Site Name: HANS AUTO REPAIR & SERVICES
Violation Date: 04-15-2019
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31

Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violation Notes: Observed a small oil spill under a car being serviced that was not being managed or attended to. Observed staining under 55 gal drum containing metal cased and cartridge oil filter waste. Observed soiled rags accumulating in open bins. Maintain facility such that all spills are managed immediately and all wastes are contained to prevent the release of hazardous wastes into the environment.

were available for review onsite -Training and Emergency Planning appear ok Note: Recommend obtaining emergency equipment for small spills; i.e. absorbant material for used oils. Also note, your facility will be permitted for the Hazardous Materials Business Plan program as it is noted you have approximately 110 gallons of used oil in 2x55 gallon drums and 900 gallons of propane onsite. Please go to the California Environmental Reporting System (CERS) at <http://cers.calepa.ca.gov> and create a user account, then enter all facility, inventory, map and plans information. For special assistance with this email or call Jeffrey Higbee at jeffrey.higbee@cep.sccgov.org or 408-918-4785. No violations were noted today, thank you.

Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-21-2014
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Note: Facility manages various soaps and detergents for commercial car washes; mostly self service car washes located at gas stations. Facility handles water softener salts and also small quantities of oxygen and acetylene gas, which are not reportable in the hazardous material business plan.

accumulation area G 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated G Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accumulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first.

Violation Notes: Returned to compliance on 11/08/2016. Approximately 23 gallons of used rags saturated with used grease and hydraulic fluid have been accumulating since 7/18/2011.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 88707
Site Name: A & Q PRECISION SHEET METAL INC
Violation Date: 10-25-2016
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12

Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.

Violation Notes: Returned to compliance on 11/08/2016. The facility has a California EPA ID Number (CAL000325199), but the ID Number has been inactive since 6/30/2015. A copy of DTSC FORM 1358 will be provided with this inspection report.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 88707
Site Name: A & Q PRECISION SHEET METAL INC
Violation Date: 10-25-2016
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11

Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violation Notes: Returned to compliance on 11/08/2016. Metal shavings and sandings are generated from sheetmetal manufacturing processes, including but not limited to deburring, drilling holes, cutting, and smoothing-out metal sheets, . Approximately half a gallon of metal shavings and sandings were observed in the trash dumpster behind the facility. A G dust collectionG system is also connected to the machining equipment used to smooth-out metal sheets. A hazardous waste determination must be conducted on the metal shavings prior to their disposal as they may meet hazardous waste criteria due to their regulated-metal content or due to particle size. Any metal waste that meets RCRA hazardous waste criteria, must be recycled for its metal content or managed as hazardous waste. Any metal dust with a particle size of less than 100 micrometers that exhibits a hazardous waste characteristic must be collected, managed, and disposed of as hazardous waste. Provide documentation to HMCD of the hazardous waste determination [Truncated]

S112345224

Violation Date: 10-25-2016
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 11/08/2016. - The 20 gallon container of used rags saturated with used grease and hydraulic fluid is open when the manufacturing equipment is not in-use and hazardous waste is not being added or removed. - The approximately 3 gallon container accumulating used rags saturated with used vgrease and hydraulic fluid is not closed and unable to be closed.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-25-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site to conduct a routine hazardous waste inspection. The facility is that manufactures aluminum, steel, and stainless steel sheet metal components. Hazardous wastes routinely generated include used grease and hydraulic fluid-saturated rags and paper towels. The following hazardous waste containers are observed on-site: - 1 x 20 gallon, black labeled container of contaminated rags saturated with used grease and hydraulic fluid - 1 x approximately 3 gallon, un-labeled container accumulating contaminated rags saturated with used grease and hydraulic fluid Scrap metal is collected in bins and recycled. The facility has not had a hazardous waste pick-up since 7/18/2011, so no hazardous waste manifests are available for review. The State's Hazardous Waste Tracking System's records are consistent with this statement. Used oil is occasionally generated when the machining equipment requires routine maintenance, but maintenance activities only occur every 3+ years. [Truncated]

GREENWASTE RECOVERY INC (Continued)

S112879687

Eval Date: 02-12-2014
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site to witness the annual monitoring system certification and spill bucket test performed by Mr. Eddie Martinez (ICC #5259954-UT; Pneumercator #10110) of Petrotek. Site is a double walled 8,000 gallon safe suction tank. The annular space is monitored by a Pneumercator LC-1000 panel and LS7 sensor. The sensor was tested in water and provided an audible and visible alarm. The UDC is monitored by a VR -001 stand alone sensor. The sensor was tested in water and shut down the dispenser. Overfill protection is provided by a flapper valve in the fill tube. The spill bucket was hydrostatically tested for one hour with no loss of water. The Emergency Shutoff switch was tested and shut down the dispenser. Submit a copy of the Monitoring Certification and Spill Bucket Test forms to HMCD within 30 days and keep a copy on-site for review.

Eval Division: Santa Clara County Environmental Health
Eval Program: UST
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-16-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to witness UST Monitoring System Certification and spill bucket testing, and to perform an inspection of the UST system. Mike Stromecki, with Advance Fuel Services Inc. performed the testing and has valid certifications (ICC, Pneumercator). Monitoring system performed as required with no exceptions. Spill bucket held water for over 1 hour with no observed loss. Reviewed the following paperwork: Operating Permit Monitoring Plan Response Plan Dusto Agreement Financial Responsibility MOnthly DO Inspections Training Records Daily visual monitoring logs

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site ID: 29014
Site Name: EXACT AUTOMOTIVE & BODY SHOP
Violation Date: 07-25-2018
Citation: Un-Specified
Violation Description: Hazardous Waste Generator Program - Administration/Documentation - General Local Ordinance
Violation Notes: Facility has operated for approximately 4 years without a hazardous waste generator permit. Pay invoice fees when received.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Evaluation:

Eval General Type: Other/Unknown
Eval Date: 07-25-2018
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: On-site to conduct a delinquency inspection with Mr. Jagir Singh of Exact Automotive. Facility currently has a balance of \$4170.25. Mr. Singh informed me that he is in the process of closing his business and is planning to be out of the building by the end of September. Mr. Singh informed me that he was visited by the Bureau of Automotive Repair on June 1st 2018, and informed them that he is canceling his registration and closing his business. Documentation from the Bureau of Automotive Repair was reviewed at the time of this visit. Mr. Singh informed me that all phones and computers are disconnected, and the business account with the bank is closed out. Facility has not been in operation since late May 2018. Six cars observed on-site are owned by Mr. Singh's relatives and are not being worked on. Mr. Singh said he would be willing to begin paying his back billed fees. No payment was collected at this time. Notes: Contact Phone Number: 408-590-9509

Actual:
59 ft.

Violations:

Site ID: 150110
Site Name: SAL AUTO REPAIR
Violation Date: 12-24-2014
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 01/07/2015. 1 x 15 gallon used oil dolly was labeled today.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Evaluation:

Eval General Type: Other/Unknown
Eval Date: 12-23-2014
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Not reported
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 09-24-2015
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Owner requested that permit be adjusted to 2201 (waste oil only) after receiving an invoice for 2205. On-site to conduct permit investigation in response. Observed one 30-gallon drum of used oil and one 30-gallon drum of used coolant. Communicated to owner that the current permit (2205) is correct. Owner indicated he would no longer generate waste coolant in order to fit into lower permit category. We will re-visit within the next two weeks to verify that the coolant drum is gone, at which point the permit will be adjusted. Any delinquencies facility may receive in the meantime shall be waived.

Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 10-13-2015
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Onsite to confirm that waste coolant drum has been removed. The following hazardous materials are still onsite and being generated as waste: 1x30 gallon drum of used oil, 1x55 gallon drum of used oil filters. Permit will be adjusted to 2201 (used oil only). Owner will send payment of \$299.00 per current permit fees. Difference in invoice will be adjusted.

Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-24-2014
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility has 1 - 55 gallon plastic drum onsite for waste coolant. Owner indicates he only performs approximately 30 coolant flushes per year, or about 30 gallons. He never reaches the 55 gallon mark, however I indicated to him that maintaining a container that is 55 gallons would require him to complete a HMBP and pay permit fees. He indicated in the next 10-14 days he will replace the 55 gallon drum with a smaller 30 gallon drum similar to the 30 gallon waste oil container.

CERS Description: Hazardous Waste Generator

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-05-2014
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Facility is not generating hazardous waste at this time. Water based paints and some lacquers are used to apply to wood for finish work with a spray gun or white cotton cloth. Also, small spray booth is located at the facility. No accumulation of hazardous wastes currently. There is also some auto repair activities in side yard but no accumulation of hazardous waste was noted here. Discussed spray booth gun cleaning and Fernando indicated he does not clean it, it is used as is. No thinners are being used for gun cleaning. The paint booth filters appeared dry, they have not been changed out since the business slowed. Most of his work is in the field. This location does perform small wood working jobs. Discussed the use of cloth and rags for finish work and that if they are saturated or contaminated they could be hazardous and require proper disposal. Fernando is aware of the small business program for hazardous waste disposal.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110009534281

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Notes: Business generates hazardous waste and is currently operating without a valid Hazardous Waste Generator permit from our office. Upon receipt of payment of permit fees, the permit will be issued and mailed to the facility mailing address.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 139952
Site Name: OMAR'S CAR CARE
Violation Date: 08-20-2014
Citation: HSC 6.95 Multiple - California Health and Safety Code, Chapter 6.95, Section(s) Multiple

Violation Description: Business Plan Program - Administration/Documentation - General Facility failed to pay Hazardous Materials Business Plan (HMBP) program permit fees. Total due is \$1,157.50 for both HMBP and Hazardous Waste program permit fees for 2013, see copy of invoice provided.

Violation Notes: Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 139952
Site Name: OMAR'S CAR CARE
Violation Date: 08-20-2014
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2

Violation Description: Failure to annually review and electronically certify that the business plan is complete, accurate, and up-to-date.

Violation Notes: Returned to compliance on 12/09/2016. The last Hazardous Materials Business Plan (HMBP) was completed 7-22-12. Annual certification of your inventory is due now. Please go to the California Environmental Reporting System (CERS) and electronically update and submit your HMBP. Go to <http://cers.calepa.ca.gov> using CERS ID#10355212 and enter all facility, inventory and plans information. Questions, or if you need further assistance entering all your data and submitting your HMBP electronically, please call Jeffrey M. Higbee at 408-918-4785.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

POTW: Not reported

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 52819
Site Name: NTL PRECISION MACHINING INC.
Violation Date: 07-25-2014
Citation: HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description: Haz Waste Generator Program - Operations/Maintenance - General
Violation Notes: 1 x 55 gallon drum of waste coolant was not marked with required details. 3 x 5 gallon drums of waste coolant were not marked with required details.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 52819
Site Name: NTL PRECISION MACHINING INC.
Violation Date: 07-25-2014
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Description: Failure to annually review and electronically certify that the business plan is complete, accurate, and up-to-date.
Violation Notes: The last complete Hazardous Materials Business Plan (HMBP) was done 8-11-11 and is due now. Please go to the California Environmental Reporting System (CERS) at <http://cers.calepa.ca.gov> and update your facility, inventory, site plan/storage map, training and emergency plan information. Use CERS ID#10345459 to update your account, obtain user access, then submit your HMBP. See also handout provided - Getting Started on CERS. Questions, or if you need more assistance, please contact Jeffrey M. Higbee at 408-918-4785.

Site ID: 52819
Site Name: NTL PRECISION MACHINING INC.
Violation Date: 09-16-2019
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes: Returned to compliance on 09/25/2019. Facility most recently electronically submitted a Hazardous Materials Business Plan (HMBP) on 8-31-2018. Ensure this HMBP is recertified every 12 months. NOTE: Beginning January 1, 2020, facility will likely be required to submit/certify the HMBP every 3 years (unless changes occur sooner that require adjustment and resubmittal of the HMBP).

Violation Date: 09-16-2019
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 09/25/2019. Observed 2x5 gal buckets of used oil/coolant mixture that did not have a lid and waste was not actively being added or removed. Owner indicated they are emptied once a week into the 55 gal drum.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 52819
Site Name: NTL PRECISION MACHINING INC.
Violation Date: 09-16-2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a site map with all required content.
Violation Notes: Returned to compliance on 09/25/2019. Most recently electronically submitted hazardous materials site map fails to include the following required element(s): Location of Emergency Response Equipment (eg fire extinguishers, absorbents) Location of storm drains

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-16-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility most recently electronically submitted a Hazardous Materials Business Plan (HMBP) on 8-31-2018. Reportable hazardous materials include: Used coolant Used oil (automotive) New Oil Business owner, Henry Ngo, indicated legal operator is same as legal property owner. NOTE 1: Observed 1x300 cubic feet oxygen cylinder and 1x330 cubic feet acetylene cylinder on-site at time of inspection. Owner indicated that facility borrowed this equipment briefly for the day. If facility anticipates having this hazardous material on-site in the future even for as little as 1 day, ensure these materials are included in the hazardous materials business plan inventory submission.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-16-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: CAL000325891 is active. Facility performs machining and generates used oil/coolant waste. No parts washing performed. Deburring is performed by either the CNC machine, grinding wheel, manually with hand tool, or by using a media blaster. Tumbling occurs on rare occasion. No downdraft table used. Facility has two high pressure machines that have micron filtration (~10 microns and less). Owner indicated that these machines are newer, rarely used, and filters have not been changed out yet. These filters contain fines that are not eligible for scrap metal recycling. If the fines meet hazardous waste criteria, ensure they are managed accordingly. REVIEWED DOCUMENTATION INCLUDING: Consolidated manifest receipts for used oil (automotive) and used oil/coolant waste NOTE 1: Reviewed outside area and observed some metal turnings. It was raining at time of inspection and inspected the storm drain and did not observe evidence of metals being washed down. Ensure area [Truncated]

CERS Description: Chemical Storage Facilities

Violations:

Site ID: 375147
Site Name: CHALLENGER SCHOOL
Violation Date: 02-13-2017
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit a site map with all required content.

Violation Notes: Returned to compliance on 03/14/2017. The following elements are not included in the HMBP site map: evacuation staging area, adjacent streets, storm and sewer drains, and location of all emergency response equipment.

Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 375147
Site Name: CHALLENGER SCHOOL
Violation Date: 02-13-2017
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)

Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: Returned to compliance on 03/14/2017. Per Mr. Isensee, the facility conducts monthly evacuation drills in the event of an emergency, but was unsure if any emergency response and safety procedures training in the event of a release or threatened release of a hazardous material is provided. Additionally, no employee training documentation was available for review.

Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-15-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: UNRESOLVED ISSUE THAT REQUIRES FOLLOW-UP: 1) Mr. Robert Lucas is identified in the HMBP as the primary emergency contact and environmental contact, but as of two weeks ago, Mr. Lucas is no longer with the facility and Mr. James Isensee has assumed all associated responsibilities. WITHIN TWO WEEKS, AMEND AND ELECTRONICALLY RE-SUBMIT

CERS ID: 10092850
CERS Description: Chemical Storage Facilities

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-19-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: HMBP threshold chemicals onsite today: 55 gal. car wash cleaner 1 x 235 oxygen gas 200 gal waste oil 525 gal. new oil 100 gal new coolant 100 gal waste coolant 1000+ cu. ft. carbon dioxide gas 220 gal DEF 1000 gal. lead acid batteries 250 cu. ft. refrigerant approx. 120 gal. battery acid/forklifts. the HMBP is current and accepted in CERS on 2/4/16.
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-19-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The fleet management shop is clean, storage containers are labeled with details and weekly inspections are conducted. Luis Granados keeps manifests in file cabinet in fleet office. Recommendation is to prepare a more robust ER plan with emergency coordinator information and spill equipment locations. No violations noted today, thank you.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CA BOND EXP. PLAN:

