## Project Overview

Project Title: SM 187 Allswell Ranch Estates

Project Location: 15910 State Highway 124  
Plymouth, CA 95669

Property Owner(s): Crawley Trust, Attn: Chantal Crawley

Project Representative: Toma and Associates

Zoning(s): R1A, Single-family Residential and Agriculture

General Plan Designation(s): AT, Agricultural-Transition

Lead Agency Name and Address: Amador County Planning Department  
810 Court Street, Jackson, Ca 95642

Contact Person/Phone Number: Nicole Sheppard, Planner  
209-233-6380

Date Prepared: March 2022

Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement.)

## PROJECT DESCRIPTION

### Project Location

This property is located in the northwest quadrant of Amador County, directly east of State Highway 124, approximately 1,000 feet south of the State Highway 16/State Highway 124 junction, and approximately 1 and ½ miles south of the City of Plymouth. The property is entirely within the unincorporated County and outside the boundaries or the sphere of influence of any incorporated municipality.

### Site Characteristics

The existing site is a single ±61.27-acre legal parcel characterized by rolling hills and an Oak Woodland covering approximately 59% of the current parcel. Current use of the property is vacant with an agricultural building located on proposed parcel 5.

### Land Use

Potential uses included those listed under the County Code Regulations under the R1A Zoning District (19.24.036). These uses include “by-right” uses including agricultural uses and certain limited commercial uses. Though there is no proposed zone change applied for, this study must consider the density-related impacts of the division of the properties (from one legal parcel to six). When considered regarding density, there is, in essence, a six-times increase of developmental potential for residential uses. Uses under the R1A zoning other than the dwelling unit limit are otherwise

not affected as there is no number-limit of allowed operations. For the purposes of this study, the most potentially impactful uses will be prioritized as potential, reasonably foreseeable, uses and development of the property.

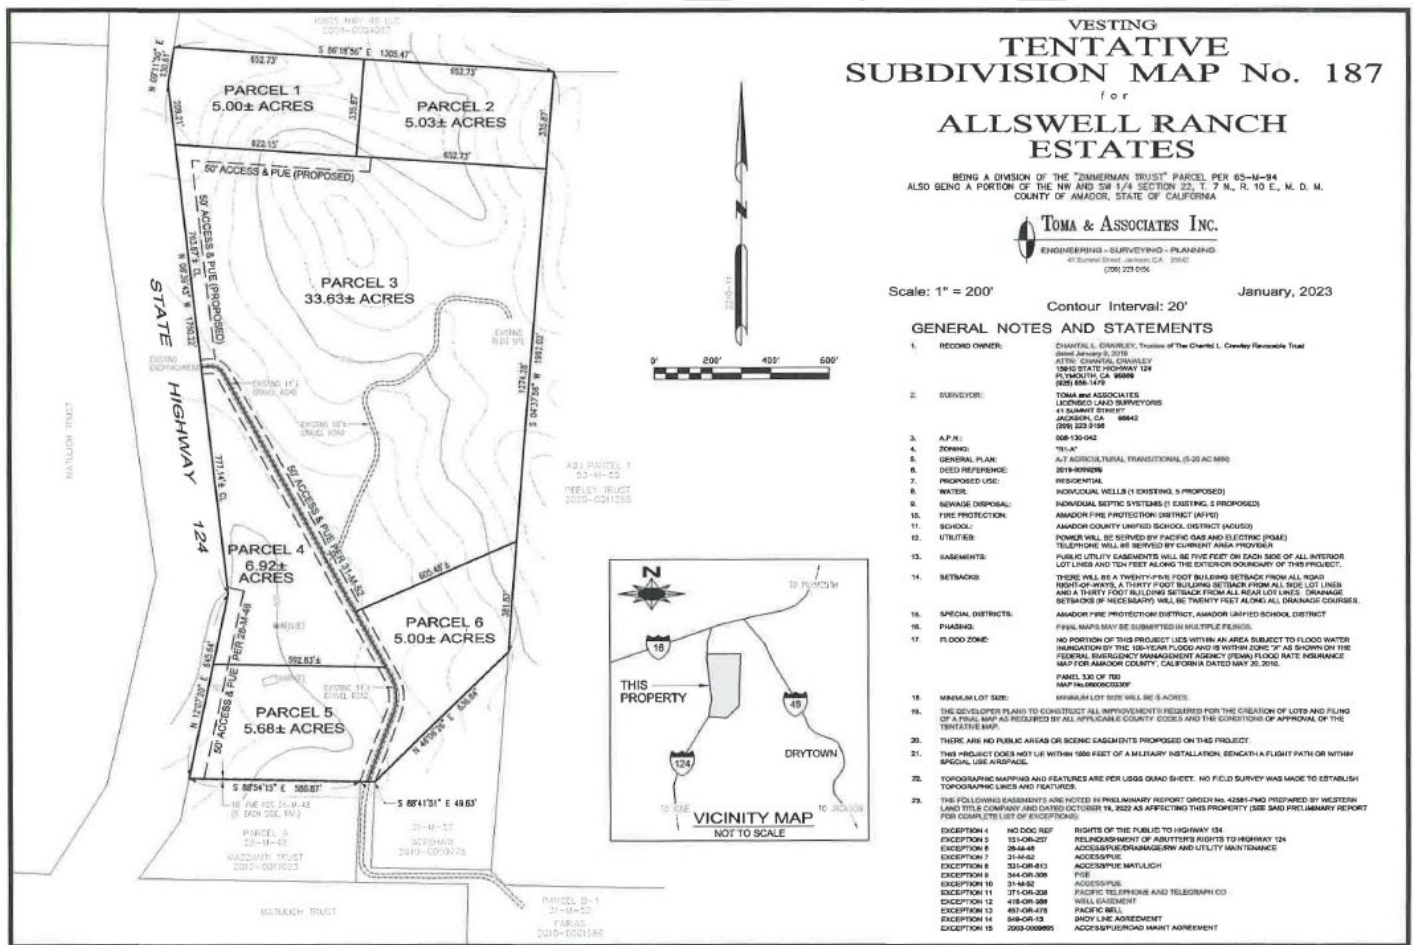

**Surrounding Land Uses**

Surrounding Uses include agricultural lands, with all adjacent properties being R1A and AG zoned. This means all surrounding properties are agricultural and/or residential in nature. This property and the properties to the immediate south have the General Plan designation of AT, Agricultural-Transition, which has a 5-acre minimum, while the properties to the east, north, and west have the General Plan designation of AG, Agricultural General, which has a 40-acre minimum.

**Lead Agency**

The lead agency is the public agency that has the principal responsibility for carrying out or approving a project that may have a significant effect upon the environment. In accordance with California Environmental Quality Act (CEQA) Guidelines Section 15051(b)(1), "the lead agency will normally be the agency with general governmental powers, such as a city or county, rather than an agency with a single or limited purpose." Amador County is the lead agency for this project.

*Project: Tentative Subdivision Map No. 187*

## PROBABLE ENVIRONMENTAL EFFECTS AND SCOPE OF MITIGATED MND/MMRP

The Initial Study (IS) will analyze a broad range of potential environmental impacts associated with the proposed project. Information will be drawn from the Amador County General Plan, technical information provided by the applicant to date, and any other reputable information pertinent to the project area. This information includes existing Environmental Laws and Executive Orders, Coordination with other agencies and authorities. In the case that no immitigable, significant impacts are identified through the IS, a Mitigated Negative Declaration (MND) will be filed pursuant to CEQA requirements. Mitigation measures proposed serve to aid in the avoidance, minimization, rectification, reduction or elimination of impacts.

In the case that through the Environmental Assessment/Initial Study, it is determined that there will be significant, immitigable impacts, an Environmental Impact Report (EIR) may be required prior to project approval. Consistent with CEQA and the requirements of Amador County, each environmental chapter will include an introduction, technical approach, environmental setting, regulatory setting, standards of significance, identification of environmental impacts, the development of mitigation measures and monitoring strategies, cumulative impacts and mitigation measures, and level of significance after mitigation measures.

## EVALUATION OF ENVIRONMENTAL IMPACTS PER CEQA:

- 1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
- 4) "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from "Earlier Analyses," as described in (5) below, may be cross-referenced).
- 5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c) (3) (D). In this case, a brief discussion should identify the following:
  - a) Earlier Analysis Used. Identify and state where they are available for review.
  - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
  - c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

- 7) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
- 9) The explanation of each issue should identify:
  - a) The significance criteria or threshold, if any, used to evaluate each question; and
  - b) The mitigation measure identified, if any, to reduce the impact to less than significance.

DRAFT

### ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact," as indicated by the checklist on the following pages.

- Aesthetics
- Agriculture and Forestry Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Geology / Soils
- Greenhouse Gas Emissions
- Hazards & Hazardous Materials
- Hydrology / Water Quality
- Land Use / Planning
- Mineral Resources
- Noise
- Population / Housing
- Public Services
- Recreation
- Transportation / Traffic
- Utilities / Service Systems
- Mandatory Findings of Significance
- Wildfire
- Energy
- Tribal Cultural Resources

### DETERMINATION: (To be completed by the Lead Agency)

On the basis of the initial evaluation:

|                                     |   |
|-------------------------------------|---|
| <input type="checkbox"/>            | I find that the proposed project COULD NOT have a significant effect on the environment, and a <b>NEGATIVE DECLARATION</b> will be prepared.  |
| <input checked="" type="checkbox"/> | I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A <b>MITIGATED NEGATIVE DECLARATION</b> will be prepared.   |
| <input type="checkbox"/>            | I find that the proposed project MAY have a significant effect on the environment, and an <b>ENVIRONMENTAL IMPACT REPORT</b> is required.   |
| <input type="checkbox"/>            | I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An <b>ENVIRONMENTAL IMPACT REPORT</b> is required, but it must analyze only the effects that remain to be addressed. |
| <input type="checkbox"/>            | I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or <b>NEGATIVE DECLARATION</b> pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or <b>NEGATIVE DECLARATION</b> , including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.                           |

**Chapter 1. AESTHETICS**

| Would the Project:   | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                           |
|--|--------------------------------|---|-------------------------------------|-------------------------------------|
| a) Have a substantial adverse effect on a scenic vista?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| c) In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). Would the project conflict with applicable zoning and other regulations governing scenic quality? | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |

**Discussion/Conclusion/Mitigation:**

- A. Scenic Vistas: For the purposes of determining significance under CEQA, a scenic vista is defined as a viewpoint that provides expansive views of a highly valued landscape for the benefit of the general public. A substantial adverse impact to a scenic vista would be one that degrades the view from such a designated location. No governmentally designated scenic vista has been identified within the project area. In addition, no specific scenic view spot has been identified in the project area. Therefore, there is **no impact**.
- B. Scenic Highways: The project is not located within a designated scenic highway corridor. There is **no impact**.
- C. There are no officially designated scenic vistas in the project area. There is **no impact**.
- D. Existing sources of light are from nearby residences and other various agricultural or residential uses, as well as traffic along the roadways. The parcel split would allow an expansion of allowed uses which may have the capacity to affect short-range views, however due to the size of the project sites (proposed parcels) and the surrounding properties, any of these impacts would be **less than significant**.

