

Starkovich Minor Use Permit Grading for SFD ED23-023 (N-DRC2022-00011)

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED: The proposed project could have a "Potentially Significant Impact" for environmental factors checked below. Please refer to the attached pages for discussion on mitigation measures or project revisions to either reduce these impacts to less than significant levels or require further study.

<input type="checkbox"/> Aesthetics	<input type="checkbox"/> Greenhouse Gas Emissions	<input type="checkbox"/> Public Services

DETERMINATION: (To be completed by the Lead Agency)

On the basis of this initial evaluation, the Principal Environmental Specialist finds that:

- The proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- Although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- The proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- The proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- Although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Initial Study – Environmental Checklist

Project Environmental Analysis

The County's environmental review process incorporates all of the requirements for completing the Initial Study as required by the California Environmental Quality Act (CEQA) and the CEQA Guidelines. The Initial Study includes staff's on-site inspection of the project site and surroundings and a detailed review of the information in the file for the project. In addition, available background information is reviewed for each project. Relevant information regarding soil types and characteristics, geologic information, significant vegetation and/or wildlife resources, water availability, wastewater disposal services, existing land uses and surrounding land use categories and other information relevant to the environmental review process are evaluated for each project. Exhibit A includes the references used, as well as the agencies or groups that were contacted as a part of the Initial Study. The County Planning Department uses the checklist to summarize the results of the research accomplished during the initial environmental review of the project.

Persons, agencies or organizations interested in obtaining more information regarding the environmental review process for a project should contact the County of San Luis Obispo Planning Department, 976 Osos Street, Rm. 200, San Luis Obispo, CA, 93408-2040 or call (805) 781-5600.

A. Project

DESCRIPTION: Request by Jim and Jill Starkovich for a Minor Use Permit to allow for major grading for a Single-Family residence, an Accessory Dwelling Unit, and a detached garage. The project will result in the disturbance of approximately 1.97 acres on a 2.48-acre parcel. The proposed project is within the Residential Suburban land use category and is located at 1053 Cougar Creek Way, an undeveloped lot, approximately 1.2 miles north of the City of Arroyo Grande. The site is in the San Luis Bay Inland Sub-Area of the South County Planning Area

ASSESSOR PARCEL NUMBER(S): 044-501-033

Latitude: 35° 09' 21.1" N **Longitude:** 120° 33' 56.8" W **SUPERVISORIAL DISTRICT #** 4

B. Existing Setting

Plan Area: South County **Sub:** San Luis Bay Inland **Comm:** N/A

Land Use Category: Residential Suburban

Combining Designation: None

Parcel Size: 2.48 acres

Topography: Steeply sloping

Vegetation: Coast live oak woodland, coyote brush scrub, open sandy areas

Existing Uses: Undeveloped

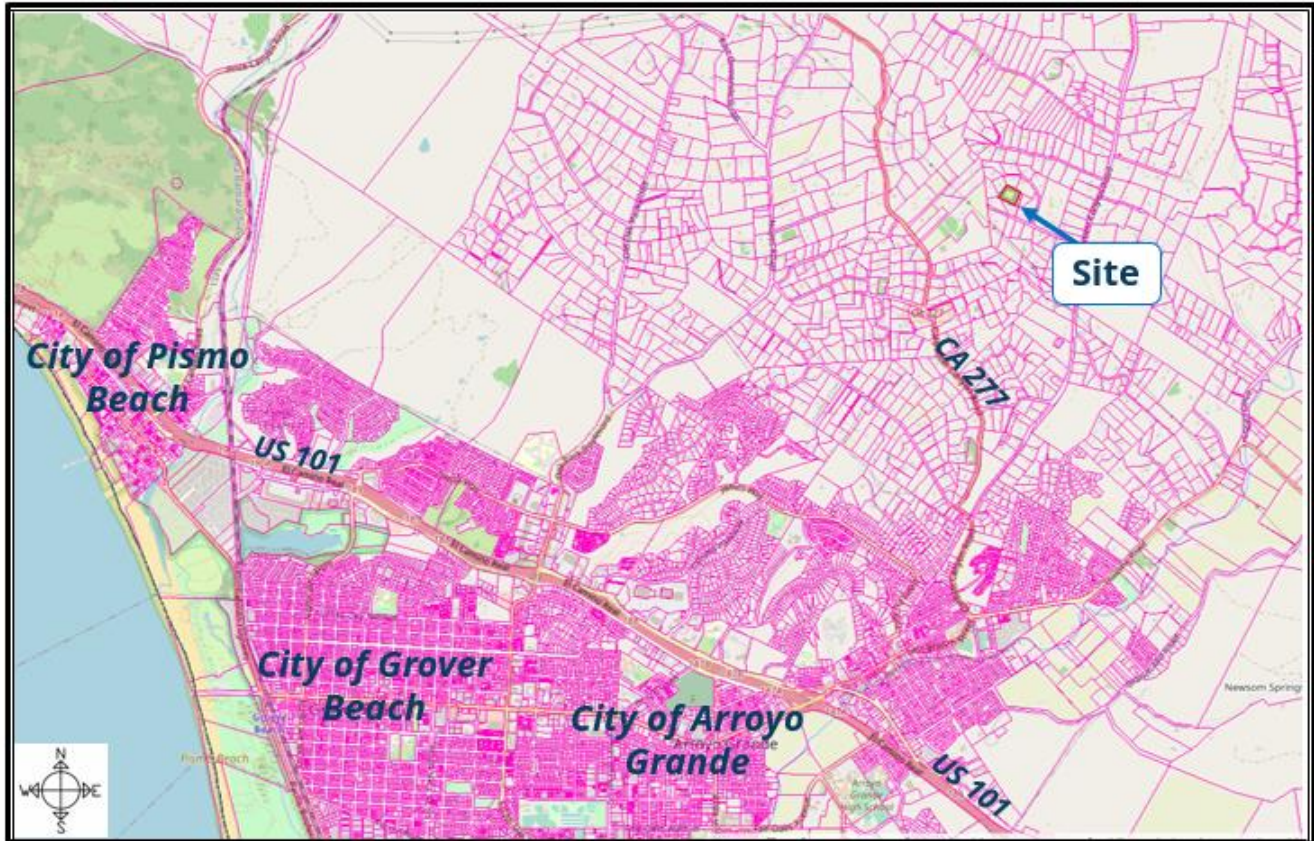

Surrounding Land Use Categories and Uses:

North: Residential Suburban; single family residence **East:** Residential Suburban; single family residence

South: Residential Suburban; single family residence **West:** Residential Suburban; single family residence

Initial Study – Environmental Checklist

C. Environmental Analysis

The Initial Study Checklist provides detailed information about the environmental impacts of the proposed project and mitigation measures to lessen the impacts.

I. AESTHETICS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Except as provided in Public Resources Code Section 21099, would the project:</i>				
(a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Setting

CEQA establishes that it is the policy of the state to take all action necessary to provide people of the state “with... enjoyment of aesthetic, natural, scenic and historic environmental qualities” (Public Resources Code Section 21001(b)).

A scenic vista is generally defined as a high-quality view displaying good aesthetic and compositional values that can be seen from public viewpoints. Some scenic vistas are officially or informally designated by public agencies or other organizations. A substantial adverse effect on a scenic vista would occur if the project would significantly degrade the scenic landscape as viewed from public roads or other public areas. A proposed project’s potential effect on a scenic vista is largely dependent upon the degree to which it would complement or contrast with the natural setting, the degree to which it would be noticeable in the existing environment, and whether it detracts from or complements the scenic vista.

Initial Study – Environmental Checklist

California's Scenic Highway Program was created by the State Legislature in 1963 with the intention of protecting and enhancing the natural scenic beauty of California highways and adjacent corridors. There are several officially designated state scenic highways and several eligible state scenic highways within the county. State Route 1 is an Officially Designated State Scenic Highway and All-American Road from the City of San Luis Obispo to the northern San Luis Obispo County boundary. A portion of Nacimiento Lake Drive is an Officially Designated County Scenic Highway. Portions of Highway 101, Highway 46, Highway 41, Highway 166, and Highway 33 are also classified as Eligible State Scenic Highways – Not Officially Designated.

The County of San Luis Obispo Inland Land Use Ordinance (LUO) establishes regulations for exterior lighting (LUO 22.10.060), height limitations for each land use category (LUO 22.10.090), scenic highway corridor standards (LUO 22.10.095), and other visual resource protection policies. These regulations are intended to help the County achieve its Strategic Growth Principles of preserving scenic natural beauty and fostering distinctive, attractive communities with a strong sense of place as set forth in the County Land Use Element.

The LUO also maps portions of the Salinas River Highway Corridor, the San Luis Obispo Highway Corridor, and the South County Highway Corridor to comply with County highway corridor design standards. These standards include but are not limited to setbacks from highway rights-of-way, guidelines for development along ridgelines, limitations on graded slopes, protection of landmark features, and standards for building height and color (LUO 22.10.095).

The County of San Luis Obispo LUO defines a Sensitive Resource Area (SRA) combining designation that applies to areas having high environmental quality and special ecological or educational significance. These designated areas are considered visual resources by the County and the LUO establishes specific standards for projects located within these areas. These standards include but are not limited to set back distances from public viewpoints, prohibition of development that silhouettes against the sky, grading slope limitations, set back distances from significant rock outcrops, design standards including height limitations and color palette, and landscaping plan requirements.

In addition to policies set forth in the LUO, the County Conservation and Open Space Element (COSE) provides guidelines for the appropriate placement of development so that the natural landscape continues to be the dominant view in rural parts of the county and to ensure the visual character contributes to a robust sense of place in urban areas. The COSE provides a number of goals and policies to protect the visual character and identify of the county while protecting private property rights, such as the identification and protection of community separators (rural-appearing land located between separate, identifiable communities and towns), designation of scenic corridors along public roads and highways throughout the county, retaining existing access to scenic vista points, and setting the standard that new development in urban and village areas shall be consistent with the local character, identify, and sense of place.

The proposed project is in a rural environment. The project site sits in a shallow valley next to a hillside in the rural area between Corbett Canyon Road and Highway 227. The area is surrounded by lots and developments similar to the proposed project. The property hosts a healthy grove of coast live oak woodlands, coyote bush scrub, and open sandy areas. This is a vacant parcel and surrounding parcels are developed with single family residences.

The overall topography of the parcel is steeply sloping with average slopes at 20 percent. At the southern portion of the property, there are gently sloping areas and towards the center of the property the slope increases into a steeply sloping hillside.

Initial Study – Environmental Checklist

The proposed project is sited in an area with a relatively low number of viewers as it is located off of a privately maintained road, Cougar Creek Way. The proposed development cannot be seen from the nearest collector road, Corbett Canyon Road.

Discussion

(a) *Have a substantial adverse effect on a scenic vista?*

The project is not located within an identified scenic vista, visually sensitive area, scenic corridor, or an area of high scenic quality that would be seen from key public viewpoints. Therefore, the project would not have a substantial adverse effect on a scenic vista and *no impacts would occur*.

(b) *Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?*

The project is not located within the viewshed of a designated or eligible state scenic highway and implementation of the project would not result in damage to scenic resources within the viewshed of a state scenic highway. While coast live oak trees are impacted and removed, the project site is not within the viewshed of a state scenic highway. Therefore, *no impacts would occur*.

(c) *In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?*

The project is located in a non-urbanized area and would be visually consistent with the type and extent of development in the surrounding area. The project would not result in a noticeable change to public views of the area and, therefore, would not result in the degradation of the existing visual character or quality of public views of the site and its surroundings. *No impacts would occur*.

(d) *Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?*

The project does not propose the use or installation of highly reflective materials that would create a substantial source of glare. The project would generally be consistent with the level of existing development in the project vicinity and does not propose the installation or use of outdoor lighting that would differ substantially from other proximate development. Additionally, County Code requires all lighting to be downcast and shielded. Therefore, the project would not create a new source of substantial light or glare that would adversely affect day or nighttime views in the area, and potential impacts would be *less than significant*.

Conclusion

The project is not located within view of a scenic vista and would not result in a substantial change to scenic resources in the area. The project would be consistent with existing policies and standards in the County LUO and COSE related to the protection of scenic resources. Potential impacts to aesthetic resources would be less than significant and no mitigation measures are necessary.

Mitigation

None necessary.

Initial Study – Environmental Checklist

II. AGRICULTURE AND FORESTRY RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<p><i>In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:</i></p>				
(a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(d) Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Setting

The County of San Luis Obispo supports a unique, diverse, and valuable agricultural industry that can be attributed to its Mediterranean climate, fertile soils, and sufficient water supply. Wine grapes are regularly the top agricultural crop in the county. Top value agricultural products in the county also include fruit and nuts, vegetables, field crops, nursery products, and animals. The County of San Luis Obispo Agriculture

Initial Study – Environmental Checklist

Element includes policies, goals, objectives, and other requirements that apply to lands designated in the Agriculture land use category. In addition to the Agriculture Element, in accordance with Sections 2272 and 2279 of the California Food and Agriculture Code, the County Agricultural Commissioner releases an annual report on the condition, acreage, production, pest management, and value of agricultural products within the county. The most recent annual crop report can be found here:

<https://www.slocounty.ca.gov/Departments/Agriculture-Weights-and-Measures/All-Forms-Documents/Information/Crop-Report.aspx>.

The California Department of Conservation's Farmland Mapping and Monitoring Program (FMMP) produces maps and statistical data used for analyzing impacts on California's agricultural resources. Agricultural land is rated according to soil quality and current land use. For environmental review purposes under CEQA, the FMMP categories of Prime Farmland, Farmland of Statewide Importance, Unique Farmland, Farmland of Local Importance, and Grazing Land are considered 'agricultural land'. Other non-agricultural designations include Urban and Built-up Land, Other Land, and Water.

Based on the FMMP, soils at the project site are within the following FMMP designation(s):

- Farmland of Statewide Importance

Onsite soils include:

- Corralitos sand, 2 to 15 percent slopes – The Corralitos series consists of deep, somewhat excessively drained soils that formed in recent sandy alluvium derived from acid sandstone and related rocks. Corralitos soils are on alluvial fans and in small valleys.

The Land Conservation Act of 1965, commonly referred to as the Williamson Act, enables local governments to enter into contracts with private landowners for the purpose of restricting specific parcels of land to agriculture or related open space use. In return, landowners receive property tax assessments which are much lower than normal because they are based upon farming and open space uses as opposed to full market value. The project site does not include land within the Agriculture land use designation and is not within lands subject to a Williamson Act contract.

According to Public Resources Code Section 12220(g), forest land is defined as land that can support 10-percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits. Timberland is defined as land, other than land owned by the federal government and land designated by the board as experimental forest land, which is available for, and capable of, growing a crop of trees of a commercial species used to produce lumber and other forest products, including Christmas trees. The project site does not support any forest land or timberland.

Discussion

- (a) *Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?*

The project site does not contain land classified as Prime Farmland or Unique Farmland pursuant to the FMMP. The project site does contain land classified as Farmland of Statewide Importance; however the project site is zoned Residential Suburban, and considering the relatively small lot, crop production is not conducive on this site. Therefore, the project would not result in the conversion of Farmland pursuant to the FMMP to a non-agricultural use. *Impacts would be less than significant.*

Initial Study – Environmental Checklist

(b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

The project site does not include land within the Agriculture land use designation or land subject to a Williamson Act contract. Therefore, the project would not result in a conflict with existing zoning for agricultural use or a Williamson Act contract and *no impacts would occur*.

(c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

The project site does not include land use designations or zoning for forest land or timberland; *no impacts would occur*.

(d) Result in the loss of forest land or conversion of forest land to non-forest use?

The project site does not support forest land or timberland and would not result in the loss or conversion of these lands to non-forest use; *no impacts would occur*.

(e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

The project is not located in close proximity to Farmland or forest land and the nature of the project would not conflict with existing agricultural uses. The project would not increase demand on agricultural water supplies or facilities and would not affect proximate agricultural support facilities. Therefore, the project would not result in changes in the existing environment that could result in the conversion of Farmland to non-agricultural uses or forest land to non-forest uses. *No impacts would occur*.

Conclusion

The project would not directly or indirectly result in the conversion of farmland, forest land, or timber land to non-agricultural uses or non-forest uses and would not conflict with agricultural zoning or otherwise adversely affect agricultural resources or uses. Potential impacts to agricultural resources would be less than significant and no mitigation measures are necessary.

Mitigation

None necessary.

III. AIR QUALITY

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:

(a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--	--------------------------	--------------------------	-------------------------------------	--------------------------

Initial Study – Environmental Checklist

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
(b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(c) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Setting

Regulatory Agencies and Standards

San Luis Obispo County is part of the South Central Coast Air Basin, (SCCAB) which also includes Santa Barbara and Ventura Counties. Air quality within the SCCAB is regulated by several jurisdictions including the U.S. Environmental Protection Agency (EPA), California Air Resources Board (ARB), and the San Luis Obispo County Air Pollution Control District (SLOAPCD). Each of these jurisdictions develops rules, regulations, and policies to attain the goals or directives imposed upon them through legislation. The California ARB is the agency responsible for coordination and oversight of state and local air pollution control programs in California and for implementing the California Clean Air Act (CCAA) of 1988. The State Department of Public Health established California Ambient Air Quality Standards (CAAQS) in 1962 to define the maximum amount of a pollutant (averaged over a specified period of time) that can be present without any harmful effects on people or the environment. The California ARB adopted the CAAQS developed by the Department of Public Health in 1969, which had established CAAQS for 10 criteria pollutants: particulate matter (PM₁₀ and PM_{2.5}), ozone (O₃), nitrogen dioxide (NO₂), sulfate, carbon monoxide (CO), sulfur dioxide (SO₂), visibility reducing particles, lead (Pb), hydrogen sulfide (H₂S), and vinyl chloride.

The Federal Clean Air Act (FCAA) later required the U.S. EPA to establish National Ambient Air Quality Standards (NAAQS) for pollutants considered harmful to public health and the environment, and also set deadlines for their attainment. The U.S. EPA has established NAAQS for six criteria pollutants (all of which are also regulated by CAAQS): CO, lead, NO₂, ozone, PM₁₀ and PM_{2.5}, and SO₂.

California law continues to mandate compliance with CAAQS, which are often more stringent than national standards. However, California law does not require that CAAQS be met by specified dates as is the case with NAAQS. Rather, it requires incremental progress toward attainment. The SLOAPCD is the agency primarily responsible for ensuring that NAAQS and CAAQS are not exceeded and that air quality conditions within the county are maintained.

SLOAPCD Thresholds

The SLOAPCD has developed and updated their CEQA Air Quality Handbook (most recently updated with a November 2017 Clarification Memorandum) to help local agencies evaluate project specific impacts and determine if air quality mitigation measures are needed, or if potentially significant impacts could result.

Initial Study – Environmental Checklist

The APCD has established thresholds for both short-term construction emissions and long-term operational emissions. Use of heavy equipment and earth moving operations during project construction can generate fugitive dust and engine combustion emissions that may have substantial temporary impacts on local air quality and climate change. Combustion emissions, such as nitrogen oxides (NOx), reactive organic gases (ROG), greenhouse gases (GHG) and diesel particulate matter (DPM), are most significant when using large, diesel-fueled scrapers, loaders, bulldozers, haul trucks, compressors, generators and other heavy equipment. SLOAPCD has established thresholds of significance for each of these contaminants.

The project will result in the disturbance of approximately 85,600 square feet (1.97 acres), including approximately 9,700 cubic yards of cut and 1,800 cubic yards of fill, on a 2.48-acre parcel.

Operational impacts are focused primarily on the indirect emissions (i.e., motor vehicles) associated with residential, commercial and industrial development. Certain types of project can also include components that generate direct emissions, such as power plants, gasoline stations, dry cleaners, and refineries (source emissions).

General screening criteria is used by the SLOAPCD to determine the type and scope of air quality assessment required for a particular project (Table 1-1 in the APCD's CEQA Air Quality Handbook). These criteria are based on project size in an urban setting and are designed to identify those projects with the potential to exceed the APCD's significance thresholds. A more refined analysis of air quality impacts specific to a given project is necessary for projects that exceed the screening criteria below or are within ten percent (10%) of exceeding the screening criteria.

Air Quality Monitoring

The county's air quality is measured by a total of 10 ambient air quality monitoring stations, and pollutant levels are measured continuously and averaged each hour, 24 hours a day. The significance of a given pollutant can be evaluated by comparing its atmospheric concentration to state and federal air quality standards. These standards represent allowable atmospheric containment concentrations at which the public health and welfare are protected, and include a factor of safety. The SLOAPCD prepares an Annual Air Quality Report detailing information on air quality monitoring and pollutant trends in the county. The most recent Annual Air Quality Report can be found here: <https://storage.googleapis.com/slocleanair-org/images/cms/upload/files/2017aqrt-FINAL2.pdf>.