Reponsible Party: COST RECOVERY/OPERATION AND MAINTENANCE SITE
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: The responsible party voluntarily conducted all characterization and removal activities. The Department did not issue a remedial action order to the responsible party. DHS has certified the site. DHS will recover all costs related to the project including staff costs and overhead. The Department is currently in the cost recovery stage.
Site Description: This site was used in the 1960s and 1970s to manufacture cosmetic products, cleaning compounds, plaster statues and as a chemist's research and development workshop. Currently, it is leased to a truck repair service and plastics molding company.
Hazardous Waste Desc: Approximately 50 drums were stored or buried onsite. Several drums contained phenols. A pile of empty five and ten-gallon metal containers, including paint thinner cans, was stored onsite.
Threat To Public Health & Env: Prior to the removal action, there was a concern that there was soil contamination and a potential for ground water contamination. In addition, there was a potential for a fire hazard if sodium perborate was stored with organic compounds. These potential threats have been eliminated with the removal of the onsite drums.
Site Activity Status: In July, 1988, the responsible parties completed, under the oversight of the Department, a removal action which involved the removal and disposal of 50 drums of which 8 contained phenols. The removal action resulted in a final remediation of the site. Post removal sampling results indicated that no residual soil contamination was present. DHS certified the site in December, 1988.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 02/09/2019

Comments: Three sentinel wells (two in the A-zone and one in the B-zone) were installed and developed. Noted lithology and depth to ground water are similar to findings from previous investigations conducted at the Site. Former Well MW-1 was destroyed by over-drilling to address the Santa Clara Valley Water District's request. Sediments (mud) deposited on top of the Site's concrete/asphalt cover (Cap) were consolidated on Site using a backhoe/bobcat. Sediments were handled per the approved Soil Management Plan. Sediments were stockpiled (approximately 130 cubic yards) and covered with heavy duty polyethylene sheeting. The stockpiled sediments have been sampled and will be disposed once lab results are available.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Health & Safety Plan
Completed Date: 02/12/2019

Comments: The Health and Safety Plan (HASP) prepared by Avocet Environmental, Inc. on behalf of Old Bayshore South LLC. addresses environmental activities that may be performed at the Site. The HASP is consistent with California Code of Regulations Title 8 requirements for hazardous substance release sites, and identifies constituents of concern and related risks, establishes work practices to minimize the risk of accidents and exposure to hazardous substances, and provides emergency response procedures and contacts.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 06/26/2019
Comments: Technical Report provides an evaluation of the health and structural condition of the trees within the landscaping structure in the southwest corner area of the site based on a visual inspection from the ground. DTSC has not reviewed and provided comments on the Technical Report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 09/03/2019
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 12/04/2019
Comments: This Report documents the second quarterly groundwater monitoring event since the implementation of the Removal Action Workplan. Because this is the second monitoring event, no trend analysis was made. Chemical of concerns (pesticides, volatile organic compounds, semivolatle organic compounds, , petroleum, and metals) concentrations were largely consistent with concentration ranges observed during previous sampling event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Well Installation Workplan
Completed Date: 11/15/2019
Comments: Based on the technical recommendations included in the well replacement workplan, DTSC concurs with the following: Replacement well should be permitted, installed, developed and surveyed in accordance with Santa Clara Valley Water District s requirements and adhered to the DTSC-approved Removal Action Design (RADIP); A hollow-stem auger drilling equipment may be selected to install the replacement well because only one water-bearing zone will be penetrated; and Replacement well construction features.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 12/04/2019
Comments: DTSC GSB staff Alex Woodward and Jerry Aarons were present at the site to witness the destruction of SJMW-4 and installation of replacement well. Soil profile was continuous cored from ~5 ft 28 ft bgs with a GeoProbe rig. This is a deviance from Workplan as continuous core was anticipated from 15 to 28 ft bgs. Visual inspection of continuous core clearly showing a LNAPL petroleum sheen (rainbow colors) in that gravelly-clay interval between 16 ft - 18 ft bgs. PID readings in a bagged headspace sample was in the range of ~60 ppm v/v. DTSC staff notices that there was a petroleum sheen on the concrete at the work site where they dropped the 8 hollow stem augers so we asked Cascade (selected driller company) to steam-clean those augers and to stage them on plastic sheeting a portable diesel

delivery truck shows up each day to fill each bus with diesel. The steam portion of the on-site steam cleaner was now functioning so they used the pressure washer only.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 06/01/2012
Comments: A Phase II Environmental Site Assessment was performed at the site. Soil and groundwater samples taken indicated the presence of pesticides and total petroleum hydrocarbons in soil and groundwater. Further investigation is recommended to determine the extent of contamination.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 02/13/2012
Comments: The Phase I Environmental Site Assessment was performed on the property in January/February 2012. Operations have included Moyer Chemical and Diamond Alkali Chemical from 1953 through the mid 1960s as pesticide manufacturers, Howard Electric, Inc. from the mid 1960s to late 1980s, and San Jose Concrete Pipe Company from the late 1980s to present. From the file and record search and based upon the historical uses, the property may have contributed to the contamination to soil or groundwater in the surrounding area and the report recommended collection of soil and groundwater samples for the property.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 04/28/2014
Comments: The Remedial Investigation Workplan outlines investigation activities to further characterize the nature and extent of contamination from past historical operations. The scope of work outlined in the Workplan includes cone penetrometer testing at three locations, collection of soil samples from up to 15 soil borings, installation of three groundwater monitoring wells, sampling of the three new and existing monitoring wells, and installation and sampling of four multi-depth soil vapor wells.

Completed Document Type: Remedial Investigation Report
Completed Date: 12/10/2015
Comments: The Remedial Investigation (RI) Report was prepared pursuant to the Imminent and Substantial Endangerment and Remedial Action Order issued to the former Moyer Chemical Company (previous owner) and San Jose Concrete Transfer Company (current owner). The RI field activities were conducted between April 2014 and March 2015 which included soil, soil gas, and groundwater sampling. No volatile organic compounds (VOCs) were detected in soil vapor above any regulatory screening levels. In soil, petroleum, pesticides, and metals were found across the site. In groundwater, petroleum, arsenic and pesticides were detected primarily along the eastern property boundary with some exceedances along the western property boundary and northern central portion of the site. A Removal Action Workplan will be prepared to address the contamination at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 11/14/2016
Comments: The Final Removal Action Workplan (RAW) addresses soil and groundwater impacted with metals, pesticides, volatile organic compounds, and total petroleum hydrocarbons (TPH). The selected removal action includes capping the contaminated soil, TPH free product removal, institutional controls, and groundwater monitoring. Field activities are scheduled to begin in the spring 2017.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 09/22/2016
Comments: The fact sheet describes the proposed removal action and announces the public comment period for the draft Removal Action Workplan from October 4 through November 4, 2016.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Notice
Completed Date: 09/22/2016
Comments: The public notice announces the public comment period for the draft Removal Action Workplan from October 4 through November 4, 2016.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/22/2019
Comments: DTSC PM conducted a site visit to verify compliance with Removal Action Design and Implementation Plan. Based on the findings noted during the site visit, DTSC PM observed the following: Tree protection zone (TPZ; landscaping structure (existing planter area) that contains five mature trees) areas were constructed according to specifications conveyed to AVOCET. Former unpaved area (Tee-Shaped) that wrapped around the southwest corner of the office building was paved with similar specifications as those paved areas of site to attain same integrity and effectiveness to prevent surface water infiltration into the vadose zone.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 02/26/2015
Comments: This second Addendum Workplan outlines additional investigation activities to address data gaps remaining after implementation of the Remedial Investigation Workplan and the first Addendum Workplan. The activities included in the second Addendum Workplan will determine the extent of total petroleum hydrocarbons and pesticide contamination in soil and the extent of the groundwater plume.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 02/12/2015
Comments: DTSC reviewed the November 2014 Quarterly Monitoring Report and discussed the results with ROUX Associates. It was agreed that step-out sampling was necessary on the adjacent property to determine the extent of contamination.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Risk Assessment Workplan
Completed Date: 07/21/2015
Comments: The Health Risk Assessment Work Plan describes the methods to be used in preparing a site-specific risk assessment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 01/21/2016
Comments: The report documents the August 2015 quarterly monitoring well sampling. The results for this quarter were consistent with the previous quarterly sampling results. The Site groundwater continues to be impacted by petroleum hydrocarbons, pesticides, and metals that exceed regulatory screening levels in the upper A-zone.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 04/07/2016
Comments: The quarterly groundwater monitoring data were consistent with the previous quarters. However, an observation was made that there were constituents in the analytical results for well SJMW-4 that did not meet the Data Quality Objectives (screening values, e.g. benzene, ethylbenzene etc.). If the comparison criteria are not met during the next quarterly sampling, DTSC requested that a discussion be included in the quarterly monitoring report explaining why the comparison criteria were not met (e.g. interferences because of TPH products).

