INITIAL STUDY
JANUARY 2023

A. BACKGROUND

-
1. Project Title: 810 East Dunne Avenue Project
 2. Lead Agency Name and Address: City of Morgan Hill
Development Services Department
Morgan Hill, CA
17575 Peak Avenue
Morgan Hill, CA 95037
 3. Contact Person and Phone Number: Tiffany Brown
Senior Planner
(408) 310-4655
 4. Project Location: 810 East Dunne Avenue
Morgan Hill, CA 95037
APNs 817-11-043, -077
 5. Project Sponsor's Name and Address: AU Energy, LLC
41805 Albrae Street, 2nd Floor
Fremont, California 94538
 6. General Plan Designation: Commercial
 7. Zoning Designation: General Commercial (CG)
 8. Required Approvals from Other Public Agencies: N/A
 9. Surrounding Land Uses and Setting:

The 1.07-acre project site consists of two parcels located at 810 East Dunne Avenue in the City of Morgan Hill, California. The site is identified by Assessor's Parcel Numbers (APNs) 817-11-043 and -077, and bound by East Dunne Avenue to the north, Walnut Grove Drive to the west, and private driveways to the east and south that provide access to existing commercial uses in the immediate project vicinity. Currently, the site is developed with an existing Shell fueling station, car wash, and convenience store, featuring a fueling canopy comprised of seven fuel dispensers, a car wash, and paved surface parking. The Morgan Hill 2035 General Plan designates the site as Commercial and the site is zoned General Commercial (CG).

Surrounding existing land uses consist of commercial uses to the north, across East Dunne Avenue; a grocery store and townhomes further to the north; commercial uses to the east; a surface parking lot to the south; commercial uses further to the south; and a commercial use, commercial/industrial uses, and associated parking areas to the west.

10. Project Description Summary:

The 810 East Dunne Avenue Project (proposed project) would include demolition of the existing Shell fueling station, car wash, and convenience store, removal of two existing 15,000-gallon underground storage tanks (USTs), and redevelopment of the project site with a new fueling station, car wash, and convenience store. The new structures would consist of a 5,007-square-foot convenience store, a 2,789-square-foot fueling canopy featuring four fuel dispensers to serve eight vehicles, a 1,733-square-foot car wash tunnel, a 250-square-foot car wash equipment room, and a 679-square-foot storage area. A total of 22 parking stalls would be provided. In addition, two new 20,000-gallon USTs would be installed on-site. The project would require City approval of a Conditional Use Permit (CUP), a Design Permit, and lot merger Map to merge the two lots into one. In addition, the project would require County of Santa Clara Hazardous Material Compliance Division (HMCD) approval of a UST System Closure Permit and UST Permit to Operate.

C. ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is “Less Than Significant with Mitigation Incorporated” as indicated by the checklist on the following pages.

- | | | |
|--|--|---|
| <input type="checkbox"/> Aesthetics | <input type="checkbox"/> Agriculture and Forest Resources | <input type="checkbox"/> Air Quality |
| <input checked="" type="checkbox"/> Biological Resources | <input type="checkbox"/> Cultural Resources | <input type="checkbox"/> Energy |
| <input type="checkbox"/> Geology and Soils | <input checked="" type="checkbox"/> Greenhouse Gas Emissions | <input checked="" type="checkbox"/> Hazards and Hazardous Materials |

| <input type="checkbox"/> Utilities and Service Systems | <input type="checkbox"/> Wildfire | <input type="checkbox"/> Mandatory Findings of Significance |

D. DETERMINATION

On the basis of this initial study:

- I find that the Proposed Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- I find that although the Proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the applicant. A MITIGATED NEGATIVE DECLARATION will be prepared.
- I find that the Proposed Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- I find that the proposed project MAY have a “potentially significant impact” or “potentially significant unless mitigated” on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

E. INTRODUCTION

The mitigation measures prescribed for environmental effects described in this Initial Study (IS) would be implemented in conjunction with the project, as required by CEQA. The mitigation measures would be incorporated into the project through project Conditions of Approval. The City would adopt findings and a Mitigation Monitoring/Reporting Program for the project in conjunction with approval of the project.

In July 2016, the City of Morgan Hill adopted the 2035 General Plan,¹ and certified an associated Environmental Impact Report (EIR) for the updated General Plan.² The General Plan EIR is a program EIR, prepared pursuant to Section 15168 of the CEQA Guidelines (Title 14, California Code of Regulations [CCR], Sections 15000 *et seq.*). The General Plan EIR analyzed full implementation of the General Plan and identified measures to mitigate the significant adverse impacts associated with the General Plan. The City of Morgan Hill 2035 General Plan designates the site as Commercial, which is intended to allow for a wide range of retail businesses, administrative and executive office uses, and professional services, either in standalone buildings or as part of shopping centers. The proposed project would be consistent with the site's General Plan land use designation.

Pursuant to Section 15152 of the CEQA Guidelines, a project which is consistent with the General Plan and zoning of the City may tier from the analysis contained in the General Plan EIR, incorporating by reference the general discussions from the broader EIR. Given that the proposed project would be consistent with the site's current General Plan land use designation, the environmental analysis contained in this IS tiers, where applicable, from the General Plan EIR, in accordance with CEQA Guidelines Section 15152.

F. PROJECT DESCRIPTION

The following provides a description of the project site's current location and setting, as well as the proposed project components and the discretionary action required for the project.

Project Location, Setting, and Surrounding Land Uses

The 1.07-acre project site consists of two parcels located at 810 East Dunne Avenue in the City of Morgan Hill, California (see Figure 1 and Figure 2). The site is identified by Assessor's Parcel Numbers (APNs) 817-11-043 and -077, and bound by East Dunne Avenue to the north, Walnut Grove Drive to the west, and private driveways to the east and south that provide access to existing commercial uses in the immediate project vicinity. Currently, the site is developed with an existing Shell fueling station, car wash, and convenience store, featuring a fueling canopy comprised of seven fuel dispensers, a car wash, paved surface parking, and two 15,000-gallon USTs. In addition, the site features landscaping trees and vegetation, primarily along the site's perimeters. The Morgan Hill 2035 General Plan designates the site as Commercial, with a CG zoning designation.

¹ City of Morgan Hill. *2035 General Plan, City of Morgan Hill*. Adopted July 2016.

² City of Morgan Hill. *Morgan Hill 2035 Final Environmental Impact Report*. Certified July 2016.

Figure 1
Regional Vicinity Location

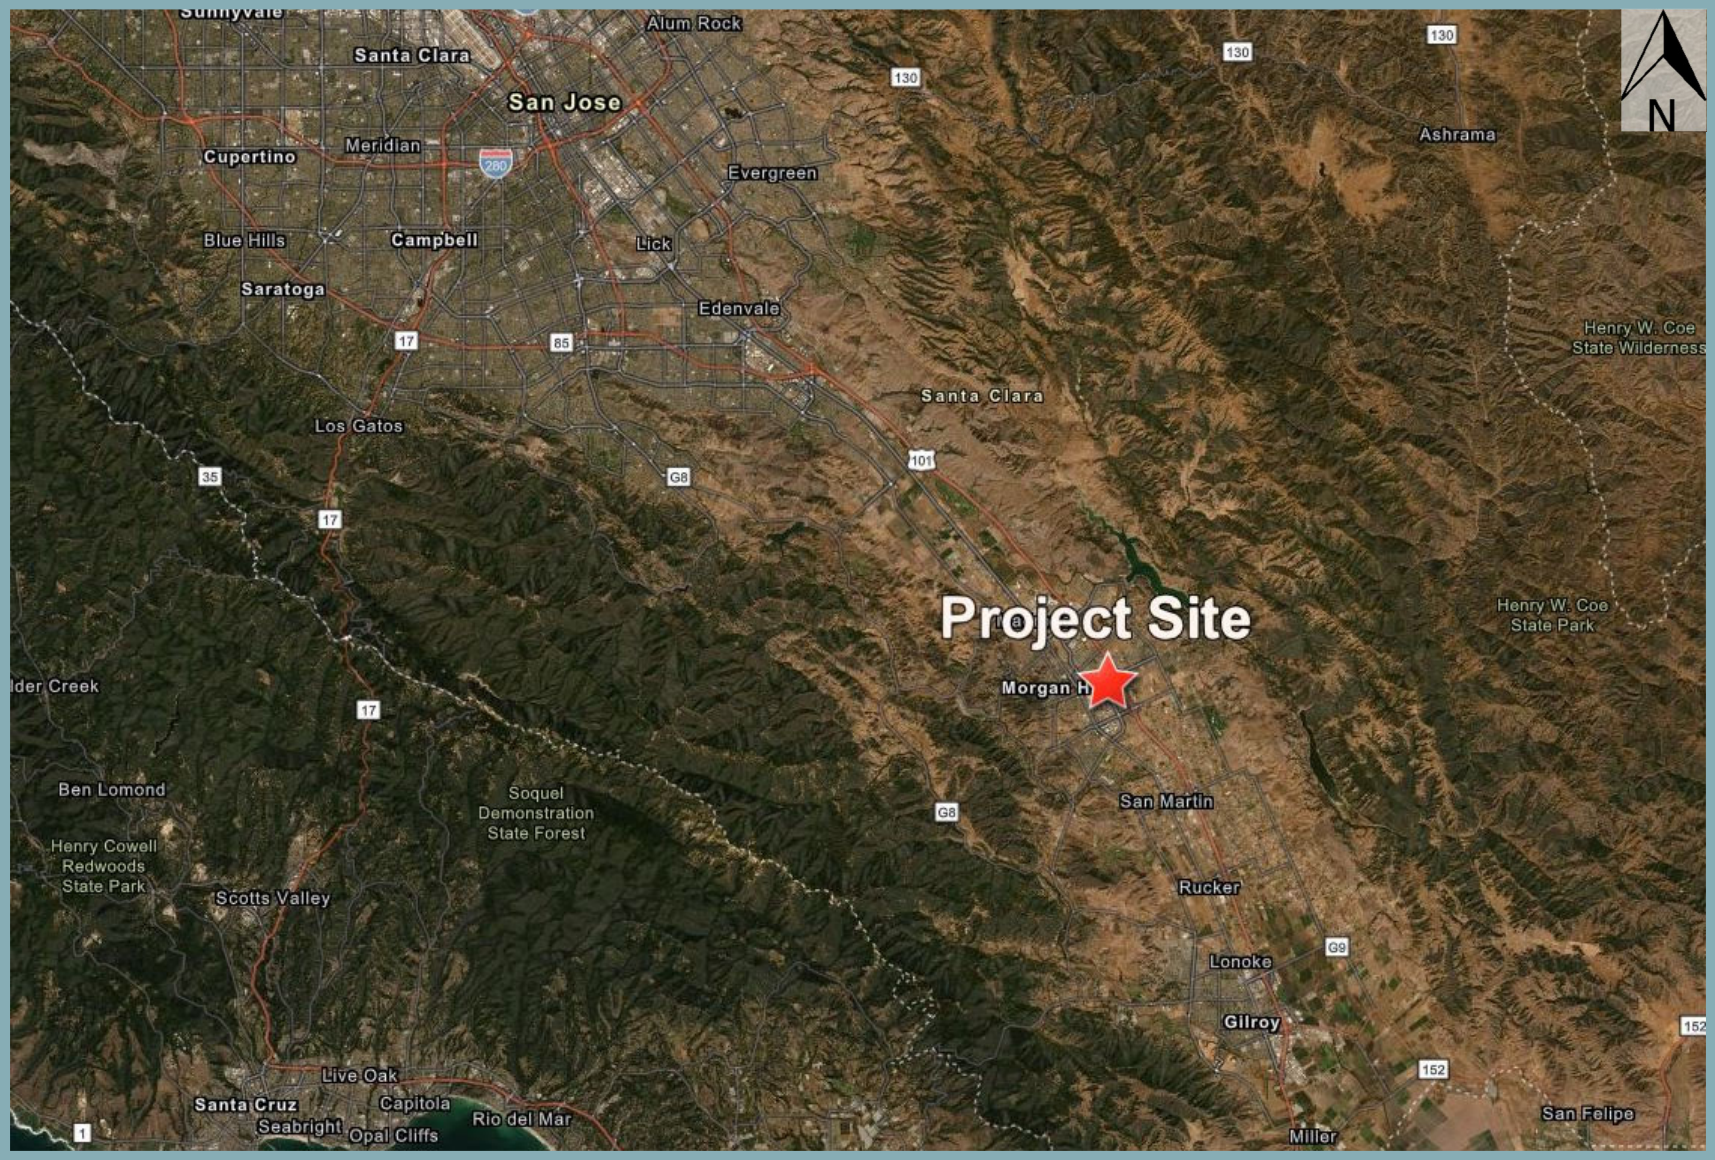

Figure 2
Project Site Boundaries

The site is located within the immediate vicinity of several commercial and commercial/industrial uses to the west of the East Dunne Avenue/U.S. 101 interchange. Surrounding existing land uses consist of commercial uses to the north (Walgreens, Aging Resource Center, Yolked Extreme Breakfast, Jiffy Lube, Chevron ExtraMile, KFC), across East Dunne Avenue; a grocery store (Trader Joe's) and townhomes further to the north; commercial uses (Kelly Moore Paints, Great Clips, Natalie Nail Bar) to the east; a surface parking lot to the south; commercial uses further to the south (Burger King, Safeway, and Home Depot); and a commercial use (CVS), commercial/industrial uses (Twin Glass Industries, Country Automotive, King Muffler, M&M Auto Care, Roadrunner Driving School, George's Auto Service & Transmission), and associated parking areas to the west.

Project Components

In general, the proposed project would consist of demolition of the existing on-site structures and redevelopment of the project site with a new fueling station, car wash, and convenience store. The following section provides more detail regarding the overall project.

Fueling Station, Car Wash, and Convenience Store

Following demolition of the existing on-site fueling station, car wash, and convenience store and removal of the two existing 15,000-gallon USTs, a new fueling station, car wash, and convenience store would be constructed, comprised of a 5,007-square-foot convenience store, a 2,789-square-foot fueling canopy featuring four fuel dispensers, a 1,733-square-foot car wash tunnel, a 250-square-foot car wash equipment room, and a 679-square-foot storage area (see Figure 3). In addition, the fueling station would include installation of two new 20,000-gallon USTs.

The convenience store would be located in the western portion of the site, with parking stalls provided immediately to the east and south of the structure. The storage area and car wash equipment room would be attached to the convenience store's north wall. The convenience store would additionally include an attached masonry trash enclosure immediately to the east of the car wash equipment room, which would feature a solid roof and floor drain. Excluding rooftop heating, ventilation, and air conditioning (HVAC) equipment, the building would be constructed at heights primarily ranging between 20 to 22 feet above the finished grade; although, the building height would extend to 27.5 feet above the main entrance, in order to accommodate the storefront sign (see Figure 4). Exterior building materials would consist of board and batten siding, concrete tiles, and cement plaster bands in neutral colors (i.e., pewter, distant gray, Pennsylvania blue). Vacuum equipment would be installed adjacent to each parking stall along the store's southern boundary and air/water equipment would be located outside the convenience store's southeast corner.

The fueling canopy would be constructed to the east of the convenience store. As previously discussed, the new fueling canopy would include four fuel dispensers from which a total of eight vehicles could re-fuel, representing a net reduction of three fuel dispensers from the seven dispensers currently on-site at the existing fueling station. In addition, two guard posts would be installed at each fuel dispenser. As shown in Figure 5, the new canopy would be constructed at a height of approximately 18.8 feet above the finished grade. Similar to the existing canopy, the new canopy would feature colors synonymous with Shell branding (i.e., red, white, yellow, and gray). Fuel would be provided to the fueling canopy by new 20,000-gallon USTs, which would be installed in the southeastern portion of the project site. Because the new USTs would be installed in the same location as the existing USTs, installation of the larger USTs as part of the project would require 72 cubic yards of excavation.

**Figure 3
Site Plan**

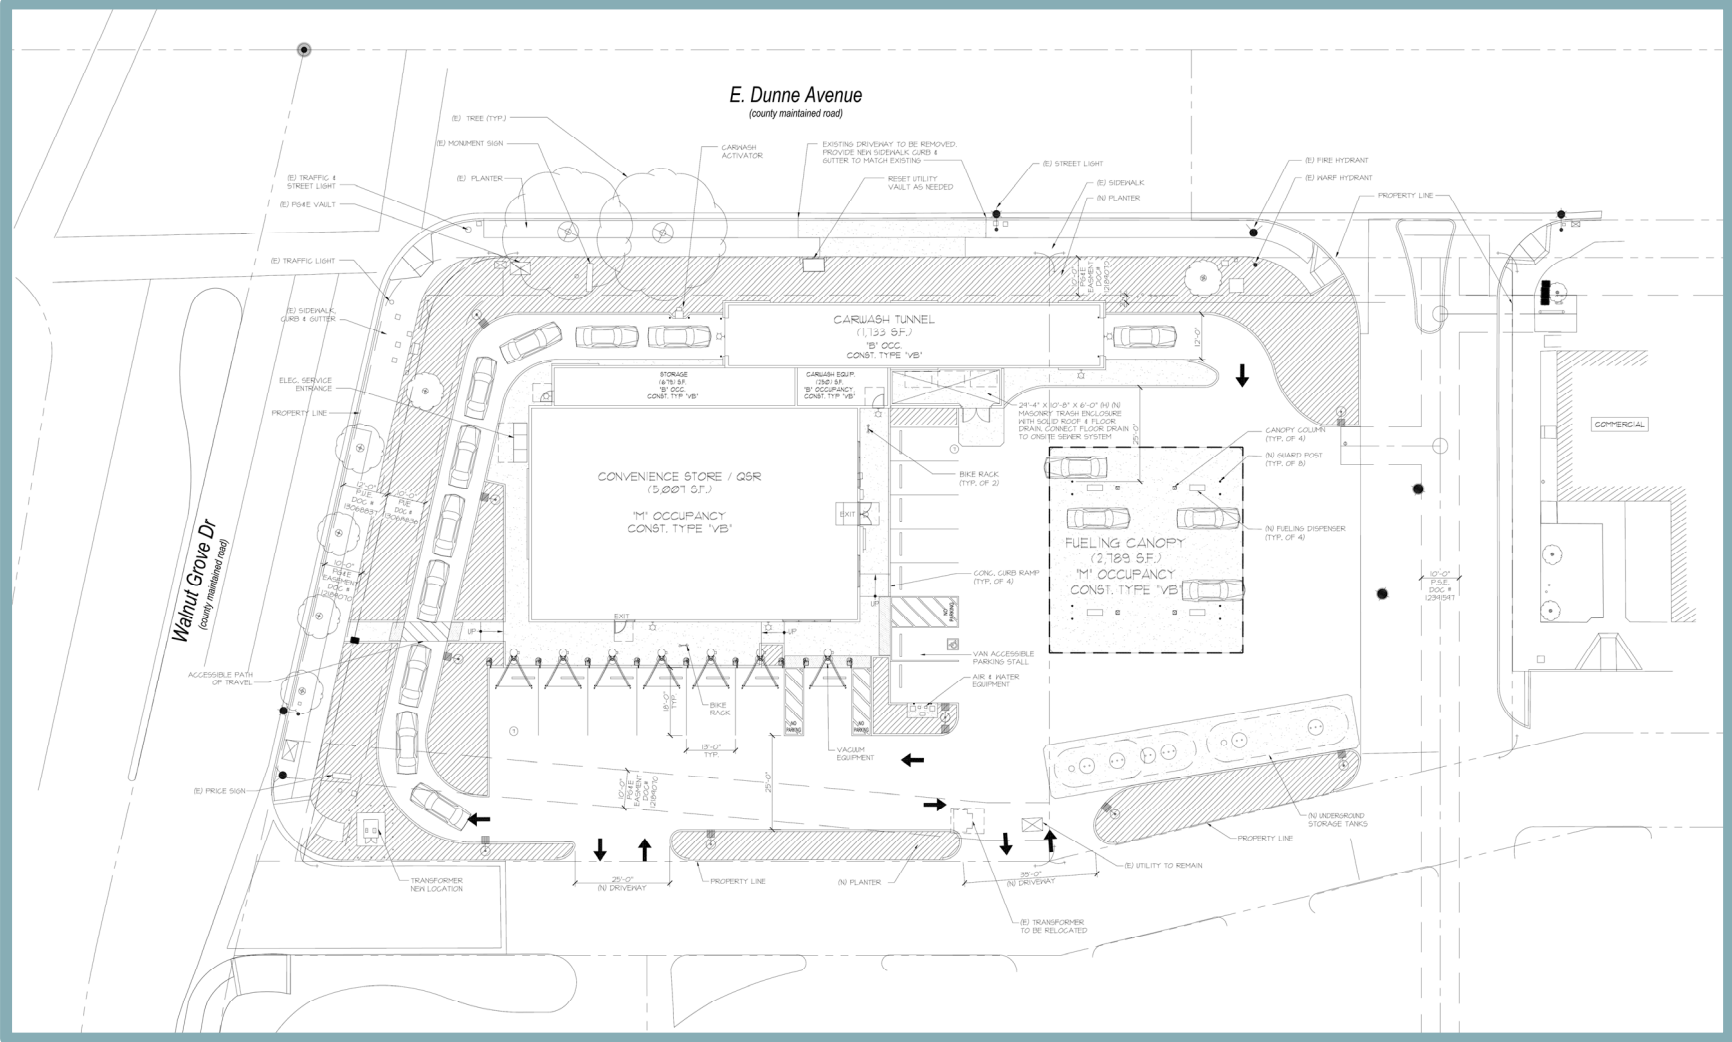

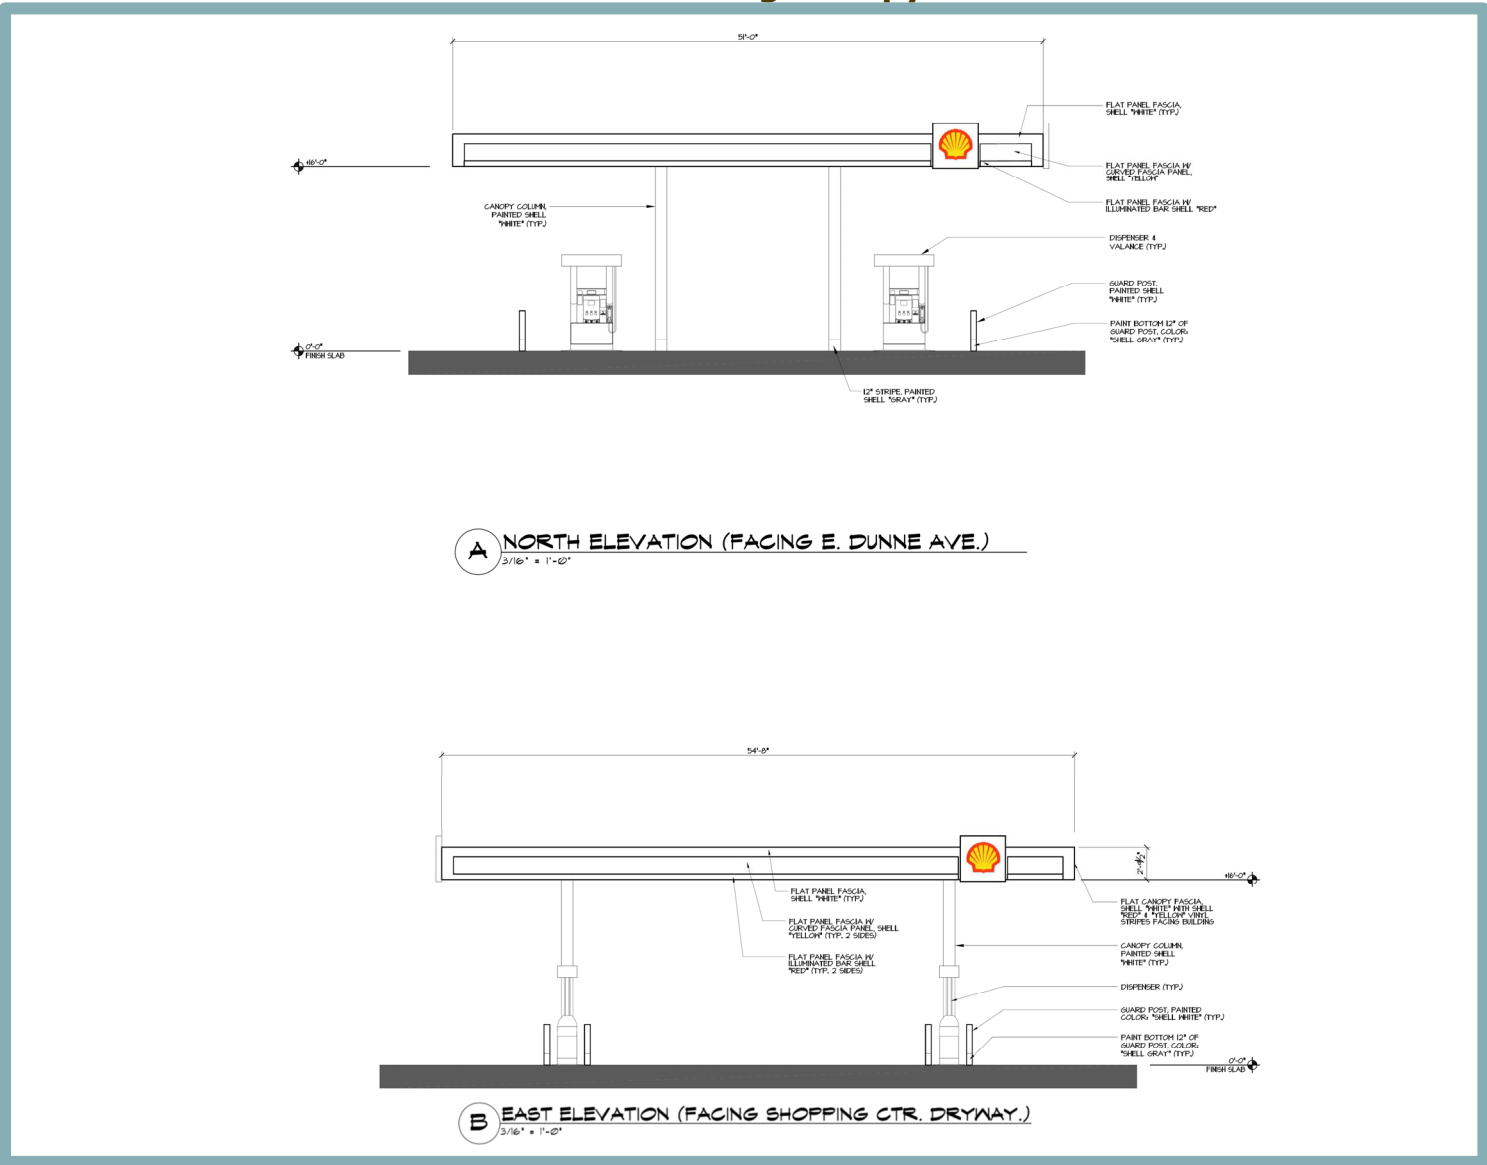

Figure 4
East and South Convenience Store Elevations

Figure 5
North and East Fueling Canopy Elevations

The new car wash tunnel would be located to the north of the convenience store in the northern portion of the project site, parallel to East Dunne Avenue. The tunnel would be attached to the northern walls of the storage area and car wash equipment room. Vehicles would access the car wash through a single-lane queue that loops around the west and north of the convenience store, beginning in the southwest portion of the site. The queue would be 12 feet wide. The car wash would use recycled car wash water as part of project operation, with the ratio of recycled water to fresh water controlled by a reclaim system located in the car wash equipment room.

Access, Circulation, and Parking

Currently, access to the project site is provided through two driveways: one driveway from East Dunne Avenue and one driveway from the southern boundary of the project site. As part of the proposed project, the number of driveways into the site would be maintained; however, both driveways would be located along the site's southern property line, which would thereby eliminate access to the site directly from East Dunne Avenue. The new driveways would consist of a 25-foot-wide driveway and a 35-foot-driveway, the former located more closely to the car wash queue entrance and the latter located more closely to the fueling canopy.

With respect to parking, the project site currently contains a total of 22 parking spaces, comprised of seven standard stalls, a stall in compliance with the Americans with Disabilities Act (ADA), and 14 parking spaces at the seven fuel dispensers. The proposed project would maintain a total of 22 parking spaces; however, the types and locations of the stalls would be modified relative to the existing parking layout (see Figure 3). The new parking spaces would be comprised of five standard spaces, an ADA-compliant van parking stall, an air/water stall, seven vacuum stalls, all of which would be located either to the east or south of the new convenience store, and eight parking spaces at the four fuel dispensers.

In regard to pedestrian access, the existing sidewalks along the project site's northern and western boundaries would be maintained as part of the proposed project. Because the project would remove the existing driveway that currently provides access to the site from East Dunne Avenue, a new segment of sidewalk, curb, and gutter would be constructed along the site's northern boundary. In addition, an accessible path of travel would be constructed from the western sidewalk to the southwest corner of the convenience store.

With respect to bicycle facilities and parking, an existing Class II bike lane is located parallel to the project site's northern boundary along East Dunne Avenue. The proposed project would include bike racks to the east and south of the convenience store.

Utilities

Consistent with the existing conditions, water and sewer service for the proposed project would be provided by the City of Morgan Hill through connections to existing infrastructure located in the project vicinity. More specifically, the proposed project would include new water connections from the proposed convenience store and car wash to the existing eight-inch water main in East Dunne Avenue and the existing 10-inch water main in Walnut Grove Drive. Additionally, the project would include new sewer connections from the proposed convenience store and car wash to the existing 12-inch sewer line in East Dunne Avenue. Car wash water would be treated through a sand/oil separator and clarifier underground tanks, prior to being discharged to the City's sanitary sewer system. In addition, a portion of the car wash water would be recycled.

With respect to storm drainage facilities, the proposed project would include bio-planters within newly landscaped areas of the project site for the purposes of preliminary stormwater treatment.

Following filtration through the bio-planters, flows would be released to the City's storm drain system by way of new connections to the City's existing 30-inch storm drain line located in East Dunne Avenue. From the 30-inch line, flows would be conveyed westward to the existing channel in Butterfield Boulevard.

Finally, electricity would be provided to the proposed project by Pacific Gas & Electric Co. (PG&E) through the existing underground utility lines along East Dunne Avenue. The project would not include natural gas, as natural gas has been prohibited in all new construction since March 1, 2020, pursuant to City Ordinance No. 2306.

Landscaping

The project site currently supports several live oak trees to the north and south of the existing convenience store, which would require removal as part of construction of the proposed project. In addition, the project would require removal of various trees located along the northern and western perimeters of the project site.

As shown in Figure 6, new landscaping would be provided along the northern, southern, and western boundaries of the project site, as well as in areas adjacent to the proposed convenience store. Plant selection would be in accordance with Morgan Hill Municipal Code Section 18.64.060, which requires that a minimum of 90 percent of plants and trees be drought-tolerant, with the City preferring native plants adapted to the local climate. New vegetation would consist of 15-gallon sterling silver linden, honey locust, and Tuscarora trees; five-gallon variegated mock orange, Shiny Xylosma, purple hopseed bush shrubs; and various groundcovers.

Conditional Use Permit and Design Permit

Pursuant to Morgan Hill Municipal Code Section 18.24.010, the purpose of the CG zoning district is to provide a location for a broad range of commercial and employment uses to serve the City's residents, workers, and visitors. As established by Section 18.24.020 of the Municipal Code, convenience markets with a fuel and service station are permitted within the CG zoning district through approval of a CUP. A CUP is a discretionary action that enables the Planning Commission to ensure that a proposed use is consistent with the General Plan and will not create negative impacts to adjacent properties or the general public.

Pursuant to Morgan Hill Municipal Code Section 18.108.040, the City's Design Permit process allows the City to ensure a project is consistent with applicable regulations and standards related to various criteria, including, but not limited to, community character, neighborhood compatibility, safety, architectural style, and parking and access.

Requested/Required Entitlements

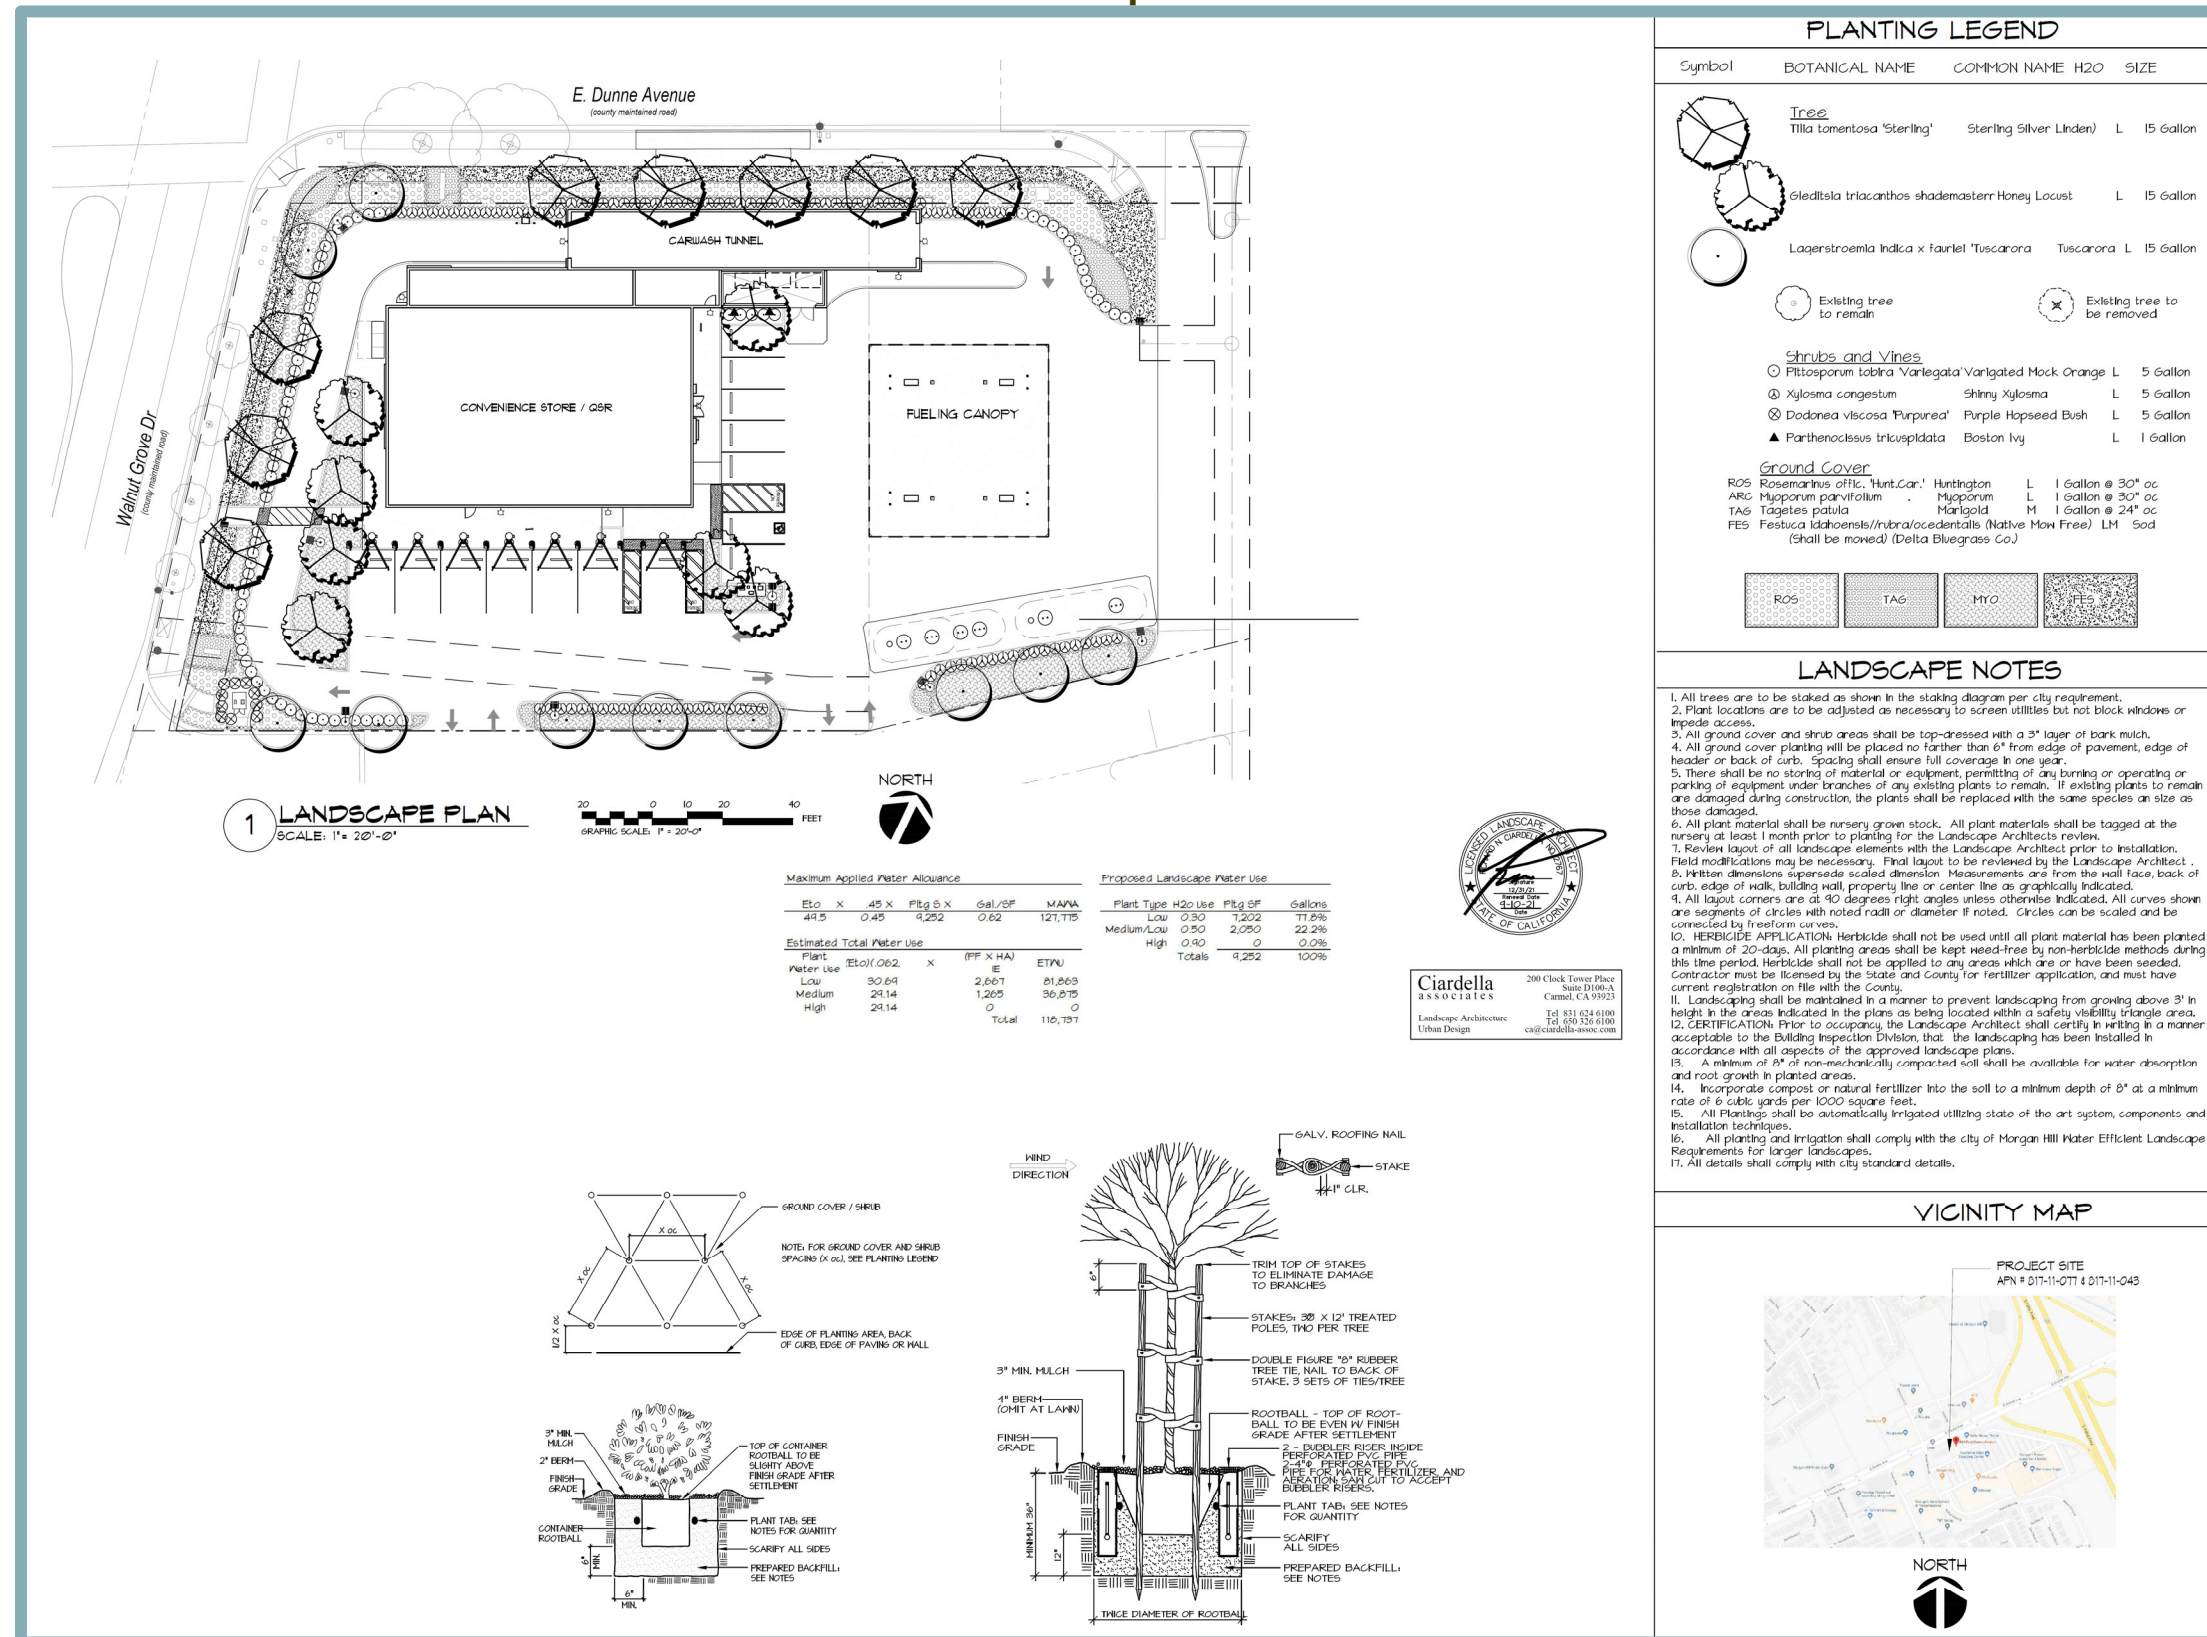

The proposed project would require City approval of the following discretionary entitlements:

- Conditional Use Permit;
- Design Permit; and
- Lot Merger.

In addition, as a responsible agency, the following approvals will be required from Santa Clara County HMCD:

- UST System Closure Permit (issued by the Santa Clara County HMCD); and
- UST Permit to Operate (issued by the Santa Clara County HMCD).

Figure 6
Landscape Plan

G. ENVIRONMENTAL CHECKLIST

The following checklist contains the environmental checklist form presented in Appendix G of the CEQA Guidelines. The checklist form is used to describe the impacts of the proposed project. A discussion follows each environmental issue identified in the checklist. For this checklist, the following designations are used:

Potentially Significant Impact: An impact that could be significant, and for which no mitigation has been identified. If any potentially significant impacts are identified, an EIR must be prepared.

Less Than Significant with Mitigation Incorporated: An impact that requires mitigation to reduce the impact to a less-than-significant level.

Less-Than-Significant Impact: Any impact that would not be considered significant under CEQA relative to existing standards.

No Impact: The project would not have any impact.

I. AESTHETICS.

Would the project:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	✘	<input type="checkbox"/>
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	✘
c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	<input type="checkbox"/>	<input type="checkbox"/>	✘	<input type="checkbox"/>
d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	✘	<input type="checkbox"/>

Discussion

- a. Examples of typical scenic vistas include mountain ranges, ridgelines, or bodies of water as viewed from a highway, public space, or other area designated for the express purpose of viewing or sightseeing. In general, a project’s impact to a scenic vista would occur if development of the project would substantially change or remove a scenic vista.

The Morgan Hill General Plan does not designate official scenic view corridors or vistas. However, according to the City’s General Plan, the hillsides that surround the City to the east and west are considered scenic. Although views of the City’s western hillsides, which are located approximately 3.4 miles to the west of the project site, are visible from the Walnut Grove Drive/East Dunne Avenue intersection, existing views are largely obscured by developed structures, landscaping trees, overhead utility lines, and street lights. Similarly, existing views from the project site of the City’s eastern hillsides, which are located approximately 3.6 miles to the east of the site, are largely obscured by developed structures and other visual impediments. As such, development of the proposed project would not substantially affect existing views of the City’s surrounding hillsides, as currently existing views of such areas are largely obscured from the project site.

In addition, as previously discussed, the project site, which is currently developed with a Shell fueling station, car wash, and convenience store, is surrounded by several existing commercial and industrial uses to the west of the East Dunne Avenue/U.S. 101 interchange. As such, scenic vistas are not located on or within the vicinity of the project site. Furthermore, construction of the proposed project would result in a new fueling station, car wash, and convenience store, similar to the site’s existing use. Therefore, potential modifications to existing views from the project site as a result of the proposed project would not change substantially relative to existing conditions, given the similarities between the existing and proposed uses. Finally, the proposed project is consistent with the site’s Commercial designation, and pursuant to Morgan Hill Municipal Code Section 18.24.020, the project would be consistent with the site’s CG zoning district through approval of a CUP. As part of conformance with the CG zone, the project would be designed and constructed in accordance with the CG development standards set forth by Municipal Code Section 18.24.030, which includes requirements pertaining to minimum setbacks and maximum building height. Conformance with such standards would be verified by the City of Morgan Hill through the City’s Design Permit process. As set forth

by Morgan Hill Municipal Code Section 18.108.040, the Design Permit process allows the City to ensure a project is consistent with applicable regulations and standards related to various criteria, including, but not limited to, community character, neighborhood compatibility, safety, architectural style, and parking and access.

Based on the above information, the proposed project would not have a substantial adverse effect on a scenic vista, and a **less-than-significant** impact would occur.

- b. According to the California Department of Transportation's (Caltrans) State Scenic Highway Map, the nearest officially designated State Scenic Highway to the project site is a segment of State Route (SR) 9, approximately 20.3 miles to the west of the project site.³ In addition, as previously discussed, the project site is currently developed with a Shell fueling station, car wash, and convenience store. As such, the site does not include rock outcroppings, nor are the site's existing structures considered historic buildings. Therefore, the proposed project would not substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State Scenic Highway, and the project would result in **no impact**.
- c. The project site, which is currently developed with a Shell fueling station, car wash, and convenience store, is surrounded by several existing commercial and industrial uses to the west of the East Dunne Avenue/U.S. 101 interchange within the City of Morgan Hill. Therefore, the project site is within an urbanized area, and the relevant threshold is whether the proposed project would conflict with applicable zoning and other regulations governing scenic quality.

The proposed project is consistent with the uses allowed in the General Plan's Commercial land use designation, as the Commercial designation is intended to allow for a wide range of retail businesses, administrative and executive office uses, and professional services, either in standalone buildings or as part of shopping centers. In addition, the proposed project's floor area ratio (FAR) of 0.22 FAR would be consistent with the Commercial designation, which allows for a maximum 0.6 FAR. Furthermore, as previously discussed, pursuant to Morgan Hill Municipal Code Section 18.24.020, through approval of a CUP, the project would be consistent with the site's CG zoning district and would be designed and constructed in accordance with development standards set forth by Municipal Code Section 18.24.030 for the CG zone, including requirements pertaining to minimum setbacks and maximum building height. For instance, the proposed car wash tunnel, convenience store, and fueling canopy would all meet the minimum setback distance and maximum building height standards established for the CG zone. In addition, the proposed project would include new landscaping along the northern, southern, and western boundaries of the site, as well as in areas adjacent to the proposed convenience store. Plant selection would be in accordance with Morgan Hill Municipal Code Section 18.64.060. The proposed project's compliance with applicable regulations and standards related to visual character would be ensured through the City's Design Permit process, as set forth by Morgan Hill Municipal Code Section 18.108.040, which allows the City to ensure a project is consistent with applicable regulations and standards related to various criteria, including, but not limited to, community character, neighborhood compatibility, safety, architectural style, and parking and access.

³ California Department of Transportation. *Scenic Highways: California State Scenic Highways*. Available at: <https://dot.ca.gov/programs/design/lap-landscape-architecture-and-community-livability/lap-liv-i-scenic-highways>. Accessed November 2022.

Finally, the City's General Plan EIR evaluated the potential for development facilitated by buildout of the General Plan planning area to substantially degrade the existing visual character or quality of the City and its surroundings under Impact AES-3. The General Plan EIR determined that, through compliance with applicable General Plan goals, policies, and actions, a less-than-significant impact would occur. The proposed project is consistent with the project site's Commercial land use designation and would be subject to all applicable General Plan policies, including, but not limited to, Policy CNF-8.7, which provides that new development be sensitive to the character of adjacent structures and the immediate neighborhood, and Policy CNF-8.9, which encourages new commercial development to incorporate landscaping. As such, development of the project site with the proposed uses was generally considered as part of buildout of the planning area, and the proposed project would not result in impacts beyond those that were identified in the General Plan EIR.

