Section 100: Introduction

100.1 Introduction

The 9600 Wilshire Boulevard Specific Plan ("Specific Plan") is generally located at 9570 through 9620 Wilshire Boulevard, 128 South Bedford Drive, 133 S. Camden Drive, and 128 and 133 S. Peck Drive (the exact boundaries of which are referred to as the "Specific Plan Area"). The Specific Plan would apply to an approximately four-net acre site located south of Wilshire Boulevard between South Bedford Drive to the west and South Camden Drive to the east, adjacent to the southwestern portion of the City of Beverly Hills. The Specific Plan Area generally consists of two rectangular blocks bisected by South Peck Drive. The Specific Plan would facilitate: the rehabilitation and adaptive reuse of the existing, Sak's Women's Building in accordance with the Secretary of the Interior's Standards for Rehabilitation of Historic Structures; the retention of the existing commercial building at 9570 Wilshire for continued commercial use; and the development of complementary residential, retail, office, hospitality, social club, boutique hotel, open space, and related uses, including privately owned and maintained, but publicly accessible open-air spaces in the form of the Terrace and the Via. The Specific Plan would permit up to 642,000 square feet of floor area within the specific plan boundaries, for a maximum aggregate floor area ratio of 3.7 averaged across the Specific Plan Area. Any new development within the Specific Plan Area would be implemented through the approval from time to time of a conceptual project plan, consistent with the proposed Specific Plan.

For purposes of CEQA review, the current "Project" is composed of both a programmatic review of the proposed Specific Plan and a project-level analysis of the conceptual plan included as part of the part of the current Project application (the "Conceptual Plan"). The Conceptual Plan reflects an FAR of 3.52, which is within the limits of the Specific Plan. The proposed Conceptual Plan development is the basis for the drainage system described below.

100.2 Methodology

The Los Angeles County Department of Public Works Hydrology Map was used to determine the approximate rainfall during a 50-year storm on the site. This hydrology map contains historical rainfall data from the previous 40-80 years at 99 rainfall gauges across the County. HydroCalc was used to determine the pre- and post-development on-site flows. The calculations are included in Appendix A.

100.3 Existing Drainage Conditions

The elevation of the site ranges from approximately 237 to 250 feet above mean sea level (MSL). In the existing condition, stormwater runoff generally flows southwest to the curb and gutters along Peck Drive and South Camden Drive. The slope across the parking lots between Bedford Drive and South Camden Drive is generally 2%.

The runoff from the roof areas of the existing buildings discharges at the curb face of the frontage streets of Wilshire Boulevard, Bedford Drive, Peck Drive, and South Camden Drive via curb and parkway drains respectively. The runoff is then conveyed via a concrete curb and gutter south along forementioned streets into catch basins at the intersections of Charleville Boulevard where it discharges into the public storm drain system.

See Exhibit 1 – Existing Drainage Area Map for details.

100.4 Proposed Drainage Conditions

The Project site improvements will include constructing storm drainage infrastructure, including storm drain inlets internal to the site and within the private driveways, to convey onsite runoff to a stormwater treatment system. The proposed stormwater treatment system will consist of an underground rainwater harvesting cistern which will capture the stormwater runoff and then dispose of it via metered discharge to the City's system. See Table 1 on page 2 for a summary of the Pre- and Post-Development Conditions.

Table 1: Pre- and Post-Development Conditions

Drainage Area	Area (AC)	Site Condition	% Impervious
A	0.34	Pre-Construction	100
		Post-Construction	100
B	0.49	Pre-Construction	100
		Post-Construction	100
C	0.34	Pre-Construction	100
		Post-Construction	100
D	1.15	Pre-Construction	92
		Post-Construction	93
E	1.12	Pre-Construction	93
		Post-Construction	93

Per the ALTA/Topographic Survey provided by Calvada Surveying Inc., dated 4/27/2020, the three parking lots throughout the site sheet flow into the surrounding streets.

A summary of proposed drainage areas and their associated flows are as follows:

Area A: Area A is entirely covered by a portion of the proposed mixed-use building with an access driveway, and therefore area is 100% impervious.

This drainage tributary area has a Q_{50} flow of 1.12 cfs. The onsite runoff will be captured by the roof drains and conveyed via the stormwater pipe network to the stormwater treatment system and associated overflow structure. The overflow from the underground cistern will be discharged to a junction structure and parkway drain at Wilshire Boulevard.

Area B: Area B is entirely covered by a portion of the proposed mixed-use building and therefore area is 100% impervious.

This drainage tributary area has a Q_{50} flow of 1.62 cfs. The onsite runoff will be captured by the roof drains and conveyed via the stormwater pipe network to the stormwater treatment system and associated overflow structure. The overflow from the underground cistern will be discharged to a junction structure and parkway drain at Wilshire Boulevard.

Area C: Area C is entirely covered by a portion of the proposed commercial building and therefore area is 100% impervious.

This drainage tributary area has a Q_{50} flow of 1.12 cfs. The onsite runoff will be captured by the roof drains and conveyed via the stormwater pipe network to the stormwater treatment system and associated overflow structure. The overflow from the underground cistern will be discharged to a junction structure and parkway drain at Wilshire Boulevard.

Area D: Area D consists of a walkway path and landscaping, as well as a multifamily complex and driveway access. The area is 93% impervious.

This drainage tributary area has a Q_{50} flow of 3.79 cfs. The onsite runoff will be captured by the roof drains/catch basins and conveyed via the stormwater pipe network to the stormwater treatment system and associated overflow structure. The overflow from the underground cistern will be discharged to two junction structures and parkway drains at South Bedford Drive.