Completed Date: 07/06/2016
Comments: The report presents the results and findings of the February 2016 quarterly well sampling. A trend analysis was performed using the data from the February 2016 and past groundwater sampling events and showed the February 2016 results were consistent with the previous sampling events. Based on the trend analysis, DTSC concurred with the recommendation to reduce the groundwater sampling program from quarterly to semi-annual basis. The next semi-annual report will be due to DTSC in November 2016.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Community Profile
Completed Date: 08/31/2016
Comments: The Community Profile describes community demographics and land uses and documents the results of a community survey that was mailed out to determine the potential concerns that the community has or might have regarding health risks and cleanup at the site. It describes anticipated public participation activities. Recommended activities include publishing a notice of the draft Removal Action Workplan, providing a public comment period of 30 days, holding a public meeting if necessary, and preparing a response to public comments.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 11/15/2016
Comments: The report presents the results of groundwater sampling from four monitoring wells on September 7 and 8, 2016. This was the ninth groundwater sampling event and the first semi-annual sampling event for the Site with the current monitoring well network. The results were consistent with the previous monitoring results.

Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 02/09/2019
Comments: Three sentinel wells (two in the A-zone and one in the B-zone) were installed and developed. Noted lithology and depth to ground water are similar to findings from previous investigations conducted at the Site. Former Well MW-1 was destroyed by over-drilling to address the Santa Clara Valley Water District's request. Sediments (mud) deposited on top of the Site's concrete/asphalt cover (Cap) were consolidated on Site using a backhoe/bobcat. Sediments were handled per the approved Soil Management Plan. Sediments were stockpiled (approximately 130 cubic yards) and covered with heavy duty polyethylene sheeting. The stockpiled sediments have been sampled and will be disposed once lab results are available.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Health & Safety Plan
Completed Date: 02/12/2019
Comments: The Health and Safety Plan (HASP) prepared by Avocet Environmental, Inc. on behalf of Old Bayshore South LLC. addresses environmental activities that may be performed at the Site. The HASP is consistent with California Code of Regulations Title 8 requirements for hazardous substance release sites, and identifies constituents of concern and related risks, establishes work practices to minimize the risk of accidents and exposure to hazardous substances, and provides emergency response procedures and contacts.

S111842224

Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 12/04/2019

Comments: This Report documents the second quarterly groundwater monitoring event since the implementation of the Removal Action Workplan. Because this is the second monitoring event, no trend analysis was made. Chemical of concerns (pesticides, volatile organic compounds, semivolatile organic compounds, , petroleum, and metals) concentrations were largely consistent with concentration ranges observed during previous sampling event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Well Installation Workplan
Completed Date: 11/15/2019

Comments: Based on the technical recommendations included in the well replacement workplan, DTSC concurs with the following: Replacement well should be permitted, installed, developed and surveyed in accordance with Santa Clara Valley Water District s requirements and adhered to the DTSC-approved Removal Action Design (RADIP); A hollow-stem auger drilling equipment may be selected to install the replacement well because only one water-bearing zone will be penetrated; and Replacement well construction features.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 12/04/2019

Comments: DTSC GSB staff Alex Woodward and Jerry Aarons were present at the site to witness the destruction of SJMW-4 and installation of replacement well. Soil profile was continuous cored from ~5 ft 28 ft bgs with a GeoProbe rig. This is a deviance from Workplan as continuous core was anticipated from 15 to 28 ft bgs. Visual inspection of continuous core clearly showing a LNAPL petroleum sheen (rainbow colors) in that gravelly-clay interval between 16 ft - 18 ft bgs. PID readings in a bagged headspace sample was in the range of ~60 ppm v/v. DTSC staff notices that there was a petroleum sheen on the concrete at the work site where they dropped the 8 hollow stem augers so we asked Cascade (selected driller company) to steam-clean those augers and to stage them on plastic sheeting a portable diesel delivery truck shows up each day to fill each bus with diesel. The steam portion of the on-site steam cleaner was now functioning so they used the pressure washer only.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 06/01/2012

Comments: A Phase II Environmental Site Assessment was performed at the site. Soil and groundwater samples taken indicated the presence of pesticides and total petroleum hydrocarbons in soil and groundwater. Further investigation is recommended to determine the extent of contamination.

MOYER CHEMICAL (Continued)

S111842224

Completed Date: 02/13/2012
Comments: The Phase I Environmental Site Assessment was performed on the property in January/February 2012. Operations have included Moyer Chemical and Diamond Alkali Chemical from 1953 through the mid 1960s as pesticide manufacturers, Howard Electric, Inc. from the mid 1960s to late 1980s, and San Jose Concrete Pipe Company from the late 1980s to present. From the file and record search and based upon the historical uses, the property may have contributed to the contamination to soil or groundwater in the surrounding area and the report recommended collection of soil and groundwater samples for the property.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 04/28/2014
Comments: The Remedial Investigation Workplan outlines investigation activities to further characterize the nature and extent of contamination from past historical operations. The scope of work outlined in the Workplan includes cone penetrometer testing at three locations, collection of soil samples from up to 15 soil borings, installation of three groundwater monitoring wells, sampling of the three new and existing monitoring wells, and installation and sampling of four multi-depth soil vapor wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 05/16/2014
Comments: The work outlined in the Remedial Investigation Workplan, approved by DTSC on April 28, 2014, was completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 12/10/2015
Comments: The Remedial Investigation (RI) Report was prepared pursuant to the Imminent and Substantial Endangerment and Remedial Action Order issued to the former Moyer Chemical Company (previous owner) and San Jose Concrete Transfer Company (current owner). The RI field activities were conducted between April 2014 and March 2015 which included soil, soil gas, and groundwater sampling. No volatile organic compounds (VOCs) were detected in soil vapor above any regulatory screening levels. In soil, petroleum, pesticides, and metals were found across the site. In groundwater, petroleum, arsenic and pesticides were detected primarily along the eastern property boundary with some exceedances along the western property boundary and northern central portion of the site. A Removal Action Workplan will be prepared to address the contamination at the site.

Completed Sub Area Name: Not reported
Completed Document Type: Public Notice
Completed Date: 09/22/2016
Comments: The public notice announces the public comment period for the draft Removal Action Workplan from October 4 through November 4, 2016.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/22/2019
Comments: DTSC PM conducted a site visit to verify compliance with Removal Action Design and Implementation Plan. Based on the findings noted during the site visit, DTSC PM observed the following: Tree protection zone (TPZ; landscaping structure (existing planter area) that contains five mature trees) areas were constructed according to specifications conveyed to AVOCET. Former unpaved area (Tee-Shaped) that wrapped around the southwest corner of the office building was paved with similar specifications as those paved areas of site to attain same integrity and effectiveness to prevent surface water infiltration into the vadose zone.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 04/08/2019
Comments: Work notice sent to inform local community of cap installation at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 11/18/2014
Comments: The Addendum was prepared to address data gaps that were identified after a preliminary evaluation of the data collected during the remedial investigation field program. The activities outlined in the Addendum include drilling and sampling of seven soil borings and installation of one additional groundwater monitoring well.