**Source:** Amador County Planning Department, Amador County General Plan and Final Environmental Impact Report (FEIR).

**Chapter 2. AGRICULTURE AND FOREST RESOURCES**

| <p>In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the CA Dept. of Forestry and Fire Protection regarding the state’s inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. – Would the project:</p> | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                           |
|---|--------------------------------|---|-------------------------------------|-------------------------------------|
| <p>a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the CA Resources Agency, to non-agricultural use?</p>   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| <p>b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?</p>   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| <p>c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in PRC §12220(g)), timberland (as defined in PRC §4526), or timberland zoned Timberland Production (as defined by Government Code § 51104(g))?</p>   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| <p>d) Result in the loss of forest land or conversion of forest land to non-forest use?</p>   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| <p>e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?</p>   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |

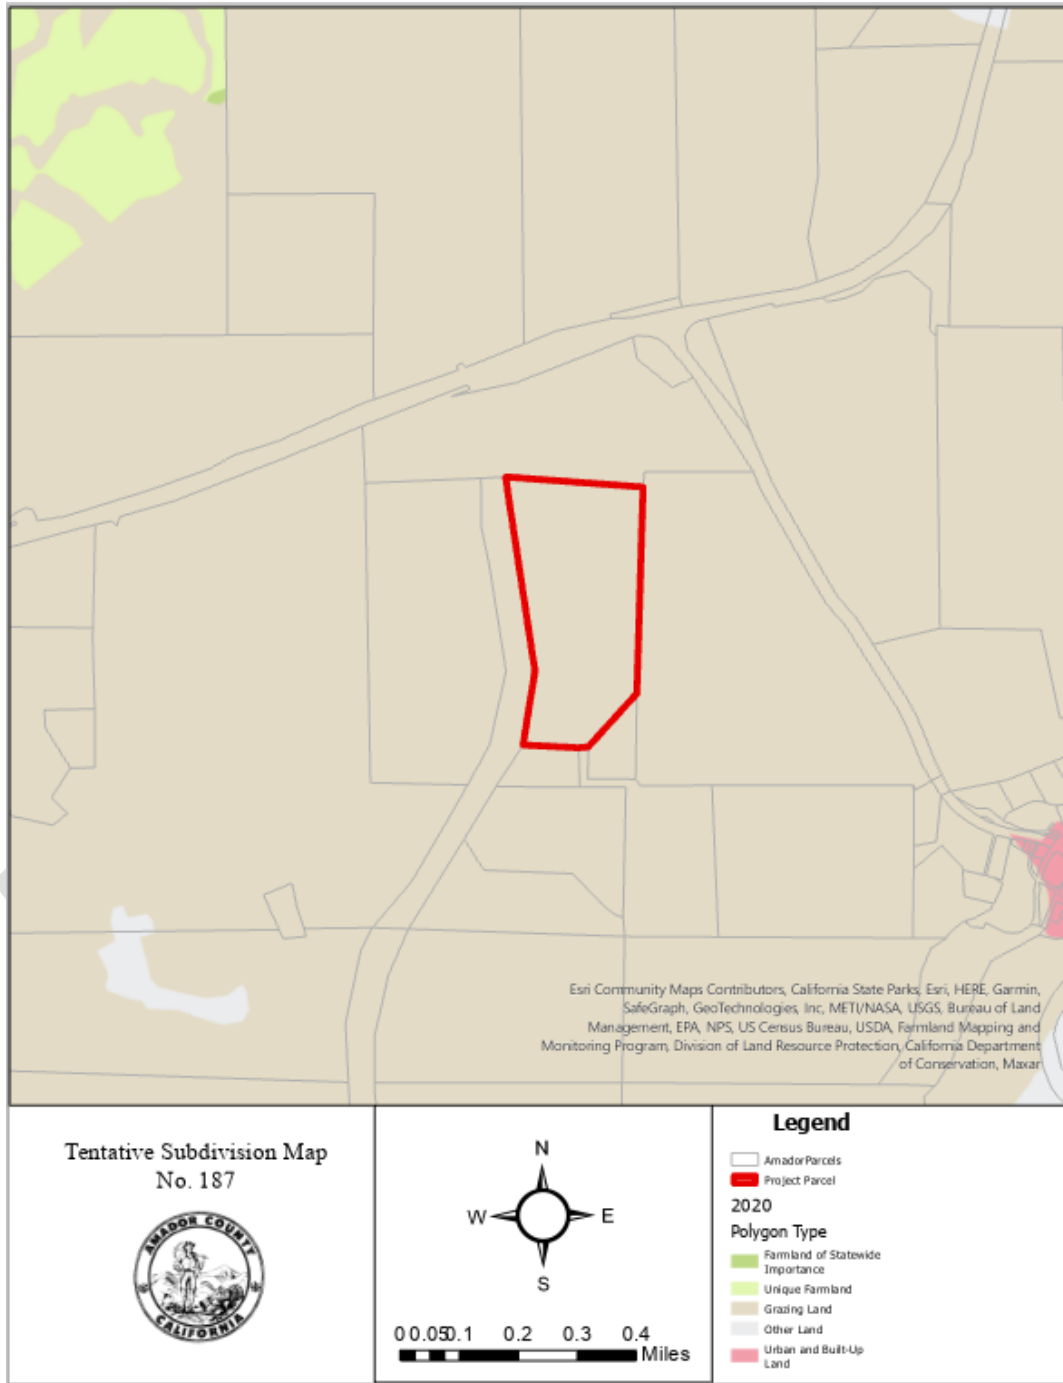

**Discussion/Conclusion/Mitigation:**

- A. Farmland Conversion: The project site is occupied entirely by areas classified as Grazing Land as determined by the USDA Department of Conservation (2016). The proposed parcel split results in six (6) parcels ranging in size from approximately 5 acres to approximately 33.63 acres, which would still be able to be utilized for grazing purposes. The density increase is relatively low, and would not affect the agricultural capacity of the land regarding the provision of grazing land. There is **a less than significant impact**.
- B. There is no conflict with an existing Contract. The potential qualification of the property for a new contract is eliminated with the reduction of property sizes however as there was no present or proposed entry of the subject property into the Williamson act, there is **a less than significant impact**.
- C. The area is not zoned for forest land or timberland nor utilized for forest land or timber production, therefore there is **no impact**.
- D. The area is not considered forest land, or zoned as forest land or timberland, therefore there is **no impact**.

- E. This project does not introduce any inconsistent uses not otherwise mitigated for. Present uses are retained and there is no additional uses applied for through this project, aside from a minor increase in residential development. There is a **less than significant impact** to farmland or forest land through this project.

Figure 2a: California Important Farmland (USGS)

**Source:** California Important Farmland: 1984-2016 Map, California Department of Conservation; Amador County General Plan; Amador County Planning Department; CA Public Resources Code, Food and Agricultural Code Sections 19020, 21281.5, and 21070 “Custom Livestock Slaughterhouse” and “USDA Exempt Meat Establishment.”

### Chapter 3. AIR QUALITY

| Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the Project:   | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                           |
|---|--------------------------------|---|-------------------------------------|-------------------------------------|
| a) Conflict with or obstruct implementation of the applicable air quality plan?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| b) Violate any air quality standard, result in substantial increase of any criteria pollutant, or substantially contribute to an existing or projected air quality violation under an applicable local, federal, or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)? | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| c) Expose sensitive receptors to substantial pollutant concentrations?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| d) Result in other emissions (example: Odors) adversely affecting a substantial number of people?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |

**Discussion/Conclusion/Mitigation:**

- A. The project site is within the jurisdiction of the Amador Air District. Amador Air District is responsible for attaining and maintaining compliance with the NAAQS and CAAQS in the Mountain Counties Air Basin (MCAB) through the regulation of pollution emissions from stationary and industrial sources. There is **no impact** to implementation of any applicable air quality plans.
- B. The proposed project would not generate a significant increase in operational or long-term emissions. The existing development climate of the area is a combination of commercial agriculture and residential uses. Future development of the property would be required to comply with the General Plan regarding construction emissions and related project-level emissions. There is a **less than significant impact** relative to air quality standards.
- C. Sensitive receptors are uses that have an increased sensitivity to air pollution or environmental contaminants. Sensitive receptor locations include schools, parks and playgrounds, day care centers, nursing homes, hospitals, and residential dwelling units. The nearest incorporated city is Plymouth, located approximately 1.5 miles to the north. The project itself does not introduce any significant increases of air pollution or environmental contaminants which would affect the surrounding populations. For these reasons, there would be no substantial increase the exposure of sensitive receptors to substantial pollutant concentrations. There is a **less than significant impact**.
- D. The proposed project would not generate any significantly objectionable odors beyond that which is permitted under the zoning limitations of the R1A zoning district. It is unlikely, due to the size and location of the property that any uses resulting from this project would introduce an increase of objectionable odors discernable at property boundaries and the County’s Agricultural lands and operations also describe and address expectation of odors accompanying agricultural industries. This project results in a **less than significant impact**.