Area E: Area E consists of a walkway path and landscaping, as well as a multifamily complex and driveway access. The area is 93% impervious.

This drainage tributary area has a Q_{50} flow of 3.70 cfs. The onsite runoff will be captured by the roof drains/catch basins and conveyed via the stormwater pipe network to the stormwater treatment system and associated overflow structure. The overflow from the underground cistern will be discharged to a junction structure and parkway drain at South Camden Drive.

The Project will not increase the total runoff for the Q_{50} from pre-development to post-development conditions. See Table 2 below for a summary of the existing and proposed drainage areas and flows. Refer to Exhibit 1 for the Existing Drainage Area Map, and Exhibit 2 for the Proposed Drainage Area Map.

100.5 LID Design Criteria & Feasibility Analysis

Proposed peak mitigated flows and volumes have been calculated using the Los Angeles County HydroCalc Calculator. Per the Los Angeles County Department of Public Works' requirements, the peak mitigated flows and mitigated volumes are based on the 85th Percentile of rainfall or ¾" rainfall, whichever is greater. Our analysis shows the 85th Percentile to be greater, which shows to be 1.15 inches.

The tributary areas of the site of 3.44 acre site include building areas, proposed paved traffic circulation areas, and landscaping. The peak mitigated discharge volume was calculated to be 1,267 cubic feet (CF) for Area A, 1,843 CF for Area B, 1,267 CF for Area C, 4,018 CF for Area D, and 3,916 CF for Area E per the LA County HydroCalc Calculator.

Per the Geotechnical Engineering Investigation performed by Geocon West, Inc., dated September, 30, 2021, a stormwater infiltration system is not recommended at the site due to the observed groundwater level of 53 feet below the surface, and proposed subgrade parking extending to a total maximum depth of 60 feet. Since a minimum of 10 feet is required from the groundwater level to the bottom of a proposed infiltration device, it is reasonable to assume that infiltration is not feasible for the Project. Thus, a rainwater harvesting system is proposed for the Project. Stormwater will be pre-treated with an approved pretreatment structure prior to entering the cistern. Stormwater will then be metered out to the City storm drain system in coordination with the City, as irrigation for the site will be provided via greywater reuse.

100.6 Conclusions

The Project's proposed drainage system is designed to provide storm water control and quality measures based on the current City of Beverly Hills requirements. The Project has been analyzed for adherence to Low Impact Development (LID) design requirements for stormwater treatment, along with stormwater runoff control for the 50-year (Q50) storm event per the Los Angeles County requirements.

The analysis shows that the proposed development will not increase overall runoff from existing conditions. Overflow in high rain events will ultimately discharge via parkway drains to the surrounding streets of Bedford Drive, Wilshire Boulevard, and South Camden Drive. Since the total runoff from the site will not increase in the post-development condition, it has been determined that the existing storm drain system has adequate capacity for the proposed development.

100.7 Limitations

Kimley-Horn was retained to perform a limited preliminary hydrology analysis and report to support the California Environmental Quality Act analysis that is being prepared by the City of Beverly Hills. Our assessment is based on information provided to Kimley-Horn by others (municipality staff, design team, utility company representatives, etc.) up to the date of this report.

1. INTRODUCTION

The 9600 Wilshire Boulevard Specific Plan ("Specific Plan") is generally located at 9570 through 9620 Wilshire Boulevard, 128 South Bedford Drive, 133 S. Camden Drive, and 128 and 133 S. Peck Drive (the exact boundaries of which are referred to as the "Specific Plan Area"). The Specific Plan would apply to an approximately four-net acre site located south of Wilshire Boulevard between South Bedford Drive to the west and South Camden Drive to the east, adjacent to the southwestern portion of the City of Beverly Hills. The Specific Plan Area generally consists of two rectangular blocks bisected by South Peck Drive. The Specific Plan would facilitate: the rehabilitation and adaptive reuse of the existing, Saks Women's Building in accordance with the Secretary of the Interior's Standards for Rehabilitation of Historic Structures; the retention of the existing commercial building at 9570 Wilshire for continued commercial use; and the development of complementary residential, retail, office, hospitality, social club, boutique hotel, open space, and related uses, including privately owned and maintained, but publicly accessible open-air spaces in the form of the Terrace and the Via. The Specific Plan would permit up to 642,000 square feet of floor area within the specific plan boundaries, for a maximum aggregate floor area ratio of 3.7 averaged across the Specific Plan Area. Any new development within the Specific Plan Area would be implemented through the approval from time to time of a conceptual project plan, consistent with the proposed Specific Plan.

For purposes of CEQA review, the current "Project" is composed of both a programmatic review of the proposed Specific Plan and a project-level analysis of the conceptual plan included as part of the current Project application (the "Conceptual Plan"). The Conceptual Plan reflects an FAR of 3.52, which is within the limits of the Specific Plan. The Proposed Conceptual Plan development provides the basis for the physical configuration of the drainage system described below because this physical configuration would not change under any of the various build-out scenarios of the Specific Plan.