Completed Document Type: Monitoring Report
Completed Date: 02/12/2015
Comments: DTSC reviewed the November 2014 Quarterly Monitoring Report and discussed the results with ROUX Associates. It was agreed that step-out sampling was necessary on the adjacent property to determine the extent of contamination.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Risk Assessment Workplan
Completed Date: 07/21/2015
Comments: The Health Risk Assessment Work Plan describes the methods to be used in preparing a site-specific risk assessment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 01/21/2016
Comments: The report documents the August 2015 quarterly monitoring well sampling. The results for this quarter were consistent with the previous quarterly sampling results. The Site groundwater continues to be impacted by petroleum hydrocarbons, pesticides, and metals that exceed regulatory screening levels in the upper A-zone.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 04/07/2016
Comments: The quarterly groundwater monitoring data were consistent with the previous quarters. However, an observation was made that there were constituents in the analytical results for well SJMW-4 that did not meet the Data Quality Objectives (screening values, e.g. benzene, ethylbenzene etc.). If the comparison criteria are not met during the next quarterly sampling, DTSC requested that a discussion be included in the quarterly monitoring report explaining why the comparison criteria were not met (e.g. interferences because of TPH products).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 07/06/2016
Comments: The report presents the results and findings of the February 2016 quarterly well sampling. A trend analysis was performed using the data from the February 2016 and past groundwater sampling events and showed the February 2016 results were consistent with the previous sampling events. Based on the trend analysis, DTSC concurred with the recommendation to reduce the groundwater sampling program from quarterly to semi-annual basis. The next semi-annual report will be due to DTSC in November 2016.

Completed Area Name: PROJECT WIDE

1000593293

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violations:

Site ID: 397745
Site Name: MOHAWK PACKING CO
Violation Date: 05-11-2016
Citation: HSC 6.5 25189.5(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25189.5(a)
Violation Description: Failure to properly dispose of hazardous waste at an authorized location.
Violation Notes: Facility personnel Clinton Duerksan and Jay Molcan admitted to knowingly discharge pH 12.5 wastewater to the publicly owned treatment works on multiple occasions as noted in City of San Jose Warning Notice (WN-009168) - 12/11/15, 1/18/16, 1/22/16, 2/25/16, and 2/26/16. Evidence of this recorded wastewater pH was also observed on pH charts maintained at the facility.

Eval Notes: Onsite today for routine inspection, met with Clinton Duerksen and toured facility. All hazardous waste containers are in good condition with proper labels, weekly inspection, emergency info. and equipment available. NO violations noted today, thank you.

Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-19-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: HMBP threshold chemicals onsite today: 220 gal sanitizer, 220 gal NaOH, 220 MgOH, 55 gal. new oil, 55 gal. waste oil, 55 gal.+ lead/acid batteries, 200+ cu. ft. Oxygen gas, 200+ cu. ft. Acetylene gas, 1000+ cu. ft. Argon gas, 1000+ cu. ft. Nitrogen gas, 1000+ cu. ft. carbon dioxide, 1000+ cu. ft. carbon dioxide/argon mix gases, 200 gallons of propane gas in permanent tank onsite All items were accepted in CERS, dated 6/4/15.

Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 05-11-2016
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: Onsite today with Clinton Duerksan and Jay Molcan for complaint follow-up inspection, noted the following: -Clinton and Jay both acknowledged and admitted to disposal of wastewater at or greater than pH 12.5 on multiple occasions as noted in Warning Notice (WN-009168) from City of San Jose Environmental Services Department. -Discharge events of pH 12.5 or greater wastewater occurred on 12/11/15, 1/18/16, 1/22/16, 2/25/16, and 2/26/16 -The environmental standard operating procedure (eSOP) was modified to include new settings and adjustments to meet pH criteria. -As of right now the addition of caustic to buffer low pH wastewaters is set to match wastewater flow with the infrastructure in place. -In the past, wastewater low flows resulted in multiple additions of caustic to wastewater flow pipe during plant shutdown and/or times of non-operation resulting in significant pH spikes at the pH monitoring point. -The plant is in process of City of San Jose building permit [Truncated]

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Case Number: 06S1E31F02f
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Co-mingled plume with Wester Exterminator at 1611 Terminal Ave. On April 22, 1986, a 1,000-gallon underground storage tank (UST) was excavated and removed from 1607 Terminal Avenue. One soil sample was collected by CHIPS Environmental Consultants from beneath the UST at approximately 9 feet below ground surface (bgs). Analytical results of the soil sample indicated the presence of petroleum hydrocarbons. On August 1, 1986, two 1,000-gallon gasoline USTs were excavated and removed by WD Construction from 1611 Terminal Avenue. Four soil samples were collected by CHIPS Environmental Consultants at depths between 10 and 15 feet bgs. Analytical results of the soil samples indicated the presence of petroleum hydrocarbons. On August 11, 1988, On-Site Technologies (OST) supervised the installation of monitoring well GX-132A. Laboratory results indicated elevated concentrations of TPHg and BTEX in the soil and groundwater collected from GX-132A. Detailed information of this investigation is documented in the Subsurface Investigation (report) at 1607 Terminal Ave., San Jose, California, dated October 10, 1988, prepared by OST. On March 22, 1991, monitoring wells GX-132B and GX-132C were installed at 1607 Terminal Avenue. Analytical results from the soil samples indicated trace concentrations of petroleum hydrocarbon constituents. Groundwater analytical results indicated the presence of TPHg and BTEX. A summary of this investigation is presented in OSTs report Remedial Investigation Phase II, dated May 22, 1991. From August to November 1991, seven monitoring wells (GX-132D, GX-132E, GX-132F, GX-132G, EW-1, MW-1, and MW-2) were installed at 1607 and 1611 Terminal Avenue. Analytical results from select soil samples collected from each boring indicated the presence of TPHg and BTEX in MW-1, MW-2, and GX-132G. A summary account of the installation

activities is documented in OSTs Remedial Investigation Phase III report dated October 22, 1991, and Remedial Investigation Phase IV report dated March 24, 1992. An aquifer pumping test was conducted using groundwater extraction well EW-1 on December 20, 1991. On January 19, 1993, extraction well EW-2 was installed at 1615 Terminal Avenue to assist in the assessment of groundwater quality and groundwater flow direction. Three of four soil samples collected from EW-2 were impacted with petroleum hydrocarbons. The installation activities are documented in OSTs report titled Remedial Investigation/Interim Remediation Plan, dated October 28, 1993. In October 1993, OST submitted the Remedial Investigation/Interim Remediation Plan to the Santa Clara Valley Water District (SCVWD), which contained results of the aquifer testing. In October 1994, the groundwater pump and treat system was installed and operation initiated. In January 1995, the soil vapor extraction (SVE) system was installed and operation initiated. In July 1996, the groundwater recirculation system was installed in wells EW-1 and EW-2. In August 1997, the remediation systems were deactivated. In May 2003, passive LNAPL skimmers were installed in monitoring wells GX-132B and GX-132K. Groundwater analytical results from monitoring well GX-132A, screened from 23 to 43 feet bgs, indicated that groundwater at depths greater than 23 feet bgs required further investigation. Monitoring wells GX-132H through GX-132J were installed in 1998 by ATC. The purpose of these wells was to investigate groundwater quality in the water bearing unit observed from 40 to 50 ft bgs, however, after encountering the presence of hydrocarbons in the shallow water bearing unit from approximately 10 to 25 feet bgs during drilling, it was decided that conductor casing should be used to minimize possibly cross- contaminating the deep (40-50 feet bgs) water bearing unit. For budgetary reasons, these three wells were completed in the shallow water bearing unit. In December 1999, six grab groundwater samples (GW-1 through GW-6) were collected from the shallow water bearing unit from soil borings completed up-gradient of the site and north of Terminal Avenue. BTEX, MTBE, and TPHg analytical results did not indicate the presence of petroleum compounds at or above their respective laboratory detection limits. In January and February 2001, six direct push soil borings (GW-9 through GW-12) were advanced on-and off-site. The borings were completed in an effort to evaluate the extent of petroleum and MTBE impacted groundwater in deep water bearing unit. Groundwater samples were collected at approximately 45 feet bgs. Petroleum hydrocarbons in groundwater were detected from borings GW-9, GW-10, and GW-12; and MTBE was detected in GW-9 and GW-10. Soil samples were not collected. The assessment investigation is summarized in ATCs report titled Report of Additional Groundwater Investigation, dated May 9, 2001. In February 2006, five additional soil borings GW-13 through GW-17, were completed to depths between 44 and 48 feet bgs in an attempt to define the extent of LNAPL. LNAPL had previously been observed in monitoring wells GX-132B, GX-132H, and GX-132K, which are screened from 24 to 30 feet bgs and 30.5 to 40.5 feet bgs. Additionally, the soil boring locations were selected to evaluate the vertical extent of adsorbed-phase and dissolved-phase hydrocarbons and fuel oxygenates. Concentrations of TPHg and BTEX in soil and groundwater were detected in GW-17. Concentrations of MTBE in groundwater were detected in GW-13, GW-14, GW-15, and GW-16. A detailed summary of the investigation activities is documented in ATCs 1st Quarter 2006 Groundwater Monitoring and Subsurface Investigation Report, dated April 25, 2006. ATC conducted a Nitrate