In the county of San Luis Obispo, ozone and fine particulates (particulate matter of 10 microns in diameter or smaller; PM₁₀) are the pollutants of main concern, since exceedances of state health-based standards for these pollutants are experienced in some areas of the county. Under federal standards, the county has non-attainment status for ozone in eastern San Luis Obispo County.

San Luis Obispo County Clean Air Plan

The SLOAPCD's San Luis Obispo County 2001 Clean Air Plan (CAP) is a comprehensive planning document intended to evaluate long-term emissions and cumulative effects and provide guidance to the SLOAPCD and other local agencies on how to attain and maintain the state standards for ozone and PM₁₀. The CAP presents a detailed description of the sources and pollutants which impact the jurisdiction's attainment of state standards, future air quality impacts to be expected under current growth trends, and an appropriate control strategy for reducing ozone precursor emissions, thereby improving air quality.

Naturally Occurring Asbestos

Naturally Occurring Asbestos (NOA) is identified as a toxic air contaminant by the California Air Resources Board (CARB). Serpentine and other ultramafic rocks are fairly common throughout the county and may

Initial Study – Environmental Checklist

contain NOA. If these areas are disturbed during construction, NOA-containing particles can be released into the air and have an adverse impact on local air quality and human health.

The project would not be within close proximity to any serpentine rock outcrops and/or soil formations which may have the potential to contain naturally occurring asbestos. Therefore, the project site is not within an area identified as having the potential for Naturally Occurring Asbestos (NOA).

Sensitive Receptors

Sensitive receptors are people that have an increased sensitivity to air pollution or environmental contaminants, such as the elderly, children, people with asthma or other respiratory illnesses, and others who are at a heightened risk of negative health outcomes due to exposure to air pollution. Some land uses are considered more sensitive to changes in air quality than others, due to the population that occupies the uses and the activities involved. Sensitive receptor locations include schools, parks and playgrounds, day care centers, nursing homes, hospitals, and residences.

There are approximately 41 off-site residences located within 1,000 feet of the subject property. The nearest sensitive receptor location is an off-site residence located approximately 165 feet east of the eastern property line of the project parcel (APN 044-501-032)

The project would not be within close proximity to any serpentine rock outcrops and/or soil formations which may have the potential to contain naturally occurring asbestos.

The nearest air quality monitoring station to the project site is the San Luis Obispo Air Quality Monitoring Station. The monitoring site mainly measures Ozone and PM10 concentrations.

Discussion

(a) *Conflict with or obstruct implementation of the applicable air quality plan?*

The project would not result in a new or substantially difference use in the project area. The project would not generate a substantial increase in population or employment opportunities and would not result in a significant increase in vehicle trips. The proposed project would not contribute to the generation of significant levels of any air contaminants and would not conflict with or obstruct the implementation of the San Luis Obispo County Clean Air Plan or other applicable regional and local planning documents. Therefore, impacts would be *less than significant*.

(b) *Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?*

The County is within the South-Central Coast Air Basin, which is currently considered by the state as being in “non-attainment” (exceeding acceptable thresholds) for ozone and particulate matter (PM₁₀, or fugitive dust). Dust, or particulate matter less than ten microns (PM₁₀), that becomes airborne and finds its way into the lower atmosphere can act as the catalyst in this chemical transformation to harmful ozone. The proposed project would result in the generation of criteria air pollutants, including ozone precursors (ROGs and NO_x) and fugitive dust (PM₁₀) through grading operations and the use of large diesel-fueled equipment, including scrapers, loaders, bulldozers, haul trucks, compressors, and generators. However, activity would be short term and would not result in a cumulatively considerable net increase in PM₁₀. Additionally, the project is small in scale

Initial Study – Environmental Checklist

and nature and is not expected to result in any other activities which may otherwise result in a cumulatively considerable net increase in PM10.

Construction Impacts

The SLOAPCD CEQA Air Quality Handbook provides thresholds of significance for construction related emissions. Table 1 lists SLOAPCD’s general thresholds for determining whether a potentially significant impact could occur as a result of a project’s construction activities.

Table 1. SLOAPCD Thresholds of Significance for Construction Activities

Pollutant	Threshold ⁽¹⁾		
	Daily	Quarterly Tier 1	Quarterly Tier 2
Diesel Particulate Matter (DPM)	7 lbs	0.13 tons	0.32 tons
Reactive Organic Gases (ROG) + Oxides of Nitrogen (NO _x)	137 lbs	2.5	6.3 tons
Fugitive Particulate Matter (PM ₁₀), Dust ⁽²⁾		2.5 tons ⁽²⁾	

1. Daily and quarterly emission thresholds are based on the California Health and Safety Code and the CARB Carl Moyer Guidelines.
2. Any project with a grading area greater than 4.0 acres of worked area can exceed the 2.5-ton PM₁₀ quarterly threshold.

The SLOAPCD CEQA Air Quality Handbook also provides preliminary screening construction emission rates based on the proposed volume of soil to be moved and the anticipated area of disturbance. Table 2 lists the SLOAPCD’s screening emission rates that would be generated based on the amount of material to be moved. The APCD’s CEQA Handbook also clarifies that any project that would require grading of 4.0 acres or more can exceed the 2.5-ton PM10 quarterly threshold listed above.

Table 2. Screening Emission Rates for Construction Activities

Pollutant	Grams/Cubic Yard of Material Moved	Lbs/Cubic Yard of Material Moved
Diesel Particulate Matter (DPM)	2.2	0.0049
Reactive Organic Gases (ROG)	9.2	0.0203

Initial Study – Environmental Checklist

Oxides of Nitrogen (NO _x)	42.4	0.0935
Fugitive Particulate Matter (PM ₁₀)	0.75 tons/acre/month of construction activity (assuming 22 days of construction per month)	

Based on estimated cut and fill estimates and the construction emission rates shown in Table 2, construction-related emissions that would result from the project were calculated and are shown in Table 3 below.

Table 3. Proposed Project Estimated Construction Emissions.

Pollutant	Total Estimated Emissions	SLOAPCD Threshold		Threshold Exceeded?
		Daily	Quarterly (Tier 1)	
ROG + NO _x (combined)	130	137 pounds	2.5 tons	No
Diesel Particulate Matter (DPM)	5.65	7 pounds	0.13 tons	No
Fugitive Particulate Matter (PM ₁₀)	1.48		2.5 tons	No

Based on the volume of proposed grading, area of project site disturbance, estimated duration of the construction period (i.e., 10 days), and the APCD's screening construction emission rates identified above, the project would not exceed SLOAPCD thresholds for daily or quarterly emissions of combined ROG and NO_x or PM₁₀. In addition to the daily and quarterly emissions thresholds noted above, the SLOAPCD states that projects that disturb more than 4.0 acres of land have the potential to exceed the 2.5-ton PM₁₀ quarterly threshold. The project would result in a total site disturbance of approximately 1.97 acres. Therefore, the project would not have the potential to exceed the quarterly PM₁₀ emissions threshold.

Operational Impacts

The SLOAPCD's CEQA Air Quality Handbook provides operational screening criteria to identify projects with the potential to exceed APCD operational significance thresholds (refer to Table 1-1 of the CEQA Handbook). Based on Table 1-1 of the CEQA Handbook, the project does not propose a use that would have the potential to result in operational emissions that would exceed APCD thresholds. The project would not generate substantial new long-term traffic trips or vehicle emissions and does not propose construction of new direct (source) emissions.

Based on the analysis provided above, the project would not have the potential to exceed air pollutant emissions significance thresholds set forth by the SLOACPD during construction or

Initial Study – Environmental Checklist

operation. Therefore, potential impacts associated with a cumulatively considerable net increase of criteria pollutants for which the region is in nonattainment would be *less than significant*.

(c) *Expose sensitive receptors to substantial pollutant concentrations?*

For projects involving construction and/or grading activities, the LUO requires that all surfaces and materials shall be managed to ensure that fugitive dust emissions are adequately controlled to below the 20% opacity limit and to ensure dust is not emitted offsite. The LUO includes a list of primary fugitive dust control measures required for all projects involving grading or site disturbance. The LUO also includes an expanded list of fugitive dust control measures for projects requiring site disturbance of greater than four acres or which are located within 1,000 feet of any sensitive receptor location. All applicable fugitive dust control measures are required to be shown on grading and building plans and monitored by a designated monitor to minimize dust complaints, reduce visible emissions below the 20% opacity limit, and to prevent transport of dust offsite (LUO 22.52.160.C).

According to the SLOAPCD CEQA Air Quality Handbook, projects that occur within 1,000 feet of sensitive receptors have the potential to result in adverse impacts involving construction emissions (SLOAPCD 2012). There are several sensitive receptor locations, including single-family residential dwellings, within 1,000 feet of the project site. Construction activities associated with the proposed residential uses and utility improvements on-site would result in the generation of air pollutants that can cause adverse health impacts, including ozone precursors, fugitive dust, and particulate matter emitted by exhaust from diesel vehicles less than 2.5 micrometers in size or smaller (herein referred to as DPM).

Based on the analysis provided above in Table 3, the project would not have the potential to exceed SLOAPCD's daily or quarterly emissions thresholds for combined ROG and NO_x or fugitive dust. However, based on the project site's location within 1,000 feet of sensitive receptor locations, the SLOAPCD states that implementation of the expanded list of fugitive dust mitigation measures is needed to reduce the potential for adverse health effects for nearby sensitive receptors. Mitigation Measure AQ-1 has been identified to require implementation of the SLOAPCD's expanded list of fugitive dust mitigation.

The California Code of Regulations (Section 2485 of Title 13) also prohibits idling in excess of 5 minutes from any diesel-fueled commercial motor vehicles with gross vehicular weight ratings of 10,000 pounds or more or that must be licensed for operation on highways.

The project would not exceed daily or quarterly emissions thresholds for DPM during construction. However, based on the project site's location within 1,000 feet of sensitive receptor locations and proposed use of diesel-powered equipment, the SLOAPCD states that implementation of limits on idling during the construction phase are needed to reduce the potential for adverse health effects for nearby sensitive receptors. Mitigation Measure AQ-2 has been identified to require implementation of idling limits for diesel-powered equipment during construction activities and for these measures to be shown on project grading and construction plans. The project would not include demolishing or remodeling, sandblasting, removing paint with a heat gun, or other activities that may result in other air emissions with the potential to adversely affect surrounding sensitive receptors.

With implementation of Mitigation Measures AQ-1 and AQ-2, potential impacts to sensitive receptors associated with construction activities would be *less than significant with mitigation*.

Initial Study – Environmental Checklist

- (d) *Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?*

Construction could generate odors from heavy diesel machinery, equipment, and/or materials. The generation of odors during the construction period would be temporary, would be consistent with odors commonly associated with construction, and would dissipate within a short distance from the active work area. No long-term operational odors would be generated by the project. Therefore, potential odor-related impacts would be *less than significant*.

Conclusion

Project impacts associated with consistency with an adopted clean air plan, cumulatively considerable net increases in criteria air pollutants, and other emissions would be less than significant. Project impacts associated with exposure of sensitive receptors to substantial pollutant concentrations would be reduced to less than significant with implementation of mitigation measures identified below. Upon implementation of the identified mitigation measures, potential impacts related to air quality would be less than significant.

Mitigation

AQ-1 Fugitive Dust Mitigation Measures (Expanded List). At the time of application for grading and construction permits for both Phases I and II of proposed development, the following measures shall be provided on project grading and construction plans and shall be implemented throughout the duration of project grading and construction activities:

1. Reduce the amount of the disturbed area where possible;
2. Use of water trucks or sprinkler systems in sufficient quantities to prevent airborne dust from leaving the site and from exceeding the San Luis Obispo County Air Pollution Control District's limit of 20% opacity for greater than 3 minutes in any 60-minute period. Increased watering frequency would be required whenever wind speeds exceed 15 miles per hour. Reclaimed (non-potable) water should be used whenever possible. When drought conditions exist and water use is a concern, the contractor or builder should consider use of a dust suppressant that is effective for the specific site conditions to reduce the amount of water used for dust control. Please refer to the following link from the San Joaquin Valley Air District for a list of potential dust suppressants:
<http://www.valleyair.org/busind/comply/PM10/Products%20Available%20for%20Controlling%20PM10%20Emissions.htm>;
3. All dirt stockpile areas should be sprayed daily and covered with tarps or other dust barriers as needed;
4. All roadways, driveways, sidewalks, etc. to be paved should be completed as soon as possible, and building pads should be laid as soon as possible after grading unless seeding, soil binders or other dust controls are used;
5. All trucks hauling dirt, sand, soil, or other loose materials are to be covered or should maintain at least 2 feet of freeboard (minimum vertical distance between top of load and top of trailer) or otherwise comply with California Vehicle Code Section 23114;

Initial Study – Environmental Checklist

6. "Track-Out" is defined as sand or soil that adheres to and/or agglomerates on the exterior surfaces of motor vehicles and/or equipment (including tires) that may then fall onto any highway or street as described in California Vehicle Code Section 23113 and California Water Code 13304. To prevent track out, designate access points and require all employees, subcontractors, and others to use them. Install and operate a "track-out prevention device" where vehicles enter and exit unpaved roads onto paved streets. The track-out prevention device can be any device or combination of devices that are effective at preventing track out, located at the point of intersection of an unpaved area and a paved road. Rumble strips or steel plate devices need periodic cleaning to be effective. If paved roadways accumulate tracked out soils, the track-out prevention device may need to be modified;
7. All fugitive dust mitigation measures shall be shown on grading and building plans;
8. The contractor or builder shall designate a person or persons whose responsibility is to ensure any fugitive dust emissions do not result in a nuisance and to enhance the implementation of the mitigation measures as necessary to minimize dust complaints and reduce visible emissions below the San Luis Obispo County Air Pollution Control District's limit of 20% opacity for greater than 3 minutes in any 60-minute period. Their duties shall include holidays and weekend periods when work may not be in progress (for example, wind-blown dust could be generated on an open dirt lot). The name and telephone number of such persons shall be provided to the San Luis Obispo County Air Pollution Control District Compliance Division prior to the start of any grading, earthwork or demolition (Contact the Compliance Division at 805-781-5912).
9. Permanent dust control measures identified in the approved project revegetation and landscape plans should be implemented as soon as possible, following completion of any soil-disturbing activities;
10. Exposed ground areas that are planned to be reworked at dates greater than 1 month after initial grading should be sown with a fast germinating, non-invasive grass seed and watered until vegetation is established;
11. All disturbed soil areas not subject to revegetation should be stabilized using approved chemical soil binders, jute netting, or other methods approved in advance by the San Luis Obispo County Air Pollution Control District;
12. Vehicle speed for all construction vehicles shall not exceed 15 miles per hour on any unpaved surface at the construction site;
13. Sweep streets at the end of each day if visible soil material is carried onto adjacent paved roads. Water sweepers shall be used with reclaimed water where feasible. Roads shall be pre-wetted prior to sweeping when feasible; and
14. Take additional measures as needed to ensure dust from the project site is not impacting areas outside the project boundary.

AQ-2

Limits on Idling During Construction. At the time of application for grading and construction permits for both Phases I and II of proposed development, the following measures shall be provided on project grading and construction plans and shall be

Initial Study – Environmental Checklist

implemented throughout the duration of project grading and construction activities when diesel-powered vehicles/equipment are in use:

1. State law prohibits idling diesel engines for more than 5 minutes. All projects with diesel-powered construction activity shall comply with Section 2485 of Title 13 of the California Code of Regulations and the 5-minute idling restriction identified in Section 2449(d)(2) of the California Air Resources Board’s In-Use Off-Road Diesel regulation to minimize toxic air pollution impacts from idling diesel engines. The specific requirements and exceptions for the on-road and off-road regulations can be reviewed at the following websites:
arb.ca.gov/sites/default/files/classic/msprog/truck-idling/13ccr2485_09022016.pdf
 and arb.ca.gov/regact/2007/ordiesl07/frooal.pdf.
2. In addition, because this project is located within 1,000 feet of sensitive receptors, the project applicant shall comply with the following more restrictive requirements to minimize impacts to nearby sensitive receptors.
 - a. Staging and queuing areas shall be located at the greatest distance from sensitive receptor locations as feasible;
 - b. Diesel idling while equipment is not in use shall not be permitted;
 - c. Use of alternative fueled equipment is recommended; and signs must be posted and enforced at the site that specify no idling areas.

IV. BIOLOGICAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>				
(a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Initial Study – Environmental Checklist

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
(b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
(e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
(f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Setting

Sensitive Resource Area Designations

The County of San Luis Obispo Land Use Ordinance (LUO) Sensitive Resource Area (SRA) combining designation applies to areas of the county with special environmental qualities, or areas containing unique or sensitive endangered vegetation or habitat resources. The combining designation standards established in the LUO require that proposed uses be designed with consideration of the identified sensitive resources and the need for their protection.

Federal and State Endangered Species Acts

The Federal Endangered Species Act of 1973 (FESA) provides legislation to protect federally listed plant and animal species. The California Endangered Species Act of 1984 (CESA) ensures legal protection for plants listed as rare or endangered, and wildlife species formally listed as endangered or threatened, and also maintains a list of California Species of Special Concern (SSC). SSC status is assigned to species that have

Initial Study – Environmental Checklist

limited distribution, declining populations, diminishing habitat, or unusual scientific, recreational, or educational value. Under state law, the CDFW has the authority to review projects for their potential to impact special-status species and their habitats.

Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) protects all migratory birds, including their eggs, nests, and feathers. The MBTA was originally drafted to put an end to the commercial trade in bird feathers, popular in the latter part of the 1800s. The MBTA is enforced by the U.S. Fish and Wildlife Service (USFWS), and potential impacts to species protected under the MBTA are evaluated by the USFWS in consultation with other federal agencies and are required to be evaluated under CEQA.

Oak Woodland Ordinance

The County of San Luis Obispo Oak Woodland Ordinance was adopted in April 2017 to regulate the clear-cutting of oak woodlands. This ordinance applies to sites located outside of Urban or Village areas within the inland portions of the county (not within the Coastal Zone). "Clear-cutting" is defined as the removal of one acre or more of contiguous trees within an oak woodland from a site or portion of a site for any reason, including harvesting of wood, or to enable the conversion of land to other land uses. "Oak woodland" includes the following species: Blue oak (*Quercus douglasii*), coast live oak (*Quercus agrifolia*), interior live oak (*Quercus wislizeni*), valley oak (*Quercus labata*), and California black oak (*Quercus kelloggii*). The ordinance applies to clear-cutting of oak woodland only and does not apply to the removal of other species of trees, individual oak trees (except for Heritage Oaks), or the thinning, tree trimming, or removal of oak woodland trees that are diseased, dead, or creating a hazardous condition. Heritage oaks are any individual oak species, as defined in the Oak Woodland Ordinance, of 48 inches diameter at breast height (dbh) or greater, separated from all Stands and Oak Woodlands by at least 500 feet. Minor Use Permit approval is required to remove any Heritage Oak.

The project site supports a healthy grove of coast live oak trees.

A total of 25 trees, all coast live oaks, were identified during a Biological Resource Assessment (BRA).

Clean Water Act and State Porter Cologne Water Quality Control Act

The U.S. Army Corps of Engineers (USACE) regulates discharges of dredged or fill material into waters of the United States. These waters include wetland and non-wetland water bodies that meet specific criteria. USACE jurisdiction regulates almost all work in, over, and under waters listed as "navigable waters of the U.S." that results in a discharge of dredged or fill material within USACE regulatory jurisdiction, pursuant to Section 404 of the Clean Water Act (CWA). Under Section 404, USACE regulates traditional navigable waters, wetlands adjacent to traditional navigable waters, relatively permanent non-navigable tributaries that have a continuous flow at least seasonally (typically 3 months), and wetlands that directly abut relatively permanent tributaries.

The State Water Resources Control Board (SWRCB) and nine Regional Water Quality Control Boards (RWQCBs) regulate discharges of fill and dredged material in California, under Section 401 of the CWA and the State Porter-Cologne Water Quality Control Act, through the State Water Quality Certification Program. State Water Quality Certification is necessary for all projects that require a USACE permit, or fall under other federal jurisdiction, and have the potential to impact waters of the State. Based on the U.S. Fish and Wildlife Service National Wetlands Inventory, the project site does not support wetlands, riparian or deep-water habitats (USFWS 2019).

Conservation and Open Space Element

Initial Study – Environmental Checklist

The intent of the goals, policies, and implementation strategies in the COSE is to identify and protect biological resources that are a critical component of the county's environmental, social, and economic well-being. Biological resources include major ecosystems; threatened, rare, and endangered species and their habitats; native trees and vegetation; creeks and riparian areas; wetlands; fisheries; and marine resources. Individual species, habitat areas, ecosystems and migration patterns must be considered together in order to sustain biological resources. The COSE identifies Critical Habitat areas for sensitive species including California condor, California red legged frog, vernal pool fairy shrimp, La Graciosa thistle, Morro Bay kangaroo rat, Morro shoulderband snail, tiger salamander, and western snowy plover. The COSE also identifies features of particular importance to wildlife for movement corridors such as riparian corridors, shorelines of the coast and bay, and ridgelines.