Based on the above, the proposed project would be required to comply with applicable regulations and standards and would be subject to the City's Design Permit process, which would ensure the project would not conflict with applicable zoning and other regulations governing scenic quality. Therefore, a **less-than-significant** impact would occur.

- d. The project site is currently developed with a Shell fueling station, car wash, and convenience store and, therefore, includes existing sources of light or glare. In addition, the site is surrounded by several existing commercial and industrial uses to the west of the East Dunne Avenue/U.S. 101 interchange within the City of Morgan Hill. Thus, the project vicinity contains numerous existing sources of light and glare.

The proposed project would introduce similar sources of light and glare, including, but not limited to, exterior light fixtures, light reflecting off windows, and interior light spilling through windows. New sources of lighting would be required to comply with the standards set forth in Morgan Hill Municipal Code Sections 18.76.060 (Glare) and 15.40.310 (Open parking lots), which include such requirements as cut-off lenses to direct light downward and minimum maintained lighting on parking surfaces. Compliance with such standards would be ensured through the City's Design Permit process, as set forth by Morgan Hill Municipal Code Section 18.108.040, and would help to ensure that the light and glare created by the proposed project would be consistent with the levels of light and glare currently emitted in the surrounding developed environment by existing commercial and industrial uses.

As part of demonstrating compliance with applicable standards set forth by the Morgan Hill Municipal Code, a Lighting Proposal summarizing the anticipated horizontal illuminance of the proposed project was prepared by LSI Industries, Inc.⁴ Horizontal illuminance describes the amount of light landing on a horizontal surface, such as the ground. According to the Lighting Proposal, the proposed project would result in a horizontal illuminance ranging between 0.4 and 8.2 footcandles along the site's eastern, southern, and western property lines. The areas east, south, and west of the project site are developed with commercial and/or industrial uses and, therefore, do not represent sensitive receptors subject to impacts from light and/or glare. However, with respect to the northern boundary of the project site, which is the property line nearest to existing sensitive receptors in the project vicinity (i.e., the townhomes further to the north of East Dunne Avenue), the Lighting Proposal found that the horizontal illuminance from sources of light

⁴ LSI Industries, Inc. *Lighting Proposal*. September 14, 2021.

associated with the proposed project would range between 0.0 and 1.3 footcandles at the northern perimeter. Within East Dunne Avenue, the horizontal illuminance generated by the project would not exceed 0.5 footcandles and would range in most areas between 0.0 and 0.3 footcandles. For comparison's sake, the Illuminating Engineering Society's (IES) recommended level of horizontal illuminance for a parking lot in an urban setting is 1 footcandle. IES is a nonprofit organization that develops and publishes standards regarding lighting. As such, pursuant to the Lighting Proposal, the proposed project would not result in new sources of substantial light or glare at the project site that would adversely affect day or nighttime views at the nearest sensitive receptors in the project vicinity.

Based on the above, the proposed project would not introduce new sources of substantial light or glare to the site which would adversely affect day or nighttime views in the area, and a ***less-than-significant*** impact would occur.

II. AGRICULTURE AND FORESTRY RESOURCES.

Would the project:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	✘
b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	✘
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	✘
d. Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	✘
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	✘

Discussion

- a,e. The project site is currently developed with a Shell fueling station, car wash, and convenience store. Pursuant to the California Department of Conservation (DOC) Farmland Mapping and Monitoring Program, the project site is designated entirely as "Urban and Built-up Land."⁵ The DOC defines Urban and Built-up Land as land that is “used for residential, industrial, commercial, construction, institutional, public administration, railroad and other transportation yards, cemeteries, airports, golf courses, sanitary landfills, sewage treatment, water control structures, and other developed purposes.” As such, the project site does not contain Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, and development of the proposed project would not convert such resources to non-agricultural use, nor otherwise result in the loss of Farmland to non-agricultural use or forest land to non-forest use. Therefore, **no impact** would occur.
- b. The project site is not under a Williamson Act contract and is not zoned for agricultural uses. The site is currently zoned CG and developed with an existing Shell fueling station, car wash, and convenience store. Therefore, buildout of the proposed project would not conflict with an agricultural use or a Williamson Act contract, and **no impact** would occur.
- c,d. The project site is not considered forest land (as defined in Public Resources Code [PRC] Section 12220[g]), timberland (as defined by PRC Section 4526), and is not zoned Timberland Production (as defined by Government Code Section 51104[g]). Therefore, the proposed project would not conflict with existing zoning for, or cause rezoning of, forest land, timberland, or timberland zoned Timberland Production, or result in the loss of forest land or conversion of forest land to non-forest use. Therefore, the project would result in **no impact**.

⁵ California Department of Conservation. *California Important Farmland Finder*. Available at: <https://maps.conservation.ca.gov/DLRP/CIFF/>. Accessed November 2022.

III. AIR QUALITY.

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	✘	<input type="checkbox"/>
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	<input type="checkbox"/>	<input type="checkbox"/>	✘	<input type="checkbox"/>
c. Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	✘	<input type="checkbox"/>
d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	✘	<input type="checkbox"/>

Discussion

a,b. The City of Morgan Hill is located in the San Francisco Bay Area Air Basin (SFBAAB), which is under the jurisdiction of the Bay Area Air Quality Management District (BAAQMD). The SFBAAB area is currently designated as a nonattainment area for State and federal ozone, State and federal fine particulate matter 2.5 microns in diameter (PM_{2.5}), and State respirable particulate matter 10 microns in diameter (PM₁₀) ambient air quality standards (AAQS). The SFBAAB is designated attainment or unclassified for all other AAQS. It should be noted that on January 9, 2013, the U.S. Environmental Protection Agency (USEPA) issued a final rule to determine that the Bay Area has attained the 24-hour PM_{2.5} federal AAQS. Nonetheless, the Bay Area must continue to be designated as nonattainment for the federal PM_{2.5} AAQS until such time as the BAAQMD submits a redesignation request and a maintenance plan to the USEPA, and the USEPA approves the proposed redesignation. The USEPA has not yet approved a request for redesignation of the SFBAAB; therefore, the SFBAAB remains in nonattainment for 24-hour PM_{2.5}.

In compliance with regulations, due to the nonattainment designations of the area, the BAAQMD periodically prepares and updates air quality plans that provide emission reduction strategies to achieve attainment of the AAQS, including control strategies to reduce air pollutant emissions through regulations, incentive programs, public education, and partnerships with other agencies. The current air quality plans are prepared in cooperation with the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG).

The most recent federal ozone plan is the 2001 Ozone Attainment Plan, which was adopted on October 24, 2001 and approved by the California Air Resources Board (CARB) on November 1, 2001. The plan was submitted to the USEPA on November 30, 2001 for review and approval. The most recent State ozone plan is the 2017 Clean Air Plan, adopted on April 19, 2017. The 2017 Clean Air Plan was developed as a multi-pollutant plan that provides an integrated control strategy to reduce ozone, PM, toxic air contaminants (TACs), and greenhouse gases (GHGs). Although a plan for achieving the State PM₁₀ standard is not required, the BAAQMD has prioritized measures to reduce PM in developing the control strategy for the 2017 Clean Air Plan. The control strategy serves as the backbone of the BAAQMD's current PM control program.

The aforementioned air quality plans contain mobile source controls, stationary source controls, and transportation control measures to be implemented in the region to attain the State and federal AAQS within the SFBAAB. Adopted BAAQMD rules and regulations, as well as thresholds of significance, have been developed with the intent to ensure

continued attainment of AAQS, or to work towards attainment of AAQS for which the area is currently designated nonattainment, consistent with applicable air quality plans. The BAAQMD’s established significance thresholds associated with development projects for emissions of the ozone precursors reactive organic gases (ROG) and oxides of nitrogen (NO_x), as well as for PM₁₀ and PM_{2.5}, expressed in pounds per day (lbs/day) and tons per year (tons/yr), are listed in Table 1. By exceeding the BAAQMD’s mass emission thresholds for ROG, NO_x, PM₁₀, or PM_{2.5}, a project would be considered to conflict with or obstruct implementation of the BAAQMD’s air quality planning efforts.

Table 1 BAAQMD Thresholds of Significance			
Pollutant	Construction	Operational	
	Average Daily Emissions (lbs/day)	Average Daily Emissions (lbs/day)	Maximum Annual Emissions (tons/yr)
ROG	54	54	10
NO _x	54	54	10
PM ₁₀ (exhaust)	82	82	15
PM _{2.5} (exhaust)	54	54	10

Source: BAAQMD, CEQA Guidelines, May 2017.

Emissions of particulate matter can be split into two categories: fugitive emissions and exhaust emissions. The BAAQMD thresholds of significance for exhaust PM emissions are presented in Table 1. The BAAQMD does not maintain quantitative thresholds for fugitive emissions of PM₁₀ or PM_{2.5}; rather, BAAQMD requires all projects within the district’s jurisdiction to implement Basic Construction Mitigation Measures (BCMMS) related to dust suppression.

The proposed project’s construction and operational emissions were quantified using the California Emissions Estimator Model (CalEEMod) software version 2020.4.0 – a statewide model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify air quality emissions, including GHG emissions, from land use projects. The model applies inherent default values for various land uses, including construction data, trip generation rates, vehicle mix, trip length, average speed, compliance with the California Building Standards Code (CBSC), etc. Where project-specific information is available, such information should be applied in the model. The proposed project’s modeling assumes the following:

- Construction would commence in July of 2023 and occur over an approximately 1.5-year period;
- Approximately 8,000-square-foot of building material would be removed during demolition;
- Approximately 72 cubic yards of soils/materials would be exported during site preparation;
- The trip generation rate was updated to be consistent with the project-specific Traffic Impact Analysis prepared for the project by TJKM;⁶
- Consistent with City Ordinance No. 2306, the proposed project would not include natural gas infrastructure; and

⁶ TJKM. *Traffic Impact Analysis, Proposed Commercial Development at 810 East Dunne Avenue*. June 9, 2021.

- The project would comply with the Model Water Efficient Landscape Ordinance (MWELO) and the 2019 CALGreen Code.

The proposed project’s estimated emissions associated with construction and operation are provided below. All CalEEMod results are included as Appendix A to this IS.

Construction Emissions

According to the CalEEMod results, the proposed project would result in maximum unmitigated construction criteria air pollutant emissions as shown in Table 2.

Pollutant	Proposed Project Emissions	Threshold of Significance	Exceeds Threshold?
ROG	2.30	54	NO
NO _x	14.61	54	NO
PM ₁₀ *	0.68	82	NO
PM _{2.5} *	0.64	54	NO
Note: * Denotes emissions from exhaust only. BAAQMD does not have adopted PM thresholds for fugitive emissions.			
Source: CalEEMod, November 2022 (see Appendix A).			

As shown in the table, the construction of the proposed project would generate criteria pollutant emissions below all applicable thresholds of significance.

All projects within the jurisdiction of the BAAQMD are required to implement all of the BAAQMD’s BCMMs, which would be required by the City as conditions of approval:

1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
2. All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
3. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
4. All vehicle speeds on unpaved roads shall be limited to 15 miles per hour (mph).
5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
6. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measure CCR Title 13, Section 2485). Clear signage shall be provided for construction workers at all access points.
7. All construction equipment shall be maintained and properly tuned in accordance with manufacturer’s specifications. All equipment shall be checked by a certified visible emissions evaluator.
8. Post a publicly visible sign with the telephone number and person to contact at the lead agency regarding dust complaints. This person shall respond and take

corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations.

The proposed project's required implementation of the BAAQMD's BCMMs listed above for the project's construction activities would help to minimize construction-related emissions.

Overall, because construction of the proposed project would not exceed any applicable thresholds of significance, project construction would result in a less-than-significant impact.

Operational Emissions

According to the CalEEMod results, the proposed project would result in maximum unmitigated operational criteria air pollutant emissions as shown in Table 3.

Pollutant	Proposed Project Emissions		Threshold of Significance		Exceeds Threshold?
	lbs/day	tons/yr	lbs/day	tons/yr	
ROG	4.87	0.76	54	10	NO
NO _x	3.01	0.52	54	10	NO
PM ₁₀ *	0.03	0.005	82	15	NO
PM _{2.5} *	0.03	0.005	54	10	NO
Note: * Denotes emissions from exhaust only. BAAQMD has not yet adopted PM thresholds for fugitive emissions.					
Source: CalEEMod, November 2022 (see Appendix A).					

As shown in the table, the proposed project's operational emissions would be below the applicable thresholds of significance. Because the proposed project's operational emissions would be below the applicable thresholds of significance, the proposed project would not be considered to conflict with air quality plans during project operation.

Cumulative Emissions

Past, present, and future development projects contribute to the region's adverse air quality impacts on a cumulative basis. By nature, air pollution is largely a cumulative impact. A single project is not sufficient in size to, by itself, result in nonattainment of AAQS. Instead, a project's individual emissions contribute to existing cumulatively significant adverse air quality impacts. If a project's contribution to the cumulative impact is considerable, then the project's impact on air quality would be considered significant. In developing thresholds of significance for air pollutants, BAAQMD considered the emission levels for which a project's individual emissions would be cumulatively considerable. The thresholds of significance presented in Table 1 represent the levels at which a project's individual emissions of criteria air pollutants or precursors would result in a cumulatively considerable contribution to the SFBAAB's existing air quality conditions. If a project exceeds the significance thresholds presented in Table 1, the proposed project's emissions would be cumulatively considerable, resulting in a significant adverse cumulative air quality impact to the region's existing air quality conditions. Because the proposed project would not generate criteria pollutant emissions above the applicable

thresholds of significance, the project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State AAQS.

Conclusion

As stated previously, the applicable regional air quality plans include the 2001 Ozone Attainment Plan and the 2017 Clean Air Plan. Because construction and operation of the proposed project would not result in emissions of criteria air pollutants in excess of BAAQMD's thresholds of significance, conflicts with or obstruction of the implementation of the applicable regional air quality plans would not occur. As a result, the project would not result in a cumulatively considerable net increase of a criteria pollutant for which the project region is nonattainment under an applicable federal or State AAQS. Thus, a **less-than-significant** impact would occur.

- c. Some land uses are considered more sensitive to air pollution than others, due to the types of population groups or activities involved. Heightened sensitivity may be caused by health problems, proximity to the emissions source, and/or duration of exposure to air pollutants. Children, pregnant women, the elderly, and those with existing health problems are especially vulnerable to the effects of air pollution. Sensitive receptors are typically defined as facilities where sensitive receptor population groups (i.e., children, the elderly, the acutely ill, and the chronically ill) are likely to be located. Accordingly, land uses that are typically considered to be sensitive receptors include residences, schools, playgrounds, childcare centers, retirement homes, convalescent homes, hospitals, and medical clinics. The nearest existing sensitive receptors would be the single-family residences along Mei Drive, with the closest located approximately 600 feet south of the project site.

The major pollutant concentrations of concern are localized carbon monoxide (CO) emissions, TAC emissions, and criteria pollutants, which are addressed in further detail below.

Localized CO Emissions

Localized concentrations of CO are related to the levels of traffic and congestion along streets and at intersections. High levels of localized CO concentrations are only expected where background levels are high, and traffic volumes and congestion levels are high. Emissions of CO are of potential concern, as the pollutant is a toxic gas that results from the incomplete combustion of carbon-containing fuels such as gasoline or wood.

In order to provide a conservative indication of whether a project would result in impacts related to localized CO emissions, the BAAQMD has established screening criteria for localized CO emissions. According to BAAQMD, a proposed project would result in a less-than-significant impact related to localized CO emission concentrations if all of the following conditions are true for the project:

- The project is consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, regional transportation plan, and local congestion management agency plans;
- The project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour; and

- The project traffic would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, underpass, etc.).

Considering the project would be consistent with the General Plan land use designation for the site, the project would not conflict with the Santa Clara Valley Transportation Authority (VTA) Congestion Management Program (CMP).⁷ As described in further detail in Section XVII, Transportation, of this IS, the proposed project would result in a net reduction of daily vehicle trips relative to existing conditions, as the current fuel station, car wash, and convenience store generates 1,204 daily trips and the proposed project is anticipated to generate 903 daily trips. As a result, traffic associated with the proposed development would not increase traffic volumes at an affected intersection to more than 44,000 vehicles per hour. Furthermore, intersections where vertical and/or horizontal mixing is limited due to tunnels, underpasses, or similar features do not exist in the project area. Therefore, based on the BAAQMD's screening criteria for localized CO emissions, the proposed project would not be expected to result in substantial levels of localized CO at surrounding intersections or generate localized concentrations of CO that would exceed standards or cause health hazards.

TAC Emissions

Another category of environmental concern is TACs. The CARB's *Air Quality and Land Use Handbook: A Community Health Perspective* (Handbook) provides recommended setback distances for sensitive land uses from major sources of TACs, including, but not limited to, freeways and high traffic roads, distribution centers, rail yards, and gas dispensing facilities (GDFs). The CARB has identified diesel particulate matter (DPM) from diesel-fueled engines as a TAC; thus, high volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic are identified as having the highest associated health risks from DPM. Gasoline includes multiple TACs, which are released through various processes during the operation of GDFs. Such TACs include benzene, ethyl benzene, toluene, and xylene, among others. Health risks associated with TACs are a function of both the concentration of emissions and the duration of exposure, where the higher the concentration and/or the longer the period of time that a sensitive receptor is exposed to pollutant concentrations would correlate to a higher health risk.

Implementation of the proposed project would result in emissions related to project-construction and operations of the proposed GDF. Each source of TACs is discussed in further depth in the sections below.

Construction Emissions

Short-term, construction-related activities would result in the generation of TACs, specifically DPM, from on-road haul trucks and off-road equipment exhaust emissions. Construction is temporary and occurs over a relatively short duration in comparison to the operational lifetime of the proposed project. Health risks are typically associated with exposure to high concentrations of TACs over extended periods of time (e.g., 30 years or greater), whereas the construction period associated with the proposed project is estimated to be approximately 1.5 years.

⁷ Santa Clara Valley Transportation Authority. 2015 *Congestion Management Plan*. October 2015.

All construction equipment and operation thereof would be regulated in accordance with the In-Use Off-Road Diesel Vehicle Regulation, which is intended to help reduce emissions associated with off-road diesel vehicles and equipment, including DPM. Project construction would also be required to comply with Morgan Hill Municipal Code Chapter 18.76, which states that sources of air pollution shall comply with all rules established by the USEPA, CARB, and BAAQMD. Operators of activities, processes, or uses that require approval to operate from the BAAQMD shall file a copy of the permit with the City's Development Services Division within 30 days of permit approval. In addition, only portions of the site would be disturbed at a time throughout the construction period, with operation of construction equipment occurring intermittently throughout the course of a day rather than continuously at any one location on the project site. Operation of construction equipment within portions of the development area would allow for the dispersal of emissions, and would ensure that construction-activity is not continuously occurring in the portions of the project site closest to existing receptors. In addition, the prevailing wind direction in Morgan Hill is from the west.⁸ Therefore, emissions of DPM from the use of construction equipment would be blown towards the eastward direction and away from the nearest sensitive receptors.

Due to the temporary nature of construction and the relatively short duration of potential exposure to associated emissions, the potential for any one sensitive receptor in the area to be exposed to concentrations of pollutants for a substantially extended period of time would be low.

GDF Operations

GDFs are considered sources of various types of TACs, including benzene. As a result, in order to reduce adverse health effects, the CARB recommends that GDFs with a total throughput of 3.6 million gallons per year or greater be sited at least 300 feet away from existing sensitive land uses, or that a detailed health risk assessment be performed if such land uses are within 300 feet from each other.⁹ The property lines of the nearest sensitive receptors (townhomes) are located further to the north, across East Dunne Avenue, and separated from the project site by existing commercial uses. Thus, the proposed project would be sited well outside of the CARB's recommended setback distance from existing sensitive receptors and, based on agency guidance, health risks would be less than significant. Additionally, it is noted that the project site is currently developed with a GDF. Therefore, redevelopment of the site with the proposed project would not result in exposure of sensitive receptors to substantially greater concentrations of TACs as compared to existing conditions.

Criteria Pollutants

The BAAQMD thresholds of significance were established with consideration given to the health-based air quality standards established by the National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS), and are designed to aid the district in achieving attainment of the NAAQS and CAAQS.¹⁰ Although the BAAQMD's thresholds of significance are intended to aid achievement of the NAAQS and CAAQS for which the SFBAAB is in nonattainment, the thresholds of significance do

⁸ Weather Spark. *Average Weather in Morgan Hill*. Available at: <https://weatherspark.com/y/1089/Average-Weather-in-Morgan-Hill-California-United-States-Year-Round>. Accessed November 2022.

⁹ California Air Resources Board. *Air Quality and Land Use Handbook: A Community Health Perspective* [pg 32]. April 2005.

¹⁰ Bay Area Air Quality Management District. *California Environmental Quality Act Air Quality Guidelines*. May 2017.

not represent a level above which individual project-level emissions would directly result in public health impacts. Nevertheless, a project's compliance with BAAQMD's thresholds of significance provides an indication that criteria pollutants released as a result of project implementation would not inhibit attainment of the health-based regional NAAQS and CAAQS. Because project-related emissions would not exceed the BAAQMD's thresholds, and, thus, would not inhibit attainment of regional NAAQS and CAAQS, the criteria pollutants emitted during project implementation would not be anticipated to result in measurable health impacts to sensitive receptors. Accordingly, the proposed project would not expose sensitive receptors to excess concentrations of criteria pollutants.

Conclusion

Based on the above discussion, the proposed project would not expose any sensitive receptors to excess concentrations of localized CO, TACs, or criteria pollutants during operations of the project. Consequently, the proposed project would result in a **less-than-significant** impact related to the exposure of sensitive receptors to substantial pollutant concentrations.

- d. Emissions of concern include those leading to odors, emission of dust, or emissions considered to constitute air pollutants. Air pollutants have been discussed in questions 'a' through 'c' above. Therefore, the following discussion focuses on emissions of odors and dust.

According to the BAAQMD CEQA Guidelines, odors are generally regarded as an annoyance rather than a health hazard.¹¹ Manifestations of a person's reaction to odors can range from psychological (e.g., irritation, anger, or anxiety) to physiological (e.g., circulatory and respiratory effects, nausea, vomiting, and headache). The presence of an odor impact is dependent on a number of variables including: the nature of the odor source; the frequency of odor generation; the intensity of odor; the distance of odor source to sensitive receptors; wind direction; and sensitivity of the receptor. Due to the subjective nature of odor impacts, the number of variables that can influence the potential for an odor impact, and the variety of odor sources, quantitative analysis to determine the presence of a significant odor impact is difficult. Typical odor-generating land uses include, but are not limited to, wastewater treatment plants, landfills, and composting facilities. The proposed project would not introduce any such land uses and is not located in the vicinity of any such existing or planned land uses.

Construction activities often include diesel-fueled equipment and heavy-duty trucks, which could create odors associated with diesel fumes that may be considered objectionable. However, construction activities would be temporary, and hours of operation for construction equipment would be prohibited between 8:00 PM and 7:00 AM, Monday through Friday, and between 6:00 PM and 9:00 AM on Saturdays as required by Morgan Hill Municipal Code Chapter 8.28. Project construction would also be required to comply with all applicable BAAQMD rules and regulations, particularly associated with permitting of air pollutant sources. The aforementioned regulations would help to minimize emissions, including emissions leading to odors. Accordingly, substantial objectionable odors would not be expected to occur during construction activities.

The proposed project includes a GDF, operations of which could generate odorous emissions. However, as property lines of the nearest sensitive receptors (townhomes) are

¹¹ Bay Area Air Quality Management District. *California Environmental Quality Act Air Quality Guidelines*. May 2017.

located further to the north, across East Dunne Avenue, and separated from the project site by existing commercial uses, odors generated as part of project operation would not be discernible. In addition, gas pumps are required to include vapor-recovery systems, which limit the release of gasoline vapors during vehicle refueling and underground tank refilling. Furthermore, the proposed project would result in a new fueling station, car wash, and convenience store, similar to the site's existing use. Therefore, odors generated by the redeveloped site would not change substantially relative to existing conditions. Given the distance and existing uses separating the project site from the townhomes further to the north, across East Dunne Avenue, and the required vapor-recovery systems that would be installed on the proposed gas pumps, odors are anticipated to dissipate prior to reaching any nearby receptors, and the GDF would not result in emissions of odors that would adversely affect the nearest receptors during project operation.

With respect to dust, as noted previously, the proposed project would be required to implement BAAQMD's BCMMs during project construction. The BCMMs would act to reduce construction-related dust by requiring that haul trucks with loose material are covered, reducing vehicle dirt track-out, and limiting vehicle speeds within the project site, among other methods, which would ensure that construction of the proposed project does not result in substantial emissions of dust. Following project construction, vehicles operating within the project site would be limited to paved areas of the site, and non-paved areas would be landscaped. Thus, project operations would not include sources of dust that could adversely affect a substantial number of people.

For the aforementioned reasons, construction and operation of the proposed project would not result in emissions (such as those leading to odors) adversely affecting a substantial number of people, and a **less-than-significant** impact would result.

IV. BIOLOGICAL RESOURCES.

Would the project:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Discussion

- a. A development project could have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or U.S. Fish and Wildlife Service (USFWS), if the project's components result in the "take" of such species. Pursuant to the Federal Endangered Species Act, "take" is defined to include harassing, harming, pursuing, hunting, shooting, wounding, killing, trapping, capturing, or collecting wildlife species or any attempt to engage in such conduct. In addition, raptors (birds of prey), migratory birds, and other avian species are protected under the Migratory Bird Treaty Act of 1918 (MBTA) and California Fish and Game Code (CFG) Section 3503.5. Furthermore, plant species considered to be rare, threatened, or endangered in California by the California Native Plant Society (CNPS) and CDFW (California Rare Plant Rank [CRPR] 1 and 2) are provided special status under CEQA.

The project site, currently developed with a Shell fueling station, car wash, and convenience store, is located within the boundaries of the Santa Clara Valley Habitat Plan (SCVHP). The existing fueling station, car wash, and convenience store is comprised of a seven-fuel-dispenser fueling canopy, a car wash, and paved surface parking. In addition, the project site contains several trees along the site's perimeters and adjacent to the existing convenience store. Pursuant to the Santa Clara Valley Habitat Agency Geobrowser (SCVHA Geobrowser), the project site is designated by the SCVHP as Urban-

Suburban land cover.¹² The existing on-site conditions are consistent with the Urban-Suburban land cover type, which is described in the SCVHP as characterizing developed areas “where the native vegetation has been cleared for residential, commercial, industrial, transportation, or recreational structures, and is defined as one or more structures per 2.5 acres.” Typically, species covered by the SCVHP are unlikely to occur within Urban-Suburban areas.

Additionally, according to the SCVHA Geobrowser, the project site is not located within a designated Plant Survey Area or Wildlife Survey Area. The SCVHA Geobrowser further indicates that the project site is located outside of the SCVHP Burrowing Owl Fee Area and is not identified in the SCVHP as Occupied Nesting Burrowing Owl Habitat, Potential Burrowing Owl Nesting/Overwintering Habitat Depending on Site Conditions, or Overwintering Only Habitat. Therefore, considering the heavily disturbed nature of the project site and existing development in the project vicinity, the site does not provide habitat for plant or wildlife species identified by the CDFW and/or USFWS as endangered, rare, or threatened.

However, the existing on-site trees and off-site trees in the immediate project vicinity represent potential habitat for nesting birds and raptors protected under the MBTA and CFGC Section 3503.5. The MBTA prohibits killing, possessing, or trading of migratory birds, except in accordance with regulations prescribed by the Secretary of the Interior. The MBTA covers take of whole birds, parts of birds, and bird nests and eggs. In addition, CFGC Section 3503.5 states, “It is unlawful to take, possess, or destroy any birds in the order *Falconiformes* or *Strigiformes* (birds-of-prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by the code or any regulation adopted pursuant thereto.”

Because project construction activities, including initial site grading, soil excavation, and/or tree and vegetation removal, occurring during the nesting period for migratory birds (typically between February 1 to August 31) could have the potential to result in nest abandonment or death of any live eggs or young, the proposed project could result in a **potentially significant** impact, should migratory birds or their nests be present within or near the project site.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

IV-1 If construction is proposed during the breeding season (February 1 to August 31), a pre-construction nesting survey for raptors and other protected migratory birds shall be conducted by a qualified biologist and submitted to the City of Morgan Hill Development Services Department for review no more than 14 days prior to the start of construction. Pre-construction surveys during the non-breeding season (September 1 to January 31) are not necessary for birds, including roosting raptors, as they are expected to abandon their roosts during construction. If the aforementioned species are deemed absent from the area, no further mitigation is required and construction may occur within 14 days following

¹² Santa Clara Valley Habitat Agency. *Santa Clara Valley Habitat Agency Geobrowser*. Available at: <http://www.hcpmaps.com/habitat/>. Accessed November 2022.

the survey during the early nesting season (February to May) and within 30 days following the survey during the late nesting season (June to August).

If nesting migratory birds or raptors are detected on or adjacent to the project site during the survey, a suitable construction-free buffer shall be established around all active nests. The precise dimension of the buffer (250-foot minimum for certain raptors) shall be determined by the qualified biologist at that time and may vary depending on location, topography, type of construction activity, and species. The buffer areas shall be enclosed with temporary fencing, and construction equipment and workers shall not enter the enclosed setback areas. Buffers shall remain in place for the duration of the breeding season or until it has been confirmed by a qualified biologist that all chicks have fledged and are independent of their parents.

- b,c. Riparian habitats are lands that occur along watercourses and water bodies, with typical examples including streambanks and floodplains. Riparian habitats are distinctly different from surrounding lands, due to a riparian habitat's unique soil and vegetation characteristics, which are strongly influenced by the presence of water. With respect to State or federally protected wetlands, wetlands are generally considered to be areas that are periodically or permanently inundated by surface or groundwater, and support vegetation adapted to life in saturated soil. Wetlands are recognized as important features on a regional and national level due to their high inherent value to fish and wildlife, use as storage areas for storm and flood waters, and water recharge, filtration, and purification functions.

Considering the developed nature of the project site, riparian land cover and/or State or federally protected wetlands are not present on-site. As previously noted, the site has been highly disturbed through development of the site with the existing Shell fueling station, car wash, and convenience store. Therefore, the project would not have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the CDFW or the USFWS or have a substantial adverse effect on State or federally protected wetlands through direct removal, filling, hydrological interruption, or other means. Thus, a **less-than-significant** impact would occur.

- d. Movement corridors or landscape linkages are usually linear habitats that connect two or more habitat patches, providing assumed benefits to wildlife species by reducing inbreeding depression and increasing the potential for recolonization of habitat patches. The project site is bound by East Dunne Avenue to the north, Walnut Grove Drive to the west, and private driveways to the east and south that provide access to existing commercial uses in the immediate project vicinity. Due to the developed nature of the project vicinity, as well as physical barriers to wildlife movement along the project boundaries, the project site does not support any major wildlife movement corridors. As such, the project would not interfere substantially with the movement of any resident or migratory fish or wildlife species or with established resident or migratory wildlife corridors, or impede the use of wildlife nursery sites. Thus, a **less-than-significant** impact would occur.
- e. Morgan Hill Municipal Code Section 12.32.030 requires the approval of a Tree Removal Permit prior to the removal of any Ordinance Sized Tree, defined as a non-indigenous tree with a circumference greater than 40 inches (approximately 12.7-inch diameter) or any

indigenous tree with circumference greater than 18 inches (approximately 5.7 inches diameter). An indigenous tree is defined as any tree native to the Morgan Hill region, such as oaks (all types), Sycamore, California Bay, Madrone, or Alder. According to the Morgan Hill Municipal Code, non-indigenous tree species in residential zones and orchards (including individual fruit trees) are not considered Ordinance Sized Trees. In addition, a Tree Removal Permit is required prior to the removal of a Street Tree, defined as a tree of any size within the public street right-of-way (ROW) or publicly accessible private street or within five feet of a publicly accessible sidewalk adjacent to a public or private street in the case of a street without a landscape park strip.

As shown in Figure 6, construction of the proposed project would include the preservation of the majority of existing trees along the project site's western boundary. In addition, the project would include new landscaping along the northern, southern, and western boundaries of the project site, as well as in areas adjacent to the proposed convenience store. Plant selection would be in accordance with Morgan Hill Municipal Code Section 18.64.060, which requires that a minimum of 90 percent of plants and trees be drought-tolerant. The newly planted trees would consist of 15-gallon sterling silver linden, honey locust, and Tuscarora trees. However, as shown in Figure 7, the project site currently includes several live oaks to the north and south of the existing convenience store, several of which meet the Ordinance Sized Tree's criterion of having a circumference greater than 18 inches. The aforementioned live oaks would require removal as part of construction of the proposed project. As such, the proposed project would require a Tree Removal Permit, in accordance with Morgan Hill Municipal Code Section 12.32.030, to address potential impacts to protected Ordinance Sized Trees that would require removal as part of project construction. In addition, removal of any on-site trees that meet the City's definition of a Street Tree would additionally require coverage under the City's Tree Removal Permit.

Based on the above, without obtaining a Tree Removal Permit pursuant to the requirements set forth in Morgan Hill Municipal Code Chapter 12.32, the proposed project could conflict with a local policy or ordinance protecting biological resources, such as a tree preservation policy or ordinance, and a **potentially significant** impact could occur.

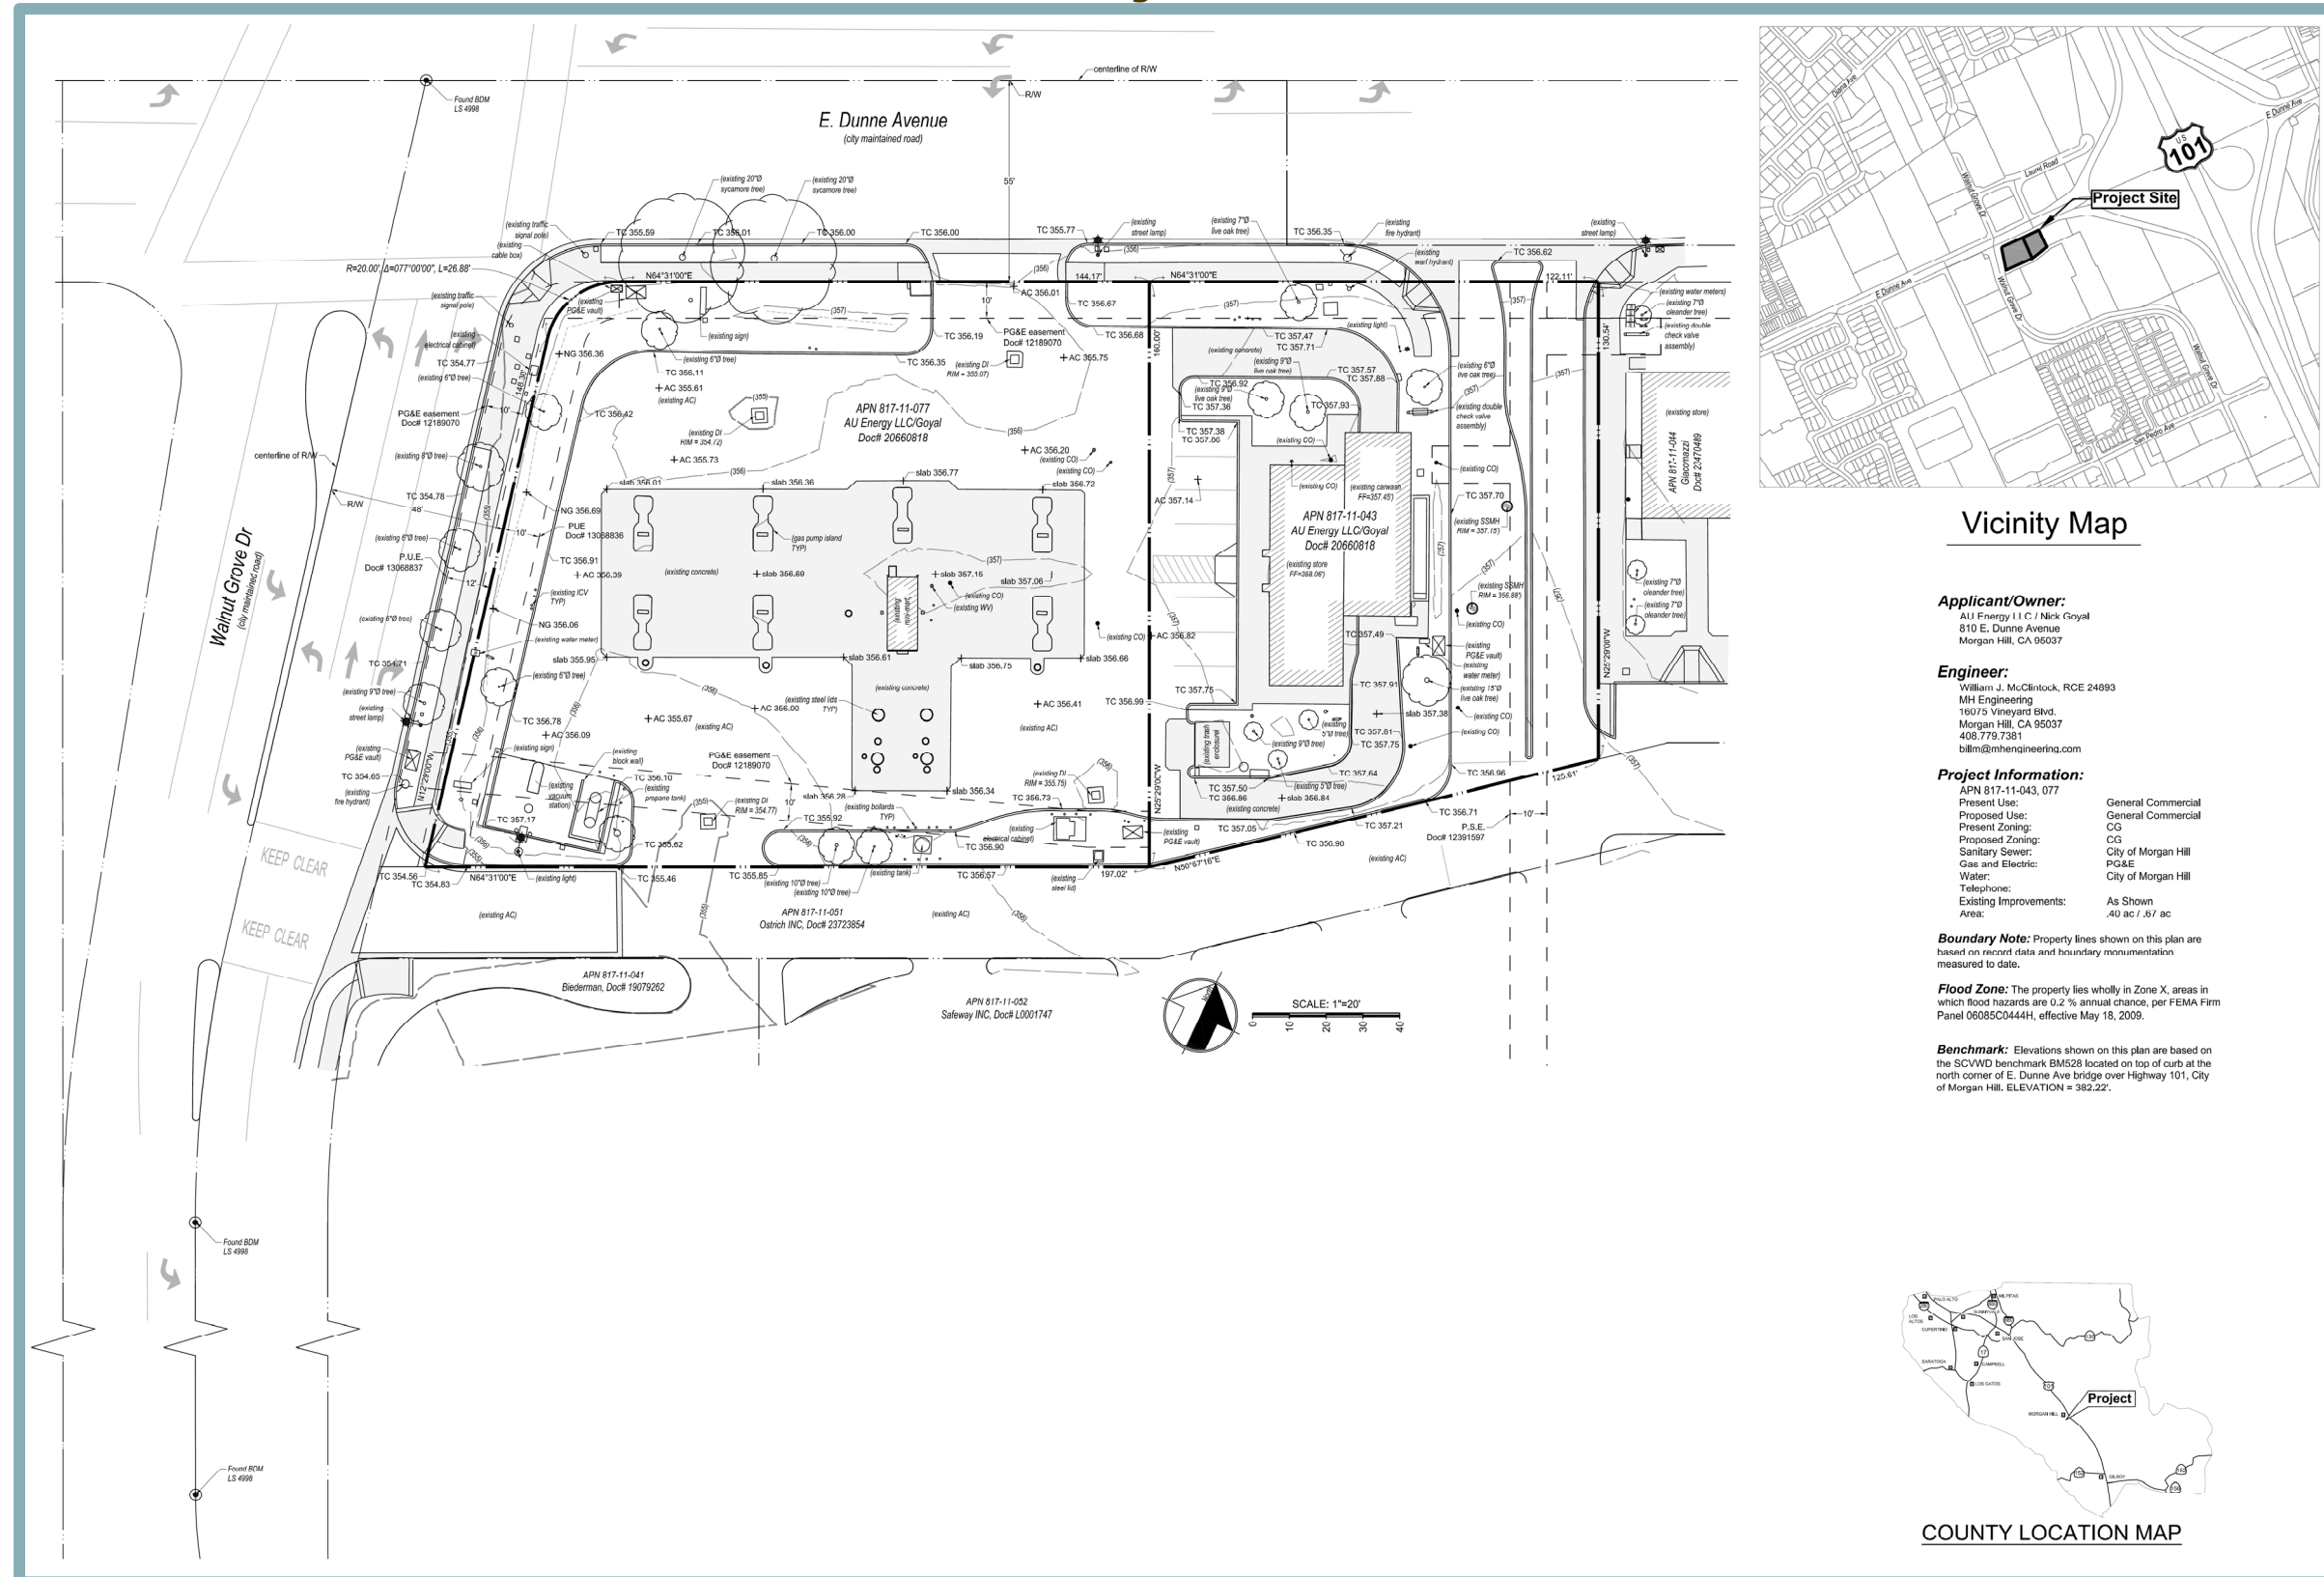

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

IV-2. *The project applicant shall mitigate for the removal of on-site Ordinance Sized Trees and Street Trees, as identified in the Existing Topography sheet for the proposed project, by obtaining a Tree Removal Permit in accordance with the requirements set forth in Morgan Hill Municipal Code Chapter 12.32 and providing an on-site replacement planting at a minimum 1:1 ratio with 15-gallon minimum size trees.*

For the Ordinance Sized Trees and Street Trees to be preserved as part of the proposed project, the project applicant shall retain a certified arborist to prepare a Tree Protection Plan, subject to review and approval by the Morgan Hill Development Services Department, prior to issuance of a grading permit. The plan shall demonstrate how any retained trees are to be protected during and after construction. The Tree Protection Plan may include, but not be limited to, the following:

Present Use:	General Commercial
Proposed Use:	CC
Present Zoning:	CC
Proposed Zoning:	City of Morgan Hill
Sanitary Sewer:	PG&E
Gas and Electric:	City of Morgan Hill
Water:	
Telephone:	
Existing Improvements:	As Shown
Area:	40 ac / .67 ac

Boundary Note: Property lines shown on this plan are based on record data and boundary monumentation measured to date.

Flood Zone: The property lies wholly in Zone X, areas in which flood hazards are 0.2% annual chance, per FEMA Firm Panel 06085C0444H, effective May 18, 2009.

Benchmark: Elevations shown on this plan are based on the SCVWD benchmark BM528 located on top of curb at the north corner of E. Dunne Ave bridge over Highway 101, City of Morgan Hill. ELEVATION = 382.22.

COUNTY LOCATION MAP

- *Locate structures, grade changes, etc. as far as feasible from the 'dripline' area of the tree.*
 - *Avoid root damage through grading, trenching, compaction, etc., at least within an area 1.5 times the 'dripline' area of trees. Where root damage cannot be avoided, roots encountered (over one inch in diameter) should be exposed approximately 12 inches beyond the area to be disturbed (towards tree stem), by hand excavation, or with specialized hydraulic or pneumatic equipment, cut cleanly with hand pruners or power saw, and immediately back-filled with soil. Tearing, or otherwise disturbing the portion of the root(s) to remain, shall be avoided.*
 - *A temporary fence shall be constructed as far from the tree stem (trunk) as possible, completely surrounding the tree, and six to eight feet in height. 'No parking or storage' signs shall be posted outside/on the fencing. Postings shall not be attached to the main stem of the tree.*
 - *Vehicles, equipment, pedestrian traffic, building materials, debris storage, and/or disposal of toxic or other materials shall not be permitted inside of the fenced off area.*
 - *The project applicant shall avoid pruning immediately before, during, or immediately after construction impact. Perform only that pruning which is unavoidable due to conflicts with proposed development. Aesthetic pruning should not be performed for at least one to two years following completion of construction.*
 - *Trees that will be impacted by construction may benefit from fertilization, ideally performed in the fall, and preferably prior to any construction activities, with not more than six pounds of actual nitrogen per 1,000 square feet of accessible 'drip line' area or beyond.*
 - *The 'rooting' area shall be mulched with an acidic, organic compost or mulch.*
 - *The project applicant shall arrange for periodic (biannual/quarterly) inspection of tree's condition, and treatment of damaging conditions (insects, diseases, nutrient deficiencies, etc.) as such conditions occur, or as appropriate.*
 - *Subject to the discretion of the Development Services Department, individual trees likely to suffer significant impacts may require specific, more extensive efforts and/or a more detailed specification than those contained within the above general guidelines.*
- f. The SCVHP was developed through a partnership between Santa Clara County, the cities of San José, Morgan Hill, and Gilroy, the Santa Clara Valley Water District (SCVWD), the Santa Clara VTA, the USFWS, and the CDFW. The SCVHP is intended to promote the recovery of endangered species and enhance ecological diversity and function, while accommodating planned growth in approximately 500,000 acres of southern Santa Clara County. The SCVHP provides take authorization for 18 listed and non-listed species (i.e., covered species). In addition, the SCVHP includes conservation measures to protect the covered species covered by the SCVHP, as well as a conservation strategy designed to mitigate impacts on covered species and contribute to the recovery of the species in the study area.

As noted previously, the SCVHP designates the project site as an Urban-Suburban developed land cover type. Typically, species covered by the SCVHP are unlikely to occur within Urban-Suburban areas. Pursuant to the SCVHA Geobrowser program, the project site is not located within a designated Plant Survey Area or Wildlife Survey Area for any covered species.¹³ In addition, the project site is not located within a designated fee zone area and would not result in impacts on any natural land cover types. Finally, as discussed further in Section XVII, Transportation, of this IS, the proposed project would result in a net reduction of daily vehicle trips relative to existing conditions, as the current fuel station, car wash, and convenience store generates 1,204 daily trips and the proposed project is anticipated to generate 903 daily trips. Therefore, the project not be subject to payment of the SCVHP Nitrogen Deposition Fee.

Based on the above, the proposed project would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State Habitat Conservation Plan, and **no impact** would occur.