Injection Feasibility Study at the site in accordance with the Workplan for Insitu Feasibility Testing Using Nitrate Gravity Injection for the Treatment of Petroleum Hydrocarbons in Groundwater, dated September 5, 2006. The study began with the initial nitrate injection on January 29, 2007, and continued until the final injection on April 16, 2007. It was conducted for 12 weeks with a total of 12 nitrate injection events. Field parameters, field HACH kit nitrate readings, and inorganic compound laboratory analyses were also conducted weekly in accordance with a schedule outlined in the work plan. Nitrate solution was injected under pressure in monitoring wells: GX-132A, GX-132C, and MW-5. Upon initial testing, it was determined that the nitrate solution would be more efficiently distributed using a centrifugal pump to facilitate forced injection as opposed to gravity fed injection. To achieve the appropriate concentration of nitrate in the subsurface one pound of potassium nitrate fertilizer was mixed with fifteen gallons of water to give an approximate concentration of 5,000 mg/L. One batch of the 5,000 mg/L solution was applied to GX-132A, GX-132C, and MW-5 followed by fifteen gallons of clean water to flush the well per event. Other remedial methods are being evaluated. Periodic DPE on well GX132B to remove FP.

Name: SAN JOSE FIRE STATION #5
Address: 1380 N. 10TH STREET
City,State,Zip: SAN JOSE, CA 95112
Lead Agency: SANTA CLARA COUNTY LOP
Case Type: LUST Cleanup Site
Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0608500618
Global Id: T0608500618
Latitude: 37.3658541739655
Longitude: -121.899092048407
Status: Completed - Case Closed
Status Date: 12/02/2019
Case Worker: GOR
RB Case Number: 10-074
Local Agency: SANTA CLARA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 06S1E31J04f
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Diesel, Gasoline
Site History: In 1959, 2 single-walled UST were installed to provide 1500 gallons of gasoline and 2000 gallons of diesel storage. In 1998, vapor wells were installed and monitoring of combustible gas commenced. In February 1990 and March 1992, reported total combustible gas readings consistently over 10,000 ppm in 2 wells. In June 1992, 5 soil borings

(SB1 and wells FS5-4 through FS5-7) were advanced onsite. SB1 was advanced to 41.5 ft bgs and the wells were completed between 20-26.5 ft bgs. Soil contamination as well as free product (FP) were identified by the investigation. FP was measured in wells FS5-4 and FS5-6. A FP skimmer was installed in 6/92. Both tanks were removed in 1993. The vapor wells were removed during UST removal and over-excavation. Maximum concentrations were reported of 430 ppm TPHd, 370 ppm TPHg, 1.5 ppm Benzene, 1.6 ppm Toluene, 7.1 ppm Ethylbenzene, and 43 ppm Xylenes in a soil sample collected from the final excavation. 270 cubic yards of soil were removed from the site. In April 1995, 2 additional soil borings and 4 groundwater monitoring wells (FS5-9 through FS5-12) were advanced on and offsite. In December, 2 additional wells FS5-14 and FS5-15 were installed. Additional investigation downgradient was to be completed to define the extent of contamination, however, the adjacent property owner has not granted access. In 2004, it was proposed to place ORC socks in the monitoring wells for remedial purposes. To date, this has not been completed.

Completed Date: 11/09/1993
Comments: DTSC did not review this report when filed. Removal of 392 yards of debris and 6,600 gallons of process liquids and 2,400 gallons of wash water were disposed. Site was cleared of the fire debris and pressure washed . Soil sampling also occurred under the process equipment in the native dirt and analysed for chromium, copper, lead, nichel, zinc, total cyanide, and pH.

Local Case Number: 06S1E31F03f
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: Co-mingled plume with S&W Company site located at 1607 Terminal Ave. On April 22, 1986, a 1,000-gallon underground storage tank (UST) was excavated and removed from 1607 Terminal Avenue. One soil sample was collected by CHIPS Environmental Consultants from beneath the UST at approximately 9 feet below ground surface (bgs). Analytical results of the soil sample indicated the presence of petroleum hydrocarbons. On August 1, 1986, two 1,000-gallon gasoline USTs were excavated and removed by WD Construction from 1611 Terminal Avenue. Four soil samples were collected by CHIPS Environmental Consultants at depths between 10 and 15 feet bgs. Analytical results of the soil samples indicated the presence of petroleum hydrocarbons. On August 11, 1988, On-Site Technologies (OST) supervised the installation of monitoring well GX-132A. Laboratory results indicated elevated concentrations of TPHg and BTEX in the soil and groundwater collected from GX-132A. Detailed information of this investigation is documented in the Subsurface Investigation (report) at 1607 Terminal Ave., San Jose, California, dated October 10, 1988, prepared by OST. On March 22, 1991, monitoring wells GX-132B and GX-132C were installed at 1607 Terminal Avenue. Analytical results from the soil samples indicated trace concentrations of petroleum hydrocarbon constituents. Groundwater analytical results indicated the presence of TPHg and BTEX. A summary of this investigation is presented in OSTs report

Remedial Investigation Phase II, dated May 22, 1991. From August to November 1991, seven monitoring wells (GX-132D, GX-132E, GX-132F, GX-132G, EW-1, MW-1, and MW-2) were installed at 1607 and 1611 Terminal Avenue. Analytical results from select soil samples collected from each boring indicated the presence of TPHg and BTEX in MW-1, MW-2, and GX-132G. A summary account of the installation activities is documented in OSTs Remedial Investigation Phase III report dated October 22, 1991, and Remedial Investigation Phase IV report dated March 24, 1992. An aquifer pumping test was conducted using groundwater extraction well EW-1 on December 20, 1991. On January 19, 1993, extraction well EW-2 was installed at 1615 Terminal Avenue to assist in the assessment of groundwater quality and groundwater flow direction. Three of four soil samples collected from EW-2 were impacted with petroleum hydrocarbons. The installation activities are documented in OSTs report titled Remedial Investigation/Interim Remediation Plan, dated October 28, 1993. In October 1993, OST submitted the Remedial Investigation/Interim Remediation Plan to the Santa Clara Valley Water District (SCVWD), which contained results of the aquifer testing. In October 1994, the groundwater pump and treat system was installed and operation initiated. In January 1995, the soil vapor extraction (SVE) system was installed and operation initiated. In July 1996, the groundwater recirculation system was installed in wells EW-1 and EW-2. In August 1997, the remediation systems were deactivated. In May 2003, passive LNAPL skimmers were installed in monitoring wells GX-132B and GX-132K. Groundwater analytical results from monitoring well GX-132A, screened from 23 to 43 feet bgs, indicated that groundwater at depths greater than 23 feet bgs required further investigation. Monitoring wells GX-132H through GX-132J were installed in 1998 by ATC. The purpose of these wells was to investigate groundwater quality in the water bearing unit observed from 40 to 50 ft bgs, however, after encountering the presence of hydrocarbons in the shallow water bearing unit from approximately 10 to 25 feet bgs during drilling, it was decided that conductor casing should be used to minimize possibly cross- contaminating the deep (40-50 feet bgs) water bearing unit. For budgetary reasons, these three wells were completed in the shallow water bearing unit. In December 1999, six grab groundwater samples (GW-1 through GW-6) were collected from the shallow water bearing unit from soil borings completed up-gradient of the site and north of Terminal Avenue. BTEX, MTBE, and TPHg analytical results did not indicate the presence of petroleum compounds at or above their respective laboratory detection limits. In January and February 2001, six direct push soil borings (GW-9 through GW-12) were advanced on-and off-site. The borings were completed in an effort to evaluate the extent of petroleum and MTBE impacted groundwater in deep water bearing unit. Groundwater samples were collected at approximately 45 feet bgs. Petroleum hydrocarbons in groundwater were detected from borings GW-9, GW-10, and GW-12; and MTBE was detected in GW-9 and GW-10. Soil samples were not collected. The assessment investigation is summarized in ATCs report titled Report of Additional Groundwater Investigation, dated May 9, 2001. In February 2006, five additional soil borings GW-13 through GW-17, were completed to depths between 44 and 48 feet bgs in an attempt to define the extent of LNAPL. LNAPL had previously been observed in monitoring wells GX-132B, GX-132H, and GX-132K, which are screened from 24 to 30 feet bgs and 30.5 to 40.5 feet bgs. Additionally, the soil boring locations were selected to evaluate the vertical extent of adsorbed-phase and dissolved-phase