2. PROJECT INFORMATION

Kimley-Horn was tasked with analyzing the existing and proposed sewer facilities, which would serve the range of uses authorized by build-out of the Specific Plan, in order to verify the capacity of the facilities to accommodate the wastewater flows generated by the build-out of the Specific Plan. Analysis is performed to evaluate the greatest sewage generation that could foreseeably result from build-out of the Specific Plan (which necessarily includes construction and operation of the proposed Conceptual Plan), including under scenarios that consider construction and occupancy both with and without the Residential Conversion Units. After analyzing each such build-out scenario, the maximum sewage generation scenario was determined to be maximum build-out with no Residential Conversion Units (described in this Study, including Appendix A, as Scenario 1). Scenario 1 is therefore the focus of the following write-up. This methodology, analysis and discussion is intended to provide a conservative (worst-case) environmental analysis of build-out of the Specific Plan.

The Project is a proposed mixed-use development located near the intersection of Wilshire Boulevard and Peck Drive. It is bounded by Wilshire Boulevard to the north, Bedford Drive to the west, South Drive to the south, and Camden Drive to the east. The existing site consists of a commercial development. The Project location and surrounding vicinity are depicted in **Figure 1**.

Figure 1 – Project Vicinity

In addition to continued commercial use of approximately 107,000 square feet at 9570 Wilshire (an existing condition), the proposed Specific Plan permits a mix of residential and commercial uses, including up to: 213,000 square feet of development and tenant improvement on “Parcel B” and “Saks Rehabilitation”, 80,000 square feet of development on “Parcel A”, and 242,000 square feet of development across Neighborhood West and Neighborhood East, of which 2,000 square feet must be and up to 15,000 square feet may be Small Shop/Boutique Retail. The project also consists of subterranean parking, ancillary and loading docks, amenity spaces and public space redevelopment.

3. EXECUTIVE SUMMARY

The results of this report indicate that all the existing City sewer mains to be protected or reconstructed in place are sufficient to accommodate the proposed flow generated from the 9600 Wilshire Boulevard "Project".

4. METHODOLOGY

This report evaluates the sewer capacities in the Bedford Drive and Peck Drive to accommodate the proposed sewer peak flow from the developments and assesses the need for City sewer system improvements and upgrades.

The Manning Equation is the most commonly used equation to analyze gravity liquid flow within a pipe. It was applied to determine the normal depth (d) in each pipe with a certain diameter (D) by adding the existing and new flows (cfs) to each pipe segment from one manhole to another. The software, Bentley FlowMaster, was used to generate flow results, specifically for d/D, based on Manning’s equation.

Existing dry and wet weather sewer flows were referenced from the “d/D for Sewers s/o Wilshire Blvd. between Bedford Dr. & Camden Dr. and Alley s/o Wilshire Blvd. within the City of Beverly Hills” dated May

9, 2023 and the existing flows are shown in Table 1 and 2 below. These maps provide full flow pipe capacity, normal depth and pipe size. First, slopes are computed from these three values. Next, existing pipe flow is computed for total analysis.

Proposed sewer flows were calculated utilizing the County of Los Angeles estimated average daily sewage flow rates in Appendix A to estimate the proposed sewer flows for various land uses and occupancy types. A sewer exhibit is provided in Appendix A that details the manholes reconstructed or reconstructed in place for the purposes of this analysis.

The City of Beverly Hills Sewer System Management Plan identifies criteria for determining the action categories for existing pipeline based on d/D values and these status categories are Ok, Watch, Schedule, and Replace as listed in Table 2 below. If the new d/D values are greater than 0.75 in the existing City sewer mains, City sewer system upgrade will be required. Additionally, new sewer pipes were sized to have less than 0.50 d/D values.

5. EXISTING CITY SEWER SYSTEM

Based on Appendix C d/D dry and wet weather flows provided by Public Works and Transportation Department in City of Beverly Hills dated May 9, 2023, the existing d/D and full flow rate (Q) in the cubic feet per second (cfs) are listed in 3 below. There are no adjacent developments anticipated to increase existing flows.

6. PROPOSED SEWER FLOW RATES

The proposed sewer flow rates generated from the Project were calculated utilizing the County of Los Angeles estimated average daily sewage flow rates in Appendix A to estimate the flows for various occupancy types. Each proposed occupancy type is assigned to a corresponding occupancy type from the County of Los Angeles estimated average daily sewage flow rates as shown in Tables 6-10. A peaking factor of 2.5 is applied for analysis.

Proposed redevelopment includes demolishing part of the existing 8” sewer main from MH 554 to 560, reconstructing the 8” sewer main from MH 560A to MH 560B in its existing place, and reconstructing the 8” main from MH 560B to MH 560C in its existing place. Proposed MH 560 will be a drop manhole diverting E-W flows within the alley to the main in Bedford Drive between MH 592 and 593. Refer to Figure 2 for the map of the proposed sewer network below.