¹³ Santa Clara Valley Habitat Agency. *Santa Clara Valley Habitat Agency Geobrowser*. Available at: <http://www.hcpmaps.com/habitat/>. Accessed November 2022.

V. CULTURAL RESOURCES.

Would the project:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	✘	<input type="checkbox"/>
b. Cause a substantial adverse change in the significance of a unique archaeological resource pursuant to Section 15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	✘	<input type="checkbox"/>
c. Disturb any human remains, including those interred outside of dedicated cemeteries.	<input type="checkbox"/>	<input type="checkbox"/>	✘	<input type="checkbox"/>

Discussion

a-c. Historical resources are features that are associated with the lives of historically important persons and/or historically significant events, that embody the distinctive characteristics of a type, period, region, or method of construction, or that have yielded, or may be likely to yield, information important to the pre-history or history of the local area, California, or the nation. Examples of typical historical resources include, but are not limited to, buildings, farmsteads, rail lines, bridges, and trash scatters containing objects such as colored glass and ceramics.

The proposed project would include demolition of the existing on-site fueling station, car wash, and convenience store and removal of two existing on-site USTs. As discussed further in Section IX, Hazards and Hazardous Materials, of this IS, pursuant to the Phase I Environmental Site Assessment (ESA) prepared for the proposed project, the existing fueling station, car wash, and convenience store were constructed between 1982 and 1998 (see Appendix B of this IS).¹⁴ Generally, properties eligible for listing in the National Register of Historic Places (NRHP) are at least 50 years old. Cultural resources determined eligible for the NRHP by a federal agency are automatically eligible for the California Register of Historical Resources (CRHR). Given the age of the existing on-site fueling station, car wash, and convenience store, the structures would not meet the aforementioned criterion for listing. Properties under 50 years of age that are of exceptional significance or are contributors to a district could also be included on the NRHP. Four criteria (Criteria A through D) are used to determine if a potential resource may be considered significant and eligible for listing on the NRHP. The State Historical Resources Commission uses similar criteria for CRHR designation (Criteria 1 through 4). The criteria include resources that:

- A. Are associated with events that have made a significant contribution to the broad patterns of history; or
- B. Are associated with the lives of persons significant in our past; or
- C. Embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- D. Have yielded or may likely yield information important in prehistory or history.

The on-site structures do not appear to be associated with any important events or people who would have contributed to local, State, or U.S. history. Therefore, the structures do not appear to be eligible under NRHP Criterion A/CRHR Criterion 1 or NRHP Criterion

¹⁴ Geocon Consultants, Inc. *Phase I Environmental Site Assessment Report: Shell Gas Station, 810 East Dunne Avenue, Morgan Hill, California*. November 2022.

B/CRHR Criterion 2. The structures are of simple modern design and do not embody distinctive characteristics of a type, period, or method of construction; therefore, the structures do not appear eligible under NRHP Criterion C/CRHR Criterion 3. NRHP Criterion D/CRHR Criterion 4 is typically utilized for determining the importance of archaeological sites; therefore, the project site would be ineligible for such a classification under Criterion 4.

Additionally, to further ascertain the extent to which potential impacts could occur to historical and archaeological resources within and/or immediately adjacent to the project site as a result of the proposed project, a review of the California Historical Resources Information System at the Northwest Information Center (NWIC) at Sonoma State University was conducted. The review included pertinent NWIC base maps that reference cultural resources and reports, historic-period maps, and literature for Santa Clara County. According to the results of the CHRIS query, the project site does not contain known buildings or structures identified by the State Office of Historic Preservation Built Environment Resources Directory, which includes listings of the CRHR, California State Historical Landmarks, California State Points of Historical Interest, and the NRHP. Similarly, the project site does not contain known archaeological resources. However, review of historical literature and maps indicate the possibility of historic-period activity within the project vicinity. As such, the CHRIS results found that moderate potential exists for unrecorded historic-period archaeological resources to be within the project site.

As noted in the General Plan EIR, archaeological surveys conducted in Morgan Hill have identified numerous prehistoric sites with shell midden components, including human burials. Based on such findings, the potential exists for subsurface historical resources and previously unknown archaeological resources to be found on-site during grading and excavation associated with development of the proposed project; however, it is noted that the potential for discovering unknown resources is limited due to the developed nature of the project site. Nonetheless, in the event that such resources are unearthed, the following City standard Conditions of Approval related to the protection of historical and archaeological resources would be implemented, consistent with Morgan Hill Municipal Code Section 18.60.090:

- A. The developer shall enter into written contracts with an archaeologist and the Tamien Nation Tribe, and pay all fees associated with the activities required by this condition. The following policies and procedures for treatment and disposition of inadvertently discovered human remains or archaeological materials shall apply:
 1. Prior to start of grading or earthmoving activity (includes demolition and moving of heavy equipment on site) on the "first day of construction", the archaeologist and Tamien Nation Tribal Monitor shall hold a preconstruction meeting for the purposes of "cultural sensitivity training" with the general contractor and subcontractors.
 2. An archaeologist and a Tamien Nation Tribal Monitor shall be present on-site to monitor all ground disturbing activities and an archaeologist shall be on-call. Where historical or archaeological artifacts are found, work in areas where remains or artifacts are found will be restricted or stopped until proper protocols are met, as described below:
 - a) Work at the location of the find will halt immediately within fifty feet of the find. If an archaeologist is not present at the time

of the discovery, the applicant shall contact an archaeologist for evaluation of the find to determine whether it qualifies as a unique archaeological resource as defined by this chapter.

- b) If the find is determined not to be a Unique Archaeological Resource, construction can continue. The archaeologist will prepare a brief informal memo/letter in collaboration with a tribal representative that describes and assesses the significance of the resource, including a discussion of the methods used to determine significance for the find;
 - c) If the find appears significant and to qualify as a unique archaeological resource, the archaeologist will determine if the resource can be avoided and will detail avoidance procedures in a formal memo/letter; and
 - d) If the resource cannot be avoided, the archaeologist in collaboration with a tribal representative shall develop within forty-eight hours an action plan to avoid or minimize impacts. The field crew shall not proceed until the action plan is approved by the Development Services Director. The action plan shall be in conformance with California Public Resources Code 21083.2.
3. The following policies and procedures for treatment and disposition of inadvertently discovered human remains or archaeological materials shall apply. If human remains are discovered, it is probable they are the remains of Native Americans,
- a) If human remains are encountered, they shall be treated with dignity and respect as due to them. Discovery of Native American remains is a very sensitive issue and serious concern. Information about such a discovery shall be held in confidence by all project personnel on a need-to-know basis. The rights of Native Americans to practice ceremonial observances on sites, in labs and around artifacts shall be upheld.
 - b) Remains should not be held by human hands. Surgical gloves should be worn if remains need to be handled.
 - c) Surgical mask should also be worn to prevent exposure to pathogens that may be associated with the remains.
4. In the event that known or suspected Native American remains are encountered, or significant historic or archaeological materials are discovered, ground-disturbing activities shall be immediately stopped. Examples of significant historic or archaeological materials include, but are not limited to, concentrations of historic artifacts (e.g., bottles, ceramics) or prehistoric artifacts (chipped chert or obsidian, arrow points, ground stone mortars and pestles), culturally altered ash stained midden soils associated with pre-contact Native American habitation sites, concentrations of fire-altered rock and/or burned or charred organic materials and historic structure remains such as stone lined building foundations, wells or privy pits. Ground-disturbing

project activities may continue in other areas that are outside the exclusion zone as defined below.

5. An "exclusion zone" where unauthorized equipment and personnel are not permitted shall be established (e.g., taped off) around the discovery area plus a reasonable buffer zone by the contractor foreman or authorized representative, or party who made the discovery and initiated these protocols, or if on-site at the time of discovery, by the monitoring archaeologist and tribal representative (typically twenty-five to fifty feet for single burial or archaeological find).
6. The discovery locale shall be secured (e.g., 24-hour surveillance) as directed by the City or County if considered prudent to avoid further disturbances.
7. The Contractor Foreman or authorized representative, or party who made the discovery and initiated these protocols shall be responsible for immediately contacting by telephone the parties listed below to report the find and initiate the consultation process for treatment and disposition:
 - The City of Morgan Hill Development Services Director (408) 779-7247
 - The Contractor's Point(s) of Contact
 - The Coroner of the County of Santa Clara (if human remains found) (408) 793-1900
 - The Native American Heritage Commission (NAHC) in Sacramento (916) 653-4082
 - The Amah Mutsun Tribal Band (916) 481-5785 (H) or (916) 743-5833 (C)
 - The Tamien Nation (707) 295-4011 (office) and (925) 336-5359 (THPO)
8. The Coroner has two working days to examine the remains after being notified of the discovery. If the remains are Native American the Coroner has 24 hours to notify the NAHC.
9. The NAHC is responsible for identifying and immediately notifying the Most Likely Descendant (MLD). (Note: NAHC policy holds that the Native American Monitor will not be designated the MLD.)
10. Within 24 hours of their notification by the NAHC, the MLD will be granted permission to inspect the discovery site if they so choose.
11. Within 24 hours of their notification by the NAHC, the MLD may recommend to the City's Development Services Director the recommended means for treating or disposing, with appropriate dignity, the human remains and any associated grave goods. The recommendation may include the scientific removal and non-destructive or destructive analysis of human remains and items associated with Native American burials. Only those osteological analyses or DNA analyses recommended by the appropriate tribe may be considered and carried out.

12. If the MLD recommendation is rejected by the City of Morgan Hill the parties will attempt to mediate the disagreement with the NAHC. If mediation fails then the remains and all associated grave offerings shall be reburied with appropriate dignity on the property in a location not subject to further subsurface disturbance.

Compliance with the above standard Conditions of Approval would ensure that construction of the proposed project would have a ***less-than-significant*** impact related to historical resources and unique archeological resources, as well as the disturbance of human remains.

VI. ENERGY.

Would the project:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Discussion

a,b. A description of the currently adopted 2022 California Green Building Standards Code and the Building Energy Efficiency Standards, as well as discussions regarding the proposed project’s potential effects related to energy demand during construction and operations, are provided below.

California Green Building Standards Code

The 2022 California Green Building Standards Code, otherwise known as the CALGreen Code (CCR Title 24, Part 11), is a portion of the CBSC, which became effective on January 1, 2023. The purpose of the CALGreen Code is to improve public health, safety, and general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact or positive environmental impact and encouraging sustainable construction practices. The CALGreen standards regulate the method of use, properties, performance, types of materials used in construction, alteration repair, improvement and rehabilitation of a structure or improvement to property. The provisions of the code apply to the planning, design, operation, construction, use, and occupancy of every newly constructed building or structure throughout California. Requirements of the CALGreen Code include, but are not limited to, the following measures:

- Compliance with relevant regulations related to future installation of electric vehicle (EV) charging infrastructure in residential and non-residential structures;
- Indoor water use consumption is reduced through the establishment of maximum fixture water use rates;
- Outdoor landscaping must comply with the California Department of Water Resources’ MWEL0, or a local ordinance, whichever is more stringent, to reduce outdoor water use;
- Diversion of 65 percent of construction and demolition waste from landfills; and
- Mandatory use of low-pollutant emitting interior finish materials such as paints, carpet, vinyl flooring, and particle board.

Building Energy Efficiency Standards

The 2022 Building Energy Efficiency Standards is a portion of the CBSC (CCR Title 24, Part 6), which expands upon energy efficiency measures from the 2019 Building Energy Efficiency Standards. Energy reductions relative to previous Building Energy Efficiency Standards are achieved through various regulations, including requirements for the use of high-efficacy lighting, improved water heating system efficiency, and high-performance attics and walls. For nonresidential buildings, the 2022 Building Energy Efficiency Standards improve efficiency standards for building envelope, various internal systems,

and grid integration equipment, such as demand-responsive controls to buoy grid stability.¹⁵

Construction Energy Use

Construction of the proposed project would involve on-site energy demand and consumption related to use of oil in the form of gasoline and diesel fuel for construction worker vehicle trips, hauling and materials delivery truck trips, and operation of off-road construction equipment. In addition, diesel-fueled portable generators may be necessary to provide additional electricity demands for temporary on-site lighting, welding, and for supplying energy to areas of the site where energy supply cannot be met via a hookup to the existing electricity grid. Project construction would not involve the use of natural gas appliances or equipment.

Even during the most intense period of construction, due to the different types of construction activities (e.g., site preparation, grading, building construction), only portions of the project site would be disturbed at a time, with operation of construction equipment occurring at different locations on the project site, rather than a single location. In addition, all construction equipment and operation thereof would be regulated per the CARB In-Use Off-Road Diesel Vehicle Regulation. The In-Use Off-Road Diesel Vehicle Regulation is intended to reduce emissions from in-use, off-road, heavy-duty diesel vehicles in California by imposing limits on idling, requiring all vehicles to be reported to CARB, restricting the addition of older vehicles into fleets, and requiring fleets to reduce emissions by retiring, replacing, or repowering older engines, or installing exhaust retrofits. In addition, as a means of reducing emissions, construction vehicles are required to become cleaner through the use of renewable energy resources. The In-Use Off-Road Diesel Vehicle Regulation would therefore help to improve fuel efficiency for equipment used in construction of the proposed project. Technological innovations and more stringent standards are being researched, such as multi-function equipment, hybrid equipment, or other design changes, which could help to further reduce demand on oil and limit emissions associated with construction.

The CARB prepared the 2022 Climate Change Scoping Plan Update (2022 Scoping Plan), which builds upon previous efforts to reduce GHG emissions and is designed to continue to shift the California economy away from dependence on fossil fuels.¹⁶ Appendix D of the 2022 Scoping Plan includes examples of local actions (municipal code changes, zoning changes, policy directions, and mitigation measures) that would support the State's climate goals. The examples provided include, but are not limited to, enforcing idling time restrictions for construction vehicles, utilizing existing grid power for electric energy rather than operating temporary gasoline/diesel-powered generators, and increasing use of electric and renewable fuel-powered construction equipment. The In-Use Off-Road Diesel Vehicle Regulation and idling restriction regulations described above, with which the proposed project must comply, would be consistent with the intention of the 2022 Scoping Plan and the recommended actions included in Appendix D of the 2022 Scoping Plan.

Based on the above, the temporary increase in energy use occurring during construction of the proposed project would not result in a significant increase in peak or base demands

¹⁵ California Energy Commission. *2022 Building Energy Efficiency Standards Summary*. Available at: <https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2022-building-energy-efficiency>. Accessed January 2023.

¹⁶ California Air Resources Board. *2022 Scoping Plan for Achieving Carbon Neutrality*. November 16, 2022.

or require additional capacity from local or regional energy supplies. In addition, the proposed project would be required to comply with all applicable regulations related to energy conservation and fuel efficiency, which would help to reduce the temporary increase in demand.

Operational Energy Use

In response to the growing climate crisis, the City has determined that natural gas use in local buildings, which accounts for approximately one-third of the community's carbon footprint, represents the City's greatest opportunity to reduce future GHG emissions. Requiring all new buildings to be constructed without natural gas will dramatically reduce future emissions growth as electricity procured by Silicon Valley Clean Energy is 100 percent carbon free. The City Council adopted Ordinance No. 2306 on November 6, 2019, which prohibits natural gas infrastructure in new buildings.

Energy use associated with operation of the proposed project would be typical of fueling station, car wash, and convenience store uses, requiring electricity for interior and exterior building lighting, HVAC, electronic equipment, machinery, appliances, security systems, and more. Maintenance activities during operations, such as landscape maintenance, would involve the use of electric- or gas-powered equipment. In addition to on-site energy use, the proposed project would result in transportation energy use associated with vehicle trips generated by employee commutes, patrons to the project site, and the movement of goods.

The proposed project would be subject to all relevant provisions of the most recent update of the CBSC, including the Building Energy Efficiency Standards. Adherence to the most recent CALGreen Code and the Building Energy Efficiency Standards would ensure that the proposed structures would consume energy efficiently through the incorporation of such features as door and window interlocks, direct digital controls for HVAC systems, and high efficiency outdoor lighting.

In addition, the City Council adopted a Climate Action Plan (CAP) on December 15, 2021 that focuses on the expansion of EV use in the community and the decarbonization of existing buildings through reducing reliance upon fossil fuels. A goal of the CAP is to transition 95 percent of existing buildings in Morgan Hill to all-electric by 2045. In meeting such targets, the CAP encourages the prohibition of new fueling stations that do not have active permit applications by December 2022. However, this is a remodel of an existing gas station with a minor expansion which does not qualify as a new gas station. In addition, consistent with the Morgan Hill CAP, the new convenience store will be required to be built as an all-electric structure which reduces fossil fuels and supports the goal to transition existing buildings to all-electric.

With regard to transportation energy use, the proposed project would comply with all applicable regulations associated with vehicle efficiency and fuel economy, including mandatory charging spaces for EVs. The convenience store parking lot would additionally include spaces for short-term bicycle parking. As discussed later in Section XVII, Transportation, of this IS, the project site is also located within close proximity to existing residences, other commercial uses, bicycle infrastructure, and transit infrastructure.

Conclusion

Based on the above, construction and operation of the proposed project would not result in wasteful, inefficient, or unnecessary consumption of energy resources or conflict with or obstruct a State or local plan for renewable energy or energy efficiency. Thus, a ***less-than-significant*** impact would occur.

VII. GEOLOGY AND SOILS.

Would the project:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area based on other substantial evidence of a known fault? ii. Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii. Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv. Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Be located on expansive soil, as defined in Table 18-1B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Discussion

ai-aii. Pursuant to Figure SSI-1 in the Safety, Services, and Infrastructure Element of the City’s General Plan, known faults do not cross the project site. In addition, while the City of Morgan Hill lies within a seismically active region and several faults in the area are considered active, the project site is not within a currently established California Earthquake Hazard Zone for surface fault rupture hazards, including Alquist-Priolo Earthquake Fault Zones.¹⁷ Therefore, the potential for surface rupture due to faulting occurring beneath the site during the design life of the proposed development is considered low.

According to the City’s General Plan EIR, major faults near the City include the Calaveras Fault, located adjacent to the eastern boundary of the General Plan planning area; the San Andreas Fault, located approximately five miles southwest of the planning area; and the Sargent Fault, located approximately three miles west of the planning area. Due to the proximity of the project site to nearby active faults, strong ground shaking could occur at the site as a result of an earthquake along any one of the faults. However, the proposed project would be subject to applicable regulations within the CBSC and Morgan Hill Municipal Code Chapter 15.08 (Building Code), which provide standards to protect property and public safety by regulating the design and construction of foundations, building frames, and other building elements. Proper engineering of the proposed project

¹⁷ California Department of Conservation. *Earthquake Zones of Required Investigation*. Available at: <https://maps.conservation.ca.gov/cgs/EQZApp/app/>. Accessed November 2022.

in accordance with the aforementioned standards would ensure that seismic-related effects do not cause adverse impacts.

Based on the above, the proposed project would not directly or indirectly cause substantial adverse effects involving rupture of a known earthquake fault or strong seismic ground shaking, and a **less-than-significant** impact would occur.

a.iii, a.iv, The proposed project's potential effects related to liquefaction, subsidence, landslides, and lateral spreading, and are discussed in detail below.

Liquefaction and Subsidence

Soil liquefaction is a state of soil particles suspension caused by a complete loss of strength when the effective stress drops to zero. Soils most susceptible to liquefaction are clean, loose, saturated, uniformly graded, fine-grained sands. Liquefaction normally occurs under saturated conditions in soils such as sand in which the strength is purely frictional. Primary factors that trigger liquefaction are: moderate to strong ground shaking (seismic source), relatively clean, loose granular soils (primarily poorly graded sands and silty sands), and saturated soil conditions (shallow groundwater). Due to the increasing overburden pressure with depth, liquefaction of granular soils is generally limited to the upper 50 feet of a soil profile. However, liquefaction has occurred in soils other than clean sand.

According to the ABAG Resilience Program's interactive Hazard Viewer Map, the project site is located in an area designated as having low susceptibility to earthquake-induced liquefaction, and thus, would not be at substantial risk of potential impacts related to such hazards. In addition, as previously discussed, the proposed project would be subject to applicable regulations within the CBSC and Morgan Hill Municipal Code Chapter 15.08, which would further reduce the potential for seismic-related ground failure, including liquefaction. The proposed project would be substantially similar to the existing uses associated with the project site. Finally, the City's General Plan EIR evaluated the potential for development facilitated by buildout of the General Plan planning area to be located on a geologic unit or soil that is or would become unstable and potentially result in liquefaction and concluded that with compliance with applicable General Plan policies, a less-than-significant impact would occur. The proposed project is consistent with the site's Commercial designation and would be required to comply with applicable policies set forth by the General Plan and regulations and standards established at the State and local levels. As such, development of the proposed project would not result in impacts beyond those that were identified in the General Plan EIR, and potential impacts related to liquefaction would be less than significant.

Subsidence is the settlement of soils of very low density generally from either oxidation of organic material, or desiccation and shrinkage, or both, following drainage. Subsidence takes place gradually, usually over a period of several years. Given that the proposed project would comply with applicable regulations within the CBSC and Morgan Hill Municipal Code Chapter 15.08, potential impacts related to subsidence would be less than significant.

Landslides and Lateral Spreading

Seismically induced landslides are triggered by earthquake ground shaking. The risk of landslide hazard is greatest in areas with steep, unstable slopes. The project site is entirely

flat with an elevation of 400 feet above sea level. Thus, the proposed project does not include the potential hazard of a landslide, and potential impacts would be less than significant.

Lateral spreading is horizontal/lateral ground movement of relatively flat-lying soil deposits towards a free face such as an excavation, channel, or open body of water; typically, lateral spreading is associated with liquefaction of one or more subsurface layers near the bottom of the exposed slope. The project site, entirely flat, is not located near any open faces that would be considered susceptible to lateral spreading. Therefore, the potential for lateral spreading to pose a risk to the proposed development is relatively low, and potential impacts would be less than significant.

Conclusion

Based on the above, the proposed project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving liquefaction or landslides, and would not be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse. Thus, a **less-than-significant** impact would occur.

- b. Development of the project site would cause ground disturbance related to construction activity. The ground disturbance would be limited to the areas proposed for grading and excavation, including building pads; curb, gutter, and sidewalk improvement areas; excavation of existing USTs; installation of new USTs, and drainage, sewer, and water infrastructure alignments. After grading and excavation and prior to overlaying the disturbed ground surfaces with impervious surfaces and structures, the potential exists for wind and water erosion to occur, which could adversely affect downstream storm drainage facilities.

New development within the City that disturbs one or more acres of land is required to comply with the National Pollutant Discharge Elimination System (NPDES) Construction General Permit and prepare a Storm Water Pollution Prevention Plan (SWPPP) incorporating Best Management Practices (BMPs) to control sedimentation, erosion, and hazardous materials contamination of runoff during construction. The proposed project would disturb approximately 1.07 acres, and thus, would be subject to such requirements. In addition, pursuant to Morgan Hill Municipal Code Chapter 13.30 (Urban Storm Water Quality Management and Discharge Control), the project applicant would be required to submit a sediment and erosion control plan to the City of Morgan Hill, Land Development Engineering Division, prior to the approval of improvement plans and issuance of building permits. The plan(s) must be acceptable and conform to City standards to prevent significant sediment and soil erosion during construction and include the standards and guidelines found in the California Stormwater Quality Association, Stormwater Best Management Practice Handbook. Additionally, pursuant to Morgan Hill Municipal Code Section 13.30.270, erosion control plans must provide details for BMPs, such as preservation of existing vegetation, hydraulic mulch, hydroseeding, soil binders, and straw mulch. Incorporation of such BMPs would further ensure substantial adverse effects to downstream storm drainage facilities do not occur as a result of substantial soil erosion or the loss of topsoil.

Based on the above, the proposed project would not result in substantial soil erosion or the loss of topsoil. Thus, a **less-than-significant** impact would occur.

- d. Expansive soils increase in volume when they absorb water and have the potential to crack or otherwise compromise the integrity of building foundations. Pursuant to the U.S. Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey, the project site is underlain with Arbuckle gravelly loam, 0 to 2 percent slopes, MLRA 14, which has a rating of “Not limited” for small commercial buildings.¹⁸ The rating indicates that the soil has features that are very favorable for the specified use. In addition, the Web Soil Survey does not identify limitations for development of the project site with small commercial buildings related to shrink-swell potential, indicating the potential for impacts related to expansive soils is low. Furthermore, Morgan Hill Municipal Code Section 15.08.090 includes requirements for minimum thickness of concrete floor slabs, as well as required reinforcement with wire mesh or an approved alternative. Finally, as previously discussed, the proposed project would be subject to applicable regulations set forth by the CBSC, which provide standards to protect property and public safety by regulating the design and construction of foundations, building frames, and other building elements. Given required compliance with the CBSC and the slab and foundation construction standards provided in the Municipal Code, the proposed project would not be subject to substantial risks related to expansive soils.

Based on the above, the proposed project would not create substantial direct or indirect risks to life or property related to being located on expansive soil, as defined in Table 18-1B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property. Thus, a **less-than-significant** impact would occur.

- e. The proposed development would connect to existing City-maintained sewer infrastructure and would not include the use of septic tanks. Accordingly, **no impact** would occur related to soils incapable of adequately supporting the use of septic tanks.
- f. Paleontological resources or fossils are the remains of prehistoric plant and animal life. As noted in the General Plan EIR, based on a review of the University of California’s Museum of Paleontology’s (UCMP) fossil locality database conducted for all of Santa Clara County, paleontological resources have not been explicitly identified as being found within Morgan Hill.¹⁹

As noted in the City’s General Plan, occurrences of fossil resources are closely tied to the geologic units. The soil types at the project site are not considered unique geologic features and are common within the geographic area of the City. As such, development of the proposed project would not destroy a unique geologic feature. Furthermore, the proposed project would be subject to the City’s standard measures listed in Section V, Cultural Resources, of this IS, which, as noted in the General Plan EIR, would ensure that impacts to paleontological resources are less than significant.

Therefore, the proposed project would not directly or indirectly destroy a unique paleontological resource or site or unique geologic feature, and a **less-than-significant** impact would occur.

VIII. GREENHOUSE GAS EMISSIONS.

Would the project:

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gasses?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Discussion

a,b. Emissions of GHGs contributing to global climate change are attributable in large part to human activities associated with the industrial/manufacturing, utility, transportation, residential, and agricultural sectors. Therefore, the cumulative global emissions of GHGs contributing to global climate change can be attributed to every nation, region, and city, and virtually every individual on Earth. An individual project's GHG emissions are at a micro-scale level relative to global emissions and effects to global climate change; however, an individual project could result in a cumulatively considerable incremental contribution to a significant cumulative macro-scale impact. As such, impacts related to emissions of GHG are inherently considered cumulative impacts.

Implementation of the proposed project would cumulatively contribute to increases of GHG emissions. Estimated GHG emissions attributable to future development would be primarily associated with increases of carbon dioxide (CO₂) and, to a lesser extent, other GHG pollutants, such as methane (CH₄) and nitrous oxide (N₂O) associated with area sources, mobile sources or vehicles, utilities (electricity and natural gas), water usage, wastewater generation, and the generation of solid waste. The primary source of GHG emissions for the project would be mobile source emissions. The common unit of measurement for GHG is expressed in terms of annual metric tons of CO₂ equivalents (MTCO₂e/yr).

The proposed project is located within the jurisdictional boundaries of BAAQMD. On April 20, 2022, the BAAQMD Board of Directors held a public meeting and adopted proposed CEQA Thresholds for Evaluating the Significance of Climate Change Impacts from Land Use Projects and Plans.²⁰ The updated GHG thresholds therein address more recent climate change legislation, including Senate Bill (SB) 32, and provide qualitative thresholds related to Buildings and Transportation. BAAQMD is in the process of updating their CEQA Guidelines to accompany the newly adopted GHG thresholds.

Based on the modeling conducted for the proposed project, as discussed in Section III, Air Quality, of this IS, construction of the project would result in total GHG emissions of 254.13 MTCO₂e over the entire construction period.

The construction GHG emissions were amortized over the anticipated project lifetime and included in the annual operational GHG emissions.²¹ Including the construction emissions

²⁰ Bay Area Air Quality Management District. *CEQA Thresholds and Guidelines Update*. Available at: <https://www.baaqmd.gov/plans-and-climate/california-environmental-quality-act-ceqa/updated-ceqa-guidelines>. Accessed November 2022.

²¹ South Coast Air Quality Management District. 2008. *Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold*. October 2008.

(a one-time release that would occur only during construction of the project) with the annual operational emissions (which would occur every year over the lifetime of the entire project) represents a conservative analysis for the annual operational GHG emissions.

As shown in Table 4, the project’s total unmitigated annual GHG emissions in the first year of project operation, 2024, including the total construction-related emissions, were estimated to be approximately 773.76 MTCO₂e/yr.

Table 4	
Unmitigated Operational GHG Emissions	
Source	GHG Emissions (MTCO₂e/yr)
Total Construction GHG Emissions	254.13
Total Operational GHG Emissions	519.63
Area	0.006
Energy	11.75
Mobile	507.71
Waste	0.00
Water	0.17
Total Annual GHG Emissions	773.76
<i>Source: CalEEMod, November 2022 (see Appendix A).</i>	

As noted previously, the BAAQMD’s newly adopted thresholds of significance for GHG emissions are qualitative, and the foregoing information is provided for disclosure purposes only. Potential impacts related to GHG emissions resulting from implementation of the proposed project are considered in comparison with BAAQMD’s adopted thresholds of significance below. In addition, the proposed project’s consistency with the City of Morgan Hill CAP is discussed further below.

BAAQMD Thresholds of Significance

As discussed above, on April 20, 2022, the BAAQMD Board of Directors held a public meeting and adopted proposed CEQA Thresholds for Evaluating the Significance of Climate Change Impacts from Land Use Projects and Plans. According to the new thresholds of significance, a project must either include specific project design elements (e.g., exclude use of natural gas, achieve a specific reduction in project-generated VMT below the regional average) or be consistent with a local GHG reduction strategy that meets the criteria under State CEQA Guidelines Section 15183.5(b).²²

In December of 2021, the City of Morgan Hill adopted a Climate Action Plan (CAP); however, the City’s CAP does not qualify as a local GHG reduction strategy under CEQA Guidelines Section 15183.5(b). Therefore, the City has determined that the BAAQMD thresholds of significance are appropriate for the proposed project, and the following analysis focuses on the new BAAQMD GHG thresholds related to specific project design elements.

According to the BAAQMD’s thresholds of significance, in order to find a less-than-significant GHG impact, projects must include, at a minimum, the following project design elements:

²² Bay Area Air Quality Management District. *CEQA Thresholds for Evaluating the Significance of Climate Impacts From Land Use Projects and Plans*. April 2022.

- The project will not include natural gas appliances or natural gas plumbing (in both residential and nonresidential development);
- The project will not result in any wasteful, inefficient, or unnecessary energy usage as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the State CEQA Guidelines;
- The project will achieve a reduction in project-generated vehicle miles traveled (VMT) below the regional average consistent with the current version of the California Climate Change Scoping Plan (currently 15 percent) or meet a locally adopted SB 743 VMT target, reflecting the recommendations provided in the Governor's Office of Planning and Research's Technical Advisory on Evaluating Transportation Impacts in CEQA; and
- The project will achieve compliance with off-street EV requirements in the most recently adopted version of CALGreen Tier 2.

In order to be consistent with the first criterion, the proposed project is required to include all electric appliances and plumbing. As discussed previously, natural gas is prohibited in all new construction within the City, effective March 1, 2020, pursuant to City Ordinance No. 2306. Therefore, the proposed project would comply with the first criterion.

Regarding the second criterion, as discussed in Section VI, Energy, of this IS, the proposed project would comply with all applicable federal, State, and local regulations regarding energy use during both project construction and project operations. Required compliance with applicable standards and regulations ensure that the building energy use associated with the proposed project would not be wasteful, inefficient, or unnecessary, and, as a result, the project would comply with the second criterion.

With respect to the third criterion, as discussed in Section XVII, Transportation, of this IS, pursuant to the OPR, certain projects are presumed to have a less-than-significant effect on VMT due to project size, project location, or project type.²³ Specifically, OPR recommends that local-serving retail uses should be presumed to have a less-than-significant impact. Given that the proposed project would serve residents in the project vicinity, the project is considered a local-serving retail use. In addition, as described in Section XVII, Transportation, of this IS, the proposed project would result in a net reduction of daily vehicle trips relative to existing conditions, as the current fuel station, car wash, and convenience store generates 1,204 daily trips and the proposed project is anticipated to generate 903 daily trips. Therefore, based on the recommendations provided in the OPR's Technical Advisory on Evaluating Transportation Impacts in CEQA, VMT associated with the proposed project would be less than significant, and the project would comply with the third criterion.

With respect to the fourth criterion, the proposed project would be subject to the non-residential requirements set forth in the CALGreen standards. The proposed project would include a total of 22 parking spaces. Based on the non-residential Tier 2 CALGreen standards, commercial development with between 10 and 25 total parking spaces is required to provide two on-site EV capable spaces. EV capable spaces have the electric infrastructure necessary to support future installation of EV charging units. Based on the site plan for the proposed project, it does not appear that EV capable spaces are proposed to be included on-site. Therefore, the proposed project may not comply with the

²³ Governor's Office of Planning and Research. *Technical Advisory on Evaluating Transportation Impacts in CEQA*. December 2018.

nonresidential Tier 2 CALGreen standards and, thus, could conflict with the fourth criterion.

City of Morgan Hill Climate Action Plan

As discussed in Section VI, Energy, of this IS, the City's adopted CAP focuses on the expansion of EV use in the community and the decarbonization of existing buildings through reducing reliance upon fossil fuels. A goal of the CAP is to transition 95 percent of existing buildings in Morgan Hill to all-electric by 2045. In meeting such targets, the CAP encourages the prohibition of new fueling stations that do not have active permit applications by December 2022. However, this is a remodel of an existing gas station with a minor expansion which does not qualify as a new gas station. In addition, consistent with the Morgan Hill CAP, the new convenience store will be required to be built as an all-electric structure which reduces fossil fuels and supports the goal to transition existing buildings to all-electric. Thus, the proposal is consistent with the Morgan Hill Climate Action Plan.

Conclusion

Based on the above, because the project may not comply with the BAAQMD's fourth criterion, the proposed project could be considered to generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. Therefore, a **potentially significant** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

VIII-1. *The following requirement shall be noted on project improvement plans, subject to review and approval by the Morgan Hill Development Services Department:*

- *A minimum of two electric vehicle (EV) capable parking spaces shall be included on-site, consistent with the Tier 2 CALGreen standards.*

IX. HAZARDS AND HAZARDOUS MATERIALS.

Would the project:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g. Expose people or structures, either directly or indirectly, to the risk of loss, injury or death involving wildland fires?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Discussion

a. Projects that involve the routine transport, use, or disposal of hazardous materials are typically industrial in nature. The proposed project would involve the routine transport and use of gasoline and diesel fuels as part of the refilling of the gas station’s two 20,000-gallon USTs and fuel dispensers, as well as the storage and selling of automotive fluids through the location’s convenience store.

The underground storage of hazardous materials would be subject to the provisions of the California Health and Safety Code and Title 23 of the CCR. The proposed project would also be subject to regulations established by the Santa Clara County HMCD, which is a part of the Santa Clara County Department of Environmental Health. The HMCD is the Certified Unified Program Agency (CUPA) for all cities and unincorporated areas within the County. The Unified Program is a statewide program overseen by the California EPA (CalEPA) that delegates the responsibility of applying regulatory standards established by State agencies to local agencies through inspections, permitting, and enforcement activities. The Unified Program encompasses regulatory standards from the Governor’s Office of Emergency Services (OES), Department of Toxic Substances Control (DTSC), Office of the State Fire Marshal (OSFM), the State Water Resources Control Board, and CalEPA. The HMCD regulates all of the program elements in the County by issuing permits, inspecting facilities, investigating complaints, and performing enforcement as necessary.

Pursuant to the requirements established by the HMCD, the proposed project would be required to prepare a Hazardous Materials Business Plan (HMBP) to ensure impacts

related to the proposed USTs would not occur. The HMBP is required for businesses with on-site hazardous materials and must detail the quantity of such materials stored on the premises, spill prevention and control measures, and an emergency response plan to address potential incidents related to such materials such as a release, fire, and/or disaster. In addition, pursuant to Section B11-424 of the Santa Clara County Ordinance Code, the proposed project would be required to obtain a permit for the use of USTs from the HMCD and pay applicable permit fees. The information required to obtain said permit would include, but not be limited to, the following: a description of the age, size, type, location, uses, and construction of the USTs; a list of all of the hazardous substances that would be stored in the USTs, specifying the hazardous substances for each on-site UST; a description of the monitoring program for the UST system; the name and address of the UST owner, and if different from the owner, the name and address of the UST operator; and the address of the facility at which the UST is located.

Finally, pursuant to Title 23 of the CCR, new USTs are subject to various safety requirements. Such measures include that all new USTs used for the storage of hazardous substances, including associated piping, must have primary and secondary containment systems. The primary containment system must be product-tight, and the secondary containment system must be designed and constructed such that the system can be periodically tested. The design and construction of all primary containment system, including any integral secondary containment, must be approved by an independent testing organization, in accordance with industry codes and/or engineering standards. In addition, all new USTs are required by CCR Title 23 to include equipment capable of detecting a leak at the earliest possible opportunity. The new USTs installed as part of the proposed project would be subject to all applicable regulations set forth by Title 23 of the CCR, including the aforementioned requirements pertaining to primary and secondary containment systems, as well as leak-detection equipment.

Based on the above, the proposed project would be required to comply with all applicable provisions of the California Health and Safety Code and Title 23 of the CCR, as well as applicable regulations set forth by the HMCD, including the preparation of a HMBP and obtaining a permit for the proposed USTs. Compliance with such would ensure that impacts related to the routine transport, use, or disposal of hazardous materials would be **less than significant**.

- b. A Phase I ESA was prepared for the proposed project by Geocon Consultants, Inc. to assess the project site in accordance with the American Society for Testing and Materials (ASTM) E1527-21 standard for the potential presence of Recognized Environmental Conditions (RECs), Historical RECs (HRECs), and Controlled RECs (CRECs) (see Appendix B of this IS).²⁴ Pursuant to ASTM E1527-21, a REC indicates the presence or likely presence of any hazardous substances in, on, or at a property due to any release into the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment. In addition, ASTM E1527-21 defines a HREC as a previous release of hazardous substances or petroleum products affecting a subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meets unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the property to any controls (i.e., activity and use limitations or other property use

²⁴ Geocon Consultants, Inc. *Phase I Environmental Site Assessment Report: Shell Gas Station, 810 East Dunne Avenue, Morgan Hill, California*. November 2022.

limitations). A CREC is defined as a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (i.e., activity and use limitations or other property use limitations).

As part of the assessment, the Phase I ESA included, but was not limited to, a review of federal, State, and local environmental databases for the project site and facilities within a mile of the site, a review of historical aerial photographs, and an on-site reconnaissance and off-site survey. The review of applicable environmental databases returned several records for the site and facilities within the project vicinity. The project site is listed on several databases due to a previously leaking UST that impacted groundwater with gasoline, including the State's Leaking Underground Storage Tank (LUST) database, the State's Historic Leaking Underground Storage Tank (HIST LUST) database, and the State's Hazardous Waste and Substance Site List. More specifically, the existing fueling station, car wash, and convenience store was eligible for the Shell Oil Products U.S. Groundwater Assessment Program (GRASP), due to the site's proximity to public water wells. As part of participation in GRASP, groundwater monitoring wells (MW-1, MW-2, and MW-3) were installed on-site in August 2002. Because methyl tert-butyl ether (MTBE), a flammable liquid that has been used as an additive for unleaded gasoline, was detected in groundwater samples collected in MW-1 and MW-3 at concentrations of 0.59 and 8.6 micrograms per liter ($\mu\text{g/l}$), respectively, the SCVWD opened a LUST case for the project site. Subsequent to the case opening, the project site was subject to further groundwater monitoring, testing for an additional contaminant of concern (total petroleum hydrocarbons [TPH] as diesel), and the drilling of an additional monitoring well (MW-4).

According to the Case Closure Summary, included as an attachment to the Central Valley Regional Water Quality Control Board's (RWQCB) November 23, 2004 letter regarding the project site²⁵ (see Appendix C of the Phase I ESA), based on the results of soil samples collected, although residual gasoline oxygenate contamination existed in the soil (9.4 parts per million [ppm] MTBE), the level was residual contamination and did not appear to be a significant threat to the groundwater resources in the project area. The Case Closure Summary further noted that although MBTE was present in MW-4 at 6.2 parts per billion (ppb), other dissolved petroleum hydrocarbons or oxygenates were not detected. During the first sampling event for MW-4, the monitoring well exhibited the highest level of MTBE measured at the site, which was found to be anomalous and could have been attributed to drawdown of contaminants from a shallower elevation into the borehole during drilling and insufficient development of the well. The next round of sampling supported the aforementioned conclusion, as only 26 ppb MTBE was present. Based on the residual contamination of TPH in the soil and groundwater samples, the SCVWD determined that a continuing threat to groundwater, human health, and the environment from residual petroleum hydrocarbons did not exist at the site and that the RWQCB's objectives had not been compromised. Ultimately, a request for No Further Action (NFA) was submitted to the SCVWD in October 2004 and the regulatory case was closed on March 29, 2005. It should be noted that the Case Closure Summary added that "residual contamination in both soil and groundwater could pose an unacceptable risk under certain site development activities such as site grading, excavation, or installation of water wells." Based on the

²⁵ Case Closure Summary entitled "Shell, 810 East Dunne Avenue, Morgan Hill, Santa Clara County: Case Closure Concurrence [LUST CASE NO. 3550]."

findings of the Case Closure Summary, the Phase I ESA determined that the closed LUST case is a CREC for the project site.

With respect to the site's existing use as a gasoline service station with active fueling (i.e., USTs, piping, and fuel pumps), the Phase I ESA concluded that the existing use of the project site qualifies as a REC due to a "material threat of release." However, the existing 15,000-gallon USTs, piping, and fuel pumps include leak prevention and containment systems, which greatly lessen the potential for a release. In addition, as previously discussed, the proposed project includes removal of the existing USTs and installation of two new 20,000-gallon USTs. As part of the aforementioned activities, the project would be required to obtain a UST System Closure Permit from the HMCD, pursuant to the requirements set forth in Santa Clara County Code Section B11-325, which would include detailing the schedule with which the project would collect and sample soils beneath the existing USTs and the DTSC and USEPA standards against which the soils would be tested. In the event that laboratory analysis confirms the presence of contaminants which exceed applicable standards, the proposed project would be required to remediate soils on-site, if possible, or excavate contaminated soils and haul the materials to an appropriate facility for disposal.

With respect to facilities identified on environmental databases within the project vicinity, the Phase I ESA identified the following three facilities that required further analysis: a Chevron fueling station at 825 East Dunne Avenue, the Madrone Land Corporation identified on the State Water Resources Control Board (SWRCB) GeoTracker, and Glass Tek/Balcunas located at 16840 Joleen Way. The Chevron fueling station is located approximately 375 feet to the northeast of the project site and has a closed LUST case. A release was detected during removal of three gasoline USTs and one waste oil UST in 1988. All four USTs were replaced and limited over-excavation of contaminated soil in the USTs excavations was performed. In March 1998, the replaced waste oil UST was removed along with fiberglass piping associated with the three gasoline USTs. The fiberglass piping was replaced with double-walled fiberglass piping. Two hydraulic hoists were also removed from a former service bay in the gas station building. In addition, groundwater grab samples were collected and analyzed in accordance with applicable laboratory standards. Overall, due to the cross-gradient location of the release relative to the project site, the relatively low contaminant concentrations in groundwater at the Chevron property, and closure of the LUST case, the Phase I ESA found that the facility does not represent a REC to the project site.

The Madrone Land Corporation is mapped on the SWRCB GeoTracker as being within 1,088 feet to the west of the project site; however, the facility is actually located 1.75 miles to the north of the site. As such, the Phase I ESA concluded the facility is located too far from the project site to constitute a REC. Finally, Glass Tek/Balcunas is approximately 850 feet to the southwest of the project site and was found to have had a release of halogenated solvents, primarily trichloroethene (TCE), into soil and groundwater in 1985. Soil excavation, soil vapor extraction, groundwater extraction, and in-situ bioremediation activities were performed, and the regulatory case was closed in June 2020 with land use restrictions. The land use restriction limited uses of the property to commercial/industrial. Due to the case closure and the fact that the halogenated solvent plume had migrated to the southeast, away from the project site, the Phase I ESA found that the facility does not constitute a REC.

In addition to the review of environmental databases, the Phase I ESA included review of historical aerial photographs for years ranging from 1939 to 2016. The project site was used for agricultural purposes (orchard and irrigated farm field) prior to 1939 until between 1970 and 1974. The current fueling station development was constructed between 1982 and 1998. The past agricultural use suggests that pesticides could have been used on-site and could be present (along with associated metals, such as arsenic and lead) in shallow soil as a result. Although such conditions are a potential environmental concern for the project site, the Phase I ESA concluded that subsequent grading and development likely impacted the distribution of pesticides in soil and may have attributed to their attenuation. Nevertheless, the project includes excavation of approximately 72 CY of soil for the installation of larger USTs (i.e., two new 20,000-gallon USTs that would replace the two existing 15,000-gallon USTs). If the excavated soils are hauled off-site, the soils must first be tested to confirm that the soils do not contain residual pesticide contaminants or contaminants related to the former LUST case that exceed applicable regulatory standards.

Based on the above, due to project site's existing fueling station, on-site soils could include contaminants of concern associated with the existing 15,000-gallon USTs, which could pose risks under certain site development activities, such as site grading, excavation, and installation of new utility infrastructure. Therefore, the proposed project could create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, and a **potentially significant** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above potential impact to a *less-than-significant* level.

IX-1 Prior to the issuance of a grading permit, the project applicant shall submit an application for an Underground Storage Tank (UST) System Closure Permit to the Santa Clara County Hazardous Materials Compliance Division (HMCD) for review and approval, pursuant to the requirements set forth in Santa Clara County Code Section B11-325. As part of the UST System Closure Permit application, the project applicant shall also pay associated fees. At minimum, the UST Closure Permit application shall detail the following:

- The proposed schedule for collection and sampling of soils beneath the on-site USTs and along piping runs;*
- The California Department of Toxic Substances Control (DTSC) and U.S. Environmental Protection Agency (USEPA) standards against which collected on-site soils shall be tested;*
- Applicable work practice standards, in accordance with the Occupational Safety and Health Administration (OSHA) Technical Manual, that shall be implemented to ensure appropriate precautions are incorporated to protect construction workers and the surrounding community during removal of the on-site USTs and associated piping runs;*
- The proposed disposal methods for on-site soils associated with the existing USTs and piping runs;*

- The proposed date of UST closure inspection; and
- The methods with which soils shall be remediated on-site, if contaminants in tested soils exceed applicable standards. If on-site remediation is not possible, the methods and routes in which contaminated soils shall be hauled to an appropriate facility for disposal.

In accordance with California Code of Regulations (CCR) Title 22, Division 4.5, Chapter 32, the existing on-site USTs and primary piping shall be managed as hazardous waste upon removal, unless such facilities are cleaned on-site and certified by an HMCD representative as non-hazardous in accordance with DTSC hazardous waste regulations. The proposed UST and sump removal and sampling activities shall be witnessed by a HMCD representative.

IX-2

If unidentified or suspected contaminated soil or groundwater, as evidenced by stained soil, noxious odors, or other factors, is encountered during site improvements, work shall stop in the area of potential contamination, and the nature and extent of the contamination shall be assessed by a qualified environmental professional. The qualified environmental professional shall be retained by the applicant to prepare a report that describes the assessment of apparently contaminated soil and any identified contaminants and their reported concentrations. The report shall also include a comparison of contaminant concentrations (if any) to applicable health risk-based screening levels and hazardous waste criteria (as appropriate), provide a conclusion stating whether or not the contaminants are present at concentrations that could pose a threat to human health or the environment, and, if so, recommend appropriate handling and/or off-site disposal of the contaminated soil, as appropriate. Site improvement activities shall not recommence within the contaminated areas until any necessary remediation identified in the report is complete. The report and verification of proper remediation and disposal shall be submitted to the Santa Clara County Environmental Health Department for review and approval.

IX-3

If on-site soil excavation for UST removal and replacement will result in the need to export the excavated soil for disposal at an off-site location, the applicant shall retain a qualified environmental professional to characterize the excavated soil as a waste to determine an appropriate disposal facility and obtain their acceptance of the soil. The qualified environmental professional shall oversee the loading, transportation, and disposal of the soil including retaining copies of transportation and disposal documentation (i.e., waste manifests and landfill weigh tickets, respectively). The qualified environmental professional shall also prepare a report summarizing the methodology of soil waste characterization, results of the characterization, and describing the loading, transportation, and disposal of the soil. The report shall be submitted to the Santa Clara County Environmental Health Department for review and approval.

- c. The nearest school to the project site is Nordstrom Elementary School, located at 1425 East Dunne Avenue, approximately 0.6-mile to the east of the site. As such, the proposed

project would not be constructed within 0.25-mile of an existing school. In addition, as discussed under question 'a' above, through compliance with applicable regulations established by the California Health and Safety Code, Title 23 of the CCR, and the HMCD, including the preparation of a HMBP and obtaining a permit for the proposed USTs, impacts related to the routine transport, use, or disposal of hazardous materials would be less than significant. Furthermore, through implementation of Mitigation Measures IX-1 through IX-3, the proposed project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Thus, the proposed project would not emit hazardous emissions or handle hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school, and the project would result in **no impact**.

