applicable):	
Planning Area (PA) and/ or Tract Number(s) for Site:	Lot Numbers (if Site is a portion of a tract):
Date WQMP Prepared (and revised if applicable):	

III. New Owner/ New Responsible Party Information

Company/ Individual Name:		Contact Person:	
Street Address:		Title:	
City:	State:	ZIP:	Phone:

IV. Ownership Transfer Information

General Description of Site Transferred to New Owner:	General Description of Portion of Project/ Parcel Subject to WQMP Retained by Owner (if any):
---	---

Lot/ Tract Numbers of Site Transferred to New Owner:
Remaining Lot/ Tract Numbers Subject to WQMP Still Held by Owner (if any):
Date of Ownership Transfer:

Note: When the Previous Owner is transferring a Site that is a portion of a larger project/ parcel addressed by the WQMP, as opposed to the entire project/parcel addressed by the WQMP, the General Description of the Site transferred and the remainder of the project/ parcel no transferred shall be set forth as maps attached to this notice. These maps shall show those portions of a project/ parcel addressed by the WQMP that are transferred to the New Owner (the Transferred Site), those portions retained by the Previous Owner, and those portions previously transferred by Previous Owner. Those portions retained by Previous Owner shall be labeled as "Previously Transferred".

V. Purpose of Notice of Transfer

The purposes of this Notice of Transfer of Responsibility are: 1) to track transfer of responsibility for implementation and amendment of the WQMP when property to which the WQMP is transferred from the Previous Owner to the New Owner, and 2) to facilitate notification to a transferee of property subject to a WQMP that such New Order is now the Responsible Party of record for the WQMP for those portions of the site that it owns.

VI. Certifications

A. Previous Owner

I certify under penalty of law that I am no longer the owner of the Transferred Site as described in Section II above. I have provided the New Owner with a copy of the WQMP applicable to the Transferred Site that the New Owner is acquiring from the Previous Owner.

Printed Name of Previous Owner Representative:	Title:
Signature of Previous Owner Representative:	Date:

B. New Owner

I certify under penalty of law that I am the owner of the Transferred Site, as described in Section II above, that I have been provided a copy of the WQMP, and that I have informed myself and understand the New Owner's responsibilities related to the WQMP, its implementation, and Best Management Practices associated with it. I understand that by signing this notice, the New Owner is accepting all ongoing responsibilities for implementation and amendment of the WQMP for the Transferred Site, which the New Owner has acquired from the Previous Owner.

Printed Name of New Owner Representative:	Title:
Signature:	Date:

APPENDIX C

EDUCATIONAL MATERIALS

Support from Orange County residents and businesses is needed to improve water quality and reduce urban runoff pollution. Proper use and disposal of materials will help stop pollution before it reaches the storm drain and the ocean.

Stormwater quality management programs have been developed throughout Orange County to educate and encourage the public to protect water quality, monitor runoff in the storm drain system, investigate illegal dumping and maintain storm drains.

Non-point source pollution can have a serious impact on water quality in Orange County. Pollutants from the storm drain system can harm marine life as well as coastal and wetland habitats. They can also degrade recreation areas such as beaches, harbors and bays.

The Effect on the Ocean

- Automotive leaks and spills.
- Improper disposal of used oil and other engine fluids.
- Metals found in vehicle exhaust, weathered paint, rust, metal plating and tires.
- Pesticides and fertilizers from lawns, gardens and farms.
- Improper disposal of cleaners, paint and paint removers.
- Soil erosion and dust debris from landscape and construction activities.
- Litter, lawn clippings, animal waste, and other organic matter.
- Oil stains on parking lots and paved surfaces.

Sources of Non-Point Source Pollution

- Anything we use outside homes, vehicles and businesses – like motor oil, paint, pesticides, fertilizers and cleaners – can be blown or washed into storm drains.
- A little water from a garden hose or rain can also send materials into storm drains.
- Storm drains are separate from our sanitary sewer systems; unlike water in sanitary sewers (from sinks or toilets), water in storm drains is not treated before entering our waterways.

Where Does It Go?

- Most people believe that the largest source of water pollution in urban areas comes from specific sources such as factories and sewage treatment plants. In fact, the largest source of water pollution comes from city streets, neighborhoods, construction sites and parking lots. This type of pollution is sometimes called “non-point source” pollution.
- There are two types of non-point source pollution: stormwater and urban runoff.
- Stormwater runoff results from rainfall.
- When rainstorms cause large volumes of water to rinse the urban landscape, picking up pollutants along the way.
- Urban runoff can happen any time of the year when excessive water use from irrigation, vehicle washing and other sources carries trash, lawn clippings and other urban pollutants into storm drains.

Did You Know?

Even if you live miles from the Pacific Ocean, you may be unknowingly polluting it.

Dumping one quart of motor oil into a storm drain can contaminate 250,000 gallons of water.

The Ocean Begins at Your Front Door

The Ocean Begins at Your Front Door

Never allow pollutants to enter the street, gutter or storm drain!

Follow these simple steps to help reduce water pollution:

Household Activities

- Do not rinse spills with water. Use dry cleanup methods such as applying cat litter or another absorbent material, sweep and dispose of in the trash. Take items such as used or excess batteries, oven cleaners, automotive fluids, painting products and cathode ray tubes, like TVs and computer monitors, to a Household Hazardous Waste Collection Center (HHWCC).
- For a HHWCC near you call (714) 834-6752 or visit www.oilandfills.com.
- Do not hose down your driveway, sidewalk or patio to the street, gutter or storm drain. Sweep up debris and dispose of it in the trash.

Automotive

- Take your vehicle to a commercial car wash whenever possible. If you wash your vehicle at home, choose soaps, cleaners, or detergents labeled non-toxic, phosphate-free or biodegradable. Vegetable and citrus-based products are typically safest for the environment.
- Do not allow washwater from vehicle washing to drain into the street, gutter or storm drain. Excess washwater should be disposed of in the sanitary sewer (through a sink or toilet) or onto an absorbent surface like your lawn.
- Monitor your vehicles for leaks and place a pan under leaks. Keep your vehicles well maintained to stop and prevent leaks.
- Never pour oil or antifreeze in the street, gutter or storm drain. Recycle these substances at a service station, a waste oil collection center or used oil recycling center. For the nearest Used Oil Collection Center call 1-800-CLEANUP or visit www.1800cleanup.org.

Pool Maintenance

- Pool and spa water must be dechlorinated and free of excess acid, alkali or color to be allowed in the street, gutter or storm drain.
- When it is not raining, drain dechlorinated pool and spa water directly into the sanitary sewer.
- Some cities may have ordinances that do not allow pool water to be disposed of in the storm drain. Check with your city.

Landscape and Gardening

- Do not over-water. Water your lawn and garden by hand to control the amount of water you use or set irrigation systems to reflect seasonal water needs. If water flows off your yard onto your driveway or sidewalk, your system is over-watering. Periodically inspect and fix leaks and misdirected sprinklers.
- Do not rake or blow leaves, clippings or pruning waste into the street, gutter or storm drain. Instead, dispose of waste by composting, hauling it to a permitted landfill, or as green waste through your city's recycling program.
- Follow directions on pesticides and fertilizer, (measure, do not estimate amounts) and do not use if rain is predicted within 48 hours.
- Take unwanted pesticides to a HHWCC to be recycled. For locations and hours of HHWCC, call (714) 834-6752 or visit www.oilandfills.com.

Trash

- Place trash and litter that cannot be recycled in securely covered trash cans.
- Whenever possible, buy recycled products.
- Remember: Reduce, Reuse, Recycle.

Pet Care

- Always pick up after your pet. Flush waste down the toilet or dispose of it in the trash. Pet waste, if left outdoors, can wash into the street, gutter or storm drain.
- If possible, bathe your pets indoors. If you must bathe your pet outside, wash it on your lawn or another absorbent/permeable surface to keep the washwater from entering the street, gutter or storm drain.
- Follow directions for use of pet care products and dispose of any unused products at a HHWCC.

Common Pollutants

Home Maintenance

- Detergents, cleaners and solvents
- Oil and latex paint
- Swimming pool chemicals
- Outdoor trash and litter

Lawn and Garden

- Pet and animal waste
- Pesticides
- Clippings, leaves and soil
- Fertilizer

Automobile

- Oil and grease
- Radiator fluids and antifreeze
- Cleaning chemicals
- Brake pad dust

Did you know that just one quart of oil can pollute 250,000 gallons of water?

A clean ocean and healthy creeks, rivers, bays and beaches are important to Orange County. However, not properly disposing of used oil can lead to water pollution. If you pour or drain oil onto driveways, sidewalks or streets, it can be washed into the storm drain. Unlike water in sanitary sewers (from sinks and toilets), water in storm drains is not treated before entering the ocean. Help prevent water pollution by taking your used oil to a used oil collection center.

Included in this brochure is a list of locations that will accept up to five gallons of used motor oil at no cost. Many also accept used oil filters. Please contact the facility before delivering your used oil. This listing of companies is for your reference and does not constitute a recommendation or endorsement of the company.

Please note that used oil filters may not be disposed of with regular household trash. They must be taken to a household hazardous waste collection or recycling center in Anaheim, Huntington Beach, Irvine or San Juan Capistrano. For information about these centers, visit www.oilandfills.com.

Please do not mix your oil with other substances!

For more information, please call the Orange County Stormwater Program at 1-877-89-SPILL (1-877-897-7455) or visit www.watersheds.com.

For information about the proper disposal of household hazardous waste, call the Household Waste Hotline at (714) 834-6752 or visit www.oilandfills.com.

For additional information about the nearest oil recycling center, call the Used Oil Program at 1-800-CLEANUP or visit www.cleanup.org.

This information was provided by the County of Orange Integrated Waste Management Department and the California Integrated Waste Management Board (CIWMB).

Clean beaches and healthy creeks, rivers, bays and ocean are important to Orange County. However, many common activities such as pest control can lead to water pollution if you're not careful. Pesticide treatments must be planned and applied properly to ensure that pesticides do not enter the street, gutter or storm drain. Unlike water in sanitary sewers (from sinks and toilets), water in storm drains is not treated before entering our waterways.

You would never dump pesticides into the ocean, so don't let it enter the storm drains. Pesticides can cause significant damage to our environment if used improperly. If you are thinking of using a pesticide to control a pest, there are some important things to consider.

For more information,
please call
University of California Cooperative
Extension Master Gardeners at
(714) 708-1646
or visit these Web sites:
www.uccemg.org
www.ipm.ucdavis.edu

For instructions on collecting a specimen
sample visit the Orange County
Agriculture Commissioner's website at:
http://www.ocagcomm.com/ser_lab.asp

To report a spill, call the
**Orange County 24-Hour
Water Pollution Problem
Reporting Hotline**
at 1-877-89-SPILL (1-877-897-7455).

For emergencies, dial 911.

Tips for Pest Control

Key Steps to Follow:

Step 1: Correctly identify the pest (insect, weed, rodent, or disease) and verify that it is actually causing the problem.

This is important because beneficial insects are often mistaken for pests and sprayed with pesticides needlessly.

Consult with a Certified Nursery Professional at a local nursery or garden center or send a sample of the pest to the Orange County Agricultural Commissioner's Office.

Determine if the pest is still present – even though you see damage, the pest may have left.

Step 2: Determine how many pests are present and causing damage.

Small pest populations may be controlled more safely using non-pesticide techniques. These include removing food sources, washing off leaves with a strong stream of water, blocking entry into the home using caulking and replacing problem plants with ones less susceptible to pests.

Integrated Pest Management (IPM) usually combines several least toxic pest control methods for long-term prevention and management of pest problems without harming you, your family, or the environment.

Step 3: If a pesticide must be used, choose the least toxic chemical.

Obtain information on the least toxic pesticides that are effective at controlling the target pest from the UC Statewide Integrated Pest Management (IPM) Program's Web site at www.ipm.ucdavis.edu.

Seek out the assistance of a Certified Nursery Professional at a local nursery or garden center when selecting a pesticide. Purchase the smallest amount of pesticide available.

Apply the pesticide to the pest during its most vulnerable life stage. This information can be found on the pesticide label.

Step 4: Wear appropriate protective clothing.

Follow pesticide labels regarding specific types of protective equipment you should wear. Protective clothing should always be washed separately from other clothing.

Step 5: Continuously monitor external conditions when applying pesticides such as weather, irrigation, and the presence of children and animals.

Never apply pesticides when rain is predicted within the next 48 hours. Also, do not water after applying pesticides unless the directions say it is necessary.

Apply pesticides when the air is still; breezy conditions may cause the spray or dust to drift away from your targeted area.

In case of an emergency call 911 and/or the regional poison control number at (714) 634-5988 or (800) 544-4404 (CA only).

For general questions you may also visit www.calpoison.org.

Step 6: In the event of accidental spills, sweep up or use an absorbent agent to remove any excess pesticides. Avoid the use of water.

Be prepared. Have a broom, dust pan, or dry absorbent material, such as cat litter, newspapers or paper towels, ready to assist in cleaning up spills.

Contain and clean up the spill right away. Place contaminated materials in a doubled plastic bag. All materials used to clean up the spill should be properly disposed of according to your local Household Hazardous Waste Disposal site.

Step 7: Properly store and dispose of unused pesticides.

Purchase Ready-To-Use (RTU) products to avoid storing large concentrated quantities of pesticides.

Store unused chemicals in a locked cabinet.

Unused pesticide chemicals may be disposed of at a Household Hazardous Waste Collection Center.

Empty pesticide containers should be triple rinsed prior to disposing of them in the trash.

Sewage Spill Regulatory Requirements

Allowing sewage to discharge to a gutter or storm drain may subject you to penalties and/or out-of-pocket costs to reimburse cities or public agencies for clean-up efforts.

Here are the pertinent codes, fines, and agency contact information that apply.

Orange County Stormwater Program

24 Hour Water Pollution Reporting Hotline

1-877-89-SPILL (1-877-897-7455)

- County and city water quality ordinances prohibit discharges containing pollutants.

Orange County Health Care Agency

Environmental Health

(714) 433-6419

California Health and Safety Code, Sections 5410-5416

- No person shall discharge raw or treated sewage or other waste in a manner that results in contamination, pollution or a nuisance.
- Any person who causes or permits a sewage discharge to any state waters:
 - must immediately notify the local health agency of the discharge.
 - shall reimburse the local health agency for services that protect the public's health and safety (water-contact receiving waters).
 - who fails to provide the required notice to the local health agency is guilty of a misdemeanor and shall be punished by a fine (between \$500-\$1,000) and/or imprisonment for less than one year.

Regional Water Quality Control Board

Santa Ana Region San Diego Region

(951) 782-4130

(858) 467-2952

- Requires the prevention, mitigation, response to and reporting of sewage spills.

California Office of Emergency Services

(800) 852-7550

California Water Code, Article 4, Chapter 4, Sections 13268-13271
California Code of Regulations, Title 23, Division 3, Chapter 9.2, Article 2, Sections 2250-2260

- Any person who causes or permits sewage in excess of 1,000 gallons to be discharged to state waters shall immediately notify the Office of Emergency Services.
- Any person who fails to provide the notice required by this section is guilty of a misdemeanor and shall be punished by a fine (less than \$20,000) and/or imprisonment for not more than one year.

What is a Sewage Spill?

Sewage spills occur when the wastewater being transported via underground pipes overflows through a manhole, cleanout or broken pipe. Sewage spills can cause health hazards, damage to homes and businesses, and threaten the environment, local waterways and beaches.

Common Causes of Sewage Spills

Grease builds up inside and eventually blocks sewer pipes. Grease gets into the sewer from food establishments, household drains, as well as from poorly maintained commercial grease traps and interceptors.

Structure problems caused by tree roots in the lines, broken/cracked pipes, missing or broken cleanout caps or undersized sewers can cause blockages.

Infiltration and inflow (I/I) impacts pipe capacity and is caused when groundwater or rainwater enters the sewer system through pipe defects and illegal connections.

You Are Responsible for a Sewage Spill Caused by a Blockage or Break in Your Sewer Lines!

Time is of the essence in dealing with sewage spills. You are required to **immediately**:

Control and minimize the spill. Keep spills contained on private property and out of gutters, storm drains and public waterways by shutting off or not using the water.

Use sandbags, dirt and/or plastic sheeting to prevent sewage from entering the storm drain system.

Clear the sewer blockage. Always wear gloves and wash your hands. It is recommended that a plumbing professional be called for clearing blockages and making necessary repairs.

Always notify your city sewer/public works department or public sewer district of sewage spills. If the spill enters the storm drains also notify the Health Care Agency. In addition, if it exceeds 1,000 gallons notify the Office of Emergency Services. Refer to the numbers listed in this brochure.

Overflowing
cleanout pipe
located on
private property

You Could Be Liable

Allowing sewage from your home, business or property to discharge to a gutter or storm drain may subject you to penalties and/or out-of-pocket costs to reimburse cities or public agencies for clean-up and enforcement efforts. See Regulatory Codes & Fines section for pertinent codes and fines that apply.

What to Look For

Sewage spills can be a very noticeable gushing of water from a manhole or a slow water leak that may take time to be noticed. Don't dismiss unaccounted-for wet areas.

Look for:

- Drain backups inside the building.
- Wet ground and water leaking around manhole lids onto your street.
- Leaking water from cleanouts or outside drains.
- Unusual odorous wet areas: sidewalks, external walls or ground/landscape around a building.

Caution

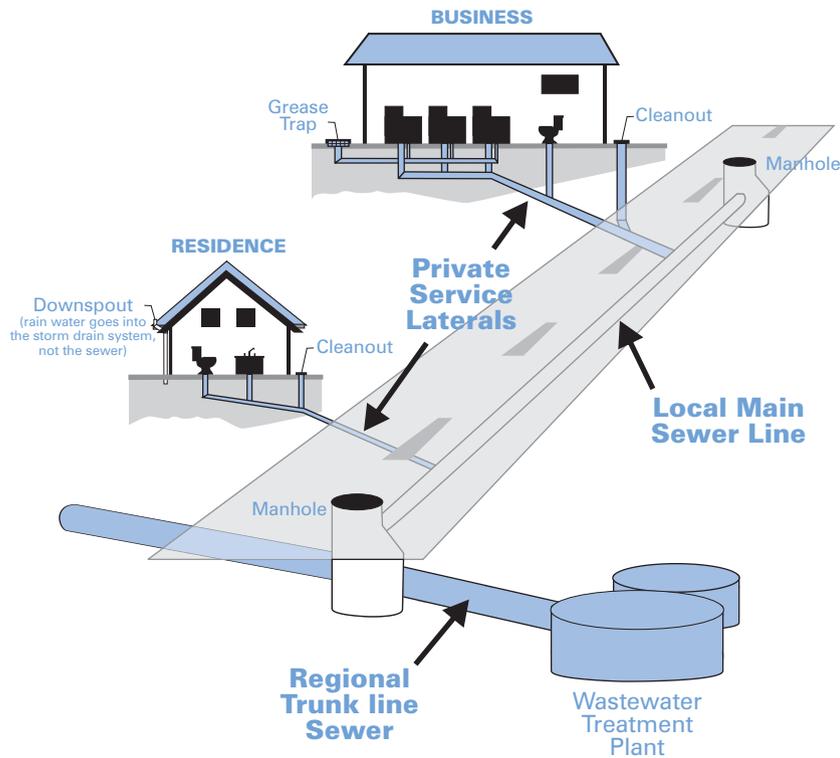

Keep people and pets away from the affected area. Untreated sewage has high levels of disease-causing viruses and bacteria. Call your local health care agency listed on the back for more information.

**If You See a Sewage Spill Occurring,
Notify Your City Sewer/Public Works
Department or Public Sewer District
IMMEDIATELY!**

How a Sewer System Works

A property owner's sewer pipes are called service laterals and are connected to larger local main and regional trunk lines. Service laterals run from the connection at the home to the connection with the public sewer (including the area under the street). These laterals are the responsibility of the property owner and must be maintained by the property owner. Many city agencies have adopted ordinances requiring maintenance of service laterals. Check with your city sewer/local public works department for more information.

Operation and maintenance of **local and regional sewer lines** are the responsibility of the city sewer/public works departments and public sewer districts.