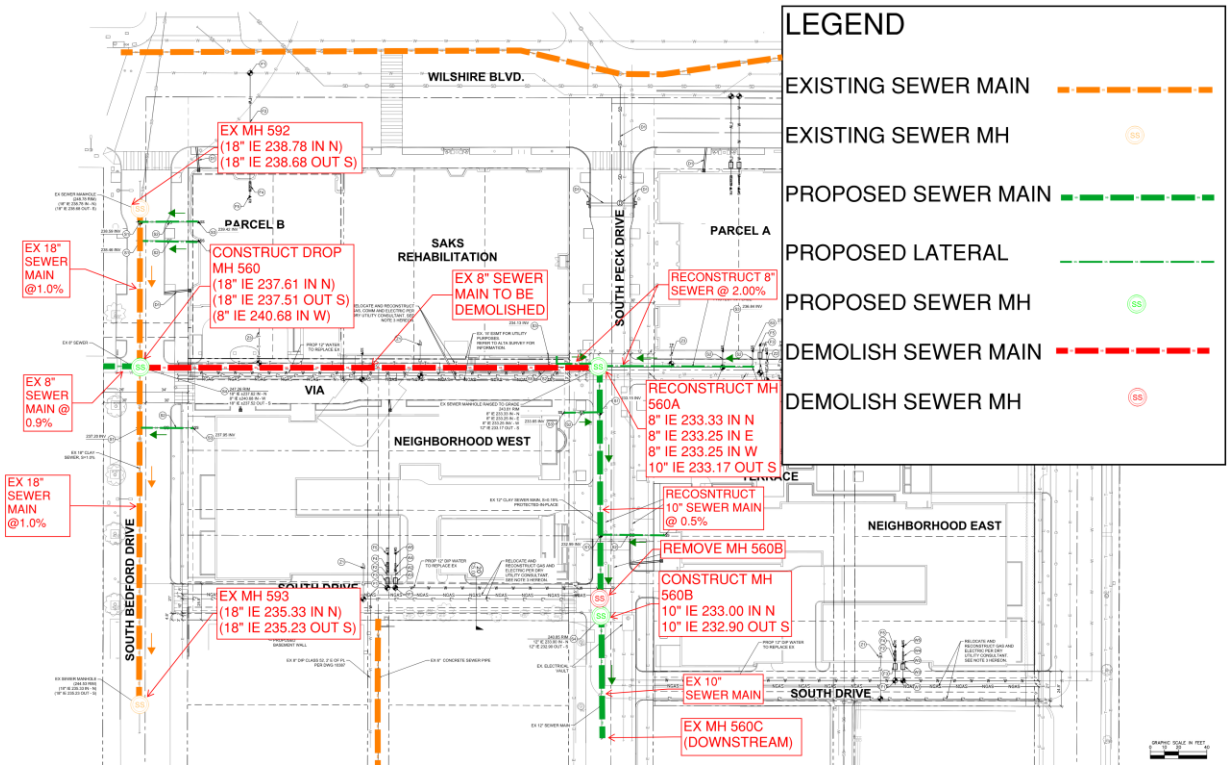

Figure 2 – Proposed Sewer Map

The proposed sewer flow generated from Parcel B building into the existing 18" sewer main within Bedford Drive between MH 592 and constructed MH 560 is shown in Table 6 below.

7. SUMMARY

A summary of new d/D are listed in Table 11 and 12 below based on the proposed sewer flow rates in dry and wet weather, respectively.

The new peak flow in dry weather discharged to existing MH 560C in Peck Drive is 0.604 cfs and the new peak flow in dry weather discharged to existing MH 593 in Bedford Drive is 1.722 cfs. The new peak flow

in wet weather discharged to existing MH 560C in Peck Drive is 0.614 cfs and the new peak flow in wet weather discharged to existing MH 593 in Bedford Drive is 3.152 cfs.

The new d/D values were compared to the criteria listed in Table 3 to determine the necessity of City sewer system upgrades. The results indicate that all the existing City sewer mains assessed in this report are sufficient to accommodate the proposed flow generated from the 9600 Wilshire Boulevard project with less than 0.5 d/D value. Figure 3-6 shows the normal depth in the ultimate downstream discharge points in Bedford Drive and Peck Drive, MH 560-3 to MH 560C and MH 592 to MH 593, in both wet and dry conditions.

Scenario Description from PD Section		In addition to continued commercial use of approximately 107,000 SF at 9570 Wilshire, the Wilshire Boulevard District would have 261,722 sf of commercial; the Neighborhood District would have 68 residential units and 10,581 sf of ground floor Small Shop/Boutique Retail. **LU totals above match this description.**		In addition to continued commercial use of approximately 107,000 SF at 9570 Wilshire, the Wilshire Boulevard District would have (i) 143,000 sf of commercial and (ii) 75 residential units located above the ground floor within the Saks Rehabilitation and Parcel B subareas; the Neighborhood District would have 70 residential units and 15,000 sf of ground floor Small Shop/Boutique Retail . **LU totals above match this description.**		In addition to continued commercial use of approximately 107,000 SF at 9570 Wilshire, the Wilshire Boulevard District would have 293,000 sf of commercial; the Neighborhood District would have 70 residential units and 15,000 sf of ground floor Small Shop/Boutique Retail. **LU totals above match this description.**

Notes:

[1] As used throughout this table, "Circulation" refers to building areas such as corridors, ground floor lobby, ground floor lobby amenities, stair vestibules.

[2] For information purposes, this figure includes 2,777 sf associated with the porte-cochere/valet space which do not constitute floor area under the BHMC or the proposed Specific Plan.