**Source:** Amador Air District, Amador County Planning Department, Amador County General Plan Mitigation Measure 4.3.

**Chapter 4. BIOLOGICAL RESOURCES**

| Would the project:  | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                           |
|---|--------------------------------|---|-------------------------------------|-------------------------------------|
| a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CA Dept. of Fish and Game or U.S. Fish and Wildlife Service? | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>            | <input type="checkbox"/>            |
| b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations or by the CA Dept. of Fish and Game or U.S. Fish and Wildlife Service?  | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>            | <input type="checkbox"/>            |
| c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?                                | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>            | <input type="checkbox"/>            |
| d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?  | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>            | <input type="checkbox"/>            |
| e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |

**Discussion/Conclusion/Mitigation:**

A. The Information for Planning and Consultation (IPAC) database provided through the U.S. Fish and Wildlife Service was reviewed to determine if any special status animal species or habitats occur on the project site or in the project area. The National Marine Fisheries Service Habitat Conservation Map from NOAA did not identify any Habitat Areas of Particular Concern (HAPC) nor EFH Protected Areas within the project area. The Marine Fish and Wildlife Bios did not identify any State Marine Projected Areas (MPAs) of Special Biological Significance.

CDFW IPAC database identified potential habitat area for Monarch Butterfly (*Danaus plexippus*), a candidate endangered species, two (2) threatened species including the California Red-legged Frog (*Rana draytonii*) and the Valley Elderberry Longhorn Beetle (*Desmocerus californicus dimorphs*). **Mitigation Measures BIO-1, BIO-2,**

**BIO-3, BIO-4, and BIO-5** are required in order to ensure that impacts are **less than significant with mitigations incorporated** with any future development of the site. In the case that any of these species are found on the project site and which would experience potential impacts through future site development, the proper authorities shall be notified and all construction and/or ground disturbing activity halted so that additional mitigation measures may be prescribed.

The California Native Plant Society (CNPS) Inventory of Rare and Endangered Plants identified five (5) plants found in Quad 3812047 (Amador City) where the property is located. These plants are shown in Figure 4a, below. The California Native Plant Society Calscape did not identify any native plants unique to the site address. As the proposed project would include ground disturbing activity, the above listed mitigation measures would be implemented to reduce impacts to **less than significant with mitigations incorporated**.

- B. Riverine Community: CDFW IPAC and the US Fish and Wildlife National Wetlands mapper did not identify potentially sensitive Riparian areas within the project area (*Figure 4c*). Any part of this project which would affect seasonal flows or surface waters would be subject to regulation under Section 404 of the Clean Water Act or other State/Federal statutes, according to the US Fish and Wildlife Service (IPAC, BIOS). Mitigation measure **HYD-1** requires erosion control and runoff management to be consistent with county code and thus avoid impacts to existing surface water off-site and on other nearby properties. There is a **less than significant impact with mitigations incorporated**.
- C. Federally Protected Wetlands (National Wetland Inventory (NWI)): The project site includes wetland according to the National Wetlands Inventory (*Figure 4c*) which would fall under CDFW and USACE jurisdiction. Any part of this project which would affect wetlands found on site would potentially be subject to regulation under Section 404 of the Clean Water Act or other State/Federal statutes, according to the US Fish and Wildlife Service (IPAC, BIOS). **Mitigation Measures BIO-1, BIO-2, BIO-3, BIO-4, and BIO-5** address the protection of potential habitats and other various biological resources which may be present in these areas. There is a **less than significant impact with mitigations incorporated**.
- D. Movement of Fish and Wildlife: The project site contains potential habitat for migratory bird species as identified by the US Fish and Wildlife Service (IPAC). These birds are listed in Figure 4(c), below. In the event that any of the special-status species are found within the project site, the proper authorities shall be notified and all construction and/or ground disturbing activity halted so that additional mitigation measures may be prescribed. **Mitigation Measures BIO-1, BIO-2, and BIO-5** are required to render impacts **less than significant with mitigation incorporated**.
- E. The proposed project would not conflict with local policies adopted for the protection of biological resources. An Oak Woodland Study performed by Foothill Resources Management and concluded that the property is approximately 59% Oak Woodland, with the majority being on proposed parcels 1, 2, 3, and 6. If further development of the property results in residential site expansion there is a potential reduction in Oak Woodland; however, if two acres of all oaks were removed from the above listed parcels, for the development of a residence on the parcels, the resulting reduction of oak woodland would be insignificant. A **less than significant impact** would occur.
- F. Amador County does not have an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plans. **No impact** would result.

| <b><i>Chamaea fasciata</i></b>                   | Wrentit                    | BCC Rangewide (CON)                  |                                      |
| <b><i>Pica nuttalli</i></b>                      | Yellow-billed Magpie       | BCC Rangewide (CON)                  |                                      |
| <b><i>Haliaeetus leucocephalus</i></b>           | Bald Eagle                 | Non-BCC Vulnerable                   | Bald and Golden Eagle Protection Act |
| <b><i>Passerculus sandwichensis beldingi</i></b> | Belding's Savannah Sparrow | BCC-BCR                              |                                      |
| <b><i>Icterus bullockii</i></b>                  | Bullock's Oriole           | BCC-BCR                              |                                      |
| <b><i>Geothlypis trichas sinuosa</i></b>         | Common Yellowthroat        | BCC-BCR                              |                                      |

- BIO-2 Ground Disturbance Timing for Nesting Birds-** To avoid impacts to nesting bird species or birds protected under the Migratory Bird Treaty Act, all ground disturbing activities conducted between February 1 and September 1 must be preceded by a pre-construction survey for active nests, to be conducted by a qualified biologist. This survey should be conducted within two weeks prior to any construction activities. The purpose of this survey is to determine the presence or absence of nests in an area to be potentially disturbed. If nests are found, a buffer depending upon the species and as determined by a qualified biologist in consultation with the California Department of Fish and Wildlife and shall be demarcated with bright orange construction fencing. Any vegetation clearing should be schedule outside of the avian nesting season (February 1 through August 31) or survey should be conducted immediately prior to vegetation removal. If active nests are found, vegetation removal should be delayed until the young fledge. No ground disturbing or other construction activities shall occur within this buffer until the County-approved biologist has confirmed that breeding/nesting is completed and the young have fledged the nest. Nesting bird surveys are not required for ground disturbing activities occurring between September 2 and January 31.
- BIO-3 Special-Status Species – Plants-** Special-status plant populations should be avoided to the maximum extent practicable. If complete avoidance is infeasible, project impacts will need to be quantified and mitigation developed to reduce the impacts to a less-than-significant level. Mitigation may include preservation and enhancement of on and/or off-site populations, transplanting individual plants to preservation area, or other actions, subject to the approval of CDFW, USFWS, or CNPS.
- BIO-4 Plant Survey-** Prior to any construction activity related to any discretionary project, a biological and/or rare plant survey shall be conducted to determine if there are any special-status plants within the project area and which may potentially be disturbed. Surveys shall be timed according to the blooming period for the target species, and known reference populations will be visited prior to surveys to confirm the species is blooming where known to occur. If special-status species are identified, avoidance zones may be established around plant populations to clearly demarcate areas for avoidance. Avoidance measures and buffer distances may vary between species, and the specific avoidance zone distance will be determined in coordination with the appropriate resource agencies. For individual specimens, highly visible temporary construction fencing shall be placed at least 10 ft. away from the drip line of the plant. No construction activity or grading would be permitted within the buffer zone. Where avoidance is infeasible, and the plant subject to removal or potential damage from construction, the project applicant shall develop and implement a mitigation plan pursuant to State and Federal regulation. The mitigation plan shall provide for no net loss of habitat and shall include, but is not limited to, relocation of the affected plants, replanting, and monitoring of relocated and planted specimens.
- BIO-5 Wetland and Riparian Habitat:** Complete avoidance of wetlands is conservatively recommended to ensure compliance with wetland laws. Site development shall implement erosion control plans, and best management practices (BMPs) that prevent the discharge of sediment into nearby drainage are found, a buffer depending upon the species and as determined by a qualified biologist in consultation with the California Department of Fish and Wildlife and shall be demarcated with bright orange construction fencing. No ground disturbing or other construction activities shall occur within this buffer until the County and CDFW approved biologist has confirmed that there is no unmitigated impact to existing riparian or wetland habit.

**Chapter 5. CULTURAL RESOURCES**

| Would the project:  | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact | No Impact                |
|---|--------------------------------|---|------------------------------|--------------------------|
| a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?    | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>     | <input type="checkbox"/> |
| b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5? | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>     | <input type="checkbox"/> |
| c) Directly or indirectly destroy a unique paleontological resource or site?                                  | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>     | <input type="checkbox"/> |
| d) Disturb any human remains, including those interred outside of formal cemeteries?                          | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>     | <input type="checkbox"/> |

**Discussion/Conclusion/Mitigation:**

(A.)(B.)(C.)(D.) Cultural resources include prehistoric and historic period archaeological sites; historical features, such as rock walls, water ditches and flumes, and cemeteries; and architectural features. Cultural resources consist of any human-made site, object (i.e., artifact), or feature that defines and illuminates our past. Prehistoric resources sites are found in foothill areas, areas with high bluffs, rock outcroppings, areas overlooking deer migratory corridors, or above bodies of water. Grading and other soil disturbance activities of previously undisturbed land on the project site have the potential to uncover historic or prehistoric cultural resources. In the case that any ground disturbing or construction activity is proposed in the future which does encroach onto any previously undisturbed land, additional environmental review would be necessary including but not limited to requiring the developer to halt construction upon the discovery of as-yet undiscovered significant prehistoric sites, documenting and/or avoiding these resources, informing the County Planning Department, and consultation with a professional archeologist.