Preventing Grease Blockages

The drain is not a dump! Recycle or dispose of grease properly and never pour grease down the drain.

Homeowners should mix fats, oils and grease with absorbent waste materials such as paper, coffee grounds, or kitty litter and place it in the trash. Wipe food scraps from plates and pans and dump them in the trash.

Restaurants and commercial food service establishments should always use "Kitchen Best Management Practices." These include:

- Collecting all cooking grease and liquid oil from pots, pans and fryers in covered grease containers for recycling.
- Scraping or dry-wiping excess food and grease from dishes, pots, pans and fryers into the trash.
- Installing drain screens on all kitchen drains.
- Having spill kits readily available for cleaning up spills.
- Properly maintaining grease traps or interceptors by having them serviced regularly. Check your local city codes.

How You Can Prevent Sewage Spills

- 1 Never put grease down garbage disposals, drains or toilets.**
- 2 Perform periodic cleaning to eliminate grease, debris and roots in your service laterals.**
- 3 Repair any structural problems in your sewer system and eliminate any rainwater infiltration/inflow leaks into your service laterals.**

Orange County Agency Responsibilities

- **City Sewer/Public Works Departments**— Responsible for protecting city property and streets, the local storm drain system, sewage collection system and other public areas.
- **Public Sewer/Sanitation District**— Responsible for collecting, treating and disposing of wastewater.
- **County of Orange Health Care Agency**— Responsible for protecting public health by closing ocean/bay waters and may close food-service businesses if a spill poses a threat to public health.
- **Regional Water Quality Control Boards**— Responsible for protecting State waters.
- **Orange County Stormwater Program**— Responsible for preventing harmful pollutants from being discharged or washed by stormwater runoff into the municipal storm drain system, creeks, bays and the ocean.

You Could Be Liable for Not Protecting the Environment

Local and state agencies have legal jurisdiction and enforcement authority to ensure that sewage spills are remedied.

They may respond and assist with containment, relieving pipe blockages, and/or clean-up of the sewage spill, especially if the spill is flowing into storm drains or onto public property.

A property owner may be charged for costs incurred by these agencies responding to spills from private properties.

Clean beaches and healthy creeks, rivers, bays and ocean are important to Orange County. However, many common activities can lead to water pollution if you're not careful. Fertilizers, pesticides and other chemicals that are left on yards or driveways can be blown or washed into storm drains that flow to the ocean. Overwatering lawns can also send materials into storm drains. Unlike water in sanitary sewers (from sinks and toilets), water in storm drains is not treated before entering our waterways.

You would never pour gardening products into the ocean, so don't let them enter the storm drains. Follow these easy tips to help prevent water pollution.

For more information, please call the **Orange County Stormwater Program** at **1-877-89-SPILL** (1-877-897-7455) or visit www.ocwatersheds.com

UCCE Master Gardener Hotline:
(714) 708-1646

To report a spill, call the **Orange County 24-Hour Water Pollution Problem Reporting Hotline** **1-877-89-SPILL** (1-877-897-7455).

For emergencies, dial 911.

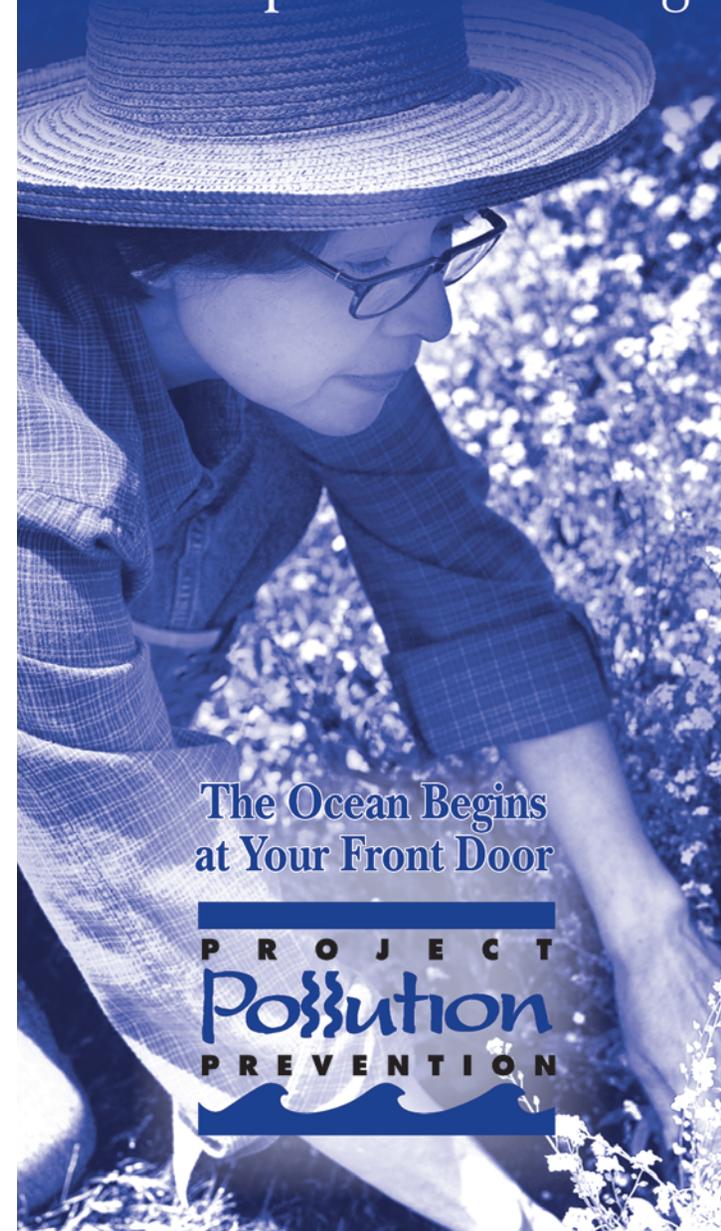

The tips contained in this brochure provide useful information to help prevent water pollution while landscaping or gardening. If you have other suggestions, please contact your city's stormwater representatives or call the Orange County Stormwater Program.

Help Prevent Ocean Pollution:

Tips for Landscape & Gardening

The Ocean Begins
at Your Front Door

Tips for Landscape & Gardening

Never allow gardening products or polluted water to enter the street, gutter or storm drain.

General Landscaping Tips

- Protect stockpiles and materials from wind and rain by storing them under tarps or secured plastic sheeting.
- Prevent erosion of slopes by planting fast-growing, dense ground covering plants. These will shield and bind the soil.
- Plant native vegetation to reduce the amount of water, fertilizers, and pesticide applied to the landscape.
- Never apply pesticides or fertilizers when rain is predicted within the next 48 hours.

Garden & Lawn Maintenance

- Do not overwater. Use irrigation practices such as drip irrigation, soaker hoses or micro spray systems. Periodically inspect and fix leaks and misdirected sprinklers.

- Do not rake or blow leaves, clippings or pruning waste into the street, gutter or storm drain. Instead, dispose of green waste by composting, hauling it to a permitted landfill, or recycling it through your city's program.

- Use slow-release fertilizers to minimize leaching, and use organic fertilizers.
- Read labels and use only as directed. Do not over-apply pesticides or fertilizers. Apply to spots as needed, rather than blanketing an entire area.
- Store pesticides, fertilizers and other chemicals in a dry covered area to prevent exposure that may result in the deterioration of containers and packaging.
- Rinse empty pesticide containers and re-use rinse water as you would use the

product. Do not dump rinse water down storm drains. Dispose of empty containers in the trash.

- When available, use non-toxic alternatives to traditional pesticides, and use pesticides specifically designed to control the pest you are targeting. For more information, visit www.ipm.ucdavis.edu.
- If fertilizer is spilled, sweep up the spill before irrigating. If the spill is liquid, apply an absorbent material such as cat litter, and then sweep it up and dispose of it in the trash.
- Take unwanted pesticides to a Household Hazardous Waste Collection Center to be recycled. Locations are provided below.

Household Hazardous Waste Collection Centers

Anaheim:	1071 N. Blue Gum St.
Huntington Beach:	17121 Nichols St.
Irvine:	6411 Oak Canyon
San Juan Capistrano:	32250 La Pata Ave.

For more information, call (714) 834-6752 or visit www.oilandfills.com

Clean beaches and healthy creeks, rivers, bays and ocean are important to Orange County. However, if we are not careful, our daily activities can lead directly to water pollution problems. Water that drains through your watershed can pick up pollutants which are then transported to our waterways and beautiful ocean.

You can prevent water pollution by taking personal action and by working with members of your watershed community to prevent urban runoff from entering your waterway.

For more information, please call the **Orange County Stormwater Program** at **1.877.89.SPILL** or visit www.ocwatersheds.com

To report a spill, call the **Orange County 24-Hour Water Pollution Problem Reporting Hotline** at **1.877.89.SPILL**.

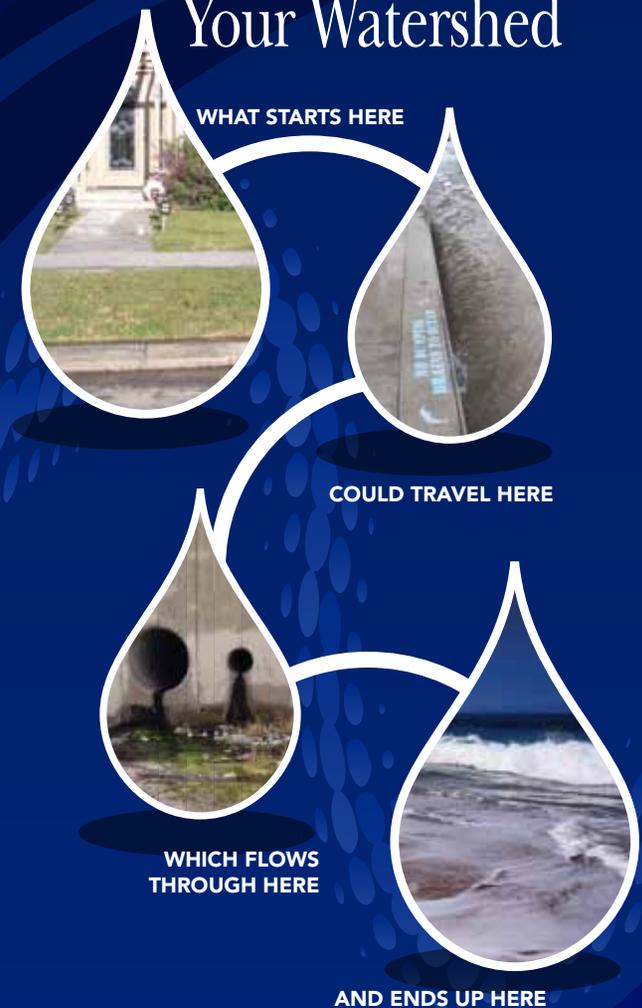

For emergencies, dial 911.

The tips contained in this brochure provide useful information to help protect your watershed. If you have other suggestions, please contact your city's stormwater representatives or call the Orange County Stormwater Program.

Printed on Recycled Paper

Help Prevent Ocean Pollution: Tips For Protecting Your Watershed

The Ocean Begins
at Your Front Door

Tips for Protecting Your Watershed

My Watershed. Our Ocean.

Water + shed, noun: A region of land within which water flows down into a specified water body, such as a river, lake, sea, or ocean; a drainage basin or catchment basin.

Orange County is comprised of 11 major watersheds into which most of our water flows, connecting all of Orange County to the Pacific Ocean.

As water from rain (stormwater) or sprinklers and hoses (urban runoff) runs down your driveway and into your neighborhood streets, sidewalks

and gutters, it flows into storm drains that lead to waterways within your watershed. The waterways from other cities merge as they make their way through our watersheds until all the runoff water in Orange County meets at the Pacific Ocean. The water that reaches our ocean is not pure. As it flows through the watershed, it picks up pollutants such as litter, cigarette butts, fertilizer, pesticides, pet waste, motor oil and lawn clippings. Unlike water that enters the sewer (from sinks and toilets), water that enters the storm drain is not treated before it flows, ultimately, to the ocean.

Water quality can be improved by "Adopting Your Watershed." Through this effort, we are challenging citizens and

organizations to join the Orange County Stormwater Program and others who are working to protect and restore our creeks, rivers, bays and ocean.

There are many opportunities to get involved:

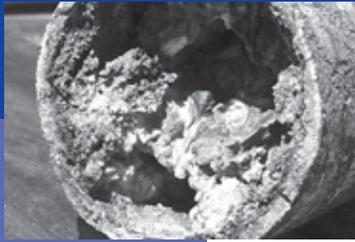

- Appreciate your watershed - explore the creeks, trails and ocean and make observations about its conditions. If you see anything abnormal (such as dead fish, oil spills, leaking barrels, and other pollution) contact the Orange County 24-hour water pollution problem reporting hotline at 1.877.89.SPILL to report the problem.
- Research your watershed. Learn about what watershed you live in by visiting www.ocwatersheds.com.
- Find a watershed organization in your community and volunteer to help. If there are no active groups, consider starting your own.
- Visit EPA's Adopt Your Watershed's Catalog of Watershed Groups at www.epa.gov/adopt to locate groups in your community.
- Organize or join in a creek, river, bay or ocean cleanup event such as Coastal & Inner Coastal Cleanup Day that takes place the 3rd Saturday of every September. For more information visit www.coast4u.org.

Follow these simple tips to protect the water quality of your watershed:

- Sweep up debris and dispose of it in the trash. Do not hose down driveways or sidewalks into the street or gutter.
- Use dry cleanup methods such as cat litter to absorb spills and sweep up residue.
- Set your irrigation systems to reflect seasonal water needs or use weather-based controllers. Inspect for runoff regularly.
- Cover trashcans securely.
- Take hazardous waste to a household hazardous waste collection center. (For example, paint, batteries and petroleum products)
- Pick up after your pet.
- Follow application and disposal directions for pesticides and fertilizers.
- If you wash your car at home, wash it on your lawn or divert the runoff onto a landscaped area. Consider taking your car to a commercial car wash, where the water is reclaimed or recycled.
 - Keep your car well maintained.
 - Never pour oil or antifreeze in the street, gutter or storm drain.

Clean beaches and healthy creeks, rivers, bays and ocean are important to Orange County. Fats, oils and grease from restaurants and food service facilities can cause sewer line blockages that may result in sewage overflow into your facility and into storm drains. Unlike water in sanitary sewers (from sinks and toilets), water in storm drains is not treated before entering our waterways and should never contain washwater, trash, grease or other materials.

You would never dump oil and trash into the ocean, so don't let it enter the storm drains. Follow these tips to help prevent water pollution.

For more information,
please call the
Orange County Stormwater Program
at **1-877-89-SPILL** (1-877-897-7455)
or visit
www.ocwatersheds.com

Report sewage spills and
discharges that are not
contained to your site to the
**Orange County 24-Hour
Water Pollution Problem
Reporting Hotline**
at **1-877-89-SPILL** (1-877-897-7455)

Printed on Recycled Paper

Help Prevent Ocean Pollution:

Tips for the Food Service Industry

The Ocean Begins
at Your Front Door

Best Kitchen Practices

Food Waste Disposal

- Scrape food waste off of plates, utensils, pots, food preparation and cooking areas and dispose of it in the trash.
- Never put food waste down the drain. Food scraps often contain grease, which can clog sewer pipes and result in sewage backups and overflows.

Grease & Oil Disposal

- Never put oil or grease down the drain. Contain grease and oil by using covered grease storage containers or installing a grease interceptor.
- Never overfill your grease storage container or transport it without a cover.
- Grease control devices must be emptied and cleaned by permitted companies.
- Keep maintenance records on site.

- For a list of oil/grease recycling companies, contact the CIWMB at www.ciwmb.ca.gov/foodwaste/render.htm or contact your local sanitation district.

Minor Spill Cleanup

- Always use dry cleanup methods, such as a rag, damp mop or broom.
- Never hose a spill into the street, gutter or storm drain.

Major Spill Cleanup

- Have spill containment and clean-up kits readily available, and train all employees on how to use them.
- Immediately contain and clean the spill using dry methods.
- If the spill leaves your site, call (714) 567-6363.

Dumpster Cleanup

- Pick up all debris around the dumpster.
- Always keep the lid on the dumpster closed.
- Never pour liquids into the dumpster or hose it out.

Floor Mat Cleaning

- Sweep the floor mats regularly, discarding the debris into the trash.
- Hose off the mats in a mop sink, at a floor drain, or in an outdoor area that can contain the water.
- Never hose the mats in an area where the wastewater can flow to the street, gutter or storm drain.

Wastewater Disposal

- Dispose of wastewater in a mop sink or an area with a floor drain.
- Never dispose of wastewater in the street, gutter or storm drain.

Preventing water pollution at your commercial/industrial site

Clean beaches and healthy creeks, rivers, bays and ocean are important to Orange County. However, many landscape and building maintenance activities can lead to water pollution if you're not careful. Paint, chemicals, plant clippings and other materials can be blown or washed into storm drains that flow to the ocean. Unlike water in sanitary sewers (from sinks and toilets), water in storm drains is not treated before entering our waterways.

You would never pour soap or fertilizers into the ocean, so why would you let them enter the storm drains? Follow these easy tips to help prevent water pollution.

Some types of industrial facilities are required to obtain coverage under the State General Industrial Permit. For more information visit: www.swrcb.ca.gov/stormwater/industrial.html

For more information,
please call the
Orange County Stormwater Program
at **1-877-89-SPILL** (1-877-897-7455)
or visit
www.ocwatersheds.com

To report a spill,
call the
**Orange County 24-Hour
Water Pollution Problem
Reporting Hotline**
at **1-877-89-SPILL** (1-877-897-7455).

For emergencies, dial 911.

RECYCLE

Help Prevent Ocean Pollution:

Proper Maintenance Practices for Your Business

**The Ocean Begins
at Your Front Door**

Proper Maintenance Practices for your Business

Landscape Maintenance

- Compost grass clippings, leaves, sticks and other vegetation, or dispose of it at a permitted landfill or in green waste containers. Do not dispose of these materials in the street, gutter or storm drain.
- Irrigate slowly and inspect the system for leaks, overspraying and runoff. Adjust automatic timers to avoid overwatering.
- Follow label directions for the use and disposal of fertilizers and pesticides.
- Do not apply pesticides or fertilizers if rain is expected within 48 hours or if wind speeds are above 5 mph.
- Do not spray pesticides within 100 feet of waterways.
- Fertilizers should be worked into the soil rather than dumped onto the surface.
- If fertilizer is spilled on the pavement or sidewalk, sweep it up immediately and place it back in the container.

Building Maintenance

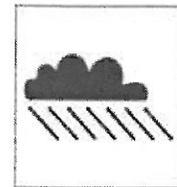

- Never allow washwater, sweepings or sediment to enter the storm drain.
- Sweep up dry spills and use cat litter, towels or similar materials to absorb wet spills. Dispose of it in the trash.
- If you wash your building, sidewalk or parking lot, you **must** contain the water. Use a shop vac to collect the water and contact your city or sanitation agency for proper disposal information. Do not let water enter the street, gutter or storm drain.
- Use drop cloths underneath outdoor painting, scraping, and sandblasting work, and properly dispose of materials in the trash.
- Use a ground cloth or oversized tub for mixing paint and cleaning tools.
- Use a damp mop or broom to clean floors.
- Cover dumpsters to keep insects, animals, rainwater and sand from entering. Keep the area around the dumpster clear of trash and debris. Do not overfill the dumpster.

- Call your trash hauler to replace leaking dumpsters.
- Do not dump any toxic substance or liquid waste on the pavement, the ground, or near a storm drain. Even materials that seem harmless such as latex paint or biodegradable cleaners can damage the environment.
- Recycle paints, solvents and other materials. For more information about recycling and collection centers, visit www.oclandfills.com.
- Store materials indoors or under cover and away from storm drains.
- Use a construction and demolition recycling company to recycle lumber, paper, cardboard, metals, masonry, carpet, plastic, pipes, drywall, rocks, dirt, and green waste. For a listing of construction and demolition recycling locations in your area, visit www.ciwmb.ca.gov/recycle.
- Properly label materials. Familiarize employees with Material Safety Data Sheets.