Biological Resources Assessment

A Biological Resource Assessment (BRA) of the project site was performed by Cleveland Biological, LLC. The purpose of the BRA was to evaluate the potential for the subject property to support special status biological resources and whether these resources could be adversely affected by the proposed project. A tree survey, seasonally timed rare plant survey, and wildlife surveys were conducted on the proposed project site. (Cleveland Biological, LLC, 2022) The project area is characterized by gently to steeply sloping topography and consists of coast live oak woodlands on the west, coyote bush scrub on the east, and open, sandy disturbed areas in the center. (Cleveland Biological, LLC, 2022) The project site is vacant and undeveloped. Surrounding properties are similar in size and development to the proposed project.

Biologists Cindy Cleveland, Paul Cleveland, and Botanist Steve Junak completed all fieldwork for this biological resources assessment. For the surveys, the biologists and botanist traversed the entire property on foot with particular attention to special-status plants, plant communities, habitats, animal tracks, animal burrows, bird nests, soil types, drainage features, and rock outcroppings. The initial May 13, 2022 survey focused on the Pismo clarkia (*Clarkia speciosa* ssp. *Immaculata*). The May 15, 2022 site visit focused on aerial photography of the project site. Subsequent site visits on May 20, 2022, May 29, 2022, June 9 & 10, 2022 focused on field cameras, vegetation community mapping, wildlife inventory, botanical inventory, and tree inventory. A July 7, 2022 survey focused on the Northern legless lizard, and finally a September 20, 2022 site visit focused on oak trees impacted by the proposed driveway. (Cleveland Biological, LLC, 2022)

Special-Status Plants

The background review determined that the proposed project site had the potential for 14 special-status plant species to occur in habitats similar to those on the proposed project site or were listed as nearby sightings. The following plants were given some potential to occur at the proposed project site and are further described below:

Black-flowered figwort (*Scrophularia atrata*)

- Black-flowered figwort is a perennial herb that occurs in closed-cone coniferous forest, chaparral, coastal dunes, coastal scrub, and riparian scrub habitats, typically on sandy or diatomaceous shale soils. It ranges from 10 to 500 meters in elevation. Black-flowered figwort blooms in April through July. Potential habitat is present onsite for this species in sandy areas adjacent to scrub, but it was not observed during surveys.

Brewer's calandrinia (*Calandrinia breweri*)

- Brewer's calandrinia is an annual herb that occurs in burned areas and disturbed sites in coastal scrub and chaparral on sandy or loamy soils. It ranges from 10 to 1220 meters in elevation. Brewer's

Initial Study – Environmental Checklist

calandrinia blooms from March to June. Potential habitat is present onsite in disturbed sandy areas, but it was not observed during surveys.

California spineflower (*Mucronea californica*)

- California spineflower is an annual herb that occurs in open, sandy areas in coastal dunes, coastal scrub, chaparral, oak woodland, and valley and foothill grassland communities. It ranges from 0 to 1400 meters in elevation. California spineflower blooms from March to July. Potential habitat is present onsite for this species in sandy areas, but it was not observed during surveys.

Hoover's bent grass (*Agrostis hooveri*)

- Hoover's bent grass is a perennial herb that typically occurs in sandy soils derived from sandstone or siliceous shale, in open chaparral, oak woodland, and valley and foothill grassland habitats. It ranges from 60 and 600 meters in elevation. Hoover's bent grass blooms from April to August. Potential habitat is present onsite in oak woodland understory with sandy soil, but it was not observed during surveys.

Kellogg's horkelia (*Horkelia cuneata* var. *sericea*)

- Kellogg's horkelia is a perennial herb found in coastal dunes, coastal scrub, maritime chaparral, and closed-cone coniferous forests. It typically occurs in open sites on gravelly or sandy soils. It ranges from 10 to 200 meters in elevation. Kellogg's horkelia blooms from April to September. Potential habitat is present onsite for this species in sandy areas adjacent to scrub, but it was not observed during surveys.

Mesa horkelia (*Horkelia cuneata* var. *puberula*)

- Mesa horkelia is a perennial herb usually found in sandy or gravelly sites in coastal scrub, maritime chaparral, and cismontane woodland communities. It ranges from 70 to 810 meters in elevation. Mesa horkelia blooms from February to July. Potential habitat is present onsite for this species in sandy areas adjacent to scrub, but it was not observed during surveys.

Pismo clarkia (*Clarkia speciosa* ssp. *Immaculata*)

- Pismo clarkia is an annual herb that occurs on sandy soils in chaparral (along edges or in openings), cismontane woodland, and valley and foothill grassland communities. It is endemic to San Luis Obispo County. It ranges from 25 to 185 meters in elevation. Pismo clarkia blooms from May to July. Potential habitat is present onsite for this species in sandy areas adjacent to scrub. While present at reference locations and blooming during the time period of the survey, it was not observed during surveys.

Saints' daisy (*Erigeron sanctarum*)

- Saints' daisy is a perennial herb found in coastal scrub, chaparral, and oak woodland communities, often in areas with sandy soil. It is restricted to San Luis Obispo and Santa Barbara counties. It ranges from 75 to 350 meters in elevation. Saints' daisy blooms from March to July. Potential habitat is present onsite in oak woodland understory with sandy soil, but it was not observed during surveys.

San Luis Obispo wallflower (*Erysimum capitatum* var. *lompocense*)

- San Luis Obispo wallflower is a perennial herb that occurs on sandy soils in coastal scrub and maritime chaparral. The vast majority of populations are found in northern Santa Barbara County. It ranges from 60 to 500 meters in elevation. San Luis Obispo wallflower blooms from February to May. Potential habitat is present onsite for this species in open sandy areas, but it was not observed during surveys.

Sand almond (*Prunus fasciculata* var. *punctata*)

- Sand almond is a woody, colonial shrub found in chaparral and oak woodland communities with sandy soils. It mostly occurs on the south side of Morro Bay and on Nipomo Mesa in San Luis Obispo

Initial Study – Environmental Checklist

County and in northern Santa Barbara County It ranges from 20 to 200 meters in elevation. Sand almond blooms from March to April. Potential habitat is present onsite for this species in open sandy areas, but it was not observed during surveys.

Sand mesa manzanita (*Arctostaphylos rudis*)

- Sand mesa manzanita is a shrub that occurs in chaparral with sandy soils, especially on Nipomo Mesa in San Luis Obispo County and in the San Antonio Terrace/Burton Mesa area in Santa Barbara County. It ranges from 50-300 m in elevation. Sand mesa manzanita blooms from November to February. Potential habitat is present onsite for this species in open sandy areas, but it was not observed during surveys.

Santa Barbara bedstraw (*Galium cliftonsmithii*)

- Santa Barbara bedstraw is a perennial herb that occurs in chaparral and oak woodland communities. It ranges from 200 to 1220 meters in elevation. Santa Barbara bedstraw blooms from April to July. Potential habitat is present onsite in oak woodland understory with sandy soil, but it was not observed during surveys. A sterile, perennial *Galium* was observed in the understory of the oaks onsite, but that individual had much narrower leaves than this species.

Southern curly-leaved monardella (*Monardella sinuata* ssp. *sinuate*)

- Southern curly-leaved monardella is an annual herb found on sandy soils in coastal dunes, coastal scrub, chaparral, and oak woodlands. It ranges from 0 to 300 meters in elevation. Southern curly-leaved monardella blooms from April to September. Potential habitat is present onsite for this species in open areas with sandy soil, but it was not observed during surveys.

Straight-awned spineflower (*Chorizanthe rectispina*)

- Straight-awned spineflower is an annual herb that occurs in chaparral, oak woodland, and coastal scrub habitats, and has even been found in vineyards and other frequently disturbed areas. It is typically found in granite sand or disintegrating shale. It ranges from 200 to 1035 meters in elevation. Straight-awned spineflower blooms from May to July. Potential habitat is present onsite for this species in open areas with sandy soil, but it was not observed during surveys.

No special-status plants were observed during field surveys. The focused rare plant surveys were conducted for the entire proposed project site in May, which is the blooming period of special-status plants identified with the potential to occur on the proposed project site. The focused rare plant surveys conducted for this investigation were considered comprehensive and covered all bloom periods of special-status plant species that could occur in the study area.

Special-Status Wildlife

Based on a query of the CNDDDB, habitat conditions observed during field surveys of the project site, and the habitat requirements of the special-status wildlife species known to occur within the project region, the BRA identified the potential for the following 11 special-status wildlife species to occur within the project area:

The background review determined that there was potential for nine of the special-status animal species to occur on the proposed project site based on habitat suitability analysis coupled with field observations. The following species were given some potential to occur on the proposed project site based on habitat requirements and nearby findings. They are further described below:

Initial Study – Environmental Checklist

Cooper's hawk (*Accipiter cooperii*; watch list)

- The Cooper's hawk is on the CDFW Watch List and was observed on the proposed project site during two of the field surveys. The Cooper's hawk was observed flying overhead and perching in three trees. The Cooper's hawk is known to hunt around human structures and nest in tall trees (The Cornell Lab of Ornithology, 2020b).

Golden eagle (*Aquila chrysaetos*; watch list and CDFW Fully Protected)

- The Golden eagle and white-tailed kite are CDFW Fully Protected species for nesting sites. These raptors are more likely to nest in larger expanses of oak woodlands (The Cornell Lab of Ornithology, 2020b). Neither species was observed during field surveys at the proposed project site.

White-tailed kite (*Elanus leucurus*; CDFW Fully Protected)

- The Golden eagle and white-tailed kite are CDFW Fully Protected species for nesting sites. These raptors are more likely to nest in larger expanses of oak woodlands (The Cornell Lab of Ornithology, 2020b). Neither species was observed during field surveys at the proposed project site.

Grasshopper sparrow (*Ammodramus savannarum*, species of special concern)

- The grasshopper sparrow is a CDFW Species of Special Concern that occurs almost exclusively in grassland habitats (The Cornell Lab of Ornithology, 2020b). There are limited grasses on the proposed project site, making it unlikely habitat for this sparrow. There were no observations of the grasshopper sparrow on the proposed project site.

Monarch butterfly (*Danaus plexippus*, federal candidate)

- The Monarch butterfly is a federal candidate species that occurs in microhabitats in windprotected eucalyptus, Monterey pine, and cypress trees, which are not near or present on the proposed project site. No Monarch butterflies were observed during field surveys.

American badger (*Taxidea taxus*; species of special concern)

- The American badger is a CDFW Species of Special Concern that inhabits friable soils and open, uncultivated ground for denning. While there is potentially suitable habitat on the proposed project site, no observations of the American badger or its burrows were made during field surveys.

Northern California legless lizard (*Anniella pulchra*, species of special concern)

- The northern California legless is a CDFW Species of Special Concern that occurs in a variety of habitats if there is soil moisture and cover, including beach dunes, chaparral, pine forest, oak woodland, riparian forest and scrub, coastal scrub, and landscaped areas near residences (California Herps, 2020). This species is fossorial and buries into loose soils, leaf litter, or is associated with cover objects that provide moisture (i.e., rocks, boards, and logs). They forage just beneath the surface of loose soil or in leaf litter during the morning or evening and may be active above the surface at dusk or at night (California Herps, 2020). Their peak activity near the surface is from February through May (Yasuda, 2012). A survey for the northern California legless lizard took place on July 7, 2022. Seven suspected areas were investigated at the proposed project site. These included sandy areas near native plants and areas of leaf litter under oak trees. At each site, three passes were made to remove cover vegetation and two layers of sand. On the third pass, the sand was found to be either too hard or absent of any legless lizard species. The moisture level at all sites was zero percent when measured with a General soil moisture meter. No Northern California legless lizards were found during the survey at the proposed project site.

Coast horned lizard (*Phrynosoma blainvillii*, species of special concern)

Initial Study – Environmental Checklist

- The coast horned lizard is a CDFW Species of Special Concern that inhabits grasslands, sandy washes, coastal scrub, chaparral, coniferous forest, and woodlands with patches of open areas for sunning and bushes for cover. They prey on native species of ants and other small invertebrates. The proposed project site has suitable habitat and the presence of native Harvester ants, although no observations of the Coast horned lizard were made during field surveys.

Discussion

- (a) *Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?*

The field surveys yielded the discovery of one special-status animal and no special-status plants. The proposed project site does not support any special-status vegetation communities, wetlands, or Environmentally Sensitive Habitat Areas. The proposed project site does provide some suitable habitat for several special-status plant and animal species described in the biological resource assessment, none of which were observed, except for Cooper's hawk. The proposed project will result in a direct impact to the native Coyote Bush Scrub vegetation community from grading, construction of structures, and landscaping. Mitigation measure BIO-1 is recommended to avoid, minimize, and compensate for impacts to the native Coyote Bush Scrub vegetation community. There are potential indirect impacts on the oak woodland from general construction activities. Mitigation measure BIO-3 is recommended to avoid, minimize, and compensate for these impacts on the native oak tree woodland community.

Implementation of Mitigation Measures BIO-1 through BIO-3 would reduce possible impacts on listed species to *less than significant with mitigation*.

- (b) *Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?*

There are no mapped blue line creeks and no riparian vegetation or other sensitive natural communities within or immediately adjacent to the proposed areas of disturbance. Therefore, the project would not result in impacts to riparian habitat or other sensitive natural communities and *no impacts would occur*.

- (c) *Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?*

The project site does not support state or federal wetlands or other jurisdictional areas. Therefore, the project would not result in an adverse effect on state or federally protected wetlands and *no impacts would occur*.

- (d) *Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?*

The project would not result in disturbance to native resident or migratory fish habitat. The project has the potential to interfere with the Cooper's hawk and other birds nesting however, using the proposed mitigation measures (BIO-1 through BIO-3), this interference impacts would be *less than significant with mitigation*.

Initial Study – Environmental Checklist

- (e) *Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?*

The proposed project driveway will remove two oak trees and impact twelve through trimming and encroachment into the critical root zones. This will require 32 replacement trees. Incorporation of mitigation measure BIO-1 through BIO-4 will bring the project *to less than significant with mitigation*.

- (f) *Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?*

The project is not located within an area under an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. The project is not within areas identified as critical habitat or within the County's San Joaquin Kit Fox standard mitigation ratio area (County of San Luis Obispo 2007). Therefore, the project would not conflict with the provisions of an adopted plan and *no impacts would occur*.

Conclusion

The proposed project site consists of a mixture of native and non-native vegetation within three vegetation communities. Potential impacts to any resources that could occur are fully mitigated with Mitigation Measures BIO-1, 2, 3 and 4. This analysis determined that the proposed project meets none of the criteria that trigger mandatory findings of significance under CEQA.

Mitigation

BIO-1 Landscape Plans. The Landscape Plan shall use native, non-invasive, and drought tolerant species. These plants will be selected by the Landscape Contractor from the San Luis Obispo County – Approved Plant List.

BIO-2 Nesting Birds. To avoid impacts to nesting birds, all ground preparation and vegetation removal activities shall take place outside the typical nesting bird season (September 1 to January 31), if possible. If construction activities are needed during nesting bird season (February 1 to August 31), a qualified biologist shall conduct pre-construction surveys for active bird nests within 300 feet of the work area. If active nests are located, construction activities shall be conducted outside an exclusion zone (i.e. 50 to 300 feet depending on species) until the nest is no longer considered active.

BIO-3 Tree Protection Fencing (TPF). Prior to the start of construction, protective fencing shall be installed by the Contractor to avoid impacts to the trees and their roots. The TPF should consist of blaze orange fencing supported by metal "T bar" posts. The fencing should be installed at or outside of the tree drip lines. The TPF should be maintained during the entire development process. Grading and construction activity should be minimized within the TPF area. Tree Protection During Construction. Heavy machinery operated by the Contractor shall take care to minimize the disruption of all tree roots. Grading and filling or compaction should be avoided around the trees. Grading can cut the shallow "feeder" roots, which may reduce the tree's ability to take up water and nutrients from the soil. Any exposed roots should be cut, so they stay 1-2 inches below the soil line and are not exposed to the air. Filling and compaction can reduce oxygen uptake as well as disrupt the activities of soil organisms that decompose organic materials, fix nitrogen, and release nutrients. Heavy equipment, construction materials, and debris should not be stored near the TPF. Any refueling should not occur near the TPF (Holland, 2010). Tree Trimming. All pruning of the coast live oak trees shall be performed by a contractor familiar and compliant with International Society of Arboriculture pruning guidelines. Landscaping and Maintenance near trees. All drainages shall avoid causing water to

Initial Study – Environmental Checklist

accumulate near the trees. No watering systems shall be installed near the trees that will provide water to the trees during the summer as this can cause root rot.

BIO-4 Driveway Substrate. A porous material would be preferable to concrete or asphalt. The design should use materials that allow water permeability and gas exchange, such as brick with sand joints, open bricks, bark, gravel, cobbles, or redwood planks. Tree Removal or Impact. Coast live oak trees removed or damaged shall be replaced by the Contractor at a 4:1 ratio (as directed by the County). Coast live oak trees that will be trimmed or encroached into the critical root zones, which are typically 1.5 times the distance from the dripline to the trunk, shall be replaced by the Contractor at a 2:1 ratio (as directed by the County). Any heavy pruning of oak trees should occur during July and August. Onsite Mitigation. Sixteen trees shall be replaced onsite as part of the Landscape Plan. These trees shall be spaced between 15 – 20 ft on-center. The replacement tree size shall be one to five-gallon deep pots. All replacement trees shall be maintained and monitored for a minimum of seven years to ensure successful establishment. If replacement trees do not successfully establish or die, then additional trees will be planted and monitored accordingly to meet this requirement. An as-built planting plan shall be prepared that is used to track the replacement trees, and annual reports prepared by a qualified individual shall be submitted to the County by December 31st of each year following planting. Offsite Mitigation Sixteen trees shall be replaced by paying an in-lieu mitigation fee to the Oak Woodlands Conservation Program. The proposed project site does not allow for satisfactory tree spacing for all thirty-two mitigation trees to be planted onsite. Oak trees also need to be on their own watering system and away from other landscape watering systems. Working with the County, the applicant will pay an estimated fee of \$1,008.00 for each tree removed and \$504.00 for each tree impacted. These prices are based on an invoice from Stalwork, Inc Construction, dated October 4, 2022. The prices are also similar to a Biological Resource Assessment from 2019, when County approved \$970 for removed trees and \$485 for impacted trees (Merk 2019).

V. CULTURAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>				
(a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(c) Disturb any human remains, including those interred outside of dedicated cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Setting

San Luis Obispo County possesses a rich and diverse cultural heritage and therefore has a wealth of historic and prehistoric resources, including sites and buildings associated with Native American inhabitation, Spanish missionaries, and immigrant settlers.

Initial Study – Environmental Checklist

As defined by CEQA, a historical resource includes:

1. A resource listed in or determined to be eligible for listing in the California Register of Historical Resources (CRHR).
2. Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant. The architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural records of California may be considered to be a historical resource, provided the lead agency's determination is supported by substantial evidence.

The County of San Luis Obispo LUO Historic Site (H) combining designation is applied to areas of the county to recognize the importance of archeological and historic sites and/or structures important to local, state, or national history. Standards are included regarding minimum parcel size and permit processing requirements for parcels with an established structure and Historic Site combining designation. For example, all new structures and uses within an H combining designation require Minor Use Permit approval, and applications for such projects are required to include a description of measures proposed to protect the historic resource identified by the Land Use Element (LUO 22.14.080).

San Luis Obispo County was historically occupied by two Native American tribes: the northernmost subdivision of the Chumash, the Obispeño (after Mission San Luis Obispo de Tolosa), and the Salinan. However, the precise location of the boundary between the Chumashan-speaking Obispeño Chumash and their northern neighbors, the Hokan-speaking Playanos Salinan, is not known, as those boundaries may have changed over time.

The COSE identifies and maps anticipated culturally sensitive areas and historic resources within the county and establishes goals, policies, and implementation strategies to identify and protect areas, sites, and buildings having architectural, historical, Native American, or cultural significance. Based on the COSE, the project is not located in a designated Archaeological Sensitive Area or Historic Site.

The project parcel is not within 300 feet of a blue line creek, the presence of regular activities of the Native American increases in close proximity to reliable water sources and the site is located approximately 1,100 feet from an unnamed intermittent stream. The distance to the creek supports the unlikelihood that cultural materials are present on site.

State law under Assembly Bill 52 (Public Resources Code Section 21080.3.1) allows California Native American tribes 30 days to request consultation regarding possible significant effects that implementation of the proposed project may have on tribal cultural resources. The project was referred to Northern Chumash Tribal Council, Salinian Tribe of San Luis Obispo and Monterey, Xolon Salinian Tribe, and Yak Tityu Tityu Yak Tilhini Northern Chumash Tribe. At this time, Tribes have not responded to inquire for consultation.