GENERAL NOTES

1. ALL SURVEY MONUMENTS, STREET LIGHTS, PARKING METERS, AND UNDERGROUND UTILITIES, AND ANY OFF-SITE IMPROVEMENTS AFFECTED BY DEMOLITION SHALL BE RE-ESTABLISHED PER CITY STANDARDS, OR AS OTHERWISE PERMITTED BY THE CITY AS PERMITTED BY THE SPECIFIC PLAN AND SHALL BE PAID FOR BY THE APPLICANT.
2. OFF-SITE IMPROVEMENTS CONSIST OF REMOVAL AND REPLACEMENT THAT IS NOT LIMITED TO: CURB AND GUTTER, CURB DRAINS, DRIVEWAY APPROACHES, SIDEWALK, AND ASPHALT PAVEMENT IN ACCORDANCE WITH CITY STANDARDS. OR AS OTHERWISE PERMITTED BY THE CITY AS PERMITTED BY THE SPECIFIC PLAN AND SHALL BE PAID FOR BY THE APPLICANT.
3. OFF-SITE IMPROVEMENTS MUST CONFORM TO CURRENT ADA AND APPLICABLE CITY STANDARDS.
4. UNLESS OTHERWISE PERMITTED BY THE CITY AS PERMITTED BY THE SPECIFIC PLAN, THE APPLICANT WILL NOT CONSTRUCT IMPROVEMENTS WITHIN THE PUBLIC RIGHT-OF-WAY WITHOUT AN ENCROACHMENT PERMIT APPROVED BY CITY COUNCIL.
5. WRITTEN APPROVAL IS REQUIRED BY ENGINEERING DIVISION FOR APPROVAL OF ANY TYPE OF TEMPORARY CONSTRUCTION ENCROACHMENT WITHIN PUBLIC RIGHT-OF-WAY AND IN ACCORDANCE WITH CITY COUNCIL RESOLUTION 71-R-4269. SHORING IS PROHIBITED FROM PROJECTING INTO ALLEYS.
6. INDEMNITY BOND MUST BE SUBMITTED AND APPROVED BY CITY ATTORNEY PRIOR TO EXCAVATION.
7. TRAFFIC CONTROL PLANS ARE TO BE REVIEWED AND APPROVED BY CITY'S TRAFFIC ENGINEERING PRIOR TO CONSTRUCTION.

EXISTING UTILITY NOTE

1. THE EXISTING UTILITIES SHOWN ON THE PLAN ARE BASED ON AVAILABLE RECORDS. THE CONTRACTOR MUST FIELD DETERMINE THE LOCATION AND DEPTH OF ALL UTILITIES PRIOR TO ANY CONSTRUCTION. REPORT DISCREPANCIES AND POTENTIAL CONFLICTS WITH PROPOSED UTILITIES TO ENGINEER PRIOR TO INSTALLATION OF ANY PIPING.

GENERAL NOTES

1. ALL SURVEY MONUMENTS, STREET LIGHTS, PARKING METERS, AND UNDERGROUND UTILITIES, AND ANY OFF-SITE IMPROVEMENTS AFFECTED BY DEMOLITION SHALL BE RE-ESTABLISHED PER CITY STANDARDS, OR AS OTHERWISE PERMITTED BY THE CITY AS PERMITTED BY THE SPECIFIC PLAN AND SHALL BE PAID FOR BY THE APPLICANT.
2. OFF-SITE IMPROVEMENTS CONSIST OF REMOVAL AND REPLACEMENT THAT IS NOT LIMITED TO: CURB AND GUTTER, CURB DRAINS, DRIVEWAY APPROACHES, SIDEWALK, AND ASPHALT PAVEMENT IN ACCORDANCE WITH CITY STANDARDS, OR AS OTHERWISE PERMITTED BY THE CITY AS PERMITTED BY THE SPECIFIC PLAN AND SHALL BE PAID FOR BY THE APPLICANT.
3. OFF-SITE IMPROVEMENTS MUST CONFORM TO CURRENT ADA AND APPLICABLE CITY STANDARDS.
4. UNLESS OTHERWISE PERMITTED BY THE CITY AS PERMITTED BY THE SPECIFIC PLAN, THE APPLICANT WILL NOT CONSTRUCT IMPROVEMENTS WITHIN THE PUBLIC RIGHT-OF-WAY WITHOUT AN ENCROACHMENT PERMIT APPROVED BY CITY COUNCIL.
5. WRITTEN APPROVAL IS REQUIRED BY ENGINEERING DIVISION FOR APPROVAL OF ANY TYPE OF TEMPORARY CONSTRUCTION ENCROACHMENT WITHIN PUBLIC RIGHT-OF-WAY AND IN ACCORDANCE WITH CITY COUNCIL RESOLUTION 71-R-4269. SHORING IS PROHIBITED FROM PROJECTING INTO ALLEYS.
6. INDEMNITY BOND MUST BE SUBMITTED AND APPROVED BY CITY ATTORNEY PRIOR TO EXCAVATION.
7. TRAFFIC CONTROL PLANS ARE TO BE REVIEWED AND APPROVED BY CITY'S TRAFFIC ENGINEERING PRIOR TO CONSTRUCTION.