NEVER DISPOSE
OF ANYTHING
IN THE STORM
DRAIN.

DF-1 DRAINAGE FACILITY OPERATION AND MAINTENANCE

As a consequence of its function, the stormwater conveyance system collects and transports urban runoff and storm water that may contain certain pollutants. Consequently these pollutants may accumulate in the system and must be removed periodically. In addition, the systems must also be maintained to function properly hydraulically to avoid flooding. Maintaining the system may involve the following activities:

1. Inspection and Cleaning of Stormwater Conveyance Structures
2. Controlling Illicit Connections and Discharges
3. Controlling Illegal Dumping

This list of Model Maintenance Procedures can be utilized as an inspection checklist to determine where better compliance with Designated Minimum Best Management Practices (notated with checkmarks and capital letters) is needed, and to recommend Additional Best Management Practices (notated with bullet points and lower case letters) that may be applicable under certain circumstances, especially where there are certain Pollutant Constituents of Concern. BMPs applicable to certain constituents are notated as:

Bacteria (BACT) Sediment (SED) Nutrients (NUT) Oil and Grease (O&G) Pesticides (PEST)
Other Toxic Compounds (TOX) Trash (TRASH) Hydrological Impacts (HYD) Any/All or General (ANY)

Program/Facility Being Inspected: _____

Date: _____ Inspector Name: _____

When completed, the checklist should be attached to the General Inspection Form Cover Sheet and copies should be provided to the Supervisor of the Facility/Program being inspected.

MAINTENANCE PROCEDURES:

1. Inspection and Cleaning of Drainage Facilities

Unsatisfactory	OK	General Guidelines
<input type="checkbox"/> _____	<input type="checkbox"/>	T 1A. Annually inspect and clean drainage structures as needed.
<input type="checkbox"/> _____	<input type="checkbox"/>	T 1B. Maintain appropriate records of cleaning and inspections.
<input type="checkbox"/> _____	<input type="checkbox"/>	T 1C. Properly dispose of removed materials at a landfill or recycling facility.
<input type="checkbox"/> _____	<input type="checkbox"/>	T 1D. Conduct intermittent supplemental visual inspections during the wet season to determine if there are problem inlets where sediment/trash or other pollutants accumulate, and provide for additional cleanouts as appropriate.
<input type="checkbox"/> _____	<input type="checkbox"/>	T 1E. Prevent or clean up any discharges that may occur during the course of maintenance and cleaning procedures.
<input type="checkbox"/> _____	<input type="checkbox"/>	T 1F. Verify that appropriate employees or subcontractors are trained in proper conductance of maintenance activities, including record keeping and disposal.
<input type="checkbox"/> _____	<input type="checkbox"/>	T 1G. Annually inspect and clean v-ditches as needed, prior to the wet season. On shrub-covered slopes, vegetative debris may be placed on the downhill side of the ditch. Trash should be bagged and disposed at a landfill.

Unsatisfactory		OK	
<input type="checkbox"/> _____		<input type="checkbox"/>	<p>General Guidelines (cont.)</p> <ul style="list-style-type: none"> • 1a. Remove trash or debris as needed from open channels. It should be noted that major vegetative debris removal may require other regulatory permits prior to completing the work. (TRASH) • 1b. Consider retrofitting energy dissipaters (e.g. riprap) below culvert outfalls to minimize potential for erosion. (SED) • 1c. Repair any v-ditches that have cracked or displaced in a manner that accelerates erosion. (SED) • 1d. If suspicious conditions appear to exist, test selected samples of the removed wastes for compliance with hazardous waste regulations prior to disposal. (TOX) • 1e. Consider more frequent regular cleaning of selected drainage structures to help address ongoing specific impairments. (SED, BACT, NUT, TRASH) • 1f. Consider structural retrofits to the MS4 to help address ongoing specific impairments (SED, BACT, NUT, TRASH, O&G) • 1g. Consider cleaning out pipes at gradient breaks or other in-pipe debris accumulation points as identified/needed. (ANY, BACT, NUT, TRASH) <p>Storm Drain Flushing</p> <ul style="list-style-type: none"> • 1h. Flushing of storm drains or storm drain inlets should only be done when critically necessary and no other solution is practical. (SED, BACT, TRASH). • 1i. If flushed, to the extent practical the material should be collected (vacuumed), treated with an appropriate filtering device to remove sand and debris and disposed of properly. (SED) <p>Waste Management</p> <ul style="list-style-type: none"> T 1H. Store wastes collected from cleaning activities of the drainage facilities in appropriate containers or temporary storage sites in a manner that prevents discharge to the storm drain. • 1j. Dewater the wastes if necessary with outflow into the sanitary sewer if permitted. Water should be treated with an appropriate filtering device to remove the sand and debris prior to discharge to the sanitary sewer. If discharge to the sanitary sewer is not permitted, water should be pumped or vacuumed to a tank and properly disposed of. Do not dewater near a storm drain or stream. (SED, TRASH) • 1k. Provide for laboratory analysis of at least one randomly collected sediment (less the debris) sample per year from the storm drain inlet leaning program to ensure that it does not meet the EPA criteria for hazardous waste. If the sample is determined to be hazardous, the sediment must be disposed of as hazardous waste and the source should be investigated. (TOX).

Take extra steps to educate the public in neighborhoods where illegal dumping has occurred to inform them why illegal dumping is a problem, and that illegal dumping carries a significant financial penalty. (ANY)
---	--

LIMITATIONS:

Clean-up activities may create a slight disturbance for local aquatic species. Access to items and material on private property may be limited. Trade-offs may exist between channel hydraulics and water quality/riparian habitat. If storm channels or basins are recognized as wetlands, many activities, including maintenance, may be subject to regulation and permitting.

IC3. BUILDING MAINTENANCE

Best Management Practices (BMPs)

A BMP is a technique, measure or structural control that is used for a given set of conditions to improve the quality of the stormwater runoff in a cost effective manner¹. The minimum required BMPs for this activity are outlined in the box to the right. Implementation of pollution prevention/good housekeeping measures may reduce or eliminate the need to implement other more costly or complicated procedures. Proper employee training is key to the success of BMP implementation.

The BMPs outlined in this fact sheet target the following pollutants:

Targeted Constituents	
Sediment	X
Nutrients	X
Floatable Materials	
Metals	X
Bacteria	X
Oil & Grease	
Organics & Toxicants	
Pesticides	
Oxygen Demanding	

MINIMUM BEST MANAGEMENT PRACTICES

Pollution Prevention/Good Housekeeping

- Properly collect and dispose of water when pressure washing buildings, rooftops, and other large objects.
- Properly prepare work area before conducting building maintenance.
- Properly clean and dispose of equipment and wastes used and generated during building maintenance.
- Store toxic material under cover when not in use and during precipitation events.

Stencil storm drains

Training

- Train employees on these BMPs, storm water discharge prohibitions, and wastewater discharge requirements.
- Provide on-going employee training in pollution prevention.

Provided below are specific procedures associated with each of the minimum BMPs along with procedures for additional BMPs that should be considered if this activity takes place at a facility located near a sensitive waterbody. In order to meet the requirements for medium and high priority facilities, the owners/operators must select, install and maintain appropriate BMPs on site. Since the selection of the appropriate BMPs is a site-specific process, the types and numbers of additional BMPs will vary for each facility.

1. **Properly collect and dispose of water when pressure washing buildings, rooftops, and other large objects.**
 - If pressure washing where the surrounding area is paved, use a water collection device that enables collection of wash water and associated solids. Use a sump pump, wet vacuum or similarly effective device to collect the runoff and loose materials. Dispose of the collected runoff and solids properly. Refer to fact sheet *IC24 Wastewater Disposal* for guidance on appropriate methods for disposal of wash water to the sanitary sewer.
 - If pressure washing on a landscaped area (with or without soap), runoff must be dispersed as sheet flow as much as possible, rather than as a concentrated stream. The wash runoff must remain on the landscaping and not drain to pavement.
2. **Properly prepare work area before conducting building maintenance.**
 - Use ground or drop cloths underneath outdoor painting, scraping, and sandblasting work, and properly dispose of collected material daily.
 - Use a ground cloth or oversized tub for activities such as paint mixing and tool cleaning.

¹ EPA " Preliminary Data Summary of Urban Stormwater Best Management Practices"

3. **Properly clean and dispose of equipment and wastes used and generated during building maintenance.**
 - Clean paint brushes and tools covered with water-based paints in sinks connected to sanitary sewers or in portable containers that can be dumped into a sanitary sewer drain. Brushes and tools covered with non-water-based paints, finishes, or other materials must be cleaned in a manner that enables collection of used solvents (e.g., paint thinner, turpentine, etc.) for recycling or proper disposal.
 - Properly dispose of wash water, sweepings, and sediments.
 - Properly store equipment, chemicals, and wastes.
 - Do not dump any toxic substance or liquid waste on the pavement, the ground, or toward a storm drain.

OPTIONAL:

 - Recycle residual paints, solvents, lumber, and other materials to the maximum extent practicable
4. **Employ soil erosion and stabilization techniques when exposing large areas of soil.**
 - Confine excavated materials to pervious surfaces away from storm drain inlets, sidewalks, pavement, and ditches. Material must be covered if rain is expected.
 - Use chemical stabilization or geosynthetics to stabilize bare ground surfaces.
5. **Store toxic material under cover when not in use and during precipitation events.**
6. **Properly dispose of fluids from air conditioning, cooling tower, and condensate drains.**
7. **Regularly inspect air emission control equipment under AQMD permit.**
8. **Switch to non-toxic chemicals for maintenance when possible.**
 - If cleaning agents are used, select biodegradable products whenever feasible
 - Consider using a waterless and non-toxic chemical cleaning method for graffiti removal (e.g. gels or spray compounds).
9. **Use chemicals that can be recycled.**
 - Buy recycled products to the maximum extent practicable

Training

1. **Train employees on these BMPs, storm water discharge prohibitions, and wastewater discharge requirements.**
2. **Train employees on proper spill containment and cleanup.**
 - Establish training that provides employees with the proper tools and knowledge to immediately begin cleaning up a spill.
 - Ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.
 - Fact sheet IC17 discusses Spill Prevention and Control in detail.
3. **Establish a regular training schedule, train all new employees, and conduct annual refresher training.**
4. **Use a training log or similar method to document training.**

Stencil storm drains

Storm drain system signs act as highly visible source controls that are typically stenciled directly adjacent to storm drain inlets. Stencils should read "No Dumping Drains to Ocean".

IC7. LANDSCAPE MAINTENANCE

Best Management Practices (BMPs)

A BMP is a technique, measure or structural control that is used for a given set of conditions to improve the quality of the stormwater runoff in a cost effective manner¹. The minimum required BMPs for this activity are outlined in the box to the right. Implementation of pollution prevention/good housekeeping measures may reduce or eliminate the need to implement other more costly or complicated procedures. Proper employee training is key to the success of BMP implementation.

The BMPs outlined in this fact sheet target the following pollutants:

Targeted Constituents	
Sediment	x
Nutrients	x
Floatable Materials	x
Metals	
Bacteria	x
Oil & Grease	
Organics & Toxicants	
Pesticides	x
Oxygen Demanding	x

MINIMUM BEST MANAGEMENT PRACTICES

Pollution Prevention/Good Housekeeping

- Properly store and dispose of gardening wastes.
- Use mulch or other erosion control measures on exposed soils.
- Properly manage irrigation and runoff.
- Properly store and dispose of chemicals.
- Properly manage pesticide and herbicide use.
- Properly manage fertilizer use.

Stencil storm drains

Training

- Train employees on these BMPs, storm water discharge prohibitions, and wastewater discharge requirements.
- Provide on-going employee training in pollution prevention.

Provided below are specific procedures associated with each of the minimum BMPs along with procedures for additional BMPs that should be considered if this activity takes place at a facility located near a sensitive waterbody. In order to meet the requirements for medium and high priority facilities, the owners/operators must select, install and maintain appropriate BMPs on site. Since the selection of the appropriate BMPs is a site-specific process, the types and numbers of additional BMPs will vary for each facility.

1. Take steps to reduce landscape maintenance requirements.

- Where feasible, retain and/or plant native vegetation with features that are determined to be beneficial. Native vegetation usually requires less maintenance than planting new vegetation.
- When planting or replanting consider using low water use flowers, trees, shrubs, and groundcovers.
- Consider alternative landscaping techniques such as naturescaping and xeriscaping.

2. Properly store and dispose of gardening wastes.

- Dispose of grass clippings, leaves, sticks, or other collected vegetation as garbage at a permitted landfill or by composting.
- Do not dispose of gardening wastes in streets, waterways, or storm drainage systems.
- Place temporarily stockpiled material away from watercourses and storm drain inlets, and berm and/or cover.

3. Use mulch or other erosion control measures on exposed soils.

¹ EPA " Preliminary Data Summary of Urban Stormwater Best Management Practices"

4. **Properly manage irrigation and runoff.**
 - Irrigate slowly or pulse irrigate so the infiltration rate of the soil is not exceeded.
 - Inspect irrigation system regularly for leaks and to ensure that excessive runoff is not occurring.
 - If re-claimed water is used for irrigation, ensure that there is no runoff from the landscaped area(s).
 - If bailing of muddy water is required (e.g. when repairing a water line leak), do not put it in the storm drain; pour over landscaped areas.
 - Use automatic timers to minimize runoff.
 - Use popup sprinkler heads in areas with a lot of activity or where pipes may be broken. Consider the use of mechanisms that reduce water flow to broken sprinkler heads.
5. **Properly store and dispose of chemicals.**
 - Implement storage requirements for pesticide products with guidance from the local fire department and/or County Agricultural Commissioner.
 - Provide secondary containment for chemical storage.
 - Dispose of empty containers according to the instructions on the container label.
 - Triple rinse containers and use rinse water as product.
6. **Properly manage pesticide and herbicide use.**
 - Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of pesticides and herbicides and training of applicators and pest control advisors.
 - Follow manufacturers' recommendations and label directions.
 - Use pesticides only if there is an actual pest problem (not on a regular preventative schedule). When applicable use less toxic pesticides that will do the job. Avoid use of copper-based pesticides if possible. Use the minimum amount of chemicals needed for the job.
 - Do not apply pesticides if rain is expected or if wind speeds are above 5 mph.
 - Do not mix or prepare pesticides for application near storm drains. Prepare the minimum amount of pesticide needed for the job and use the lowest rate that will effectively control the targeted pest.
 - Whenever possible, use mechanical methods of vegetation removal rather than applying herbicides. Use hand weeding where practical.
 - Do not apply any chemicals directly to surface waters, unless the application is approved and permitted by the state. Do not spray pesticides within 100 feet of open waters.
 - Employ techniques to minimize off-target application (e.g. spray drift) of pesticides, including consideration of alternative application techniques.
 - When conducting mechanical or manual weed control, avoid loosening the soil, which could lead to erosion.
 - Purchase only the amount of pesticide that you can reasonably use in a given time period.
 - Careful soil mixing and layering techniques using a topsoil mix or composted organic material can be used as an effective measure to reduce herbicide use and watering.
7. **Properly manage fertilizer use.**
 - Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of fertilizers.
 - Follow manufacturers' recommendations and label directions.
 - Employ techniques to minimize off-target application (e.g. spray drift) of fertilizer, including consideration of alternative application techniques. Calibrate fertilizer distributors to avoid excessive application.
 - Periodically test soils for determining proper fertilizer use.
 - Fertilizers should be worked into the soil rather than dumped or broadcast onto the surface.
 - Sweep pavement and sidewalk if fertilizer is spilled on these surfaces before applying irrigation water.
 - Use slow release fertilizers whenever possible to minimize leaching

8. Incorporate the following integrated pest management techniques where appropriate:

- Mulching can be used to prevent weeds where turf is absent.
- Remove insects by hand and place in soapy water or vegetable oil. Alternatively, remove insects with water or vacuum them off the plants.
- Use species-specific traps (e.g. pheromone-based traps or colored sticky cards).
- Sprinkle the ground surface with abrasive diatomaceous earth to prevent infestations by soft-bodied insects and slugs. Slugs also can be trapped in small cups filled with beer that are set in the ground so the slugs can get in easily.
- In cases where microscopic parasites, such as bacteria and fungi, are causing damage to plants, the affected plant material can be removed and disposed of (pruning equipment should be disinfected with bleach to prevent spreading the disease organism).
- Small mammals and birds can be excluded using fences, netting, and tree trunk guards.
- Promote beneficial organisms, such as bats, birds, green lacewings, ladybugs, praying mantis, ground beetles, parasitic nematodes, trichogramma wasps, seedhead weevils, and spiders that prey on detrimental pest species.

Training

1. **Train employees on these BMPs, storm water discharge prohibitions, and wastewater discharge requirements.**
2. **Educate and train employees on the use of pesticides and pesticide application techniques. Only employees properly trained to use pesticides can apply them.**
3. **Train and encourage employees to use integrated pest management techniques.**
4. **Train employees on proper spill containment and cleanup.**
 - Establish training that provides employees with the proper tools and knowledge to immediately begin cleaning up a spill.
 - Ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.
 - Fact sheet IC17 discusses Spill Prevention and Control in detail.
5. **Establish a regular training schedule, train all new employees, and conduct annual refresher training.**
6. **Use a training log or similar method to document training.**

IC16. POOL AND FOUNTAIN CLEANING

Best Management Practices (BMPs)

A BMP is a technique, measure or structural control that is used for a given set of conditions to improve the quality of the stormwater runoff in a cost effective manner¹. The minimum required BMPs for this activity are outlined in the box to the right. Implementation of pollution prevention/good housekeeping measures may reduce or eliminate the need to implement other more costly or complicated procedures. Proper employee training is key to the success of BMP implementation.

The BMPs outlined in this fact sheet target the following pollutants:

Targeted Constituents	
Sediment	x
Nutrients	x
Floatable Materials	x
Metals	
Bacteria	x
Oil & Grease	
Organics & Toxicants	x
Pesticides	x
Oxygen Demanding	x

MINIMUM BEST MANAGEMENT PRACTICES
<u>Pollution Prevention/Good Housekeeping</u>
<ul style="list-style-type: none"> Prevent algae problems with regular cleaning, consistent adequate chlorine levels, and well-maintained water filtration and circulation systems. Discharge pool and fountain water properly.
<u>Stencil storm drains</u>
<u>Training</u>
<ul style="list-style-type: none"> Train employees on these BMPs, storm water discharge prohibitions, and wastewater discharge requirements. Provide on-going employee training in pollution prevention.

Provided below are specific procedures associated with each of the minimum BMPs along with procedures for additional BMPs that should be considered if this activity takes place at a facility located near a sensitive waterbody. In order to meet the requirements for medium and high priority facilities, the owners/operators must select, install and maintain appropriate BMPs on site. Since the selection of the appropriate BMPs is a site-specific process, the types and numbers of additional BMPs will vary for each facility.

- 1. Prevent algae problems with regular cleaning, consistent adequate chlorine levels, and well-maintained water filtration and circulation systems.**
 - Do not use copper-based algaecides.
 - Control algae with chlorine or other alternatives, such as sodium bromide.
- 2. Manage pH and water hardness to minimize corrosion of copper pipes.**
- 3. Discharge pool and fountain water properly.** Consider hiring a professional pool-draining service to collect all pool water for off-site disposal. If this is not feasible, adhere to the following:
 - When draining pools or fountains never discharge water to a street or storm drain, discharge to the sanitary sewer if permitted to do so. Refer to fact sheet *IC24 Wastewater Disposal* for guidance on appropriate methods for disposal of wash water to the sanitary sewer.
 - If draining a pool to the sanitary sewer, prevent backflow by maintaining an "air gap" between the discharge line and the sewer line (do not seal the connection between the hose and sewer line). Be sure to call the local sewer authority for guidance on flow rate restrictions, backflow prevention, and handling special cleaning waste (such as acid wash). Keep discharge flows to the low levels. Higher flow rates may be prohibited by local ordinance.