In the unlikely event that buried cultural materials are encountered during construction, the County requires that all ground disturbances will cease until a qualified archaeologist is contacted to evaluate the nature, integrity, and significance of the deposit.

Initial Study – Environmental Checklist

Discussion

- (a) *Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?*

The project site does not contain, nor is it located near, any historic resources identified in the National Register of Historic Places or California Register of Historic Resources. The project site does not contain a site under the Historic Site (H) combining designation and does not contain other structures of historic age (50 years or older) that could be potentially significant as a historical resource. Therefore, the project would not result in an adverse change in the significance of a historical resources and *no impacts would occur*.

- (b) *Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?*

Based on a review of past archaeological surveys conducted in the project vicinity, there are no previously identified archaeological resources within 0.5 mile of the project site. In addition, the project site is not located in an area that would be considered culturally sensitive due to lack of physical features typically associated with prehistoric occupation. The project does not propose substantial earthmoving activities that would have the potential to disturb subsurface archaeological resources.

As noted above, the Cultural Resources Survey identified no known archaeological sites. In the unlikely event resources are uncovered during grading activities, implementation of LUO Section 22.10.040 (Archaeological Resources) would be required, which states:

In the event archeological resources are unearthed or discovered during any construction activities, the following standards apply:

- A. Construction activities shall cease, and the Department shall be notified so that the extent and location of discovered materials may be recorded by a qualified archaeologist, and disposition of artifacts may be accomplished in accordance with state and federal law.
- B. In the event archeological resources are found to include human remains, or in any other case when human remains are discovered during construction, the County Coroner shall be notified in addition to the Department so proper disposition may be accomplished.

Based on the low known sensitivity of the project site, and with implementation of LUO Section 22.10.040, impacts to archaeological resources would be *less than significant*.

- (c) *Disturb any human remains, including those interred outside of dedicated cemeteries?*

Based on existing conditions, buried human remains are not expected to be present in the site area. In the event of an accidental discovery or recognition of any human remains, California State Health and Safety Code Section 7050.5 and LUO 22.10.040 (Archaeological Resources) require that no further disturbances shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to Public Resources Code Section 5097.98. With adherence to State Health and Safety Code Section 7050.5 and County LUO, impacts related to the unanticipated disturbance of archaeological resources and human remains would be reduced to less than significant; therefore, potential impacts would be *less than significant*.

Initial Study – Environmental Checklist

Conclusion

No archaeological or historical resources are known or expected to occur within or adjacent to the project site. In the event unanticipated sensitive archaeological resources or human remains are discovered during project construction activities, adherence with County LUO standards and State Health and Safety Code procedures would reduce potential impacts to less than significant; therefore, potential impacts to cultural resources would be less than significant and no mitigation measures are necessary.

Mitigation

None necessary.

VI. ENERGY

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>				
(a) Result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Setting

Pacific Gas & Electric Company (PG&E) is the primary electricity provider for urban and rural communities within the County of San Luis Obispo. Approximately 33% of electricity provided by PG&E is sourced from renewable resources and an additional 45% is sourced from greenhouse gas-free resources (PG&E 2017).

The County COSE establishes goals and policies that aim to reduce vehicle miles traveled, conserve water, increase energy efficiency and the use of renewable energy, and reduce greenhouse gas emissions. The COSE provides the basis and direction for the development of the County’s EnergyWise Plan (EWP), which outlines in greater detail the County’s strategy to reduce government and community-wide greenhouse gas emissions through a number of goals, measures, and actions, including energy efficiency and development and use of renewable energy resources.

In 2010, the EWP established a goal to reduce community-wide greenhouse gas emissions to 15% below 2006 baseline levels by 2020. Two of the six community-wide goals identified to accomplish this were to “[a]ddress future energy needs through increased conservation and efficiency in all sectors” and “[i]ncrease the production of renewable energy from small-scale and commercial-scale renewable energy installations to account for 10% of local energy use by 2020.” In addition, the County has published an EnergyWise Plan 2016 Update to summarize progress toward implementing measures established in the EWP and outline overall trends in energy use and emissions since the baseline year of the EWP inventory (2006).

The California Building Code (CBC) contains standards that regulate the method of use, properties, performance, or types of materials used in the construction, alteration, improvement, repair, or

Initial Study – Environmental Checklist

rehabilitation of a building or other improvement to real property. The CBC includes mandatory green building standards for residential and nonresidential structures, the most recent version of which are referred to as the *2019 Building Energy Efficiency Standards*. These standards focus on four key areas: smart residential photovoltaic systems, updated thermal envelope standards (preventing heat transfer from the interior to the exterior and vice versa), residential and nonresidential ventilation requirements, and non-residential lighting requirements.

The County LUO includes a Renewable Energy Area combining designation to encourage and support the development of local renewable energy resources, conserving energy resources and decreasing reliance on environmentally costly energy sources. This designation is intended to identify areas of the county where renewable energy production is favorable and establish procedures to streamline the environmental review and processing of land use permits for solar electric facilities (SEFs). The LUO establishes criteria for project eligibility, required application content for SEFs proposed within this designation, permit requirements, and development standards (LUO 22.14.100).

The project is located in the County's Renewable Energy Area Combining Designation. The project proposes the use of a solar panel array which will be examined and permitted separately. Based on provided design plans, the proposed project is expected to follow the mandatory measures laid out in the 2016 California Green Building Standards Code (CCR Title 24, Parts 6 and 11).

Discussion

- (a) *Result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?*

Project implementation would require minimal consumption of energy resources. During construction, fossil fuels, electricity, and natural gas would be used by construction vehicles and equipment. The energy consumed during construction would be temporary and would not represent a significant or wasteful demand on available resources. Energy demands during project operation would be provided through existing infrastructure and would not substantially increase over existing demands. Operational energy use would be consistent with that of similar facilities and would not be wasteful or inefficient. There are no unique project characteristics that would result in a significant increase in energy usage, or an inefficient, wasteful use, or unnecessary consumption of energy resources. Potential impacts would be *less than significant*.

- (b) *Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?*

Implementation of the project would not result in a significant new energy demand and there are no project components or operations that would conflict with the EWP or any other state or local plan for renewable energy or energy efficiency. Compliance with State laws and regulations, including the most recent Building Code requirements, will ensure the project continues to reduce energy demands and greenhouse gas emissions, through, for example, increasing state-wide requirements that energy be sourced from renewable resources. Therefore, *no impact would occur*.

Conclusion

The project would not result in a significant energy demand during short-term construction or long-term operations and would not conflict with state or local renewable energy or energy efficiency plans. Therefore, potential impacts related to energy would be less than significant and no mitigation measures are necessary.

Initial Study – Environmental Checklist

Mitigation

None necessary.

VII. GEOLOGY AND SOILS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>				
(a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
(i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(ii) Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(iii) Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(iv) Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Initial Study – Environmental Checklist

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
(e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Setting

The Alquist-Priolo Earthquake Fault Zoning Act (Alquist-Priolo Act) is a California state law that was developed to regulate development near active faults and mitigate the surface fault rupture potential and other hazards. The Alquist-Priolo Act identifies active earthquake fault zones and restricts the construction of habitable structures over known active or potentially active faults. San Luis Obispo County is located in a geologically complex and seismically active region. The Safety Element of the County of San Luis Obispo General Plan identifies three active faults that traverse through the County and that are currently zoned under the Alquist-Priolo Act: the San Andreas, the Hosgri-San Simeon, and the Los Osos. The San Andreas Fault zone is located along the eastern border of San Luis Obispo County and has a length of over 600 miles. The Hosgri-San Simeon fault system generally consists of two fault zones: the Hosgri fault zone that is mapped off of the San Luis Obispo County coast; and the San Simeon fault zone, which appears to be associated with the Hosgri, and comes onshore near San Simeon Point. Lastly, the Los Osos Fault zone has been mapped generally in an east/west orientation along the northern flank of the Irish Hills.

The County Safety Element also identifies 17 other faults that are considered potentially active or have uncertain fault activity in the County. The Safety Element establishes policies that require new development to be located away from active and potentially active faults. The element also requires that the County enforce applicable building codes relating to seismic design of structures and require design professionals to evaluate the potential for liquefaction or seismic settlement to impact structures in accordance with the Uniform Building Code. The project site is located approximately 1.48 miles to the nearest fault line designated a Capable – Inferred.

Groundshaking refers to the motion that occurs in response to local and regional earthquakes. Seismic groundshaking is influenced by the proximity of the site to an earthquake fault, the intensity of the seismic event, and the underlying soil composition. Groundshaking can endanger life and safety due to damage or collapse of structures or lifeline facilities. The California Building Code includes requirements that structures be designed to resist a certain minimum seismic force resulting from ground motion.

Liquefaction is the sudden loss of soil strength due to a rapid increase in soil pore water pressures resulting from groundshaking during an earthquake. Liquefaction potential increases with earthquake magnitude and groundshaking duration. Low-lying areas adjacent to creeks, rivers, beaches, and estuaries underlain by unconsolidated alluvial soil are most likely to be vulnerable to liquefaction. The CBC requires the assessment of liquefaction in the design of all structures. Per the County's Land Use View Mapping Application, the project is located in an area with low potential for liquefaction to occur.

Initial Study – Environmental Checklist

Landslides and slope instability can occur as a result of wet weather, weak soils, improper grading, improper drainage, steep slopes, adverse geologic structure, earthquakes, or a combination of these factors. Despite current codes and policies that discourage development in areas of known landslide activity or high risk of landslide, there is a considerable amount of development that is impacted by landslide activity in the County each year. The County Safety Element identifies several policies to reduce risk from landslides and slope instability. These policies include the requirement for slope stability evaluations for development in areas of moderate or high landslide risk, and restrictions on new development in areas of known landslide activity unless development plans indicate that the hazard can be reduced to a less than significant level prior to beginning development. Per the County's Land Use View Mapping Application, the project is located in an area with moderate potential for landslides.

Shrink/swell potential is the extent to which the soil shrinks as it dries out or swells when it gets wet. Extent of shrinking and swelling is influenced by the amount and kind of clay in the soil. Shrinking and swelling of soils can cause damage to building foundations, roads and other structures. A high shrink/swell potential indicates a hazard to maintenance of structures built in, on, or with material having this rating. Moderate and low ratings lessen the hazard accordingly. As discussed above under Section II, Agriculture and Forestry Resources, project site contains the soil type identified as the Corralitos sand, 2 to 15 percent slopes – The Corralitos series consists of deep, somewhat excessively drained soils that formed in recent sandy alluvium derived from acid sandstone and related rocks. Corralitos soils are on alluvial fans and in small valleys. The County LUO identifies a Geologic Study Area (GSA) combining designation for areas where geologic and soil conditions could present new developments and/or their occupants with potential hazards to life and property. All land use permit applicants located within a GSA are required to include a report prepared by a certified engineering geologist and/or registered civil/soils engineer as appropriate, with the exception of construction of one single-story single family residence, agricultural uses not involving a building, agricultural accessory structures, and alterations or additions to any structure which does not exceed 50 percent of the assessed value of the structure. In addition, all uses within a GSA are subject to special standards regarding grading and distance from an active fault within an Earthquake Fault Zone (LUO 22.14.070).

Paleontological resources are fossilized remains of ancient environments, including fossilized bone, shell, and plant parts; impressions of plant, insect, or animal parts preserved in stone; and preserved tracks of insects and animals. Paleontological resources are considered nonrenewable resources under state and federal law. Paleontological sensitivity is defined as the potential for a geologic unit to produce scientifically significant fossils, as determined by rock type, past history of the rock unit in producing fossil materials, and fossil sites that have been recorded in the unit. Paleontological resources are generally found below ground surface in sedimentary rock units. The boundaries of the sedimentary rock unit is used to define the limits of paleontological sensitivity in a given region.

In the county, the Coastal Franciscan domain generally lies along the mountains and hills associated with the Santa Lucia Range. Fossils recorded from the Coastal Franciscan formation include trace fossils (preserved tracks or other signs of the behaviors of animals), mollusks, and marine reptiles. Nonmarine or continental deposits are more likely to contain vertebrate fossil sites. Occasionally vertebrate marine fossils such as whale, porpoise, seal, or sea lion can be found in marine rock units such as the Miocene Monterey Formation and the Pliocene Sisquoc Formations known to occur throughout Central and Southern California. Vertebrate fossils of continental material are usually rare, sporadic, and localized.

The County COSE identifies a policy for the protection of paleontological resources from the effects of development by avoiding disturbance where feasible. Where substantial subsurface disturbance is proposed in paleontologically sensitive units, Implementation Strategy CR 4.5.1 (Paleontological Studies) requires a

Initial Study – Environmental Checklist

paleontological resource assessment and mitigation plan be prepared, to identify the extent and potential significance of resources that may exist within the proposed development and provide mitigation measures to reduce potential impacts to paleontological resources.

Discussion

(a) *Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:*

(a-i) *Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.*

Based on the California Department of Conservation Earthquake Zone Map, the project site is not located within a mapped Alquist-Priolo earthquake hazard zone (CGS 2018). Based on the County Safety Element Fault Hazards Map, the project site is not located within 1 mile of a known active or potentially active fault. Therefore, the project would not have the potential to result in substantial adverse effects involving rupture of a known earthquake fault and impacts would be *less than significant*.

(a-ii) *Strong seismic ground shaking?*

Based on the County Safety Element Fault Hazards Map, the project site is not located within 1 mile of a known active or potentially active fault. However, San Luis Obispo County is located in a seismically active region and there is always a potential for seismic ground shaking. The project would be required to comply with the California Building Code (CBC) and other applicable standards to ensure the effects of a potential seismic event would be minimized through compliance with current engineering practices and techniques. The project does not include unique components that would be particularly sensitive to seismic ground shaking or result in an increased risk of injury or damage as a result of ground shaking. Implementation of the project would not expose people or structures to significant increased risks associated with seismic ground shaking; therefore, impacts would be *less than significant*.

(a-iii) *Seismic-related ground failure, including liquefaction?*

Based on the County Safety Element Liquefaction Hazards Map, the project site is located in an area with low potential for liquefaction. In addition, the project would be required to comply with CBC seismic requirements to address the site's potential for seismic-related ground failure including liquefaction; therefore, the potential impacts would be *less than significant*.

(a-iv) *Landslides?*

The project site has relatively flat topography and based on the County Safety Element Landslide Hazards Map is located in an area with low potential for landslide risk. Therefore, the project would not result in significant adverse effects associated with landslides and impacts would be *less than significant*.

(b) *Result in substantial soil erosion or the loss of topsoil?*

The project does not include substantial vegetation removal or grading. Preparation and approval of an Erosion and Sedimentation Control Plan is required for all construction and grading projects

Initial Study – Environmental Checklist

(LUO 22.52.120) to minimize potential impacts related to erosion, sedimentation, and siltation. The plan would be prepared by a civil engineer to address both temporary and long-term sedimentation and erosion impacts. Compliance with existing regulations would reduce potential impacts related to soil erosion and loss of topsoil to *less than significant*.

- (c) *Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?*

Landslides typically occur in areas with steep slopes or in areas containing escarpments. Based on the Landslide Hazards Map provided in the County Safety Element, the project site is not located in an area with slopes susceptible to local failure or landslide.

The project would be required to comply with CBC seismic requirements to address potential seismic-related ground failure including lateral spread. Based on the County Safety Element and USGS data, the project is not located in an area of historical or current land subsidence (USGS 2019). Based on the County Safety Element Liquefaction Hazards Map, the project site is located in an area with low potential for liquefaction risk and the project is not located within the GSA combining designation. Therefore, impacts related to on- or off-site landslides, lateral spreading, subsidence, liquefaction or collapse would be *less than significant*.

- (d) *Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?*

Based on the Soil Survey of San Luis Obispo County and Web Soil Survey, the project site is not located within an area known to contain expansive soils as defined in the Uniform Building Code. In addition, all future development would be required to comply with the most recent CBC requirements, which have been developed to properly safeguard structures and occupants from land stability hazards, such as expansive soils. Therefore, potential impacts related to expansive soil would be *less than significant*.

- (e) *Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?*

The septic leach field would be required to be designed and constructed in accordance with the County LAMP, which develops minimum standards for the treatment and disposal of sewage through on-site wastewater treatment systems. Final design of the septic leach field would be subject to County approval prior to implementation on-site. Therefore, installation of the septic leach field would be designed in a manner that is consistent with soil conditions at the site, and impacts would be *less than significant*.

- (f) *Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?*

No known paleontological resources are known to exist in the project area and the project site does not contain any unique geologic features. The project does not include substantial grading or earthwork that would disturb the underlying geologic formation in which paleontological resources may occur. Therefore, potential impacts on paleontological resources would be *less than significant*.

Conclusion

The project site is not within the GSA combining designation or an area of high risk of landslide, liquefaction, subsidence, or other unstable geologic conditions. The project would be required to comply with CBC and

Initial Study – Environmental Checklist

standard LUO requirements which have been developed to properly safeguard against seismic and geologic hazards. Therefore, potential impacts related to geology and soils would be less than significant and no mitigation measures are necessary.

Mitigation

Not necessary.

VIII. GREENHOUSE GAS EMISSIONS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>				
(a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Setting

Greenhouse gases (GHG) are any gases that absorb infrared radiation in the atmosphere, and are different from the criteria pollutants discussed in Section III, Air Quality, above. The primary GHGs that are emitted into the atmosphere as a result of human activities are carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), and fluorinated gases. These are most commonly emitted through the burning of fossil fuels (oil, natural gas, and coal), agricultural practices, decay of organic waste in landfills, and a variety of other chemical reactions and industrial processes (e.g., the manufacturing of cement).

Carbon dioxide is the most abundant GHG and is estimated to represent approximately 80-90% of the principal GHGs that are currently affecting the earth’s climate. According to the ARB, transportation (vehicle exhaust) and electricity generation are the main sources of GHGs in the state.

In March 2012, the SLOAPCD approved thresholds for Greenhouse Gas (GHG) emission impacts, and these thresholds have been incorporated into the CEQA Air Quality Handbook. The Bright-Line Threshold of 1,150 Metric Tons CO₂/year (MT CO₂e/yr) is the most applicable GHG threshold for most projects. Table 1-1 in the APCD CEQA Air Quality Handbook provides a list of general land uses and the estimated sizes or capacity of those uses expected to exceed the GHG Bright Line Threshold of 1,150 Metric Tons of carbon dioxide per year (MT CO₂/yr). Projects that exceed the criteria or are within ten percent of exceeding the criteria presented in Table 1-1 are required to conduct a more detailed analysis of air quality impacts.

Under CEQA, an individual project’s GHG emissions will generally not result in direct significant impacts. This is because the climate change issue is global in nature. However, an individual project could be found to

Initial Study – Environmental Checklist

contribute to a potentially significant cumulative impact. Projects that have GHG emissions above the noted thresholds may be considered cumulatively considerable and require mitigation.

In October 2008, ARB published its *Climate Change Proposed Scoping Plan*, which is the State's plan to achieve GHG reductions in California required by Assembly Bill (AB) 32. This initial Scoping Plan contained the main strategies to be implemented in order to achieve the target emission levels identified in AB 32. The Scoping Plan included ARB-recommended GHG reductions for each emissions sector of the state's GHG inventory. The largest proposed GHG reduction recommendations were associated with improving emissions standards for light-duty vehicles, implementing the Low Carbon Fuel Standard program, implementation of energy efficiency measures in buildings and appliances, the widespread development of combined heat and power systems, and developing a renewable portfolio standard for electricity production.

Senate Bill (SB) 32 and Executive Order (EO) S-3-05 extended the State's GHG reduction goals and require ARB to regulate sources of GHGs to meet a state goal of reducing GHG emissions to 1990 levels by 2020, 40 percent below 1990 levels by 2030, and 80 percent below 1990 levels by 2050. The initial Scoping Plan was first approved by ARB on December 11, 2008 and is updated every five years. The first update of the Scoping Plan was approved by the ARB on May 22, 2014, which looked past 2020 to set mid-term goals (2030-2035) toward reaching the 2050 goals. The most recent update released by ARB is the 2017 Climate Change Scoping Plan, which was released in November 2017. The 2017 Climate Change Scoping Plan incorporates strategies for achieving the 2030 GHG-reduction target established in SB 32 and EO S-3-05.