Discretionary permits for projects “that could have significant adverse impacts to prehistoric or historic-era archeological resources” in areas designated by the Amador County General Plan as being moderate-to-high cultural resource sensitivity are required to have a Cultural Resource Study prepared prior to project approval, per Mitigation Measures 4.5-1a, 4.5-1b, and 4.5-2 of the Amador County Implementation Plan. The project site is located in an area of moderate cultural resource sensitivity. As the designated parcel map does not include changes in allowed uses of the property there are no prescriptive mitigations at this time, however **mitigation measure CULTR-1 and CULTR-2** are required in the event that any of the conditional uses under the R1A district result in ground disturbing activities or activities which may include impacts to undiscovered cultural resources.

Mitigations **CULTR-1** and **CULTR-2** are included and will require additional study to be performed in the case that expanded uses under the R1A zoning district requires or involve any ground-disturbing activity, consistent with the requirements under the Amador County General Plan. Per the recommendations prescribed by Historic Resources Associates through the cultural resources study conducted for the project, it is recommended that a non-building setback or other type of easement be established around the boundaries of any identified historically significant resource(s). Additionally, there is a provision that avoidance of other resources be observed, and unique conditions regarding potential road incursion into the area(s) designated as historically significant or notable. These recommendations are included in the MMRP for the project, under **CULTR-3**. There is a **less than significant impact with mitigations incorporated** to cultural resources.

### Mitigation Measures

**CULTR-1** During ground-disturbing activity, if paleontological, historic or pre-historic resources such as chipped or ground stone, fossil-bearing rock, large quantities of shell, historic debris, building foundations, or human bone are inadvertently discovered, the operator/permittee shall immediately cease all such activities within 100 feet of the find and notify the applicable agency. A qualified archaeologist shall be contracted by the operator/permittee to assess the significance of the find and prepare an evaluation, avoidance or mitigation plan, as appropriate, which shall be implemented before resuming ground disturbing activities.

**CULTR-2** Immediately cease any disturbance of the area where such suspected remains are discovered and any nearby areas reasonably suspected to overlie adjacent remains until the Amador County Coroner is Amador County General Plan FEIR AECOM County of Amador 4.5-15 Cultural Resources contacted, per Section 7050.5 of the California Health and Safety Code. The coroner shall, within two working days:

Determine if an investigation of cause of death is required;

1. Determine if the remains are most likely that of Native American origin, and if so suspected, the coroner shall notify the California Native American Heritage Commission (NAHC) within 24 hours of making his or her determination.
2. The descendants of the deceased Native Americans shall make a recommendation to the operator/permittee for the means of handling the remains and any associated grave goods as provided in Public Resources Code (PRC) Section 5097.98.
3. The NAHC shall immediately notify those persons it believes to be most likely descended from the deceased Native American.
4. The descendants may, with the permission of the landowner or their representative, inspect the site of the discovered Native American remains and may recommend possible treatment or disposition within 24 hours of their notification.
5. Whenever the NAHC is unable to identify a descendent, or the descendent identified fails to make a recommendation, or the landowner or his or her authorized representative rejects the recommendation of the descendent and the mediation provided for in subdivision (k) of PRC Section 5097.94 fails to provide measures acceptable to the landowner, the landowner or his or her authorized representative shall reinter the human remains and items associated with Native American burials with appropriate dignity on the property in a location not subject to further subsurface disturbance.

**CULTR-3** Historic Resource Preservation- Prior to recordation of the final map, Applicant shall record a non-building setback easement to be established around any historic resources on the project site, as prescribed by Historic Resources Associates relative to specific resources identified in the 2023 Archaeological Study for the project. Additionally, a condition regulating ground-disturbing activity relative to identified resources shall be included in the MMRP for this project, and shall be applied towards any ground-disturbing activity to take place in the future. "In the event that a concentration of artifacts or culturally modified soil deposits (including trash pits older than 50 years) should be encountered at any time during ground disturbing activities, all work must stop until a qualified archaeologist views the finds and makes a preliminary evaluation. If warranted, further archaeological work in the discovery area should be performed. Although unlikely, if human remains are encountered, all work must stop in the immediate vicinity of the discovery until the County Coroner and a qualified archeologist evaluate[s] the remains" (Historic Resource Associates, 2022), consistent with **Mitigation Measure CULTR-2**.

**Source:** Amador County Planning Department, Amador County General Plan Environmental Impact Report, Amador County Implementation Plan 2016, California Health and Safety Code, California Native American Heritage Commission (NAHC), CA Office of Historic Preservation, State of California Resources Agency Department of Parks and Recreation Primary Records, Historic Resource Associates, Phase 1 Archaeological Study for APN 008-130-042 (2023), Amador County Planning Department.

### Chapter 6. ENERGY

| Would the project:  | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                           |
|---|--------------------------------|---|-------------------------------------|-------------------------------------|
| a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation? | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |

**Discussion/Conclusion/Mitigation:**

- A. Long-term project construction or long-term operational changes resulting in substantial energy use shall conform to the Amador County General Plan energy use requirements, and any other applicable requirements under the State of California. There is a **less than significant impact**.
- B. The only local energy plan is the Energy Action Plan (EAP) which provides incentives for homeowners and business owners to invest in higher-efficiency energy services. The project would not conflict with or obstruct any state or local plan for energy management, therefore there is **no impact**.

**Sources:** Amador County EAP, Amador County Planning Department.

**Chapter 7. GEOLOGY AND SOILS**

| Would the project:   | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                           |
|--|--------------------------------|---|-------------------------------------|-------------------------------------|
| a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:  |                                |   |                                     |                                     |
| i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42. | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| ii) Strong seismic ground shaking?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| iii) Seismic-related ground failure, including liquefaction?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| iv) Landslides?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| b) Result in substantial soil erosion or the loss of topsoil?  | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>            | <input type="checkbox"/>            |
| c) Be located on a geological unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?   | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>            | <input type="checkbox"/>            |
| f) Directly or indirectly destroy a unique geological site or feature?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |

**Discussion/Conclusion/Mitigation:**

- A. The project site is not located within an Alquist-Priolo Earthquake Fault Zone and no active faults are located on or adjacent to the property, as identified by the U.S. Geologic Survey mapping system. Therefore, **no impact** would occur. The State Geologist has determined there are no known sufficiently active or well-defined faults or areas subject to strong ground shaking, liquefaction, landslides, or other ground failure in Amador County as to constitute a potential hazard to structures from surface faulting or fault creep. The project location has not

been evaluated for liquefaction hazards or seismic landslide hazards by the California Geological Survey. There is **no impact**.

- B. According to the project location as mapped in *Figure 7a-c* by the Natural Resources Conservation Service (NRCS, 2017), the property where the project is located is characterized by 13.9 acres of Auburn silt loam, 20.5 acres of Auburn very rocky silt loam, 0.6 acres of Exchequer very rocky silt loam, 12.2 acres of Exchequer and Auburn loams, and 20.3 acres of Exchequer and Auburn very rocky loams. Grading Permits are required for any earthmoving of 50 or more cubic yards, and are reviewed and approved by the County in accordance with Ordinance 1619 (County Code 15.40) with conditions/requirements applied to minimize potential erosion. Presence of the above listed soil types does not require additional regulatory action nor does it indicate special circumstance requiring any under County code. If future uses require grading, that grading shall be subject to regulation by the Amador County Building Department and, with the implementation of **Mitigation Measures GEO-1, HYD-1, and BIO-1, 2, 3, and 4**, is a **less than significant impact with those mitigations incorporated**.
- C. Slopes most susceptible to earthquake-induced failure include those with highly weathered and unconsolidated materials on moderately steep slopes (especially in areas of previously existing landslides). The actuators of landslides can be both natural events, such as earthquakes, rainfall, and erosion, and human activities. Those induced by man are most commonly related to large grading activities that can potentially cause new slides or reactivate old ones when compacted fill is placed on potentially unstable slopes. Conditions to be considered in regard to slope instability include slope inclination, characteristics of the soil materials, the presence of groundwater and degree of soil saturation. This project will not impact the stability of existing geological units or soil, nor impact potential landslides, lateral spreading, subsidence, liquefaction or collapse. There is **no impact** of this project on the aforementioned conditions.
- D. Expansive or collapsible soils are characterized by the ability to undergo significant volume change (shrink and swell) as a result of variation in soil moisture content. Soil moisture content can change due to many factors, including perched groundwater, landscape irrigation, rainfall, and utility leakage. Requirement of a grading permit requires building inspection and grading permit issuance for any substantial earthmoving or construction of structures, and as it is unlikely that even if expansive soils are found at the project site, that there would be impacts detrimental to the project, property, or current uses with the current regulation implemented through construction. There is **no impact**.
- E. Soil conditions within the project site must be determined to be suitable for on-site sewage systems permissible for this type of land division. Mitigation Measure GEO-1 requires compliance with Amador County Code regarding sewage disposal requirements for projects of this nature. **Mitigation Measure UTL-1** requires review and approval of the existing wastewater treatment system utilized by this project. There is a **less than significant impact with mitigation incorporated**.
- F. The proposed project would not destroy or greatly impact any known unique geological site or feature. There is a **less than significant impact**.

**Mitigation Measure:**

**GEO-1 Sewage Disposal:** In accordance with Health and Safety Code 5411 and Amador County Code 14.12.140, wastewater from any residence, place of business, or other building or place where persons reside, congregate, or are employed, must be discharged to an approved method of wastewater treatment and disposal.

All future new or replacement sewage disposal systems to be constructed on the project parcel, shall be designed by a qualified professional to serve the intended use. The system shall be designed under permit from the Amador County Environmental Health Department and said system shall comply with Chapter 14 of the Amador County Code and the On-site Wastewater Treatment System Regulations adopted pursuant to Code.