GENERAL DEMOLITION NOTES

1. THE CONTRACTOR SHALL CLEAR THE PROJECT SITE AREA WITHIN THE CONFINES OF THE DEMOLITION LIMIT LINE. THE CONTRACTOR SHALL CAP IN PLACE ALL EXISTING UTILITIES AT THE DEMOLITION LIMIT LINE, UNLESS NOTED ON THE PLAN. THE CONTRACTOR SHALL DEMOLISH AND REMOVE FROM THE SITE ALL EXISTING UTILITY STRUCTURES, PLANTERS, TREES, AND ALL OTHER SITE FEATURES, UNLESS OTHERWISE NOTED ON THE PLAN.
2. DEMOLITION AND REMOVAL OF PAVEMENT INCLUDES PAVEMENT THICKNESS AS WELL AS BASE COURSE THICKNESS.
3. REMOVAL OF LANDSCAPING SHALL INCLUDE ROOTS AND ORGANIC MATERIAL.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ANY AND ALL PERMITS AND SHALL PAY ALL FEES NECESSARY FOR ENCROACHMENT, GRADING, DEMOLITION, AND DISPOSAL OF SAID MATERIALS AS REQUIRED BY PRIVATE, LOCAL AND STATE JURISDICTIONS.
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR A SITE INSPECTION TO FULLY ACKNOWLEDGE THE EXTENT OF DEMOLITION WORK.
6. THE CONTRACTOR SHALL VERIFY AND LOCATE ALL EXISTING ABOVE AND UNDERGROUND UTILITIES. LOCATIONS SHOWN ON THE PLANS ARE APPROXIMATE AND ARE SHOWN FOR GENERAL INFORMATION ONLY.
7. DAMAGE TO ANY EXISTING UTILITIES AND SERVICES TO REMAIN SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR. CONTRACTOR SHALL REPAIR AND/OR REPLACE IN KIND.
8. EROSION CONTROL MEASURES SHALL BE IMPLEMENTED TO PREVENT DEBRIS AND UNSUITABLE MATERIALS FROM ENTERING STORM DRAINS, SANITARY SEWERS AND STREETS.
9. DUST CONTROL MEASURES SHALL BE IMPLEMENTED DURING DEMOLITION.
10. DEMOLITION IS LIMITED TO WITHIN THE DEMOLITION LIMIT LINE UNLESS OTHERWISE NOTED.
11. CONTRACTOR SHALL REMOVE DEMOLISHED MATERIALS FROM THE SITE AS WORK PROGRESSES.
12. THE DRAWINGS MAY NOT INDICATE IN DETAIL ALL DEMOLITION WORK TO BE PERFORMED. THE CONTRACTOR SHALL EXAMINE EXISTING CONDITIONS TO DETERMINE THE FULL EXTENT OF DEMOLITION.
13. ALL DEMOLITION SHALL COMPLY WITH CHAPTER 33 OF THE CALIFORNIA FIRE CODE.
14. CONTRACTOR TO USE CARE IN HANDLING DEBRIS FROM SITE TO ENSURE THE SAFETY OF THE PUBLIC. HAUL ROUTE TO BE CLOSELY MONITORED FOR DEBRIS OR MATERIALS TRACKED ONTO ADJOINING ROADWAYS, SIDEWALKS, ETC. ROADWAYS AND WALKWAYS TO BE CLEARED DAILY OR AS NECESSARY TO MAINTAIN PUBLIC SAFETY.
15. SEE EROSION CONTROL PLAN FOR REMAINING INLET PROTECTION AND EROSION PREVENTION.
16. CONTRACTOR TO INSTALL CHAIN LINK FENCE WITH MESH SCREEN TO PROTECT PUBLIC FROM ENTERING CONSTRUCTION AREA.
17. CONTINUOUS ACCESS SHALL BE MAINTAINED FOR SURROUNDING PROPERTIES AT ALL TIMES DURING DEMOLITION OF EXISTING FACILITIES.
18. MONITORING WELLS TO BE REMOVED PRIOR TO BEGINNING OF CONSTRUCTION.

PROTECTION NOTES

1. PROTECT-IN-PLACE EXISTING BUILDING AND APPURTENANCES
2. PROTECT-IN-PLACE EXISTING POWER POLE PER DRY UTILITY CONSULTANT IN COORDINATION WITH SCE.
3. PROTECT-IN-PLACE EXISTING OVERHEAD ELECTRIC PER DRY UTILITY CONSULTANT IN COORDINATION WITH SCE.

DEMOLITION NOTES

1. DEMOLISH BUILDING IN ITS ENTIRETY, INCLUDING ESCALATOR TOWER, CONCRETE SLAB, FOUNDATIONS, FOOTINGS, CANOPIES, PORCHES, STAIRS, OTHER APPURTENANCES, AND BELOW AND ABOVE GRADE UTILITIES TO EXPOSE EXISTING SUBGRADE. THE CONTRACTOR SHALL CAP IN PLACE ALL EXISTING UTILITIES AT THE DEMOLITION LIMIT LINE, UNLESS NOTED ON THE PLAN.

MASS GRADING GENERAL NOTES:

1. CONTRACTOR TO LOCATE TEMPORARY CONSTRUCTION ACCESS RAMP FROM STREET TO EXCAVATED SITE.
2. COORDINATE WITH SHORING PLANS BY OTHERS FOR PROPOSED SHORING SYSTEM. SHORING PER SEPARATE PERMIT.
3. GRADING QUANTITIES AND FINISH GRADE DO NOT ACCOUNT FOR ADDITIONAL EXCAVATION FOR FOOTING, PITS, REMOVAL AND RECOMPACTION OR TRENCHES. REFER TO ARCHITECTURAL PLANS FOR DETAILS.
4. REFER TO DEMOLITION PLAN AND UTILITY PLAN FOR INFORMATION PERTAINING TO THE PROTECTION OF EXISTING UTILITIES.
5. CONTRACTOR SHALL CONSULT WITH OWNER REGARDING HAUL ROUTE AND LOCATION OF DISPOSAL OF EXCAVATED MATERIALS.
6. HAUL ROUTE PER SEPARATE PERMIT.