- d. Government Code Section 65962.5 requires the California Environmental Protection Agency to annually develop an updated Cortese List. The project site is not located on the DTSC's Hazardous Waste and Substances Site List, which is a component of the Cortese List.²⁶ As previously discussed, the Phase I ESA found that the project site is identified on the SWRCB's GeoTracker database as a LUST site, which is another portion of the Cortese List. However, as discussed under question 'b,' based on the analysis of soil and groundwater samples collected at the project site associated with the LUST case, residual contamination at the site did not appear to be a significant threat to the groundwater resources in the project area and the LUST case was closed on March 29, 2005. Based on the findings of the Case Closure Summary, the Phase I ESA prepared for the proposed project determined that the closed LUST case is a CREC for the project site. Finally, the proposed project would be subject to Mitigation Measure IX-1, which would require the project to obtain a UST System Closure Permit and test on-site soils beneath the existing USTs in accordance with applicable regulatory standards. If contaminant levels exceed applicable standards, Mitigation Measures IX-2(a) and (b) require on-site remediation of soils, if possible, or hauling of soils to an appropriate facility for disposal.

Based on the above, through compliance with Mitigation Measures IX-1 and IX-2, the proposed project would not create a significant hazard to the public or the environment, and a **less-than-significant** impact would occur.

- e. The nearest airport to the project site is the San Martin Airport, which is located approximately 3.5 miles to the south of the project site. The project site is located well outside of the Airport Influence Area (AIA) identified in the South County Airport Comprehensive Land Use Plan.²⁷ In addition, the project site is not located within the vicinity of a private airstrip. Therefore, the proposed project would not result in an airport-related safety hazard for people residing or working in the project area, and **no impact** would occur.
- f. Implementation of the proposed project would not result in any substantial modifications to the City's existing roadway system. Access to the project site would be provided by the existing private driveway located parallel to the site's southern boundary through the construction of two new entries into the site. The entries would consist of a 25-foot-wide

²⁶ California Department of Toxic Substances Control. *Hazardous Waste and Substances Site List*. Available at: <https://dtsc.ca.gov/dtscs-cortese-list>. Accessed November 2022.

²⁷ Santa Clara County. *Comprehensive Land Use Plan, Santa Clara County, South County Airport*. Amended November 16, 2016.

driveway and a 35-foot-driveway. Furthermore, the proposed project would not interfere with potential evacuation or response routes used by emergency response teams and would not conflict with the City's Emergency Operations Plan.²⁸ The proposed project is consistent with the site's current General Plan land use and zoning designations; thus, development of the site and associated effects on emergency evacuation routes has been anticipated by the General Plan and analyzed in the General Plan EIR.

Based on the above, the proposed project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan, and a **less-than-significant** impact would occur.

- g. The City's Wildland Urban Interface map indicates that the project site is not located in a High or Very High Fire Hazard Severity Zone (FHSZ).²⁹ In addition, buildout of the site has been previously considered by the City, and the project site is situated within a developed area. Furthermore, the proposed project would be substantially similar to the existing uses associated with the project site. Therefore, the proposed project would not expose people or structures to the risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands, and a **less-than-significant** impact would occur.

²⁸ City of Morgan Hill. *Emergency Operations Plan*. January 11, 2018.

X. HYDROLOGY AND WATER QUALITY.

Would the project:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i. Result in substantial erosion or siltation on- or off-site;	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv. Impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Discussion

- a. The proposed project’s potential to result in water quality impacts during construction and operations is discussed in further detail separately below.

Construction

Project construction activities such as grading, excavation, and trenching for site improvements would result in the disturbance of on-site soils. The exposed soils have the potential to affect water quality in two ways: 1) suspended soil particles and sediments transported through runoff; or 2) sediments transported as dust that eventually reach local water bodies. Spills or leaks from heavy equipment and machinery, staging areas, or building sites also have the potential to enter runoff. Typical pollutants include, but are not limited to, petroleum and heavy metals from equipment and products such as paints, solvents, and cleaning agents, which could contain hazardous constituents. Sediment from erosion of graded or excavated surface materials, leaks or spills from equipment, or inadvertent releases of building products could result in water quality degradation if runoff containing the sediment or contaminants should enter receiving waters in sufficient quantities. Impacts from construction-related activities would generally be short-term and of limited duration.

Water quality degradation is regulated by the federal NPDES Program, established by the Clean Water Act, which controls and reduces pollutants to water bodies from point and non-point discharges. In California, the NPDES permitting program is administered by the

SWRCB through nine RWQCBs. As discussed in Section VII, Geology and Soils, of this IS, new development within the City that disturbs one or more acres of land is required to comply with the NPDES Construction General Permit and prepare a SWPPP incorporating BMPs to control sedimentation, erosion, and hazardous materials contamination of runoff during construction. The proposed project would disturb approximately 1.07 acres, and would, thus, be subject to the NPDES Construction General Permit conditions.

The proposed project would also be subject to all regional and local water quality regulations. In order to meet water quality objectives for the region, the City of Morgan Hill, City of Gilroy, and County of Santa Clara have prepared and are implementing a Revised Regional Storm Water Management Plan (SWMP). The SWMP incorporates the efforts of the City of Morgan Hill, the City of Gilroy, and the unincorporated portion of Santa Clara County, within the watershed of the Pajaro River and Monterey Bay, to meet the NPDES Phase II Storm Water Permit requirements for small municipal separate storm sewer systems (MS4s). The Upper Pajaro River Watershed is located within the jurisdiction of the Central Coast RWQCB. The City of Morgan Hill implements the SWMP through an extensive program that entails: 1) the establishment of SWMP goals for the City; 2) public education and outreach; 3) public involvement and participation; 4) illicit discharge control; 5) construction site storm water runoff control; 6) post-construction storm water management in development; and 7) pollution prevention. For construction activities, the SWMP presents BMPs that are required for the control of storm water runoff quality during construction, including, but not limited to, covering disturbed areas with mulch, temporary seeding, soil stabilizers, binders, fiber rolls or blankets, temporary vegetation, and permanent seeding.

Operation

After project completion, impervious surfaces on the project site could contribute incrementally to the degradation of downstream water quality during storm events. During the dry season, vehicles and other urban activities may release contaminants onto the impervious surfaces, where they would accumulate until the first storm event. During the initial storm event, or first flush, the concentrated pollutants would be transported via stormwater runoff from the site to the stormwater drainage system and eventually a downstream waterway. Typical urban pollutants that would likely be associated with the proposed project include sediment, pesticides, oil and grease, nutrients, metals, bacteria, and trash. In addition, stormwater runoff could cause soil erosion if not properly addressed, which would provide a more lucrative means of transport for pollutants to enter the waterways.

The proposed project would result in a new fueling station, car wash, and convenience store, similar to the site's existing use. Therefore, water quality in the project vicinity due to runoff from the redeveloped project site would not change substantially relative to existing conditions, given the similarities between the existing and proposed uses. In addition, the proposed project would be managed in accordance with Resolution R3-2013-0032 issued by Central Coast RWQCB. This resolution formally adopts post-construction stormwater management requirements for development projects in the Central Coast Region. The requirements identify 10 Watershed Management Zones (WMZs) in the covered area, and specify stormwater management requirements for each zone, depending on the size of the development project. Because the project site is located in an area classified as WMZ-1, stormwater management at the project site must include site design and runoff features to limit the amount of runoff from the project site as well as on-site water quality treatment to reduce pollutant loads in the stormwater runoff using a Low

Impact Development (LID) treatment system such as optimized infiltration.³⁰ In WMZ-1, the treatment system must retain 95 percent of the runoff from the project site and also maintain peak runoff flows such that they do not exceed pre-project flows.

As part of the existing fueling station, car wash, and convenience store, the project site includes existing on-site stormwater infrastructure that connects to the City's existing 30-inch storm drain line located in East Dunne Avenue, from which flows are conveyed westward to the existing channel in Butterfield Boulevard. The proposed project would include bio-planters within newly landscaped areas of the project site for the purpose of preliminary stormwater treatment. Following filtration through the on-site bio-planters, flows would be released to the City's storm drain system by way of new connections to the City's existing 30-inch storm drain line in East Dunne Avenue. In addition, the portion of car wash water not recycled on-site would be treated through a sand/oil separator and clarifier underground tanks prior to being discharged to the City's sanitary sewer system.

Pursuant to Morgan Hill Municipal Code Chapter 18.140 (Post Construction Stormwater Pollution Prevention), the proposed project would be subject to permanent stormwater pollution prevention measures and would be required to comply with the design standards set forth in Municipal Code Section 18.140.040 (Design standards and selection of best management practices). Selection and implementation of BMPs would be required to be to the satisfaction of the City and in accordance with the requirements contained in the most recent versions of the following documents:

1. City of Morgan Hill Stormwater Post Construction Best Management Practices Development Standards for new development and redevelopment;
2. California Storm Water Quality Association Best Management Practice Handbooks;
3. City of Gilroy, City of Morgan Hill and County of Santa Clara Regional Stormwater Management Plan (SWMP), as approved by the Central Coast Regional Water Quality Control Board; and
4. City of Morgan Hill Hydro-modification Management Plan, as approved by the Central Coast Regional Water Quality Control Board.

The final design of the proposed drainage system would be reviewed and approved by the City of Morgan Hill Engineering Land Development Division, which would ensure that the proposed drainage system complies with the City's Post Construction Stormwater Pollution Prevention Ordinance with respect to incorporating sufficient permanent stormwater treatment control BMPs. Therefore, water quality standards or waste discharge requirements would not be violated, and water quality would not be degraded as a result of the proposed project operations.

Conclusion

Based on the above discussions, the proposed project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality during construction or operations. Therefore, a **less-than-significant** impact would occur.

³⁰ Central Coast Regional Water Quality Control Board. *Technical Support Document for Post-Construction Stormwater Management Requirements for Development Projects in the Central Coast Region*. July 12, 2013.

- b.e. The City's water supplies currently consist entirely of groundwater. Approximately 25 percent of the City's supply is extracted from the Coyote Valley subarea of the Santa Clara Subbasin, and approximately 75 percent is extracted from the Llagas Subbasin. The project site is located within the Llagas Subbasin. Neither of the subbasins are in a condition of overdraft, and groundwater levels are not expected to drop.³¹ It should be noted that water supply is discussed in Section XIX, Utilities and Service Systems, of this IS.

Groundwater within the Llagas Subbasin is managed by the SCVWD. The 2016 Groundwater Management Plan (GWMP), prepared pursuant to the Sustainable Groundwater Management Act of 2014 (SGMA), describes the SCVWD's comprehensive groundwater management framework, including existing and potential actions to achieve basin sustainability goals and ensure continued sustainable groundwater management. The GWMP covers the Santa Clara and Llagas subbasins, located entirely in Santa Clara County and identified by the Department of Water Resources (DWR) as Basins 2-9.02 and 3-3.01, respectively. Pursuant to the DWR, the Llagas Subbasin is designated as a high-priority basin.³² Major recharge facilities within the Llagas Subbasin include the Uvas and Chesbro Reservoirs, in-stream recharge in Llagas and Uvas Creeks, the Madrone Channel, the San Pedro and Main Avenue groundwater recharge ponds, and the Uvas-Llagas pipeline, which is capable of diverting water from Uvas Reservoir to Llagas Creek.

The proposed project would provide landscaped, grassy areas capable of absorbing stormwater and providing groundwater recharge along the northern, western, and southern boundaries of the project site. In addition, as previously discussed, the proposed project would result in a new fueling station, car wash, and convenience store, similar to the site's existing use. Therefore, the redeveloped project site's recharge capability would not change substantially relative to existing conditions, given the similarities between the existing and proposed uses. Given that groundwater levels within the subbasin underlying the project site are currently stable, and that the proposed project would provide for opportunities for on-site recharge, the proposed project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the Llagas Subbasin.

Based on the above, the proposed project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project would impede sustainable groundwater management of the basin, nor conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. Therefore, a **less-than-significant** impact would occur.

- ci-iii. The project site is currently composed primarily of impervious surfaces as part of the site's existing fueling station, car wash, and convenience store. The proposed project would result in a new fueling station, car wash, and convenience store, similar to the site's existing use. Therefore, the redeveloped site's drainage pattern would not change substantially relative to existing conditions, given the similarities between the existing and proposed uses. The project site includes existing on-site stormwater infrastructure that connects to the City's existing 30-inch storm drain line located in East Dunne Avenue, from which flows are conveyed westward to the existing channel in Butterfield Boulevard.

³¹ City of Morgan Hill. *Morgan Hill 2035 Final Environmental Impact Report* [pg. 4.9-18]. Certified July 2016.

³² Santa Clara Valley Water District. *2016 Groundwater Management Plan, Santa Clara and Llagas Subbasins* [pg. ES-1]. November 2016.

The proposed project would include bio-planters within newly landscaped areas of the project site for the purposes of preliminary treatment of stormwater runoff. Following filtration within the bio-planters, flows would be released to the City's storm drain system by way of new connections to the City's existing 30-inch storm drain line in East Dunne Avenue. The on-site storm drainage infrastructure would treat and retain 95 percent of the runoff from the project site and would also maintain peak runoff flows such that they do not exceed pre-project flows in accordance with the stormwater management requirements adopted by Resolution R3-2013-0032 issued by Central Coast RWQCB.

Based on the above, the proposed project would not significantly increase stormwater flows such that the capacity of the City's existing stormwater drainage system would be exceeded. The final drainage system design for the project would be subject to review and approval by the City of Morgan Hill Engineering Land Development Division, who would confirm that the proposed drainage system for the project is consistent with the City's Storm Drainage Master Plan and standard stormwater-related conditions of approval. Therefore, the proposed project would not substantially alter the existing drainage pattern of the site or area in a manner which would result in substantial erosion, siltation, or flooding on- or off-site, create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems, or provide substantial additional sources of polluted runoff. Thus, a **less-than-significant** impact would occur.

- civ. According to Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) number 06085C0444H, the project site is located entirely within Zone X, defined as an area that is located outside of the 100-year floodplain.³³ As such, the project site is not located within a FEMA-designated Special Flood Hazard Area (SFHA). Therefore, the proposed project would not impede or redirect flood flows or expose people or structures to a significant loss, injury, or death involving flooding, and a **less-than-significant** impact would occur.
- d. A seiche is defined as a wave generated by rapid displacement of water within a reservoir or lake, due to an earthquake that triggers land movement within the water body or land sliding into or beneath the water body. The project site is not located near a water body that is susceptible to seiche hazard. In addition, the distance to the nearest coastline does not subject the site to tsunami hazards.

The project site is within the dam failure inundation hazard zone for Anderson Reservoir as indicated by the dam failure inundation hazard maps.³⁴ The dams in Santa Clara County are managed by the SCVWD. The dams are inspected twice each year and are continuously monitored for seepage and settling and inspected immediately following significant earthquakes. A seismic stability evaluation performed in 2007 for Anderson Dam indicated that the downstream and upstream embankments could become unstable during a very large magnitude earthquake and the rupture of faults underlying the dam may have adverse impact on the outlet pipes and intake structure. The SCVWD has initiated a capital project, the Anderson Dam Seismic Retrofit Project (ADSRP), to

³³ Federal Emergency Management Agency. *National Flood Hazard Layer FIRMette*. Available at: <https://hazards-fema.maps.arcgis.com/apps/webappviewer/index.html?id=8b0adb51996444d4879338b5529aa9cd>. Accessed November 2022.

³⁴ Association of Bay Area Governments. *Dam Failure Inundation Hazard Map for Morgan Hill*. Available at: http://www.mhcert.com/prepare/dam_failure.shtml. Accessed November 2022.

complete the planning, design, and construction of the seismic retrofit of the dam. Construction work for the ADSRP is planned to start in 2021.³⁵

Until recently, in order to protect the public from potential effects until the ADSRP is complete, a storage restriction of approximately 45 feet below the dam crest has been put in place, with a reduced storage capacity of 61,810 acre-feet. The SCVWD and regulatory agencies (California Division of Safety of Dams and the Federal Energy Regulatory Commission) have approved the restriction and believe that the restriction would be sufficient to prevent the uncontrolled release of water in case of dam failure after a major earthquake. As of December 2020, Anderson Reservoir, the largest reservoir in Santa Clara County, has been completely drained under the direction of federal dam regulators.

Based on the above, the proposed project would not be exposed to substantial risks related to flooding as a result of the failure of a dam, tsunamis, or seiches. Therefore, a **less-than-significant** impact would occur.

XI. LAND USE AND PLANNING.

Would the project:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	✘	<input type="checkbox"/>
b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	✘	<input type="checkbox"/>

Discussion

- a. A project risks dividing an established community if the project would introduce infrastructure or alter land use so as to change the land use conditions in the surrounding community or isolate an existing land use. The project site is currently developed with an existing fueling station, car wash, and convenience store. The proposed project would result in a new fueling station, car wash, and convenience store, similar to the site’s existing use. Therefore, the redeveloped site’s land use would not change relative to existing conditions, given the similarities between the existing and proposed uses. Based on the above, the project would not physically divide an established community, and a **less-than-significant** impact would occur.

- b. The proposed project would be generally consistent with Morgan Hill Municipal Code standards and General Plan policies, as well as other applicable policies and regulations adopted for the purpose of avoiding or mitigating environmental effects. In addition, mitigation measures set forth in this IS would further ensure that potential impacts that could occur as a result of the proposed project are reduced to less-than-significant levels. For example, with implementation of Mitigation Measures IV-1 and IV-2, the project would be required to conduct preconstruction surveys to ensure potential impacts do not occur to nesting birds and raptors during project construction and to mitigate for the removal of on-site Ordinance Sized Trees and Street Trees. In addition, Mitigation Measure VIII-1 would require the proposed project to incorporate a minimum of two EV-capable parking spaces. Finally, as discussed in Section IX, Hazards and Hazardous Materials, of this IS, the proposed project would be required to apply to HMCD for a UST System Closure Permit. The UST System Closure Permit application would be required to detail how the project proposes to collect and sample on-site soils associated with the existing USTs and piping runs and, if necessary, remediate any contaminated soils. The collection and testing of on-site soils would be subject to applicable DTSC, USEPA, and OSHA standards, which would ensure potential impacts related to the release of hazardous materials into the environment are reduced to a less-than-significant level. In addition, a UST Permit to Operate would be required from the County of Santa Clara HMCD for the new UST’s.

Thus, the proposed project would be consistent with the General Plan and would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect, and a **less-than-significant** impact would occur.

XII. MINERAL RESOURCES.

Would the project:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	✘
b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	✘

Discussion

a,b. The City’s General Plan does not identify any regionally or locally important mineral resources within the City of Morgan Hill. The Santa Clara County General Plan does identify mineral resources of importance; however, the project site is not in proximity to the quarries currently in operation. Consequently, the proposed project would not result in the loss of a known mineral resource that would be of value to the region nor would the project result in the loss of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. Therefore, **no impact** to mineral resources would occur as a result of the proposed project.

XIII. NOISE.

Would the project result in:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Discussion

- a. The following section includes a discussion of noise standards and criteria applicable to various land uses, as well as potential traffic noise and non-transportation noise sources associated with the proposed project. The following terms are referenced in the sections below:
- Decibel (dB): A unit of sound energy intensity. An A-weighted decibel (dBA) is a decibel corrected for the variation in frequency response to the typical human ear at commonly encountered noise levels. All references to dB in this section will be A-weighted unless noted otherwise.
 - Day-Night Average Level (L_{dn}): The average sound level over a 24-hour day, with a +10 decibel weighing applied to noise occurring during nighttime (10:00 PM to 7:00 AM) hours.
 - Equivalent Sound Level (L_{eq}): The average sound level over a given time-period.
 - Maximum Sound Level (L_{max}): The maximum sound level over a given time-period.
 - Median Sound Level (L₅₀): The sound level exceeded 50 percent of the time over a given time-period.

Sensitive Receptors

Noise-sensitive land uses are generally defined as locations where people reside or where the presence of unwanted sound could adversely affect the primary intended use of the land. Places where people live, sleep, recreate, worship, and study are considered to be sensitive to noise because intrusive noise can be disruptive to such activities. Within the project vicinity, the nearest sensitive receptors are the townhomes located approximately 406 feet to the north of the project site, across East Dunne Avenue.

City Noise Standards and Criteria

Chapter 9, Safety, Service, and Infrastructure, of the City’s General Plan contains the following policies that would be applicable to the proposed project:

- SSI-8.1 Exterior Noise Level Standards. Require new development projects to be designed and constructed to meet acceptable exterior noise level standards (see Table SSI-1 [of the General Plan]), as follows:

- Apply a maximum exterior noise level of 60 dBA L_{dn} in residential areas where outdoor use is a major consideration (e.g., backyards in single-family housing developments and recreation areas in multi-family housing projects). Where the City determines that providing an L_{dn} of 60 dBA or lower cannot be achieved after the application of reasonable and feasible mitigation, an L_{dn} of 65 dBA may be permitted.
- Indoor noise levels should not exceed an L_{dn} of 45 dBA in new residential housing units.
- Noise levels in new residential development exposed to an exterior L_{dn} 60 dBA or greater should be limited to a maximum instantaneous noise level (e.g., trucks on busy streets, train warning whistles) in bedrooms of 50 dBA. Maximum instantaneous noise levels in all other habitable rooms should not exceed 55 dBA. The maximum outdoor noise level for new residences near the railroad shall be 70 dBA L_{dn} , recognizing that train noise is characterized by relatively few loud events.

SSI-8.2 Impact Evaluation. The impact of a proposed development project on existing land uses should be evaluated in terms of the potential for adverse community response based on significant increase in existing noise levels, regardless of compatibility guidelines.

SSI-8.5 Traffic Noise Level Standards. Consider noise level increases resulting from traffic associated with new projects significant if: a) the noise level increase is 5 dBA L_{dn} or greater, with a future noise level of less than 60 dBA L_{dn} , or b) the noise level increase is 3 dBA L_{dn} or greater, with a future noise level of 60 dBA L_{dn} or greater.

SSI-8.6 Stationary Noise Level Standards. Consider noise levels produced by stationary noise sources associated with new projects significant if they substantially exceed existing ambient noise levels.

SSI-8.7 Other Noise Sources. Consider noise levels produced by other noise sources (such as ballfields) significant if an acoustical study demonstrates they would substantially exceed ambient noise levels.

SSI-8.9 Site Planning and Design. Require attention to site planning and design techniques other than sound walls to reduce noise impacts, including: a) installing earth berms, b) increasing the distance between the noise source and the receiver, c) using non-sensitive structures such as parking lots, utility areas, and garages to shield noise-sensitive areas, d) orienting buildings to shield outdoor spaces from the noise source, and e) minimizing the noise at its source.

In addition to the policies listed above, Morgan Hill Municipal Code Section 18.76.090 (Noise) contains maximum noise levels for non-transportation noise sources. The City's quantitative exterior noise standards are reproduced below in Table 5. According to City staff, such standards are interpreted as being hourly average noise level standards (L_{eq}).

Table 5 Noise Level Performance Standards	
Receiving Land Use	Maximum Noise Level at Lot Line of Receiving Use
Industrial and Wholesale	70 dBA
Commercial	65 dBA
Residential or Public/Quasi Public	60 dBA
<p>Notes:</p> <ul style="list-style-type: none"> • The planning commission may allow an additional 5 dBA noise level at the lot line if the maximum noise level shown above cannot be achieved with reasonable and feasible mitigation. • Noise standards shown above do not apply to noise generated by vehicle traffic in the public right-of-way or from temporary construction, demolition, and vehicles that enter or leave the site of the noise-generating use (e.g., construction equipment, trains, trucks). <p>Source: City of Morgan Hill Municipal Code.</p>	

Furthermore, Morgan Hill Municipal Code Section 8.28.040.D limits construction activity noise as follows:

"Construction activities" are defined as including but not limited to excavation, grading, paving, demolition, construction, alteration or repair of any building, site, street or highway, delivery or removal of construction material to a site, or movement of construction materials on a site. Construction activities are prohibited other than between the hours of seven a.m. and eight p.m., Monday through Friday and between the hours of nine a.m. to six p.m. on Saturday. Construction activities may not occur on Sundays or federal holidays. No third person, including but not limited to landowners, construction company owners, contractors, subcontractors, or employers, shall permit or allow any person working on construction activities which are under their ownership, control or direction to violate this provision. Construction activities may occur in the following cases without violation of this provision:

- a. In the event of urgent necessity in the interests of the public health and safety, and then only with a permit from the Chief Building Official, which permit may be granted for a period of not to exceed three days or less while the emergency continues and which permit may be renewed for periods of three days or less while the emergency continues.
- b. If the Chief Building Official determines that the public health and safety will not be impaired by the construction activities between the hours of eight p.m. and seven a.m., and that loss or inconvenience would result to any party in interest, the Chief Building Official may grant permission for such work to be done between the hours of eight p.m. and seven a.m. upon an application being made at the time the permit for the work is issued or during the progress of the work.
- c. The City Council finds that construction by the resident of a single residence does not have the same magnitude or frequency of noise impacts as a larger construction project. Therefore, the resident of

a single residence may perform construction activities on that home during the hours in this subsection, as well as on Sundays and federal holidays from nine a.m. to six p.m., provided that such activities are limited to the improvement or maintenance undertaken by the resident on a personal basis.

- d. Public work projects are exempt from this section and the Public Works Director shall determine the hours of construction for public works projects.

Project Construction Noise

During project construction, heavy-duty equipment would be used for demolition, grading, excavation, paving, and building construction, which would result in temporary noise level increases while in operation. Noise levels would vary depending on the type of equipment used, how the equipment is operated, and how well the equipment is maintained. In addition, noise exposure at any single point outside the project site would vary depending on the proximity of construction activities to that point. Standard construction equipment, such as graders, backhoes, loaders, and haul trucks would be used on-site.

Table 6 shows maximum noise levels associated with typical construction equipment. Based on the table, activities involved in typical construction would generate maximum noise levels up to 85 dB at a distance of 50 feet. As one increases the distance between equipment, or increases separation of areas with simultaneous construction activity, dispersion and distance attenuation reduce the effects of combining separate noise sources. The noise levels from a source decrease due to spherical spreading loss at a rate of approximately 6.0 dB per every doubling of distance from the noise source.

Table 6 Construction Equipment Noise	
Type of Equipment	Maximum Level, dB at 50 feet
Backhoe	78
Compactor	83
Compressor (air)	78
Dozer	82
Dump Truck	76
Excavator	81
Generator	81
Pneumatic Tools	85
<i>Source: Federal Highway Administration, Roadway Construction Noise Model User's Guide, January 2006.</i>	

The nearest noise-sensitive receptor is located approximately 406 feet to the north of the project site. Thus, noise levels generated during project construction would be substantially less due to spherical spreading loss than those shown in Table 6 at the receptor. Additionally, the Morgan Hill Municipal Code does not specify any short-term noise level limits. Morgan Hill Municipal Code Chapter 8.28 prohibits construction activities between 8:00 PM and 7:00 AM, Monday through Friday, and between 6:00 PM and 9:00 AM on Saturdays. Construction activities may not occur on Sundays or federal holidays. Furthermore, construction activities related to the proposed project would include the use of sound-dampening equipment such as mufflers, air-inlet silencers, shrouds, shields, or other noise-reducing features where appropriate.

Enforcement of time restrictions specified in the Morgan Hill Noise Ordinance and the use of noise-dampened equipment would ensure that the temporary or periodic increase in ambient noise levels in the project vicinity during project construction are reduced to the maximum extent feasible, and a less-than-significant impact would occur.

Project Operational Noise

The primary noise source associated with operation of the proposed project would be traffic noise, as well as noise generated as part of the proposed car wash drying assembly and rooftop HVAC equipment.

Pursuant to General Plan Policy SSI-8.5, noise level increases resulting from traffic associated with new projects are considered significant if: a) the noise level increase is 5 dBA L_{dn} or greater, with a future noise level of less than 60 dB L_{dn} , or b) the noise level increase is 3 dB L_{dn} or greater, with a future noise level of 60 dB L_{dn} or greater. As previously discussed, the proposed project would result in a new fueling station, car wash, and convenience store, similar to the site's existing use. Therefore, ambient noise levels at the redeveloped project site would not change substantially relative to existing conditions, given the similarities between the existing and proposed uses. Furthermore, as discussed in Section XVII, Transportation, of this IS, the proposed project would result in a net reduction of daily vehicle trips relative to existing conditions, as the current fuel station, car wash, and convenience store generates 1,204 daily trips and the proposed project is anticipated to generate 903 daily trips. Therefore, traffic-related noise levels generated as part of project operation would not result in a substantial permanent increase in ambient noise levels in the project vicinity in excess of standards established in the Morgan Hill General Plan.

With respect to the proposed car wash drying assembly, as shown in Figure 3, the proposed car wash tunnel would be oriented parallel and to the south of East Dunne Avenue, with vehicles proceeding through the tunnel in a west-to-east direction. As such, noise generated by the proposed car wash drying assembly would be directed towards the East Dunne Avenue/U.S. 101 interchange to the east, and away from the nearest noise-sensitive receptors to the north. In addition, noise generated by the proposed car wash drying assembly would be temporary, occurring only during the final portion of car wash cycles. In comparison to the proposed car wash tunnel, the existing car wash tunnel is oriented in a south-to-north direction, with vehicles proceeding through the tunnel in a northern direction. Thus, the orientation of the existing tunnel directs noise generated as part of vehicle drying activities towards the townhomes located to the north of the project site. Given the differences in orientation between the existing and proposed car wash tunnels, noise levels associated with the proposed car wash drying assembly would not change substantially and could potentially decrease at the nearest sensitive receptors relative to existing conditions. Therefore, car wash-related noise levels generated as part of project operation would not result in a substantial permanent increase in ambient noise levels in the project vicinity in excess of standards established in the Morgan Hill General Plan.

Finally, rooftop HVAC equipment associated with project operation could contribute to long-term increases in ambient noise levels in the project vicinity; however, such equipment would be enclosed and shielded from direct public exposure. In addition, given the similarities between the existing and proposed uses, noise generated by rooftop HVAC equipment as part of the redeveloped site would not change substantially relative to existing conditions. Therefore, HVAC equipment-related noise levels generated as part of

project operation would not result in a substantial permanent increase in ambient noise levels in the project vicinity in excess of standards established in the Morgan Hill General Plan.

Conclusion

Based on the above, project construction and operation would not result in a substantial temporary or permanent increase in ambient noise levels in the project vicinity in excess of standards established in the Morgan Hill General Plan. Thus, a **less-than-significant** impact would occur.

- b. Similar to noise, vibration involves a source, a transmission path, and a receiver. However, noise is generally considered to be pressure waves transmitted through air, whereas vibration usually consists of the excitation of a structure or surface. As with noise, vibration consists of an amplitude and frequency. A person's perception to the vibration depends on their individual sensitivity to vibration, as well as the amplitude and frequency of the source and the response of the system which is vibrating.

Vibration is measured in terms of acceleration, velocity, or displacement. A common practice is to monitor vibration in terms of peak particle velocities (PPV) in inches per second (in/sec). Standards pertaining to perception as well as damage to structures have been developed for vibration levels defined in terms of PPV. Human and structural response to different vibration levels is influenced by a number of factors, including ground type, distance between source and receptor, duration, and the number of perceived vibration events. Table 7, which was developed by Caltrans, shows the vibration levels that would normally be required to result in damage to structures. As shown in the table, the threshold for architectural damage to structures is 0.20 in/sec PPV, and continuous vibrations of 0.10 in/sec PPV, or greater, would likely cause annoyance to sensitive receptors.

The proposed project would only cause elevated vibration levels during construction, as the proposed project would not involve any uses or operations that would generate substantial groundborne vibration. Although noise and vibration associated with the construction phase of the project would add to the noise environment in the immediate project vicinity, construction activities would be temporary in nature and are anticipated to occur during normal daytime working hours.

The primary vibration-generating activities associated with the proposed project would occur during grading, paving, placement of utilities, and construction of foundations. Table 8 shows the typical vibration levels produced by construction equipment at various distances. The most substantial source of groundborne vibrations associated with project construction would be the use of vibratory compactors. Use of vibratory compactors/rollers could potentially be required during development of the site's new paved surfaces.

During project construction, heavy equipment would be used for grading, excavation, paving, and building construction, which would generate localized vibration in the immediate vicinity of construction activities. The nearest structures to the project site are the commercial uses located approximately 43.6 feet to the east. Based on the vibration levels presented in Table 8, vibration levels generated from on-site project construction activities at the nearest structures would be below Caltrans' 0.20 in/sec PPV threshold for damage to structures. Furthermore, construction activities would not result in vibration

levels in excess of Caltrans' 0.10 in/sec PPV threshold for annoyance to the nearest sensitive receptors, located 406 feet to the north of the project site.

Table 7			
Effects of Vibration on People and Buildings			
PPV		Human Reaction	Effect on Buildings
mm/sec	in/sec		
0.15 to 0.30	0.006 to 0.019	Threshold of perception; possibility of intrusion	Vibrations unlikely to cause damage of any type
2.0	0.08	Vibrations readily perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
2.5	0.10	Level at which continuous vibrations begin to annoy people	Virtually no risk of "architectural" damage to normal buildings
5.0	0.20	Vibrations annoying to people in buildings (this agrees with the levels established for people standing on bridges and subjected to relative short periods of vibrations)	Threshold at which there is a risk of "architectural" damage to normal dwelling - houses with plastered walls and ceilings. Special types of finish such as lining of walls, flexible ceiling treatment, etc., would minimize "architectural" damage
10 to 15	0.4 to 0.6	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause "architectural" damage and possibly minor structural damage
Source: Caltrans. Transportation Related Earthborne Vibrations. TAV-02-01-R9601. February 20, 2002.			

Table 8		
Vibration Levels for Various Construction Equipment		
Type of Equipment	PPV at 25 feet (in/sec)	PPV at 50 feet (in/sec)
Large Bulldozer	0.089	0.029
Loaded Trucks	0.076	0.025
Small Bulldozer	0.003	0.000
Auger/drill Rigs	0.089	0.029
Jackhammer	0.035	0.011
Vibratory Hammer	0.070	0.023
Vibratory Compactor/roller	0.210	0.070
Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment Guidelines, May 2006.		

Based on the above, project operation would not include uses that would involve elevated vibration levels, and project construction would not generate excessive groundborne vibration or groundborne noise levels at the nearest existing sensitive receptors. Therefore, the project would result in a **less-than-significant** impact.

- c. The nearest airport to the project site is the San Martin Airport, which is located approximately 3.5 miles to the south of the project site. The project site is located well

outside of the AIA identified in the South County Airport Comprehensive Land Use Plan.³⁶ In addition, the project site is not located within the vicinity of a private airstrip. Therefore, the proposed project would not expose people residing or working in the project area to excessive noise levels associated with air traffic, and ***no impact*** would occur.

³⁶ Santa Clara County. *Comprehensive Land Use Plan, Santa Clara County, South County Airport*. Amended November 16, 2016.

XIV. POPULATION AND HOUSING.

Would the project:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (e.g., through projects in an undeveloped area or extension of major infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	✘
b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	✘

Discussion

- a. Given the nature of the proposed project, the project would not directly or indirectly induce substantial unplanned population growth in the project area, as fueling stations and convenience stores do not constitute major infrastructure. In addition, as previously discussed, the proposed project would be similar to the site’s existing use. Therefore, the City population would not change substantially relative to existing conditions, given the similarities between the existing and proposed uses.

Based on the above, the proposed project would not induce substantial unplanned population growth in the project area, either directly or indirectly, a **no impact** would occur.

- b. The project site does not contain existing residences. Therefore, the proposed project would not displace substantial numbers of existing people or housing and **no impact** would occur.

XV. PUBLIC SERVICES.

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	✘
b. Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	✘
c. Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	✘
d. Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	✘
e. Other Public Facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	✘

Discussion

a-e. The City of Morgan Hill contracts with the California Department of Forestry and Fire Protection (CAL FIRE) for fire protection services. Three CAL FIRE stations are located within the City boundaries: El Toro Station, located at 18300 Old Monterey Road; Dunne-Hill Station, located at 2100 East Dunne Avenue; and the CAL FIRE station at 15670 Monterey Road. The nearest fire station (Dunne-Hill Station) is located approximately 1.3 miles to the east of the site. Although the City has not adopted response time standards or goals related to fire suppression, CAL FIRE is held to a seven minute, 59 second response time standard, pursuant to the 911 Emergency Medical Services Provider Agreement between the City of Morgan Hill and the County of Santa Clara Emergency Medical Services Agency.³⁷ Based on the distance between the project site and the Dunne-Hill Station, the CAL FIRE response time standard could be met.

With respect to police protection services, the project site is located in close proximity to the Morgan Hill Police Department, which is located at 16200 Vineyard Boulevard, approximately 0.75-mile to the south of the site. The project site is located within the Morgan Hill Police Department’s normal patrol route.

In regard to school facilities, the Morgan Hill Unified School District (MHUSD) operates public education facilities that serve the project site and surrounding area. The MHUSD has 10 elementary schools, two middle schools, and three high schools serving more than 8,000 students within and in the vicinity of Morgan Hill.

The City’s Community Services Department oversees the provision and maintenance of parks and recreation amenities and services within the City limits. The Community Services Department operates the Centennial Recreation Center, Aquatic Center, Outdoor Sports Center, Community and Cultural Center, and a variety of recreation programs and activities year-round. In addition, the City maintains and operates various community parks, neighborhood parks, and mini parks throughout the City limits.

Finally, with regard to other public facilities, the City is served by the Santa Clara County Library District, which maintains a library branch in the City at 660 West Main Avenue, located 1.4 miles to the west of the project site.

³⁷ Dwight Good, Assistant Chief Cooperative Fire Protection, Morgan Hill Fire Department. Personal communication [phone] with Nick Pappani, Vice President, Raney Planning and Management, Inc. June 1, 2021.

As previously discussed, the proposed project would result in a new fueling station, car wash, and convenience store, similar to the site's existing use. As such, the level at which fire protection, law enforcement, educational, recreational, and other services are provided in the City of Morgan Hill would not change substantially as a result of the proposed project, relative to existing conditions. Furthermore, the proposed project would not directly or indirectly induce population growth in the City, as fueling stations, car washes, and convenience stores do not generate new residents, nor do they indirectly facilitate to a substantial degree the construction of new residences that could result in population growth.

Based on the above, the proposed project would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts. Thus, a ***less-than-significant*** impact would occur.

XVI. RECREATION.

Would the project:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Discussion

a,b. As discussed above, the City’s Community Services Department oversees the provision and maintenance of parks and recreation amenities and services within the City limits. The proposed project would not directly or indirectly induce population growth in the City, as fueling stations and convenience stores do not generate new residents, nor do they indirectly facilitate to a substantial degree the construction of new residences that could result in population growth. As such, use of the City’s parks and recreation amenities would not substantially increase as a result of the proposed project. Furthermore, the proposed project would be similar to the site’s existing use. As such, the level at which park facilities are used in the City of Morgan Hill would not change substantially as a result of the proposed project, given the similarities between the existing and proposed uses.

Based on the above, a **less-than-significant** impact would occur with regard to recreational resources.

XVII. TRANSPORTATION.

Would the project:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d. Result in inadequate emergency access?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Discussion

- a. This section discusses any potential conflict between the proposed project and any applicable programs, plans, ordinances, or policy addressing the circulation system. This includes all modes of transportation, including transit, roadway, bicycle, and pedestrian facilities.

The law has changed with respect to how transportation-related impacts may be addressed under CEQA. Traditionally, lead agencies used level of service (LOS) to assess the significance of such impacts. LOS represents a qualitative description of the traffic operations experienced by the driver at an intersection or along a roadway segment and ranges from LOS A, which represents the absence of congestion and little delay, to LOS F, which signifies excessive congestion and delays. Greater levels of congestion are considered to be more significant than lesser levels. Mitigation measures typically took the form of capacity-increasing improvements, which often had their own environmental impacts (e.g., to biological resources). Depending on circumstances, and an agency’s tolerance for congestion (e.g., as reflected in its general plan), LOS D, E, or F often represented significant environmental effects. In 2013, however, the State Legislature passed legislation with the intention of ultimately doing away with LOS in most instances as a basis for environmental analysis under CEQA. Enacted as part of SB 743 (2013), PRC Section 21099, subdivision (b)(1), directed the Governor’s Office of Planning and Research (OPR) to prepare, develop, and transmit to the Secretary of the Natural Resources Agency for certification and adoption proposed CEQA Guidelines addressing “criteria for determining the significance of transportation impacts of projects within transit priority areas. Those criteria shall promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses. In developing the criteria, [OPR] shall recommend potential metrics to measure transportation impacts that may include, but are not limited to, vehicle miles traveled, vehicle miles traveled per capita, automobile trip generation rates, or automobile trips generated. The office may also establish criteria for models used to analyze transportation impacts to ensure the models are accurate, reliable, and consistent with the intent of this section.”

Subdivision (b)(2) of Section 21099 further provides that “[u]pon certification of the guidelines by the Secretary of the Natural Resources Agency pursuant to this section, automobile delay, as described solely by level of service or similar measures of vehicular capacity or traffic congestion *shall not be considered a significant impact on the environment* pursuant to [CEQA], except in locations specifically identified in the guidelines, if any.” (Italics added.)

Pursuant to SB 743, the Natural Resources Agency promulgated CEQA Guidelines Section 15064.3 in late 2018, which became effective in early 2019. Subdivision (a) of that section provides that “[g]enerally, vehicle miles traveled is the most appropriate measure of transportation impacts. For the purposes of this section, ‘vehicle miles traveled’ refers to the amount and distance of automobile travel attributable to a project. Other relevant considerations may include the effects of the project on transit and non-motorized travel. Except as provided in subdivision (b)(2) below (regarding roadway capacity), a project’s effect on automobile delay shall not constitute a significant environmental impact.”³⁸

Please refer to Question ‘b’ for a discussion of VMT.

Transit, Bicycle, and Pedestrian Facilities

The following discussions are based on information from the Traffic Impact Analysis (TIA) prepared for the proposed project by TJKM, which evaluates the project’s potential impacts to the transportation network in the project vicinity (see Appendix C of this IS).³⁹

With respect to transit facilities, Santa Clara VTA operates local and express buses that connect the City of Morgan Hill with other portions of Santa Clara County. The nearest VTA bus stop is approximately 0.75-mile to the west of the project site, along Monterey Road. In addition, Caltrain provides regional transit services that connect the South Bay to the City of San Francisco. The Morgan Hill Caltrain Station is located approximately 0.75-mile to the west of the project site at 17300 Depot Street. Transit services are not available within the immediate project vicinity. Therefore, construction and operation of the proposed project would not interfere with Santa Clara VTA or Caltrain operations. In addition, as discussed previously, the proposed project would result in a new fueling station, car wash, and convenience store, similar to the site’s existing use. Therefore, transit operations in the project vicinity would not change substantially relative to existing conditions, given the similarities between the existing and proposed uses. Finally, given the nature of the proposed project, which is the servicing of vehicles (i.e., fuel station/car wash), customers of the proposed project are not expected to use public transit services. Thus, the proposed project would result in a less-than-significant impact to existing transit facilities.

With respect to bicycle facilities, Class II bike lanes are located along the eastbound and westbound lanes of East Dunne Avenue. Class II bike lanes are those that provide on-road striped lanes with signs and pavement markings and legends with restricted travel to motor vehicles and pedestrians. Through travel by motor vehicles or pedestrians is prohibited, but crossflows by pedestrians and motorists is permitted. While Class I bikeways are located in the greater project vicinity, along Butterfield Boulevard and to the east of U.S. 101, other bicycle facilities beyond the aforementioned Class II bike lanes are not within the immediate vicinity of the project site. As previously discussed, implementation of the proposed project would not result in any substantial modifications to the City’s existing roadway system. Access to the project site would be provided by the existing private driveway located parallel to the site’s southern boundary through the

³⁸ Subdivision (b)(2) of Section 15064.3 (“transportation projects”) provides that “[t]ransportation projects that reduce, or have no impact on, vehicle miles traveled should be presumed to cause a less than significant transportation impact. For roadway capacity projects, agencies have discretion to determine the appropriate measure of transportation impact consistent with CEQA and other applicable requirements. To the extent that such impacts have already been adequately addressed at a programmatic level, such as in a regional transportation plan EIR, a lead agency may tier from that analysis as provided in Section 15152.

³⁹ TJKM. *Traffic Impact Analysis, Proposed Commercial Development at 810 East Dunne Avenue*. June 9, 2021.

construction of two new entries into the site. In addition, the proposed project would result in a new fueling station, car wash, and convenience store, similar to the site's existing use. Therefore, maintenance and use of bicycle facilities in the project vicinity would not change substantially relative to existing conditions, given the similarities between the existing and proposed uses. Thus, the proposed project would result in a less-than-significant impact to existing bicycle facilities.

With respect to pedestrian facilities, East Dunne Avenue, Walnut Grove Drive, and Laurel Drive provide sidewalks on one or both sides of the roadway in the immediate project vicinity. East Dunne Avenue includes sidewalks on both sides of the road and ADA-compliant curb ramps at intersections and driveways. Walnut Grove Drive provides sidewalks on the eastern side of the street, but facilities are intermittent on the west side of the street. Additionally, ADA-compliant curb ramps, striped crosswalks, and pedestrian signal heads are provided at the East Dunne Avenue/Walnut Grove Drive intersection. A striped crosswalk is also provided on the north leg of the East Dunne Avenue/Laurel Road intersection. As previously discussed, implementation of the proposed project would not result in any substantial modifications to the City's existing roadway system. The existing sidewalks along the project site's northern and western boundaries would be maintained as part of the proposed project. Because the project would remove the existing driveway that currently provides access to the site from East Dunne Avenue, a new segment of sidewalk, curb, and gutter would be constructed along the site's northern boundary. Given the similarities between the existing and proposed uses, maintenance and use of pedestrian facilities in the project vicinity would not change substantially relative to existing conditions. Thus, the proposed project would result in a less-than-significant impact to existing pedestrian facilities.

Conclusion

Based on the above information, the proposed project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities, and a **less-than-significant** impact would occur.

- b. Section 15064.3 of the CEQA Guidelines provides specific considerations for evaluating a project's transportation impacts. Pursuant to CEQA Guidelines Section 15064.3, analysis of VMT attributable to a project is the most appropriate measure of transportation impacts. Other relevant considerations may include the effects of the project on transit and non-motorized travel. The City of Morgan Hill has not yet established standards or thresholds regarding VMT. As a result, the City has elected to use the thresholds recommended in the *Technical Advisory on Evaluating Transportation Impacts in CEQA* (OPR Guidance), published by the OPR in December 2018.⁴⁰ Consistent with OPR Guidance, projects that meet certain screening thresholds based on their location and project type may be presumed to result in a less-than-significant transportation impact.

OPR Guidance recommends that local-serving retail uses should be presumed to have a less-than-significant impact, absent substantial evidence to the contrary. By adding retail opportunities into the urban fabric and thereby improving retail destination proximity, local-serving retail development tends to shorten trips and reduce VMT. The proposed project, as designed, includes a fueling station, car wash, and convenience store, similar to the existing on-site uses. The project would be able to serve existing residents in the project

⁴⁰ Governor's Office of Planning and Research. *Technical Advisory on Evaluating Transportation Impacts in CEQA*. December 2018.

vicinity. Therefore, VMT associated with the redeveloped project site would not change substantially relative to existing conditions, given the similarities between the existing and proposed uses. In addition, it is reasonable to assume that the proposed project would not create additional trips to the local area as the convenience store, car wash, and fueling station would not be an ultimate destination, but rather would serve travelers already passing through the area. Thus, the proposed project meets the OPR Guidance screening criteria for local-serving retail uses. Furthermore, pursuant to the TIA prepared for the proposed project by TJKM, the proposed project would result in a net reduction of 301 vehicle trips, as the project is anticipated to generate 903 daily trips, while the existing fueling station, car wash, and convenience store generates 1,204 daily trips. The net reduction in daily trips is anticipated to result in a net reduction in project-generated VMT.

Based on the above, the proposed project would not conflict or be inconsistent with CEQA Guidelines Section 15064.3(b), and a **less-than-significant** impact would occur.

- c,d. The proposed project does not include changes to existing roadways or the introduction of an incompatible use or any design features that would be considered hazardous. Access to the project site would be provided by the existing private drive aisle located parallel to the site's southern boundary through the construction of two new driveways into the site. The driveways would consist of a 25-foot-wide driveway and a 35-foot-driveway, the former located more closely to the car wash queue entrance and the latter located more closely to the fueling canopy. The project site's entrances and exits would conform with applicable design standards and requirements contained in the Morgan Hill Municipal Code and the City's Design Standards and Standard Details for Construction, which would ensure that traffic entering and exiting the site would not pose hazards to traffic associated with the existing commercial uses to the east, south, and west of the project site. Furthermore, the proposed project's conformance with standards set forth in the City's Design Standards and Standard Details for Construction would be subject to approval by the City Engineer, prior to approval of the project's final improvement plans.

Based on the above information, the proposed project would not substantially increase hazards due to design features or incompatible uses, and emergency access to the site would be adequate. However, during construction of the proposed project, the possibility exists that construction activities could include disruptions to the transportation network near the project site. Such disruptions would include the possibility of temporary lane closures, street closures, sidewalk closures, and bikeway closures. In addition, heavy-truck traffic would temporarily increase due to delivery of construction materials. The above-noted factors could disrupt vehicle, bicycle and transit access and increase safety conflicts, resulting in a **potentially significant** impact.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

XVII-1 Prior to any construction activities at the project site, the project applicant shall prepare a detailed Construction Traffic Control Plan and submit it for review and approval to the City of Morgan Hill Engineering Land Development Division. At a minimum, the plan shall include:

- *The number of truck trips, time, and day of street closures;*
- *Time of day of arrival and departure of trucks;*

- *Limitations on the size and type of trucks, provision of a staging area with a limitation on the number of trucks that can be waiting;*
- *Provision of a truck circulation pattern;*
- *Provision of driveway access plan so that safe vehicular, pedestrian, and bicycle movements are maintained (e.g., steel plates, minimum distances of open trenches, and private vehicle pick up and drop off areas);*
- *Safe and efficient access routes for emergency vehicles;*
- *Manual traffic control, when necessary;*
- *Proper advance warning and posted signage concerning street closures; and*
- *Provisions for pedestrian safety.*

A copy of the Construction Traffic Control Plan shall be submitted to local emergency response agencies, and the agencies shall be notified at least 14 days prior to the commencement of construction that would partially or fully obstruct roadways.