¹ EPA " Preliminary Data Summary of Urban Stormwater Best Management Practices"

- If water is dechlorinated with a neutralizing chemical or by allowing chlorine to dissipate for a few days (do not use the facility during this time), the water may be recycled/reused by draining it gradually onto a landscaped area. Water must be tested prior to discharge to ensure that chlorine is not present.
 - Provide drip pans or buckets beneath drain pipe connections to catch leaks. This will be especially pertinent if pool or spa water that has not been dechlorinated is pumped through piping to a discharge location.
- 4. Properly clean and/or dispose of filters.**
- Never clean a filter in the street or near a storm drain.
 - Rinse cartridge filters onto a dirt area, and work filter residue into soil.
 - Backwash diatomaceous earth filters onto dirt. Dispose of spent diatomaceous earth in the garbage. Diatomaceous earth cannot be discharged to surface waters, storm drainage systems, septic systems, or on the ground.
 - If there is not a suitable dirt area, discharge filter backwash or rinsewater to the sanitary sewer if permitted to do so by the local sewerage agency.

Training

- 1. Train employees on these BMPs, storm water discharge prohibitions, and wastewater discharge requirements.**
- 2. Train employees on proper spill containment and cleanup.**
 - Establish training that provides employees with the proper tools and knowledge to immediately begin cleaning up a spill.
 - Ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.
 - Fact sheet IC17 discusses Spill Prevention and Control in detail.
- 3. Train maintenance personnel on the proper techniques for testing chlorine levels and applying neutralizing chemicals.**
- 4. Establish a regular training schedule, train all new employees, and conduct annual refresher training.**
- 5. Use a training log or similar method to document training.**

Stencil storm drains

Storm drain system signs act as highly visible source controls that are typically stenciled directly adjacent to storm drain inlets. Stencils should read "No Dumping Drains to Ocean".

IC22. EATING AND DRINKING ESTABLISHMENTS

Best Management Practices (BMPs)

A BMP is a technique, measure or structural control that is used for a given set of conditions to improve the quality of the stormwater runoff in a cost effective manner¹. The minimum required BMPs for this activity are outlined in the box to the right. Implementation of pollution prevention/good housekeeping measures may reduce or eliminate the need to implement other more costly or complicated procedures. Proper employee training is key to the success of BMP implementation.

The BMPs outlined in this fact sheet target the following pollutants:

Targeted Constituents	
Sediment	
Nutrients	x
Floatable Materials	x
Metals	
Bacteria	x
Oil & Grease	x
Organics & Toxicants	x
Pesticides	x
Oxygen Demanding	x

MINIMUM BEST MANAGEMENT PRACTICES

Pollution Prevention/Good Housekeeping

- Use dry cleaning methods instead of water
- Clean equipment (floor mats, grease filters, grills, garbage cans, etc.) indoors or in a covered outdoor wash area that is plumbed to the sanitary sewer or in an area that will contain the wash water (Refer to fact sheet *IC24 Wastewater Disposal* for guidance on appropriate methods for disposal of wash water to the sanitary sewer).
- Recycle and/or properly dispose of grease and oil.
- Block the storm drain when hosing or steam/pressure washing outside dumpster areas, sidewalks, and common areas.

Stencil storm drains

Training

- Train employees on these BMPs, storm water discharge prohibitions, and wastewater discharge requirements.

Provided below are specific procedures associated with each of the minimum BMPs along with procedures for additional BMPs that should be considered if this activity takes place at a facility located near a sensitive waterbody. In order to meet the requirements for medium and high priority facilities, the owners/operators must select, install and maintain appropriate BMPs on site. Since the selection of the appropriate BMPs is a site-specific process, the types and numbers of additional BMPs will vary for each facility.

1. Practice good housekeeping.

- Conduct regular sweeping or vacuuming of outdoor areas: Dry sweep pavement areas including "drive-thru" areas, parking lots, sidewalks, outdoor eating areas and dumpster storage areas frequently.
- Keep outside areas free of trash & debris.
- Do not hose out dumpsters or fill them with liquid waste.
- Regularly inspect, repair, and/or replace dumpsters.

2. Clean equipment (floor mats, grease filters, grills, garbage cans, etc.) indoors or in a covered outdoor wash area that is plumbed to the sanitary sewer.

- Clean equipment in a mop sink if possible (never in a food preparation sink). If there is no mop sink, dedicate an indoor cleaning area where a drain is plumbed to the sanitary sewer.
- Dispose mop water from cleaning floors in a mop sink, toilet or other drain that is plumbed to the sanitary sewer. Refer to fact sheet *IC24 Wastewater Disposal* for guidance on appropriate methods for disposal of wash water to the sanitary sewer.
- Do not pour wash water outside or into a street, gutter, or storm drain.

¹ EPA " Preliminary Data Summary of Urban Stormwater Best Management Practices"

- Dispose of all wastewater containing oil and grease in a grease trap or interceptor.
3. **Recycle and/or properly dispose of grease and oil.** Collect and dispose of concentrated waste oil and grease and disposed of by a certified waste grease hauler. NEVER pour grease or oil into a sink, floor drain, storm drain or dumpster.
 4. **Block storm drain(s) when cleaning (hosing or steam/pressure washing) outside dumpster areas, sidewalks, and common areas with hot water, soap, or other cleaning agent.** Collect water/waste and discharge to the sanitary sewer (with approval of the local sanitation district).

Training

1. **Train employees on these BMPs, storm water discharge prohibitions, and wastewater discharge requirements.**
2. **Train employees on proper spill containment and cleanup.**
 - Establish training that provides employees with the proper tools and knowledge to immediately begin cleaning up a spill.
 - Ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.
 - Fact sheet IC17 discusses Spill Prevention and Control in detail.
3. **Establish a regular training schedule, train all new employees, and conduct annual refresher training.**
4. **Use a training log or similar method to document training.**

Stencil storm drains

Storm drain system signs act as highly visible source controls that are typically stenciled directly adjacent to storm drain inlets. Stencils should read "No Dumping Drains to Ocean".

Building & Grounds Maintenance SC-41

Description

Stormwater runoff from building and grounds maintenance activities can be contaminated with toxic hydrocarbons in solvents, fertilizers and pesticides, suspended solids, heavy metals, abnormal pH, and oils and greases. Utilizing the protocols in this fact sheet will prevent or reduce the discharge of pollutants to stormwater from building and grounds maintenance activities by washing and cleaning up with as little water as possible, following good landscape management practices, preventing and cleaning up spills immediately, keeping debris from entering the storm drains, and maintaining the stormwater collection system.

Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

Pollution Prevention

- Switch to non-toxic chemicals for maintenance when possible.
- Choose cleaning agents that can be recycled.
- Encourage proper lawn management and landscaping, including use of native vegetation.

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Targeted Constituents

Sediment	✓
Nutrients	✓
Trash	
Metals	✓
Bacteria	✓
Oil and Grease	
Organics	

SC-41 Building & Grounds Maintenance

- Encourage use of Integrated Pest Management techniques for pest control.
- Encourage proper onsite recycling of yard trimmings.
- Recycle residual paints, solvents, lumber, and other material as much as possible.

Suggested Protocols

Pressure Washing of Buildings, Rooftops, and Other Large Objects

- In situations where soaps or detergents are used and the surrounding area is paved, pressure washers must use a water collection device that enables collection of wash water and associated solids. A sump pump, wet vacuum or similarly effective device must be used to collect the runoff and loose materials. The collected runoff and solids must be disposed of properly.
- If soaps or detergents are not used, and the surrounding area is paved, wash runoff does not have to be collected but must be screened. Pressure washers must use filter fabric or some other type of screen on the ground and/or in the catch basin to trap the particles in wash water runoff.
- If you are pressure washing on a grassed area (with or without soap), runoff must be dispersed as sheet flow as much as possible, rather than as a concentrated stream. The wash runoff must remain on the grass and not drain to pavement.

Landscaping Activities

- Dispose of grass clippings, leaves, sticks, or other collected vegetation as garbage, or by composting. Do not dispose of collected vegetation into waterways or storm drainage systems.
- Use mulch or other erosion control measures on exposed soils.

Building Repair, Remodeling, and Construction

- Do not dump any toxic substance or liquid waste on the pavement, the ground, or toward a storm drain.
- Use ground or drop cloths underneath outdoor painting, scraping, and sandblasting work, and properly dispose of collected material daily.
- Use a ground cloth or oversized tub for activities such as paint mixing and tool cleaning.
- Clean paintbrushes and tools covered with water-based paints in sinks connected to sanitary sewers or in portable containers that can be dumped into a sanitary sewer drain. Brushes and tools covered with non-water-based paints, finishes, or other materials must be cleaned in a manner that enables collection of used solvents (e.g., paint thinner, turpentine, etc.) for recycling or proper disposal.
- Use a storm drain cover, filter fabric, or similarly effective runoff control mechanism if dust, grit, wash water, or other pollutants may escape the work area and enter a catch basin. This is particularly necessary on rainy days. The containment device(s) must be in place at the beginning of the work day, and accumulated dirty runoff and solids must be collected and disposed of before removing the containment device(s) at the end of the work day.

Building & Grounds Maintenance **SC-41**

- If you need to de-water an excavation site, you may need to filter the water before discharging to a catch basin or off-site. If directed off-site, you should direct the water through hay bales and filter fabric or use other sediment filters or traps.
- Store toxic material under cover during precipitation events and when not in use. A cover would include tarps or other temporary cover material.

Mowing, Trimming, and Planting

- Dispose of leaves, sticks, or other collected vegetation as garbage, by composting or at a permitted landfill. Do not dispose of collected vegetation into waterways or storm drainage systems.
- Use mulch or other erosion control measures when soils are exposed.
- Place temporarily stockpiled material away from watercourses and drain inlets, and berm or cover stockpiles to prevent material releases to the storm drain system.
- Consider an alternative approach when bailing out muddy water: do not put it in the storm drain; pour over landscaped areas.
- Use hand weeding where practical.

Fertilizer and Pesticide Management

- Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of fertilizers and pesticides and training of applicators and pest control advisors.
- Use less toxic pesticides that will do the job when applicable. Avoid use of copper-based pesticides if possible.
- Do not use pesticides if rain is expected.
- Do not mix or prepare pesticides for application near storm drains.
- Use the minimum amount needed for the job.
- Calibrate fertilizer distributors to avoid excessive application.
- Employ techniques to minimize off-target application (e.g., spray drift) of pesticides, including consideration of alternative application techniques.
- Apply pesticides only when wind speeds are low.
- Fertilizers should be worked into the soil rather than dumped or broadcast onto the surface.
- Irrigate slowly to prevent runoff and then only as much as is needed.
- Clean pavement and sidewalk if fertilizer is spilled on these surfaces before applying irrigation water.
- Dispose of empty pesticide containers according to the instructions on the container label.

SC-41 Building & Grounds Maintenance

- Use up the pesticides. Rinse containers, and use rinse water as product. Dispose of unused pesticide as hazardous waste.
- Implement storage requirements for pesticide products with guidance from the local fire department and County Agricultural Commissioner. Provide secondary containment for pesticides.

Inspection

- Inspect irrigation system periodically to ensure that the right amount of water is being applied and that excessive runoff is not occurring. Minimize excess watering and repair leaks in the irrigation system as soon as they are observed.

Training

- Educate and train employees on pesticide use and in pesticide application techniques to prevent pollution.
- Train employees and contractors in proper techniques for spill containment and cleanup.
- Be sure the frequency of training takes into account the complexity of the operations and the nature of the staff.

Spill Response and Prevention

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Place a stockpile of spill cleanup materials, such as brooms, dustpans, and vacuum sweepers (if desired) near the storage area where it will be readily accessible.
- Have employees trained in spill containment and cleanup present during the loading/unloading of dangerous wastes, liquid chemicals, or other materials.
- Familiarize employees with the Spill Prevention Control and Countermeasure Plan.
- Clean up spills immediately.

Other Considerations

Alternative pest/weed controls may not be available, suitable, or effective in many cases.

Requirements

Costs

- Cost will vary depending on the type and size of facility.
- Overall costs should be low in comparison to other BMPs.

Maintenance

Sweep paved areas regularly to collect loose particles. Wipe up spills with rags and other absorbent material immediately, do not hose down the area to a storm drain.

Supplemental Information

Further Detail of the BMP

Fire Sprinkler Line Flushing

Building fire sprinkler line flushing may be a source of non-stormwater runoff pollution. The water entering the system is usually potable water, though in some areas it may be non-potable reclaimed wastewater. There are subsequent factors that may drastically reduce the quality of the water in such systems. Black iron pipe is usually used since it is cheaper than potable piping, but it is subject to rusting and results in lower quality water. Initially, the black iron pipe has an oil coating to protect it from rusting between manufacture and installation; this will contaminate the water from the first flush but not from subsequent flushes. Nitrates, poly-phosphates and other corrosion inhibitors, as well as fire suppressants and antifreeze may be added to the sprinkler water system. Water generally remains in the sprinkler system a long time (typically a year) and between flushes may accumulate iron, manganese, lead, copper, nickel, and zinc. The water generally becomes anoxic and contains living and dead bacteria and breakdown products from chlorination. This may result in a significant BOD problem and the water often smells. Consequently dispose fire sprinkler line flush water into the sanitary sewer. Do not allow discharge to storm drain or infiltration due to potential high levels of pollutants in fire sprinkler line water.

Parking/Storage Area Maintenance SC-43

Description

Parking lots and storage areas can contribute a number of substances, such as trash, suspended solids, hydrocarbons, oil and grease, and heavy metals that can enter receiving waters through stormwater runoff or non-stormwater discharges. The following protocols are intended to prevent or reduce the discharge of pollutants from parking/storage areas and include using good housekeeping practices, following appropriate cleaning BMPs, and training employees.

Approach

Pollution Prevention

- Encourage alternative designs and maintenance strategies for impervious parking lots. (See New Development and Redevelopment BMP Handbook).
- Keep accurate maintenance logs to evaluate BMP implementation.

Suggested Protocols

General

- Keep the parking and storage areas clean and orderly. Remove debris in a timely fashion.
- Allow sheet runoff to flow into biofilters (vegetated strip and swale) and/or infiltration devices.
- Utilize sand filters or oleophilic collectors for oily waste in low concentrations.

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Targeted Constituents

Sediment	<input checked="" type="checkbox"/>
Nutrients	<input checked="" type="checkbox"/>
Trash	<input checked="" type="checkbox"/>
Metals	<input checked="" type="checkbox"/>
Bacteria	<input checked="" type="checkbox"/>
Oil and Grease	<input checked="" type="checkbox"/>
Organics	<input checked="" type="checkbox"/>
Oxygen Demanding	<input checked="" type="checkbox"/>

SC-43 Parking/Storage Area Maintenance

- Arrange rooftop drains to prevent drainage directly onto paved surfaces.
- Design lot to include semi-permeable hardscape.

Controlling Litter

- Post “No Littering” signs and enforce anti-litter laws.
- Provide an adequate number of litter receptacles.
- Clean out and cover litter receptacles frequently to prevent spillage.
- Provide trash receptacles in parking lots to discourage litter.
- Routinely sweep, shovel and dispose of litter in the trash.

Surface cleaning

- Use dry cleaning methods (e.g. sweeping or vacuuming) to prevent the discharge of pollutants into the stormwater conveyance system.
- Establish frequency of public parking lot sweeping based on usage and field observations of waste accumulation.
- Sweep all parking lots at least once before the onset of the wet season.
- If water is used follow the procedures below:
 - Block the storm drain or contain runoff.
 - Wash water should be collected and pumped to the sanitary sewer or discharged to a pervious surface, do not allow wash water to enter storm drains.
 - Dispose of parking lot sweeping debris and dirt at a landfill.
- When cleaning heavy oily deposits:
 - Use absorbent materials on oily spots prior to sweeping or washing.
 - Dispose of used absorbents appropriately.

Surface Repair

- Pre-heat, transfer or load hot bituminous material away from storm drain inlets.
- Apply concrete, asphalt, and seal coat during dry weather to prevent contamination from contacting stormwater runoff.
- Cover and seal nearby storm drain inlets (with waterproof material or mesh) and manholes before applying seal coat, slurry seal, etc., where applicable. Leave covers in place until job is complete and until all water from emulsified oil sealants has drained or evaporated. Clean any debris from these covered manholes and drains for proper disposal.

Parking/Storage Area Maintenance SC-43

- Use only as much water as necessary for dust control, to avoid runoff.
- Catch drips from paving equipment that is not in use with pans or absorbent material placed under the machines. Dispose of collected material and absorbents properly.

Inspection

- Have designated personnel conduct inspections of the parking facilities and stormwater conveyance systems associated with them on a regular basis.
- Inspect cleaning equipment/sweepers for leaks on a regular basis.

Training

- Provide regular training to field employees and/or contractors regarding cleaning of paved areas and proper operation of equipment.
- Train employees and contractors in proper techniques for spill containment and cleanup.

Spill Response and Prevention

- Refer to SC-11, Spill Prevention, Control & Cleanup.
- Keep your Spill Prevention Control and countermeasure (SPCC) plan up-to-date, and implement accordingly.
- Have spill cleanup materials readily available and in a known location.
- Cleanup spills immediately and use dry methods if possible.
- Properly dispose of spill cleanup material.

Other Considerations

- Limitations related to sweeping activities at large parking facilities may include high equipment costs, the need for sweeper operator training, and the inability of current sweeper technology to remove oil and grease.

Requirements

Costs

Cleaning/sweeping costs can be quite large, construction and maintenance of stormwater structural controls can be quite expensive as well.

Maintenance

- Sweep parking lot to minimize cleaning with water.
- Clean out oil/water/sand separators regularly, especially after heavy storms.
- Clean parking facilities on a regular basis to prevent accumulated wastes and pollutants from being discharged into conveyance systems during rainy conditions.

SC-43 Parking/Storage Area Maintenance

Supplemental Information

Further Detail of the BMP

Surface Repair

Apply concrete, asphalt, and seal coat during dry weather to prevent contamination from contacting stormwater runoff. Where applicable, cover and seal nearby storm drain inlets (with waterproof material or mesh) and manholes before applying seal coat, slurry seal, etc. Leave covers in place until job is complete and until all water from emulsified oil sealants has drained or evaporated. Clean any debris from these covered manholes and drains for proper disposal. Use only as much water as necessary for dust control, to avoid runoff.

Site Design & Landscape Planning SD-10

Design Objectives

- Maximize Infiltration
 - Provide Retention
 - Slow Runoff
 - Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey
-

Description

Each project site possesses unique topographic, hydrologic, and vegetative features, some of which are more suitable for development than others. Integrating and incorporating appropriate landscape planning methodologies into the project design is the most effective action that can be done to minimize surface and groundwater contamination from stormwater.

Approach

Landscape planning should couple consideration of land suitability for urban uses with consideration of community goals and projected growth. Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Design requirements for site design and landscapes planning should conform to applicable standards and specifications of agencies with jurisdiction and be consistent with applicable General Plan and Local Area Plan policies.

SD-10 Site Design & Landscape Planning

Designing New Installations

Begin the development of a plan for the landscape unit with attention to the following general principles:

- Formulate the plan on the basis of clearly articulated community goals. Carefully identify conflicts and choices between retaining and protecting desired resources and community growth.
- Map and assess land suitability for urban uses. Include the following landscape features in the assessment: wooded land, open unwooded land, steep slopes, erosion-prone soils, foundation suitability, soil suitability for waste disposal, aquifers, aquifer recharge areas, wetlands, floodplains, surface waters, agricultural lands, and various categories of urban land use. When appropriate, the assessment can highlight outstanding local or regional resources that the community determines should be protected (e.g., a scenic area, recreational area, threatened species habitat, farmland, fish run). Mapping and assessment should recognize not only these resources but also additional areas needed for their sustenance.

Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Conserve Natural Areas during Landscape Planning

If applicable, the following items are required and must be implemented in the site layout during the subdivision design and approval process, consistent with applicable General Plan and Local Area Plan policies:

- Cluster development on least-sensitive portions of a site while leaving the remaining land in a natural undisturbed condition.
- Limit clearing and grading of native vegetation at a site to the minimum amount needed to build lots, allow access, and provide fire protection.
- Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants.
- Promote natural vegetation by using parking lot islands and other landscaped areas.
- Preserve riparian areas and wetlands.