hydrocarbons and fuel oxygenates. Concentrations of TPHg and BTEX in soil and groundwater were detected in GW-17. Concentrations of MTBE in groundwater were detected in GW-13, GW-14, GW-15, and GW-16. A detailed summary of the investigation activities is documented in ATCs 1st Quarter 2006 Groundwater Monitoring and Subsurface Investigation Report, dated April 25, 2006. ATC conducted a Nitrate Injection Feasibility Study at the site in accordance with the Workplan for Insitu Feasibility Testing Using Nitrate Gravity Injection for the Treatment of Petroleum Hydrocarbons in Groundwater, dated September 5, 2006. The study began with the initial nitrate injection on January 29, 2007, and continued until the final injection on April 16, 2007. It was conducted for 12 weeks with a total of 12 nitrate injection events. Field parameters, field HACH kit nitrate readings, and inorganic compound laboratory analyses were also conducted weekly in accordance with a schedule outlined in the work plan. Nitrate solution was injected under pressure in monitoring wells: GX-132A, GX-132C, and MW-5. Upon initial testing, it was determined that the nitrate solution would be more efficiently distributed using a centrifugal pump to facilitate forced injection as opposed to gravity fed injection. To achieve the appropriate concentration of nitrate in the subsurface one pound of potassium nitrate fertilizer was mixed with fifteen gallons of water to give an approximate concentration of 5,000 mg/L. One batch of the 5,000 mg/L solution was applied to GX-132A, GX-132C, and MW-5 followed by fifteen gallons of clean water to flush the well per event. Other remedial methods are being evaluated. Periodic DPE on well GX132B to remove FP.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 04/28/2003
Comments: Approved PEA noting DDE, chlordane and dieldrin contamination. Also a 500 gallon gasoline tank was previously removed from the lot which contributed to the soil contamination containing fuel hydrocarbons.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 04/17/2002
Comments: Signed VCA for PEA and any follow up.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction
Completed Date: 05/16/2006
Comments: Deed restriction recorded with Santa Clara County Recorder's office.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 01/20/2004
Comments: Report approved with modifications.

Completed Area Name: PROJECT WIDE

RB Case Number: 14-048
Local Agency: SANTA CLARA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 06S1E31K01f
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Additional historical information for this case is available for review at the County's website at <http://lustop.sccgov.org/files/06S1E31K01f/> The 1,500-gallon gasoline UST had previously been closed in place and one monitoring well was installed in 1985 (MW1). Two additional groundwater monitoring wells (MW2 and MW3) were installed in 1999, and monitored and sampled on an irregular basis from 1999 until 2007. All of the previous work completed prior to 2007 is summarized in TerraSearchs report entitled, Groundwater Monitoring Report, Third Quarter 2006, dated July 31, 2006. The analytical results of the historic soil and water sampling are included on the attached Tables 1 through 4. The on-site fuel UST was removed on August 27, 2007. This work is summarized in a letter report by Golden Gate Tank Removal dated September 2007. Because it was located either within or adjacent to the tank pit, groundwater monitoring well MW1 was sealed with grout, prior to the tank removal. The analytical results of the soil samples collected during the tank removal (E-9, W-9) are presented on the attached Table 1. On October 2, 2007, monitoring well MW4 and four soil borings (B4 through B7) were installed on site using a Geoprobe direct push drill rig. In October 2007 and January 2008, all of the on-site monitoring wells were sampled. This work is summarized in PIERS previous Report of Installation of Monitoring Well and Sampling Event dated October 2007, and PIERS Report of January 2008 Sampling Event dated February 2008. During the soil sampling work in October 2007, an odor of weathered gasoline was noted in the soils collected from approximately nine feet below ground surface (at the water table), extending to the total depth explored (i.e., 20 feet below grade). This is consistent with a release of hydrocarbons that occurred when the water table was significantly lower; then, when the water table fluctuated closer to the ground surface, the dissolved hydrocarbons traveled upward with the water table, creating a smear zone of contamination. The depth of this smear zone is estimated to range from approximately 7 feet to 22 feet below grade. The soil samples from soil borings B4 through B7 were selected for analyses from approximately 15 feet and 20 feet below grade. These soil samples were selected on the basis of having stronger hydrocarbon odors and in some cases soil staining, so that the analytical results could be used to better characterize the large smear zone of hydrocarbon contamination created by the change in water levels over time. The analytical results of the soil and groundwater samples collected during this work are presented in Tables 2 through 4. Total Petroleum Hydrocarbons (TPH)- gasoline and benzene were detected in the soil samples at concentrations ranging up to 360 parts per million (ppm) and 5.7 ppm, respectively. These concentrations were

found in soil samples collected below the present water table, and are part of the smear zone of residual hydrocarbons in the saturated fine-grained soils. The concentrations are consistent with a rise in water levels since the original hydrocarbon release. The analytical results of the groundwater grab samples and of the groundwater samples from the monitoring wells indicated elevated dissolved concentrations of hydrocarbons at all locations sampled, except in monitoring well MW2. The highest concentration of benzene was detected at a concentration of 4,600 parts per billion (ppb) in soil boring B7 at approximately 9.5 feet below grade. These results indicated that, except in the vicinity of MW2, the lateral extent of hydrocarbon concentrations was undefined. PIERS then recommended the installation of additional soil borings to further delineate the lateral extent of hydrocarbons in groundwater. On March 18, 2008, four soil borings were installed at the Property using a rubber trackmounted dual-capability hollow-stem auger/Geoprobe drill rig. The soil borings were continuously cored to a depth of approximately 15 feet below grade. The soil samples were selected for analyses from approximately 15 feet below grade, the total depth explored. No odors in soil were encountered at the soil/water interface. However, slight to moderate odors of very old gasoline were encountered in soil borings B9 through B11 below approximately ten feet below grade. TPH-gasoline and TPH-diesel were detected in the soil samples at concentrations ranging up to 26 ppm and 8.5 ppm, respectively (in soil samples B10 d14.5 and B11 d 14.5, respectively). TPH-motor oil, benzene, and MTBE were not detected. Toluene, ethylbenzene and xylenes were detected at concentrations ranging up to 0.098 ppm (B10 d14.5). In groundwater, benzene was detected at 2.8 ppb and 4.5 ppb in soil borings B9 and B10, respectively, and was non-detectable in B8 and B11. TPH-gasoline was detected at concentrations of 560 ppb and 640 ppb in B9 and B10, respectively, and was nondetectable in B8 and B11. TPH-diesel and TPH-motor oil were detected at concentrations ranging up to 2,100 ppb for diesel and 14,000 ppb for motor oil in all of the soil borings except B11. This work was summarized in PIERS previous Report of Further Delineation of Groundwater Impacts and Site Conceptual Model dated April 2008. The analytical results are summarized in the Tables 2 through 4, attached to this report. On September 9, 2008, one groundwater-monitoring well, designated as MW5, was installed at the Property using a rubber track-mounted dual-capability hollow-stem auger/Geoprobe drill rig. An attempt to install MW6 was also made but underground utility conflicts were encountered. Following this, the location of well MW6 was re-sited to the nearby sidewalk, and an encroachment permit for the installation of MW6 was obtained from the City of San Jose Department of Public Works. Installation of the well was completed on September 25, 2008. The locations of the groundwater monitoring wells are shown on Figure 2. During previous sampling at B6, TPH- gasoline were detected in a grab groundwater sample of the first encountered water elevation at a concentration of 210,000 parts per billion (ppb). This was the highest TPH-gasoline concentration detected at the Property at that time. Other hydrocarbon constituents including benzene were also detected in B6 at elevated concentrations. During on the previous work, after drilling to approximately 15 to 20 feet below grade, groundwater tended to rise in the soil borings to approximately eight or nine feet below grade. The soils at B6 were previously continuously cored to approximately 20 feet below grade, and soil samples were collected and analyzed from approximately 15 and 20 feet