XVIII. TRIBAL CULTURAL RESOURCES.

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k).	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Discussion

a,b. As discussed in Section V, Cultural Resources, of this IS, the existing on-site structures are not listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in PRC Section 5020.1(k), and the site does not contain known resources that could be considered historic pursuant to the criteria set forth in subdivision (c) of PRC Section 5024.1.

To further ascertain the extent to which potential impacts could occur to tribal cultural resources within and/or immediately adjacent to the project site as a result of the proposed project, a review of the NAHC Sacred Lands File was conducted. The review returned negative results, indicating that known tribal cultural resources are not present within the site. However, pursuant to the results of the CHRIS query completed for the proposed project, the project site is located in the Santa Clara Valley in the eastern portion of the City limits, in alluvial valley lands approximately 0.75-mile east of the nearest watercourse. Native American resources in the aforementioned area have been found along the general margin of the bay and its associated wetlands, near sources of water (including perennial and intermittent springs and streams), and near the interface between low-lying terrain and higher elevation foothills. As such, the CHRIS review determined that the project site has low potential for containing unrecorded Native American resources.

As discussed in Section V, Cultural Resources, of this IS, the proposed project would be required to implement the City’s standard Conditions of Approval related to the protection of historical and archaeological resources would be implemented, consistent with Morgan Hill Municipal Code Section 18.60.090. As part of compliance with the Conditions of Approval, a Tamien Nation Tribal Monitor would be present on-site to monitor all ground-disturbing activities during project construction. In the event that archaeological resources are discovered during the course of construction activities, including tribal cultural resources and suspected Native American remains, the project would be required to comply with further measures to ensure that potential impacts are avoided.

Based on the above, the proposed project is not expected to adversely impact tribal cultural resources. In addition, the project applicant would be required to comply with the City’s standard conditions of approval related to cultural resource discovery, as discussed

in Section V, Cultural Resources, of this IS. Therefore, a **less-than-significant** impact to tribal cultural resources would occur.

XIX. UTILITIES AND SERVICE SYSTEMS.

Would the project:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Discussion

a-c. Brief discussions of the water, wastewater, stormwater drainage, electrical, natural gas, and telecommunications facilities that would serve the proposed project are included below.

Water

The City of Morgan Hill provides potable water service to residential, commercial, industrial, and institutional customers within the City limits. The City's water system facilities include 14 groundwater wells, 10 potable water storage tanks, 10 booster stations, and over 160 miles of pressured pipes ranging from two to 14 inches in diameter. The City's water distribution system meets the needs of existing customers. The City has planned and constructed water projects in conjunction with new street construction in anticipation of future growth and water needs. The proposed project would include new water connections from the proposed convenience store and car wash to the existing eight-inch water main in East Dunne Avenue and the existing 10-inch water main in Walnut Grove Drive.

The City of Morgan Hill 2020 Urban Water Management Plan (UWMP) includes a water service reliability assessment that evaluates the ability for the City's projected water supply to meet projected demand in normal, single dry, and multiple dry years, in accordance with buildout of adopted land use designations set forth by the Morgan Hill General Plan.⁴¹ As shown in Tables 7-2, 7-3, and 7-4 of the UWMP, the City is projected to have sufficient water supply available to meet the demand under all scenarios through 2045. Considering that the proposed project is consistent with the project site's Commercial designation,

⁴¹ City of Morgan Hill. 2020 Urban Water Management Plan [pgs. 7-4 and 7-7]. October 2021.

development of the site with the proposed uses was generally considered as part of the UWMP's water service reliability assessment. As such, the proposed project would not result in potential water supply impacts beyond those identified in the UWMP and the City would have sufficient water supply to serve the demand for potable water service generated by the project. In addition, it is noted that the car wash would use recycled car wash water as part of project operation, which would help reduce water demand associated with the proposed project.

Furthermore, the proposed project would be subject to the City's Development Impact Mitigation Fee, in accordance with Morgan Hill Municipal Code Section 3.56.030. The revenues generated through payment of the fee are used by the City to pay for needed upgrades and/or expansions to City facilities, including water facilities. Therefore, payment of the City's Development Impact Mitigation Fee would further serve to reduce the proposed project's potential impacts on the domestic water system.

Finally, as previously discussed, the proposed project would result in a new fueling station, car wash, and convenience store, similar to the site's existing use. Therefore, water consumption associated with the redeveloped project site would not change substantially relative to existing conditions, given the similarities between the existing and proposed uses.

Based on the above, the proposed project would not require or result in the construction of new water treatment facilities or expansion of existing facilities, and sufficient water supplies would be available to serve the project from existing entitlements and resources. Thus, a less-than-significant impact would occur.

Wastewater

The City of Morgan Hill sewer collection system consists of approximately 157.9 miles of gravity sewers, 3,284 manholes, 2.92 miles of force mains, and 14 lift stations. The Morgan Hill-Gilroy Joint Sewer Trunk conveys flows toward the South County Regional Wastewater Authority (SCRWA) Wastewater Treatment Plant (WWTP), located southeast of Gilroy. The SCRWA WWTP is permitted to treat up to 8.5 million gallons per day (mgd) of wastewater. The City of Morgan Hill has an allocation of 3.56 mgd from the WWTP. In 2015, the average dry weather flow from the City of Morgan Hill was approximately 2.7 mgd.

The proposed project would include new sewer connections from the proposed convenience store and car wash to the existing 12-inch sewer line in East Dunne Avenue. Wastewater generated by the project would consist of sewage from convenience store restrooms and the proposed car wash. As previously discussed, the proposed project would result in a new fueling station, car wash, and convenience store, similar to the site's existing use. Therefore, wastewater generation associated with the redeveloped project site would not change substantially relative to existing conditions, given the similarities between the existing and proposed uses. As such, considering the WWTP receives approximately 2.7 mgd of wastewater from Morgan Hill and has an allocated capacity to treat up to 3.56 mgd, the WWTP has adequate capacity to accommodate the wastewater generated by the proposed project. Therefore, the proposed project would not generate wastewater flows beyond the allocated capacity of existing wastewater treatment facilities or planned future improvements to such facilities.

In addition, the proposed project would be subject to the City's Development Impact Mitigation Fee, in accordance with Morgan Hill Municipal Code Section 3.56.030. The revenues generated through payment of the fee are used by the City to pay for needed upgrades and/or expansions to City facilities, including sewer facilities. Therefore, payment of the City's Development Impact Mitigation Fee would further serve to reduce the proposed project's potential impacts on the wastewater conveyance and treatment facilities that serve the City.

Based on the above, the proposed project would not require or result in the construction of new wastewater treatment facilities or expansion of existing facilities, and adequate capacity to serve the project's projected wastewater demand in addition to the WWTP's existing commitments would be available. Thus, a less-than-significant impact would occur.

Stormwater

Issues related to stormwater infrastructure are discussed in Section X, Hydrology and Water Quality, of this IS. As noted therein, the proposed project would not significantly increase stormwater flows into the City's existing system. The final drainage system design for the project would be subject to review and approval by the City of Morgan Hill City Engineer to confirm that the proposed drainage system for the project is consistent with the City's Storm Drainage Master Plan and standard stormwater-related conditions of approval. Therefore, the proposed project would not require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects, and a less-than-significant impact would occur.

Electricity, Natural Gas, and Telecommunications

The City prohibits the use of natural gas for new construction. Electricity would be provided by PG&E by way of existing electrical infrastructure in the project vicinity. Internet and telephone services would be provided by Frontier Communications, AT&T, Charter Communications, or a similar service provider operating within the City. The project would not require major upgrades to, or extension of, existing infrastructure. Thus, impacts to electricity, natural gas, and telecommunications infrastructure would be less than significant.

Conclusion

Based on the above information, the proposed project would not require or result in the relocation or construction of new or expanded utility facilities, the construction or relocation of which could cause significant environmental effects. Additionally, the City would have sufficient water supplies to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years and adequate capacity to serve the project's projected wastewater services demand in addition to the City's existing commitments. Therefore, the project would result in a **less-than-significant** impact.

- d,e. Recology South Valley provides solid waste and recycling services to the businesses and residents of the cities of Morgan Hill and Gilroy. Recology South Valley has contracted with the Monterey Regional Waste Management District to provide solid waste disposal services at the Monterey Peninsula Landfill and Materials Recovery Facility for the waste

collected by Recology.⁴² Pursuant to the Landfill's current Solid Waste Facility Permit, the Landfill has a maximum permitted tonnage limit of 3,500 tons per day and a design capacity of 49,700,000 cubic yards.⁴³

As previously discussed, the proposed project would result in a new fueling station, car wash, and convenience store, similar to the site's existing use. Therefore, waste generation associated with the redeveloped project site would not change substantially relative to existing conditions, given the similarities between the existing and proposed uses. Therefore, the proposed project would not produce enough solid waste for the landfill to exceed capacity, and sufficient permitted capacity exists at the Monterey Peninsula Landfill to accommodate the proposed project's incremental increase in solid waste disposal needs.

In addition, during project construction, the proposed project would be required to submit a Waste Management Plan to the City detailing on-site sorting of construction debris, as required by CBSC Section 4.408. Implementation of the Waste Management Plan would ensure that the proposed project meets established diversion requirements for reused or recycled construction waste.

Based on the above, the proposed project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. The project would comply with federal, State, and local management and reduction statutes and regulations related to solid waste. Therefore, the project would result in a **less-than-significant** impact.

⁴² Andi Borowski, Environmental Services Assistant, Morgan Hill Environmental Services Department. Personal communication [email] with Jesse Fahrney, Associate, Raney Planning and Management, Inc. July 26, 2022.

⁴³ California Department of Resources Recycling and Recovery (CalRecycle). *Facility/Site Summary Details: Monterey Peninsula Landfill (27-AA-0010)*. Available at: <https://www2.calrecycle.ca.gov/SolidWaste/SiteActivity/Details/2642?siteID=1976>. Accessed October 2022.

XX. WILDFIRE.

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Substantially impair an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	✘	<input type="checkbox"/>
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	✘	<input type="checkbox"/>
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	✘	<input type="checkbox"/>
d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	<input type="checkbox"/>	<input type="checkbox"/>	✘	<input type="checkbox"/>

Discussion

a-d. As discussed in Section IX, Hazards and Hazardous Materials, of this IS, the City’s Wildland Urban Interface map indicates that the project site is not located in a State Responsibility Area nor a High or Very High FHSZ.⁴⁴ The project would be required to comply with all applicable requirements of the California Fire Code, as adopted by Morgan Hill Municipal Code Chapter 15.44. In addition, the proposed project would be required to comply with all applicable provisions of the California Health and Safety Code and Title 23 of the CCR, as well as applicable regulations set forth by the HMCDC, including the preparation of a HMBP and obtaining a permit for the proposed USTs.

The proposed project would not conflict with the City’s Emergency Operations Plan.⁴⁵ As previously discussed, implementation of the proposed project would not result in any substantial modifications to the City’s existing roadway system. The project site is not located on a substantial slope, and the project area does not include any existing features that would substantially increase fire risk for future workers or customers. Given that the project site is located within a developed urban area and is situated adjacent to existing roads, water lines, and other utilities, the project would not result in substantial fire risks related to installation or maintenance of such infrastructure. Lastly, as discussed in Section VII, Geology and Soils, and Section X, Hydrology and Water Quality, of this IS, development of the proposed project would not expose people or structures to significant risks related to flooding or landslides.

Based on the above, the proposed project would not expose people or structures to the risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands, and a **less-than-significant** impact would occur.

⁴⁴ City of Morgan Hill. *City of Morgan Hill Wildland Urban Interface Map*. March 2009.

⁴⁵ City of Morgan Hill. *Emergency Operations Plan*. January 11, 2018.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE.

	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Discussion

- a. As discussed in Section IV, Biological Resources, of this IS, the proposed project would have the potential to adversely impact the environment by reducing available habitat for nesting and migratory birds and raptors protected under the MBTA and CFGC Section 3503.5. However, Mitigation Measures IV-1 would ensure that impacts to special-status species would be less than significant by requiring preconstruction surveys if construction is proposed during the breeding season and additional requirements if active nests are identified. The project site has been previously disturbed, and does not contain any known historic or prehistoric resources. Thus, implementation of the proposed project is not anticipated to have the potential to result in impacts related to historic or prehistoric resources. Nonetheless, in the event that such resources are unearthed, the City's standard Conditions of Approval related to the protection of historical and archaeological resources would be implemented, consistent with Morgan Hill Municipal Code Section 18.60.090. The proposed project would implement and comply with applicable General Plan policies and Municipal Code standards, as discussed throughout this IS. With implementation of the mitigation measures required by this IS, compliance with General Plan policies, Municipal Code standards, and application of standard BMPs during construction, development of the proposed project would not result in any of the following: 1) degrade the quality of the environment; 2) substantially reduce or impact the habitat of fish or wildlife species; 3) cause fish or wildlife populations to drop below self-sustaining levels; 4) threaten to eliminate a plant or animal community; 5) reduce the number or restrict the range of a rare or endangered plant or animal; or 6) eliminate important examples of the major periods of California history or prehistory. Therefore, a **less-than-significant** impact would occur.
- b. The proposed project, in conjunction with other development within the City of Morgan Hill, could incrementally contribute to cumulative impacts in the area. However, as demonstrated in this IS, all potential environmental impacts that could occur as a result of project implementation would be reduced to a less-than-significant level with implementation of project-specific mitigation measures and compliance with applicable

General Plan policies, Morgan Hill Municipal Code standards, and other applicable local and State regulations. Therefore, when viewed in conjunction with other closely related past, present, or reasonably foreseeable future projects, development of the proposed project would not contribute to cumulative impacts in the City of Morgan Hill, and the project's contribution to the cumulative impact would be **less than significant**.

- c. The proposed project site would be developed in an urbanized and developed area of the City of Morgan Hill. Development of the proposed project would not be expected to result in substantial adverse impacts to human beings, either directly or indirectly. The potential for substantial environmental effects on human beings is addressed within this IS and all impacts have been identified as less-than-significant or less than significant with the incorporation of mitigation measures. As such, a **less-than-significant** impact would result.

Appendix A

Air Quality and Greenhouse Gas Modeling Results

810 E. Dunne Avenue Project - Bay Area AQMD Air District, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Parking Lot	22.00	Space	0.20	8,800.00	0
Convenience Market with Gas Pumps	8.00	Pump	0.87	10,458.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	64
Climate Zone	4			Operational Year	2024
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MWhr)	203.98	CH4 Intensity (lb/MWhr)	0.033	N2O Intensity (lb/MWhr)	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Retail square footage based on site plan. Lot acreage updated to represent total acreage of the project site.

Construction Phase - Architectural coating assumed to start two weeks after building construction, and last for the same duration.

Demolition - Based on estimate of existing on-site building square footage.

Water Mitigation - Compliant with MWELO.

Grading - Based on information provided by project applicant regarding excavation of on-site USTs.

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Retail square footage based on site plan. Lot acreage updated to represent total acreage of the project site.

Construction Phase - Architectural coating assumed to start two weeks after building construction, and last for the same duration.

Demolition - Based on estimate of existing on-site building square footage.

Water Mitigation - Compliant with MWELO.

Grading - Based on information provided by project applicant regarding excavation of on-site USTs.

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Retail square footage based on site plan. Lot acreage updated to represent total acreage of the project site.

Construction Phase - Architectural coating assumed to start two weeks after building construction, and last for the same duration.

Demolition - Based on estimate of existing on-site building square footage.

Water Mitigation - Compliant with MWELO.

Grading - Based on information provided by project applicant regarding excavation of on-site USTs.

Subject: PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT
SHELL GAS STATION
800 AND 810 EAST DUNNE AVENUE
MORGAN HILL, CALIFORNIA

Mr. Pappani:

In accordance with Raney Planning and Management, Inc.'s (Raney; the Client) *Sub-Consultant Agreement* executed on August 15, 2022, Geocon Consultants, Inc. has performed a Phase I Environmental Site Assessment (ESA) of the property and improvements at 800 and 810 East Dunne Avenue in Morgan Hill, California. We performed the Phase I ESA for Raney to assess the Site for the potential presence of recognized environmental conditions as defined by the American Society for Testing and Materials *Designation E 1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* so that Raney can summarize the Phase I ESA findings in a California Environmental Quality Act Negative Declaration for the planned redevelopment of the Site. The enclosed report describes the Phase I ESA and presents our findings, conclusions, and recommendations.

We appreciate the opportunity to have performed this Phase I ESA for Raney. Please contact us if you have any questions concerning the report and our findings or if we may be of further service.

Sincerely,

GEOCON CONSULTANTS, INC.

Austin Perry, GIT
Staff Geologist

Jim Brake, PG
Senior Geologist

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

1.0 INTRODUCTION

Geocon Consultants, Inc. (Geocon) has performed a Phase I Environmental Site Assessment (ESA) of the property and improvements at 800 and 810 East Dunne Avenue (the Site) in Morgan Hill, California. We performed the Phase I ESA for Raney Planning and Management, Inc. (Raney, the Client) to assess the Site for the potential presence of recognized environmental conditions (REC), as defined by the American Society for Testing and Materials (ASTM) Designation E 1527-21 – *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. Raney will include our Phase I ESA findings in California Environmental Quality Act (CEQA) Negative Declaration that they are preparing for the City of Morgan Hill (the City) for redevelopment of the Site.

This report presents our findings, conclusions, and recommendations and is organized as follows:

- Section 1.0 provides a description of the purpose and objectives of the Phase I ESA, defines conditions and/or features that constitute an REC, other qualified RECs, and potential environmental concerns, and describes the Phase I ESA services, limitations, and any identified data gaps;
- Section 2.0 describes the Site’s physical setting and conditions and that of the surrounding area;
- Section 3.0 summarizes information regarding the Site provided by Raney as the “user” of the Phase I ESA;
- Section 4.0 summarizes readily available records for the Site and surrounding properties that we obtained from regulatory and administrative agencies and other sources;
- Section 5.0 describes the historical use of the Site and surrounding area ascertained from historical records and information sources;
- Section 6.0 describes our observations of the Site and surrounding properties and facilities from our site and vicinity reconnaissance;
- Section 7.0 summarizes information obtained from interviews of persons (owner, occupants, tenants, neighbors, etc.) familiar with the Site;
- Section 8.0 presents our Phase I ESA findings, our conclusions regarding the environmental conditions of the Site including any RECs, other qualified RECs, or potential environmental concerns, and our recommendations for further environmental assessment, if any;
- Section 9.0 lists the references for information sources used during this Phase I ESA; and
- Section 10.0 provides a qualifications statement from the environmental professional responsible for the Phase I ESA and report.

1.1 Purpose and Definitions

The purpose of the Phase I ESA was to identify evidence or indications of RECs, or other qualified RECs, at the Site as defined by ASTM Designation E 1527-21 and/or any potential environmental concerns. Section 1.1.1 of ASTM *Designation E 1527-21* defines an REC as “(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the

environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition.” De minimis conditions are those that generally do not present a threat to human health or the environment and that generally would not be the subject of the enforcement action if brought to the attention of appropriate governmental agencies.

ASTM *Designation E1527-21* also defines ‘Historical’ and ‘Controlled’ RECs (HREC and CREC, respectively). An ‘Historical REC’ is defined as “a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).” A ‘Controlled REC’ is defined as “recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).” An HREC is not an REC if a property meets current standards for unrestricted residential use. A CREC remains an REC by definition when a property does not meet the unrestricted residential use requirement unconditionally.

We define a “potential environmental concern” as a past use of the Site or adjoining or adjacent property that may have involved the use, storage, and/or release of hazardous substances or petroleum products that could have impacted the Site, but for which there are no records or other information to confirm that use, storage, or release. An example would be the possible application of pesticides to an agricultural field (i.e., irrigated row crop or orchard), but for which there are no records of such application or confirmation from a knowledgeable person (i.e., site owner/occupant/operator) that pesticides were used at the Site.

We also conducted the Phase I ESA in general accordance with the requirements of 42 United States Code (USC) § 9601(35)(B) and 40 Code of Federal Regulations (CFR) Part 312 titled *Standards and Practices for All Appropriate Inquiries*, as required under Sections 101(35)(B)(ii) and (iii) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The purpose of conducting an all appropriate inquiries investigation into the previous ownership and uses of a property is to meet the provisions necessary for the landowner, contiguous property owner, and/or bona fide prospective purchaser to qualify for certain landowner liability protections under CERCLA.

1.2 Phase I ESA Principles

The following principles are an integral part of ASTM *Designation E1527-21*:

- **“Uncertainty Not Eliminated** - No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a subject property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a subject property, and this practice recognizes reasonable limits of time and cost.”
- **“Not Exhaustive** - All Appropriate Inquiries does not mean an exhaustive assessment of a property. There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an environmental site assessment and the reduction of uncertainty about unknown conditions resulting from additional information.”
- **“Level of Inquiry is Variable** - Not every property will warrant the same level of assessment. Consistent with good commercial and customary standards and practices as defined at 42 U.S.C. § 9601(35)(B), the appropriate level of environmental site assessment will be guided by the type of property subject to assessment, the expertise and risk tolerance of the user, future intended uses of the subject property disclosed to the environmental professional, and the information developed in the course of the inquiry.”
- **“Comparison with Subsequent Inquiry** - It should not be concluded or assumed that an inquiry was not all appropriate inquiries merely because the inquiry did not identify recognized environmental conditions in connection with a subject property. Environmental site assessments must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent environmental site assessments should not be considered valid standards to judge the appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors.”
- **“Point in Time** - The environmental site assessment is based upon conditions at the time of completion of the individual environmental site assessment elements.” [The following table lists the Phase I ESA elements and the date they were completed:](#)

Phase I ESA Element	Report Section	Completion Date
Physical Setting Resources	2.0	October 14, 2022
User’s Responsibilities	3.0	October 14, 2022
Government Records	4.0	October 14, 2022
Historical Records	5.0	October 14, 2022
Site Reconnaissance	6.0	September 29, 2022
Owner/Operator/Occupant Interviews	7.0	September 29, 2022
Local Government Official Interviews	4.0	October 14, 2022
Evaluation and Report	8.0	October 14, 2022

Therefore, the information contained herein is valid as of September 29, 2022, and will require an update after approximately 180 days to reflect updated records and another site reconnaissance to assess current site conditions.

1.3 Scope of Services

Geocon Proposal No. LS-22-93 dated March 15, 2022 describes the services for this Phase I ESA. We performed the services as outlined in the proposal with the exception that we did not review Sanborn Fire Insurance Maps (Sanborn maps) as Environmental Data Resources, Inc. (EDR) indicated that Sanborn map coverage does not exist for the Site and vicinity.

The main components of the Phase I ESA and their objectives, as specified by the referenced standards, include the following:

- **Physical Setting:** We reviewed various references to obtain information concerning the topographic, geologic, and hydrogeologic characteristics of the Site and vicinity. Such information may be indicative of the direction and/or extent that a contaminant could be transported in the event of a spill or release on or near the Site.
- **Records Review:** We reviewed publicly available federal, state, and local regulatory agency records to obtain information that could potentially help identify RECs at or potentially affecting the Site.
- **Site History:** We reviewed historical information sources to assess previous uses of the Site and surrounding area and identify those that could have led to RECs on the Site. Those information sources included historical aerial photographs and topographic maps, and city directories. In addition, we conducted interviews with persons who were expected to be reasonably knowledgeable about historical and/or current uses and conditions at of the Site.
- **Site Reconnaissance:** We performed a site reconnaissance to observe site uses and conditions for evidence or indications of RECs. We viewed adjoining and adjacent offsite properties and features solely from the vantage of the Site and public thoroughfares.

1.4 Report Limitations

We prepared this Phase I ESA report exclusively for Raney. The information obtained is only relevant for the latest of the dates of the records reviewed, the latest site visit, and completion of interviews with governmental officials and/or site owner(s), occupant(s), and/or operator(s) as cited in Section 1.1.

Raney should recognize that a Phase I ESA is not a comprehensive site characterization and should not be construed as such. The findings and conclusions presented in this report are predicated on the site reconnaissance, information in the specified regulatory records, and information regarding the historical usage of the Site, as presented in this report. Raney should also understand that we did not assess the Site for wetlands or perform testing (sample collection and testing) for asbestos-containing building materials, lead-containing paint, lead in drinking water, radon, mercury related to mining, methane, mold, per- and polyfluoroalkyl substances, or potential naturally occurring hazards such as asbestos and arsenic as part of this Phase I ESA.

Therefore, this report should only be deemed conclusive with respect to the information obtained. No guarantee or warranty of the results of the Phase I ESA is implied within the intent of this report or any subsequent reports, correspondence or consultation, either express or implied. We strived to conduct the services summarized herein in accordance with the local standard of care in the geographic region at the time the services were rendered.

1.5 Data Gaps and Significant Data Gaps

A data gap is defined by *ASTM Designation E 1527-21* as “a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information.” Data gaps could include such things as insufficient historical information, the inability to interview persons with direct site knowledge (e.g., the owner(s), past owner(s), tenants, workers, etc.) or the lack of access to all parts of a site during the site reconnaissance.

A significant data gap is defined by *ASTM Designation E 1527-21* as “a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.” These data gaps are only significant if “other information and/or professional experience raises reasonable concerns involving the effects of that data gap on the ability of the environmental professional to render an opinion regarding whether conditions exist that are indicative of recognized environmental conditions or controlled recognized environmental conditions.”

We identified one data gap and no significant data gaps during this Phase I ESA. As described in Section 1.2, we did not review Sanborn maps for the Site as EDR indicated that Sanborn map coverage does not exist for the Site and vicinity. However, we were able to review other sufficient historical information and therefore do not consider the lack of Sanborn map coverage a data gap. We also did not receive a user questionnaire. However, we were able to review other sufficient historical information and therefore do not consider the lack of a user questionnaire a data gap.

2.0 SITE DESCRIPTION

This section describes the location and physical characteristics of the Site including its size, topography, geologic, soil, and hydro- and hydrogeologic conditions of the Site.

2.1 Location and Legal Description

The Site is located at 800 and 810 East Dunne Avenue in Morgan Hill, California (Figure 1). The Site is situated on the southern side of East Dunne Avenue approximately 0.2 miles west of U.S. Route 101.

Within the Public Land Survey System of California, the Site is in the northwestern quarter of Section 28 of Township 9 South, Range 3 East, Mount Diablo Base and Meridian.

The Site is identified by Santa Clara County assessor's parcel numbers 817-11-043 and 817-11-077. A parcel map depicting the Site is in Appendix A.

2.2 Site and Vicinity General Characteristics

The approximate one-acre Site is developed for commercial use with a retail gas station, convenience store, and car wash. The Site is situated in an area of retail commercial development along East Dunne Avenue just west of the East Dunne Avenue interchange on U.S. Route 101. Residential development is present beyond the commercial zone to the north and south and further west along East Dunne Avenue.

2.2.1 Topography

The United States Geological Survey (USGS) *Morgan Hill, California* 7.5-minute topographic maps shows the topography of the Site as flat at an elevation of approximately 400 feet in the Coyote Valley, which is the southernmost portion of the Santa Clara Valley (USGS, 2022). The Coyote Valley is situated between the Diablo Range to the east and Santa Cruz Mountains to the west.

2.2.2 Geologic Conditions

We obtained site geologic information from a variety of sources including:

- *California Geology* (Harden, 2003);
- *Note 36, California Geomorphic Provinces* (California Geological Survey [CGS], 2002); and
- *Geologic Map of the Morgan Hill Quadrangle, Santa Clara County, California* (Diblee and Minch, 1981).

Following are summaries of pertinent information obtained.

2.2.2.1 Geomorphic Region

The Site is located in the central portion of the Coast Ranges geomorphic province. The central Coast Ranges is that portion extending from San Francisco Bay in the north to the Transverse Ranges in the south and are bounded to the east by the Great Valley geomorphic province and to the west by the Pacific Ocean. The Coast Ranges are characterized by northwest to southeast-trending mountain ranges and valleys composed of thick Mesozoic and Cenozoic sedimentary strata (CGS, 2002; Harden, 2003).

2.2.2.2 Geologic Formations/Stratigraphy

The referenced geologic map indicates that the Site is underlain by alluvial gravels, sand, and clay. (Diblee and Minch, 1981). Greater detail regarding geologic conditions beneath the Site itself is provided by KHM Environmental Management's *Site Assessment Report, Shell Service Station*, dated December 3, 2002, which is available on the California State Water Resources Control Board's GeoTracker online environmental data management system. This report includes logs of borings

drilled on the Site in 2002 for installation of groundwater monitoring wells. The logs indicate that the borings encountered dark yellowish-brown clayey sands with gravel and occasional cobbles from the surface to a depth of 60 feet.

2.2.3 Soil Conditions

The United States Department of Agriculture – Natural Resources Conservation Service *Web Soil Survey* (<http://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx>) indicates that surficial soil on the Site is classified as Arbuckle gravelly loam, which formed in alluvium derived from sedimentary rock.

2.2.4 Hydrologic and Hydrogeologic Conditions

Morgan Hill's location in the Coyote Valley is on a very low-lying topographic divide between watersheds creating a unique hydrologic setting. The surface water bodies nearest the Site are Anderson Lake, approximately 2.6 miles northeast of the Site and Llagas Creek the same distance southwest of the Site. Anderson Lake is a reservoir on Coyote Creek, which drains a watershed in the Diablo Range east of the Coyote Valley. Coyote Creek flows northwest out of its watershed into the valley and out to San Francisco Bay. Llagas Creek drains a watershed in the Santa Cruz Mountains west of the Coyote Valley. Llagas Creek flows out of its watershed into the valley then southeast to the Pajaro River, which flows southwest to Monterey Bay.

Groundwater elevation data for the site region available on the California Department of Water Resources Sustainable Groundwater Management Act (SGMA) *Data Viewer* (<https://sgma.water.ca.gov/webgis/?appid=SGMADataViewer#gwlevels>) for fall 2021 suggests that groundwater flow directions are likely variable depending on proximity to surrounding higher elevation areas on either side of Coyote Valley and location relative to the topographic divide described above. Groundwater flow is likely from the higher elevation areas toward the valley bottom then (depending on location relative to the topographic divide) northwest toward the main Santa Clara Valley or southeast toward Gilroy.

KHM Environmental Management's *Shell GRASP First Quarter 2003 Monitoring Report* dated April 30, 2003, and available on GeoTracker, provides site-specific groundwater information. The report indicates that depth to water in groundwater monitoring wells on the Site in September 2003 ranged from 32 to 34 feet and groundwater flow direction was toward the southwest, but that flow direction the previous year was toward the north-northeast (KHM, 2003).

Apex Companies, LLC's (Apex) *2017 Annual Groundwater Monitoring and Sampling and Well Destruction Report* dated July 13, 2017, for the Former GlassTek facility at 16840 Joleen Way approximately 850 feet southwest of the Site, shows that depth to groundwater there in 2017 ranged from 17.87 to 21.20 feet with a groundwater flow direction to the southeast (Apex, 2017).

2.3 Current and Planned Uses of the Site

The Site is currently used as a retail gas station, convenience store, and car wash. We understand that the Site is planned to be redeveloped into a new gas station, convenience store, and car wash.

2.4 Descriptions of Structures, Roads, Other Improvements on the Site

Site structures include the retail gas station USTs, fuel pumps, and fuel pump building, the convenience store, and the attached car wash. Two 15,000-gallon gasoline USTs are in the south-central portion of the Site and their associated piping connects north to the eight fueling islands. A vacuum and air station is located in the southwestern portion of the Site. The Site is paved with asphalt and concrete and includes perimeter landscaping.

2.5 Current Uses of Adjoining Properties

East Dunne Avenue adjoins the Site to the north, beyond which are a Walgreens store, a restaurant, and a Chevron gas station. The Site is adjoined to the east and south by the Lawrence Oaks Shopping Center, which is developed with retail stores and a fast-food restaurant. The Site is adjoined to the west by Walnut Grove Drive, beyond which is a CVS store.

3.0 USER-PROVIDED INFORMATION

We have yet to receive a completed user (Raney or the City) questionnaire. If a user questionnaire providing pertinent information regarding the Site is ultimately provided, we will summarize that information in a revised report, as necessary.

4.0 RECORDS REVIEW

This section summarizes information we obtained from readily available agency records pertaining to the Site and properties and facilities in the vicinity of the Site.

4.1 Standard Environmental Record Sources

Environmental Data Resources, Inc. (EDR) searched federal, state, and local environmental databases for the Site and properties/facilities within one mile of the Site. The following table lists the databases that were searched which have listings and the number of properties/facilities listed. Other databases searched that do not list any properties/facilities are not included in the table. A copy of the report: *The EDR Radius Map Report with GeoCheck*, dated August 17, 2022, is in Appendix B.

* Site is listed on the database

4.1.1 Site

The Site is listed on the following databases recording a release of gasoline that impacted groundwater with gasoline:

- LUST;
- HIST LUST;
- RGA LUST;
- CERS;
- CORTESE; and
- FINDS.

The LUST database indicates that the LUST case was opened on August 27, 2002 and closed on March 29, 2005. This LUST case is described further in Section 4.3.1.

The CERS TANKS and UST databases report the presence of two gasoline USTs on the Site. No other pertinent information is provided.

The CERS HAZ WASTE, CUPA LISTINGS, and HAZNET databases indicate the hazardous waste generator status of the Site. The HAZNET database indicates that “aqueous solution with total organic residues 10 percent or more, other organic solids, unspecified oil-containing waste, unspecified organic liquid mixture, and tank bottom waste 251 still bottoms with halogenated organics” was disposed of offsite.

The CERS database reports violations related to the fail-safe systems and poor record keeping. These violations are described further in Section 4.3.3. All violations reported on the CERS database were returned to compliance.

The EDR HIST AUTO database lists the use of the Site as a gasoline service station from 1997 to 2014.

The Site is also listed on the following databases; however, they provide no pertinent information

regarding the Site:

- HWTS;
- RCRA NONGEN/NLR;
- ECHO;
- RCRA SQG; and
- EMI

The use of the Site as a gasoline service station with active fueling (e.g., USTs, piping, and fuel pumps) is an REC for the Site as a “material threat of release”. However, the USTs, piping, and fuel pumps include leak prevention and containment systems, which greatly lessen the potential for a release.

4.1.2 Offsite Properties

Thirty properties within $\frac{1}{8}$ mile of the Site are listed on various non-release-related databases¹ and therefore are unlikely to have caused an REC at the Site. Two properties within $\frac{1}{4}$ mile of the Site are listed on release-related databases and are summarized in the following table:

¹ "Release" refers to an unauthorized release of a petroleum product or hazardous substance to the environment - i.e., the ground surface, soil, soil vapor, groundwater, or surface water on a property. "Release-related database" refers to those which provide information regarding an unauthorized release. "Non-release-related database" refers to those that may report use, storage, or disposal of hazardous substances and/or petroleum products or other environmental conditions, but do not report releases of such.

Business	Address	Approximate Distance from the Site	Database	Pertinent Information/Potential to Impact the Site
Chevron #9-260	825 East Dunne Avenue	375 feet north (likely cross-gradient)	LUST, SWEEPS UST, HIST UST, CA FID UST, UST, HIST LUST, CORTESE, CERS, RCRA-SQG, FINDS, ECHO, HAZNET, EDR HIST AUTO, CERS HAZ WASTE, CERS TANKS, CUPA LISTINGS	<p>This facility is listed on the LUST, HIST LUST, CERS, and CORTESE, databases for a release of gasoline to unspecified media in 1989. The LUST case was closed on September 3, 1999.</p> <p>The SWEEPS UST, HIST UST, UST, CUPA LISTINGS and CA FID UST databases indicate that four USTs were present on this property. Two 10,000-gallon USTs, a 5,000-gallon UST and a 1,000-gallon UST are listed as having been installed in 1972. The contents of the USTs are unspecified.</p> <p>The RCRA-SQG and HAZNET databases indicate ignitable waste containing benzene, aqueous solution with total organic residues less than 10 percent, other organic solids, unspecified oil-containing waste, unspecified organic liquid mixture, and laboratory waste chemicals 561 detergent and soap, were used/stored/generated on the property.</p> <p>The EDR HIST AUTO database indicates that the property was a gasoline service station from 1986 to 2014.</p> <p>The CHMIRS database indicates that a fire took place on the property and one gallon of gasoline was released onto the ground. The release was contained and cleaned. No waterways were impacted.</p> <p>The CERS database records violations relating to leak detection systems and poor record keeping. All violations were returned to compliance.</p> <p>The HIST CORTESE and ECHO databases contain no pertinent information about this property. Further information regarding this property is available on GeoTracker and is summarized in Section 4.3.1.</p>

Business	Address	Approximate Distance from the Site	Database	Pertinent Information/Potential to Impact the Site
<p>Glass Tek/ Balcunas/ Savage Enterprises/Ce vola Custom Homes/On the Road Again/ Technovac/ Xtreme Custom Detail/ Lime Engineering/T riad Millworks/ Godofredo Soliman DB/ Semispares Inc.</p>	<p>16840 Joleen Way</p>	<p>850 feet southwest (cross-gradient)</p>	<p>ENVIROSTOR, CERS, RCRA NONGEN/NLR, FINDS, ECHO, EMI, CPS- SLIC, CERS HAZ WASTE, DEED, CUPA LISTINGS, RCRA-SQG, EMI, HAZNET, WDS, CERS, HWTS</p>	<p>This facility is listed on the ENVIROSTOR and CERS databases for a release of halogenated solvents to unspecified media.</p> <p>The CERS and CERS HAZ WASTE databases report violations relating to improper storage of flammable materials, improper disposal of hazardous waste, failure to inspect hazardous waste storage, and poor record keeping. All violations were returned to compliance.</p> <p>The CPS-SLIC database indicates a release occurred that affected groundwater and that the regulatory case was closed on June 29, 2020.</p> <p>The DEED database indicates that land use restrictions have been put in place on this property.</p> <p>The CUPA LISTINGS and HAZNET databases indicate that the property generated hazardous material including waste oil, other inorganic solid waste, liquids with halogenated organic compounds $\geq 1,000$ mg/l, laboratory waste chemicals, halogenated solvents,</p> <p>The ECHO, FINDS, EMI, RCRA NONGEN/NLR, RCRA-SQG, HWTS, and WDS databases provide no pertinent information about the property. Further information regarding this property is available on GeoTracker and is summarized in Section 4.3.1.</p>

4.2 Orphan Summary

EDR's Orphan Summary identifies properties and facilities that have incomplete address information and therefore could not be accurately plotted. No properties or facilities are listed in the Orphan Summary.

4.3 Other Environmental Record Sources

4.3.1 GeoTracker and EnviroStor

We reviewed the California State Water Resources Control Board's GeoTracker (<http://geotracker.waterboards.ca.gov>) and the California Department of Toxic Substances Control's (DTSC) EnviroStor (<http://www.envirostor.dtsc.ca.gov/public/>) online data management systems for information regarding documented environmental assessment and cleanup at the Site and/or properties/facilities within ¼ mile of the Site. No information pertaining to the Site or any properties or facilities within ¼ mile of the Site is available on EnviroStor. Following are summaries of information for the Site and properties/facilities within ¼ mile of the Site available on GeoTracker.

Shell, 810 E Dunne Avenue (Site) – The Site was eligible for the Shell Oil Products US Groundwater Assessment Program (GRASP) due to its proximity to public water wells. The GRASP program initiates the installation of groundwater monitoring wells and quarterly groundwater monitoring to proactively prepare for a release of petroleum products to groundwater. Groundwater monitoring wells MW-1, MW-2, and MW-3 were installed on the Site in August 2002. Initial groundwater samples, collected in September of 2002, were analyzed for the following contaminants of concern (COC):

- total petroleum hydrocarbons as gasoline (TPHg);
- benzene;
- toluene;
- ethyl-benzene;
- xylenes; and
- fuel oxygenates including:
 - methyl tert-butyl ether (MTBE);
 - di-isopropyl ether;
 - ethyl tert-butyl ether;
 - tert-amyl methyl ether; and
 - tert-butyl alcohol.

MTBE was detected in groundwater samples collected from wells MW-1 and MW-3 at concentrations of 0.59 and 8.6 micrograms per liter (µg/l), respectively. These detections prompted the Santa Clara Valley Water District (SCVWD) to open a LUST case for the Site. Groundwater monitoring continued on a quarterly basis and in March 2003, TPH as diesel (TPHd) was added to the list of COCs to be analyzed for in groundwater samples. TPHd was detected in groundwater samples from wells MW-1, MW-2, and MW-3 at concentrations of 130, 270, and 680 µg/l, respectively. An additional well, MW-4, was installed in September 2003 concurrently with the advancement of soil boring SB-1. Soil samples

collected from the boring for MW-4 and SB-1 were analyzed and MTBE was detected at concentrations ranging from 0.0053 to 9.4 milligrams per kilogram (mg/kg). In April through June of 2004, cone-penetration test (CPT) borings CPT-1 through CPT-5 were advanced on the Site to identify saturated zones and collect groundwater grab samples. MTBE was detected in groundwater samples from CPT-4 at concentrations ranging from 1.6 to 7.5 µg/l. Benzene and toluene were detected in a groundwater sample from CPT-2 at concentrations of 0.57 and 0.89 µg/l, respectively.

A request for no further action (NFA) was submitted to the SCVWD in October 2004 and the regulatory case was closed on March 29, 2005. The case closure noted that “residual contamination in both soil and groundwater could pose an unacceptable risk under certain site development activities such as site grading, excavation, or installation of water wells” (SCVWD, 2005). A copy of the case closure letter, including data tables and a site map are in Appendix C. The closed LUST case is a CREC for the Site.

Chevron #9-2060, 825 E Dunne Avenue – This property is approximately 375 feet north-northeast of the Site and has a closed LUST case. A release was detected during removal of three gasoline USTs and one waste oil UST in 1988. All four USTs were replaced and limited over-excavation of contaminated soil in the USTs excavations was performed. In March 1998, the waste oil UST was removed along with fiberglass piping associated with the three gasoline USTs. The fiberglass piping was replaced with double-walled fiberglass piping. Two hydraulic hoists were also removed from a former service bay in the gas station building. Laboratory analysis of groundwater grab samples collected for closure detected the following:

- TPHd - 150 parts per billion (ppb, equivalent to µg/l);
- benzene - 1.4 ppb;
- toluene - 0.89 ppb;
- xylene - 1 ppb;
- chromium - 23 ppb;
- nickel - 260 ppb; and
- zinc - 630 ppb.

The cross-gradient location of the release relative to the Site, the relatively low contaminant concentrations in groundwater there, and closure of the LUST case suggest that the release at this property is unlikely to have caused an REC on the Site.

Madrone Land Corporation, 645 Cochrane Road – This property is mapped on GeoTracker as being 1,088 feet west of the Site. The actual location of this property is approximately 1.75 miles north of the Site and therefore is too far to have caused an REC on the Site.

Glass Tek/Balcunas, 16840 Joleen Way – This property is approximately 850 feet southwest of the Site and was found to have had a release of halogenated solvents, primarily trichloroethene (TCE), into soil and groundwater in 1985. Soil excavation, soil vapor extraction, groundwater extraction, and in-situ bioremediation activities were performed, and the regulatory case was closed in June 2020 with land use restrictions. The land use restriction limited uses of the property to commercial/industrial. The property is unlikely to have caused an REC on the Site due to the case closure and that the plume had migrated to the southeast, away from the Site.

4.3.2 Santa Clara County Department of Environmental Health

We submitted a request to the Santa Clara County Department of Environmental Health (SCCDEH) for records pertaining to the use, storage, or releases of, or violations related to, hazardous substances and/or petroleum at the Site. Melissa Belloso provided 73 documents relating to the use of the Site as a gasoline service station. SCCDEH records included Hazardous Materials Business Plans, Notices of Inspection, permits, certificates of financial responsibility, UST test results, and fail-safe systems test results.

SCCDEH records indicate several minor violations and five Class II violations (repeated minor violations) related to the USTs on the Site. The SCCDEH issued the violations during their annual compliance inspections of the Site. The minor violations were issued in 2018, 2019, 2020, and 2022 and relate to sensor failures in the leak detection system and poor record keeping. The Class II violations were issued in 2018 and 2019 and related to outdated financial responsibility information, a non-functional leak detector in the UST system, and an outdated permit. According to SCCDEH records, each violation at the Site was corrected. No violations were reported for the 2022 compliance inspection.

These violations do not represent an REC for the Site in that no release to the environment appears to have occurred.

4.3.3 City of Morgan Hill Building Department

We requested to review City of Morgan Hill Building Department records pertaining to any building violations or environmental records of the Site. Angie Gonzalez with the City indicated that they do not have any records related to building violations or environmental violations for the Site.

4.3.4 California Geologic Energy Management Division

The California Geologic Energy Management Division's (CalGEM) Well Finder, an online petroleum (oil and natural gas) field and well mapping system, does not show any oil or natural gas wells on or within ¼ mile of the Site (CalGEM, 2022).

4.3.5 National Pipeline Mapping System

The National Pipeline Mapping System (NPMS) online pipeline mapping system does not show any natural gas or liquid petroleum pipelines on or in the vicinity of the Site (USDOT, 2022).

5.0 HISTORICAL USE

We evaluated the historical use of the Site and adjacent properties through review of historical aerial photographs, topographic maps, and city directories provided by EDR. This section summarizes information obtained from these sources.

5.1 Aerial Photographs

We reviewed historical aerial photographs provided by EDR for the years 1939, 1940, 1950, 1956, 1963, 1968, 1970, 1974, 1982, 1998, 2006, 2009, 2012, and 2016 (Appendix D) and aerial imagery available on Google Earth for the years 2018 through 2022 for indications of past land uses that had the potential to have impacted the Site through the use, storage or disposal of hazardous substances and/or petroleum. The following table summarizes our observations of the Site and adjacent properties on the historical aerial photographs.

Year	Observations	
	Site	Adjoining and Adjacent Properties
1939 (1" = 500')	The Site was part of an orchard.	The adjoining properties were similar orchards. East Dunne Avenue was adjacent to the north of the Site and a farm residence was on the adjoining property to the southeast.
1940 (1" = 500')	Conditions were generally similar to those observed on the 1939 photograph.	Conditions were generally similar to those observed on the 1939 photograph.
1950 (1" = 500')	Conditions were generally similar to those observed on the 1940 photograph.	Conditions were generally similar to those observed on the 1940 photograph except additional farm residences were present northeast and northwest of the Site.
1956 (1" = 500')	The northern portion of the Site still had orchard trees on it, but the rest of the Site appears to have been irrigated farm fields.	Conditions were generally similar to those observed on the 1950 photograph except irrigated farm fields were present on several surrounding properties and an additional residence was present north of the Site.
1963 (1" = 500')	The Site was again all planted with an orchard.	Conditions were generally similar to those observed on the 1956 photograph.
1968 (1" = 500')	Conditions were generally similar to those observed on the 1963 photograph.	Conditions were generally similar to those observed on the 1963 photograph except a commercial structure was present on the southern side of East Dunne Avenue southwest of the Site.

Year	Observations	
	Site	Adjoining and Adjacent Properties
1970 (1" = 500')	The resolution of the photo is poor, but conditions appear to have been generally similar to those observed on the 1968 photograph.	The resolution of the photo was poor, but conditions appear to have been generally similar to those observed on the 1968 photograph with the exception that additional commercial/industrial structures were present southwest of the Site.
1974 (1" = 500')	Orchards were no longer present on the Site.	U.S. Route 101 and the East Dunne Avenue interchange were present. A gas station was present beyond East Dunne Avenue to the north-northeast in the location of the present-day Chevron.
1982 (1" = 500')	Conditions were generally similar to those observed on the 1974 photograph.	Additional commercial/industrial buildings were present south and southwest of the Site.
1998 (1" = 500')	A gas station canopy, convenience store, and car wash were present on the Site.	East Dunne Avenue had been widened and the Lawrence Oaks shopping center was present south and southeast of the Site. Walnut Grove Drive was adjacent to the west of the Site and properties west of that were developed with commercial buildings and paved parking. Much more residential development was present south, west, and north of the commercial development along East Dunne Avenue.
2006 (1" = 500')	Conditions were generally similar to those observed on the 1998 photograph.	Conditions were generally similar to those observed on the 1998 photograph.
2009, 2012, and 2016 (1" = 500')	Conditions were generally similar to those observed on the 2006 photograph.	Conditions were generally similar to those observed on the 2006 photograph except development has expanded in each direction.
2018 through 2022 (Google Earth)	Conditions were generally similar to those observed on the 2009, 2012, and 2016 photographs.	Conditions were generally similar to those observed on the 2009, 2012, and 2016 photographs.

The Site was used for agricultural purposes (orchard and irrigated farm field) from sometime prior to 1939 until sometime between 1970 and 1974. The current gas station development began sometime between 1982 and 1998. The past agricultural use suggests that pesticides could have been used on the Site and could be present (along with associated metals such as arsenic and lead) in shallow soil as a result. This is a potential environmental concern for the Site. However, subsequent grading and development likely impacted the distribution of pesticides in soil and may have attributed to their attenuation. The gas station use of the Site is an REC as described in Section 4.1.1.