Figure 7a: Soil Map Unit Legend

| Map Unit Symbol                    | Map Unit Name   | Acres in AOI | Percent of AOI |
|------------------------------------|---|--------------|----------------|
| ArC                                | Auburn silt loam, moderately deep, 3 to 16 percent slopes     | 13.9         | 20.6%          |

### MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

**Warning: Soil Map may not be valid at this scale.**

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service  
 Web Soil Survey URL:  
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Amador Area, California  
 Survey Area Data: Version 15, Sep 1, 2022

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Oct 3, 2022—Oct 6, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

### Chapter 8. GREENHOUSE GAS EMISSIONS

| Would the project:  | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                           |
|---|--------------------------------|---|-------------------------------------|-------------------------------------|
| a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?       | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases? | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |

**Discussion/Conclusion/Mitigation:**

- A. This project is not anticipated to generate substantial increase in emissions. The project would not generate significant greenhouse gas emissions or result in significant global climate change impacts. There is **a less than significant impact**.
- B. There is no applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases. Any increase in emissions would comply with regulations and limits established by the California Air Resources Board (CARB) and Amador Air District. Therefore, there is **no impact**.

**Sources:** Amador County General Plan, Amador Air District, Amador County Municipal Codes, Assembly Bill 32 Scoping Plan- California Air Resources Board (CARB), Amador County General Plan EIR.

**Chapter 9. HAZARDS AND HAZARDOUS MATERIALS**

| Would the project:   | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                |
|--|--------------------------------|---|-------------------------------------|--------------------------|
| a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, or otherwise introduce potential hazards to residents or property?           | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code §65962.5 and, as a result, would it create a significant hazard to the public or the environment? Or otherwise be influenced by other notable hazards? | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?             | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |

**Discussion/Conclusion/Mitigation:**

- A. Hazardous Materials Transport and Handling: The project does not significantly increase risk to the public or the environment through the routine transport, use, or disposal of hazardous materials. **There is a less than significant impact.**
- B. Hazardous Materials Upset and Release: Potential impacts of hazardous material handling, transport, or release through this project is mitigated by oversight of the Amador County Environmental Health department pursuant to state law. There is a **less than significant impact.**

- C. The nearest public school are located more than 2.5 miles away in the City of Plymouth. Schools would not be exposed to hazardous materials, substances, or waste due to the project, and there would be **a less than significant impact**.
- D. Pursuant to Government Code Section 65962.5, the project site was queried for past-to-current records regarding information collected, compiled, and updated by the Department of Toxic Substances Control and Secretary for Environmental Protection (EPA) evaluating sites meeting the "Cortese List" requirements. The project site was also searched on the California EPA's Superfund Enterprise Management System (SEMS) database and the US EPA Facility Registry Service (FRS) however there were no specific flags for the project on either site. CalEPA GeoTracker identified no potential hazardous materials within the project area or near vicinity (1 mile radius), with the nearest site being located over 3 miles away in the community of River Pines and the City of Plymouth.

The project does not propose any significant changes in use, intensity, or major construction, which would increase the number nor amounts of hazardous materials on-site, or the probability of sensitive receptors being exposed to any hazardous materials. There is a **less than significant impact** regarding hazardous materials on site.

- E. The nearest public use airport to the project site is the Westover Field Airport located in Martell, located approximately 8 miles away. The proposed project is located outside the safety compatibility zones for the area airport, and due to the significant distance from the project site, there is no impact to people working on the project site. The impact is **less than significant**.
- F. The nearest private airstrip to the project site is located approximately 35,283.5 feet to the southwest of the project site. The proposed use will not negatively affect the airport or airport usage, nor will the project be negatively affected in turn. There is no impact to safety hazards associated with airport operations are anticipated to affect people working or residing within the project site. Impacts are **less than significant**.
- G. The proposed project is located directly off of State Highway 124, one of the County's main arterials. Amador County has an adopted Local Hazard Mitigation Plan (LHMP), updated in January of 2014. The proposed project does not include any actions that physically interfere with any emergency response or emergency evacuation plans. There is a **less than significant impact**.

**Sources:** Amador County Planning Department, Amador County Environmental Health Department, Superfund Enterprise Management System database (SEMS), Department of Toxic Substances Control Envirostor database, Geotracker, California State Water Control Board (CA SWRBC), California Stormwater Quality Association (CASQA), Local Hazard Mitigation Plan (LHMP).

**Chapter 10. HYDROLOGY AND WATER QUALITY**

| Would the project:  | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                |
|---|--------------------------------|---|-------------------------------------|--------------------------|
| a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?  | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>            | <input type="checkbox"/> |
| b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate or pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)? | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>            | <input type="checkbox"/> |
| c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:  |                                |   |                                     |                          |
| i. Result in substantial erosion or siltation on- or off-site?  | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>            | <input type="checkbox"/> |
| ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?   | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>            | <input type="checkbox"/> |
| iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?   | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>            | <input type="checkbox"/> |
| iv. Impede or redirect flood flows or place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| d) In a flood hazard, tsunami, or seiche zone, risk release of pollutants due to project inundation or increase risk of such inundation?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| e) Otherwise substantially degrade water quality?   | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>            | <input type="checkbox"/> |
| f) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| g) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |

**Discussion/Conclusion/Mitigation:**

- A. The proposed project would not significantly increase the impermeable surfaces on-site, and would not result in a significant increase in urban storm water runoff. The County requires a grading permit (County Code Chapter

- 15.40) for any earthmoving in excess of 50 cubic yards. This requirement is included as **Mitigation Measure HYD-1**. The impacts are **less than significant with mitigation incorporated**.
- B. The proposed project would not significantly require the use of, or otherwise interfere with, available groundwater supplies with the implementation of **Mitigation Measure HYD-1**. It is the stated intent of the applicant that each of the proposed six (6) parcels will be served by private wells for domestic uses. Applicant will have to demonstrate the ability for each parcel to support adequate potable water. The impacts are **less than significant with mitigations incorporated**.
- C. i-ii The proposed project is not projected to significantly contribute to any increase in erosion, siltation, surface runoff, or redirection of flood flows with implementation of **Mitigation Measures HYD-1**. There is a **less than significant impact with mitigations incorporated**.
- iii The project would not contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems with implementation of **Mitigation Measure HYD-1**. There is a **less than significant impact with mitigation incorporated**.
- iv The project is located in Flood Zone X, meaning that the northern portion of the site is outside of the Standard Flood Height Elevation and of minimal flood hazard (Zone X). The proposed project does not involve the construction of housing on the property. **Impacts are less than significant** with respect to placing housing within a 100-year flood hazard area for this project.
- D. It is highly unlikely that the project would be subject to inundation by seiche, tsunami, or mudflow as the project site is not in any FEMA mapped DFIRM Flood Zones. There would not be substantial risk for property or people through the failure of levees or dams introduced by this project, therefore there is a **less than significant impact** regarding risk or loss.
- E. The project would not substantially degrade water quality through its operation. Conditions of additional project approval include submission of plans to the Amador County Environmental Health Department, obtainment of a Grading Permit through the Amador County Building Department, included as **Mitigation Measure HYD-1**. **Mitigation Measure UTL-2 and UTL-3** addresses the water quality of on-site wells. There is a **less than significant impact with mitigations incorporated** regarding water quality resulting from this project.
- F. There is no known risk mapped on the California Department of Conservation CGS Information Warehouse regarding landslides. This parcel map is a division of land which does not propose changes of use or additional development therefore a **less than significant impact** to/from flood flows.
- G. There is no existing water quality control plan or sustainable groundwater management plan in the vicinity of this project. Compliance with SGMA would be required for future water usage. There is a **less than significant impact**.

## Mitigation Measures

**HYD-1 Grading Permits and Erosion Control:** Prior to the issuance of permits for site-specific development, drainage and grading permits shall be prepared by a licensed civil engineer and submitted to the Amador County Building Department for approval. Drainage plans shall demonstrate that new development would not increase peak storm flows and that adequate capacity exists downstream to accommodate increased stormwater volume. All site-specific development shall implement appropriate stormwater runoff best management practices (BMPs) and design features to protect receiving water quality consistent with Amador County standards, and any required National Pollution Discharge Elimination System (NPDES) permits administered by the State Water Resources Control Board (SWRCB) must be obtained prior to project execution.

**Sources:** Amador County Planning Department, California State Water Resources Control Board (CSWRCB), California Stormwater Quality Association (CASQA), CA Department of Conservation, USGS-USDA Forest Service Quad Map, USGS Landslide Hazards Program, CA Department of Conservation CGS Information Warehouse.

**Chapter 11. LAND USE AND PLANNING**

| Would the project:  | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                           |
|---|--------------------------------|---|-------------------------------------|-------------------------------------|
| a) Physically divide an established community?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect? | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| c) Conflict with any applicable habitat conservation plan or natural community conservation plan?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |

**Discussion/Conclusion/Mitigation:**

- A. The proposed project would not divide an established community and is consistent with the General Plan designation of AT, Agricultural-Transition. This project does increase the potential housing stock by 5 units, however there is no proposed major change in density or services to nearby residences. There is **a less than significant impact**.
- B. Proposed uses are primarily residential and agricultural in nature and would not inherently introduce significant impacts to the neighboring properties (residential and agricultural uses). There is **a less than significant impact**.
- C. The project site is not included in any adopted habitat conservation plans or natural community conservation plans. Therefore, the project would not conflict with any such plans and **no impact** would result.

**Sources:** Amador County General Plan, Amador County Municipal Codes, Amador County Planning Department.

### Chapter 12. MINERAL RESOURCES

| Would the project:   | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                |
|--|--------------------------------|---|-------------------------------------|--------------------------|
| a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?                           | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use? | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |

#### Discussion/Conclusion/Mitigation:

A & B According to the California Division of Mines and Geology Mineral Land Classification Map, this project is located in the Sutter Creek 15-Minute Quadrangle which has a reported SMARA Study Area, conducted in 1983. This project would not restrict access to any mineral resources on site. This project will not encroach onto any of the other properties and therefore not interfere with any present or future access to known mineral resource areas. There are no proposed structures or changes in use, therefore there is a **less than significant impact** to any mineral resources.

