Project Description (Proposed actions, location, and/or consequences).

The proposed Project involves construction of an underground infiltration system, biofiltration systems, two hydrodynamic separators, and a concrete-lined flood control channel to reduce on-campus flooding and improve water quality. The proposed Project would be constructed generally in the southwest corner of the LAHC campus in the baseball field, adjacent to Campus Drive, and to the west of Campus Drive, south of Harbor Park Golf Course. The proposed Project would address flooding in the western portion of LAHC during storm events, reduce sediment accumulation in the West Drainage channel, provide stormwater capture, and improve stormwater runoff quality.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

Biological Resources, Cultural Resources, Geology and Soils and Mandatory Findings of Significance. Mitigation measures, further described in the MND, have been identified to reduce the impacts to a less than significant level.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

Provide a list of the responsible or trustee agencies for the project.