We observed no other uses of the Site or adjoining and adjacent properties on the aerial photographs that would suggest the presence of, or potential to have caused, RECs on the Site.

5.2 Topographic Maps

We reviewed historical topographic maps provided by EDR for the years 1917, 1939, 1955, 1968, 1973, 1980/1981, 2012, 2015, and 2018 (Appendix E). The following table summarizes our observations of the Site and adjacent properties on the historical topographic maps.

Year	Observations	
	Site	Adjoining and Adjacent Properties
1917 (1:62,500)	No structures or land uses are depicted on the Site.	Structures are depicted northeast, east, and west of the Site.
1939 (1:62,500)	Conditions depicted are similar to those on the 1917 maps.	Conditions depicted are similar to those on the 1917 maps except additional structures are depicted west and northwest of the Site.
1955 (1:24,000)	Conditions depicted are similar to those on the 1939 map.	Conditions depicted are similar to those on the 1939 map.
1968 (1:24,000)	Conditions depicted are similar to those on the 1955 map.	Conditions depicted are similar to those on the 1955 map except structures are depicted east and west of the Site.
1973 (1:24,000)	Conditions depicted are similar to those on the 1968 map.	Conditions depicted are similar to those on the 1968 map.
1980/1981 (1:24,000)	Conditions depicted are similar to those on the 1973 map.	Conditions depicted are similar to those on the 1973 map.
2012, 2015, and 2018 (1:24,000)	No structures or land uses are depicted on these maps.	No structures or land uses are depicted on these maps.

The topographic maps do not depict features or land uses that directly suggest the presence of RECs on the Site or adjacent properties.

5.3 City Directories

EDR prepared an abstract of city directories including city, cross reference and telephone directory listings (Appendix F). EDR included information from directories at approximate 5-year intervals, if available, from 1964 to 2017. Site addresses were obtained from Google Earth. The following table lists the addresses and occupants.

Address	Occupants
Onsite	
810 East Dunne Avenue	<ul style="list-style-type: none"> • 1971-1992 residential listings • 2005, 2017 Shell
800 East Dunne Avenue	<ul style="list-style-type: none"> • 2000, 2010 Shell • 2010, 2017 Dish Network • 2014, 2017 AU Energy, LLC
Offsite	
775 East Dunne Avenue (adjacent to north)	<ul style="list-style-type: none"> • 1971-1985 residential listings • 1985-2000 Lyons Restaurants • 2005-2017 Scramblz Diner
825 East Dunne Avenue (adjacent to the north-northeast)	<ul style="list-style-type: none"> • 1976-1995, 2005-2014 Chevron
820 East Dunne Avenue (adjacent to east)	<ul style="list-style-type: none"> • 2000-2010 Blockbuster Video • 2000 Coldwell Banker Residential Brokerage, Eagle Jim & Polly Real Estate Brokers, Stubas Janet Real Estate • 2005 Sears Real Estate • 2014-2017 KellyMoore Paints, TL Nail Spa
840 East Dunne Avenue (adjacent to south)	<ul style="list-style-type: none"> • 2000-2017 Safeway Stores, Wells Fargo Bank Branch Offices • 2017 Redbox, Charter Communications, Dish Network
830 East Dunne Avenue (adjacent to the southwest)	<ul style="list-style-type: none"> • 2000-2017 Burger King
745 East Dunne Avenue (adjacent to the northwest)	<ul style="list-style-type: none"> • 1971-1981 Residential Listings • 2005-2014 Walgreens

Residents are listed for the Site from 1971 to 1992. The current gasoline service station is listed from 2000 to 2017 and as summarized in Section 4.1.1 is an REC for the Site.

The entities listed for adjoining and adjacent properties include residences, commercial businesses, and a gas station. With the exception of the gas station at 825 East Dunne Avenue, the listed entities generally do not appear likely to have stored or used hazardous substances or petroleum products. The gas station property is summarized in Section 4.3.1 and is unlikely to have caused an REC on the Site.

6.0 SITE RECONNAISSANCE

This section summarizes our observations of the Site and surrounding properties during the site reconnaissance.

6.1 Methodology and Limiting Conditions

Austin Perry, Staff Geologist with Geocon, performed the site reconnaissance on September 29, 2022. He met with Imelda Rodriguez, manager of the Shell gas station, who provided access to all areas of the Site. Mr. Perry performed the site reconnaissance, unaccompanied, by walking throughout the Site and

along the site perimeter to observe site features and conditions. He performed the offsite survey by observing adjoining and adjacent properties from the Site and public roads. Weather on the day of the site reconnaissance was sunny with temperatures in the mid-70s°F. Photographs of various site features and offsite properties are appended.

6.2 Site Setting

The Site is situated in an area of similar commercial and retail development.

6.3 Onsite Survey

The approximate 1.06-acre Site is developed with a convenience store, car wash, and seven fuel islands and small equipment building covered by a steel-framed canopy (Photos 1 through 3). Building locations and other key features observed on the Site during the onsite survey are depicted on Figure 2.

6.3.1 Interior Areas

The convenience store consists of a retail store, car wash, utility room, storage rooms, and office space, and restrooms. The retail store contains food, beverages, retail-size containers of cleaners and automotive fluids (such as motor oil and transmission fluid) and tobacco products (Photo 4). Floor drains (Photo 5) are present throughout the retail store. No staining or odors indicative of the presence of hazardous substances or petroleum were observed around the floor drains. Beverages are stored in a walk-in refrigerator.

The utility room contains various cleaning supplies including brooms, mops, and retail-size containers of cleaners, a water heater, sink, ice machine, and electrical panels (Photos 6 and 7).

The storage rooms are used to store beverages, paint, and miscellaneous equipment and materials (Photo 8). We observed de minimis staining the concrete floor below an air compressor in a storage room in the southern portion of the convenience store (Photo 9).

The car wash is in good working order and is connected to the eastern side of the convenience store (Photo 10). Drains within the car wash are part of a water recycling system that is accessible along the eastern wall of the building (Photo 11). Mrs. Rodriguez indicated that an unknown contractor recycles the water every 3 months and that Ryko Car Wash Solutions performs monthly maintenance on the car wash. Plastic drums of cleaning chemicals are stored on the concrete floor of the car wash (Photo 12).

The equipment building under the canopy contains the computer systems for the fuel system leak detection system, spill absorbents, and has an unused restroom (Photos 13 and 14).

No evidence of RECs was observed in the interior areas of the Site.

6.3.2 Exterior Areas

The exterior areas on the Site consist mainly of asphalt driveways in the northern, southern, and western portions of the Site and concrete-paved driveways near the fuel islands and USTs. The concrete-paved driveways near the fuel islands have de minimis staining; however, they appear to be in good condition with no visible cracks or fissures. We observed patching on the asphalt where borings mentioned in Section 4.3.1 had been advanced and backfilled on the Site. On arrival to the Site, we observed Richie Ruiz, field technician with Service Station Systems, Inc. making repairs to Pump 4 as well as to the fill port of the 87 octane UST. The repair to Pump 4 involved the re-installation of the fuel dispenser hose and the collar on the fill port of the UST was being checked. Aside from Pump 4, the gasoline pumps and hoses at each fuel island appear to be well-maintained with no visible sign of leakage.

Two 15,000-gallon gasoline USTs are located beneath the concrete slab to the south of the canopy (Photo 15). We observed no evidence of spills near the USTs. A UST vapor recovery system is located along the southern site boundary (Photo 16).

We observed two 55-gallon drums and two 8-gallon drums (Photo 17) on a concrete pad in a dumpster enclosure west of the convenience store. All of the drums were empty. The 55-gallon drums are labeled "Hazardous Waste." According to Mrs. Rodriguez, the 55-gallon drums are used to store any spilled gasoline and absorbent material used and the 8-gallon drums are used to store used oil absorbents. Mrs. Rodriguez indicated that she has never observed a spill in the 11 years she has managed the Site. We also observed a fuel hose and dispenser on the concrete pad, which was re-installed on Pump 4 by Mr. Ruiz.

An Ice freezer and 5-gallon propane tanks in a locked metal cabinet are on the western wall of the convenience store (Photo 18). A coin/card-operated vacuum, air, and water station is in the southwestern portion of the Site (Photo 19). An approximate 500-gallon propane above-ground storage tank is in the southwestern portion of the Site (Photo 20). A pad-mounted transformer (Photo 21) is in the southeastern portion of the Site. We observed no labels indicating polychlorinated biphenyl content, but observed no evidence of leakage on the ground beneath the transformer. Various water and electrical utilities are present along the northern, western, and southern boundaries of the Site. Two fuel pricing signs are present on the Site – one near the northwestern corner (Photo 21) and one near the southwestern corner (Photo 22). A sign for the businesses in Lawrence Oaks shopping center is on the small portion of the Site in the southeastern corner of the intersection of Walnut Grove Drive and East Dunne Avenue (Photo 23).

The current gas station use is an REC as the USTs and related piping are a material threat of a release.

6.4 Offsite Survey

Adjoining and adjacent properties consist of the following:

- Northwest - East Dunne Avenue, beyond which is a Walgreens store;
- North – East Dunne Avenue, beyond which is a restaurant, Yolked Extreme Breakfast, (Photo 24);
- Northeast – East Dunne Avenue, beyond which is a Chevron gas station, (Photo 25);
- East – Kelly-Moore Paints (Photo 26);
- South – A parking lot, beyond which are a Safeway (Photo 27), Home Depot, and other stores of the Lawrence Oaks shopping center;
- Southwest – Burger King (Photo 28); and
- West – Walnut Grove Drive, beyond which is a CVS store (Photo 29).

Except for the Chevron Station, we observed no conditions or uses on adjoining and adjacent properties likely to cause or have caused an REC at the Site. The Chevron station is summarized in Section 4.3.1 and is unlikely to have caused an REC at the Site.

7.0 INTERVIEWS

On October 3, 2022, we provided Sundeep Goyal, Vice President of Au Energy, the site owner, with an owner/occupant questionnaire regarding past and present use of the Site and the potential for impacts related to the use, storage, or disposal of hazardous substances and/or petroleum products on the Site. A copy of the owner/occupant questionnaire is in Appendix G.

Mr. Goyal stated that the Site has been owned by Au Energy since April 2010 and has been used as a gas station since the 1990s. He also indicated that he believes the land was vacant prior to the construction of the gas station. He indicated that the gas station has eight fuel pumps, a convenience store, and a self-service car wash with an associated water reclamation station. Mr. Goyal also stated that there are three USTs in the ground on the Site. We asked what the third UST is, as there are two 15,000-gallon USTs associated with the current operations and no other declared USTs on the Site. Mr. Goyal indicated that he made a mistake when filling out the questionnaire and that there are only the two 15,000-gallon gasoline USTs on the Site.

8.0 CONCLUSIONS AND RECOMMENDATIONS

We have performed a Phase I ESA, in general conformance with the scope and limitations of ASTM *Designation E 1527-21* of the Shell gasoline service station at 800 and 810 East Dunne Avenue in Morgan Hill, California. Exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

The Phase I ESA identified the past agricultural use of the Site as a potential environmental concern because of the possible application of pesticides and their potential presence in shallow soil as a result.

The Phase I ESA identified the current gas station operation as an REC as the USTs and related piping are a material threat of a release.

The Phase I ESA identified the former LUST case on the Site as a CREC as the case closure noted “residual contamination in both soil and groundwater could pose an unacceptable risk under certain site development activities such as site grading, excavation, or installation of water wells.”

During demolition and subsequent soil-disturbing construction activities (i.e., grading and excavation), impacted soil may be encountered and should be handled in accordance with a Soil Management Plan (SMP). An SMP will provide protocols and guidelines for assessment and handling of impacted soil (if encountered) as well as any unknown, undocumented subsurface equipment or features.

10.0 QUALIFICATIONS

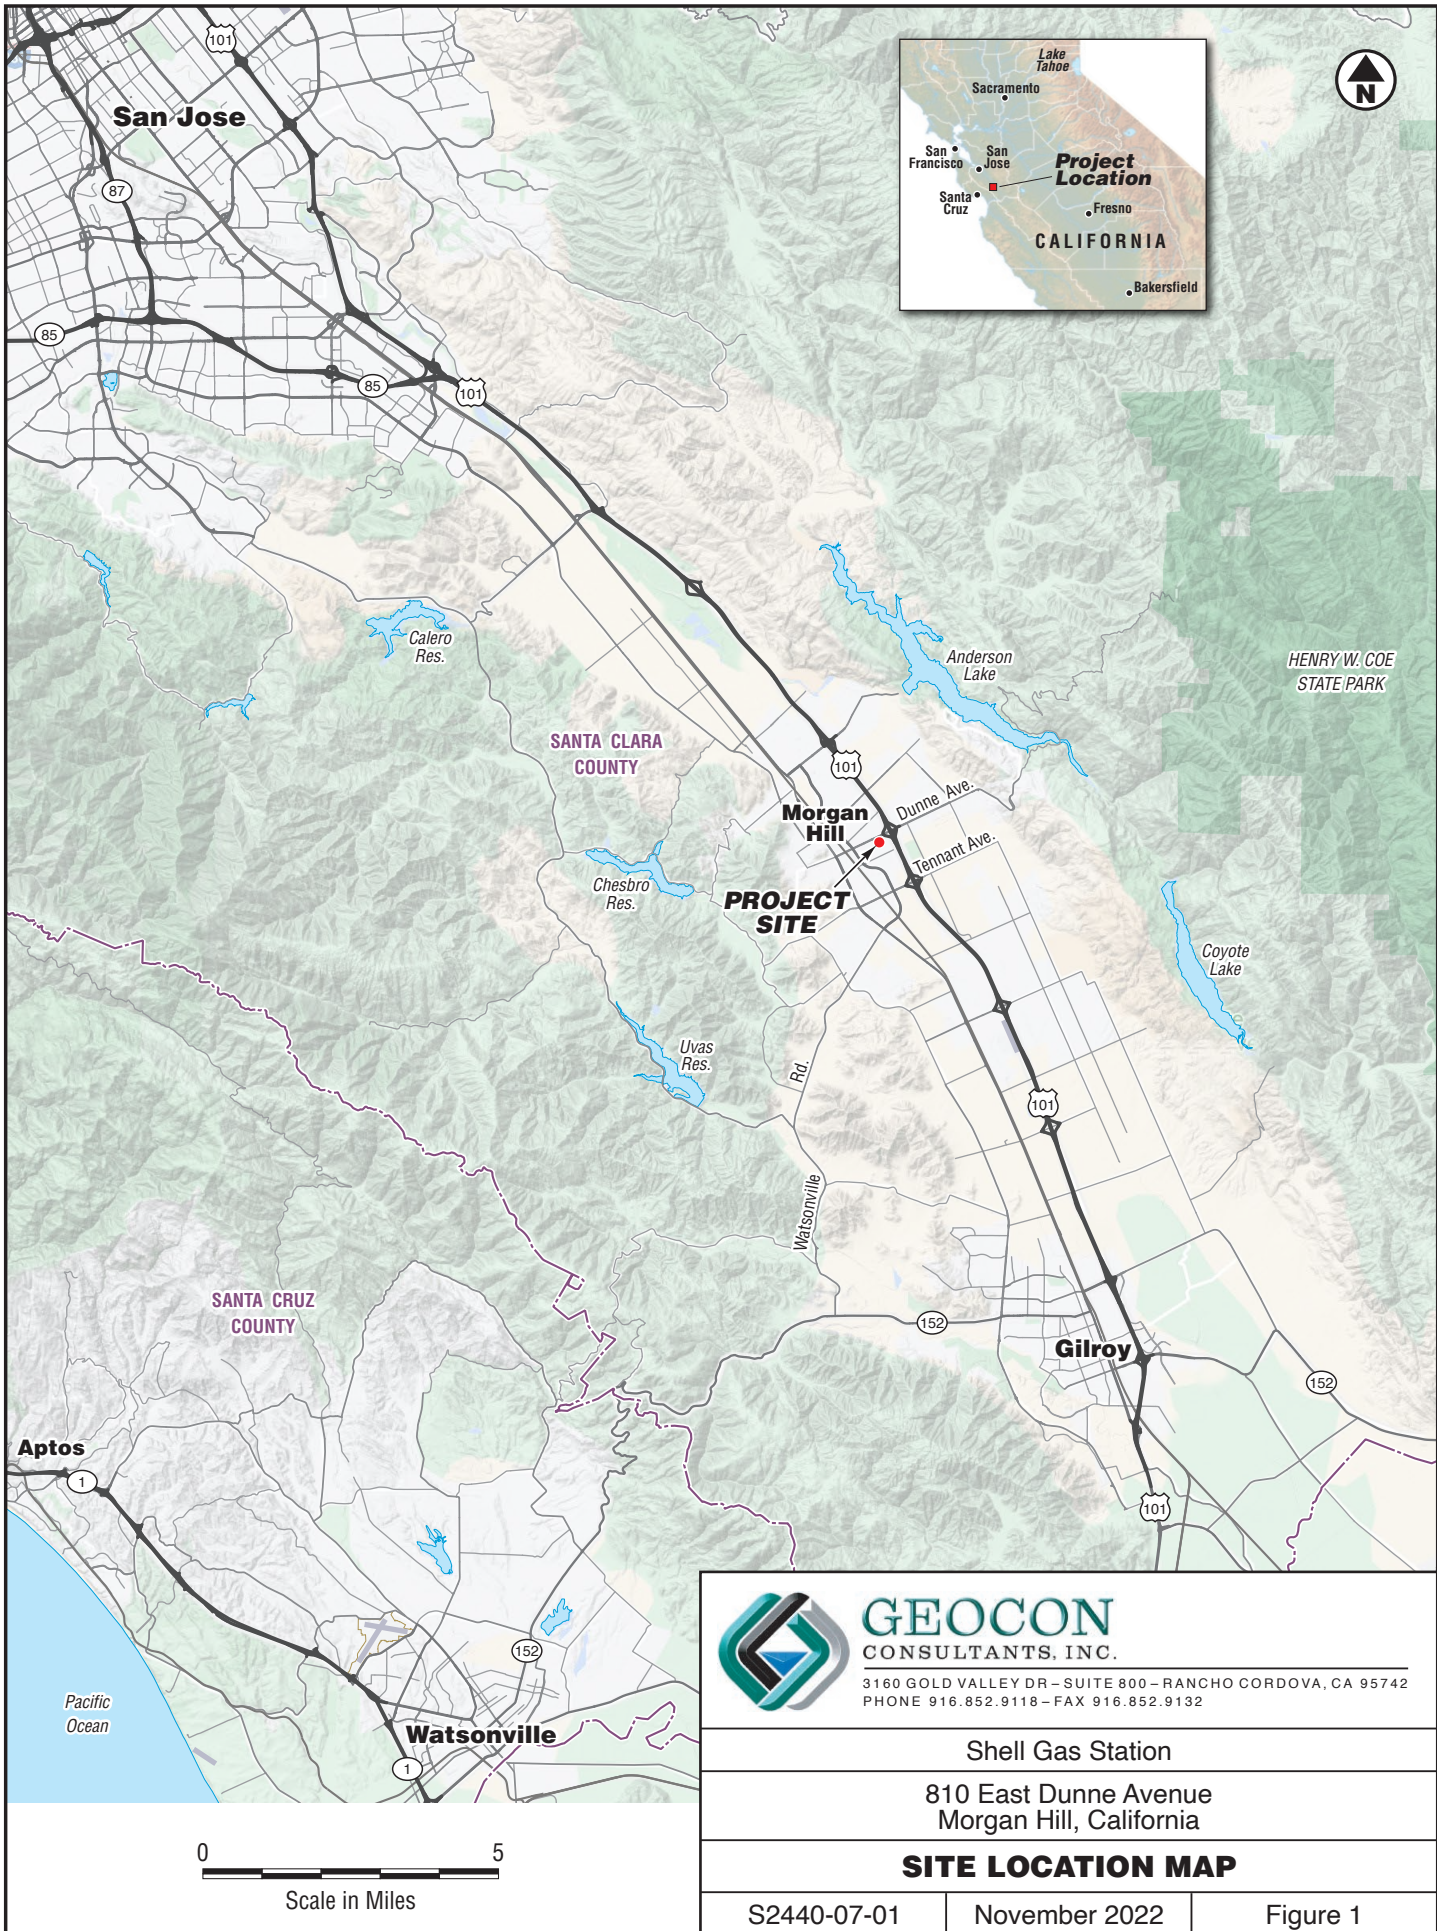

This Phase I ESA report was prepared by Austin Perry and Jim Brake, PG. Austin Perry has a Bachelor of Science degree in Geology. He has worked on a variety of projects for clients in water resources research, environmental health and safety, and soil, soil vapor, and groundwater sampling. Mr. Perry has performed Phase I and II ESAs on several commercial, industrial, agricultural, and residential properties throughout California.

Mr. Brake has an MS degree in Geological Science and 35 years of experience in environmental investigation and remediation, including implementation of Remedial Investigation/Feasibility Study programs and soil and groundwater remedial actions for private industrial and government clients. He has managed a wide variety of projects for clients in the manufacturing, transportation, mining, automobile and real estate industries including Environmental Protection Agency and DTSC Superfund sites. Mr. Brake has extensive experience in the performance of Phase I and II ESAs of commercial, industrial, and agricultural properties throughout California.

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in §312.10 of 40 CFR 312 and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries investigation in conformance with the standards and practices set forth in 40 CFR Part 312.

Jim Brake, PG

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/20/2022 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/25/2022 has revealed that there are 11 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 3 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/20/2022 has revealed that

EMI: Toxics and criteria pollutant emissions data collected by the ARB and local air pollution agencies

A review of the EMI list, as provided by EDR, and dated 12/31/2019 has revealed that there is 1 EMI site within approximately 0.001 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
EAST DUNNE SHELL Facility Id: 112287	800 E DUNNE AVE	0 - 1/8 (0.000 mi.)	A21	61

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2019 has revealed that there is 1 HAZNET site within approximately 0.001 miles of the target property.

SHELL SERVICE STATIO GEPaid: CAR000099671	800 E DUNNE AVE S A	0 - 1/8 (0.000 mi.)	A16	48

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSTATES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 2 HIST CORTESE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

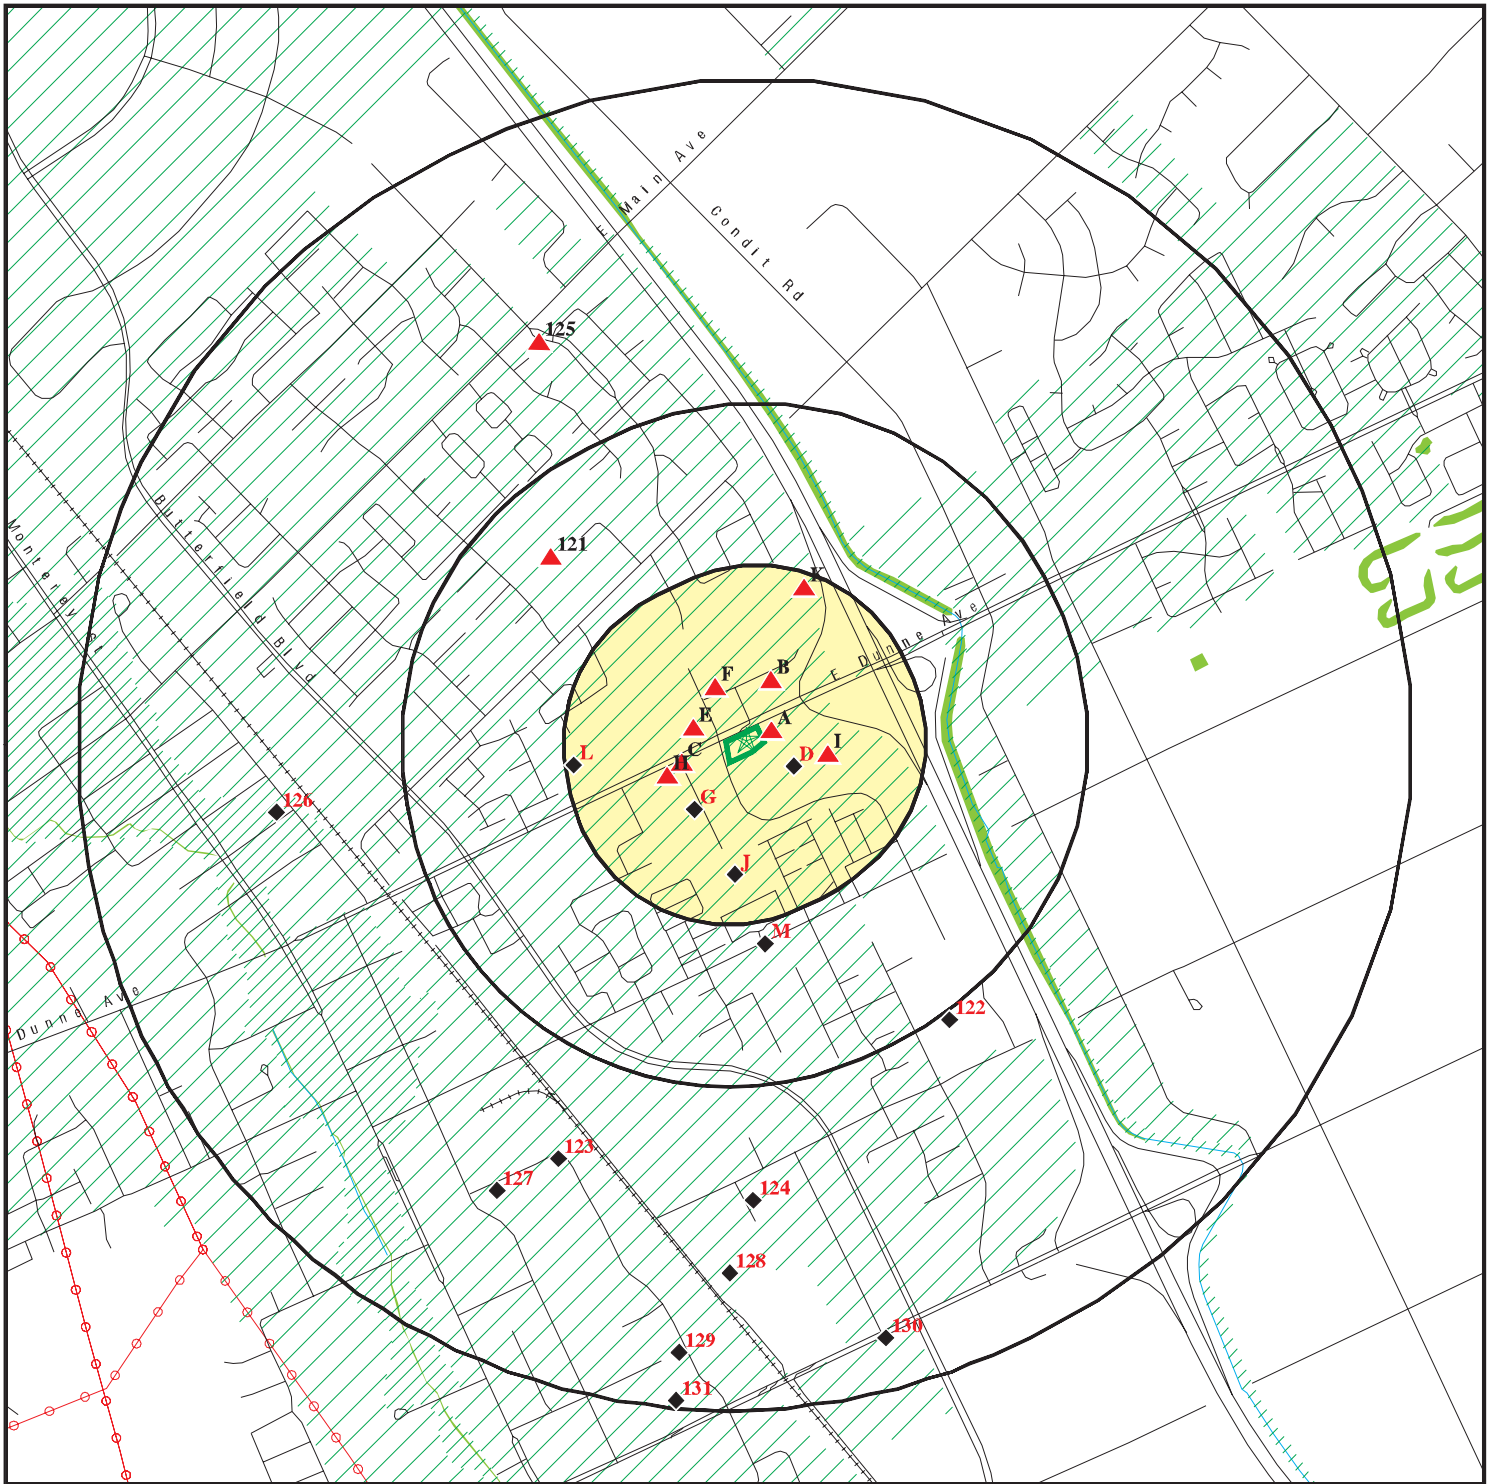

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EAST DUNNE SHELL #140 (Continued)

S121739397

Violation Description: Failure of the UST system to be designed and constructed with a monitoring system capable of detecting the entry of the hazardous substance into the secondary containment.

Violation Notes: Returned to compliance on 08/02/2021. 87 tank STP sump sensor, Veeder Root 794380-208, failed to trigger audible and visual alarm and/ or positive shut down of turbine. Mr. Leyva replaced sensor with another Veeder Root 794380-208. Sensor was retested and functioned as required. NO FURTHER ACTION REQUIRED.

Violation Date: 01-22-2018
Citation: HSC 6.7 25293 - California Health and Safety Code, Chapter 6.7, Section(s) 25293

Violation Description: Failure to maintain UST records of monitoring, testing, repairing, and closure in sufficient detail to enable the UPA to determine whether the UST systems are in compliance.

Violation Notes: It was noted on the 1/27/2015 Notice of Inspection that the line length for each Electronic Line Leak Detector (ELLD) Q1 & Q2 was 250-ft., respectively. A review of the UST Set-up tape during today's inspection list the piping line length for Q1 & Q2 at 350-ft., respectively. ELLD functionality relies on accurate programming including the actual line length to detect a gross fuel leak. See additional comments below.

Violation Date: 01-16-2020
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 08/25/2021. Observed 1 x 55 gallon open-head steel drum marked with a HAZARDOUS WASTE label containing all required information except the hazardous constituents (accumulation start date marked is "111219"). The contents were identified simply as, "HOSE." Used hoses contaminated with Gasoline typically contain Benzene at hazardous concentrations. Add the hazardous constituents to the information on on the label. Mark accumulation start dates with dashes or slashes between the MM, DD, and YY so dates can be clearly understood (e.g., 11/12/19). 1 x 55 gallon open-head poly drum was observed marked only with the only with the words, "GAS HOSES ONLY." A dispenser hose was reportedly placed in the drum yesterday. If this drum holds used dispenser hoses, either label the drum per hazardous waste marking requirements or transfer the hose(s) to the other solid waste drum.

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Notes: _____ One 500 gallon propane tank is not listed in the chemical inventory. In addition, there are three 55 gallon drums of "Ryko" car wash chemicals listed in the chemical inventory, however, they are not observed on site. Only one 5 gallon drum of "Clean Touch" White Foam Detergent is observed in the car wash tunnel. Smaller containers of other detergents are also observed. *Update the chemical inventory and resubmit to CERS.

Violation Date: 01-26-2017
Citation: 23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)
Violation Description: Failure to maintain secondarily contained piping to allow liquid to flow into the sump in the event of a leak (i.e., failure to remove test boot).
Violation Notes: Returned to compliance on 01/26/2017.

The secondary containment test boot installed at the termination of secondary piping within the 91 turbine (STP) sump was observed to be secured over the secondary pipe termination, thus blocking potential liquid from draining into the sump and being detected by the leak detection sensor. Service Station Systems, Inc. Technicians pulled this boot back during this inspection to allow for proper communication and monitoring. VIOLATION CORRECTED. NO FURTHER ACTION REQUIRED FOR THIS VIOLATION.

Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violation Notes: Returned to compliance on 08/25/2021. The interval between DUSTO inspections exceeded 30 days for the inspections that occurred on 8/5/2019 and 9/5/2019, 7/5/2019 and 8/5/2019, 6/4/2019 and 7/5/2019, 5/3/2019 and 6/4/2019, and 1/4/2019 and 2/5/2019. Ensure that a DUSTO inspection occurs at least once every 30 days.

Violation Date: 01-22-2018
Citation: HSC 6.7 25284 - California Health and Safety Code, Chapter 6.7, Section(s) 25284

Violation Description: Failure to obtain a valid permit to operate from the UPA including but not limited to unpaid permit fees.

Violation Notes: Returned to compliance on 01/01/2019. The UST permit expired on 7/30/17 and cannot be renewed due to the following: --Outstanding violation (T530) noted on 1/26/17 for not repairing and retesting the components that failed the secondary containment testing that occurred on 4/19/16. --Facility has not provided a written response with the corrective actions taken for the Official Notice of Inspection Report (NOI) issued on 1/26/17.

CAL000350853 is active. Facility generates liquid and solid petroleum contaminated wastes typical of a gas station. One 55 gallon steel drum for each waste stream is located inside the dumpster enclosure. Markings on gasoline filters inside the fuel dispensers indicate that filter changes occurred on 12/13/2019 and 6/15/2019. ACTION ITEMS: 1. Correct all violations noted above and submit documentation of corrective actions taken as soon as possible (see last page of this report for instructions). 2. Ensure that all hazardous wastes shipped to Crosby & Overton in Long Beach (or other facilities located more than 200 miles away from this facility) are shipped within 270 days of their accumulation start date. If disposal facilities 200 miles away or closer are used, the accumulation time limit is 180 days. 3. Keep copies of all hazardous waste records transportation/disposal records on-site [Truncated]

Eval Notes: Inspection to witness every-36-month testing of underground storage tank (UST) system secondary containment components by UST Service Technician Michael A. (Tony) McCarter of Able Maintenance, Inc. Mr. McCarter has current ICC California UST Service Technician certification (exp. 10/25/2019) and Franklin Fueling Systems Incon Level 4 (TS-STS Sump Test System) certification (exp. 9/24/2020). The tanks are double-wall fiberglass tanks manufactured by Xerxes. They are exempt from periodic secondary containment testing since the annular spaces are hydrostatically monitored. The UDC sumps are single-wall fiberglass reinforced plastic (FRP) sumps. Hydrostatic testing of the UDC sumps was done with water levels above the highest plumbing penetrations using the Incon TS-STS accelerated hydrostatic testing apparatus. All 7 sumps passed. Testing of remaining components was still undergoing setup at the end of this inspection. Product piping is double-wall Red Thread FRP [Truncated]

Eval Notes: On site to witness triennial overfill prevention equipment inspection performed by Marcus Garcia of Service Station Systems. Mr. Garcia has current ICC UST Service Technician (exp 05/21/23) and OPW UST EVR (exp 03/26/23) certifications. OPW 71SO overfill prevention valves were removed from fill risers and visually inspected. Floats were observed to move freely and restrict flow when lifted. Shutoff heights were determined using OPW Appendix B worksheet and 15,000-gallon Xerxes 10' diameter DWT-II tank chart. Based on measurements and calculations, valves are set to restrict flow at the following heights and pass: 15,000-gallon Regular UST: 102.5" (93.28%) 15,000-gallon Premium UST: 102.75" (93.45%) USTs are not equipped with ball floats and was verified by service technician during initial overfill prevention equipment inspection. Submit results for today's testing to this department within 30 days.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site ID: 421739
Site Name: 0825 Kelly Moore Paint Company
Violation Date: 03-04-2020
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1
Violation Description: Failure to provide a copy of the business plan to the owner or the owner's agent within five working days after receiving a request for a copy from the owner or the owner's agent.
Violation Notes: Returned to compliance on 03/05/2020. According to Mr. Rosas, the business leases the property from a property owner. Mr. Rosas was unsure if a property owner notification has been sent notifying the property owner that the facility is subject to and in compliance with all HMBP requirements, and was unable to provide a copy of a submitted notification at the time of this inspection. Notify the property owner in writing that the facility is subject to and in compliance with HMBP requirements, retain a copy on-site and provide a copy to our office for review.
Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 421739
Site Name: 0825 Kelly Moore Paint Company
Violation Date: 06-29-2017
Citation: Un-Specified
Violation Description: Hazardous Waste Generator Program - Administration/Documentation - General Local Ordinance
Violation Notes: Returned to compliance on 08/23/2017. Business generates hazardous waste and is currently operating without a valid Hazardous Waste Generator permit from our office. Upon receipt of payment of permit fees, the permit will be issued and mailed to the facility mailing address.

Violation Source: CERS,

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-07-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: State ID number CAL000393600 is active. Facility generates small amounts of purge waste from mixing tank. Waste is collected in 1 gal cans. Most recent manifest was from 11-27-17. Mistints at this location are generally sold to a third party and are shipped out to a company identified as "GDB" for recycling and/or reuse. GDB pays both for the paint and the shipping demonstrating that the paints still retain value. Mistints include mis-tinted paint, older unsold paint,

and paint which has been discontinued by the company or store. NOTE: Facility is eligible to participate in the County's hazardous waste disposal program for small businesses (<100kg/mo RCRA waste). To participate, go to HHW.ORG. ****FOLLOW-UP REQUIRED**** Provide additional information regarding how mistints may be recycled or reused by GDM. Are the paints used "as-is" for their intended purpose or are they reclaimed and reformulated? If claiming mistints to be an excluded recyclable material [Truncated]

Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-04-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On-site to conduct a routine hazardous waste generator inspection.

Facility is a paint retail store that generates small amounts of purge waste from the paint mixing machine. Purge waste is collected in 1 gal metal cans near the Accutint paint mixer, marked as the Satellite Accumulation Area. When full, the 1 gal can is transferred to the Hazardous Waste Storage Area and marked with the date that the container was filled. Facility also collects empty tint/colorant containers in cubic yard boxes and manages the containers as hazardous waste. Facility accepts PaintCare wastes from the public during business hours, and staff are required to examine all waste to determine if it is eligible for disposal through PaintCare. All wastes that are not PaintCare eligible are rejected by facility personnel. According to Mr. Rosas, night drop-offs have not occurred at this location and so management of non-PaintCare wastes has not been an issue for this facility. Facility conducts [Truncated]

Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-04-2020
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site to conduct a routine Hazardous Materials Business Plan (HMBP)

inspection. Facility is a retail paint supply store. A majority of the inventory stored on-site is intended for retail sale to the general public and is exempt from HMBP reporting requirements. Facility stores paint tint/colorant that is used in the paint mixing machine that is not intended for sale to the general public. The most recent HMBP submittal that occurred on 9/13/19 indicated storage of 150 gal of CCA Tint. Observed ~40 gal of CCA Tint on-site during this inspection. Mr. Rosas and Mrs. Utt stated that inventory of tint may fluctuate throughout the year. Notes: CERS ID: 10672324 Facility's most recent HMBP submittal was submitted on 9/13/19 and was accepted by Santa Clara County DEH Staff Most recent HMBP was available on-site for review Training logs for monthly safety trainings are kept in a binder for three years. Observed monthly training topics included fire evacuation and [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-07-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Facility most recent electronic submission of the hazardous materials business plan performed on 7-12-17. Reported items include 150 gallons of paint tints. Kelly Moore has stated that this waste is not part of paint care and therefore 25507(a)(4)(B) CA HSC exemption does not apply. At this time, EH&S coordinator, Janet Bailey, has indicated that Kelly Moore does not believe the material to be a simple irritant/sensitive that is subject to a higher reporting threshold of 550 gallons. Other inventory observed on-site at 55 gallons or more was all saleable and exempt per 25507(b)(5) that indicates hazardous material in consumer product, handled at and found in retail establishments and intended for sale to, and for use by, the public, is exempt from reporting requirements. Observed less than 55 gallons of mistints on-site at time of inspection. Facility does not currently have a permit but EH&S coordinator, Janet Bailey, has indicated that they want a hazardous [Truncated]

Environmental Interest/Information System:
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS Description: Chemical Storage Facilities

Violations:

Site ID: 104941
Site Name: CHEVRON STATION #92060
Violation Date: 01-27-2021
Citation: HSC 6.7 25290.1(e) - California Health and Safety Code, Chapter 6.7, Section(s) 25290.1(e)
Violation Description: Failure to maintain the interstitial space such that a breach in the primary or secondary containment is detected before the liquid or vapor phase of the hazardous substance stored in the UST tank is released into the environment, i.e., vapor, pressure, hydrostatic (VPH) monitoring.
Violation Notes: Returned to compliance on 02/26/2021. S9 vacuum sensor replace was unable to detect a no vacuum alarm. This vacuum portion of this sensor was replaced like for like. The service technician retested and this functioned as required. No further action needed.
Violation Division: Santa Clara County Environmental Health
Violation Program: UST
Violation Source: CERS,

Site ID: 104941
Site Name: CHEVRON STATION #92060
Violation Date: 01-16-2020
Citation: 23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)
Violation Description: Failure of leak detection equipment to be located such that equipment is capable of detecting a leak at the earliest possible opportunity.
Violation Notes: Returned to compliance on 01/16/2020. Liquid sensor within the fill sump of the diesel tank (VPH system) did not alarm upon immersion in water. Sensor was replaced during inspection and shown to work as designed. NO CORRECTIVE ACTIONS REQUIRED.
Violation Division: Santa Clara County Environmental Health
Violation Program: UST
Violation Source: CERS,

Site ID: 104941
Site Name: CHEVRON STATION #92060
Violation Date: 01-16-2018
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description: Failure to comply with one or more of the following: Failure to install or maintain a liquid-tight spill bucket. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container. Be resistant to galvanic corrosion.
Violation Notes: Returned to compliance on 01/16/2018. The spill bucket for Tank T2 REGULAR (Southernmost tank) failed hydrostatic testing today (it appears to be leaking into the drop tube via the drain valve). Disregard the directive to cease tank filling, below. Repair the leaking drain valve and retest the bucket. No repair permit is required unless the bucket itself is replaced.

Violation Date: 04-05-2018
Citation: 23 CCR 16 2638(d) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2638(d)
Violation Description: Failure to submit the Annual Monitoring System Certification Form to the UPA within 30 days of completion of the test.
Violation Notes: Returned to compliance on 04/05/2018. Monitoring System Certification form documenting testing of line leak detectors on 1/22/2018 has not yet been submitted to HMCD.
Violation Division: Santa Clara County Environmental Health
Violation Program: UST
Violation Source: CERS,

Site ID: 104941
Site Name: CHEVRON STATION #92060
Violation Date: 01-16-2018
Citation: HSC 6.7 25290.1(d) - California Health and Safety Code, Chapter 6.7, Section(s) 25290.1(d)
Violation Description: Failure of a UST system installed on or after July 1, 2004 to be designed and constructed with a monitoring system capable of detecting the entry of the liquid or vapor-phase of the hazardous substance stored in the primary containment into the secondary containment and capable of detecting water intrusion into the secondary containment.
Violation Notes: Returned to compliance on 03/08/2018. Flexible vacuum supply tubing for the Diesel tank Vent Line secondary pipe and Diesel Fill Sump annular space runs within a double-wall fiberglass chase pipe running between the vacuum source in the Diesel tank STP Sump and the Fill Sump. The primary chase pipe is open to the two sumps. Secondary containment for the chase pipe is not monitored. Obtain a UST Minor Retrofit permit from HMCD and correct this deficiency as soon as possible. [Note: It is recommended that the existing tubing in the chase pipe be removed, that vacuum be transmitted between the two sumps via the secondary chase pipe, and that the Vent Pipe secondary containment be supplied with vacuum in series with the Vacuum Chase pipe. That will allow vacuum communication throughout the entire run to be easily verified at the Vent Sump.]
Violation Division: Santa Clara County Environmental Health
Violation Program: UST
Violation Source: CERS,

Site ID: 104941
Site Name: CHEVRON STATION #92060
Violation Date: 01-16-2020
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes: Returned to compliance on 03/11/2020. Spill bucket on Tank 1 (87) had visual leakage from the drain valve, but the valve could not be repaired/replaced to ensure only source of loss during testing. PLEASE

Violation Source: CERS,

Site ID: 104941
Site Name: CHEVRON STATION #92060
Violation Date: 01-16-2018
Citation: 23 CCR 16 2715(i) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(i)
Violation Description: Failure to have a properly qualified service technician test leak detection equipment as required every 12 months (vapor, pressure, hydrostatic (VPH) system, sensors, line-leak detectors (LLD), automatic tank gauge (ATG), etc.).
Violation Notes: Returned to compliance on 03/08/2018. Annual certification of monitoring containment must include verification of both functionality and interstitial communication. Solid plugs are glued into the ends of the flexible tubing installed at the bottoms of the Diesel Tank Vent Sump and under dispenser containment (UDC) sumps for Dispensers 9/10 and 11/12, so there is no way to confirm vacuum communication within those 3 sumps. Tanknology did not remove the plugs today because there was no way to reseal the vacuum zones with the equipment on-hand. Include in the scope of work for the minor retrofit permit described above removal of the plugs and installation of vacuum release valves so interstitial communication can be verified annually.

Site Name: CHEVRON STATION #92060
Violation Date: 01-16-2018
Citation: HSC 6.7 25293 - California Health and Safety Code, Chapter 6.7, Section(s) 25293

Violation Description: Failure to maintain UST records of monitoring, testing, repairing, and closure in sufficient detail to enable the UPA to determine whether the UST systems are in compliance.

Violation Notes: Returned to compliance on 04/05/2018. Training of facility employees occurred this month and is documented, but on the list of employees trained, the DUSTO mistakenly noted the year the training was provided as 2017 rather than 2018. Have the DUSTO correct the training record during their next site visit.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-24-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Jarrod Cooke (certifications current) of Tanknology. Site consists of 3 gasoline tanks (87x2, 91) and a diesel tank. The gasoline tanks are pre-VPH and the diesel and connected dispensers are VPH monitored. The annular, dispenser and sump (fill, piping and VPH vent containment) sensors were tested in water and provided audible and visible alarms. The turbine sump and dispenser sensors provided positive shutdown of the turbines. The diesel tank has a wet annular and High and Low liquid were simulated and triggered audible and visible alarms. The vacuum sensors for the product line and dispensers, vent line and vent sump, and STP sump annular were tested and provided audible and visible alarms. Valves and gages are installed in the vent sump, dispensers and piping sump for verification of communication. Sensor out and power out (fail safe) triggered positive shutdown [Truncated]

Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: Follow up to 1/16/2018 underground storage tank (UST) annual compliance inspection. Minor retrofit of underground storage tank (UST) secondary containment has been completed. Vacuum zone interstitial communication can now be verified during annual monitoring system certification testing. Diesel tank underground vacuum Chase Pipe is now monitored in accordance with Health and Safety Code 25290.1(d). Flexible vacuum supply tubing for the Diesel Vent Line still runs within the primary Chase Pipe running between the vacuum source in the Diesel tank submersible turbine pump (STP) Sump and the Fill Sump, where the tubing connects to the Diesel Vent Line secondary pipe. A new 5-way vacuum manifold has been installed within the Diesel Vent Transition Sump. The manifold has a valved connection to flexible tubing connected to the secondary Diesel Vent Line (vacuum supply), valved outlets to flexible lines connected to the sump's upper and lower interstitial connection 2 valved [Truncated]

Violation Date: 07-15-2015
Citation: 22 CCR 15 66265.192(k) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(k)
Violation Description: Failure of the new hazardous waste tank assessment to include all of the following information: 1) Tank configuration (i.e., horizontal, vertical), material of construction, and gross capacity (in gallons); 2) Design standard(s), if available, according to which the tank and ancillary equipment were or will be constructed and all of the following information: A) Material of construction; B) material thickness and the method used to determine the thickness; C) description of tank system piping (material, diameter); D) description of any internal and external pumps; and E) sketch or drawing of tank including dimensions. 3) Documented age of the tank system (if tank was previously used), if available, (otherwise, an estimate of the age); 4) Description and evaluation of any leak detection equipment; 5) Description and evaluation of any corrosion protection equipment, devices, or material; 6) Description and evaluation of any spill prevention or overfill equipment; 7) Description and evaluation of secondary containment for the tank system (secondary containment must meet minimum standards as specified in subsections (j)(1) through (j)(3) of this section) including applicable secondary containment for ancillary equipment as required in subsection 66265.193(f); 8) Hazardous characteristics of the waste(s) that have been or will be handled; 9) Prior to placing a new tank system or component in use, an independent, qualified installation inspector or an independent, qualified, professional engineer, registered in California, either of whom is trained and experienced in the proper installation of tank systems, shall inspect the system or component for the presence of any of the following items and document in writing the results of the inspection: A) Weld cracks or breaks; B) scrapes of protective coatings; C) corrosion; D) any structural damage or inadequate construction or installation such as cracks, punctures, damaged fittings. All discrepancies shall be documented in the assessment and remedied before the tank system

Violation Notes:

Two used oil tanks and two waste antifreeze tanks have not had integrity and containment assessments conducted. Facility did have application (un-approved) for exemption dated 6/2010 (form was signed by Co. Fire personnel noting approval of installation).

Violation Description: Failure to comply with general tank operating requirements: (a) Hazardous wastes or treatment reagents shall not be placed in a tank system if they could cause the tank , its ancillary equipment, or the secondary containment system to rupture, leak, corrode, or otherwise fail;. (b) The owner or operator shall use appropriate controls and practices to prevent spills and overflows from tank or secondary containment systems. These include at a minimum: (1) spill prevention controls (e.g., check valves, dry discount couplings); (2) overflow prevention controls (e.g., level sensing devices, high level alarms, automatic feed cutoff, or bypass to a standby tank); and (3) maintenance of sufficient freeboard in uncovered tanks to prevent overtopping by wave or wind action or by precipitation. Uncovered tanks shall be operated to ensure at least 60 centimeters (2 feet) of freeboard, unless the tank is equipped with a containment structure (e.g., standby tank with a capacity that equals or exceeds the volume of the top 60 centimeters (2 feet) of the tank).
Violation Notes: Used oil tank (b) and both antifreeze tanks do not have any overflow prevention controls.