When assessing the significance of potential impacts for CEQA compliance, an individual project's GHG emissions will generally not result in direct significant impacts because the climate change issue is global in nature. However, an individual project could be found to contribute to a potentially significant cumulative impact. Projects that have GHG emissions above the noted thresholds may be considered cumulatively considerable and require mitigation. Accordingly, in March 2012, the SLOAPCD approved thresholds for GHG impacts which were incorporated into their 2012 CEQA Air Quality Handbook. The Handbook recommended applying a 1,150 MTCO_{2e} per year Bright Line Threshold for commercial and residential projects and included a list of general land uses and estimated sizes or capacities of uses expected to exceed this threshold. According to the SLOAPCD, this threshold was based on a 'gap analysis' and was used for CEQA compliance evaluations to demonstrate consistency with the state's GHG emission reduction goals associated with AB32 and the 2008 Climate Change Scoping Plan which have a target year of 2020. However, in 2015, the California Supreme Court issued an opinion in the case of *Center for Biological Diversity vs California Department of Fish and Wildlife* ("Newhall Ranch") that determined that AB 32 based thresholds derived from a gap analysis are invalid for projects with a planning horizon beyond 2020. Since the bright-line and service population GHG thresholds in the Handbook are AB 32 based, and project horizons are now beyond 2020, the SLOAPCD no longer recommends the use of these thresholds in CEQA evaluations. Instead, the following threshold options are recommended for consideration by the lead agency:

- **No-net Increase:** The 2017 Scoping Plan states that no-net increase in GHG emissions relative to baseline conditions "*is an appropriate overall objective for new development*" consistent with the Court's direction provided by the Newhall Ranch case. Although a desirable goal, the application of this threshold may not be appropriate for a small project where it can be clearly shown that it will not generate significant GHG emissions (i.e., *di minimus*: too trivial or minor to merit consideration).
- **Lead Agency Adopted Defensible GHG CEQA Thresholds:** Under this approach, a lead agency may establish SB 32-based local operational thresholds. As discussed above, SB 32 requires the state to reduce GHG levels by 40 percent below 1990 levels by the year 2030. According to the *California Greenhouse Gas Emissions for 2000 to 2017, Trends of Emissions and Other Indicators* published by the

Initial Study – Environmental Checklist

California Air Resources Board, emissions of GHG statewide in 2017 were 424 million MMTCO_{2e}, which was 7 million MTCO_{2e} below the 2020 GHG target of 431 MMTCO_{2e} established by AB 32. Therefore, application of the 1,150 MTCO_{2e} Bright Line Threshold in San Luis Obispo County, together with other local and State-wide efforts to reduce GHG emissions, proved to be an effective approach for achieving the reduction targets set forth by AB32 for the year 2020. It should be noted that the 1,150 MTCO_{2e} per year Bright Line Threshold was based on the assumption that a project with the potential to emit less than 1,150 MTCO_{2e} per year would result in impacts that are less than significant and less than cumulatively considerable impact and would be consistent with state and local GHG reduction goals.

Since SB 32 requires the state to reduce GHG levels by 40 percent below 1990 levels by the year 2030, the application of an interim “bright line” SB32-based working threshold that is 40 percent below the 1,150 MTCO_{2e} Bright Line threshold ($1,150 \times 0.6 = 690$ MTCO_{2e}) would be expected to produce comparable GHG reductions “in the spirit of” the targets established by SB32. Therefore, for the purpose of evaluating the significance of GHG emissions for a project after 2020, emissions estimated to be less than 690 MTCO_{2e} per year GHG are considered *de minimus* (too trivial or minor to merit consideration), and will have a less than significant impact that is less than cumulatively considerable and consistent with state and local GHG reduction goals.

The County Energy Wise Plan (EWP; 2011) identifies ways in which the community and County government can reduce greenhouse gas emissions from their various sources. Looking at the four key sectors of energy, waste, transportation, and land use, the EWP incorporates best practices to provide a blueprint for achieving greenhouse gas emissions reductions in the unincorporated towns and rural areas of San Luis Obispo County by 15% below the baseline year of 2006 by the year 2020. The EWP includes an Implementation Program that provides a strategy for actions with specific measures and steps to achieve the identified GHG reduction targets including, but not limited to, the following:

- Encourage new development to exceed minimum Cal Green requirements;
- Require a minimum of 75% of nonhazardous construction and demolition debris generated on site to be recycled or salvaged;
- Continue to implement strategic growth strategies that direct the county's future growth into existing communities and to provide complete services to meet local needs;
- Continue to increase the amount of affordable housing in the County, allowing lower-income families to live closer to jobs and activity centers, and providing residents with greater access to transit and alternative modes of transportation;
- Reduce potable water use by 20% in all newly constructed buildings by using the performance methods provided in the California Green Building Code;
- Require use of energy-efficient equipment in all new development;
- Minimize the use of dark materials on roofs by requiring roofs to achieve a minimum solar reflectivity index of 10 for high-slope roofs and 68 for low-slope roofs; and
- Use light-colored aggregate in new road construction and repaving projects adjacent to existing cities.

In 2016 the County published the EnergyWise Plan 2016 Update, which describes the progress made toward implementing measures in the 2011 EWP, overall trends in energy use and emissions since the baseline year

Initial Study – Environmental Checklist

of the inventory (2006), and the addition of implementation measures intended to provide a greater understanding of the County's emissions status.

Discussion

- (a) *Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?*

Based on the nature of the proposed project and Table 1-1 of the SLOAPCD CEQA Air Quality Handbook, the project would generate less than the SLOAPCD Bright-Line Threshold of 1,150 metric tons of GHG emissions. The project's construction-related and operational GHG emissions and energy demands would be minimal. Therefore, the project's potential direct and cumulative GHG emissions would be less than significant and less than a cumulatively considerable contribution to regional GHG emissions.

Projects that generate less than the above-mentioned thresholds will also participate in emission reductions because air emissions, including GHGs, are under the purview of the ARB (or other regulatory agencies) and will be regulated by standards implemented by the ARB, the federal government, or other regulatory agencies. For example, new vehicles will be subject to increased fuel economy standards and emission reductions, large and small appliances will be subject to more strict emissions standards, and energy delivered to consumers will increasingly come from renewable sources. As a result, even the emissions that result from projects that produce fewer emissions than the threshold will be subject to emission reductions. Therefore, potential impacts associated with the generation of greenhouse gas emissions would be *less than significant*.

- (b) *Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?*

The proposed project would be required to comply with existing state regulations, which include increased energy conservation measures, reduced potable water use, increased waste diversion, and other actions adopted to achieve the overall GHG emissions reduction goals identified in SB 32 and EO S-3-05. The project would not conflict with the control measures identified in the CAP, EWP, or other state and local regulations related to GHG emissions and renewable energy. The project would be generally consistent with the property's existing land use and would be designed to comply with the California Green Building Code standards. Therefore, the project would be consistent with applicable plans and programs designed to reduce GHG emissions and potential impacts would be *less than significant*.

Conclusion

The project would not generate significant GHG emissions above existing levels and would not exceed any applicable GHG thresholds, contribute considerably to cumulatively significant GHG emissions, or conflict with plans adopted to reduce GHG emissions. Therefore, potential impacts related to greenhouse gas emissions would be less than significant and no mitigation measures are necessary.

Mitigation

None necessary.

Initial Study – Environmental Checklist

IX. HAZARDS AND HAZARDOUS MATERIALS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>				
(a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Initial Study – Environmental Checklist

Setting

The Hazardous Waste and Substances Site (Cortese) List is a planning document used by the State, local agencies, and developers to comply with CEQA requirements related to the disclosure of information about the location of hazardous materials release sites. Government Code section 65962.5 requires the California EPA to develop at least annually an updated Cortese List. Various state and local government agencies are required to track and document hazardous material release information for the Cortese List. The California Department of Toxic Substance Control's (DTSC's) EnviroStor database tracks DTSC cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known contamination, such as federal superfund sites, state response sites, voluntary cleanup sites, school cleanup sites, school investigation sites, and military evaluation sites. The State Water Resources Control Board's (SWRCB's) GeoTracker database contains records for sites that impact, or have the potential to impact, water in California, such as Leaking Underground Storage Tank (LUST) sites, Department of Defense sites, and Cleanup Program Sites. The remaining data regarding facilities or sites identified as meeting the "Cortese List" requirements can be located on the CalEPA website: <https://calepa.ca.gov/sitecleanup/corteselist/>. The project site is located approximately 1.8 miles southeast of the Patchett Pit. This mine is identified as a private sand and gravel mine.

The California Health and Safety Code provides regulations pertaining to the abatement of fire related hazards and requires that local jurisdictions enforce the California Building Code, which provides standards for fire resistive building and roofing materials, and other fire-related construction methods. The County Safety Element provides a Fire Hazard Zones Map that indicates unincorporated areas in the County within moderate, high, and very high fire hazard severity zones. The project site is within a High Hazard severity zone and has a 5-10 minute emergency response time. For more information about fire-related hazards and risk assessment, see Section XX. Wildfire.

The County also has adopted general emergency plans for multiple potential natural disasters, including the Local Hazard Mitigation Plan, County Emergency Operations Plan, Earthquake Plan, Dam and Levee Failure Plan, Hazardous Materials Response Plan, County Recovery Plan, and the Tsunami Response Plan.

Discussion

- (a) *Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?*

The project does not propose the routine transport, use or disposal of hazardous substances. Any commonly-used hazardous substances within the project site (e.g., cleaners, solvents, oils, paints, etc.) would be transported, stored, and used according to regulatory requirements and existing procedures for the handling of hazardous materials. *No impacts* associated with the routine transport of hazardous materials would occur.

- (b) *Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?*

The project does not propose the handling or use of hazardous materials or volatile substances that would result in a significant risk of upset or accidental release conditions. Construction of the proposed project is anticipated to require use of limited quantities of hazardous substances, including gasoline, diesel fuel, hydraulic fluid, solvents, oils, paints, etc. Construction contractors would be required to comply with applicable federal and state environmental and workplace safety

Initial Study – Environmental Checklist

laws for the handling of hazardous materials, including response and clean-up requirements for any minor spills. Therefore, potential impacts would be *less than significant*.

- (c) *Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?*

The project site is not located within 0.25 mile of an existing or proposed school facility; therefore, *no impacts would occur*.

- (d) *Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?*

Based on a search of the California Department of Toxic Substance Control's EnviroStar database, the State Water Resources Control Board's Geotracker database, and CalEPA's Cortese List website, there are no hazardous waste cleanup sites within the project site. Therefore, *no impacts would occur*.

- (e) *For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?*

The project site is not located within an airport land use plan or within 2 miles of a public airport or private airstrip; therefore, *no impacts would occur*.

- (f) *Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?*

Implementation of the proposed project would not result in a significant temporary or permanent impact on any adopted emergency response plans or emergency evacuation plans. No breaks in utility service or road closures would occur as a result of project implementation. Any construction-related detours would include proper signage and notification and would be short-term and limited in nature and duration. Therefore, potential impacts would be *less than significant*.

- (g) *Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?*

The project is not located within or adjacent to a wildland area. Based on the County Safety Element, the project is not located within a high or very high fire hazard severity zone. The project would be required to comply with all applicable fire safety rules and regulations including the California Fire Code and Public Resources Code prior to issuance of building permits; therefore, potential impacts would be *less than significant*.

Initial Study – Environmental Checklist

Conclusion

The project does not propose the routine transport, use, handling, or disposal of hazardous substances. It is not located within proximity to any known contaminated sites and is not within close proximity to populations that could be substantially affected by upset or release of hazardous substances. Project implementation would not subject people or structures to substantial risks associated with wildland fires and would not impair implementation or interfere with any adopted emergency response or evacuation plan. Therefore, potential impacts related to hazards and hazardous materials would be less than significant and no mitigation measures are necessary.

Mitigation

None necessary.

X. HYDROLOGY AND WATER QUALITY

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>				
(a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Setting

The Central Coast Regional Water Quality Control Board (RWQCB) has established Total Maximum Daily Load (TMDL) thresholds for waterbodies within the County. A TMDL establishes the allowable amount of a particular pollutant a waterbody can receive on a regular basis and still remain at levels that protect beneficial uses designated for that waterbody. A TMDL also establishes proportional responsibility for controlling the pollutant, numeric indicators of water quality, and measures to achieve the allowable amount of pollutant loading. Section 303(d) of the Clean Water Act (CWA) requires states to maintain a list of bodies of water that are designated as “impaired”. A body of water is considered impaired when a particular water quality objective or standard is not being met.

The RWQCB’s Water Quality Control Plan for the Central Coast Basin (Basin Plan; 2017) describes how the quality of surface water and groundwater in the Central Coast Region should be managed to provide the highest water quality reasonably possible. The Basin Plan outlines the beneficial uses of streams, lakes, and other water bodies for humans and other life. There are 24 categories of beneficial uses, including, but not limited to, municipal water supply, water contact recreation, non-water contact recreation, and cold freshwater habitat. Water quality objectives are then established to protect the beneficial uses of those water resources. The Regional Board implements the Basin Plan by issuing and enforcing waste discharge requirements to individuals, communities, or businesses whose discharges can affect water quality.

The U.S. Army Corps of Engineers (USACE), through Section 404 of the CWA, regulates the discharge of dredged or fill material into waters of the U.S., including wetlands. Waters of the U.S. are typically identified by the presence of an ordinary high water mark (OHWM) and connectivity to traditional navigable waters or other jurisdictional features. The State Water Resources Control Board (SWRCB) and nine RWQCBs regulate discharges of fill and dredged material in California, under Section 401 of the CWA and the State Porter-Cologne Water Quality Control Act, through the State Water Quality Certification Program. State Water Quality Certification is necessary for all projects that require a USACE permit, or fall under other federal jurisdiction, or have the potential to impact waters of the State. Waters of the State are defined by the

Initial Study – Environmental Checklist

Porter-Cologne Act as any surface water or groundwater, including saline waters, within the boundaries of the state.

The project site is not located within a County groundwater basin.

The County LUO dictates which projects are required to prepare a drainage plan, including any project that would, for example, change the runoff volume or velocity leaving any point of the site, result in an impervious surface of more than 20,000 square feet, or involve hillside development on slopes steeper than 10 percent. Preparation of a drainage plan is not required where grading is exclusively for an exempt agricultural structure, crop production, or grazing.

The County LUO also dictates that an erosion and sedimentation control plan is required year-round for all construction and grading permit projects and site disturbance activities of one-half acre or more in geologically unstable areas, on slopes steeper than 30 percent, on highly erodible soils, or within 100 feet of any watercourse.

Per the County's Stormwater Program, the Public Works Department is responsible for ensuring that new construction sites implement best management practices during construction, and that site plans incorporate appropriate post-construction stormwater runoff controls. Construction sites that disturb 1.0 acre or more must obtain coverage under the SWRCB's Construction General Permit. The Construction General Permit requires the preparation of a Stormwater Pollution Prevention Plan (SWPPP) to minimize on-site sedimentation and erosion. There are several types of projects that are exempt from preparing a SWPPP, including routine maintenance to existing developments, emergency construction activities, and projects exempted by the SWRCB or RWQCB. Projects that disturb less than 1.0 acre must implement all required elements within the site's erosion and sediment control plan as required by the San Luis Obispo County LUO.

For planning purposes, the flood event most often used to delineate areas subject to flooding is the 100-year flood. The County Safety Element establishes policies to reduce flood hazards and reduce flood damage, including but not limited to prohibition of development in areas of high flood hazard potential, discouragement of single road access into remote areas that could be closed during floods, and review of plans for construction in low-lying areas. All development located in a 100-year flood zone is subject to Federal Emergency Management Act (FEMA) regulations. The County Land Use Ordinance designates a Flood Hazard (FH) combining designation for areas of the County that could be subject to inundation by a 100-year flood or within coastal high hazard areas. Development projects within this combining designation are subject to FH permit and processing requirements, including, but not limited to, the preparation of a drainage plan, implementation of additional construction standards, and additional materials storage and processing requirements for substances that could be injurious to human, animal or plant life in the event of flooding. The project site is not located within a Flood Hazard combining designation. The nearest waterbody to the project site is Lopez Lake, approximately 5 miles northeast.

Discussion

- (a) *Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?*

The project site is not located in proximity to any mapped creek or surface water bodies that could be adversely affected by project construction or operation. The project site does not contain Waters of the U.S. or the State. Implementation of the project would not substantially change the volume or velocity of runoff leaving any point of the site or result in a significant increase in impervious surface area. The project site is generally flat and does not pose a risk to downslope runoff, sedimentation,

Initial Study – Environmental Checklist

erosion, or runoff. The project would not substantially affect surface water or groundwater quality. Therefore, potential impacts would be *less than significant*.

- (b) *Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?*

The project is not located within a groundwater basin designated as Level of Severity III per the County's Resource Management System or in severe decline by the Sustainable Groundwater Management Act (SGMA). The project would not substantially increase water demand, deplete groundwater supplies, or interfere substantially with groundwater recharge; therefore, the project would not interfere with sustainable management of the groundwater basin. Potential impacts associated with groundwater supplies would be *less than significant*.

- (c) *Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:*

- (c-i) *Result in substantial erosion or siltation on- or off-site?*

The project site is not located in proximity to any surface stream or body of water that would be subject to risk associated with erosion or siltation as the result of project construction or operation. The project will result in greater than 1 acre of site disturbance and would be required to implement required elements of the site's erosion and sediment control plan as required by the San Luis Obispo County LUO; therefore, potential impacts related to erosion and siltation would be *less than significant*.

- (c-ii) *Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?*

The project would not substantially increase the amount of impervious surface area or the rate and volume of surface runoff in a manner that could result in flooding on- or off-site. Based on the nature and implementation of Stormwater and Public Works recommended conditions of the project, changes in surface hydrology would be negligible. Therefore, potential impacts related to increased surface runoff resulting in flooding would be *less than significant*.

- (c-iii) *Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?*

The project would not substantially increase the amount of impervious surface area or the rate and volume of surface runoff in a manner that could exceed the capacity of existing stormwater or drainage systems. Based on the nature and size of the project, changes in surface hydrology would be negligible. Therefore, potential impacts related to increased surface runoff exceeding stormwater capacity would be *less than significant*.

- (c-iv) *Impede or redirect flood flows?*

Based on the County Flood Hazard Map, the project site is not located within a 100-year flood zone. The project would be subject to standard County requirements for drainage, sedimentation, and erosion control for construction and operation. Therefore, *no impacts would occur*.

Initial Study – Environmental Checklist

(d) *In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?*

Based on the County Safety Element, the project site is not located within a 100-year flood zone or within an area that would be inundated if dam failure were to occur. Based on the San Luis Obispo County Tsunami Inundation Maps, the project site is not located in an area with potential for inundation by a tsunami (DOC 2019). The project site is not located within close proximity to a standing body of water with the potential for a seiche to occur. Therefore, the project site has no potential to release pollutants due to project inundation and *no impacts would occur*.

(e) *Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?*

The project is not located within a groundwater basin designated as Level of Severity III per the County’s Resource Management System or in severe decline by SGMA. The project would not substantially increase water demand, deplete groundwater supplies, or interfere substantially with groundwater recharge. The project would not conflict with the Central Coastal Basin Plan, SGMA, or other local or regional plans or policies intended to manage water quality or groundwater supplies; therefore, *no impacts would occur*.

Conclusion

The project site is not within the 100-year flood zone and does not include existing drainages or other surface waters. The project would not substantially increase impervious surfaces and does not propose alterations to existing water courses or other significant alterations to existing on-site drainage patterns. Therefore, potential impacts related to hydrology and water quality would be less than significant and no mitigation measures are necessary.

Mitigation

None necessary.

XI. LAND USE AND PLANNING

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>					
(a)	Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(b)	Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Initial Study – Environmental Checklist

Setting

The LUO was established to guide and manage the future growth in the County in accordance with the General Plan, to regulate land use in a manner that will encourage and support orderly development and beneficial use of lands, to minimize adverse effects on the public resulting from inappropriate creation, location, use or design of buildings or land uses, and to protect and enhance significant natural, historic, archeological, and scenic resources within the county. The LUO is the primary tool used by the County to carry out the goals, objectives, and policies of the County General Plan.

The County Land Use Element (LUE) provides policies and standards for the management of growth and development in each unincorporated community and rural areas of the county and serves as a reference point and guide for future land use planning studies throughout the county. The LUE identifies strategic growth principles to define and focus the county's pro-active planning approach and balance environmental, economic, and social equity concerns. Each strategic growth principle correlates with a set of policies and implementation strategies that define how land will be used and resources protected. The LUE also defines each of the 14 land use designations and identifies standards for land uses based on the designation they are located within. The project site is zoned Residential Suburban (RS) and surrounding land uses are also Residential Suburban.

The inland LUE also contains the area plans of each of the four inland planning areas: Carrizo, North County, San Luis Obispo, and South County. The area plans establish policies and programs for land use, circulation, public facilities, services, and resources that apply "areawide", in rural areas, and in unincorporated urban areas within each planning area. Part three of the LUE contains each of the 13 inland community and village plans, which contain goals, policies, programs, and related background information for the County's unincorporated inland urban and village areas. The project site is located within the South County San Luis Bay Inland Planning Area.