Maximize Natural Water Storage and Infiltration Opportunities Within the Landscape Unit

- Promote the conservation of forest cover. Building on land that is already deforested affects basin hydrology to a lesser extent than converting forested land. Loss of forest cover reduces interception storage, detention in the organic forest floor layer, and water losses by evapotranspiration, resulting in large peak runoff increases and either their negative effects or the expense of countering them with structural solutions.
- Maintain natural storage reservoirs and drainage corridors, including depressions, areas of permeable soils, swales, and intermittent streams. Develop and implement policies and

Site Design & Landscape Planning SD-10

regulations to discourage the clearing, filling, and channelization of these features. Utilize them in drainage networks in preference to pipes, culverts, and engineered ditches.

- Evaluating infiltration opportunities by referring to the stormwater management manual for the jurisdiction and pay particular attention to the selection criteria for avoiding groundwater contamination, poor soils, and hydrogeological conditions that cause these facilities to fail. If necessary, locate developments with large amounts of impervious surfaces or a potential to produce relatively contaminated runoff away from groundwater recharge areas.

Protection of Slopes and Channels during Landscape Design

- Convey runoff safely from the tops of slopes.
- Avoid disturbing steep or unstable slopes.
- Avoid disturbing natural channels.
- Stabilize disturbed slopes as quickly as possible.
- Vegetate slopes with native or drought tolerant vegetation.
- Control and treat flows in landscaping and/or other controls prior to reaching existing natural drainage systems.
- Stabilize temporary and permanent channel crossings as quickly as possible, and ensure that increases in run-off velocity and frequency caused by the project do not erode the channel.
- Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels that enter unlined channels in accordance with applicable specifications to minimize erosion. Energy dissipaters shall be installed in such a way as to minimize impacts to receiving waters.
- Line on-site conveyance channels where appropriate, to reduce erosion caused by increased flow velocity due to increases in tributary impervious area. The first choice for linings should be grass or some other vegetative surface, since these materials not only reduce runoff velocities, but also provide water quality benefits from filtration and infiltration. If velocities in the channel are high enough to erode grass or other vegetative linings, riprap, concrete, soil cement, or geo-grid stabilization are other alternatives.
- Consider other design principles that are comparable and equally effective.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define “redevelopment” in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of “redevelopment” must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under “designing new installations” above should be followed.

SD-10 Site Design & Landscape Planning

Redevelopment may present significant opportunity to add features which had not previously been implemented. Examples include incorporation of depressions, areas of permeable soils, and swales in newly redeveloped areas. While some site constraints may exist due to the status of already existing infrastructure, opportunities should not be missed to maximize infiltration, slow runoff, reduce impervious areas, disconnect directly connected impervious areas.

Model Water Quality Management Plan (WQMP) for County of Orange, Orange County Flood Control District, and the Incorporated Cities of Orange County, Draft February 2003.

Ventura Countywide Technical Guidance Manual for Stormwater Quality Control Measures, July 2002.

Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Irrigation water provided to landscaped areas may result in excess irrigation water being conveyed into stormwater drainage systems.

Approach

Project plan designs for development and redevelopment should include application methods of irrigation water that minimize runoff of excess irrigation water into the stormwater conveyance system.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

Design Considerations

Designing New Installations

The following methods to reduce excessive irrigation runoff should be considered, and incorporated and implemented where determined applicable and feasible by the Permittee:

- Employ rain-triggered shutoff devices to prevent irrigation after precipitation.
- Design irrigation systems to each landscape area's specific water requirements.
- Include design featuring flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.
- Implement landscape plans consistent with County or City water conservation resolutions, which may include provision of water sensors, programmable irrigation times (for short cycles), etc.

- Design timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the storm water drainage system.
- Group plants with similar water requirements in order to reduce excess irrigation runoff and promote surface filtration. Choose plants with low irrigation requirements (for example, native or drought tolerant species). Consider design features such as:
 - Using mulches (such as wood chips or bar) in planter areas without ground cover to minimize sediment in runoff
 - Installing appropriate plant materials for the location, in accordance with amount of sunlight and climate, and use native plant materials where possible and/or as recommended by the landscape architect
 - Leaving a vegetative barrier along the property boundary and interior watercourses, to act as a pollutant filter, where appropriate and feasible
 - Choosing plants that minimize or eliminate the use of fertilizer or pesticides to sustain growth
- Employ other comparable, equally effective methods to reduce irrigation water runoff.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define “redevelopment” in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of “redevelopment” must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under “designing new installations” above should be followed.

Other Resources

A Manual for the Standard Urban Stormwater Mitigation Plan (SUSMP), Los Angeles County Department of Public Works, May 2002.

Model Standard Urban Storm Water Mitigation Plan (SUSMP) for San Diego County, Port of San Diego, and Cities in San Diego County, February 14, 2002.

Model Water Quality Management Plan (WQMP) for County of Orange, Orange County Flood Control District, and the Incorporated Cities of Orange County, Draft February 2003.

Ventura Countywide Technical Guidance Manual for Stormwater Quality Control Measures, July 2002.

Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Waste materials dumped into storm drain inlets can have severe impacts on receiving and ground waters. Posting notices regarding discharge prohibitions at storm drain inlets can prevent waste dumping. Storm drain signs and stencils are highly visible source controls that are typically placed directly adjacent to storm drain inlets.

Approach

The stencil or affixed sign contains a brief statement that prohibits dumping of improper materials into the urban runoff conveyance system. Storm drain messages have become a popular method of alerting the public about the effects of and the prohibitions against waste disposal.

Suitable Applications

Stencils and signs alert the public to the destination of pollutants discharged to the storm drain. Signs are appropriate in residential, commercial, and industrial areas, as well as any other area where contributions or dumping to storm drains is likely.

Design Considerations

Storm drain message markers or placards are recommended at all storm drain inlets within the boundary of a development project. The marker should be placed in clear sight facing toward anyone approaching the inlet from either side. All storm drain inlet locations should be identified on the development site map.

Designing New Installations

The following methods should be considered for inclusion in the project design and show on project plans:

- Provide stenciling or labeling of all storm drain inlets and catch basins, constructed or modified, within the project area with prohibitive language. Examples include "NO DUMPING

– DRAINS TO OCEAN” and/or other graphical icons to discourage illegal dumping.

- Post signs with prohibitive language and/or graphical icons, which prohibit illegal dumping at public access points along channels and creeks within the project area.

Note - Some local agencies have approved specific signage and/or storm drain message placards for use. Consult local agency stormwater staff to determine specific requirements for placard types and methods of application.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define “redevelopment” in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. If the project meets the definition of “redevelopment”, then the requirements stated under “designing new installations” above should be included in all project design plans.

Additional Information

Maintenance Considerations

- Legibility of markers and signs should be maintained. If required by the agency with jurisdiction over the project, the owner/operator or homeowner’s association should enter into a maintenance agreement with the agency or record a deed restriction upon the property title to maintain the legibility of placards or signs.

Placement

- Signage on top of curbs tends to weather and fade.
- Signage on face of curbs tends to be worn by contact with vehicle tires and sweeper brooms.

Supplemental Information

Examples

- Most MS4 programs have storm drain signage programs. Some MS4 programs will provide stencils, or arrange for volunteers to stencil storm drains as part of their outreach program.

Required Permits

Permits are not required for the implementation, operation, and maintenance of the BMPs.

Forms to Record BMP Implementation, Maintenance, and Inspection

The form that will be used to record implementation, maintenance, and inspection of BMPs is attached.

Recordkeeping

All records must be maintained for at least five (5) years and must be made available for review upon request.

Waste Management

Any waste generated from maintenance activities will be disposed of properly. Wash water and other waste from maintenance activities is not to be discharged or disposed of into the storm drain system. Clippings from landscape maintenance (i.e. prunings) will be collected and disposed of properly off-site, and will not be washed into the streets, local area drains/conveyances, or catch basin inlets.

1.0 INTRODUCTION

This report presents the results of the geotechnical investigation performed by Diaz•Yourman & Associates (DYA) for the proposed Clubhouse Additions and Miscellaneous Structures at the Old Ranch Golf Course in Seal Beach, California. Bixby Ranch Company authorized this work on May 19, 2000.

The Old Ranch Golf Course is located at 3901 Lampson Avenue, in the City of Seal Beach, California, as shown on the Vicinity Map, Figure 1. The proposed development will consist of the following: two 1,000 square foot (sf; plan area) additions to the existing clubhouse; driving range operation buildings; and public pro-shop. The proposed structures are planned to be one story high. The approximate location of the proposed development is shown on the Site Plan, Figure 2. The foundation loads of the proposed structures were provided by Ken Okamoto and Associates to be up to 60 kips and 5.5 kips per linear foot (klf) for column and wall loads, respectively. The proposed grades will be near the existing grades except near the clubhouse, where a 10-foot deep cut will be required. Parking lots are proposed for the pro-shop and the clubhouse.

We understand that the clubhouse additions will not be considered "projects" by California Division of Mines & Geology (CDMG) Special Publication 117. However, the pro-shop and driving range buildings will be considered "projects".

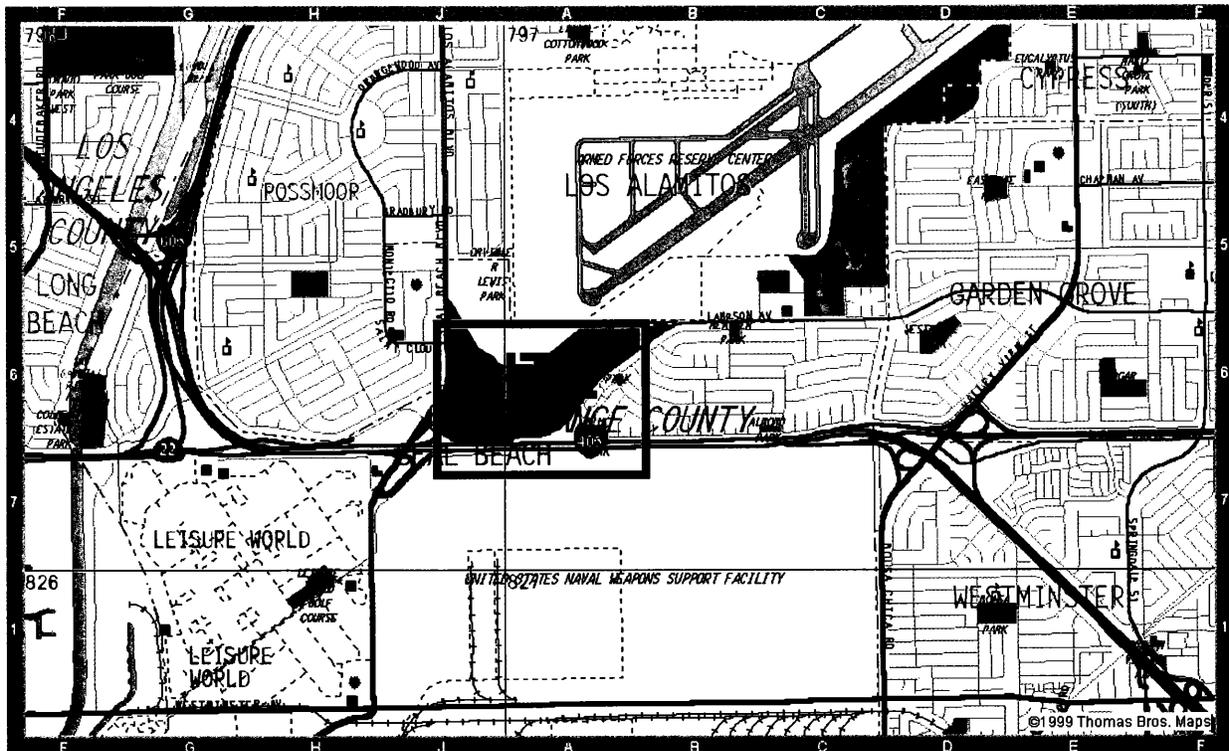

Figure 1 - VICINITY MAP

The purpose of DYA's investigation was to provide geotechnical input for the design of the proposed development. The scope of our services consisted of the following tasks:

- reviewing data;
- conducting a field investigation;
- performing laboratory tests on selected samples;
- performing engineering analyses to develop conclusions and recommendations regarding the following:
 - site preparation and grading,
 - foundation type and allowable bearing capacity,
 - estimated total and differential foundation settlements,
 - resistance to lateral loads,
 - lateral earth pressures,
 - slab-on-grade support,
 - pavement thickness design, and
 - corrosion potential; and
- preparing this report.