Figure 12a: CGS Geologic Map of California (CGS- webportal)

# CEQA INITIAL STUDY | SM 187 Allswell Ranch Estates

| DESCRIPTION OF MAP UNITS          |  | TERTIARY VOLCANIC ROCKS                               |   | MESOZOIC METAVOLCANIC ROCKS         |   | PALEOZOIC PLUTONIC ROCKS  |  |
|-----------------------------------|--|---|---|-------------------------------------|---|---|--|
| <b>QUATERNARY DEPOSITS</b>        |  | <b>TV</b>   | Tertiary volcanic flow rocks, minor pyroclastic deposits  | <b>Mv</b>                           | Undivided Mesozoic volcanic and metavolcanic rocks. Andesite and rhyolite flow rocks; greenstone, volcanic breccia and other pyroclastic rocks, in part strongly metamorphosed. Includes volcanic rocks of Franciscan Complex: basaltic pillow lava, diabase, greenstone, and minor pyroclastic rocks | <b>gn</b>   | Paleozoic and Permo-Triassic granitic rocks in the San Gabriel and Klamath Mountains   |
| <b>Qs</b>                         | Extensive marine and nonmarine sand deposits, generally near the coast or desert playas                | <b>TV'</b>  | Tertiary pyroclastic and volcanic mudflow deposits.   | <b>mv</b>                           | Undivided pre-Cenozoic metavolcanic rocks. Includes latite, dacite, tuff, and greenstone, commonly schistose  | <b>PRECAMBRIAN ROCKS</b>  |  |
| <b>Q</b>                          | Alluvium, lake, playa, and terrace deposits; unconsolidated and semi-consolidated                      | <b>Ti</b>   | Tertiary intrusive rocks, mostly shallow (hypabyssal) plugs and dikes   | <b>g<sup>h</sup></b>                | Mesozoic granite, quartz monzonite, granodiorite, and quartz diorite  | <b>pc</b>   | Conglomerate, shale, sandstone, limestone, dolomite, marble, gneiss, hornfels, and quartzite, may be Paleozoic in part   |
| <b>Qs</b>                         | Selected large landslides  | <b>TERTIARY PLUTONIC ROCKS</b>                        |   | <b>um</b>                           | Ultramafic rocks, mostly serpentine. Minor peridotite, gabbro, and diabase, chiefly Mesozoic  | <b>pCc</b>  | Complex of Pre-cambrian igneous and metamorphic rocks. Mostly gneiss and schist intruded by igneous rocks, may be Mesozoic in part                                       |
| <b>Qg</b>                         | Glacial till and moraines. Found at high elevations mostly in the Sierra Nevada and Klamath Mountains  | <b>gr<sup>n</sup></b>                                 | Cenozoic (Tertiary) granitic rocks - quartz monzonite, quartz latite, and minor monzonite, granodiorite, and granite, found in the Kingston, Panamint, Amargosa, and Greenwater Ranges in southeastern California | <b>gb</b>                           | Gabbro and dark dioritic rocks, chiefly Mesozoic  | <b>gr<sup>c</sup></b>   | Precambrian granite, syenite, anorthosite, and gabbroic rocks in the San Gabriel Mountains, also various Precambrian plutonic rocks elsewhere in southeastern California |
| <b>Qoa</b>                        | Older alluvium, lake, playa, and terrace deposits  | <b>MESOZOIC SEDIMENTARY AND METASEDIMENTARY ROCKS</b> |   | <b>gr</b>                           | Undated granitic rocks  | <b>SYMBOL EXPLANATION</b>   |  |
| <b>QPc</b>                        | Pleistocene and/or Pliocene sandstone, shale, and gravels deposits, mostly loosely consolidated        | <b>TK</b>   | Sandstone, shale, and minor conglomerate in coastal belt of northwestern California. Previously considered Cretaceous, but now known to contain early Tertiary microfossils in places                             | <b>P</b>                            | Undivided Paleozoic metasedimentary rocks. Includes slate, sandstone, shale, chert, conglomerate, limestone, dolomite, marble, phyllite, schist, hornfels, and quartzite  | Contact between geologic units - approximately located  |  |
| <b>QUATERNARY VOLCANIC ROCKS</b>  |  | <b>K</b>  | Undivided Cretaceous sandstone, shale, and conglomerate, minor nonmarine rocks in Peninsular Ranges   | <b>Pm</b>                           | Permian shale, conglomerate, limestone, dolomite, sandstone, slate, hornfels, and quartzite; minor pyroclastic rocks  | Fault traces - solid where well located, dashed where approximately located or inferred, dotted where concealed, and queried where continuation or existence is uncertain. Ball and bar on downthrown side (relative or apparent). Arrows indicate direction of lateral movement (relative or apparent) |  |
| <b>Qv</b>                         | Recent (Holocene) volcanic flow rocks, minor pyroclastic deposits                                      | <b>Ku</b>   | Upper Cretaceous sandstone, shale, and conglomerate   | <b>C</b>                            | Carboniferous shale, sandstone, conglomerate, limestone, dolomite, chert, hornfels, marble, and quartzite, in part pyroclastic rocks  | Thrust fault (barbs on upper plate)   |  |
| <b>Qv'</b>                        | Recent (Holocene) pyroclastic and volcanic mudflow deposits  | <b>Kl</b>   | Lower Cretaceous sandstone, shale, and conglomerate   | <b>D</b>                            | Devonian limestone, dolomite, sandstone, and shale, in part tuffaceous  | Regional strike and dip of stratified rocks   |  |
| <b>Qv</b>                         | Quaternary volcanic flow rocks, minor pyroclastic deposits   | <b>KJl</b>  | Franciscan Complex: Cretaceous and Jurassic sandstone with smaller amounts of shale, chert, limestone, and conglomerate. Includes Franciscan melange, except where separated                                      | <b>SO</b>                           | Silurian to Ordovician sandstone, shale, conglomerate, chert, slate, quartzite, hornfels, marble, dolomite, and phyllite, some greenstone   | Regional strike and dip of stratified rocks (overturned)  |  |
| <b>Qv'</b>                        | Quaternary pyroclastic and volcanic mudflow deposits   | <b>KJl<sub>s</sub></b>                                | Melange of fragmented and sheared Franciscan Complex rocks  | <b>C</b>                            | Cambrian sandstone, shale, limestone, dolomite, chert, quartzite, and phyllite; includes some rocks that are possibly Precambrian   | Anticlinal fold   |  |
| <b>TERTIARY SEDIMENTARY ROCKS</b> |  | <b>KJl<sub>s</sub></b>                                | Blueschist and semi-schist of Franciscan Complex  | <b>PALEOZOIC MIXED ROCKS</b>        |   | Synclinal fold  |  |
| <b>Tc</b>                         | Undivided Tertiary nonmarine sandstone, shale, conglomerate, breccia, and ancient lake deposits        | <b>J</b>  | Jurassic shale and sandstone, minor conglomerate, chert, slate, limestone, and pyroclastic rocks  | <b>m</b>                            | Undivided pre-Cenozoic metasedimentary and metavolcanic rocks of great variety. Mostly slate, quartzite, hornfels, chert, phyllite, mylonite, schist, gneiss, and minor marble  | Monoclinical fold   |  |
| <b>P</b>                          | Pliocene marine sandstone, siltstone, shale, and conglomerate, mostly moderately consolidated          | <b>T</b>  | Triassic shale, conglomerate, limestone, dolomite, sandstone, slate, hornfels, and quartzite; minor pyroclastic rocks   | <b>PALEOZOIC METAVOLCANIC ROCKS</b> |   |   |  |
| <b>M</b>                          | Miocene marine sandstone, shale, siltstone, conglomerate, and breccia, moderately to well consolidated | <b>sch</b>  | Schists of various types, mostly Paleozoic or Mesozoic age, some Precambrian  | <b>Pv</b>                           | Undivided Paleozoic metavolcanic rocks. Mostly flows, breccia, and tuff; includes greenstone, diabase, and pillow lavas; minor interbedded sedimentary rocks  |   |  |
| <b>Mc</b>                         | Miocene nonmarine sandstone, shale, conglomerate, and fanglomerate, moderately to well consolidated    | <b>ls</b>   | Limestone, dolomite, and marble whose age is uncertain but probably Paleozoic or Mesozoic   |                                     |   |   |  |
| <b>Oa</b>                         | Oligocene marine sandstone, shale, and conglomerate, mostly well consolidated                          | <b>MESOZOIC MIXED ROCKS</b>                           |   |                                     |   |   |  |
| <b>Oac</b>                        | Oligocene nonmarine sandstone, shale, and conglomerate, mostly well consolidated                       | <b>gr-m</b>   | Mesozoic to Precambrian granitic and metamorphic rocks, mostly gneiss and other metamorphic rocks injected by granitic rocks.   |                                     |   |   |  |
| <b>E</b>                          | Eocene marine shale, sandstone, conglomerate, and minor limestone, mostly well consolidated            |   |   |                                     |   |   |  |
| <b>Ec</b>                         | Eocene nonmarine sandstone, shale, and conglomerate, moderately to well consolidated                   |   |   |                                     |   |   |  |
| <b>Ep</b>                         | Paleocene marine sandstone, shale, and conglomerate, mostly well consolidated                          |   |   |                                     |   |   |  |

**Source:** Amador County Planning Department, California Geological Survey <https://maps.conservation.ca.gov/cgs/gmc/>; Wagner, D.L., Jennings, C.W., Bedrossian, T.L., and Bortugno, E.J.; Geologic map of the Sacramento quadrangle, California, 1:250,000: California Division of Mines and Geology, Geologic Map 1A; 1981.