Discussion

(a) *Physically divide an established community?*

The project does not propose project elements or components that would physically divide the site from surrounding areas and uses. The project would be consistent with the general level of development within the project vicinity and would not create, close, or impede any existing public or private roads, or create any other barriers to movement or accessibility within the community. Therefore, the proposed project would not physically divide an established community and *no impacts would occur*.

(b) *Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?*

The project would be consistent with the property's land use designation and the guidelines and policies for development within the applicable area plan, inland LUO, and the COSE. The project is consistent with existing surrounding developments and does not contain sensitive on-site resources; therefore, the project would not conflict with policies or regulations adopted for the purpose of avoiding or mitigating environmental effects. The project would be consistent with existing land uses and designations for the proposed site and, therefore, would not conflict with any applicable land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating environmental effects. *No impacts would occur*.

Initial Study – Environmental Checklist

Conclusion

The project would be consistent with local and regional land use designations, plans, and policies and would not divide an established community. Therefore, potential impacts related to land use and planning would be less than significant and no mitigation measures are necessary.

Mitigation

None necessary.

XII. MINERAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>				
(a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(b) Result in the loss of availability of a locally- important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Setting

The California Surface Mining and Reclamation Act of 1975 (SMARA) requires that the State Geologist classify land into mineral resource zones (MRZ) according to the known or inferred mineral potential of the land (Public Resources Code Sections 2710–2796).

The three MRZs used in the SMARA classification-designation process in the San Luis Obispo-Santa Barbara Production-Consumption Region are defined below (California Geological Survey 2011 a):

- **MRZ-1:** Areas where available geologic information indicates that little likelihood exists for the presence of significant mineral resources.
- **MRZ-2:** Areas where adequate information indicates that significant mineral deposits are present, or where it is judged that a high likelihood for their presence exists. This zone shall be applied to known mineral deposits or where well-developed lines of reasoning, based upon economic-geologic principles and adequate data, demonstrate that the likelihood for occurrence of significant mineral deposits is high.
- **MRZ-3:** Areas containing known or inferred aggregate resources of undetermined significance.

The County LUO provides regulations for development in delineated Energy and Extractive Resource Areas (EX) and Extractive Resource Areas (EX1). The EX combining designation is used to identify areas of the county where:

Initial Study – Environmental Checklist

1. Mineral or petroleum extraction occurs or is proposed to occur;
2. The state geologist has designated a mineral resource area of statewide or regional significance pursuant to PRC Sections 2710 et seq. (SMARA); and,
3. Major public utility electric generation facilities exist or are proposed.

The purpose of this combining designation is to protect significant resource extraction and energy production areas identified by the County LUE from encroachment by incompatible land uses that could hinder resource extraction or energy production operations, or land uses that would be adversely affected by extraction or energy production.

Information provided by the USGS Mineral Resources Data System confirms that the proposed project does not cross any active mining operations and no significant economic mineral resources have been recorded on site. The proposed project is more than three miles from any existing mines.

Discussion

- (a) *Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?*

The project is not located within a designated mineral resource zone or within an Extractive Resource Area combining designation. There are no known mineral resources in the project area; therefore, *no impacts would occur.*

- (b) *Result in the loss of availability of a locally- important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?*

There are no known or mapped mineral resources in the project area and the likelihood of future mining of important resources within the project area is very low. Therefore *no impacts would occur.*

Conclusion

No impacts to mineral resources would occur and no mitigation measures are necessary.

Mitigation

None necessary.

Initial Study – Environmental Checklist

XIII. NOISE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project result in:</i>				
(a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
(b) Generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Setting

The San Luis Obispo County Noise Element of the General Plan provides a policy framework for addressing potential noise impacts in the planning process. The purpose of the Noise Element is to minimize future noise conflicts. The Noise Element identifies the major noise sources in the county (highways and freeways, primary arterial roadways and major local streets, railroad operations, aircraft and airport operations, local industrial facilities, and other stationary sources) and includes goals, policies, and implementation programs to reduce future noise impacts. Among the most significant policies of the Noise Element are numerical noise standards that limit noise exposure within noise-sensitive land uses, and performance standards for new commercial and industrial uses that might adversely impact noise-sensitive land uses.

Noise sensitive uses that have been identified by the County include the following:

- Residential development, except temporary dwellings
- Schools – preschool to secondary, college and university, specialized education and training
- Health care services (e.g., hospitals, clinics, etc.)
- Nursing and personal care
- Churches
- Public assembly and entertainment
- Libraries and museums
- Hotels and motels

Initial Study – Environmental Checklist

- Bed and breakfast facilities
- Outdoor sports and recreation
- Offices

All sound levels referred to in the Noise Element are expressed in A-weighted decibels (dB). A-weighting de-emphasizes the very low and very high frequencies of sound in a manner similar to the human ear.

The LUO establishes acceptable standards for exterior and interior noise levels and describe how noise shall be measured. Exterior noise level standards are applicable when a land use affected by noise is one of the sensitive uses listed in the Noise Element. Exterior noise levels are measured from the property line of the affected noise-sensitive land use.

Table 3 – Maximum allowable exterior noise level standards⁽¹⁾

Sound Levels	Daytime 7 a.m. to 10 p.m.	Nighttime ⁽²⁾
Hourly Equivalent Sound Level (L _{eq} , dB)	50	45
Maximum level, dB	70	65

¹ When the receiving noise-sensitive land use is outdoor sports and recreation, the noise level standards are increased by 10 db.

² Applies only to uses that operate or are occupied during nighttime hours.

The proposed project site is not within loud noise source based on the County's noise contour map. The nearest existing noise-sensitive land use are the residential suburban developments discussed above.

The proposed project includes a single family residence, an accessory dwelling unit, a detached 2-car garage, and 1.97 acres of disturbance. The nearest parcel is directly east on the adjacent lot, their existing residence sits approximately 70 feet from the property line.

Discussion

- (a) *Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?*

The County Land Use Ordinance noise standards are subject to a range of exceptions, including noise sources associated with construction, provided such activities do not take place before 7 a.m. or after 9 p.m. on weekdays, or before 8 a.m. or after 5 p.m. on Saturday or Sunday. Noise associated with agricultural land uses (as listed in Section 22.06.030), traffic on public roadways, railroad line operations, and aircraft in flight are also exempt.

Project construction would result in a temporary increase in noise levels associated with construction activities, equipment, and vehicle trips. Construction noise would be variable, temporary, and limited in nature and duration. The County LUO requires that construction activities be conducted during daytime hours to be able to utilize County construction noise exception standards and that construction equipment be equipped with appropriate mufflers recommended by the manufacturer. Compliance with these standards would ensure short-term construction noise would be less than significant.

Initial Study – Environmental Checklist

The project does not propose any uses or features that would generate a significant permanent source of mobile or stationary noise sources. Ambient noise levels at the project site and in surrounding areas after project implementation would not be significantly different than existing levels. Therefore, potential operational noise impacts would be less than significant.

Based on the typical nature of construction activities associated with developing a single family residence, an accessory dwelling unit, and detached 2-car garage, and the consistency of the proposed use with existing and surrounding uses, impacts associated with the generation of a substantial temporary or permanent increase in ambient noise levels would be less than significant.

(b) *Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?*

The project does not propose substantial grading/earthmoving activities, pile driving, or other high impact activities that would generate substantial groundborne noise or groundborne vibration during construction. Construction equipment has the potential to generate minor groundborne noise and/or vibration, but these activities would be limited in duration and are not likely to be perceptible from adjacent areas. The project does not propose a use that would generate long-term operational groundborne noise or vibration. Therefore, impacts related to exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels would be *less than significant*.

(c) *For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?*

The project site is not located within or adjacent to an airport land use plan or within 2 miles of a public airport or private airstrip; therefore, *no impact would occur*.

Conclusion

Short-term construction activities would be limited in nature and duration and conducted during daytime periods per County LUO standards. No long-term operational noise or ground vibration would occur as a result of the project. Therefore, potential impacts related to noise would be less than significant and no mitigation measures are necessary.

Mitigation

None necessary.

Initial Study – Environmental Checklist

XIV. POPULATION AND HOUSING

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>				
(a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Setting

The County of San Luis Obispo General Plan Housing Element recognizes the difficulty for residents to find suitable and affordable housing within San Luis Obispo County. The Housing Element includes an analysis of vacant and underutilized land located in urban areas that is suitable for residential development and considers zoning provisions and development standards to encourage development of these areas. Consistent with State housing element laws, these areas are categorized into potential sites for very low- and low-income households, moderate-income households, and above moderate-income households.

The County’s Inclusionary Housing Ordinance requires the provision of new affordable housing in conjunction with both residential and nonresidential development and subdivisions. In its efforts to provide for affordable housing, the County currently administers the Home Investment Partnerships (HOME) Program and the Community Development Block Grant (CDBG) program, which provides limited financing to projects relating to affordable housing throughout the county.

The project site is a vacant lot undeveloped with any residential structures. Surrounding the project site are Residential Suburban lots, all of which are developed with a Single-Family Residence and residential accessory structures.

Discussion

- (a) *Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?*

The project is not expected to cause any substantial population growth as it would be providing only for a single-family residence. The project would not generate a substantial number of new employment opportunities that would encourage population growth in the area. Therefore, the project would not directly or indirectly induce substantial growth and *no impacts would occur*.

Initial Study – Environmental Checklist

(b) *Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?*

The construction and use of the proposed project as a single-family residence would not result in the displacement of existing people or housing and would therefore not necessitate the construction of replacement housing elsewhere. Therefore, *no impacts would occur.*

Conclusion

No impacts to population and housing would occur and no mitigation measures are necessary.

Mitigation

None necessary.

XV. PUBLIC SERVICES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
(a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Setting

Fire protection services in unincorporated San Luis Obispo County are provided by the California Department of Forestry and Fire Protection (CAL FIRE), which has been under contract with the County of San Luis Obispo to provide full-service fire protection since 1930. Approximately 180 full-time state employees operate the County Fire Department, supplemented by as many as 100 state seasonal fire

Initial Study – Environmental Checklist

fighters, 300 County paid-call and reserve fire fighters, and 120 state inmate fire fighters. CAL FIRE responds to emergencies and other requests for assistance, plans for and takes action to prevent emergencies and to reduce their impact, coordinates regional emergency response efforts, and provides public education and training in local communities. CAL FIRE has 24 fire stations located throughout the county. The project will be served by CAL FIRE station 21, located at 4671 Broad Street in San Luis Obispo approximately 6.5 miles northwest of the project site. Emergency response time is between 5 and 10 minutes.

Police protection and emergency services in the unincorporated portions of the county are provided by the San Luis Obispo County Sheriff's Office. The Sheriff's Office Patrol Division responds to calls for service, conducts proactive law enforcement activities, and performs initial investigations of crimes. Patrol personnel are deployed from three stations throughout the county, the Coast Station in Los Osos, the North Station in Templeton, and the South Station in Oceano. South Station in Oceano is the nearest patrol station located at 1681 Front Street, approximately 4.7 miles southwest of the project site.

San Luis Obispo County has a total of 12 school districts that currently enroll approximately 34,000 students in over 75 schools. The project site would be located within the Lucia Mar School District. Within the Lucia Mar School District, there are four high schools, one independent study school, three middle schools, and twelve elementary schools. Based on the County's 2016-2018 Resource Summary Report, schools within the Lucia Mar Unified School District are currently operating at acceptable capacities and levels, with the exception of 100% capacity for elementary schools.

Within the County's unincorporated areas, there are currently 23 parks, three golf courses, four trails/staging areas, and eight Special Areas that include natural areas, coastal access, and historic facilities currently operated and maintained by the County. The project site is located approximately 5 miles west of Lopez Lake Recreation Area, a County maintained park with camping, fishing, and hiking activities. Additionally, the project site is located approximately 5 miles west of Biddle Regional Park, a County maintained day use recreational park.

Public facilities fees, Quimby fees, and developer conditions are several ways the County currently funds public services. A public facility fee program (i.e., development impact fee program) has been adopted to address impacts related to public facilities (county) and schools (State Government Code 65995 et seq.). The fee amounts are assessed annually by the County based on the type of proposed development and the development's proportional impact and are collected at the time of building permit issuance. Public facility fees are used as needed to finance the construction of and/or improvements to public facilities required to the serve new development, including fire protection, law enforcement, schools, parks, and roads.

Discussion

- (a) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:*

Fire protection?

The project would be required to comply with all fire safety rules and regulations including the California Fire Code and Public Resources Code prior to issuance of building permits. Based on the limited nature of development proposed, the project would not result in a significant increase in demand for fire protection services. The project would be served by existing fire protection services and would not result in the need for new or altered fire protection services or facilities. In addition,

Initial Study – Environmental Checklist

the project would be subject to development impact fees to offset the project's contribution to demand for fire protection services. Therefore, impacts would be *less than significant*.

Police protection?

The project does not propose a new use or activity that would require additional police services above what is normally provided for similar surrounding land uses. The project would not result in a significant increase in demand for police protection services and would not result in the need for new or altered police protection services or facilities. In addition, the project would be subject to development impact fees to offset the project's contribution to demand on law enforcement services. Therefore, impacts related to police services would be *less than significant*.

Schools?

As discussed in Section XIV. Population and Housing, the project would not induce a substantial increase in population growth and would not result in the need for additional school services or facilities to serve new student populations. Therefore, potential impacts would be *less than significant*.

Parks?

As discussed in Section XIV. Population and Housing, the project would not induce a substantial increase in population growth and would not result in the need for additional parks or recreational services or facilities to serve new populations. Therefore, potential impacts would be *less than significant*.

Other public facilities?

As discussed above, the proposed project would be subject to applicable fees to offset negligible increased demands on public facilities; therefore, impacts related to other public facilities would be *less than significant*.

Conclusion

No significant project-specific impacts to the above-mentioned public services were identified. This project, along with others in the area, will have a cumulative effect on police / sheriff and fire protection, and schools. However, the project's direct and cumulative impacts are within the general assumptions of an allowed use for the subject property that were used to estimate future growth and the fees in place.

Regarding cumulative effects, public facility (County) and school (State Government Code 65995 et seq.) fee programs have been adopted to address this impact and will reduce the cumulative impacts to less than significant levels.

The project would not result in any substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the above-mentioned public services. Therefore, potential impacts related to public services would be less than significant and no mitigation measures are necessary.

Mitigation

None necessary.

Initial Study – Environmental Checklist

XVI. RECREATION

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
(a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Setting

The County of San Luis Obispo Parks and Recreation Element (Recreation Element) establishes goals, policies, and implementation measures for the management, renovation, and expansion of existing, and the development of new, parks and recreation facilities in order to meet existing and projected needs and to assure an equitable distribution of parks throughout the county.

Public facilities fees, Quimby fees, and developer conditions are several ways the County currently funds public parks and recreational facilities. Public facility fees are collected upon construction of new residential units and currently provide funding for new community-serving recreation facilities. Quimby Fees are collected when new residential lots are created and can be used to expand, acquire, rehabilitate, or develop community-serving parks. Finally, a discretionary permit issued by the County may condition a project to provide land, amenities, or facilities consistent with the Recreation Element.

The County Bikeways Plan identifies and prioritizes bikeway facilities throughout the unincorporated area of the county, including bikeways, parking, connections with public transportation, educational programs, and funding. The Bikeways Plan is updated every 5 years and was last updated in 2016. The plan identifies goals, policies, and procedures geared towards realizing significant bicycle use as a key component of the transportation options for San Luis Obispo County residents. The plan also includes descriptions of bikeway design and improvement standards, an inventory of the current bicycle circulation network, and a list of current and future bikeway projects within the county.

Discussion

- (a) *Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?*

The project would not result in a substantial growth within the area and would not substantially increase demand on any proximate existing neighborhood or regional park or other recreational facilities. Payment of standard development impact fees would ensure any incremental increase in use of existing parks and recreational facilities would be reduced to *less than significant*.

Initial Study – Environmental Checklist

(b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

The project does not include the construction of new recreational facilities and would not result in a substantial increase in demand or use of parks and recreational facilities. Implementation of the project would not require the construction or expansion of recreational facilities; therefore, *no impacts would occur.*

Conclusion

The project would not result in the significant increase in use, construction, or expansion of parks or recreational facilities. Therefore, potential impacts related to recreation would be less than significant and no mitigation measures are necessary.

Mitigation

None necessary.

XVII. TRANSPORTATION

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>				
(a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(d) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Setting

The County Department of Public Works maintains updated traffic count data for all County-maintained roadways. In addition, Traffic Circulation Studies have been conducted within several community areas using traffic models to reasonably simulate current traffic flow patterns and forecast future travel demands and traffic flow patterns. These community Traffic Circulation Studies include the South County Circulation Study, Los Osos Circulation Study, Templeton Circulation Study, San Miguel Circulation Study, Avila Circulation Study, and North Coast Circulation Study. The California Department of Transportation (Caltrans)

Initial Study – Environmental Checklist

maintains annual traffic data on state highways and interchanges within the county. The project site would be accessed by Cougar Creek Way, a privately maintained road. The nearest County maintained road is Fox Canyon Lane.

In 2013, Senate Bill 743 was signed into law with the intent to “more appropriately balance the needs of congestion management with statewide goals related to infill development, promotion of public health through active transportation, and reduction of greenhouse gas emissions” and required the Governor’s Office of Planning and Research (OPR) to identify new metrics for identifying and mitigating transportation impacts within CEQA. As a result, in December 2018, the California Natural Resources Agency certified and adopted updates to the State CEQA Guidelines. The revisions included new requirements related to the implementation of Senate Bill 743 and identified vehicle miles traveled (VMT) per capita, VMT per employee, and net VMT as new metrics for transportation analysis under CEQA (as detailed in Section 15064.3 [b]). Beginning July 1, 2020, the newly adopted VMT criteria for determining significance of transportation impacts must be implemented statewide.

The San Luis Obispo Council of Governments (SLOCOG) holds several key roles in transportation planning within the county. As the Regional Transportation Planning Agency (RTPA), SLOCOG is responsible for conducting a comprehensive, coordinated transportation program, preparation of a Regional Transportation Plan (RTP), programming of state funds for transportation projects, and the administration and allocation of transportation development act funds required by state statutes. As the Metropolitan Planning Organization (MPO), SLOCOG is also responsible for all transportation planning and programming activities required under federal law. This includes development of long-range transportation plans and funding programs, and the approval of transportation projects using federal funds.

The 2019 RTP, adopted June 5, 2019, is a long-term blueprint of San Luis Obispo County’s transportation system. The plan identifies and analyzes transportation needs of the region and creates a framework for project priorities. SLOCOG represents and works with the County of San Luis Obispo as well as the Cities within the county in facilitating the development of the RTP.

The County Department of Public Works establishes bicycle paths and lanes in coordination with the RTP, which outlines how the region can establish an extensive bikeway network. County bikeway facilities are funded by state grants, local general funds, and developer contributions. The RTP also establishes goals and recommendations to develop, promote, and invest in the public transit systems, rail systems, air services, harbor improvements, and commodity movements within the county in order to meet the needs of transit-dependent individuals and encourage the increasing use of alternative modes by all travelers that choose public transportation. Local transit systems are presently in operation in the cities of Morro Bay and San Luis Obispo, and South County services are offered to Grover Beach, Arroyo Grande, Pismo Beach, and Oceano. Dial-a-ride systems provide intra-community transit in Morro Bay, Atascadero, and Los Osos. Inter-urban systems operate between the City of San Luis Obispo and South County, Los Osos, and the North Coast.

The County’s Framework for Planning (Inland), includes the Land Use and Circulation Elements of the County’s General Plan. The Framework establishes goals and strategies to meet pedestrian circulation needs by providing usable and attractive sidewalks, pathways, and trails to establish maximum access and connectivity between land use designations.

Initial Study – Environmental Checklist

Discussion

- (a) *Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?*

The project does not propose the substantial temporary or long-term alteration of any proximate transportation facilities. Marginal increases in traffic can be accommodated by existing local streets and the project would not result in any long-term changes in traffic or circulation. The project does not propose uses that would interfere or conflict with applicable policies related to circulation, transit, roadway, bicycle, or pedestrian systems or facilities. The project would be consistent with the County Framework for Planning (Inland) and consistent with the projected level of growth and development identified in the 2019 RTP. Therefore, potential impacts would be *less than significant*.

- (b) *Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?*

Based on the nature and location of the project, the project would not generate a significant increase in construction-related or operational traffic trips or vehicle miles traveled. The project would not substantially change existing land uses and would not result in the need for additional new or expanded transportation facilities. The project would be subject to standard development impact fees to offset the relative impacts on surrounding roadways. Therefore, potential impacts would be *less than significant*.

- (c) *Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?*

The project would not change roadway design and does not include geometric design features that would create new hazards or an incompatible use. Therefore, *no impacts would occur*.