9. SEE OFF-SITE PLANS FOR DETAILS ON FEATURES WITHIN PROPOSED STREET RIGHT-OF-WAY.

EARTHWORK QUANTITIES:

THE QUANTITIES LISTED BELOW ARE APPROXIMATE AND FOR PERMIT PROCESS ONLY. QUANTITIES HAVE BEEN CALCULATED FROM EXISTING FINISHED GRADES TO PROPOSED SUBGRADE. THEY DO NOT REFLECT SHRINKAGE, SWELL, SUBSIDENCE AND REMOVAL OF EXISTING BUILDING STRUCTURES AND SURFACE IMPROVEMENTS. REMOVAL QUANTITIES FOR POSSIBLE SOIL CONTAMINATION OR EXISTING ABANDONED SUBSTRUCTURES HAVE NOT BEEN INCLUDED BECAUSE THEY ARE UNKNOWN AT THIS TIME. FIELD CONDITIONS DURING CONSTRUCTION MAY VARY RESULTING IN ACTUAL EARTHWORK QUANTITIES DIFFERENT FROM THOSE ESTIMATED BELOW. THE CONTRACTOR SHALL MAKE HIS OWN DETERMINATION OF THE QUANTITIES INVOLVED AND BASE HIS BID ON HIS OWN ESTIMATE.

DISTURBED AREA:	2.44 ACRES
CUT:	179,000 CUBIC YARDS
FILL:	0.00 CUBIC YARDS
NET(CUT):	179,000 CUBIC YARDS (EXPORT)
NET(CUT) INCLUDING 40% CONTINGENCY*:	250,600 CUBIC YARDS (EXPORT)

*A CONTINGENCY FACTOR OF 40% HAS BEEN ADDED TO ACCOUNT FOR SOIL VARIATIONS IN EXCAVATION PER GEOTECHNICAL ENGINEER RECOMMENDATIONS. FINAL DETERMINATION OF EARTHWORK QUANTITIES WILL BE ASSESSED BY THE CONTRACTOR. CONTRACTOR SHALL MAKE THEIR OWN DETERMINATION IN ACCOUNTING FOR SHRINKAGE, SWELL AND SUBSIDENCE FACTORS. EARTHWORK QUANTITIES SHALL BE USED FOR PLAN CHECK PURPOSES ONLY.

4. PROPOSED SUMP PUMP PER MEP.
5. PROPOSED SUMP PUMP OUTLET CONTROL STRUCTURE.
6. PROPOSED PVC SUMP PUMP FORCE MAIN TO CURB DRAIN TRANSITION STRUCTURE.
7. PROPOSED CURB DRAIN OVERFLOW TO CURB FACE.
8. PROPOSED PVC STORM DRAIN PIPING, STRUCTURES, AND APPURTENANCES PER PLUMBING.
9. SEE PLUMBING PLANS FOR CONTINUATION AND INVERT INFORMATION.
10. PROPOSED STORM DRAIN PIPE, STRUCTURES AND APPURTENANCES IN PECK DRIVE. REFER TO SHEET C3.01 - OVERALL GRADING AND DRAINAGE PLAN FOR MORE DETAILS.

LID CONCEPT GENERAL NOTES:

1. SEE PLUMBING PLANS FOR ROUTING OF STORM DRAIN INTERNAL TO THE BUILDING STRUCTURE.
2. SEE C3.01 - OVERALL GRADING AND DRAINAGE PLAN FOR CONSTRUCTION INFORMATION.
3. CONTRACTOR SHALL TAKE PICTURES AT EACH PHASE OF BMP CONSTRUCTION. CONTRACTOR SHALL TAKE PICTURES BEFORE, DURING, AND AFTER CONSTRUCTION. THESE PICTURES SHALL BE SUBMITTED TO THE ENGINEER-OF-RECORD.
4. CONTRACTOR SHALL SCHEDULE A BMP MEETING BEFORE THE INSTALLATION OF BMPS.
5. TESTS FOR BMPS SHALL BE CONDUCTED BY CONTRACTOR AT THE CONCLUSION OF CONSTRUCTION TO VERIFY PERFORMANCE AND ENSURE IT MEETS DESIGN STANDARDS. TEST RESULTS SHALL BE SENT TO THE ENGINEER-OF-RECORD FOR REVIEW AND APPROVAL.
6. CONTRACTOR SHALL PREPARE CLOSEOUT PROCEDURES FOR BMPS.
7. CONTRACTOR SHALL COMPLY WITH THE LA COUNTY PLUMBING CODE - CHAPTER 16 - NON-POTABLE RAINWATER CATCHMENT SYSTEMS.
8. ANY CHANGES (TYPE, SIZE, LOCATION) TO APPROVED STORMWATER BEST MANAGEMENT PRACTICES (BMPS) MUST OBTAIN WRITTEN APPROVAL FROM LOS ANGELES, DEPARTMENT OF PUBLIC WORKS, BUREAU OF SANITATION PRIOR TO CONSTRUCTION OF BMP(S)
9. ALL DRAINAGE INLETS TO BE LABELED WITH "NO DUMPING - DRAINS TO OCEAN".
10. SEE LANDSCAPE PLANS FOR LOCATION OF IRRIGATED LANDSCAPE ON ROOF.