**Chapter 13. NOISE**

| Would the project:  | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                |
|---|--------------------------------|---|-------------------------------------|--------------------------|
| a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| c) Contribute to substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| d) Contribute to substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels? | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |

**Discussion/Conclusion/Mitigation:**

- A. The project would result in low levels of noise-related impacts related to the current uses for agricultural and residential uses. Any additional noise-related issues would be subject to regulation by the Amador County Code regarding nuisance conditions. There is **a less than significant impact**.
- B. If uses associated with the proposed project would include the construction activity which may generate ground-borne vibration, noise, or use construction activities, construction would be required to comply with the provisions of General Plan. There are no additional uses which would propose the use of heavy equipment for an extended period of time beyond what is expected for construction, which would be temporary. There is **a less than significant impact**.
- C & D. The presented project will not introduce significant increased noise and due to the size of the parcels, any increased noise resulting from the increased uses allowed by right in the R1A district, would not be likely to negatively impact surrounding properties. Noise levels generated would not exceed applicable noise standards established in the General Plan, and the property would be subject to Amador County noise regulations (Chapter 9.44). There is **a less than significant impact**.
- E & F Public and private airports would not be impacted by this project. **A less than significant impact** would result.

**Sources:** Amador County Planning Department, Amador County General Plan: Noise Element, General Plan Mitigation Measure 4.11.

**Chapter 14. POPULATION AND HOUSING**

| Would the project:  | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                |
|---|--------------------------------|---|-------------------------------------|--------------------------|
| a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)? | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |

**Discussion/Conclusion/Mitigation:**

- A The project would not increase the developmental density allowed on the affected property. Current zoning of R1A, Single-family Residential and Agricultural Zoning District allows for residential development on the parcel. The proposed project does present a minor increase in available housing potential, and the current residential uses of the property remains consistent with the zoning. There is a **less than significant impact**.
- B & C There are no residential structures on the property. While this project proposes to increase the potential for residential structures, there are none proposed with this project. There is a **less than significant impact** to housing.

**Sources:** Amador County Planning Department.

## Chapter 15. PUBLIC SERVICES

| Would the project:   | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                |
|--|--------------------------------|---|-------------------------------------|--------------------------|
| Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: |                                |   |                                     |                          |
| a) Fire protection?  | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>            | <input type="checkbox"/> |
| b) Police protection?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| c) Schools?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| d) Parks?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| e) Other public facilities?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/> |

### Discussion/Conclusion/Mitigation:

- A The project site is currently served by the Amador Fire Protection District (AFPD). The nearest fire station is AFPD 121 in the unincorporated area of Amador County, approximately 3 miles away from the project site. Mutual aid agreements coordinate protection service between City or Community Fire Protection Jurisdictions, and CalFire. The project requires annexation to Community Facilities District 2006-1, included as Mitigation measure **PUB-1**. A **less than significant impact with mitigations incorporated** related to fire protection services would occur.
- B The project site is currently served by the Amador County Sheriff's Department. The nearest Sheriff station is located at 700 Court St., Jackson, which serves the unincorporated area of the County. Proposed improvements would not result in additional demand for sheriff protection services. California Highway Patrol (CHP) also provides police protection associated with the State Highways; the nearest highways to this project are CA State Hwy 124 located immediately west of the project site. As these various agencies all provide various police and emergency services, this project would not result in the provision of or need for new or physically altered sheriff or police protection facilities. There is a **less than significant impact** to police protection services.
- C&D Because the demand for schools, parks, and other public facilities is driven by population, the proposed project would not significantly increase demand for those services at this time as the property is not going to experience any change in zoning or general plan designation. As such, the proposed project would result in a **less than significant impact** on these public services.
- E Any additional uses allowed through this zone change would be required to provide adequate solid waste disposal services. It is not foreseeable that any of those potential uses would introduce significant additional pressure on existing solid waste processing/transfer facilities. There is a **less than significant impact**.

### Mitigation Measure

**PUB-1** Prior to recordation of any final map, the subdivider shall participate in the annexation to the County's community Facilities District No. 2006-1.

**Sources:** Amador County Planning Department.

**Chapter 16. RECREATION**

| Would the project:   | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact | No Impact                |
|--|--------------------------------|---|------------------------------|--------------------------|
| a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>     | <input type="checkbox"/> |
| b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?                        | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>     | <input type="checkbox"/> |

**Discussion/Conclusion/Mitigation:**

A&B The proposed project would increase opportunity for residential development thus presenting potential increases in demand for parks or recreational facilities for full-time residents. The proposed project would not significantly affect use of existing facilities, nor would it require the construction or expansion of existing recreational facilities at this time. **Mitigation Measure REC-1** requires the developer to make a dedication of land or payment of fees pursuant to County Code Chapter 17.50. The proposed project would have a **less than significant impact with mitigations incorporated** on recreational facilities.

**Mitigation Measure**

**REC-1 Amador County Recreation and Fees Ordinance:** Pursuant to County Code Chapter 17.50 (Ordinance No. 1198-Amador County Recreation and Fees Ordinance) a dedication of land, payment of fees, or a combination of both for park and recreational purposes shall be provided by the developer prior to recordation of the Subdivision Map.

**Source:** Amador County Planning Department.

**Chapter 17. TRANSPORTATION / TRAFFIC**

| Would the project:   | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                           |
|--|--------------------------------|---|-------------------------------------|-------------------------------------|
| a) Conflict with an applicable plan, ordinance or policy establishing measure of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit? | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| b) Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| e) Result in inadequate emergency access?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| g) Conflict with or be inconsistent with CEQA Guidelines §15064.3, subdivision (b)?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |

**Discussion/Conclusion/Mitigation:**

A&B The proposed project would not cause a substantial increase in traffic, reduce the existing level of service, or create any significant congestion at any intersection nor would it conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system. Caltrans, Amador County Department of Transportation and Public Works, and other applicable transportation agencies have been included in circulation of this project. Any significant changes in use would require appropriate

encroachments onto the main roads to the property, which falls on the responsibility of the property owner to obtain. There would be a **less than significant impact**.

- C The proposed project would not be located within any Westover Airport safety zones (Westover Field Airport Land Use Compatibility Plan 1990). Therefore, the project would not result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that would result in a safety risk. A **less than significant impact** would result.
- D The proposed project would not have significant impacts to transportation nor necessitate additional mitigation. There is a **less than significant impact**.
- E The proposed project must comply with the Fire and Life Safety Ordinance (Chapter 15.30). There is **less than significant impact**.
- F The project would not affect alternative transportation. Therefore, the proposed project is consistent with the policies, plans, and programs supporting alternative transportation, and there would be **no impact**.
- G Pursuant to CEQA Guidelines §15064.3, subdivision (b) the County's qualitative analysis of this project establishes there are no significant impacts to traffic. The project is located directly off the major arterial of Highway 124, therefore regulation of encroachment onto said highway is under Caltrans jurisdiction, which was notified throughout the processing of the application. There is **no impact** to the implementation of this project with respects to CEQA Guidelines §15064.3(b).

**Sources:** Amador County Planning, California Fire and Life Safety (Chapter 15.30), California Environmental Quality Act (CEQA) Guidelines 2019.

DRAFT

**Chapter 18. TRIBAL CULTURAL RESOURCES**

| Would the project:   | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact | No Impact                |
|--|--------------------------------|---|------------------------------|--------------------------|
| a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code § 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:                                       | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>     | <input type="checkbox"/> |
| i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?  | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>     | <input type="checkbox"/> |
| ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code § 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe? | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>     | <input type="checkbox"/> |

**Discussion/Conclusion/Mitigation:**

Tribal cultural resources” are defined as (1) Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following:

- (A) Included or determined to be eligible for inclusion in the California Register of Historical Resources.
- (B) Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.

These may include non-unique archaeological resources previously subject to limited review under CEQA. Assembly Bill 52, which became effective in July 2015, requires the lead agency (in this case, Amador County) to begin consultation with any California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project prior to the release of a negative declaration, mitigated negative declaration, or environmental impact report if: (1) the California Native American tribe requested to the lead agency, in writing, to be informed by the lead agency through formal notification of proposed projects in the geographic area that is traditionally and culturally affiliated with the tribe, and (2) the California Native American tribe responds, in writing, within 30 days of receipt of the formal notification and requests the consultation (Public Resources Code Section 21080.3.1[b]).

A As defined by Public Resources Code section 21074 (a) there were no tribal cultural resources identified in the project area therefore the project would not cause a substantial adverse change in any identified tribal cultural

resources. Additionally, all tribes requesting notification for discretionary project submissions were notified of this project proposal. Any identified cultural resources or potentially significant resources would be preserved and avoided by future development consistent with the provisions of **Mitigation Measure CULTR-1, 2, and 3 and TRI-1**. Impacts to Tribal Cultural Resources on this site are **less than significant with the mitigation measures incorporated**.

#### **Mitigation Measure**

**TRI-1** The Ione Band of Miwok Indians Cultural Heritage Committee and Cultural Resources Department is not aware of any specific cultural resources within the project's Area of Potential Effects other than those listed in the official reports, thus the Cultural Heritage Committee and the Cultural Resources Department does not have any further comment at this time. Following AB 52 consultation with the Ione Band of Miwok Indians, in the event that any Native American Cultural Resources are discovered at the project site, consultation with the Ione Band of Miwok Indians will be reinitiated prior to any additional development of the site.