- (d) *Result in inadequate emergency access?*

The project would not result in road closures during short-term construction activities or long-term operations. Individual access to adjacent properties would be maintained during construction activities and throughout the project area. Project implementation would not affect long-term access through the project area and sufficient alternative access exists to accommodate regional trips. Therefore, the project would not adversely affect existing emergency access and *no impacts would occur*.

Conclusion

The project would not alter existing transportation facilities or result in the generation of substantial additional trips or vehicle miles traveled. Payment of standard development fees and compliance with existing regulations would ensure potential impacts were reduced to less than significant. Therefore, potential impacts related to transportation would be less than significant and no mitigation measures are necessary.

Mitigation

None necessary.

Initial Study – Environmental Checklist

XVIII. TRIBAL CULTURAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
(a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
(i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Setting

Approved in 2014, AB 52 added tribal cultural resources to the categories of resources that must be evaluated under CEQA. Tribal cultural resources are defined as either of the following:

- 1) Sites, features, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following:
 - a. Included or determined to be eligible for inclusion in the California Register of Historical Resources; or
 - b. Included in a local register of historical resources as defined in subdivision (k) of California Public Resources Code Section 5020.1.

Initial Study – Environmental Checklist

- 2) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of California Public Resources Code Section 5024.1. In applying these criteria for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American Tribe.

Recognizing that tribes have expertise with regard to their tribal history and practices, AB 52 requires lead agencies to provide notice to tribes that are traditionally and culturally affiliated with the geographic area of a proposed project if they have requested notice of projects proposed within that area. If the tribe requests consultation within 30 days upon receipt of the notice, the lead agency must consult with the tribe regarding the potential for adverse impacts on tribal cultural resources as a result of a project. Consultation may include discussing the type of environmental review necessary, the presence and/or significance of tribal cultural resources, the level of significance of a project's impacts on the tribal cultural resources, and available project alternatives and mitigation measures recommended by the tribe to avoid or lessen potential impacts on tribal cultural resources.

On May 13, 2022 the project was referred to four tribes, the Northern Chumash Tribal Council, Salinan Tribe of San Luis Obispo and Monterey Counties, Xolon Salinan Tribe, and Yak Tityu Tityu Yak Tilhini Northern Chumash Tribe. At this time no comments or request for consultation have been received from any of the four tribes.

Discussion

- (a) *Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:*

- (a-i) *Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?*

The County has provided notice of the opportunity to consult with appropriate tribes per the requirements of AB 52 and the project site does not contain any known tribal cultural resources that have been listed or been found eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in PRC Section 5020.1. Potential impacts associated with the inadvertent discovery of tribal cultural resources would be subject to LUO 22.10.040 (Archaeological Resources), which requires that in the event resources are encountered during project construction, construction activities shall cease, and the County Planning and Building Department shall be notified of the discovery so that the extent and location of discovered materials may be recorded by a qualified archaeologist, and the disposition of artifacts may be accomplished in accordance with state and federal law. Therefore, impacts related to a substantial adverse change in the significance of tribal cultural resources would be *less than significant*.

- (a-ii) *A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.*

The project site does not contain any resources determined by the County to be a potentially significant tribal cultural resource. Impacts associated with potential inadvertent discovery would be

Initial Study – Environmental Checklist

minimized through compliance with existing standards and regulations (LUO 22.10.040). Therefore, potential impacts would be *less than significant*.

Conclusion

No tribal cultural resources are known or expected to occur within or adjacent to the project site. In the event unanticipated sensitive resources are discovered during project activities, adherence with County LUO standards and State Health and Safety Code procedures would reduce potential impacts to less than significant; therefore, potential impacts to tribal cultural resources would be less than significant and no mitigation measures are necessary.

Mitigation

None necessary.

XIX. UTILITIES AND SERVICE SYSTEMS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>				
(a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
(d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Initial Study – Environmental Checklist

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
(e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Setting

The County Public Works Department provides water and wastewater services for specific County Service Areas (CSAs) that are managed through issuance of water/wastewater “will serve” letters. The Department of Public Works currently maintains CSAs for the communities of Nipomo, Oak Shores, Cayucos, Avila Beach, Shandon, the San Luis Obispo County Club, and Santa Margarita. Other unincorporated areas in the County rely on on-site wells and individual wastewater systems. Regulatory standards and design criteria for onsite wastewater treatment systems are provided by the Water Quality Control Policy for Siting, Design, Operation, and Maintenance of Onsite Wastewater Treatment Systems (California OWTS Policy).

Per the County’s Stormwater Program, the Public Works Department is responsible for ensuring that new construction sites implement best management practices during construction, and that site plans incorporate appropriate post-construction stormwater runoff controls. Construction sites that disturb 1.0 acre or more must obtain coverage under the SWRCB’s Construction General Permit. Pacific Gas & Electric Company (PG&E) is the primary electricity provider and both PG&E and Southern California Gas Company provide natural gas services for urban and rural communities within the County of San Luis Obispo. The project site does not currently host water, wastewater, or stormwater collection infrastructure.

There are three landfills in San Luis Obispo County: Cold Canyon Landfill, located near the City of San Luis Obispo, Chicago Grade Landfill, located near the community of Templeton, and Paso Robles Landfill, located east of the City of Paso Robles. The project would be serviced by South County Sanitary and Cold Canyon Landfill.

Discussion

- (a) *Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electrical power, natural gas, or telecommunications facilities, the construction of which could cause significant environmental effects?*

The project would not result in a substantial increase in demand on water, wastewater, or stormwater collection, treatment, or disposal facilities and would not require the construction of new or expanded water, wastewater, or stormwater facilities. The project would not result in a substantial increase in energy demand, natural gas, or telecommunications; no new or expanded facilities would be required. No utility relocations are proposed. Therefore, *no impact would occur.*

- (b) *Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?*

The project would be consistent with existing and planned levels and types of development in the project area and would not create new or expanded water supply entitlements. Short-term construction activities would require minimal amounts of water, which would be met through

Initial Study – Environmental Checklist

available existing supplies. Operational water demands would not be substantially different than existing demands. Therefore, potential impacts on water supplies would be *less than significant*.

- (c) *Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project’s projected demand in addition to the provider’s existing commitments?*

The project would not substantially increase demands on existing wastewater collection, treatment, and disposal facilities. The project does not include new connections to wastewater treatment facilities; therefore, *no impact would occur*.

- (d) *Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?*

Construction activities would result in the generation of minimal solid waste materials; no significant long-term increase in solid waste would occur. Local landfills have adequate permit capacity to serve the project and the project does not propose to generate solid waste in excess of State or local standards or otherwise impair the attainment of solid waste reduction goals. Therefore, potential impacts would be *less than significant*.

- (e) *Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?*

The project would not result in a substantial increase in waste generation during project construction or operation. Construction waste disposal would comply with federal, state, and local management and reduction statutes and regulations related to solid waste. Therefore, potential impacts would be *less than significant*.

Conclusion

The project would not result in significant increased demands on water, wastewater, or stormwater infrastructure and facilities. No substantial increase in solid waste generation would occur. Therefore, potential impacts to utilities and service systems would be less than significant and no mitigation measures are necessary.

Mitigation

None necessary.

XX. WILDFIRE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

- | | | | | |
|---|--------------------------|--------------------------|-------------------------------------|--------------------------|
| (a) Substantially impair an adopted emergency response plan or emergency evacuation plan? | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
|---|--------------------------|--------------------------|-------------------------------------|--------------------------|

Initial Study – Environmental Checklist

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
(b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Setting

In central California, the fire season usually extends from roughly May through October, however, recent events indicate that wildfire behavior, frequency, and duration of the fire season are changing in California. Fire Hazard Severity Zones (FHSZ) are defined by the California Department of Forestry and Fire Protection (CALFIRE) based on the presence of fire-prone vegetation, climate, topography, assets at risk (e.g., high population centers), and a fire protection agency's ability to provide service to the area (CAL FIRE 2007). FHSZs throughout the County have been designated as "Very High," "High," or "Moderate." In San Luis Obispo County, most of the area that has been designated as a "Very High Fire Hazard Severity Zone" is located in the Santa Lucia Mountains, which extend parallel to the coast along the entire length of San Luis Obispo County. The Moderate Hazard designation does not mean the area cannot experience a damaging fire; rather, it indicates that the probability is reduced, generally because the number of days a year that the area has "fire weather" is less than in high or very high fire severity zones. The proposed project site is within a high fire severity zone with a 5-to-10-minute response time.

The County Emergency Operations Plan (EOP) addresses several overall policy and coordination functions related to emergency management. The EOP includes the following components:

- Identifies the departments and agencies designated to perform response and recovery activities and specifies tasks they must accomplish;
- Outlines the integration of assistance that is available to local jurisdictions during disaster situations that generate emergency response and recovery needs beyond what the local jurisdiction can satisfy;

Initial Study – Environmental Checklist

- Specifies the direction, control, and communications procedures and systems that will be relied upon to alert, notify, recall, and dispatch emergency response personnel, alert the public, protect residents and property, and request aid/support from other jurisdictions and/or the federal government;
- Identifies key continuity of government operations; and
- Describes the overall logistical support process for planned operations.

Topography influences wildland fire to such an extent that slope conditions can often become a critical wildland fire factor. Conditions such as speed and direction of dominant wind patterns, the length and steepness of slopes, direction of exposure, and/or overall ruggedness of terrain influence the potential intensity and behavior of wildland fires and/or the rates at which they may spread (Barros et al. 2013).

The County of San Luis Obispo Safety Element establishes goals, policies, and programs to reduce the threat to life, structures, and the environment caused by fire. Policy S-13 identifies that new development should be carefully located, with special attention given to fuel management in higher fire risk areas, and that new development in fire hazard areas should be configured to minimize the potential for added danger. Implementation strategies for this policy include identifying high risk areas, the development and implementation of mitigation efforts to reduce the threat of fire, requiring fire resistant material to be used for building construction in fire hazard areas, and encouraging applicants applying for subdivisions in fire hazard areas to cluster development to allow for a wildfire protection zone.

The California Fire Code provides minimum standards for many aspects of fire prevention and suppression activities. These standards include provisions for emergency vehicle access, water supply, fire protection systems, and the use of fire resistant building materials.

The County has prepared an Emergency Operations Plan (EOP) to outline the emergency measures that are essential for protecting the public health and safety. These measures include, but are not limited to, public alert and notifications, emergency public information, and protective actions. The EOP also addresses policy and coordination related to emergency management.

Discussion

(a) *Substantially impair an adopted emergency response plan or emergency evacuation plan?*

Implementation of the proposed project would not have a permanent impact on any adopted emergency response plans or emergency evacuation plans. Temporary construction activities and staging would not substantially alter existing circulation patterns or trips. Access to adjacent areas would be maintained throughout the duration of the project. There are adequate alternative routes available to accommodate any rerouted trips through the project area for the short-term construction period. Therefore, the project would not substantially impair an adopted emergency response plan or emergency evacuation plan. Potential impacts would be *less than significant*.

(b) *Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?*

The 2.48-acre project property is characterized by gently to steeply sloping topography and consists of coast live oak woodland, scrubs, and open sandy areas. The project site is vacant and undeveloped. Surrounding land uses include residential suburban parcels developed with single family residences and accessory structures to the north, south, west, and east. Implementation of the project would result in the development of one single-family residence, a detached garage, and an Accessory

Initial Study – Environmental Checklist

Dwelling Unit. The project would be constructed in accordance with CFC and CBC requirements to reduce risk associated with fire ignition and exposure of project occupants to wildfire risk. In addition, the project would be required to implement design recommendations identified by CAL FIRE/County Fire to ensure adequate ability to provide fire protection services to the proposed project. Based on required compliance with CFC, CBC, and CAL FIRE/County Fire requirements, the project is not anticipated to significantly exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire in an SRA or a very high fire hazard severity zone; therefore, impacts would be *less than significant*.

- (c) *Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?*

The project would not require the installation or maintenance of utility or wildfire protection infrastructure and would not exacerbate fire risk or result in temporary or ongoing impacts to the environment as a result of the development of wildfire prevention, protection, and/or management techniques. Therefore, potential impacts would be *less than significant*.

- (d) *Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?*

The project site is located near a hillslope. The project site is in a high wildfire risk area but does not include any design elements that would expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes. With design features that adhere to building code requirements and Cal Fire safety requirements, impacts would be *less than significant*.

Conclusion

The project would not expose people or structures to new or exacerbated wildfire risks and would not require the development of new or expanded infrastructure or maintenance to reduce wildfire risks. Therefore, potential impacts associated with wildfire would be less than significant and no mitigation measures are necessary.

Mitigation

None necessary.

Initial Study – Environmental Checklist

XXI. MANDATORY FINDINGS OF SIGNIFICANCE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
(a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
(c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Setting

Refer to setting information provided above.

Discussion

- (a) *Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?*

Based on the nature and scale of proposed development, the project does not have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a

Initial Study – Environmental Checklist

rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory. Potential impacts would be *less than significant*.

- (b) *Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?*

The proposed project does not have impacts that are individually limited, but cumulatively considerable. Therefore, potential cumulative impacts would be *less than significant*.

- (c) *Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?*

Based on the nature and scale of the project, the project would not result in a substantial adverse direct or indirect effect on human beings.

Conclusion

Potential impacts would be less than significant and no mitigation measures are necessary.

Mitigation

None necessary.

Initial Study – Environmental Checklist

Exhibit A - Initial Study References and Agency Contacts

The County Planning Department has contacted various agencies for their comments on the proposed project. With respect to the subject application, the following have been contacted (marked with an ☒) and when a response was made, it is either attached or in the application file:

Initial Study – Environmental Checklist

Exhibit B - Mitigation Summary

The applicant has agreed to incorporate the following measures into the project. These measures become a part of the project description and therefore become a part of the record of action upon which the environmental determination is based. All development activity must occur in strict compliance with the following mitigation measures. These measures shall be perpetual and run with the land. These measures are binding on all successors in interest of the subject property.

Air Quality

AQ-1 Fugitive Dust Mitigation Measures (Expanded List). At the time of application for grading and **construction** permits for both Phases I and II of proposed development, the following measures shall be provided on project grading and construction plans and shall be implemented throughout the duration of project grading and construction activities:

3. Reduce the amount of the disturbed area where possible;
4. Use of water trucks or sprinkler systems in sufficient quantities to prevent airborne dust from leaving the site and from exceeding the San Luis Obispo County Air Pollution Control District's limit of 20% opacity for greater than 3 minutes in any 60-minute period. Increased watering frequency would be required whenever wind speeds exceed 15 miles per hour. Reclaimed (non-potable) water should be used whenever possible. When drought conditions exist and water use is a concern, the contractor or builder should consider use of a dust suppressant that is effective for the specific site conditions to reduce the amount of water used for dust control. Please refer to the following link from the San Joaquin Valley Air District for a list of potential dust suppressants:
<http://www.valleyair.org/busind/comply/PM10/Products%20Available%20for%20Controlling%20PM10%20Emissions.htm>;
5. All dirt stockpile areas should be sprayed daily and covered with tarps or other dust barriers as needed;
6. All roadways, driveways, sidewalks, etc. to be paved should be completed as soon as possible, and building pads should be laid as soon as possible after grading unless seeding, soil binders or other dust controls are used;
7. All trucks hauling dirt, sand, soil, or other loose materials are to be covered or should maintain at least 2 feet of freeboard (minimum vertical distance between top of load and top of trailer) or otherwise comply with California Vehicle Code Section 23114;
8. "Track-Out" is defined as sand or soil that adheres to and/or agglomerates on the exterior surfaces of motor vehicles and/or equipment (including tires) that may then fall onto any highway or street as described in California Vehicle Code Section 23113 and California Water Code 13304. To prevent track out, designate access points and require all employees, subcontractors, and others to use them. Install and operate a "track-out prevention device" where vehicles enter and exit unpaved roads onto paved streets. The track-out prevention device can be any device or combination of devices that are effective at preventing track out, located at the point of intersection of an unpaved area and a paved road. Rumble strips or steel plate devices need periodic cleaning to be effective. If paved roadways accumulate tracked out soils, the track-out prevention device may need to be modified;

Initial Study – Environmental Checklist

9. All fugitive dust mitigation measures shall be shown on grading and building plans;
10. The contractor or builder shall designate a person or persons whose responsibility is to ensure any fugitive dust emissions do not result in a nuisance and to enhance the implementation of the mitigation measures as necessary to minimize dust complaints and reduce visible emissions below the San Luis Obispo County Air Pollution Control District's limit of 20% opacity for greater than 3 minutes in any 60-minute period. Their duties shall include holidays and weekend periods when work may not be in progress (for example, wind-blown dust could be generated on an open dirt lot). The name and telephone number of such persons shall be provided to the San Luis Obispo County Air Pollution Control District Compliance Division prior to the start of any grading, earthwork or demolition (Contact the Compliance Division at 805-781-5912).
11. Permanent dust control measures identified in the approved project revegetation and landscape plans should be implemented as soon as possible, following completion of any soil-disturbing activities;
12. Exposed ground areas that are planned to be reworked at dates greater than 1 month after initial grading should be sown with a fast germinating, non-invasive grass seed and watered until vegetation is established;
13. All disturbed soil areas not subject to revegetation should be stabilized using approved chemical soil binders, jute netting, or other methods approved in advance by the San Luis Obispo County Air Pollution Control District;
14. Vehicle speed for all construction vehicles shall not exceed 15 miles per hour on any unpaved surface at the construction site;
15. Sweep streets at the end of each day if visible soil material is carried onto adjacent paved roads. Water sweepers shall be used with reclaimed water where feasible. Roads shall be pre-wetted prior to sweeping when feasible; and
16. Take additional measures as needed to ensure dust from the project site is not impacting areas outside the project boundary.

AQ-2 Limits on Idling During Construction. At the time of application for grading and construction permits for both Phases I and II of proposed development, the following measures shall be provided on project grading and construction plans and shall be implemented throughout the duration of project grading and construction activities when diesel-powered vehicles/equipment are in use:

17. State law prohibits idling diesel engines for more than 5 minutes. All projects with diesel-powered construction activity shall comply with Section 2485 of Title 13 of the California Code of Regulations and the 5-minute idling restriction identified in Section 2449(d)(2) of the California Air Resources Board's In-Use Off-Road Diesel regulation to minimize toxic air pollution impacts from idling diesel engines. The specific requirements and exceptions for the on-road and off-road regulations can be reviewed at the following websites: arb.ca.gov/sites/default/files/classic//msprog/truck-idling/13ccr2485_09022016.pdf and arb.ca.gov/regact/2007/ordiesl07/frooal.pdf.
18. Signs shall be posted and enforced to prohibit idling.

Initial Study – Environmental Checklist

19. In addition, because this project is located within 1,000 feet of sensitive receptors, the project applicant shall comply with the following more restrictive requirements to minimize impacts to nearby sensitive receptors.
- a. Staging and queuing areas shall be located at the greatest distance from sensitive receptor locations as feasible;
 - b. Diesel idling while equipment is not in use shall not be permitted;
 - c. Use of alternative fueled equipment is recommended; and signs must be posted and enforced at the site that specify no idling areas.

Biological Resources

BIO-1 Landscape Plan.

Prior to issuance of grading plan, the applicant shall submit to County Department of Planning and Building a landscape plan for review and approval. The intent of the Landscape Plan is to require native, non-invasive, drought tolerant landscaping that is compatible with the nearby sensitive Coyote Bush Scrub vegetation community. To the extent possible, the provisions in Section 22.16.040 of the San Luis Obispo County Land Use Ordinance Inland shall be used as long as it does not conflict with the intent stated above. Landscape plants used shall incorporate as many of the following features as possible:

- a. Plants shall be native to the nearby sensitive habitat, or at least be recognized by a landscape contractor/ architect familiar with native plants, as compatible, non-invasive plants;
- b. Plant shall be drought-tolerant;
- c. Plants shall have similar climate and soil requirements as the surrounding native species;
- d. Plants shall be watered by drip irrigation until successfully established (with the intent to wean them from the irrigation system permanently). The Landscape Plan shall include ongoing irrigation and maintenance elements to ensure ongoing success and compliance with the intent of the measure during operations/ post approval.

BIO-2 Nesting Birds.

Prior to any vegetation clearing, removal and/or grading activities, to avoid impacts to nesting birds, all ground preparation and vegetation removal activities shall take place outside the typical nesting bird season (September 1 to January 31), if possible.

- a. If construction activities are needed during nesting bird season (February 1 to August 31), within one week of activity beginning on site, a qualified biologist shall conduct pre-construction surveys for active bird nests within 300 feet of the work area. At such time, if any evidence of nesting activities are found, the biologist will determine if any construction activities can occur during the nesting period and to what extent. If active nests are located, construction activities shall be conducted outside an exclusion zone (i.e. 50 to 300 feet depending on species) The biologist shall determine the appropriate buffer distance based on the bird species, topography, vegetation, and type of disturbance. At a minimum, the buffer area shall be delineated with brightly colored construction fencing. No construction, grading, or equipment staging activities shall occur within the buffer area, which shall remain in place until the biologist has determined that the young have fledged from the nest or until the nest is no longer considered active.