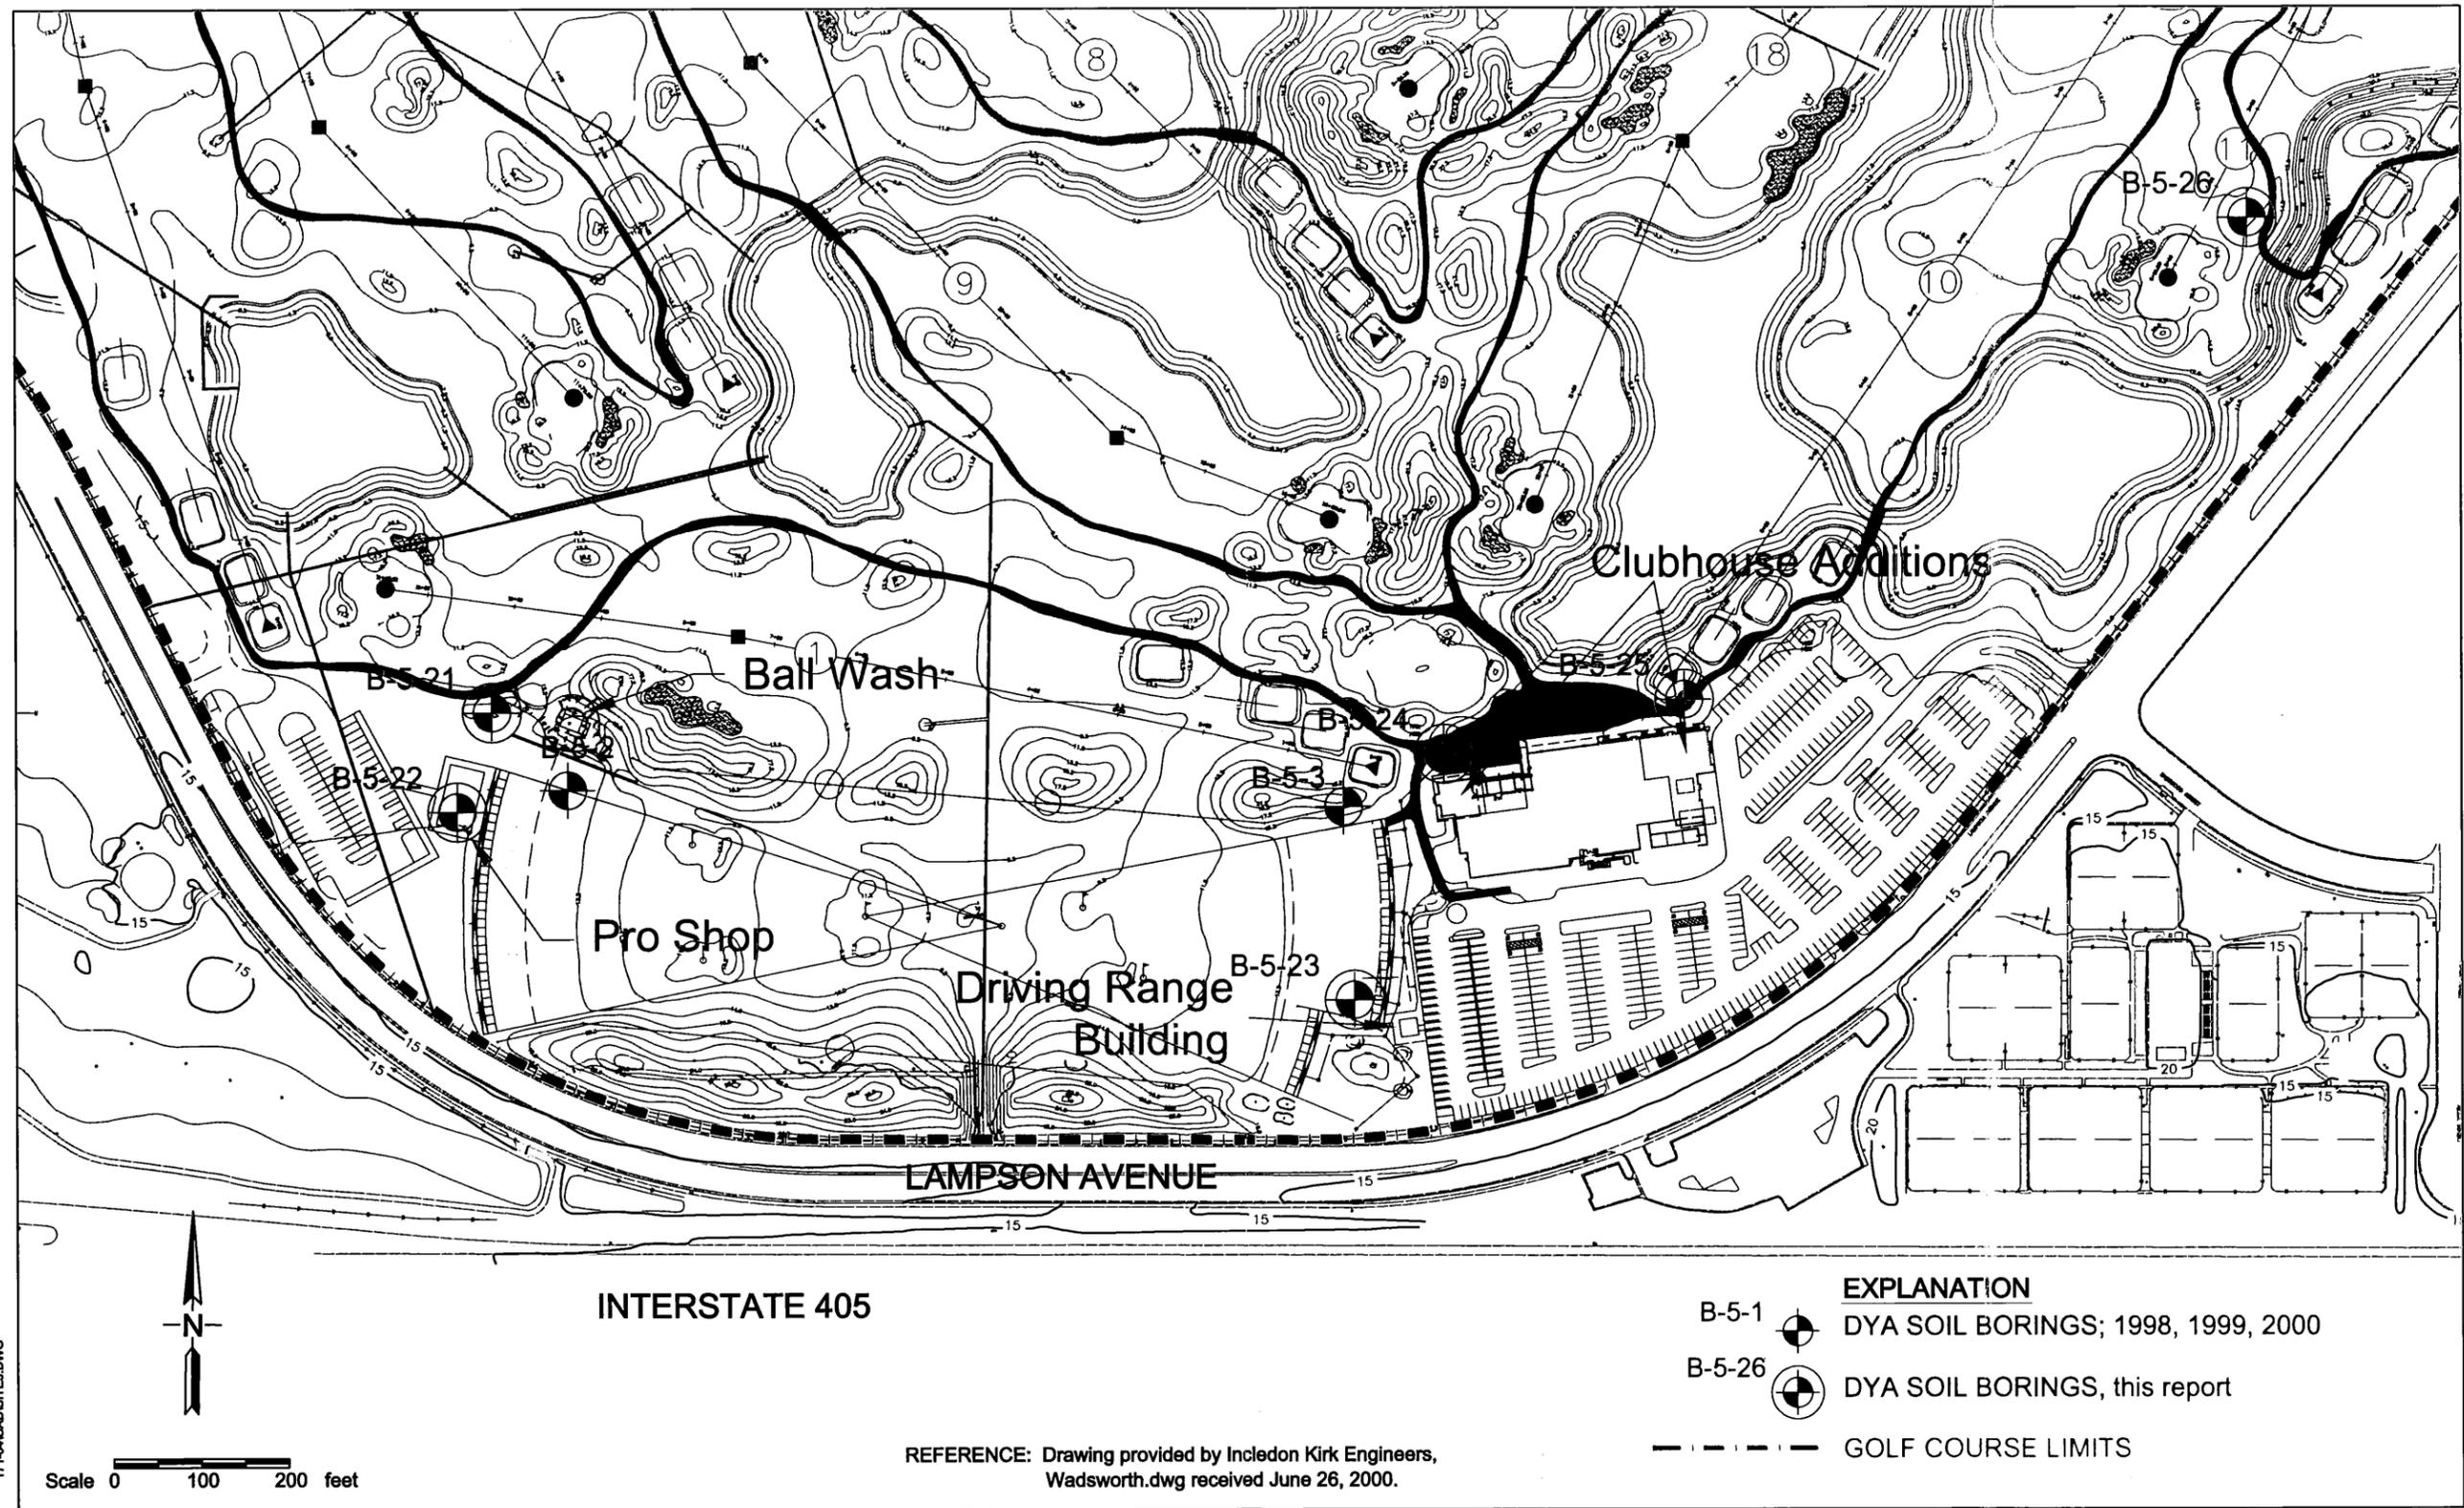

Figure 2 - SITE PLAN

171-04CAD\SITES.DWG

2.0 DATA REVIEW, FIELD INVESTIGATION, AND LABORATORY TESTING

Geotechnical data in the project vicinity presented in previous reports were reviewed to supplement site data collected during this investigation. A list of the documents reviewed is presented in the bibliography (Section 7).

The field investigation, conducted on May 26, 2000, consisted of drilling 5 soil borings at the locations shown on the Site Plan, Figure 2. The boring locations were chosen to provide coverage of the project site for grading and data for foundation design. The boring depths, ranging from approximately 14.5 to 16.5 feet, were selected to extend to the depth of significant influence of the proposed loads and to investigate liquefaction potential. Details of the field investigation, including sampling procedures and boring logs, are presented in Appendix A.

Soil samples collected from the borings were reexamined in the laboratory to substantiate field classifications. Selected soil samples were tested for moisture content, dry density, grain-size distribution, percent passing the No. 200 sieve, Atterberg limits, expansion index, shear strength, compaction characteristics, pavement-supporting capacity, and corrosion potential (pH, electrical resistivity, soluble chlorides, and soluble sulfates). The soil samples tested are identified on the boring logs. Laboratory test data are summarized on the boring logs in Appendix A and presented on individual test reports in Appendix B.

3.0 SITE CONDITIONS

3.1 SURFACE CONDITIONS

At the time of our investigation the adjacent golf course was under construction. Protected, designated trees were left in place and new trees were planted. The surface consisted of freshly cut and fill soils making up new lakes and golf course mounds, devoid of surface vegetation.

The existing ground surface elevation at the building sites ranged from approximately 12 to 15 feet above mean sea level (MSL).

3.2 SUBSURFACE CONDITIONS

The subsurface soils were generally moist, soft to hard, lean clay (CL) and silt (ML) to the depth explored, 16.5 feet. Fill was encountered at depths varying from 0 to 14.5 feet. Based on our construction observations during rough grading of the golf course the fills were compacted to 85 percent relative compaction¹. However, the areas comprising the Pro-shop and Driving Range Buildings, and the Clubhouse additions did not receive fills during rough grading of the Golf Course. Therefore, any fills encountered during this investigation were considered uncertified, unengineered fills. The following is a summary of the depths of fills encountered:

- Pro-shop: Boring B-5-22, evidence of fills encountered to depths of 10 feet
- Driving Range Building: boring B-5-23, evidence of fills encountered to depths of 8 feet
- Clubhouse Addition: Boring B-5-24, evidence of fills encountered to depths of 6.5 feet.
Boring B-5-25, no evidence of fills.

The soil profile below 16.5 feet was based upon a previous boring B-5-17 (DYA, 2000A). From 16.5 to 38 feet the soils were assumed to be moist to wet, firm, lean clay (CL). The soils from 38 to 50 feet were assumed to consist of wet, loose to dense, silty sands (SM).

¹ Relative compaction refers to the in-place dry density of soil expressed as a percentage of the maximum dry density of the same material, as determined by the American Society for Testing Materials (ASTM) D1557-91 test method. Optimum moisture content is the moisture content corresponding to the maximum dry density, as determined by the ASTM D1557-91 test method.

Based on our previous work (DYA, 1998), an existing nearby expansion index (EI) was 77. This investigation measured an EI of 65 (B-5-25) at the location of the proposed clubhouse addition. EIs between 51 and 90 are classified as "medium expansion potential" based on the 1997 Uniform Building Code (UBC).

Groundwater was encountered at a depth of 14.5 feet in boring B-5-25 during drilling operations.

4.0 CONCLUSIONS AND RECOMMENDATIONS

Based on geotechnical considerations, the site is suitable for the proposed development. The primary geotechnical considerations are:

- the medium expansive nature of the in-situ soils;
- the existence of fills compacted below 90 percent relative compaction;
- the proposed 10-foot deep excavation adjacent to the existing clubhouse; and
- the potentially liquefiable underlying silts and silty sands.

The proposed pro-shop and driving range operations building, defined as projects under CDMG SP117, can be supported on mat foundations placed on a layer of geogrid reinforced compacted fill. The clubhouse addition can be supported on shallow foundations placed on a layer of compacted fill.

4.1 SEISMIC/GEOLOGIC HAZARDS

The site, like most of southern California, will be subject to strong ground shaking during major earthquakes. Seismic design can be performed in accordance with the criteria listed in Table 1.

Table 1 - SEISMIC DESIGN CRITERIA

CHARACTERISTIC	CRITERIA
Alquist-Priolo Special Study Zone Act	Site outside special study zones
UBC Seismic Zone Factor, z	0.4
UBC Soil Profile	S_D
UBC Seismic Source Type / Distance (km)	$B / 4$ km
UBC Near Source Factors, N_a and N_v	1.2 and 1.5
California Seismic Hazards Mapping Act, Liquefaction Zone	Site within liquefaction zone
California Seismic Hazards Mapping Act, Landslide Zone	Site outside landslide zone
USGS Peak Ground Acceleration* (g)	0.45
* 10 percent probability of exceedance in 50 years, firm rock site.	

Liquefaction analyses were based on the following:

- data from Boring B-5-17 (soil type and depth to groundwater)(DYA,2000A);
- subsurface data from our previous investigation and an assumed groundwater depth of 7 feet (DYA, 2000A);

- National Center for Earthquake Engineering Research guidelines (1997);
- a peak ground acceleration of 0.45 g; and
- an earthquake moment magnitude of 7.

Based on the soil type and assumed depth to groundwater of 7 feet, some of the subsurface sandy and silty soils are subject to liquefaction. Research to evaluate the historic groundwater levels was beyond the scope of our work. Liquefaction-induced settlement was estimated to be approximately 4 inches for Boring B-5-17 (DYA, 2000A) based on Tokimatsu and Seed (1987) procedures. Approximately 2 inches of liquefaction induce settlements occurred in the silt (ML) layer between depths of 7 and 17 feet, and 2 inches of liquefaction induced settlements occurred in the silty sand (SM) layer between depths of 37 and 43 feet. Based on Ishihara (1985), surface expression of liquefaction is anticipated.

Our understanding of whether a building was to be considered a “project” was based upon discussions with the project civil engineer and architect, and the CDMG’s SP117 definition. The CDMG defines a project according to Public Resource Code Sections 2693 and 2621.6 and the California Code of Regulations Section 3601. When new construction is considered a “project” a liquefaction analysis should be performed and some form of liquefaction mitigation is required. Based on information provided by Denzer International, the clubhouse additions are not greater than 50 percent of the value of the structure or 50 percent of the existing floor area of the structure. Therefore, they probably will not be considered a “project” according to the Public Resources Code Section, 2693. The driving range operation and public pro-shop buildings will have an occupancy of more than 2,000 person-hours per year and will be considered projects as stated in California Code of Regulations Section 3601.

In order to limit the effects of liquefaction on the proposed structures, the soil below the foundations should be over-excavated, reinforced with a geogrid, and recompacted. This will provide a mechanically stabilized earth (MSE) composite raft foundation system to help the structures to float over the liquefied soils and mitigate the effects of liquefaction on the structures. The goal is to reduce, not eliminate the effects of liquefaction. In order to mitigate the effects of liquefaction, the proposed structures would have to be pile supported or underlain by improved ground (i.e., stone columns, compaction grouting, etc). The cost of liquefaction mitigation methods was judged prohibitive in relation to the size and use of the proposed structures.

4.2 EARTHWORK

4.2.1 Site Preparation and Grading

Prior to the start of construction, the following should be performed:

- All utilities should be located in the field and either rerouted, removed, abandoned, or protected.
- Areas to be graded should be stripped of all vegetation and debris and the material should be removed from the site.
- Approximately 3 inches of stripping is recommended.
- Topsoil materials should be stockpiled for later use in landscaped areas.
- Asphalt concrete pavement and Portland cement concrete should be separated for recycling.

In the area of the 10-foot excavation for the clubhouse addition, a detailed survey of the area and structures possibly affected by the proposed project should be performed both before and after the excavation. Nearby structures, pavements, and slopes should be carefully checked for damage. The survey should be documented with photographs of the interior and exterior of structures and level surveys of floor and patio slabs.

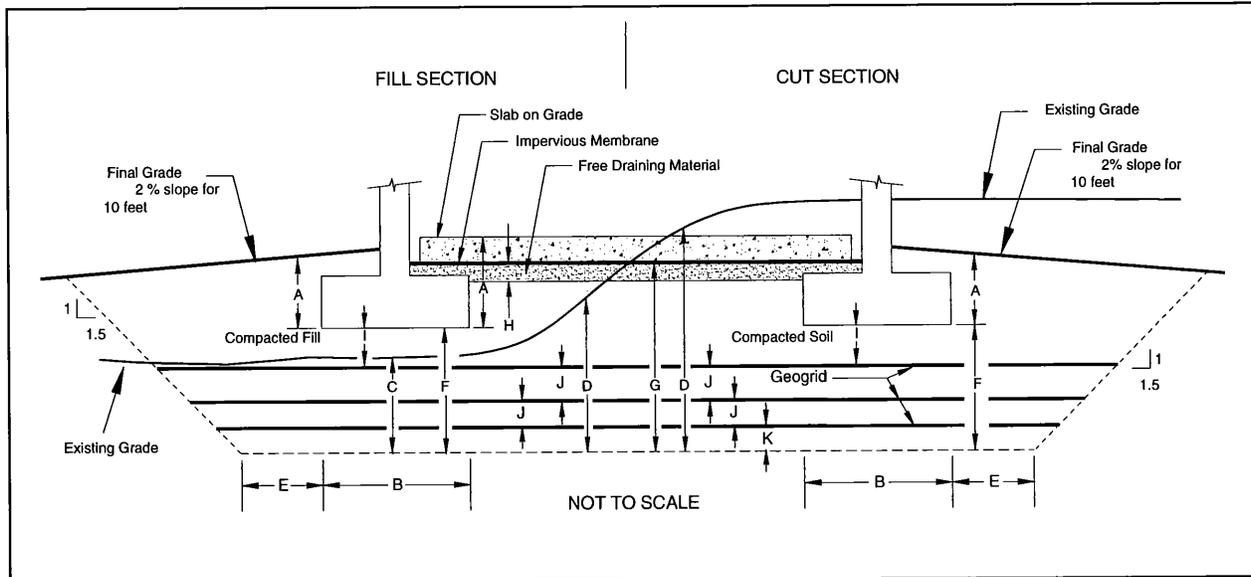

The upper soil should be excavated and replaced with compacted fill as shown on Figure 3. The bottom of the excavation should be

- scarified to a depth of 8 inches,
- moisture conditioned to above-optimum moisture content,
- proof-rolled to check for loose or soft areas,
- compacted to at least 90 percent relative compaction, and
- loose or soft areas should be replaced with compacted fill.

To reduce the effects of liquefaction, we recommend that a MSE composite raft foundation system consisting of 3 layers of a geogrid (Tensar BX6200 or equivalent) be placed below the foundation, as shown of Figure 3.

Where the soil at the bottom of the excavation preclude compaction, they should be excavated to a sufficient depth such that a firm and unyielding surface is achieved at the planned bottom of excavation. Generally, an over excavation depth of 1 to 2 feet is sufficient. Using easily compactable material, such as crushed rock and/or geotextile reinforced engineered fill, can reduce the depth of excavation. The geotextile should satisfy the requirements of Standard Specification for Public Works Construction (Greenbook) Section 213-2.1, Type 270WS, and be placed in accordance with Greenbook section 300-10

LOCATION	MINIMUM DIMENSIONS (feet)	
	Driving Range Operations Building/Public Pro-shop	Clubhouse expansion
Foundation System	Mat	Shallow
A. Footing Embedment Below Finish Grade	N/A	3
B. Footing Width	N/A	2
C. Excavation Below Existing Grade (Footing)*	4	1
D. Excavation Below Existing Grade (Slab)*	4	1
E. Excavation Beyond Footing	5	5
F. Compacted Soil/Fill Below Footing*	4	1
G. Compacted Soil/Fill Below Slab*	4	1
H. Free Draining Material	0.5	0.5
I. Geogrid Depth Below Footing	1	N/A
J. Distance Between Geogrid	1	N/A
K. Distance Between Bottom of Excavation and Geogrid	1	N/A
	PRESSURE (psf)	
Static (net) Allowable Bearing Capacity (FS _≥ 3)	2,000	2,000
Increase per Foot of Depth	N/A	300
Increase per Foot of Width	N/A	200
Maximum Static Bearing Capacity (FS _≥ 3)	2,000	3,000
Maximum Transient Bearing Capacity (FS _≥ 2)	3,000	4,500
Note: Continuous geogrid consists of Tensar BX6200 or equivalent *or depth of fill, whichever is greater.		

Figure 3 - GRADING FOUNDATION DETAILS

Fill and backfill should be compacted by

- placing in loose layers less than 8 inches thick,
- moisture conditioning to above-optimum moisture content, and
- compacting to at least 90 percent relative compaction.

Soils below the foundations and slab-on-grade should be maintained at least 2-percent above optimum moisture content. The exposed soils must not be allowed to dry before covering by the proposed slab-on-grade or foundations. This can be accomplished by watering the exposed soils daily. When the covering slab is placed, the subgrade soils should be near saturation, not soft or sloppy, but uniformly saturated to depths of 1 to 2 feet.

Import materials for fill and select backfill should meet the criteria in Table 2. Select backfill is material placed within a horizontal distance of 5 feet or one-half of the wall height, whichever is greater, behind retaining/basement walls.

Table 2 - IMPORT FILL AND SELECT BACKFILL CRITERIA

CRITERIA	IMPORT FILL	SELECT BACKFILL
Maximum particle size (inches)	4	1
Maximum liquid limit (%)	40	25
Maximum plasticity index (%)	20	15
Maximum percentage passing the #200 sieve (%)	40	30
Minimum sand equivalent	---	20

The soils encountered in the borings are not expected to meet the above criteria for select backfill.

The upper one-foot of any pavement subgrade soils should be moisture conditioned to above optimum moisture content and compacted to at least 90 percent relative compaction. The upper six inches should be additionally compacted to at least 95 percent relative compaction. After compaction, in order to limit the effects of the expansive clays, the subgrade soils should be maintained above optimum moisture content. This may require daily watering or soaking until pavement is placed over the subgrade.

Site grading may be accomplished with conventional heavy-duty construction equipment. The fill should be compacted using soil compactors or tractors pulling a sheep foot roller, as defined by the Caterpillar Performance Handbook (1998), or equivalent. However, to avoid overstressing

basement or retaining walls, backfill should be compacted using lightweight compaction equipment or the walls should be braced.

4.2.2 Excavations, and Temporary and Permanent Slopes

Stability of temporary excavations is a function of several factors including the total time the excavation is exposed, moisture condition, soil type and consistency, weather, and contractor's operations. The contractor is responsible for excavation safety. As a guideline, temporary construction excavations greater than 3 feet but less than 10 feet deep should be planned with slopes no steeper than 1.5H:1V (horizontal to vertical). For steeper temporary construction slopes or deeper excavations, shoring should be provided for stability and protection. For the excavation of the retaining wall for the clubhouse additions sloping the excavation at 1.5 H:1V will enter the 1H:1V imaginary structural influence line of the existing clubhouse footings, therefore shoring is recommended. Grading requirements for the City of Seal Beach and County of Orange and applicable health and safety regulations, including Occupational Health and Safety Administration (OSHA), should be strictly adhered to by the contractor.

Permanent compacted fill slopes should be planned no steeper than 2H:1V. The slopes should be covered with vegetation or paved to reduce surface erosion.

4.3 FOUNDATION DESIGN

The proposed structures can be supported on shallow foundations placed on a layer of compacted fill as shown on Figure 3. The static and temporary allowable bearing capacities include factors of safety of at least 3 and 2, respectively, against shear failure. For properly constructed foundations supported on compacted fill, total static settlement due to the proposed structural loads is estimated to be less than 0.5 inch. Static differential settlements between similarly loaded footings are expected to be less than 0.5 inch. Most of the static settlements are expected to occur as the loads are applied or shortly thereafter. Seismically induced settlement was estimated to be approximately 4 inches.