DRAFT

**Chapter 19. UTILITIES AND SERVICE SYSTEMS**

| Would the project:   | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                           |
|--|--------------------------------|---|-------------------------------------|-------------------------------------|
| a) Require or result in the relocation or construction of new or expanded systems (causing significant environmental effects):   |                                |   |                                     |                                     |
| i. Water or wastewater treatment facilities  | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>            | <input type="checkbox"/>            |
| ii. Stormwater drainage facilities   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| iii. Electric power facilities   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| iv. Natural gas facilities   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| v. Telecommunications facilities   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| b) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| c) Have sufficient water supplies available to serve the project from existing entitlements and resources (for the reasonably foreseeable future during normal, dry, or multiple dry years), or are new or expanded entitlements needed? | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>            | <input type="checkbox"/>            |
| d) Result in determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?          | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>            | <input type="checkbox"/>            |
| e) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs while not otherwise impairing the attainment of solid waste reduction goals?                                       | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| f) Generate solid waste in excess of state or local standards or in excess of the capacity of local infrastructure?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| g) Comply with federal, state, and local statues and regulations related to solid waste?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |

**Discussion/Conclusion/Mitigation:**

A i. As the project proposes additional uses which are dependent on the provision of services support additional uses, the applicant must provide evidence of availability of water and wastewater disposal consistent with the requirements by Amador County Environmental Health, included as **Mitigation Measure UTL-1**. Due to the small scale of the project and lack of changes in use, this project would not require a Stormwater Pollution

Prevention Permit (SWPPP) from State Water Resources Control Board. There is a **less than significant impact with mitigation incorporated.**

- A ii. Stormwater drainage on site will need to be redirected and will necessitate the project proponent obtain a grading permit (Chapter 15.40) through the Building Department in order to regulate stormwater drainage and runoff. As there is no proposed physical changes of the property proposed with this project there is **no impact.**
- Aiii-v. No new or expanded stormwater or drainage facility, electric power facility, natural gas facility, or telecommunications facility would be necessary over the course of this project and therefore would not cause any environmental effects as a result. There is **no impact.**
- B. The proposed project would not exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board or result in the expansion of water or wastewater treatment facilities. Therefore, a **less than significant impact** related to these utilities and service systems would occur.
- C. The project is not located within the service area of an existing public water system. **Mitigation Measure UTL-1** requires the applicant to verify sufficient water services. The impacts are **less than significant with mitigation incorporated.**
- D. The project will not increase demands of any wastewater treatment provider beyond what existing systems are prepared to serve. **Mitigation Measure UTL-1** addresses provision of sufficient irrigation improvements required for project approval. There is a **less than significant impact with mitigation incorporated.**
- E-G The project will not produce an increase in solid waste disposal needs beyond what would be addressed by County and State requirements therefore. There is a **less than significant impact.**

#### **Mitigation Measure**

**UTL-1 Water Systems:** Applicant must verify sufficient water and wastewater disposal services to meet minimum requirements by Amador County Environmental Health Department, prior to final map recordation.

**UTL-2 Well Water Quality/Water Supply:** Prior to recordation of any final map, the subdivider shall provide the Amador County Environmental Health Department with general mineral, general physical, and inorganic chemical analysis for a water well located within the project boundary. The results shall be generated by an accredited laboratory. The test results must demonstrate that the water produced does not exceed any primary maximum contaminant levels listed in California Code of Regulations, Title 22, Table 64431-A.

**UTL-3 Well Water Quality/Water Supply:** Prior to recordation of a final map the subdivider shall demonstrate that the yield of at least 2 wells within the project boundary meet the production requirements of Section 14.06.055, Amador County Code. For any parcel created by the final map not containing a well meeting the production standard, record a constructive notice document concurrent with recordation of the final map that will be discovered through title search. The constructive notice statements shall advise interested parties of the following: "Groundwater yield in the area is generally low and has not been demonstrated for this parcel. Any water well intended to support a proposed residence on this parcel must either meet the production standards of Section 14.06.055 or additional storage shall be required to mitigate the lower yield. Interested parties may contact the Amador County Environmental Health Department for additional details."

**Sources:** Amador County Planning Department, Amador County Environmental Health Department.

**Chapter 20. WILDFIRE**

| If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:  | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact        | No Impact                           |
|---|--------------------------------|---|-------------------------------------|-------------------------------------|
| a) Substantially impair an adopted emergency response plan or emergency evacuation plan?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment? | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?   | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| e) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?  | <input type="checkbox"/>       | <input type="checkbox"/>                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |

**Discussion/Conclusion/Mitigation:**

- A The project shall not impair any adopted emergency response plan or emergency evacuation plan. There is **no impact**.
- B The project does not exacerbate wildfire risks through significant change in slope, prevailing winds, or other major factors. The project would not require the installation of emergency services and infrastructure that may result in temporary or ongoing environmental risks or increase in fire risk. Therefore, there is **no impact**.
- C The project shall not require the installation or maintenance of associated infrastructure that may exacerbate fire risk or impact the environment. Standard conditions require compliance with 15.30 regarding fire access, therefore there is **less than significant impact**.
- D&E The project will not expose people or structure to any new significant risks regarding flooding, landslides, or wildland fire risk. The project is located in Moderate Fire Risk Zone and therefore shall conform to all standard Fire Safety Regulations as determined by Amador County Fire Department and California Building Code. The project is located approximately 3 miles from Fire Station AFPD 121 and therefore will not require any increased fire protection due to this project. There is **a less than significant impact**.

**Chapter 21. MANDATORY FINDINGS OF SIGNIFICANCE**

| Would the Project:   | Potentially Significant Impact | Less Than Significant Impact with Mitigation Incorporated | Less Than Significant Impact | No Impact                |
|--|--------------------------------|---|------------------------------|--------------------------|
| a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>     | <input type="checkbox"/> |
| b) Does the project have impacts that are individually limited, but cumulatively are considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?   | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>     | <input type="checkbox"/> |
| c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?  | <input type="checkbox"/>       | <input checked="" type="checkbox"/>                       | <input type="checkbox"/>     | <input type="checkbox"/> |

**Discussion/Conclusion/Mitigation:**

A. The project will not degrade the quality of the environment and no habitat, wildlife populations, and plant and animal communities would be significantly impacted by this project. All environmental topics are either considered to have "No Impact," "Less Than Significant Impact," or "**Less than Significant Impacts with Mitigation Incorporated.**"

Mitigation measures included with this Initial Study include the following, summarized:

- BIO-1** Special Status Animal Species Mitigation plan will reduce biological impacts consistent with BMPs developed with CDFW and USFW;
- BIO-2** Ground Disturbance Timing for Nesting Birds, and Survey will be conducted prior to any construction;
- BIO-3** Special Status Plant Species Mitigation will be developed in conjunction with regulation by CDFW, USFW, and CNPS;
- BIO-4** Plant Survey will be conducted prior to ground disturbance resultant from any discretionary project.
- BIO-5** Wetland and Riparian Habitat conservation mitigation shall apply within the affected ranges of mapped riparian and wetland conservation regions.
- CULTR-1** Historic/Cultural Resources, if found, shall be protected consistent with General Plan Mitigation Measures 4.5-1 and 4.5-2;
- CULTR-2** Human Remains, if discovered, shall be protected consistent with General Plan Mitigation Measure 4.5-3.

- CULTR-3** Any significant resources under CEQA should be avoided and significant resources under CEQA and referenced in the accompanying Cultural Resources Report
  - GEO-1** Prior to recordation of any final map, the subdivider shall demonstrate compliance with Amador County Code Sections 14.12.130 regarding sewage disposal.
  - HYD-1** Prior to the issuance of permits for site-specific development, drainage and grading permits shall be prepared by a licensed civil engineer and submitted to the Amador County Building Department for approval if needed.
  - PUB-1** Prior to recordation of any final map, the subdivider shall participate in the annexation to the County's Community facilities District No. 2006-1.
  - REC-1** Developer must adhere to County Code 17.50 regarding Recreation and Fees (Recreation).
  - TRI-1** Tribal Cultural Resources—Ione Band
  - UTL-1** Applicant must verify sufficient water and wastewater disposal services to meet minimum requirements by Amador County Environmental Health Department, prior to final map recordation.
  - UTL-2** Prior to recordation of any final map, the subdivider shall provide the Amador County Environmental Health Department with general mineral, general physical, and inorganic chemical analyses for a water well located within the project boundary
  - UTL-3** Prior to recordation of a final map the subdivider shall demonstrate that the yield of at least two wells within the project boundary meets the production requirements of Section 143063055, Amador County Code
- B. In addition to the individually limited impacts discussed in the previous chapters of this Initial Study, CEQA requires a discussion of “cumulatively considerable impacts”, meaning the incremental effects of a project in connection with the effects of past, current, and probable future projects. These potential cumulatively considerable impacts may refer to those resulting from increased traffic to and from the general area, overall resource consumption, aesthetic and community character, and other general developmental shifts.

Evaluation of these potentially cumulative impacts may be conducted through two alternative methods as presented by the CA State CEQA Guidelines, the list method and regional growth projections/plan method. As this project is independent and unique to the County, the latter is most appropriately employed to evaluate an individual project's contribution to potential cumulative significant impacts in conjunction with past, current, or reasonably foreseeable future projects. Thresholds of significance may be established independently for the project evaluated depending on potentially cumulative impacts particular to the project under review, but shall reference those established in the 2016 General Plan EIR and be supplemented by other relevant documents as necessary. According to CEQA Guidelines §15064.7, thresholds of significance may include environmental standards, defined as “(1) a quantitative, qualitative, or performance requirement found in an ordinance, resolution, rule, regulation, order, plan, or other environmental requirement; (2) adopted for the purpose of environmental protection; (3) addresses the environmental effect caused by the project; and, (4) applies to the project under review” (CEQA Guidelines §15064(d)). CEQA states that an EIR may determine a project's individual contribution to a cumulative impact, and may establish whether the impact would be rendered less than cumulatively considerable with the implementation of mitigation or reduction strategies. Any impacts would only be evaluated with direct associations to the proposed project. If cumulative impacts when combined with the impact product of the specific project are found to be less than significant, minimal explanation is required. For elements of the environmental review for which the project is found to have no impact through the Initial Study, no additional evaluation of cumulative impacts is necessary.

No past, current, or probable future projects were identified in the project vicinity that, when added to project-related impacts, would result in cumulatively considerable impacts. The intent of the project is to divide a single legal parcel into six legal parcels. The six proposed parcels range in size from approximately 5 acres to approximately 33.63 acres. Additional potential cumulatively considerable impacts of this project are otherwise mitigated to a less-than significant level, therefore cumulative impacts are **less than significant with mitigation(s) incorporated.**

- C. There have been no impacts discovered through the review of this application demonstrating that there would be substantial adverse effects on human beings directly or indirectly relating the project. There is no proposed development and the potential uses following approval of the project shall be sufficiently mitigated to reduce any potential impacts to a less than significant level through the Mitigation Monitoring and Reporting Program proposed with the project, therefore, there is a less **than significant impact with mitigations incorporated.**