Eval Type: Routine done by local agency
Eval Notes: Facility is express oil change facility with tanks for waste oil and waste antifreeze and drums for filters. Used oil tanks are double walled with overfill and secondary containment monitoring (in working order) Antifreeze tanks are single walled poly tanks with no overfill. Rely on basement area with no floor drains as containment. Per Mr. Dela Cruz, floor mop water is placed in antifreeze waste container. --Did note two mop buckets (1 each up and down stairs) with oily sheen on liquid in bucket. Upstairs mop stored adjacent to janitor's sink (on floor) which is tied to municipal sewer. Rags are stored in step cans and laundered commercially. Fire extinguishers last serviced 4/14/15. Eyewash in basement tested and found to be in good working order. Noted absorptive materials contaminated with used oil but no container in which to dispose of them. **STRONGLY RECOMMEND USING ONE OF THE DRUMS PROVIDED FOR FILTERS TO STORE ABSORBTIVE MATERIALS (CARDBOARD, PADS) AS WELL [Truncated]**

Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-11-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: California ID CAL000421057 Facility is vehicle maintenance/fluid service site generating used oil, used antifreeze, empty containers >5 gal, oil contaminated non-cased filters, metal cased used oil filters. Oil to 1 of 2 500 gallon double walled steel tanks located in "pit" area. Tanks are institially monitored and one tank has a visual overfill guage. Antifreeze to one of two double walled 200 gal poly tanks. No overfill indicators on tanks. Gravity fed from upper bay. Filters are segregated to drums marked for cased and uncased after draining on screens and sorting to buckets on catwalks. Inner liners of 6 gallon EcoBox containers are placed in 55 gallon drum ans managed as "oily debris" Floors and tank tops/catwalks are mopped as needed, with waste added to antifreeze tanks since mixed antifreeze, water and oil. Rags serviced by Cintas - Observed a number of saturated rags, under stairs to catwalk and in trash can in pit. Noted seepage of oil from under to [Truncated]

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Notes: generator knowledge or applying testing method.
Returned to compliance on 12/12/2017. Facility uses Super Clean Degreaser to mop and clean shop floors. Mop water is disposed of to the sanitary sewer. pH of the mop water (at liquid surface) at time of inspection was approximately 12.5-13 (according to two different style test strips). Safety Data Sheet indicates this product has a pH between 12.5 and 13.8. Product is diluted prior to use. Manage any pH liquid 12.5 or higher as a hazardous waste (not eligible for sewer disposal).

Violation Date: 04-21-2021
Citation: 22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7
Violation Description: Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.
Violation Notes: Facility is currently accumulating empty ~20 gallon containers that previously held hazardous materials behind hazardous waste accumulation are without clear indication of how long they have been stored. Properly label each empty hazardous material/waste container larger than 5 gallons in capacity or manage it by having it reconditioned, recycled, or reclaimed for its scrap value, or by returning it to the supplier to be refilled.

Site ID: 108374
Site Name: COUNTRY AUTOMOTIVE
Violation Date: 10-30-2017
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Hazardous Waste Generator Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 12/12/2017. Contamination of Used Oil Fuel filters are emptied into the used oil prior to managing the metal filter as a drained used gas filter. It was estimated that 1 fuel filter is replaced each week on average. Per 25250.7 (a) of the California Health and Safety Code, "...no person who generates, stores, or transfers used oil shall intentionally contaminate used oil with other hazardous waste other than minimal amounts of vehicle fuel." Minimal amounts of vehicle fuel refers to contamination via engine "blow-by", whereas fuel can be forced through the rings and into the crankcase. Immediately cease addition of non-oil hazardous waste to the used oil collection containers.

Site Name: TWIN GLASS INDUSTRIES INC.
Violation Date: 01-30-2018
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Observed 24- 5 gal sized containers of glass cutting sludge and oil/water open on the concrete outside for purpose of evaporating off liquids to dispose of solids in municipal trash. Determine if buckets contain regulated hazardous waste. Additionally, the acid is used to strip wafers that may contain chromium (and state regulated metals such as nickel, cobalt, copper) however the land disposal restriction (LDR) does not indicate a presence of chromium. Determine if the chromium is present in the acid waste at greater than 5mg/l TCLP (federal leaching test). Generator may exercise caution and place waste code on LDR in lieu of performing laboratory testing.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 163936
Site Name: TWIN GLASS INDUSTRIES INC.
Violation Date: 01-30-2018
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1
Violation Description: Failure to provide a copy of the business plan to the owner or the owner's agent within five working days after receiving a request for a copy from the owner or the owner's agent.
Violation Notes: Facility has not notified landlord in writing.

S109432821

Violation Description: Failure to separate incompatible wastes from the same container, nearby containers, or unwashed containers which previously contained incompatible waste or materials.

Violation Notes: Observed the storage of a 500 ml bottle of 69% nitric acid being stored next to organic materials/wastes including power steering fluid, lubricating oil, and paints. Owner planning to dispose of old items in this cabinet. Owner relocated the 69% nitric to a different cabinet where it doesn't share secondary containment with any other chemicals. NO FURTHER ACTION REQUIRED. Additionally, a 1 gal plastic jug with original marking indicating contents to be "hydrogen chloride" stored next to 2 large bags of baking soda. Baking soda removed from cabinet. NO FURTHER ACTION REQUIRED.

Violation Date: 01-30-2018
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174

Violation Description: Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.

Violation Notes: Weekly inspections of hazardous waste containers is not being performed. Owner reported to have hired an individual who will begin performing these inspections.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 163936
Site Name: TWIN GLASS INDUSTRIES INC.
Violation Date: 01-30-2018
Citation: 22 CCR 12 66262.23(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.23(a)

Violation Description: Failure to properly complete the Uniform Hazardous Waste Manifest.

Violation Notes: Manifest #003434498GBF indicated a technical name of "hydrochloric acid" when the actual waste being shipped on this line item consisted of hydrofluoric acid (as indicated in box 14 in profile information). 49 CFR 172.203 (k) requires the use of a technical name if the proper shipping name is identified by the letter G in column (1) of 172.101. If the waste stream contained both hydrofluoric acid and hydrochloric acid then the technical names of at least two components most predominately contributing to the hazards of the mixture or solution must be entered on the shipping paper 49 CFR 172.203 (k).

Violation Notes: safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Returned to compliance on 01/12/2018. Facility employees are not trained annually and annual documented training is not available. Ensure employees are training annually as it relates to a release or threatened release of a hazardous material (eg. used oil) and ensure training is documented annually.

Violation Division: Santa Clara County Environmental Health

Site ID: 375245
Site Name: M & M AUTO CARE
Violation Date: 12-15-2017
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1

Violation Description: Failure to provide a copy of the business plan to the owner or the owner's agent within five working days after receiving a request for a copy from the owner or the owner's agent.

Violation Notes: Returned to compliance on 01/12/2018. Facility has not notified property owner in writing.

Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 375245
Site Name: M & M AUTO CARE
Violation Date: 12-15-2017
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple

Violation Description: Hazardous Waste Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General

Violation Notes: Returned to compliance on 01/12/2018. Contamination of Used Oil Fuel filters are emptied into the used oil prior to managing the metal filter as a drained used gas filter. Per 25250.7 (a) of the California Health and Safety Code, "...no person who generates, stores, or transfers used oil shall intentionally contaminate used oil with other hazardous waste other than minimal amounts of vehicle fuel." Minimal amounts of vehicle fuel refers to contamination via engine "blow-by", whereas fuel can be forced through the rings and into the crankcase. Immediately cease addition of non-oil hazardous waste to the used oil collection containers.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 375245

CERS HAZ WASTE:
Name: RENTERIA BROTHERS CUSTOM SHOP
Address: 16870 JOLEEN WY 7B
City,State,Zip: MORGAN HILL, CA 95037
Site ID: 147473
CERS ID: 10347190
CERS Description: Hazardous Waste Generator

Violations:

Site ID: 147473
Site Name: RENTERIA BROTHERS CUSTOM SHOP
Violation Date: 11-27-2017
Citation: 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)
Violation Description: Failure to keep records of any test results, waste analyses, or other determinations made in accordance with section 66262.11 for at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal.
Violation Notes: Returned to compliance on 12/18/2017. Owner indicated that spent spray booth filters have been tested in the past by Sequoia laboratories and determined to be non hazardous but does not have the documentation any longer. Last test was estimated to be performed 15 years ago.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-27-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility performs autobody repair and generates the following waste streams: Thinner waste from gun cleaning - managed as hazardous waste. Waterborne paint waste - managed as hazardous waste. Solvent paint waste - managed as hazardous waste. Spent spray booth filters - managed as non hazardous waste. No analytical available. EPA ID #CAD121378319 is active. Disposal receipts reviewed for past 3 years. Owner stated that no used oil or antifreeze is collected. Since only minor dents and repairs are performed, owner indicates more damaged vehicles with leaking fluids would be managed by a different autobody with more repair capabilities. Do not accumulate hazardous waste for longer than: 1 year (under satellite accumulation - at or near the point of generation and under control of the operator) OR 6 months from the time you accumulate over 100kgs (~27 gal). Up to 100kgs may be accumulated indefinitely. The following minor violations were corrected at time [Truncated]

CERS Description: Hazardous Waste Generator

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-29-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Facility performs rebuilding of engines and custom engine work. Waste streams include but are not limited to: Engine Degreasing waste - Manage as hazardous waste or perform laboratory testing demonstrating it is not hazardous. Parts Cleaning solvent waste - Manage as hazardous waste or perform laboratory testing demonstrating it is not hazardous. Beadblast media waste - Manage as hazardous waste or perform laboratory testing demonstrating it is not hazardous. Metal machining waste - Manage as scrap metal or hazardous waste. Used oil - Manage as hazardous waste or perform laboratory testing demonstrating it is not hazardous. Owner has stated to manage all above as hazardous waste, except for metal waste which is managed as scrap metal. Owner generates small amounts of hazardous waste and has historically used the County's hazardous waste disposal program for small businesses or the Recology transfer station. No receipts available. Violation Date: 01-30-2018
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1
Violation Description: Failure to provide a copy of the business plan to the owner or the owner's agent within five working days after receiving a request for a copy from the owner or the owner's agent.
Violation Notes: Returned to compliance on 02/02/2018. Property owner has not been notified in writing.
Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 26919
Site Name: E & S MACHINING
Violation Date: 01-30-2018
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description: Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes: Returned to compliance on 02/02/2018. Secondary containment of waste coolant/oil is approximately 2-4 inches full of an unknown liquid that appears to be oil/coolant. As a consequence, facility is unable to perform complete weekly inspections of containers, looking for leaks or deterioration. MAINTAIN SECONDARY CONTAINMENT DRY AT ALL TIMES SO ANY LEAK FROM A WASTE DRUM CAN BE DETECTED AT EARLIEST OPPORTUNITY DURING WEEKLY INSPECTIONS.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-30-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility last electronically submitted a complete and accurate hazardous materials business plan on 10-10-2017.
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-30-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility performs machining of metal parts primarily consisting of aluminum. CNC machines are flood cooled and no high pressure units (that would require micron filtration of metals). Deburring is usually manually performed and on occasion a tumbler is utilized. Waste streams generated on-site include but are not limited to: Used coolant with oil Tumbling waste water Parts washer waste ACTION REQUIRED: WITHIN 30 DAYS, PROVIDE TO THE COUNTY THE MOST RECENT HAZARDOUS WASTE PICKUP DISPOSAL RECEIPTS FOR THE PAST 3 YEARS.

Violation Date: 11-27-2017
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 12/29/2017. The following containers of hazardous waste were unmarked or insufficiently marked: 2x15 gal waste gasoline - no marking. 3x55 gal used oil - blank/faded/illegible hazardous waste marking. 1x55 gal used coolant - blank/faded/illegible hazardous waste marking. 5x20 gal mobile oil dollies - no marking. REPEAT VIOLATION FROM LAST INSPECTION ON 4-25-2012. 1x5 gal bucket of parts washer sludge - no marking.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 119294
Site Name: GEORGE'S AUTO SERVICE
Violation Date: 11-27-2017
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Hazardous Waste Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General
Violation Notes: Returned to compliance on 12/29/2017. Contamination of Used Oil Fuel filters are emptied into the used oil prior to managing the metal filter as a drained used gas filter. Per 25250.7 (a) of the California Health and Safety Code, "...no person who generates, stores, or transfers used oil shall intentionally contaminate used oil with other hazardous waste other than minimal amounts of vehicle fuel." Minimal amounts of vehicle fuel refers to contamination via engine "blow-by", whereas fuel can be forced through the rings and into the crankcase. Immediately cease addition of non-oil hazardous waste to the used oil collection containers.

Site Name: FRED'S EUROPEAN/ASIAN AUTO
Violation Date: 02-15-2018
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple

Violation Description: Hazardous Waste Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General

Violation Notes: Returned to compliance on 04/03/2018. CONTAMINATION OF USED OIL Fuel filters have been emptied into the used oil prior to managing the metal filter as a drained used gas filter. Per 25250.7 (a) of the California Health and Safety Code, "...no person who generates, stores, or transfers used oil shall intentionally contaminate used oil with other hazardous waste other than minimal amounts of vehicle fuel." Minimal amounts of vehicle fuel refers to contamination via engine "blow-by", whereas fuel can be forced through the rings and into the crankcase. Immediately cease addition of non-oil hazardous waste to the used oil collection containers.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-12-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Conducted a hazardous waste inspection with Tim Altamirano. Inspected all service bays and staging area of customer's vehicles. Mr. Altamirano stated that his technicians have recently done touch-up painting using store bought spray paint. Mr. Altamirano showed me a recent touch-up on an RV and the touch-up area measured 1-ft x 2-ft. Due to recent visits by the City of Morgan Hill the practice of doing any touch-up painting has ceased. However, the facility does use when requested by customers a 2-part liquid rubber sealant that is applied to the roofs of RVs as a weather-proofing repair. Mr. Altamirano showed me the process and due to the cost of the product (Liquid Roof) only a pre-measured amount of Part-A and Part- B is used. The entire volume is consumed during the repair. The container volume of Liquid Roof observed were 1-gallon and 5-gallon. A 5-gallon container was mixed and ready to apply during my visit. The mixed product did have a slight "solvent" odor [Truncated]

Violation Date: 08-06-2021
Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16

Violation Description: Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

Violation Notes: Returned to compliance on 08/20/2021. Mr. Miramontes indicated that hazardous waste training is provided electronically. Records of this training which include the requirements listed below were unavailable for review at the time of inspection. Within 30 days, provide documentation of this training to our office for review. Ensure training records are made available for inspection for at least 3 years.

portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 08/20/2021. The treated wood waste bin located in the exterior lot is marked with incorrect generator information and is missing the accumulation start date. The generator listed is Home Depot #HD0657 in San Rafael, CA, with EPA ID: CAR000168278. Within 30 days, ensure the bin is marked with the correct information and accumulation start date.

Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-06-2021
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site to perform a routine Hazardous Waste Generator inspection. Home Depot generates hazardous waste from broken/ damaged items as well as ancillary activities within the store in the paint, plumbing, garden, and receiving areas. A walk-through of the facility was conducted with Store Manager, Angel Miramontes. Noted the following: FRONT OF STORE - A drop-off location next to the entrance accepts household batteries and bulbs from the public. According to Mr. Miramontes, they do not accept fluorescent tubes/ lamps but they are still sometimes dropped off. All bulbs/ tubes/ lamps and batteries are brought to the receiving area to be managed as universal waste. Broken items are bagged first, prior to placement in the universal waste drum. PLUMBING AISLE - An employee operates a small station in this aisle that cuts plumbing pipes. Cutting oil is used in this process. Rags are used to clean up the residual oil and grindings and brought

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:

Site ID: 114485
Site Name: EMTEC ENGINEERING
Violation Date: 01-18-2018
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 03/14/2018. Observed 2x55 gal containers of scrap metal turnings in damaged metal drums with coolant waste leaking out the bottom. Clean up spills and only use drums that can contain any free liquid. Additionally, the floor of the waste storage area has been covered with significant volume of absorbent that the GM indicated is there to absorb water from rainfall. There is evidence of some saturated absorbent and oil contaminated absorbent. Remove absorbent immediately once it has been used and maintain the floor clear of any debris or absorbent that could cover the presence of a leak. Absorbent may be used repeatedly until it can no longer perform its function.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 114485
Site Name: EMTEC ENGINEERING
Violation Date: 01-18-2018
Citation: HSC 6.5 25189.5(a),25201(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25189.5(a),25201(a)
Violation Description: Failure to dispose of hazardous waste at a facility which has a permit from DTSC or disposing of hazardous waste at any point which is not authorized according to HSC 6.5.
Violation Notes: Returned to compliance on 03/14/2018. Observed significant amounts of aluminum scrap and turnings disposed of in the municipal trash dumpster. Additionally observed some scrap aluminum disposed of in a trash barrel. A review of all aluminum mill certificates indicate the percentages of copper ranging from 0.28 (2800ppm) to .31 (3100ppm). If not recycled as scrap metal, these wastes meet hazardous waste criteria for copper (2500 mg/kg or greater).
Violation Division: Santa Clara County Environmental Health

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violation Notes: Returned to compliance on 10/01/2018. A Hazardous Materials Business Plan (HMBP) is required to be electronically submitted within 30 days via the California Environmental Reporting System (CERS) at cers.calepa.ca.gov or Santa Clara County FrontCounter at frontcounter.sccgov.org. Refer to the list of State-reportable hazardous materials in the Comments section below to be reported on your inventory. For assistance with this, please contact Lead Hazardous Materials Technician, Yoni Fajardo, at yonifajardo@cep.sccgov.org or 408-918-1966.

Violation Date: 09-05-2018
Citation: HSC 6.5 25250.7(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25250.7(a)

Violation Description: Failure to prevent intentional contamination of used oil with other hazardous waste other than minimal amounts of vehicle fuel.

Violation Notes: Returned to compliance on 10/01/2018. Mr. Hiland stated that the brake fluid accumulated in the evacuator was brake fluid that would be emptied into the used oil drum. Brake fluid must be managed as a separate hazardous waste stream and NOT combined with used oil.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 53832
Site Name: ON THE ROAD AGAIN
Violation Date: 09-05-2018
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31

Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violation Notes: Returned to compliance on 10/01/2018. Observed liquid that appeared to be used oil in the secondary containment of the waste oil, waste coolant, and waste gasoline storage.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 53832
Site Name: ON THE ROAD AGAIN
Violation Date: 09-05-2018
Citation: 22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7

Violation Description: Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22

Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-05-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site with Ray Maiden of HMCD to conduct a routine Hazardous Materials Business Plan (HMBP) inspection. On the Road Again Classics does restoration and service on classic and British automobiles. Consent for a facility walk-through was granted by Project Manager, Janusz Rudawski. Also present during the walk-through was CEO William Hiland and Business Manager, Rachel Hill. The following hazardous materials were observed at or above HMBP State-reportable thresholds: 1) Used Oil: 1 x 55 gal drum + 1 x 15 gal roller 2) Used Coolant: 1 x 55 gal drum 3) Used Gasoline: 1 x 55 gal drum The following materials were also observed, below State-reportable thresholds: - oxygen - acetylene - argon - argon/ carbon dioxide - new oil (1 x 55 gal drum, observed as empty during inspection) - misc. paints - used oil filters
Note: - Observed 1 x 55 gal empty steel drum that previously held new

Eval General Type: Other/Unknown
Eval Date: 09-19-2018
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: On-site with Matthew Burge of HMCD to review hazardous waste disposal records. Routine Hazardous Waste Generator inspection was conducted 9/5/2018. Disposal receipts for 2018, 2017, and 2016 were reviewed. Based on records review, business is more often than not, a Conditionally Exempt Small Quantity Generator (CESQG). Waste gasoline is sporadically generated. Business Manager, Rachel Hill, also stated that they intend to downsize to 30-gal hazardous waste drums.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: "Failure to prepare an SPCC Plan which fulfills all basic requirements that include: 1. The SPCC Plan must be prepared in accordance with good engineering practices. 2. Have full approval of management at a level of authority to commit the necessary resources to fully implement the SPCC Plan. 3. Prepare the SPCC Plan in writing. 4. Follow the sequence of the SPCC rule or include a cross-reference. 5. If the SPCC Plan calls for additional procedures, methods, or equipment not yet fully operational, discuss the items in separate paragraphs."
Violation Notes: Although the facility qualifies to use a Tier I template they have elected to implement a full SPCC Plan. The plan present to me for inspection was not organized consistently with the Federal SPCC regulations; sections did not match-up.

Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11

Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violation Notes: The facility currently used a auto detailing product named H.D. Water Spot Remover; part number: 40955, manufactured by MOC Products Company, Inc. The product SDS states that the product contains hydrofluoric acid (10-20% by wt.). The auto detailing technician stated that he uses the chemical without diluting in water. The effluent is collected in a 3-stage oil/water separator before discharge to the sewer. The Soluble Threshold Limit Concentration (STLC) for Fluoride Salts is 180 mg/l. Waste liquid containing fluoride salts => 180 mg/l must be managed as hazardous waste. A discreet sample must be obtained from each of the chambers in the oil/water separator by December 8, 2017. The sampling must be witnessed by a representative from this office. Contact Ray Maiden at ray.maiden@cep.sccgov.org or at 408-918-1980 to witness the sampling. The facility has agreed to voluntarily stop using the HD Spot Remover until test results are known or hazardous waste management [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-21-2015
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Conducted a hazardous waste inspection of the facility. The site walk-through included the service bays and hazardous waste storage area. Present during the inspection were Augustina Stevens and Bill Kendrick. Operations at this site began in 2011. Tanks containing hazardous waste will be due for tank assessment in 2016. Document review included the following: --Uniform Hazardous Waste Manifests; all copies were matched with TSDf copy. --Consolidated Manifests for used oil, waste antifreeze, drained oil filters and used automotive batteries. --Training records for employees are kept electronically.

Eval Notes: Conducted an Aboveground Petroleum Storage Act (APSA) inspection. The site walk-through included all areas where petroleum is stored in containers/aboveground storage tanks \geq 55-gallons are stored. Present during the inspection were Augustina Stevens and Paul Cimoli. Confirmed the following container/tank volumes: ATF (DW-1): 240-gallon AST New Motor Oil (0w-20): 240-gallon AST New Motor Oil (5w-20): 240-gallon AST Waste Oil: 500-gallon AST New Motor Oil (5w-30):2-55-gallon drum Aggregate petroleum volume: 1,330-gallons. The SPCC Plan was certified by John Strandberg, PE-Chemical on 6/27/12. Site management approval was certified by Jill Pfeffee, Parts Manager on 8-30-12. The 5-yr review and evaluation was completed by Augustina Stevens, Group Compliance Coordinator on 10/24/17. The facility has elected to reduce the site's aggregate volume of petroleum stored in containers \geq 55-gallons to less than 1,320-gallons. This reduction will be achieved by [Truncated]

Eval Notes: On-site to witness the sampling of waste water that enters an oil/water separator that receives waste water from washing & prepping customer vehicles. Today's sampling was required by this office during the inspection conducted on 11/30/17. The sampler for today's sampling event was Kurt Soto from Catalyst Environmental. Mr. Soto obtained 2-grab samples (1-sample and 1-backup) from a floor drain catch basin. The sample was obtained by using a glass . A field pH was completed with a test result of ~6.0. The samples were sealed by Ray Maiden using evidence tape that bears the seal of the County. The samples were placed in a 5-gallon poly bucket containing ice and sealed with a spin-on lid. The samples were recorded on a chain of custody for total fluoride. Samples will be analyzed by Test America in Pleasanton, CA. Provide a copy of the test report within 30-days once the report it has been issued. Note: Mr Soto cleared the sampling protocol with Test America [Truncated]

Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violation Notes: The facility currently used a auto detailing product named H.D. Water Spot Remover; part number: 40955, manufactured by MOC Products Company, Inc. The product SDS states that the product contains hydrofluoric acid (10-20% by wt.). The auto detailing technician stated that he uses the chemical without diluting in water. The effluent is collected in a 3-stage oil/water separator before discharge to the sewer. The Soluble Threshold Limit Concentration (STLC) for Fluoride Salts is 180 mg/l. Waste liquid containing fluoride salts => 180 mg/l must be managed as hazardous waste. A discreet sample must be obtained from each of the chambers in the oil/water separator by December 8, 2017. The sampling must be witnessed by a representative from this office. Contact Ray Maiden at ray.maiden@cep.sccgov.org or at 408-918-1980 to witness the sampling. The facility has agreed to voluntarily stop using the HD Spot Remover until test results are known or hazardous waste management [Truncated]

Eval Notes: Conducted a hazardous waste inspection of the facility. The site walk-through included the service bays and hazardous waste storage area. Present during the inspection were Augustina Stevens and Bill Kendrick. Operations at this site began in 2011. Tanks containing hazardous waste will be due for tank assessment in 2016. Document review included the following: --Uniform Hazardous Waste Manifests; all copies were matched with TSDf copy. --Consolidated Manifests for used oil, waste antifreeze, drained oil filters and used automotive batteries. --Training records for employees are kept electronically. --Hazardous waste container weekly inspection logsheets. --Hazardous waste tank daily inspection logsheets. Facility's EPA ID Number is active. All areas inspected were free of spills and all tanks and containers and tanks were closed. All containers and waste storage tanks were labeled as required. Spill kits and fire extinguishers are available [Truncated]

Eval Notes: On-site to witness the sampling of waste water that enters an oil/water separator that receives waste water from washing & prepping customer vehicles. Today's sampling was required by this office during the inspection conducted on 11/30/17. The sampler for today's sampling event was Kurt Soto from Catalyst Environmental. Mr. Soto obtained 2-grab samples (1-sample and 1-backup) from a floor drain catch basin. The sample was obtained by using a glass . A field pH was completed with a test result of ~6.0. The samples were sealed by Ray Maiden using evidence tape that bears the seal of the County. The samples were placed in a 5-gallon poly bucket containing ice and sealed with a spin-on lid. The samples were recorded on a chain of custody for total fluoride. Samples will be analyzed by Test America in Pleasanton, CA. Provide a copy of the test report within 30-days once the report it has been issued. Note: Mr Soto cleared the sampling protocol with Test America [Truncated]

 Potential Media Affected: Soil
 Potential Contaminants of Concern: Lead
 Site History: Shallow soil sampling was conducted and lead was reported to be present at elevated concentrations around two existing residences on the property. There are also a garage and barn on the property, but samples did not report elevated lead around them. The property is to be subdivided for development of single family residences. The majority of the land was used for orchards with two residences and farm-related structures. Lead impacted soil around residences was

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 01/10/2000
Comments: Site screening approved by USEPA. No further action required under CERCLA. Post-removal concentrations of contaminants (lead, DDE, DDT, and dieldrin) were below CHHSLs.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 08/13/1996
Comments: Completed Site Screening. A variety of chemicals were present in non-hazardous levels (>TTLC) : arsenic to 91 ppm, chromium to 62 ppm, lead to 480 ppm, zinc to 190 ppm, and extractable hydrocarbons (motor oil) to 45,000 ppm. Pesticides including DDT and dieldrin are present below soluble limits. The former farm vacant, a large garbage pile, and auto painting wastes were reported on site. The buyer wants the seller to get a signoff from the City who in turn, referred the site to DTSC.

ASCO AIR CONDITIONING (Continued)

1000483007

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 07/01/1991
Comments: Though the operation process and waste handling practices at this site do not appear to be hazardous to human health and/or the environment, no verification has been conducted. The EPA's FIT program did not conduct a site reconnaissance visit to verify the facts. This fenced facility comprised of a single 20,000 sq ft warehouse building and asphalt pavement around it, was started in 1978 by James Price. Asco operates a business for sheet metal fabrication and servicing & installation of residential air conditioning units. Asco's operations involve a small quantity of hydrochloric acid (HCL), R-22 freon and generates lead scraps. The site was suspected to be a potential source of high levels of methylene chloride in site soils of Olin Corp., an adjacent site. Both a history of chemical usage and waste disposal practice at Asco have proved Asco to be harmless in the matter. Asco's location, process or waste management practice also do not appear to have potential of propagating contamination through groundwater, surface water, air or contact routes. The site is currently under the oversight of the City of Morgan Hill Fire Department with no involvement of the Regional Water Quality Control Board (RWQCB) or the Department.

Violations:

Site ID: 90952
Site Name: ALL SENSORS INC
Violation Date: 06-27-2016
Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Description: Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.
Violation Notes: Returned to compliance on 07/20/2016. The facility staff stated that personnel that manage hazardous waste have not received hazardous waste training.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 90952
Site Name: ALL SENSORS INC
Violation Date: 06-27-2016
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 07/20/2016. Ms. Bautista stated that the IPA waste that was accumulated in outside storage area has been on-site for more than 180-days.
Violation Division: Santa Clara County Environmental Health

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-27-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site to conduct a hazardous waste inspection with Vincent Nguyen and Ms. Vangie Bautista from All Sensors Corp. Reviewed disposal records for 2015, 2014, 2013. In 2015 the site generated 27-gallons of IPA waste, 2014 the site generated ~267lbs of hazardous waste and 2013 252lbs. A facility must not generate more than 225 lbs (100 kg) annually of hazardous in order to qualify for the CESQG program. Inspected the various work stations where hazardous materials are used and waste is collected. The solder stations were free of splattered solder. The site uses a Pace portable exhaust system for the solder pot in the re-flow room. The portable exhaust has an on board sensor to measure air flow. The unit's filter has an expected life expectancy of up to a year but maybe longer depending on usage. The spent exhaust filters are managed as hazardous waste. The site's emergency equipment: fire extinguishers, spill pads were available and in good

Completed Document Type: Operation and Maintenance Report
Completed Date: 06/19/2014
Comments: The Report summarizes the operation of the soil vapor extraction (SVE) system from October 1, 2013 to March 31, 2014. Rebound testing was conducted between January 28 and March 20, 2014 and verification sample results showed that the SVE inlet PCE concentrations exceeded the SVE system restart parameter of 200 micrograms per cubic meter. The SVE system was restarted on March 21, 2014.

Completed Document Type: Removal Action Workplan w/ESD
Completed Date: 10/02/2013
Comments: A French Cleaner has requested to modify the selected remedy for the A French Cleaner Site (Site) located at 650 Tennant Station, Morgan Hill, California. The modified remedy will not require the excavation of impacted soil from beneath the suite where the former dry cleaner operated as originally proposed in the RAW. Soil vapor extraction will be implemented at the Site as the primary cleanup action, rather than as a contingency cleanup action as outlined in the RAW. DTSC has determined that this is a significant, but not fundamental, change to the remedy as described in the RAW and has prepared and approved this Explanation of Significant Differences.

Completed Sub Area Name: Not reported
Completed Document Type: Well Decommissioning Workplan
Completed Date: 10/17/2016
Comments: The Work Plan describes the procedures to properly abandon the monitoring and soil vapor extraction wells and to remove the soil vapor extraction system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 08/08/2016
Comments: The Report details the results of the sub-slab and soil gas confirmation sampling that was performed to confirm that the PCE soil vapor concentrations at the Site are below the removal goals established in the Final Removal Action Workplan. PCE was not detected in the confirmation sub-slab and soil gas samples. Additionally, a significant reduction in the PCE concentrations in soil vapor extraction system influent has been observed since startup, and the mass removal by the system has become negligible. DTSC has determined that no further action is required at the Site. A certification will be issued once confirmation is received that the soil vapor extraction and monitoring wells have been properly decommissioned.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 06/19/2014
Comments: The Report summarizes the operation of the soil vapor extraction (SVE) system from October 1, 2013 to March 31, 2014. Rebound testing was conducted between January 28 and March 20, 2014 and verification sample results showed that the SVE inlet PCE concentrations exceeded the SVE system restart parameter of 200 micrograms per cubic meter. The SVE system was restarted on March 21, 2014.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 10/23/2015
Comments: DTSC had provided comments on the 1st Quarter SVE Status Report and expressed a number of concerns regarding sampling methods and continued leak detections in the sample results. DTSC comments and concerns will be addressed in the revised Sampling Workplan and in future Quarterly SVE Reports.

A FRENCH CLEANER (Continued)

S106166652

Completed Document Type: Removal Action Workplan w/ESD
Completed Date: 10/02/2013
Comments: A French Cleaner has requested to modify the selected remedy for the A French Cleaner Site (Site) located at 650 Tennant Station, Morgan Hill, California. The modified remedy will not require the excavation of impacted soil from beneath the suite where the former dry cleaner operated as originally proposed in the RAW. Soil vapor extraction will be implemented at the Site as the primary cleanup action, rather than as a contingency cleanup action as outlined in the RAW. DTSC has determined that this is a significant, but not fundamental, change to the remedy as described in the RAW and has prepared and approved this Explanation of Significant Differences.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Community Profile
Completed Date: 11/24/2008
Comments: The Community Profile summarized responses to a public survey that DTSC conducted to gauge community interest in the project.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 01/24/2013
Comments: Pilot study indicates that soil vapor extraction is an appropriate remediation technology for the Site. DTSC will modify the selected Site remedy to soil vapor extraction.

confirmation sampling that was performed to confirm that the PCE soil vapor concentrations at the Site are below the removal goals established in the Final Removal Action Workplan. PCE was not detected in the confirmation sub-slab and soil gas samples. Additionally, a significant reduction in the PCE concentrations in soil vapor extraction system influent has been observed since startup, and the mass removal by the system has become negligible. DTSC has determined that no further action is required at the Site. A certification will be issued once confirmation is received that the soil vapor extraction and monitoring wells have been properly decommissioned.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Next Scheduled EDR Contact: 10/24/2022
Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
MORGAN HILL	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles South
Site Name:	OLIN CORP MORGAN HILL PLT
Site EPA ID Number:	CAD009183831
Groundwater Flow Direction:	Southeast
Measured Depth to Water:	80 feet.
Hydraulic Connection:	The aquifer underlying the site is unconfined.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

2G	1/2 - 1 Mile WSW	NW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: ARBUCKLE

Soil Surface Texture: gravelly loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	20 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6.5 Min: 6.2
2	20 inches	40 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6.5 Min: 6.2
3	40 inches	59 inches	very gravelly sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6.5 Min: 6.2

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

SCVWDID No. 09S3E22N02f

Dear Ms. Campagna:

This letter transmits the enclosed underground storage tank (UST) case closure letter for the subject case in accordance with Chapter 6.75 (Section 25296.10 [g]). The State Water Resources Control Board adopted this letter on February 20, 1997. As of March 1, 1997, all Local Oversight Programs (LOP) in the State are required to use this case closure letter for UST leak sites. The Santa Clara Valley Water District began transferring the LOP and all cases to the County of Santa Clara Department of Environmental Health on July 1, 2004. The County of Santa Clara is responsible for the issuance of the attached closure letter. The case closure summary is also enclosed. These documents confirm the completion of the investigation and cleanup of the reported release at the subject site. The subject fuel leak case is closed.

Please note the following conditions still remain at the site: Residual gasoline oxygenate contamination exists in soil (9.4 ppm MTBE). Currently, groundwater is impacted by MTBE (6.2 ppb in one well, MW-4); no other dissolved petroleum hydrocarbons or oxygenates are detected in groundwater.

Residual contamination both in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. The County and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site

Ms. Carol Campagna
Page Two

risk are expected to reduce with time.

If you have any questions regarding the enclosed case closure form, please call Mr. Lane R. Davis of the Santa Clara Valley Water District at (408) 265-2607, extension 3756. Thank you.

Sincerely,

Ben Gale, Director

Subject: Fuel Leak Site Case Closure, Shell, 810 East Dunne Avenue, Morgan Hill, CA;
SCVWDID No. 09S3E22N02f

Dear Ms. Campagna:

This letter confirms the completion of a site investigation and remedial action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

Please contact our office if you have any questions regarding this matter.

Sincerely,

A handwritten signature in cursive script that reads "Ben Gale".

Dear Mr. Davis:

UGT: SHELL, 810 EAST DUNNE AVENUE, MORGAN HILL, SANTA CLARA COUNTY: CASE CLOSURE CONCURRENCE (LUSTIS CASE NO. 3550)

Regional Board staff has reviewed your November 10, 2004, *Case Closure Summary, Leaking Underground Storage Tank Program* report for the subject site. We agree with your recommendation for case closure. Therefore, this Regional Board has no further requirement for site investigation and cleanup. You may proceed with case closure.

Enclosed is the completed Case Closure Summary report. If you have any questions regarding this matter, please call **Burton Chadwick at (805) 542-4786.**

Sincerely,

Roger W. Briggs
Executive Officer

III. RELEASE AND SITE CHARACTERIZATION INFORMATION

Cause and Type of Release: Unknown		
Site characterization complete? Yes	Date Approved By Oversight Agency: November 10, 2004	
Monitoring wells installed? Yes	Number: 4	Proper screened interval? Yes
Highest GW Depth Below Ground Surface: 33 feet	Lowest Depth: 55 feet	Flow Direction: WNW
Most Sensitive Current Use: Potential drinking water		

Summary of Production Wells in Vicinity: There are eight groundwater contamination extraction wells between 850 and 1200 feet downgradient of this site.	
Are drinking water wells affected? No	Aquifer Name: Santa Clara Valley Groundwater Basin
Is surface water affected? No	Nearest SW Name: Madrone Channel, 1700 feet ENE
Off-Site Beneficial Use Impacts (Addresses/Locations): None	
Reports on file? Yes	Where are reports filed? Santa Clara Valley Water District

TREATMENT AND DISPOSAL OF AFFECTED MATERIAL			
Material	Amount (Include Units)	Action (Treatment or Disposal w/Destination)	Date
Tank	--	--	--
Piping	--	--	--
Free Product	--	--	--
Soil	--	--	--
Groundwater	--	--	--
Barrels	--	--	--

MAXIMUM DOCUMENTED CONTAMINANT CONCENTRATIONS BEFORE AND AFTER CLEANUP (Please see Attachment 2, 3 for additional information on contaminant locations and concentrations)

Description of Interim Remediation Activities: None

- ND- below detection limit
- NA= No analysis for this compound
- 1- via EPA Method 8260B. No oxygenates besides MTBE detected.
- 2- Latest groundwater sampling event: 9/29/04

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes

Does corrective action protect public health for current land use? Santa Clara Valley Water District staff does not make specific determinations concerning public health risk. However, it does not appear that the release would present a risk to human health.

Site Management Requirements: Residual contamination both in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of a water well in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures. The District and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time.

Should corrective action be reviewed if land use changes? Yes. This site is an active gas station.

Monitoring Wells Commissioned: 4

Number Decommissioned: 0

Number Retained: 4*

List Enforcement Actions Taken: None

List Enforcement Actions Rescinded: None

* - Wells to be properly destroyed prior to issuance of final closure letter.

V. ADDITIONAL COMMENTS, DATA, ETC.

Considerations and/or Variances:

2002- In August, a voluntary Preliminary Site Assessment was performed by Shell. Three groundwater monitoring wells (MW-1 to 3) were installed. A maximum 1.8 parts per million (ppm) Methyl tert-Butyl Ether was detected in soil.

2003- In September, two borings were advanced at the site, SB-1 and MW-4. A maximum 9.4 ppm MTBE was detected in soil.

2004- In late April and early May, three cone penetrometer borings (CPT-1, 4, and 5) were advanced at the site. No detectable level of detectable petroleum hydrocarbons or oxygenates were detected in soil. A maximum 7.5 parts per billion (ppb) MTBE was detected in one of the three groundwater grab samples collected.

In June, two additional CPT borings (CPT-2 and 3) were advanced. A maximum 0.57 ppb Benzene was detected in groundwater.

In September, only one well contained detectable levels of contamination, 6.2 ppb MTBE detected in well MW-4.

Conclusions:

Based upon the results of soil samples collected, residual gasoline oxygenate contamination exists in soil (9.4 ppm MTBE). This level of residual contamination in soil does not appear to be a significant threat to the groundwater resource at this time.

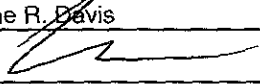

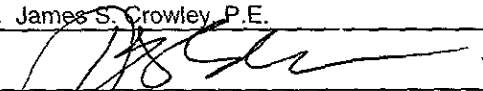

Currently, groundwater is impacted by MTBE (6.2 ppb in one well, MW-4); no other dissolved petroleum hydrocarbons or oxygenates are detected in groundwater. During the first sampling event for this well, it exhibited the highest level of MTBE measured at the site. It is believed that this concentration was anomalous and may be attributed to drawdown of contaminants from a shallower elevation into the borehole during drilling and insufficient development of the well; This is supported by the next round of sampling, in which only 26 ppb MTBE was present.

Investigation has defined the vertical and horizontal limits of impact in soil and groundwater.

At this time, this is an operating fueling facility. See Site Management Requirements.

Based upon the residual concentration of petroleum hydrocarbons in soil and groundwater samples, Santa Clara Valley Water District staff has concluded that a continuing threat to groundwater, human health and the environment from residual petroleum hydrocarbons does not exist at this site and that Regional Water Quality Control Board objectives have not been compromised. The investigation was performed in accordance with state and local guidelines. District staff recommends closure for this case.

VI. LOCAL AGENCY REPRESENTATIVE DATA

Prepared by: Lane R. Davis	Title: Associate Engineer
Signature: 	Date: 11-10-04
Approved by: James S. Crowley, P.E.	Title: Engineering Unit Manager
Signature: 	Date: 11-10-04

This closure approval is based upon the available information and with the provision that the information provided to this agency was accurate and representative of site conditions.

VII. REGIONAL BOARD NOTIFICATION

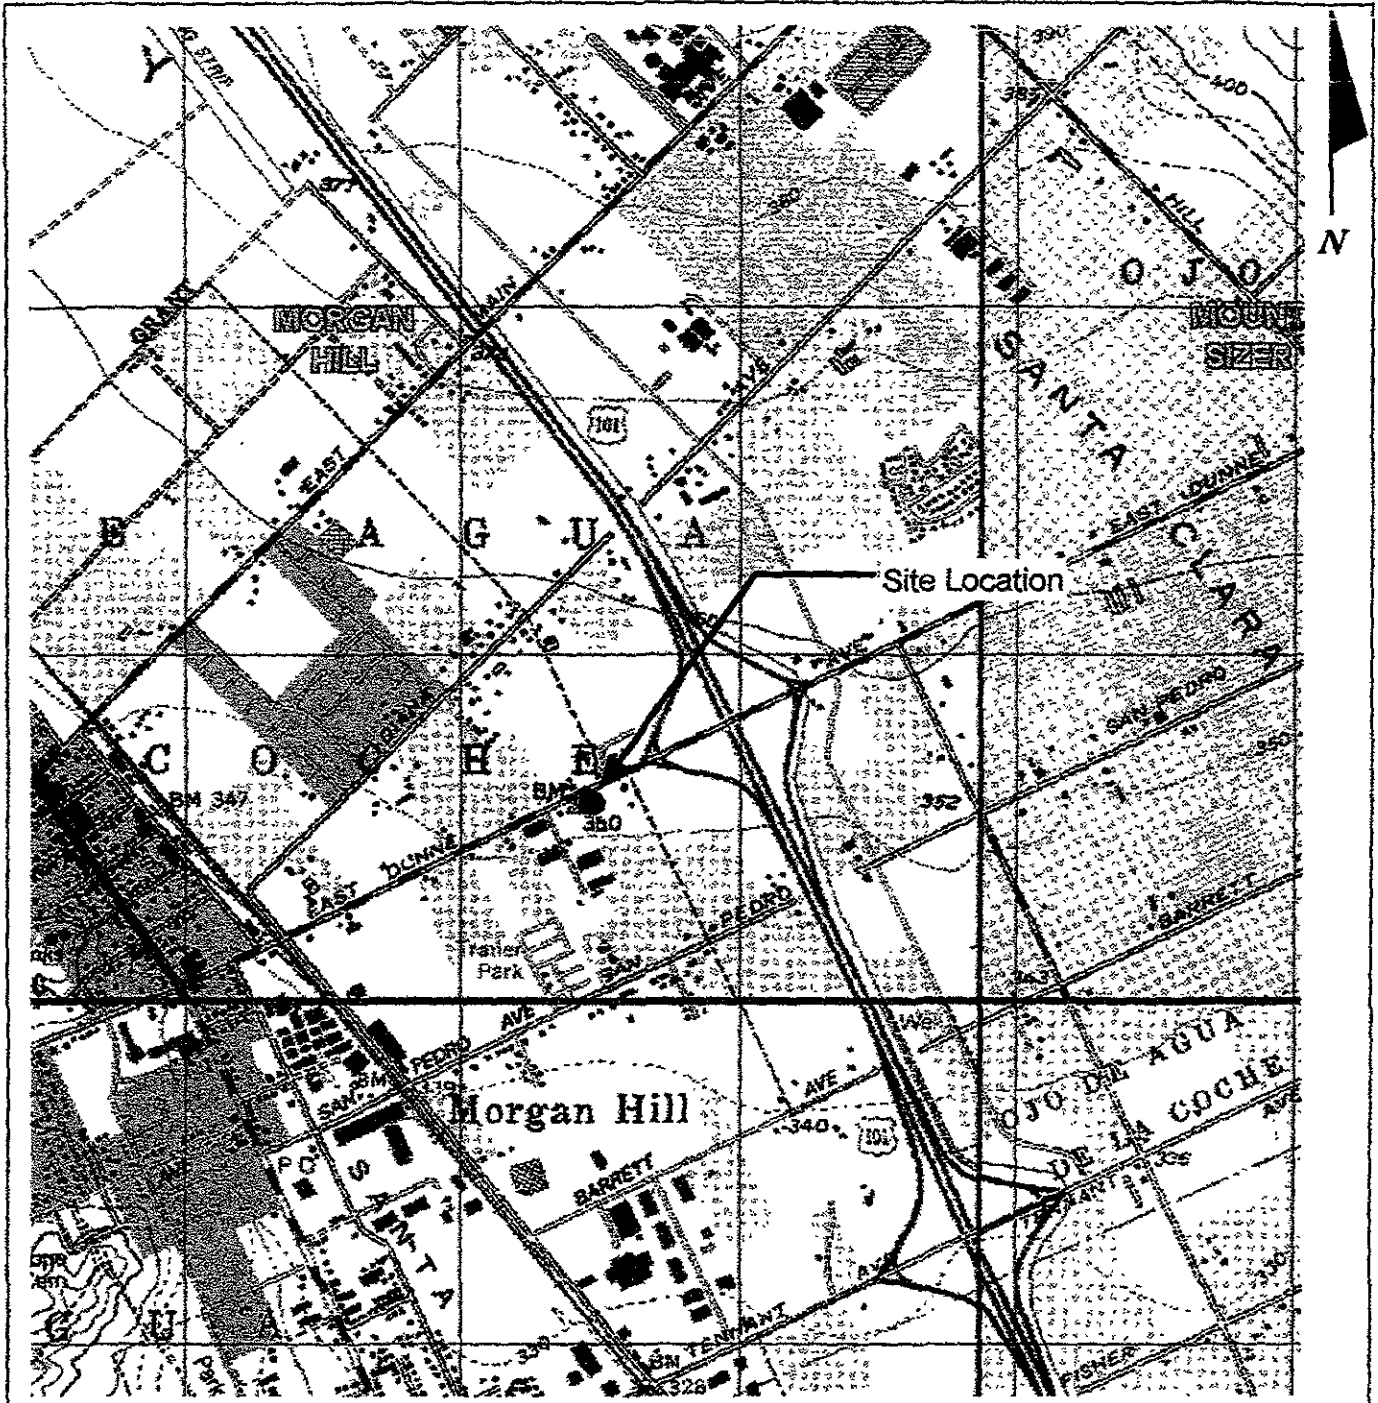

Regional Board Staff Name: Roger W. Briggs	Title: Executive Officer
RB Response: Concur, based solely upon information contained in this case closure summary.	Date Submitted to RB: 11/15/04
Signature: 	Date: 11-21-07

Attachments:

1. Site Maps
2. Soil Analytical Results
3. Groundwater Analytical results

This document and the related CASE CLOSURE LETTER, shall be retained by the lead agency as part of the official site file.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

APPENDIX

Site Owner/Occupant Questionnaire

The following questions are for: (1) the current owner of the property, (2) any major occupant of the property or, if the property does not have any major occupants, at least 10% of the occupants of the property, and (3) in addition to the current owner and the occupants identified in (2), any occupant likely to be using, treating, generating, storing, or disposing of hazardous substances and/or petroleum products on or from the property. A major occupant is any occupant using at least 40% of the leasable area of the property or any anchor tenant when the property is a shopping center. In a multi-family property containing both residential and commercial uses, residential occupants do not need to respond to this questionnaire unless they are involved in or have knowledge of the commercial or other uses.

Address: 810 EAST DUNNE AVE, MORGAN HILL, CA
Description of Site: EXISTING GAS STATION WITH PUMPS, CONVENIENCE STORE AND CARWASH.