4.4 RESISTANCE TO LATERAL LOADS AND LATERAL EARTH PRESSURES

Lateral loads can be resisted by an allowable passive soil pressure and base friction as outlined in Figure 4 for compacted fill, applied against below-grade walls and foundation elements. Retaining and subterranean walls should be designed to resist lateral earth pressures with the equivalent fluid pressures as illustrated on Figure 4 for walls free to rotate and for restrained walls. At-rest earth pressures should be used for basement walls and where the top of the wall is not expected to move laterally more than $0.001 H_1$ (see Figure 4). The lateral earth pressures on Figure 4 are based on the backfill material noted in Table 2. See Figure 5 for typical sections of subsurface drains.

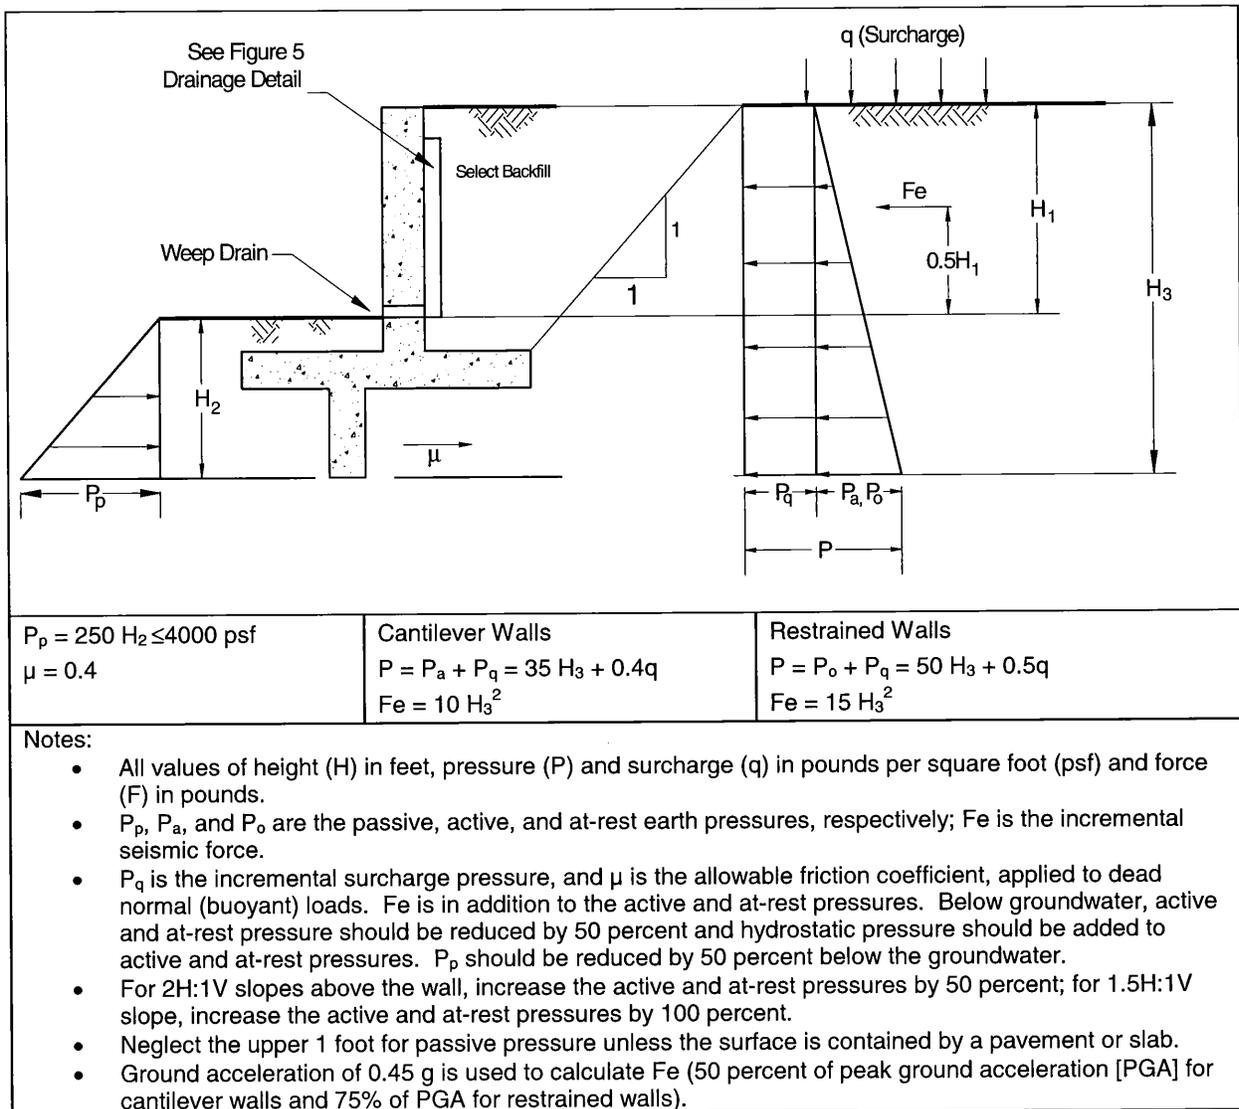

Figure 4 - LATERAL EARTH PRESSURES

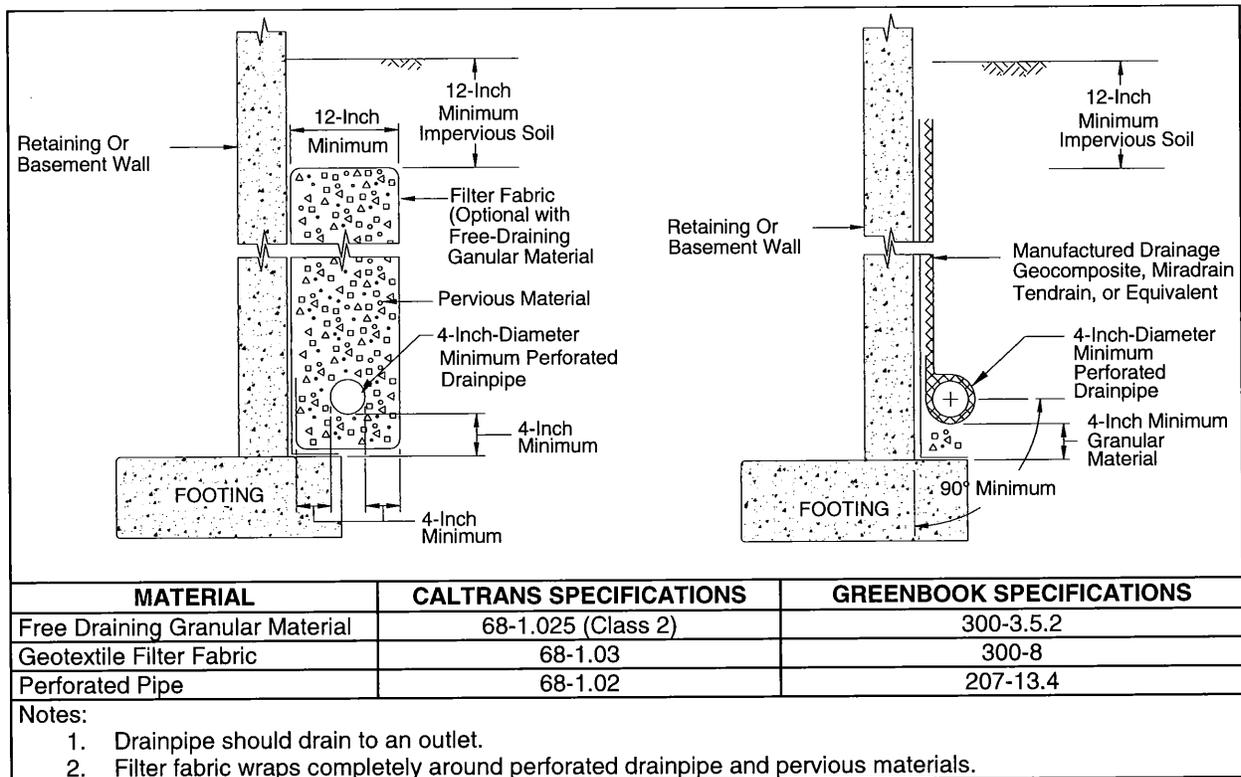

Figure 5 - RETAINING OR BASEMENT WALL DRAINAGE

4.5 SLABS-ON-GRADE

Slabs-on-grade should be designed for soils classified as medium expansive per UBC Section 1815. An effective PI of 19 should be used with UBC Section 1815.

Slabs-on-grade should be underlain by compacted free-draining onsite or imported soils as outlined on Figure 3. A free-draining layer of crushed rock that contains less than 5 percent fines (passing the No. 200 sieve) should be placed immediately below the slab-on-grade.

Potentially expansive soils should be moisture conditioned to above optimum moisture content and kept wet as outlined in Section 4.2.1. Slabs-on-grade should also be designed to resist the effects of potentially expansive soils

Moisture vapor will tend to migrate through the floor slab. To reduce vapor migration through the floor slab, the following are recommended:

- minimum 10-mil plastic vapor barrier with joints overlapped by at least 6 inches and taped,
- minimum 7-day wet cure with no curing compounds, and
- 2-month slab drying period before floor coverings are placed.

Care should be taken to seal the plastic vapor barrier and avoid puncturing the membrane during construction. A 2-inch-thick layer of sand above the membrane can be used to protect the membrane and help with concrete curing.

4.6 UTILITY TRENCHES

Utility trenches (either open or backfilled) which parallel structures, pavements, or flatwork should be planned so that they do not extend below a plane with a downward slope of 2H:1V from the bottom edge of footings, pavements, or flatwork. Temporary shoring to provide footing, pavement, flatwork, or utility support is recommended unless localized settlements on the order of one percent of the trench depth can be tolerated.

All excavations should comply with appropriate safety standards outlined in Section 4.2.2.

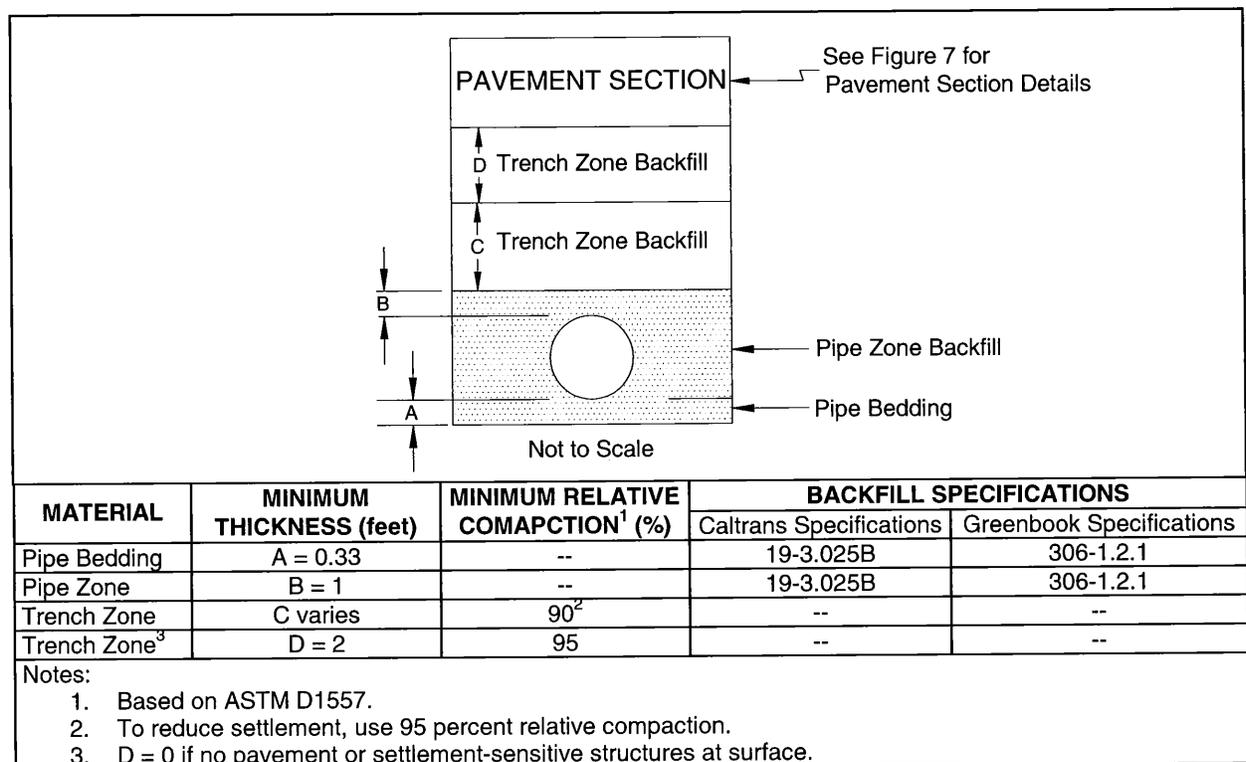

Figure 6 - PIPELINE BACKFILL SCHEMATIC

Utility pipes should be placed on the bottom of a neatly cut trench, on a layer of bedding as outlined on Figure 6 or according to the manufacturer's recommendations, whichever is greater. Bedding requirements are outlined on Figure 6. Jetting for compaction of backfill or any other purpose should not be allowed. We anticipate that the near-surface soils will not be suitable for use as bedding materials.

4.7 PAVEMENT THICKNESS DESIGN

Recommended minimum asphalt concrete (AC) and Portland cement concrete (PCC) pavement sections are presented on Figure 7. The recommended minimum pavement sections are based on the following:

- R-value of 6,
- Caltrans design method, and
- assumed traffic indices (TI) of 5 and 6 for light automobile and light truck traffic areas, respectively.

Generally, rigid PCC pavement costs more for initial construction but requires less maintenance than that for flexible AC pavements. For heavy wheel loads along limited alignments, turning areas, dolly pads, and refuse pickup areas, PCC pavement is preferred. For PCC pavements, the following should be considered

- construct pavements in a 15-foot square grid, (20-foot rectangular areas if a square is not practical),
- care for a minimum of 7 days,
- no traffic until the compressive strength exceeds 2,000 pounds per square inch (psi),
- dowels to strengthen joints, and
- minimum slope for drainage of 1 percent

Aggregate base requirements and specifications are outlined on Figure 7. The basement soil (subgrade) and aggregate base should be compacted to at least 95 percent relative compaction as shown on Figure 7. If the basement soil cannot be compacted to at least 95 percent relative compaction, the subgrade should be overexcavated as noted in Section 4.2.1.

The actual basement soil should be tested for its R-value after rough grading to check the pavement-supporting capacity of the exposed subgrade soils.

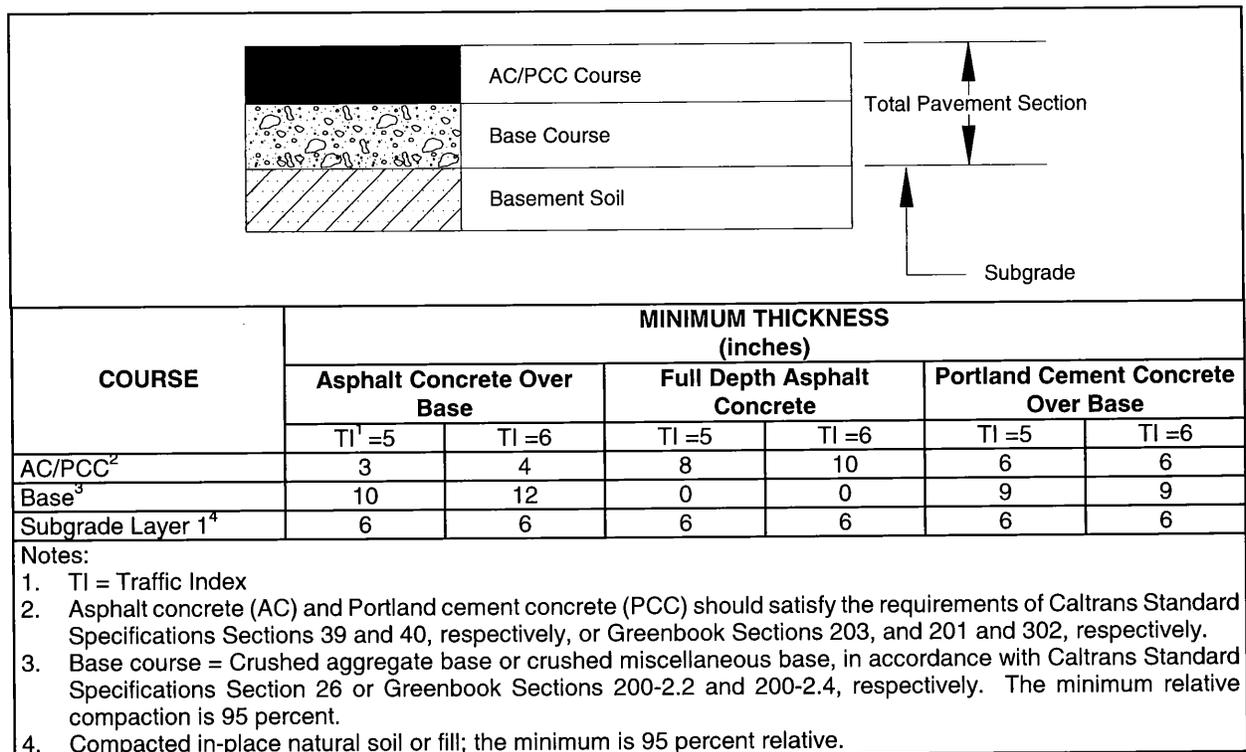

Figure 7 - PAVEMENT THICKNESS

4.8 SOIL CORROSION POTENTIAL

Two tests performed during this investigation indicated 458 to 738 parts per million (ppm) soluble sulfate concentrations in the near-surface soils. Based on these test results, we recommend that Type II cement be used with a maximum water/cement materials ratio of 0.50 in accordance with UBC standard 1904.3.1.

Two soil samples were tested for pH, soluble chloride concentration, and soil electrical resistivity tests for corrosion potential. The range of test values is summarized in Table 3. Also presented in Table 3 are Caltrans (1996) corrosion criteria. The corrosion potential test results are presented in Appendix B. Based on Caltrans standards and other published correlations and the chemical test results, the onsite soils are classified as severely corrosive to buried metal pipes. We recommend that protective coatings on metal pipes be considered and that a corrosion specialist be contacted for details of corrosion protection.

Table 3 - CORROSION POTENTIAL

CHARACTERISTIC	RANGE OF VALUES	CALTRANS CRITERIA FOR CORROSIVE MATERIALS
pH	7.61 to 7.77	<5.5
Soluble sulfate content (ppm)	458 to 738	>2,000
Soluble chloride content (ppm)	489 to 750	>500
Electrical resistivity (ohm-cm)	540 to 780	<1,000

5.0 PLAN REVIEW, CONSTRUCTION OBSERVATION, AND TESTING

DYA should be retained to review the finished grading earthwork and foundation plans and specifications for conformance with the intent of our recommendations. The review will enable DYA to modify the recommendations if final design conditions are different than presently understood. During construction, DYA should provide field observation and testing to check that the site preparation, excavation, foundation installation, and finished grading conform to the intent of these recommendations, project plans, and specifications. This would allow DYA to develop supplemental recommendations as appropriate for the actual soil conditions encountered and the specific construction techniques used by the contractor.

As needed during construction, DYA should be retained to consult on geotechnical questions, construction problems, and unanticipated conditions.

6.0 LIMITATIONS

This report has been prepared for this project in accordance with generally accepted geotechnical engineering practices common to the local area. No other warranty, expressed or implied, is made.

The analyses and recommendations contained in this report are based on the literature review, field investigation, and laboratory testing conducted in the area. The results of the field investigation indicate subsurface conditions only at the specific locations and times, and only to the depths penetrated. They do not necessarily reflect strata variations that may exist between such locations. Although subsurface conditions have been explored as part of the investigation, we have not conducted chemical laboratory testing on samples obtained nor evaluated the site with respect to the presence or potential presence of contaminated soil or groundwater conditions.