Initial Study – Environmental Checklist

BIO-3 Tree Protection Fencing (TPF).

Prior to any ground disturbing activities, protective fencing shall be installed by the Contractor to avoid impacts to the trees **and** their roots. The TPF should consist of blaze orange fencing supported by metal “T bar” posts. The fencing should be installed at or outside of the tree drip lines. The TPF should be maintained during the entire development process. Grading and construction activity should be minimized within the TPF area.

BIO-4 At the time of application for grading permits, the applicant shall clearly show on the project plans the type, size, and location of all trees to be removed as part of the project and all remaining trees within 50 feet of construction activities. The **project** plans shall also show the type and location of tree protection measures to be employed. All trees to remain on-site that are within fifty feet of construction or grading activities shall be marked for protection (e.g., with flagging) and their root zone fenced prior to any grading. The outer edge of the tree root zone is 1-1/2 times the distance from the trunk to the drip line of the tree. Grading, utility trenching, compaction of soil, or placement of fill shall be avoided within these fenced areas. If grading in the root zone cannot be avoided, retaining walls shall be constructed to minimize cut and fill impacts. Care shall be taken to avoid surface roots within the top 18 inches of soil. If any roots must be removed or exposed, they shall be cleanly cut and not left exposed above the ground surface.

BIO-5 Driveway Substrate.

Prior to issuance of grading plan, provide details of driveway materials used. A porous material would be preferable to concrete or asphalt. The design should use materials that allow water permeability and gas exchange, such as brick with sand joints, open bricks, bark, gravel, cobbles, or redwood planks.

BIO-6 Oak Tree Replacement Plan.

At the time of application for construction permits, the applicant shall submit a replacement plan to be approved by the Department of Planning in Building in compliance with the required replacement trees. Coast live oak trees removed or damaged shall be replaced by the Contractor at a 4:1 ratio (as directed by the County). Coast live oak trees that will be trimmed or encroached into the critical root zones, which are typically 1.5 times the distance from the dripline to the trunk, shall be replaced by the Contractor at a 2:1 ratio (as directed by the County). Any heavy pruning of oak trees should occur during July and August.

Initial Study – Environmental Checklist

BIO-7 Oak Tree On-Site Mitigation

At the time of application for construction permits for the single-family residence, the applicant shall submit a tree replacement plan to be reviewed and approved by the Environmental Coordinator. The plan shall provide for the **replacement of 16 oak trees**. Replant areas shall be either in native topsoil or areas where native topsoil has been reapplied. If the latter, topsoil shall be carefully removed and stockpiled for spreading over graded areas to be replanted (set aside enough for 6-12" layer).

Location of newly planted trees should adhere to the following, whenever possible: on the north side of and at the canopy/dripline edge of existing mature native trees; on north-facing slopes; within drainage swales (except when riparian habitat present); where topsoil is present; and away from continuously wet areas (e.g. lawns, leach lines). These trees shall be spaced between 15 – 20 ft on-center. The replacement tree size shall be one to five-gallon deep pots.

These newly planted trees shall be maintained until successfully established. This shall include protection (e.g. tree shelters, caging) from animals (e.g., deer, rodents), regular weeding (minimum of once early Fall and once early Spring) of at least a three-foot radius out from plant and adequate watering (e.g., drip-irrigation system). Watering should be controlled so only enough is used to initially establish the tree, and reducing to zero over a three-year period. If possible, planting during the warmest, driest months (June through September) shall be avoided. In addition, standard planting procedures (e.g., planting tablets, initial deep watering) shall be used.

Once trees have been planted and prior to final inspection of construction plans for the single-family residence, the applicant shall retain a qualified individual (e.g., landscape contractor, arborist, nurseryman, botanist) to prepare a letter stating how and when the above planting and protection measures have been completed. **All replacement trees shall be maintained and monitored for a minimum of seven years** to ensure successful establishment. If replacement trees do not successfully establish or die, then additional trees will be planted and monitored accordingly to meet this requirement. An as-built planting plan shall be prepared that is used to track the replacement trees, and annual reports prepared by a qualified individual shall be submitted to the County Department of Planning and Building by December 31st of each year following planting.

BIO-8 The applicant shall limit tree removal to no more than 2 oak trees having a five-inch diameter or larger at four feet from the ground and no more than 12 trees impacted. Construction plans shall clearly delineate all trees within 50 feet of the proposed project and shall show which trees are to be removed or impacted, and which trees are to remain unharmed.

BIO-9 Oak Tree Off-Site Mitigation

Prior to issuance of the grading permit, submit evidence that all in-lieu fees have been paid and received. Sixteen trees shall be replaced by paying an in-lieu mitigation fee to the Oak Woodlands Conservation Program. The proposed project site does not allow for satisfactory tree spacing for all thirty-two mitigation trees to be planted onsite. Working with the County, the applicant will pay an estimated fee of \$1,008.00 for each tree removed and \$504.00 for each tree impacted.

Oak Trees removed	2	@ \$1,008/tree	\$2,016
Oak Trees impacted	12	@ \$504/tree	\$6,048
ESTIMATED TOTAL			\$8,064

Initial Study – Environmental Checklist

BIO-10 Tree Protection During Construction.

During construction activities, heavy machinery operated by the Contractor shall take care to minimize the disruption of all tree roots. Grading and filling or compaction should be avoided around the trees. Grading can cut the shallow “feeder” roots, which may reduce the tree’s ability to take up water and nutrients from the soil. Any exposed roots should be cut, so they stay 1-2 inches below the soil line and are not exposed to the air. Filling and compaction can reduce oxygen uptake as well as disrupt the activities of soil organisms that decompose organic materials, fix nitrogen, and release nutrients. Heavy equipment, construction materials, and debris should not be stored near the TPF. Any refueling should not occur near the TPF.

BIO-11 Tree Trimming.

During the life of the project, all pruning of the coast live oak trees shall be performed by a contractor familiar and compliant with International Society of Arboriculture pruning guidelines. If trimming is necessary, the applicant agrees to either use a skilled arborist or apply accepted arborist’s techniques when removing limbs.

BIO-12 Landscaping and Maintenance near trees.

During the life of the project, all drainages shall avoid causing water to accumulate near the trees. No watering systems shall be installed near the trees that will provide water to the trees during the summer as this can cause root rot.

**DEVELOPER'S STATEMENT FOR
STARKOVICH GRADING PERMIT
N-DRC2022-00011**

FEBRUARY 15, 2023

The applicant agrees to incorporate the following measures into the project. These measures become a part of the project description and therefore become a part of the record of action upon which the environmental determination is based. All development activity must occur in strict compliance with the following mitigation measures. These measures shall be perpetual and run with the land. These measures are binding on all successors in interest of the subject property.

Note: The items contained in the boxes labeled "Monitoring" describe the County procedures to be used to ensure compliance with the mitigation measures.

Exhibit B - Mitigation Summary

The following mitigation measures address impacts that may occur as a result of the development of the project.

Air Quality

AQ-1 Fugitive Dust Mitigation Measures (Expanded List). At the time of application for grading and **construction** permits for both Phases I and II of proposed development, the following measures shall be provided on project grading and construction plans and shall be implemented throughout the duration of project grading and construction activities:

- a. Reduce the amount of the disturbed area where possible;
- b. Use of water trucks or sprinkler systems in sufficient quantities to prevent airborne dust from leaving the site and from exceeding the San Luis Obispo County Air Pollution Control District's limit of 20% opacity for greater than 3 minutes in any 60-minute period. Increased watering frequency would be required whenever wind speeds exceed 15 miles per hour. Reclaimed (non-potable) water should be used whenever possible. When drought conditions exist and water use is a concern, the contractor or builder should consider use of a dust suppressant that is effective for the specific site conditions to reduce the amount of water used for dust control. Please refer to the following link from the San Joaquin Valley Air District for a list of potential dust suppressants: <http://www.valleyair.org/busind/comply/PM10/Products%20Available%20for%20Controlling%20PM10%20Emissions.htm>;
- c. All dirt stockpile areas should be sprayed daily and covered with tarps or other dust barriers as needed;
- d. All roadways, driveways, sidewalks, etc. to be paved should be completed as soon as possible, and building pads should be laid as soon as possible after grading unless seeding, soil binders or other dust controls are used;
- e. All trucks hauling dirt, sand, soil, or other loose materials are to be covered or should maintain at least 2 feet of freeboard (minimum vertical distance between top of load and top of trailer) or otherwise comply with California Vehicle Code Section 23114;

- f. "Track-Out" is defined as sand or soil that adheres to and/or agglomerates on the exterior surfaces of motor vehicles and/or equipment (including tires) that may then fall onto any highway or street as described in California Vehicle Code Section 23113 and California Water Code 13304. To prevent track out, designate access points and require all employees, subcontractors, and others to use them. Install and operate a "track-out prevention device" where vehicles enter and exit unpaved roads onto paved streets. The track-out prevention device can be any device or combination of devices that are effective at preventing track out, located at the point of intersection of an unpaved area and a paved road. Rumble strips or steel plate devices need periodic cleaning to be effective. If paved roadways accumulate tracked out soils, the track-out prevention device may need to be modified;
- g. All fugitive dust mitigation measures shall be shown on grading and building plans;
- h. The contractor or builder shall designate a person or persons whose responsibility is to ensure any fugitive dust emissions do not result in a nuisance and to enhance the implementation of the mitigation measures as necessary to minimize dust complaints and reduce visible emissions below the San Luis Obispo County Air Pollution Control District's limit of 20% opacity for greater than 3 minutes in any 60-minute period. Their duties shall include holidays and weekend periods when work may not be in progress (for example, wind-blown dust could be generated on an open dirt lot). The name and telephone number of such persons shall be provided to the San Luis Obispo County Air Pollution Control District Compliance Division prior to the start of any grading, earthwork or demolition (Contact the Compliance Division at 805-781-5912).
- i. Permanent dust control measures identified in the approved project revegetation and landscape plans should be implemented as soon as possible, following completion of any soil-disturbing activities;
- j. Exposed ground areas that are planned to be reworked at dates greater than 1 month after initial grading should be sown with a fast germinating, non-invasive grass seed and watered until vegetation is established;
- k. All disturbed soil areas not subject to revegetation should be stabilized using approved chemical soil binders, jute netting, or other methods approved in advance by the San Luis Obispo County Air Pollution Control District;
- l. Vehicle speed for all construction vehicles shall not exceed 15 miles per hour on any unpaved surface at the construction site;
- m. Sweep streets at the end of each day if visible soil material is carried onto adjacent paved roads. Water sweepers shall be used with reclaimed water where feasible. Roads shall be pre-wetted prior to sweeping when feasible; and
- n. Take additional measures as needed to ensure dust from the project site is not impacting areas outside the project boundary.

AQ-2 Limits on Idling During Construction. At the time of application for grading and construction permits for both Phases I and II of proposed development, the following measures shall be provided on project grading and construction plans and shall be implemented throughout the duration of project grading and construction activities when diesel-powered vehicles/equipment are in use:

- a. State law prohibits idling diesel engines for more than 5 minutes. All projects with diesel-powered construction activity shall comply with Section 2485 of Title 13 of

the California Code of Regulations and the 5-minute idling restriction identified in Section 2449(d)(2) of the California Air Resources Board's In-Use Off-Road Diesel regulation to minimize toxic air pollution impacts from idling diesel engines. The specific requirements and exceptions for the on-road and off-road regulations can be reviewed at the following websites: arb.ca.gov/sites/default/files/classic//msprog/truck-idling/13ccr2485_09022016.pdf and arb.ca.gov/regact/2007/ordiesl07/frooal.pdf.

- b. Signs shall be posted and enforced to prohibit idling.
- c. In addition, because this project is located within 1,000 feet of sensitive receptors, the project applicant shall comply with the following more restrictive requirements to minimize impacts to nearby sensitive receptors.
 - i. Staging and queuing areas shall be located at the greatest distance from sensitive receptor locations as feasible;
 - ii. Diesel idling while equipment is not in use shall not be permitted;
 - iii. Use of alternative fueled equipment is recommended; and signs must be posted and enforced at the site that specify no idling areas.

AQ-1 to AQ-2 Monitoring: Required prior to issuance of construction permits. Compliance will be verified by the County Department of Planning and Building.

Biological Resources

BIO-1 Landscape Plan.

Prior to issuance of grading plan, the applicant shall submit to County Department of Planning and Building a landscape plan for review and approval. The intent of the Landscape Plan is to require native, non-invasive, drought tolerant landscaping that is compatible with the nearby sensitive Coyote Bush Scrub vegetation community. To the extent possible, the provisions in Section 22.16.040 of the San Luis Obispo County Land Use Ordinance Inland shall be used as long as it does not conflict with the intent stated above. Landscape plants used shall incorporate as many of the following features as possible:

- a. Plants shall be native to the nearby sensitive habitat, or at least be recognized by a landscape contractor/ architect familiar with native plants, as compatible, non-invasive plants;
- b. Plant shall be drought-tolerant;
- c. Plants shall have similar climate and soil requirements as the surrounding native species;
- d. Plants shall be watered by drip irrigation until successfully established (with the intent to wean them from the irrigation system permanently). The Landscape Plan shall include ongoing irrigation and maintenance elements to ensure ongoing success and compliance with the intent of the measure during operations/ post approval.

BIO-2 Nesting Birds.

Prior to any vegetation clearing, removal and/or grading activities, to avoid impacts to nesting birds, all ground preparation and vegetation removal activities shall take place outside the typical nesting bird season (September 1 to January 31), if possible.

- a. If construction activities are needed during nesting bird season (February 1 to August 31), within one week of activity beginning on site, a qualified biologist shall conduct pre-construction surveys for active bird nests within 300 feet of the work area. At such time, if any evidence of nesting activities are found, the biologist will determine if any construction activities can occur during the nesting period and to what extent. If active nests are located, construction activities shall be conducted outside an exclusion zone (i.e. 50 to 300 feet depending on species) The biologist shall determine the appropriate buffer distance based on the bird species, topography, vegetation, and type of disturbance. At a minimum, the buffer area shall be delineated with brightly colored construction fencing. No construction, grading, or equipment staging activities shall occur within the buffer area, which shall remain in place until the biologist has determined that the young have fledged from the nest or until the nest is no longer considered active.

BIO-3 Tree Protection Fencing (TPF).

Prior to any ground disturbing activities, protective fencing shall be installed by the Contractor to avoid impacts to the trees **and** their roots. The TPF should consist of blaze orange fencing supported by metal "T bar" posts. The fencing should be installed at or outside of the tree drip lines. The TPF should be maintained during the entire development process. Grading and construction activity should be minimized within the TPF area.

BIO-4 At the time of application for grading permits, the applicant shall clearly show on the project plans the type, size, and location of all trees to be removed as part of the project and all remaining trees within 50 feet of construction activities. The **project** plans shall also show the type and location of tree protection measures to be employed. All trees to remain on-site that are within fifty feet of construction or grading activities shall be marked for protection (e.g., with flagging) and their root zone fenced prior to any grading. The outer edge of the tree root zone is 1-1/2 times the distance from the trunk to the drip line of the tree. Grading, utility trenching, compaction of soil, or placement of fill shall be avoided within these fenced areas. If grading in the root zone cannot be avoided, retaining walls shall be constructed to minimize cut and fill impacts. Care shall be taken to avoid surface roots within the top 18 inches of soil. If any roots must be removed or exposed, they shall be cleanly cut and not left exposed above the ground surface.

BIO-5 Driveway Substrate.

Prior to issuance of grading plan, provide details of driveway materials used. A porous material would be preferable to concrete or asphalt. The design should use materials that allow water permeability and gas exchange, such as brick with sand joints, open bricks, bark, gravel, cobbles, or redwood planks.

BIO-6 Oak Tree Replacement Plan.

At the time of application for construction permits, the applicant shall submit a replacement plan to be approved by the Department of Planning in Building in compliance with the required replacement trees. Coast live oak trees removed or damaged shall be replaced by the Contractor at a 4:1 ratio (as directed by the County). Coast live oak trees that will be trimmed or encroached into the critical root zones, which are typically 1.5 times the distance from the dripline to the trunk, shall be replaced by the Contractor at a 2:1 ratio (as directed by the County). Any heavy pruning of oak trees should occur during July and August.

BIO-7 Oak Tree On-Site Mitigation

At the time of application for construction permits for the single-family residence, the applicant shall submit a tree replacement plan to be reviewed and approved by the Environmental Coordinator. The plan shall provide for the **replacement of 16 oak trees**. Replant areas shall be either in native topsoil or areas where native topsoil has been reapplied. If the latter, topsoil shall be carefully removed and stockpiled for spreading over graded areas to be replanted (set aside enough for 6-12" layer).

Location of newly planted trees should adhere to the following, whenever possible: on the north side of and at the canopy/dripline edge of existing mature native trees; on north-facing slopes; within drainage swales (except when riparian habitat present); where topsoil is present; and away from continuously wet areas (e.g. lawns, leach lines). These trees shall be spaced between 15 – 20 ft on-center. The replacement tree size shall be one to five-gallon deep pots.

These newly planted trees shall be maintained until successfully established. This shall include protection (e.g. tree shelters, caging) from animals (e.g., deer, rodents), regular weeding (minimum of once early Fall and once early Spring) of at least a three-foot radius out from plant and adequate watering (e.g., drip-irrigation system). Watering should be controlled so only enough is used to initially establish the tree, and reducing to zero over a three-year period. If possible, planting during the warmest, driest months (June through September) shall be avoided. In addition, standard planting procedures (e.g., planting tablets, initial deep watering) shall be used.

Once trees have been planted and prior to final inspection of construction plans for the single-family residence, the applicant shall retain a qualified individual (e.g., landscape contractor, arborist, nurseryman, botanist) to prepare a letter stating how and when the above planting and protection measures have been completed. **All replacement trees shall be maintained and monitored for a minimum of seven years** to ensure successful establishment. If replacement trees do not successfully establish or die, then additional trees will be planted and monitored accordingly to meet this requirement. An as-built planting plan shall be prepared that is used to track the replacement trees, and annual reports prepared by a qualified individual shall be submitted to the County Department of Planning and Building by December 31st of each year following planting.

BIO-8 The applicant shall limit tree removal to no more than 2 oak trees having a five-inch diameter or larger at four feet from the ground and no more than 12 trees impacted. Construction plans shall clearly delineate all trees within 50 feet of the proposed project and shall show which trees are to be removed or impacted, and which trees are to remain unharmed.

BIO-9 Oak Tree Off-Site Mitigation

Prior to issuance of the grading permit, submit evidence that all in-lieu fees have been paid and received. Sixteen trees shall be replaced by paying an in-lieu mitigation fee to the Oak Woodlands Conservation Program. The proposed project site does not allow for satisfactory tree spacing for all thirty-two mitigation trees to be planted onsite. Working with the County, the applicant will pay an estimated fee of \$1,008.00 for each tree removed and \$504.00 for each tree impacted.

Oak Trees removed	2	@ \$1,008/tree	\$2,016
Oak Trees impacted	12	@ \$504/tree	\$6,048
ESTIMATED TOTAL			\$8,064

BIO-10 Tree Protection During Construction.

During construction activities, heavy machinery operated by the Contractor shall take care to minimize the disruption of all tree roots. Grading and filling or compaction should be avoided around the trees. Grading can cut the shallow “feeder” roots, which may reduce the tree’s ability to take up water and nutrients from the soil. Any exposed roots should be cut, so they stay 1-2 inches below the soil line and are not exposed to the air. Filling and compaction can reduce oxygen uptake as well as disrupt the activities of soil organisms that decompose organic materials, fix nitrogen, and release nutrients. Heavy equipment, construction materials, and debris should not be stored near the TPF. Any refueling should not occur near the TPF.

BIO-11 Tree Trimming.

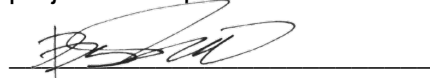

During the life of the project, all pruning of the coast live oak trees shall be performed by a contractor familiar and compliant with International Society of Arboriculture pruning guidelines. If trimming is necessary, the applicant agrees to either use a skilled arborist or apply accepted arborist's techniques when removing limbs.

BIO-12 Landscaping and Maintenance near trees.

During the life of the project, all drainages shall avoid causing water to accumulate near the trees. No watering systems shall be installed near the trees that will provide water to the trees during the summer as this can cause root rot.

<p>BIO-1 to BIO-12 Monitoring: Compliance will be verified by the County Department of Planning and Building in consultation with the Environmental Coordinator.</p>

The applicant understands that any changes made to the project description after this environmental determination must be reviewed by the Environmental Coordinator and may require a new environmental determination for the project. By signing this agreement, the owner(s) agrees to and accepts the incorporation of the above measures into the proposed project description.