Question	Owner			Occupants (if applicable)		
1a. Is the property used for an industrial use?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
1b. Is any adjoining property used for an industrial use?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
2a. Have you observed evidence of or do you have any knowledge that the property has been used for an industrial use in the past?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
2b. Have you observed evidence of or do you have any knowledge that any adjoining property has been used for an industrial use in the past?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
3a. Is the property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes X	No	Unk	Yes	No	Unk
Explain if yes: CURRENT USE IS A GAS STATION WITH AUTOMATIC SELF SERVICE CARWASH						
3b. Is any adjoining property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						

Question	Owner			Occupants (if applicable)		
	Yes	No	Unk	Yes	No	Unk
4a. Have you observed evidence of or do you have any knowledge that the property was previously used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
4b. Have you observed evidence of or do you have any knowledge that any adjoining property was previously used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
5a. Are there currently any damaged or discarded automotive or industrial batteries, petroleum products, pesticides, paints or other chemicals in individual containers of > 5gal (19L) in volume or 50gal (190L) in the aggregate, stored on or used at the property or facility?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
5b. Have you observed evidence of or do you have any knowledge that there have been previously any damaged or discarded automotive or industrial batteries, petroleum products, pesticides, paints or other chemicals in individual containers of > 5gal (19L) in volume or 50gal (190L) in the aggregate, stored on or used at the property or facility?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
6a. Are there currently any industrial drums (typically 55 gal [208L]) or sacks of chemicals located on the property or at the facility?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
6b. Have you observed evidence of or do you have any knowledge that there have been previously any industrial drums (typically 55 gal [208L]) or sacks of chemicals located on the property or at the facility?	Yes X	No	Unk	Yes	No	Unk
Explain if yes: STANDARD WHEN DOING SB989 TESTING TO PUT THE WASTE WATER IN DRUMS AFTER TESTING IS COMPLETED.						
7a. Have you observed evidence of or do you have any knowledge that fill dirt has been brought onto the property that originated from a contaminated site?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						

7b. Have you observed evidence of or do you have any knowledge that fill dirt has been brought onto the property that is of an unknown origin?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
8a. Are there currently any pits, ponds, or lagoons located on the property in connection with waste treatment or disposal?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
8b. Have you observed evidence of or do you have any knowledge that there have been previously any pits, ponds, or lagoons located on the property in connection with waste treatment or disposal?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
9a. Is there currently any stained soil on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
9b. Have you observed evidence of or do you have any knowledge that there has been previously any stained soil on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
10a. Are there currently any registered or unregistered storage tanks (aboveground or underground) located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes: CURRENTLY A GAS STATION WITH THREE TANKS IN THE GROUND						
10b. Have you observed evidence of or do you have any knowledge that there have been previously any registered or unregistered storage tanks (aboveground or underground) located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
11a. Are there currently any vent pipe, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes: CURRENT VENT PIPES FOR THE EXISTING FUELING SYSTEM AND FILL PIPES IN THE SUMPS FOR THE TANKS BUT NOT PROTRUDING OUT OF THE GROUND						
11b. Have you observed evidence of or do you have any knowledge that there have been previously any vent pipe, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes: EXISTING FUELING SYSTEM						

12a. Are there currently any flooring, drains, or walls located within the facility that are stained by substances other than water or were emitting foul odors?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
12b. Have you observed evidence of or do you have any knowledge that there have been previously any flooring, drains, or walls located within the facility that are stained by substances other than water or were emitting foul odors?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
13a. If the property is served by a private well or non-public water system, is there evidence of or do you have knowledge that contaminants have been identified in the well or system that exceed guidelines applicable to the water system?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
13b. If the property is served by a private well or non-public water system, is there evidence of or do you have knowledge that the well has been designated as contaminated by any government/health agency?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
14. Do you have any knowledge of environmental liens of governmental notification relating to past or recurrent violations of environmental laws with respect to the property or any facility located on the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
15a. Have you been informed of the past existence of hazardous substances and/or petroleum products with respect to the property or any facility located on the property?	Yes X	No	Unk	Yes	No	Unk
Explain if yes: EXISTING GAS STATION WITH GAS TANKS						
15b. Have you been informed of the current existence of hazardous substances and/or petroleum products with respect to the property or any facility located on the property?	Yes X	No	Unk	Yes	No	Unk
Explain if yes: EXISTING GAS STATION WITH GAS TANKS AND PIPING						
15c. Have you been informed of the past existence of environmental violations with respect to the property or any facility located on the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
15d. Have you been informed of the current existence of environmental violations with respect to the property or any facility located on the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						

16. Do you have any knowledge of any environmental site assessment of the property or facility that indicated the presence of hazardous substances and/or petroleum products on, or contamination of, the property or recommended further assessment of the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
17. Do you know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substances and/or petroleum products involving the property by any owner or occupant of the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
18a. Does the property discharge wastewater, on or adjacent to the property, other than stormwater, into a stormwater sewer system?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
18b. Does the property discharge wastewater, on or adjacent to the property, other than stormwater, into a sanitary sewer system?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
19. Have you observed evidence of or do you have any knowledge that any hazardous substances and/or petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials have been dumped above grade, buried and/or burned on the property?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						
20. Is there a transformer, capacitor, or any hydraulic equipment for which there are records indicating the presence of PCBs?	Yes	No X	Unk	Yes	No	Unk
Explain if yes:						

Unk – “unknown” or “no response”

Additional Questions

A) Describe the current use of the property. *CURRENT A GAS STATION WITH 8 PUMPS AND CONVENINCE STORE AND SELF SERVICE ROLL OVER CARWASH WITH RECLAIM SYSTEM. ALSO HAVE AN ABOVE GROUND BULK PROPANE SYSTEM*

B) How long has the property been used for this purpose? *BEFORE OUR OWNERSHIP WHICH WAS WAS IN 2010. We believe it has been a gas station since the 1990s*

C) How long have you owned the property? *Since April of 2010*

D) List the existing structures on the property and their age. *Carwash, convenience store, gas canopy, trash enclosure and gas kiosk. All built around the 1990s*

E) Describe the past uses, owners, and operators of the property. (Be as detailed as possible and note approximate time periods.) *- unknown, but we believe prior to a gas station, this was vacant land.*

F) Do any environmental documents exist for the Site such as environmental site assessment reports, environmental compliance audit reports, environmental permits, registrations for storage tank or any other environmentally related documents for the property? *no*

EXECUTIVE SUMMARY

This report summarizes the results of the Traffic Impact Analysis (TIA) conducted for the proposed commercial development located at 810 E. Dunne Avenue in City of Morgan Hill, California. The project proposes modifications to an existing gas station, including removing and replacing a fueling canopy, removing and replacing underground storage tanks, constructing a new convenience store or quick service restaurant of 5,005 square foot (s.f.) and a new car wash on an approximately 1.07 gross acre site. The proposed development consists of a 5,005 square foot (s.f.) convenience market or quick service restaurant, 8 fueling positions, and one car wash tunnel. The purpose of this report is to present the traffic impacts to the surrounding transportation network due to the proposed project.

The report includes evaluations and recommendations concerning intersection traffic operations, project site access and circulation, project driveway operations, delivery truck operations, project parking demand, and sight distance.

To evaluate the impacts on the transportation infrastructure due to the addition of traffic from the proposed project, TJKM evaluated two study intersections along E. Dunne Avenue during the a.m. and p.m. peak hours under two study scenarios. The scenarios include Baseline (2021) Conditions, without and with the proposed project.

Baseline Conditions

Under this scenario, all study intersections operate at acceptable LOS C or better during both a.m. and p.m. peak hours.

Project Trip Generation

The proposed project expects to generate a net of 903 daily trips, of which 62 trips are generated during the a.m. peak hour and 86 trips are generated during the p.m. peak hour. The existing development generates 1,204 daily trips, of which 60 trips are generated during the a.m. peak hour and 128 trips are generated during the p.m. peak hour. The proposed project generate two additional trips during the a.m. peak hour and no trips were generated during the p.m. peak hour.

Baseline plus Project Conditions

Under this scenario, all of the study intersections operate at acceptable LOS C or better. The project is expected to have a less-than-significant impact at all study intersections.

Queueing Analysis

The proposed project does not have an adverse effect on the expected left-turn or right-turn queues at the study intersections.

Site Access and On-Site Circulation

TJKM examined the project site plan in order to evaluate the adequacy of on-site vehicle circulation including refueling trucks, delivery trucks and emergency vehicles. The proposed project will be accessed via Walnut Grove Drive, and Commercial driveway on E. Dunne Avenue. Based on the evaluation, the proposed on-site vehicle circulation is adequate and should not result in traffic operations issues on-site that would result in significant impacts on City streets.

Sight Distance Analysis

Sight distance issues are expected for the proposed driveway for vehicles exiting the project site and turning right onto Walnut Grove Drive. TJKM recommends, appropriate signage should be added warning northbound vehicles of merging vehicles to make the driveways more visible to oncoming vehicles.

Parking Demand Analysis

The proposed project meets the required parking supply for vehicular parking to comply with the City of Morgan Hill Municipal Code.

1.0 INTRODUCTION

This report summarizes the results of the Traffic Impact Analysis (TIA) conducted for the proposed commercial development located at 810 E. Dunne Avenue in City of Morgan Hill, California. The project proposes modifications to existing gas station, including removing and replacing a fueling canopy, removing and replacing underground storage tanks, constructing a new convenience store or quick service restaurant of 5,005 square foot (s.f.) and a new car wash on an approximately 1.07 gross acre site. The proposed development consists of a 5,005 square foot (s.f.) convenience market or quick service restaurant, 8 fueling positions, and one car wash tunnel. The study purpose is to identify potential impacts of the proposed development on the surrounding transportation system and to recommend improvements to mitigate significant impacts. To assess impacts on the transportation infrastructure due to additional traffic from the proposed project, evaluation of study intersections is in accordance with the standards set forth by the LOS policies of City of Morgan Hill. Additionally, the study includes evaluation of queue length, sight distance, and parking demand as a result of added project traffic.

The project site is located at 810 E. Dunne Avenue as shown in **Figure 1**. The land is surrounded by residential, and commercial land uses. The proposed project will have a fueling canopy with 8 fueling positions, a 5,005 square foot convenience store or quick service restaurant, and a 1,733 foot long carwash. The proposed project site is located near to the US 101 Northbound off-ramp, and is likely to serve as a stop for travelers on the highway.

Currently, there are two vehicle access driveways: one on E. Dunne Avenue and another one on east of Walnut Grove Drive. The project includes closing the driveway along E. Dunne Avenue and proposes to relocate the existing driveway east of Walnut Grove Drive with 35 ft. wide and to provide one more new driveway. The proposed project will use the commercial driveway on E. Dunne Avenue to access the fueling station, convenience store or quick service restaurant and car wash tunnel.

1.1 STUDY INTERSECTIONS AND SCENARIOS

TJKM evaluated traffic conditions at two study intersections during the a.m. and p.m. peak hours for a typical weekday. The peak periods observed were between 7:00 a.m.-9:00 a.m. and 4:00 p.m.-6:00 p.m. TJKM projected baseline (2021) traffic conditions from intersection turning movement counts (TMC) provided in the Morgan Hill 2035 Draft Environmental Impact Report (DEIR), 2016. The study intersections and associated traffic controls are as follows:

1. E. Dunne Avenue / Walnut Grove Drive (Signalized)
2. E. Dunne Avenue / Laurel Road-Commercial Driveway (Unsignalized)

Figure 1 illustrates the study area of the proposed project. **Figure 2** shows the proposed project site plan.

This study addresses the following two traffic scenarios:

- **Baseline Conditions** – This scenario evaluates the study intersections based on baseline traffic volumes, lane geometry and traffic controls.
- **Baseline plus Project Conditions** – This scenario is identical to Baseline Conditions, but with the addition of traffic from the proposed project.

Figure 2 : Project Site Plan

2.0 STUDY METHODOLOGY

2.1 LEVEL OF SERVICE ANALYSIS METHODOLOGY

Traffic conditions at the study intersections were evaluated using level of service (LOS). Level of Service is a qualitative description of operating conditions ranging from LOS A, or free-flow conditions with little or no delay, to LOS F, or jammed conditions with excessive delays. The analysis methods are described below.

Signalized Intersections

Signalized study intersections are subject to the City of Morgan Hill level of service standards. The City of Morgan Hill level of service methodology is TRAFFIX, which is based on the 2000 Highway Capacity Manual (HCM) method for signalized intersections. TRAFFIX evaluates signalized intersections operations based on average delay time for all vehicles at the intersection. Since TRAFFIX is also the Congestion Management Program (CMP)-designated intersections level of service methodology, the City of Morgan Hill methodology employs the CMP defaults values for the analysis parameters, which include adjusted saturation flow rates to reflect conditions in Santa Clara County. All intersections within the City of Morgan Hill are required to meet the City's LOS standard of LOS D, with the exception of the following:

- LOS F for Downtown intersections and segments including at Main/Monterey, along Monterey Road between Main and Fifth Street, and along Depot Street at First through Fifth Street;
- LOS E for the following intersections and freeway zones:
 - Main Avenue and Del Monte Avenue
 - Main Avenue and Depot Street
 - Dunne Avenue and Del Monte Avenue
 - Dunne Avenue and Monterey Avenue
 - Dunne Avenue and Church Street
 - Dunne Avenue and Depot Street
 - Cochrane Road and Monterey Road
 - Tennant Avenue and Monterey Road
 - Tennant Avenue and Butterfield Boulevard
 - Cochrane Road Freeway Zone: from Madrone Parkway/Cochrane Plaza to Cochrane Road/DePaul Drive
 - Dunne Avenue Freeway Zone: from Walnut Grove Drive/East Dunne Avenue to Condit Road/E. Dunne Avenue
 - Tennant Avenue Freeway Zone: from Butterfield Boulevard/Tennant Avenue to Condit Road/Tennant Avenue

The correlation between average delay and level of service for signalized intersections is shown in **Table 1**.

Unsignalized Intersections

The methodology used to determine the level of service for unsignalized intersections is also TRAFFIX and the 2000 HCM methodology for unsignalized intersection analysis. This method is applicable for both two-way and all-way stop-controlled intersections. For the analysis of stop-controlled intersections, the 2000 HCM methodology evaluates intersection operations on the basis of average control delay time for all vehicles on the stop-controlled approaches. For the purpose of reporting level of service for one- and two-way stop-controlled intersections, the delay and corresponding level of service for the stop controlled minor street approach with the highest delay is reported. For all-way stop-controlled intersections, the reported average delay and corresponding level of service is the average for all approaches at the intersection. The City uses a minimum acceptable level of service standard of LOS D for unsignalized intersections, in accordance with its adopted threshold of significance in its *Guidelines for Preparation of Transportation Impact Reports*. The correlation between average delay and level of service for unsignalized intersections is shown in **Table 2**.

Table 1: Signalized Intersection Level of Service Criteria

Level of Service	Description	Signalized (seconds/vehicle)
A	Operations with very low delay occurring with favorable progression and/or short cycle lengths.	Up to 10.0
B	Operations with low delay occurring with good progression and/or short cycle lengths.	10.1 to 20.0
C	Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.1 to 35.0
D	Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.1 to 55.0
E	Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.1 to 80.0
F	Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths.	Greater than 80.0

Source: Transportation Research Board, 2000 Highway Capacity Manual. (Washington, D.C., 2000)

Table 2: Unsignalized Intersection Level of Service Criteria

Level of Service	Description	Signalized (seconds/vehicle)
A	Operations with very low delays occurring with favorable progression.	Up to 10.0
B	Operations with low delays occurring with good progression.	10.1 to 15.0
C	Operations with average delays resulting from fair progression.	15.1 to 25.0
D	Operation with longer delays due to a combination of unfavorable progression and high V/C ratios.	25.1 to 35.0
E	Operation with high delay values indicating poor progression and high V/C ratios. This is considered to be the limited of acceptable delay.	35.1 to 50.0
F	Operation with delays unacceptable to most drivers occurring due to oversaturation and poor progression.	Greater than 50.0

Signal Warrants

The level of service analysis at unsignalized intersections is supplemented with an assessment of the need for signalization of the intersection. The need for signalization of unsignalized intersections is assessed based on the Peak Hour Volume Warrant (Warrant 3) described in the California Manual on Uniform Traffic Control Devices for Streets and Highways (CA MUTCD), Part 4, Highway Traffic Signals, 2010. This method makes no evaluation of intersection level of service, but simply provides an indication whether vehicular peak hour traffic volumes are, or would be, sufficient to justify installation of a traffic signal. The decision to install a traffic signal should not be based purely on the warrants alone. Instead, the installation of a signal should be considered and further analysis performed when one or more of the warrants are met. Additionally, engineering judgment is exercised on a case-by-case basis to evaluate the effect a traffic signal will have on certain types of accidents and traffic conditions at the subject intersection as well as at adjacent intersections. Intersections that meet the peak hour warrant are subject to further analysis before determining that a traffic signal is necessary. Other options such as traffic control devices, signage, or geometric changes may be preferable based on existing field conditions.

3.0 EXISTING CONDITIONS

This section describes existing conditions in the immediate project site vicinity, including roadway facilities, bicycle and pedestrian facilities, and available transit service. In addition, this section presents existing traffic volumes and operations for the study intersections, including the results of LOS calculations.

3.1 EXISTING SETTING AND ROADWAY SYSTEM

Important roadways in the immediate vicinity of the project site follow:

US 101 is a north-south freeway extending northward to San Francisco and southward through Gilroy. US 101 is an eight-lane freeway (three mixed-flow lanes and one high-occupancy vehicle (HOV) lane in each direction) north of Cochrane Road. South of Cochrane Road, it is a six-lane freeway with no HOV lanes. Access to and from the project area is provided via a full interchange at Dunne Avenue.

E.Dunne Avenue is classified in the City of Morgan Hill General Plan as a four-lane major arterial, with the exception of the two-lane arterial segment between Del Monte Avenue and Peak Avenue. Dunne Avenue transverses the City extending from the east part of town to the west. With a full interchange at US 101, Dunne Avenue provides regional access to the project site.

Walnut Grove Drive is a two-lane undivided roadway that extends from San Pedro Avenue northward to north of Laurel Road where it currently terminates as a cul-de-sac. A second segment of Walnut Grove Drive begins at Black Walnut Way, south of Main Avenue, and extends southward parallel and adjacent to US 101 to the Laurel-Honda GPA site, where it terminates as a cul-de-sac. Access to the project site would be provided from Walnut Grove Drive.

Laurel Road is a two-lane undivided roadway that mainly runs parallel to Dunne Avenue from Walnut Grove Drive to west of the US 101 southbound off-ramp, where it terminates as a cul-de-sac. Additionally, Laurel Road also extends southward from a middle point along Laurel Road (forming a T-intersection) to Dunne Avenue, providing limited access to and from Dunne Avenue.

3.2 EXISTING PEDESTRIAN FACILITIES

Walkability is the ability to travel easily and safely between various origins and destinations without having to rely on automobiles or other motorized travel. The ideal “walkable” community includes wide sidewalks, a mix of land uses such as residential, employment, and shopping opportunities, a limited number of conflict points with vehicle traffic, and easy access to transit facilities, and services.

Pedestrian facilities are comprised of crosswalks, sidewalks, pedestrian signals, and off-street paths, which provide safe and convenient routes for pedestrians to access the destinations such as institutions, businesses, public transportation, and recreation facilities.

In the immediate project vicinity, E.Dunne Avenue, Walnut Grove Drive, and Laurel Drive provide sidewalks on one or both sides of the roadway. E.Dunne Avenue has sidewalks on both sides and ADA-compliant curb ramps at intersections and driveways. Walnut Grove Drive has sidewalks on the eastern side of the street, but intermittent on the west side of the street. ADA compliant curb ramps, striped crosswalks, pedestrian signal heads are provided at the intersection of E.Dunne Avenue/Walnut Grove Drive. A striped crosswalk is also provided for the north leg of E Dunne Avenue/Laurel Road. **Figure 3** illustrates the existing pedestrian facilities within the project vicinity.

3.3 EXISTING BICYCLE FACILITIES

Bicycle facilities include the following classifications from the 2017 City of Morgan Hill Bikeways, Trails, Parks and Recreation Master Plan:

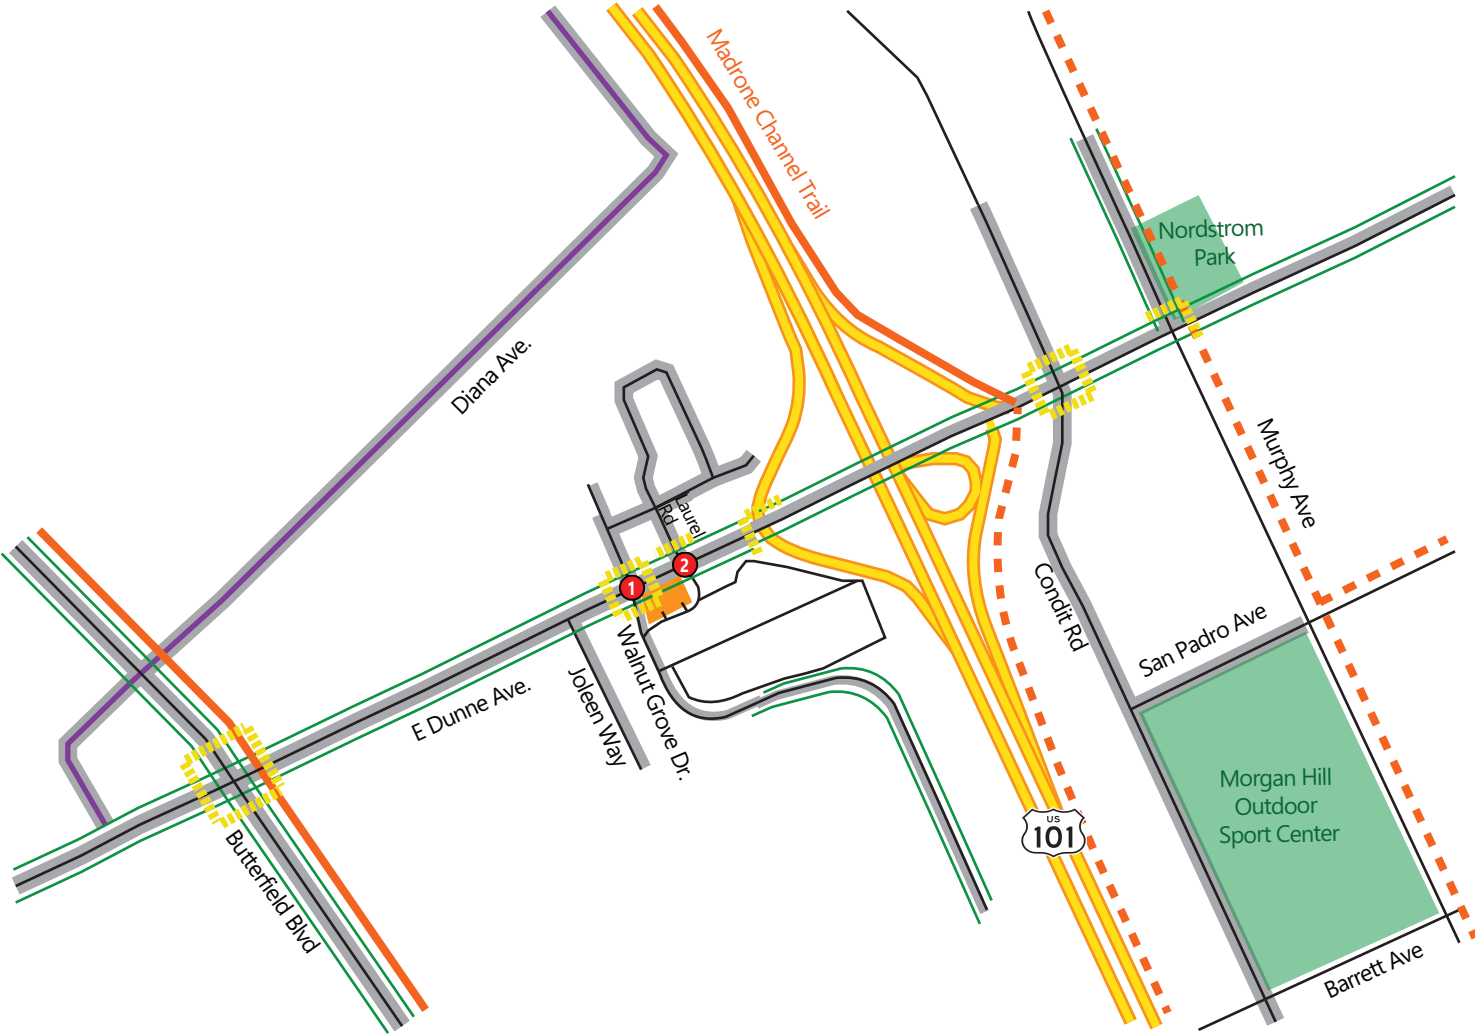

- **Multi-Use Trail (Class I)** – Allows for two-way, off street pedestrian and bicycle use. Conflicts with motorized vehicles is minimal. Trails are often found in parks, along rivers, beaches, utility corridors.
- **Buffered Bike Lanes (Class II)** – Buffered bike lanes are bicycle lanes that have striped buffer to separate the bicycle lane and vehicular traffic lane. In the immediate vicinity, there is a striped bike lane (no buffer) on both sides of E. Dunne Avenue.
- **Bicycle Boulevard (Class III)** – Bicycle boulevards are streets with low vehicular traffic volumes and speeds, and designated to give bicycle travel priority. There is usually appropriate signage, pavement markings, speed and volume management measures to discourage through trips by motor vehicles.
- **Protected Bike Lane (Class IV)** – This bikeway is for the exclusive use of bicycles and includes vertical separation from the vehicular travel lane by way of grade separation, flexible posts, inflexible physical barriers, or on-street parking.

Figure 3 illustrates the existing bicycle facilities in the project vicinity.

3.4 EXISTING TRANSIT FACILITIES

Valley Transportation Authority (VTA) operates local and express buses that connect Morgan Hill with the rest of Santa Clara County. The closest VTA stop is nearly 0.75 mile away from the project. Caltrain also provides regional transit services that connects the South Bay to San Francisco. The Morgan Hill Caltrain Station is also nearly 0.75 mile away from the project site. Within the immediate vicinity of the project, there are no transit services available.

3.5 BASELINE PEAK HOUR TRAFFIC VOLUMES AND LANE CONFIGURATIONS

The existing operations of the study intersections were evaluated for the highest one-hour volumes during weekday morning (7:00 a.m.-9:00 a.m.) and evening (4:00 p.m.-6:00 p.m.) peak periods. Turning movement counts for vehicles, bicycles, and pedestrians were projected for baseline (2021) conditions from turning movement counts provided in the City of Morgan Hill 2035 DEIR for E. Dunne Avenue/Walnut Grove Drive and E. Dunne Avenue/Laurel Road. An annual growth rate of one percent per year was applied to 2014 intersection turning movement counts to project baseline (2021) conditions traffic volumes. Traffic volume worksheets are provided in **Appendix A**. A peak hour factor of 0.92 was assumed for all study intersections in the analysis. The baseline conditions lane configurations reflect existing conditions lane geometries. The City of Morgan Hill provided existing signal timing sheets for E. Dunne Avenue/Walnut Grove Drive. **Figure 4** illustrates the existing conditions lane geometry, traffic controls, and baseline peak hour volumes at the study intersections.

TJKM evaluated Average Daily Traffic (ADT) volume counts from turning movement counts at the following location:

- E. Dunne Avenue, between Walnut Grove Drive and Laurel Road – ADT is 21,030 vehicles per day (vpd).

3.6 INTERSECTION LEVEL OF SERVICE ANALYSIS – BASELINE CONDITIONS

Baseline intersection lane configurations and traffic control, signal timings, peak-hour turning movement volumes, and peak-hour factors were used as inputs for the LOS calculations. The baseline operations of the study intersections were evaluated for the highest one-hour volume during the weekday a.m. and p.m. peak periods. All intersections were analyzed using the HCM 2000 LOS analysis methodology in the TRAFFIX software program. **Table 3** summarizes the results of the intersection LOS analysis for Baseline Conditions.

Under Baseline Conditions, without proposed project traffic, the study intersections operate within applicable jurisdictional standards of LOS C or better during both peak hours.

The peak hour signal warrant (warrant no. 3) from the California Manual of Uniform Traffic Control Devices (CA MUTCD) was evaluated for the unsignalized intersection of E. Dunne Avenue/Laurel Road, operating at LOS B during a.m., and LOS C during p.m. peak hour to determine if a traffic signal is warranted. The results show that the intersection does not meet the CA MUTCD peak hour signal warrant during the a.m. peak hour and does meet peak hour signal warrant during the p.m. peak hour. LOS and signal warrant worksheets are provided in **Appendix B**.

Table 3: Intersection Level of Service Analysis – Baseline Conditions

#	Study Intersections	Control ¹	Peak Hour ²	Delay ³	Baseline Conditions		
					LOS ⁴	Critical V/C	Critical Delay
1	E.Dunne Avenue/Walnut Grove Drive	Signal	AM	18.5	B	0.444	16.9
			PM	29.5	C	0.552	28.3

4.0 BASELINE PLUS PROJECT CONDITIONS

This analysis scenario presents the impacts of the proposed development at the study intersections and surrounding roadway system. This scenario is similar to Baseline Conditions, but with the addition of traffic from the proposed project.

The amount of traffic added to the roadway system by the proposed development is estimated using a three-step process: (1) trip generation, (2) trip distribution, and (3) trip assignment. The first step estimates the amount of added traffic to the roadway network. The second step estimates the direction of travel to and from the project site. Third, the trips are assigned to specific roadway segments and intersection turning movements. The results of the process for the proposed project are described in the following sections.

4.1 PROJECT DESCRIPTION

The proposed project is located at the northeast quadrant of the E.Dunne Avenue/Walnut Grove Drive intersection in City of Morgan Hill. The project proposes to modify an existing gas station including removing and replacing a fueling canopy, removing and replacing underground storage tanks, constructing a new convenience store or quick service restaurant of 5,005 square foot (s.f.) and a new car wash on an approximately 1.07 gross acre site. The proposed development consists of a 5,005 square foot (s.f.) convenience market or quick service restaurant, 8 fueling positions, and one car wash tunnel.

4.2 PROJECT TRIP GENERATION

Net project trips were estimated based on Trip Generation, 10th Edition (2017), published by the Institute of Transportation Engineers (ITE). Trips for the proposed gas station, convenience market, and car wash area were estimated using trip generation rates for the Convenience Market with Gasoline Pumps (ITE Code 853), and Automated car Wash (ITE Code 948) land uses. Some land uses, such as gas stations on major roadways, attract drivers already passing by on adjacent roadways. Pass-by trip reductions were applied to the proposed Convenience Market with Gasoline Pumps (ITE Code 853) land uses, as specified in the Trip Generation Handbook (3rd Edition). Peak hour pass-by rates for these uses ranged from 63 to 66 percent. The Handbook does not identify pass-by reduction rates for daily trips so the average rates for both peaks were used for the Convenience Market with Gasoline Pumps (ITE Code 853) land uses. **Table 4** shows the expected trips generated by the proposed project. The proposed project is expected to generate 903 net daily trips, with 62 net trips during the a.m. peak hour (31 inbound trips, 31 outbound trips) and 86 net trips during the p.m. peak hour (43 inbound trips, 43 outbound trips).

At the existing site, traffic volumes were not collected due to the COVID -19 pandemic induced change in traffic conditions. Alternatively, Gasoline/Service Station (ITE Code 944), and Automated Car Wash (ITE Code 948) was used for estimation based on the existing 14 fueling positions and 905 sq. ft car wash tunnel. As shown in **Table 4**, the existing land use was estimated to generate 1,204 weekday daily trips, 60

a.m. peak hour trips (30 inbound trips, 30 outbound trips), and 128 weekday p.m. peak hour trips (64 inbound trips, 64 outbound trips). The proposed project is expected to generate two additional trips during the a.m. peak hour and no net trips were expected to generate during the p.m. peak hour. The trip generation is approved by the City of Morgan Hill.

Table 4: Project Trip Generation

Land Use (ITE code)	Size	Unit	Daily		AM Peak						PM Peak

4.3 PROJECT TRIP DISTRIBUTION AND ASSIGNMENT

Trip distribution is a process that determines in what proportion vehicles would be expected to travel between the project site and various destinations outside the project study area. Assignment determines the various routes that vehicles would take from the project site to each destination using the estimated trip distribution.

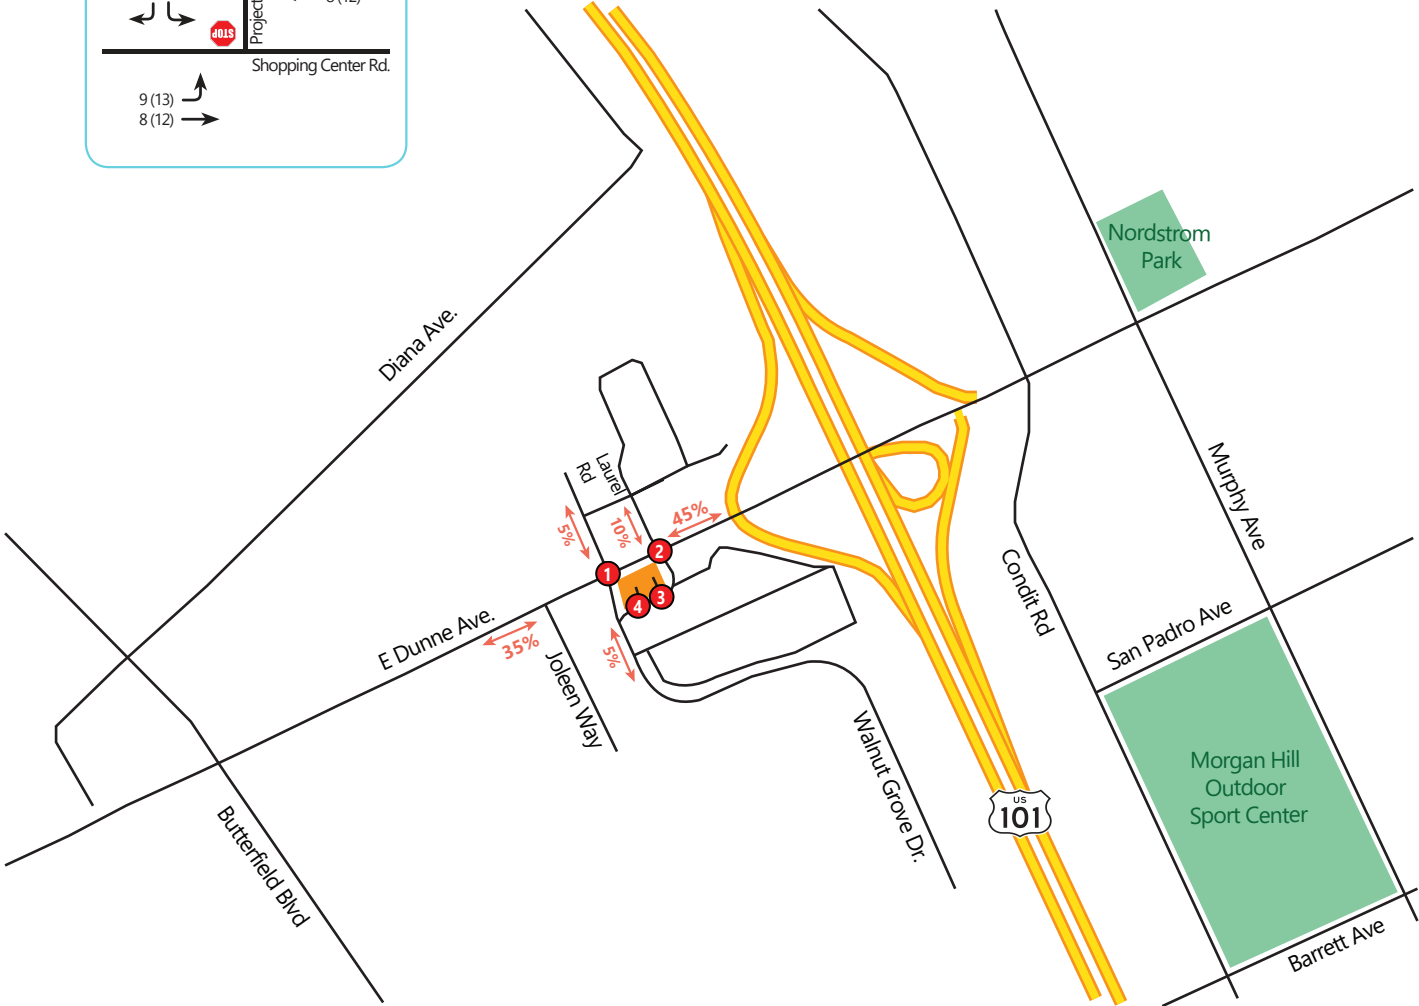

Trip distribution assumptions for the proposed project were developed based on traffic patterns in the project study area.

The trip distribution for the proposed project is as follows:

- 45% to/from the east of E.Dunne Avenue
- 35% to/from the west of E.Dunne Avenue
- 10% to/from the Laurel Road
- 5% to/from the north of Walnut Grove Drive
- 5% to/from the south of Walnut Grove Drive

The project trip distribution was approved by the City of Morgan Hill. **Figure 5** illustrates the trip distribution and assignment for the existing site trips and an additional new trips is expected to generate for proposed project. The addition of assigned project trips and traffic volumes under Baseline Conditions generate Baseline plus Project Conditions traffic volumes.

Figure 5: Trip Distribution & Assignment

4.4 INTERSECTION LEVEL OF SERVICE ANALYSIS – BASELINE PLUS PROJECT CONDITIONS

Level of service calculations were conducted for the study intersections to evaluate their operations under Baseline plus Project conditions using the methods described above. No adjustments were made to the intersection lane configurations or peak hour factors for the analysis of Baseline plus Project conditions.

Figure 6 shows projected turning movement volumes at the study intersections for Baseline plus Project Conditions. TJKM evaluated the LOS analysis for Baseline plus Project Conditions. **Table 5** summarizes the intersection LOS analysis results for the study intersections. The intersection LOS analysis results for Baseline Conditions are shown for comparison purposes.

Under this scenario, all study intersections operate within applicable jurisdictional standards of LOS C or better during both a.m. and p.m. peak hours. Based on the City of Morgan Hill impact criteria, the project is expected to have a less-than-significant impact at all the study intersections evaluated in this study.

Table 5: Intersection Level of Service Analysis – Baseline plus Project Conditions

#	Study Intersections	Control ¹	Peak Hour ²	Baseline Conditions		Baseline plus Project Conditions (Scenario 1)		Change in	
				Delay ³	LOS ⁴	Delay ³	LOS ⁴	Critical V/C ⁵	Critical Delay ⁶

³ Whole intersection weighted average control delay expressed in seconds per vehicle for signalized intersections; Worst-approach delay expressed in seconds per vehicle for side-street stop-controlled intersections.

⁴ LOS – Level of Service calculations conducted using TRAFFIX level of service analysis software package.

⁵ Change in critical volume to capacity ratio between Baseline and Baseline plus Project Conditions.

⁶ Change in average critical movement delay between Baseline and Baseline plus Project Conditions.

The peak hour signal warrant (warrant no. 3) from the California Manual of Uniform Traffic Control Devices (CA MUTCD) was evaluated for the unsignalized intersection of E.Dunne Avenue/Laurel Road, operating at LOS B during a.m., and LOS C during p.m. peak hour to determine if a traffic signal is warranted. The results show that the intersection does not meet the CA MUTCD peak hour signal warrant during the a.m. peak hour and does meet peak hour signal warrant during the p.m. peak hour. LOS and signal warrant worksheets are provided in **Appendix C**.

The average daily traffic on E. Dunne Avenue between Walnut Grove Drive and Laurel Road is 21,030 vehicles per day under Baseline plus project Conditions.

4.6 VEHICLE QUEUEING ANALYSIS

TJKM conducted a vehicle queueing and storage analysis for exclusive left and right turn pockets at the study intersections under Baseline and Baseline plus Project Conditions. The 95th percentile queues were analyzed using TRAFFIX software. Detailed calculations are included in the LOS appendices corresponding to each analysis scenario. **Table 6** summarizes the 95th percentile queue lengths at the study intersections under Baseline and Baseline plus Project scenarios. It should be noted that queue lengths at some locations exceed capacity in Baseline Conditions, creating a deficient conditions. However, the project would add only two vehicles in total to the baseline volumes during the a.m. peak hour. The following movements that are already in exceedance of the existing queues:

- At E. Dunne Avenue/Walnut Grove Drive: 95th percentile queue exceeds for eastbound left turn, eastbound through, westbound left turn, westbound through, northbound left turn, northbound right turn, southbound left turn, and southbound shared through right turn lane during one or both the peak hours. However, project won't increase in queue length at this intersection.

Table 6: 95th Percentile Queues at Study Intersections

#	Study Intersections	Lane Group	Storage Length	Baseline Conditions		Baseline plus Project Conditions		Change Scenario	
				AM	PM	AM	PM	AM	PM
1	E.Dunne Avenue/Walnut Grove Drive	EBL	125	125	226	125	226	0	0

Notes: Storage length and 95th percentile queue is expressed in feet per lane

AM – morning peak hour, PM – evening peak hour

Bold indicates queue lengths exceeding capacity

5.0 ADDITIONAL ANALYSIS

The following sections provide additional analyses of other transportation issues associated with the project site, including:

- Site Access and On-Site Circulation;
- Driveway Sight Distance Analysis; and
- Parking Analysis

The analyses in these sections are based on professional judgment in accordance with the standards and methods employed by traffic engineers. Although operational issues are not considered CEQA impacts, they do describe traffic conditions that are relevant to describing the project environment.

5.1 SITE ACCESS AND ON-SITE CIRCULATION

This section analyzes site access and internal circulation for vehicles, pedestrians and bicycles based on the site plan presented on **Figure 2**. TJKM reviewed internal and external access for the project site for vehicles, pedestrians and bicycles.

TJKM reviewed the proposed project site plan to evaluate on-site access to the project. The proposed project's access will be the driveway along Walnut Grove Drive and the Laurel Road-Commercial Driveway access. Along the project frontage, E. Dunne Avenue consists of two travel lanes in each direction with a raised center median. Internally, there will be two driveways (25 feet wide and 35 feet wide) on the south project frontage as shown on the project site plan dated May 19, 2021. The project will provide a pork chop island on E. Dunne Avenue for ingress movements. All driveways and circulation aisles accommodate two-way travel. The turning radii appear to be adequate for the garbage and delivery trucks. The proposed garbage pickup is located at the northeast corner of the proposed convenience store/quick service restaurant. Also, trash enclosure would connect the floor drain to the onsite sewer system. Small delivery vehicles for the convenience store/quick service restaurant will be able to use the parking stalls adjacent to the store; larger vehicles will be able to use the unused fueling positions.

The proposed car wash tunnel would be located within the site and oriented parallel to Walnut Grove Drive, with tunnel entrance near the south project site boundary and the exit near the north project site boundary.

In order to provide adequate on-site circulation for all vehicle types, including larger emergency vehicles and garbage and delivery trucks, the design of all drive aisles and access driveways should adhere to City of Morgan Hill design standards and guidelines. The design of the site must include adequate corner radii, driveway width, drive aisle width, parking dimensions, and signage to the satisfaction of the City of Morgan Hill design standards. Adhering to City of Morgan Hill standards and requirements, the proposed site access driveways and internal drive aisle layout would be adequate to accommodate circulation of both passenger and emergency vehicles.

Overall, the proposed on-site vehicle circulation is adequate and should not result in any traffic operations issues that would result in significant impacts on City streets.

5.2 PEDESTRIAN ACCESS

Pedestrian access to the project site will be facilitated by the existing sidewalk and crosswalk network on E. Dunne Avenue and Walnut Grove Drive. The intersection of E. Dunne Avenue/Walnut Grove Drive provides crosswalks and pedestrian signal heads to allow the crossing of pedestrians. The proposed project does not conflict with existing and planned pedestrian facilities; therefore, will not have an adverse effect on pedestrian facilities.

5.3 BICYCLE ACCESS

Bicycle access to the project site is provided by the existing Class II bike lanes along both sides of E. Dunne Avenue. Overall, existing bicycle facilities provide adequate connectivity between the proposed project site and surrounding neighborhoods. An impact to bicyclists occurs if the proposed project disrupts existing bicycle facilities; or conflicts or creates inconsistencies with adopted bicycle system plans, guidelines, policies or standards. The project does not conflict with existing and planned bicycle facilities; therefore, will not have an adverse effect on bicycle facilities.

5.4 TRANSIT ACCESS

There are no transit services available within the vicinity of the project site.

5.5 DRIVEWAY SIGHT DISTANCE

Sight distance is evaluated to determine if a driver will have adequate visibility to enter a roadway safely without resulting in a conflict with traffic already on the roadway. According to the Highway Design Manual, Chapter 200, 2014, the required minimum stopping sight distance for design speed of 40 mph (E. Dunne Avenue) should be 300 feet. For a speed of 35 mph (Walnut Grove Drive), the stopping sight distance should be 250 feet. The line of sight for vehicles exiting the driveway on E. Dunne Avenue and vehicles travelling eastbound on E. Dunne Avenue is clear and visible. The line of sight for vehicles exiting the driveway on Walnut Grove Drive and vehicles travelling northbound on Walnut Grove Drive may be obstructed due to the existing landscaping and the driveway is at the end of a slight horizontal curve. Appropriate signage should be added warning northbound vehicles of merging vehicles to make the driveways more visible to oncoming vehicles.

5.6 PARKING

Based on the project site plan (dated May 19, 2021), 22 spaces will be provided of which 5 spaces are standard parking (9 feet by 18 feet). One space will be provided for van accessible parking stalls (17 feet by 18 feet). One space will be provided for the air/water machine (11 feet by 18 feet). 7 spaces for the

vacuum stalls (13 feet by 18 feet) and 8 spaces for the fuel stations. The City of Morgan Hill Municipal Code (18.72.030/Table 18.72-2) requires that convenience market land uses provide 1 space per 250 square feet. Based on City requirements, 20 spaces are required. The project proposed 22 parking spaces plus up to 10 vehicles for stacking for the carwash tunnel. Based on the proposed parking spaces to be provided on site, no parking impacts are projected on City streets.

CONCLUSIONS AND RECOMMENDATIONS

Baseline Conditions

Under this scenario, all study intersections operate at acceptable LOS C or better during both a.m. and p.m. peak hours.

Project Trip Generation

The proposed project expects to generate a net of 903 daily trips, of which 62 trips are generated during the a.m. peak hour and 86 trips are generated during the p.m. peak hour. The existing development generates 1,204 daily trips, of which 60 trips are generated during the a.m. peak hour and 128 trips are generated during the p.m. peak hour. The proposed project generate two additional trips during the a.m. peak hour and no trips were generated during the p.m. peak hour.

Baseline plus Project Conditions

Under this scenario, all of the study intersections operate at acceptable LOS C or better. The project is expected to have a less-than-significant impact at all study intersections.

Queueing Analysis

The proposed project does not have an adverse effect on the expected left-turn or right-turn queues at the study intersections.

Site Access and On-Site Circulation

TJKM examined the project site plan in order to evaluate the adequacy of on-site vehicle circulation including refueling trucks, delivery trucks and emergency vehicles. The proposed project will be accessed via Walnut Grove Drive, and Commercial driveway on E.Dunne Avenue. Based on the evaluation, the proposed on-site vehicle circulation is adequate and should not result in traffic operations issues on-site that would result in significant impacts on City streets.

Sight Distance Analysis

Sight distance issues are expected for the proposed driveway for vehicles exiting the project site and turning right onto Walnut Grove Drive. TJKM recommends, appropriate signage should be added warning northbound vehicles of merging vehicles to make the driveways more visible to oncoming vehicles.

Parking Demand Analysis

The proposed project meets the required parking supply for vehicular parking to comply with the City of Morgan Hill Municipal Code.

 Signal Warrant Rule #1: [vehicle-hours=0.3]
 FAIL - Vehicle-hours less than 4 for one lane approach.
 Signal Warrant Rule #2: [approach volume=92]
 FAIL - Approach volume less than 100 for one lane approach.
 Signal Warrant Rule #3: [approach count=4][total volume=2074]
 SUCCEED - Total volume greater than or equal to 800 for intersection with four or more approaches.

Approach[southbound][lanes=1][control=Stop Sign]
 Signal Warrant Rule #1: [vehicle-hours=0.1]
 FAIL - Vehicle-hours less than 4 for one lane approach.
 Signal Warrant Rule #2: [approach volume=25]
 FAIL - Approach volume less than 100 for one lane approach.
 Signal Warrant Rule #3: [approach count=4][total volume=2074]
 SUCCEED - Total volume greater than or equal to 800 for intersection with four or more approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

 Signal Warrant Rule #1: [vehicle-hours=0.9]
 FAIL - Vehicle-hours less than 4 for one lane approach.
 Signal Warrant Rule #2: [approach volume=198]
 SUCCEED - Approach volume greater than or equal to 100 for one lane approach.
 Signal Warrant Rule #3: [approach count=4][total volume=2487]
 SUCCEED - Total volume greater than or equal to 800 for intersection with four or more approaches.

Approach[southbound][lanes=1][control=Stop Sign]
 Signal Warrant Rule #1: [vehicle-hours=0.2]
 FAIL - Vehicle-hours less than 4 for one lane approach.
 Signal Warrant Rule #2: [approach volume=41]
 FAIL - Approach volume less than 100 for one lane approach.
 Signal Warrant Rule #3: [approach count=4][total volume=2487]
 SUCCEED - Total volume greater than or equal to 800 for intersection with four or more approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Warrant (Urban Areas)

Intersection #2: E.Dunne Avenue/Laurel Road, Morgan Hill, CA
Scenario: Baseline plus Project Conditions

Figure 4C-3. Warrant 3, Peak Hour

Minor Street Volume = 93 (198) VPH

*Note: 150 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 100 vph applies as the lower threshold volume for a minor-street approach with one lane.

Major Street Volume = 1,957 (2,248) VPH

★ *AM Peak Hour*

★ *PM Peak Hour*

A signal is NOT WARRANTED in the a.m. Peak Hour

A signal is WARRANTED in the p.m. Peak Hour