GENERAL NOTES

1. ALL SURVEY MONUMENTS, STREET LIGHTS, PARKING METERS, AND UNDERGROUND UTILITIES, AND ANY OFF-SITE IMPROVEMENTS AFFECTED BY DEMOLITION SHALL BE RE-ESTABLISHED PER CITY STANDARDS, OR AS OTHERWISE PERMITTED BY THE CITY AS PERMITTED BY THE SPECIFIC PLAN AND SHALL BE PAID FOR BY THE APPLICANT.
2. OFF-SITE IMPROVEMENTS CONSIST OF REMOVAL AND REPLACEMENT THAT IS NOT LIMITED TO: CURB AND GUTTER, CURB DRAINS, DRIVEWAY APPROACHES, SIDEWALK, AND ASPHALT PAVEMENT IN ACCORDANCE WITH CITY STANDARDS OR AS OTHERWISE PERMITTED BY THE CITY AS PERMITTED BY THE SPECIFIC PLAN AND SHALL BE PAID FOR BY THE APPLICANT.
3. OFF-SITE IMPROVEMENTS MUST CONFORM TO CURRENT ADA AND APPLICABLE CITY STANDARDS.
4. UNLESS OTHERWISE PERMITTED BY THE CITY AS PERMITTED BY THE SPECIFIC PLAN, THE APPLICANT WILL NOT CONSTRUCT IMPROVEMENTS WITHIN THE PUBLIC RIGHT-OF-WAY WITHOUT AN ENCROACHMENT PERMIT APPROVED BY CITY COUNCIL.
5. WRITTEN APPROVAL IS REQUIRED BY ENGINEERING DIVISION FOR APPROVAL OF ANY TYPE OF TEMPORARY CONSTRUCTION ENCROACHMENT WITHIN PUBLIC RIGHT-OF-WAY AND IN ACCORDANCE WITH CITY COUNCIL RESOLUTION 71-R-4269. SHORING IS PROHIBITED FROM PROJECTING INTO ALLEYS.
6. INDEMNITY BOND MUST BE SUBMITTED AND APPROVED BY CITY ATTORNEY PRIOR TO EXCAVATION.
7. TRAFFIC CONTROL PLANS ARE TO BE REVIEWED AND APPROVED BY CITY'S TRAFFIC ENGINEERING PRIOR TO CONSTRUCTION.

EXISTING UTILITY NOTE

1. THE EXISTING UTILITIES SHOWN ON THE PLAN ARE BASED ON AVAILABLE RECORDS. THE CONTRACTOR MUST FIELD DETERMINE THE LOCATION AND DEPTH OF ALL UTILITIES PRIOR TO ANY CONSTRUCTION. REPORT DISCREPANCIES AND POTENTIAL CONFLICTS WITH PROPOSED UTILITIES TO ENGINEER PRIOR TO INSTALLATION OF ANY PIPING.
2. MEANS AND METHODS OF PROTECTING IN PLACE EXISTING UTILITIES WITHIN PECK DRIVE PER CONTRACTOR IN COORDINATION WITH THE CITY OF BEVERLY HILLS AND APPLICABLE AUTHORITIES HAVING JURISDICTION.
3. RELOCATION OR RECONSTRUCTION OF EXISTING UTILITIES SHALL REQUIRE ADJUSTMENT OF EXISTING EASEMENT PER SEPARATE INSTRUMENT. LOCATION OF EXISTING UTILITIES SHALL BE POTHOLED AND VERIFIED PRIOR TO CONSTRUCTION. UTILITY RECONSTRUCTION SHALL MEET THE SEPARATION REQUIREMENT OF UTILITY AGENCIES/COMPANIES AND ANY VARIANCE REQUIREMENT SHALL BE COORDINATED PRIOR TO CONSTRUCTION.

Thank you for inquiring about the availability of natural gas service for your project. We are pleased to inform you that Southern California Gas Company (SoCalGas) has facilities in the area where the above named project is being proposed. The service would be in accordance with SoCalGas' policies and extension rules on file with the California Public Utilities Commission (CPUC) at the time contractual arrangements are made.

This letter should not be considered a contractual commitment to serve the proposed project, and is only provided for informational purposes only. The availability of natural gas service is based upon natural gas supply conditions and is subject to changes in law or regulation. As a public utility, SoCalGas is under the jurisdiction of the Commission and certain federal regulatory agencies, and gas service will be provided in accordance with the rules and regulations in effect at the time service is provided. Natural gas service is also subject to environmental regulations, which could affect the construction of a main or service line extension (for example, if hazardous wastes were encountered in the process of installing the line). Applicable regulations will be determined once a contract with SoCalGas is executed.

If you need assistance choosing the appropriate gas equipment for your project, or would like to discuss the most effective applications of energy efficiency techniques, please contact our area Service Center at 800-427-2200.

Thank you again for choosing clean, reliable, and safe natural gas, your best energy value.

Sincerely,

J.Sum

SUBJECT: 9600 Wilshire Blvd Beverly Hills

Your project is located in Southern California Edison (SCE) service territory. SCE will serve the above subject project's electrical requirements per the California Public Utilities Commission and Federal Energy Regulatory Commission tariffs.

SCE may need to conduct utility studies, where applicable, to assess whether additions or modifications to the existing electric infrastructure are required to serve this project. Where applicable, SCE has attached Appendix (B) which not only describes the study, and permitting, but includes a Project Information Sheet that will need to be completed by you and submitted to SCE if your project is at a point where SCE has to determine the required electrical utility work. This Will-Serve letter does not imply that either: (i) these studies have been completed, or (ii) that any required California Environmental Quality Act (CEQA) analysis of project-related electric utility impacts has been conducted.

I am the SCE Design Representative currently assigned to this project. SCE or Applicant will design and construct all required electrical infrastructure to serve this project provided you enter into the applicable contractual agreements with SCE identify scope of electrical utility work required, and supply the following information:

- Site plans as required
- Required contracts and agreements (fully executed)
- Applicable fees
- Local permits
- Required easement documents

Your project will be scheduled for construction once SCE has all the necessary information for your project and you have submitted or agreed to the applicable requirements as stated above, and paid any necessary fees.

If your project will not require SCE services, please notify us so that we can update our records.

SCE appreciates your business. If you have any questions, please feel free to call me at (310) 956-9032

Sincerely,

Eric Jeronimo
SCE Design Representative