The validity of our recommendations is based in part on assumptions about the stratigraphy. Observations during construction can help confirm such assumptions. If subsurface conditions different from those described are noted during construction, recommendations in this report must be reevaluated. DYA should be retained to observe earthwork construction in order to help confirm that our assumptions and recommendations are valid or to modify them accordingly. In accordance with UBC Appendix Chapter 33 Section 3317, DYA cannot assume responsibility or liability for the adequacy of recommendations if we do not observe construction.

This report is intended for use only for the project described. In the event that any changes in the nature, design, or location of the facilities are planned, the conclusions and recommendations contained in this report should not be considered valid unless the changes are reviewed and conclusions of this report modified or verified in writing by DYA. We are not responsible for any claims, damages, or liability associated with the interpretation of subsurface data or reuse of the subsurface data or engineering analyses without our express written authorization.

APPENDIX A
FIELD INVESTIGATION

APPENDIX A - FIELD INVESTIGATION

The field investigation for the proposed project consisted of drilling 5 (Borings B-5-21 through B-5-25) to depths ranging from approximately 14.5 to 16.5 feet. Borings B-5-1 through B-5-20 were drilled for previous investigations (DYA1998, 1999 and 2000A). The approximate boring locations are shown on Figure 2.

Borings were drilled by A & R Drilling, Inc. on May 26, 2000, with a truck mounted CME-75 drill rig using hollow stem auger techniques. Our field engineer observed the drilling operations and collected drive samples for visual examination and subsequent laboratory testing. Drive samples were collected with a 2.4-inch-inside-diameter (3.0-inch-outside-diameter) modified California split-barrel sample lined with brass tubes and a standard split-spoon penetrometer with dimensions in accordance with ASTM 3550 and 1586, respectively. Both samplers were driven with a 140-pound hammer falling 30 inches. An automatic trip hammer was used. The blows required to drive the modified California sampler were converted to equivalent standard penetration test (SPT) N-values by multiplying by 0.5 ($N=0.5 \times$ modified California blows per foot). Field unconfined compression strengths were obtained using a pocket penetrometer.

Soils encountered in the borings were classified in general accordance with the ASTM Soil Classification System (ASTM D2487 and 2488), summarized on Plate A1. Boring logs presented on Plates A2 through A6 were prepared from visual examination of the samples, cuttings obtained during drilling operations, and results of laboratory tests.

Groundwater was encountered during the field investigation in Boring B-5-25 at 14.5 feet. Borings were backfilled with soil cuttings.

Boring locations were identified in the field by measuring from known locations using a measuring wheel.

SOIL CLASSIFICATION SYSTEM-ASTM D2487

MAJOR DIVISIONS			SYMBOLS		TYPICAL DESCRIPTIONS
			GRAPH	LETTER	
COARSE-GRAINED SOILS MORE THAN 50% OF MATERIAL IS LARGER THAN NO. 200 SIEVE SIZE	GRAVEL AND GRAVELLY SOILS MORE THAN 50% OF COARSE FRACTION RETAINED ON NO. 4 SIEVE	CLEAN GRAVELS (LITTLE OR NO FINES)		GW	WELL-GRADED GRAVELS, GRAVEL - SAND MIXTURES, LITTLE OR NO FINES
				GP	POORLY GRADED GRAVELS, GRAVEL - SAND MIXTURES, LITTLE OR NO FINES
		GRAVELS WITH FINES		GM	SILTY GRAVELS, GRAVEL - SAND - SILT MIXTURES
		(APPRECIABLE AMOUNT OF FINES)		GC	CLAYEY GRAVELS, GRAVEL - SAND - CLAY MIXTURES
	SAND AND SANDY SOILS MORE THAN 50% OF COARSE FRACTION PASSING ON NO. 4 SIEVE	CLEAN SANDS (LITTLE OR NO FINES)		SW	WELL-GRADED SANDS, GRAVELLY SANDS, LITTLE OR NO FINES
				SP	POORLY GRADED SANDS, GRAVELLY SAND, LITTLE OR NO FINES
		SANDS WITH FINES		SM	SILTY SANDS, SAND - SILT MIXTURES
		(APPRECIABLE AMOUNT OF FINES)		SC	CLAYEY SANDS, SAND - CLAY MIXTURES
FINE-GRAINED SOILS MORE THAN 50% OF MATERIAL IS SMALLER THAN NO. 200 SIEVE SIZE	SILTS AND CLAYS LIQUID LIMIT LESS THAN 50			ML	INORGANIC SILTS AND VERY FINE SANDS, ROCK FLOUR, SILTY OR CLAYEY FINE SANDS OR CLAYEY SILTS WITH SLIGHT PLASTICITY
				CL	INORGANIC CLAYS OF LOW TO MEDIUM PLASTICITY, GRAVELLY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS
				OL	ORGANIC SILTS AND ORGANIC SILTY CLAYS OF LOW PLASTICITY
	SILTS AND CLAYS LIQUID LIMIT GREATER THAN 50			MH	INORGANIC SILTS, MICACEOUS OR DIATOMACEOUS FINE SAND OR SILTY SOILS
				CH	INORGANIC CLAYS OF HIGH PLASTICITY
				OH	ORGANIC CLAYS OF MEDIUM TO HIGH PLASTICITY, ORGANIC SILTS
HIGHLY ORGANIC SOILS				PT	PEAT, HUMUS, SWAMP SOILS WITH HIGH ORGANIC CONTENTS

APPENDIX B
LABORATORY TESTING

APPENDIX B - LABORATORY TESTING

Diaz•Yourman & Associates (DYA) selected soil samples to be tested and selected the tests to be performed on the selected samples. Laboratory testing was performed by Teratest Labs, Inc. Laboratory data are summarized on the boring logs and presented on Plates B1 through B5. A summary of the geotechnical laboratory testing is presented in Table B1. Corrosion potential test results are summarized in Table B2.

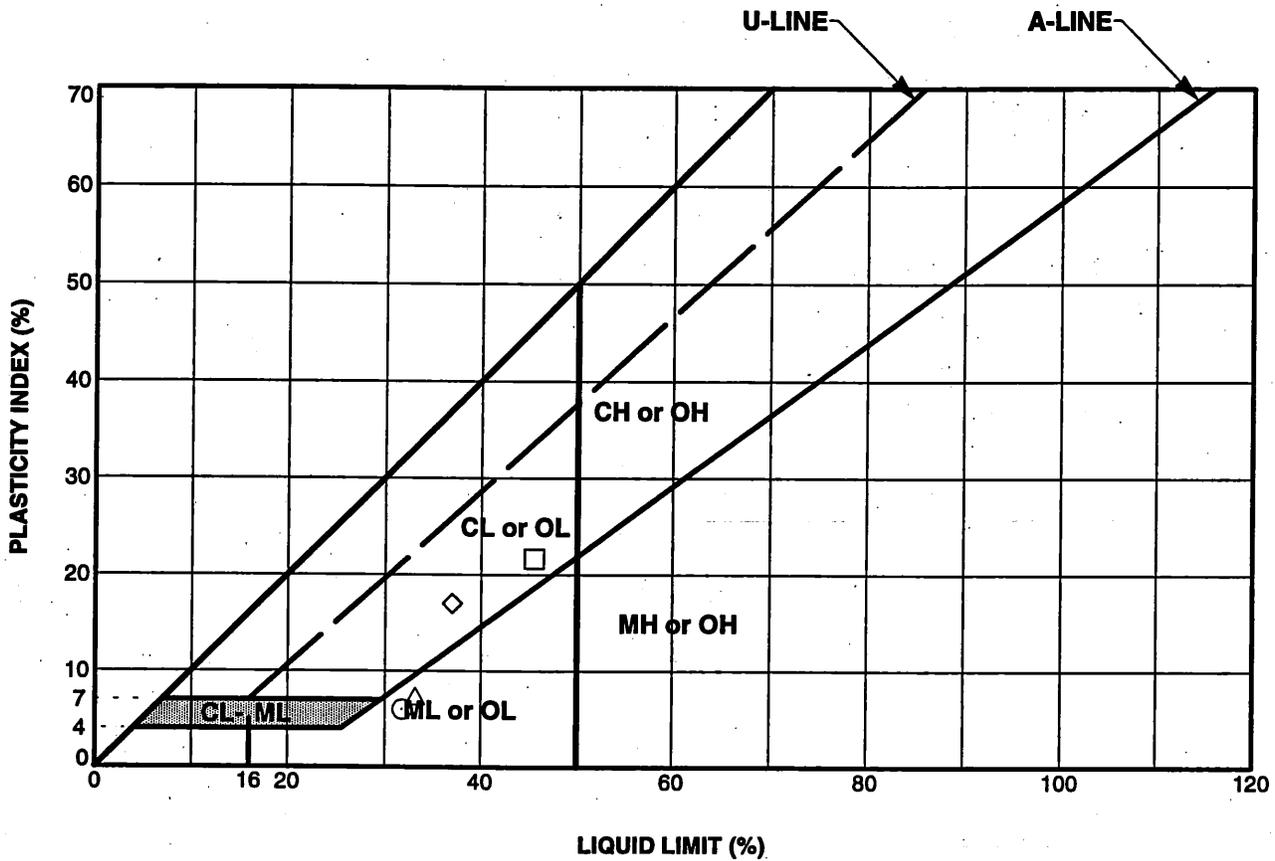

TABLE B1 - LABORATORY TESTING SUMMARY

TEST NAME	PROCEDURE	PURPOSE	LOCATION
Percent Passing the No. 200 Sieve	ASTM D1140-92	Classification, index properties	Boring Logs
Moisture Content, Dry Density	ASTM D2216-92	Classification, index properties	Boring Logs
Grain-Size Distribution	ASTM D422-63	Classification, index properties	Plate B1

	Corrected R-Value	42	47	43		
	Traffic Index	5	5	5		
	G.E. by Stability	0.94	0.85	0.91		
G.E. by Expansion		2.43	2.67	2.57		

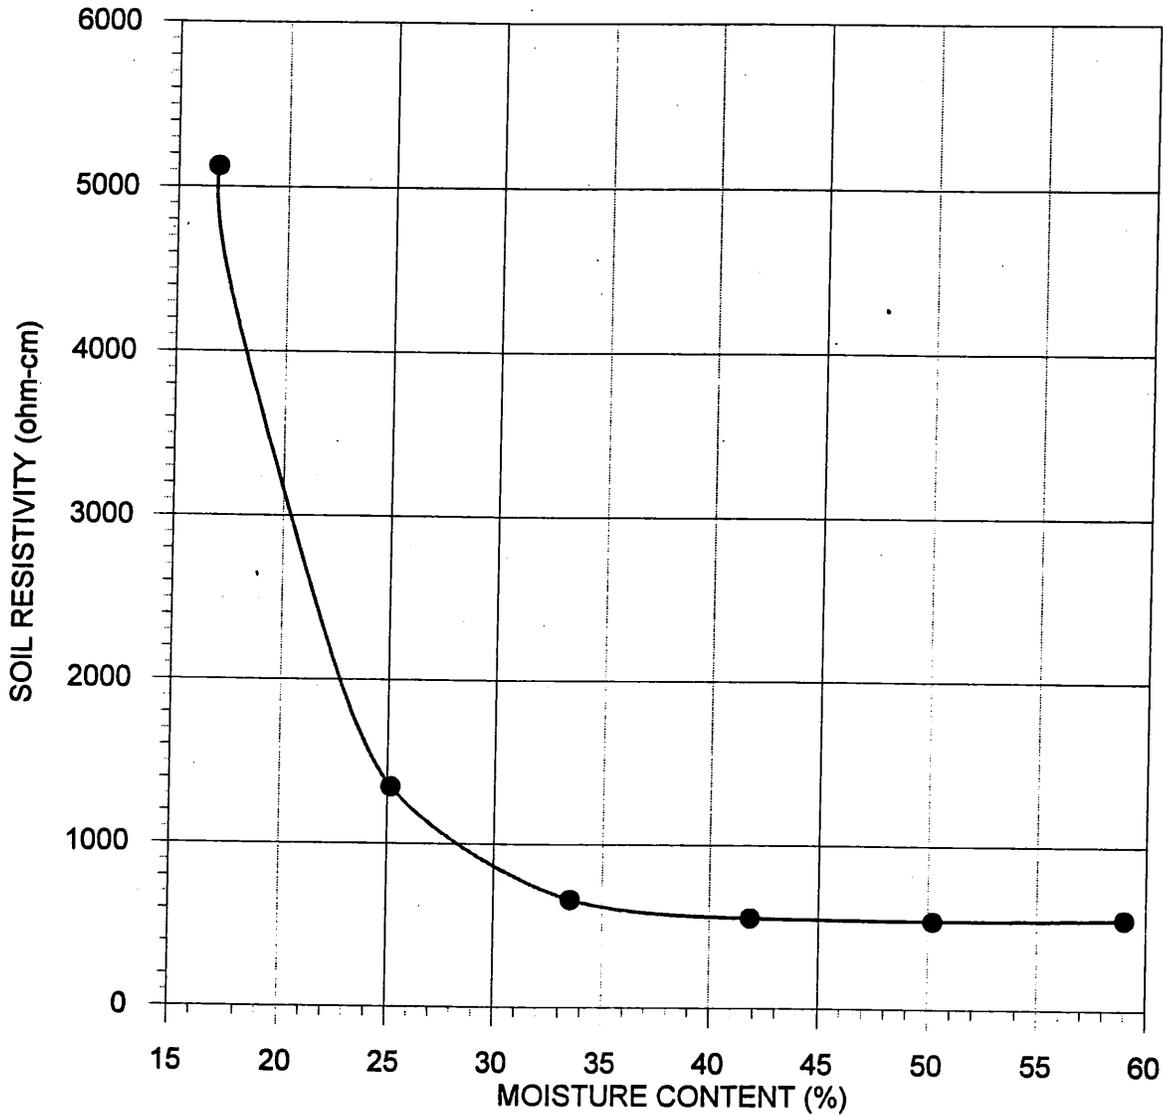

R-Value by Expansion: 29
R-Value by Stability: 42
Equilibrium R-Value: 29

Lab No. _____
Date Tested: SCF
Tested By: _____

TERATEST LABS, INC.
Premier Geotechnical Testing

Project No. 171-04
Project Name Bixby Ranch
Date 6-12-00 Figure No. _____

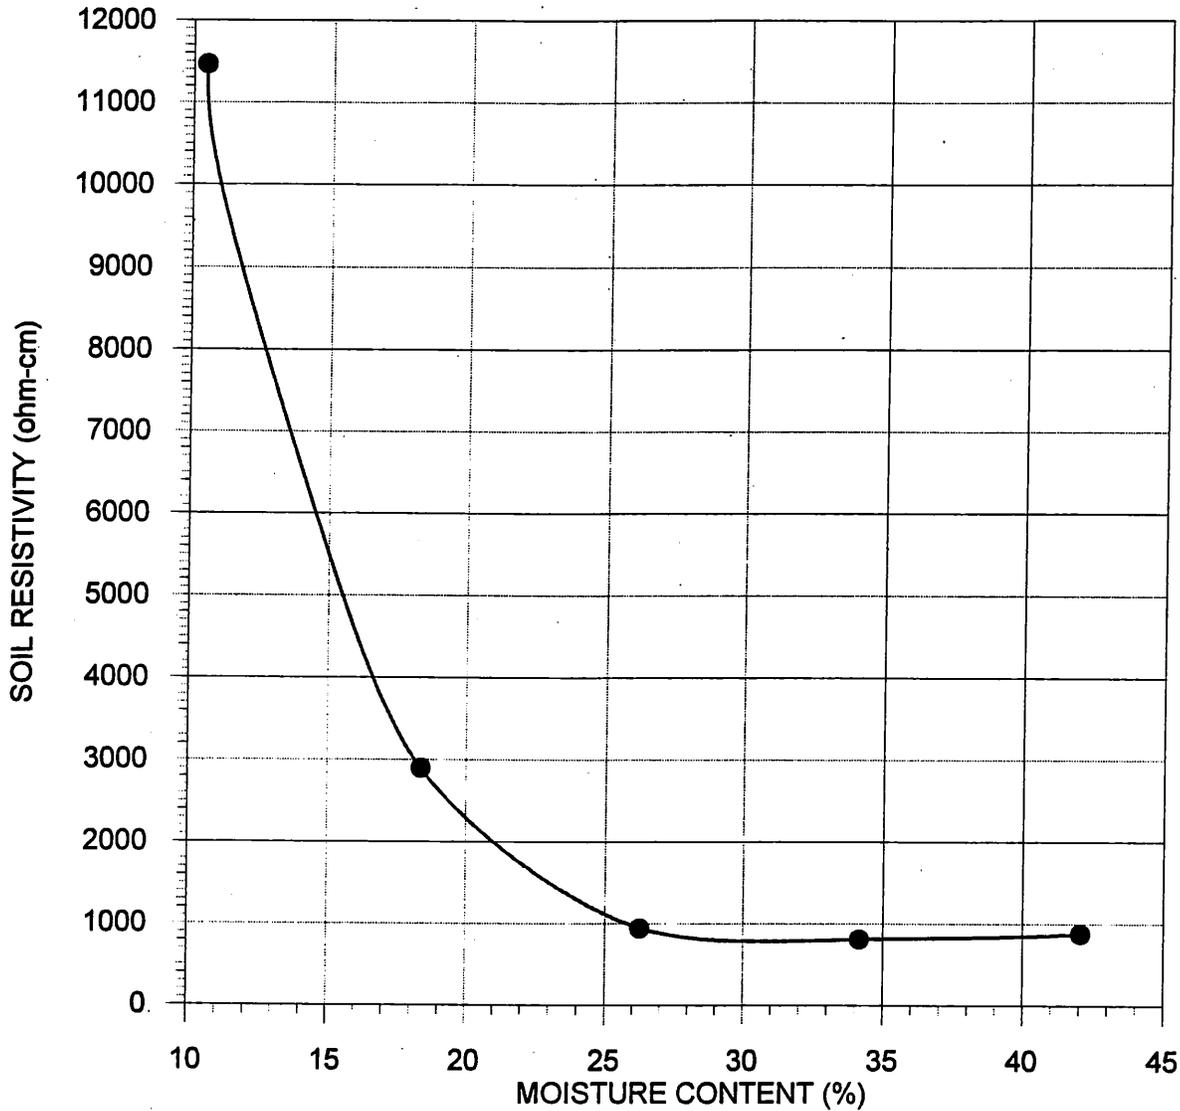

**R-VALUE
TEST
RESULTS**

BORING NO.	SAMPLE NO.	DEPTH (ft)	MINIMUM RESISTIVITY (ohm-cm)	MOISTURE CONTENT (%)	SOIL TYPE
B-5-22	Bulk	0.0-5.0	540	50.2	CL

Soil pH: 7.61 @ 22.5 °C
 Sulfate Content (ppm): 738
 Chloride Content (ppm): 750

TERATEST LABS, Inc.	Project No.	171-04
	Bixby Ranch Club House & Bridges	
MINIMUM SOIL RESISTIVITY & SOIL pH (DOT CA Test 532 / 643) Sulfate Content (DOT CA Test 417, Part II) Chloride Content (DOT CA Test 422)		
06-00		

BORING NO.	SAMPLE NO.	DEPTH (ft)	MINIMUM RESISTIVITY (ohm-cm)	MOISTURE CONTENT (%)	SOIL TYPE
B-5-23	Bulk	0.0-5.0	780	31.0	(CL)s

Soil pH: 7.77 @ 22.5 °C

Sulfate Content (ppm): 458

Chloride Content (ppm): 489

TERATEST LABS, Inc.	Project No.	171-04
	Bixby Ranch Club House & Bridges	
MINIMUM SOIL RESISTIVITY & SOIL pH (DOT CA Test 532 / 643) Sulfate Content (DOT CA Test 417, Part II) Chloride Content (DOT CA Test 422)		
		06-00

DISTRIBUTION

2 copies Mr. Ron Bradshaw
Bixby Ranch Company
3010 Old Ranch Parkway, Suite 100
Seal Beach, CA 90740

6 copies Mr. Michael Incledon
Incledon Kirk Engineers
1700 Adams Street, Suite 214
Costa Mesa, Ca. 92626

QUALITY CONTROL REVIEWER

Robert S. Wright, P.E., G.E.