below grade, in addition to a grab sample of the first encountered groundwater. For this investigation, an attempt to investigate groundwater conditions at the total depth of B6 was made. Prior to coring the soil borings and installing groundwater monitoring well MW5, drilling rods containing a hydropunch tool were extended to approximately 22 feet below grade, and the screen retracted about two feet; however, after one-half hour, water in sufficient quantities to sample had not entered the borehole. A soil sample from 21.5 feet below grade was then retained for analyses. At both MW5 and MW6, the soil was continuously cored and examined for evidence of contamination and logged for lithology. At MW6, soil samples from approximately 15 feet, 20 feet, and 22 feet below grade were collected and submitted for laboratory analyses. The subsurface lithology predominantly consisted of low permeability clayey silt (ML), with lesser amounts of silty clay (CL), consistent with previous investigations. A slight odor of hydrocarbons, increasing slightly with depth, was encountered at MW5 beginning at approximately 12 feet and continuing to 20 feet below grade. In MW6, there was a slight odor between 15 and 20 feet below grade, and apparent staining was observed from approximately 12.3 to 20 feet below grade. Upon completion of the soil boring to approximately 22 feet, pre-pack wells with one-inch inside diameter Schedule 40 PVC casings were installed in the boreholes. The well casings were screened with 0.010-inch-diameter slots from approximately 7 feet to 22 feet below grade. At MW5, the annular space around the casing was filled with #2/12 sand from approximately 7 feet to 22 feet below grade. A bentonite packer was placed in the annular space in the interval from approximately five to six feet below grade. The annular space in the upper five-foot interval was filled with neat cement grout. MW6 differed only in that the sand pack extended from approximately six to 22 feet below grade, and the bentonite seal extended from approximately five to six feet below grade. The soil and groundwater samples were analyzed for TPH-gasoline and TPH-diesel and TPH-motor oil by EPA Method 8015-Modified and EPA Method 8020; and for benzene, toluene, ethylbenzene, and xylenes (BTEX); Methyl-tertiary-butyl-ether (MTBE) and volatile organic compounds (VOC) including the fuel oxygenates and lead scavengers by EPA Method 8260. The analytical results are summarized on Tables 2 through 4. This work is summarized in PIERS Report of Additional Phase II Site Investigation dated October 27, 2008. To evaluate the potential for soil vapor emissions from soil and groundwater toward the ground surface and potential intrusion to indoor air, five soil gas borings were advanced to a depth of approximately five feet below grade within the building footprint. The locations of soil vapor borings, designated as SV1 through SV5, are shown on Figure 2, and corresponded to locations proximal to the offices within the buildings. Specifically, soil gas borings SV1 through SV3 are located at the edge of the warehouse, but adjacent to the B. Davis Construction Company office space on the opposite side of the interior wall. Soil vapor borings SV4 and SV5 are located adjacent to the office space at Universal Floor Coverings. At each location, a one-inch-diameter borehole was cored in the concrete. A drilling rod was advanced to approximately five feet below grade with a slide hammer and then retracted approximately one foot. Small diameter vinyl tubing was placed within the drilling rods and plumbed to a flow meter and then to a purge canister and also to a one-liter sample container (Summa canister). Hydrated bentonite was used to

seal the area where the tubing exits the drilling rod. After waiting at least 30 minutes after installation, a ten-minute leak test was performed. Following that, the equivalent of three casing volumes of air was purged to the purge canister, and then the one-liter soil vapor sample containers were filled. A tracer gas of isopropyl alcohol was placed at the borehole seal. The airflow rates were controlled by the manifolds provided by Air Toxics, Inc. of Folsom, California, and did not exceed 200 milliliters per minute. Upon completion of soil vapor sampling, the soil borings were backfilled with neat cement grout. The soil-gas sampling was conducted per Department of Toxic Substances Control (DTSC) guidelines (Advisory-Active Soil Gas Investigations dated January 28, 2003). The soil vapor samples were analyzed by Method TO-15. These data indicate the presence of a wide range of hydrocarbon compounds in shallow soil vapor, with the highest concentrations generally occurring in soil-gas samples SV2, SV3, and SV4. For select compounds such as acetone and xylenes, the highest concentrations occur in SV5. A comparison of detected hydrocarbon levels in soil gas with available environmental screening levels (ESLs) for residential and commercial/industrial land use indicates that only benzene has exceeded residential ESLs. None of the detected chemicals exceeded available commercial/industrial ESLs, suggesting the absence of significant risks associated with the vapor intrusion exposure pathway. This work is summarized in PIERS Report of Additional Phase II Site Investigation dated October 27, 2008.

File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 06S1E32D01f
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline

Site History: Background The subject site was used as a bulk fuel operation. The record is not clear as to when the bulk fuel operation began operating, but it could date back to the 19th century although there is some evidence it may have started in the 1920s. No records of original tank installations are known to exist. The site was also used as a retail fuel dispensing facility doing business as Spartan Service Center. Currently the site is occupied by a two story storage business. 1993 Six soil borings were installed. Free product was reported in each of the borings. Nine USTs were removed from the site. Soil samples collected beneath the former USTs detected up to 6,000 ppm TPH-g and 7,500 ppm TPH-d. 1994 Six above ground fuel storage tanks were removed from the site. 1995-96 Three exploratory trenches were excavated to assess the lateral and vertical extent of contamination. Groundwater was encountered at 26 feet bgs. TPH-g and TPH-d were detected at concentrations up to 24,000 ppm in soil. In April 1996, five monitoring wells were installed. Floating product was noted in the vicinity of MW-1 and MW-3, and in boring B-1. In soil up to 7.8 ppm TPH-g, 210 ppm TPH-d, and 0.31 ppm benzene were detected. In groundwater collected from MW-4 TPH-g and TPH-d were detected at 110 and 450 ppb, respectively. It was noted that

S101304008

groundwater flow was toward the west which is in the direction of a school which borders the western side of the site. In November 1996, two additional groundwater monitoring wells were installed to assess the downgradient extent of the contaminant plume. . In soil up to 1,400 ppm TPH-g and 570 ppm TPH-d were detected. A groundwater sample collected from B-4 contained 15,000 ppb TPH-g, 690 ppb MTBE, and 990 ppb Benzene. 1998 An excavation to remove contaminated soil took place in 1998. The excavation reached a depth of 14 to 16 feet below ground surface. Impacted soil was excavated and stockpiled on-site. Off-hauling took place in two stages: the first stage removed 1516 tons of soil and the second 648 tons. Off-hauled soil was transported to Forward landfill in Manteca CA. 2006 From June 6, 2006 to December 28, 2006 a SVE system was operating. During the six months the system operated approximately 5.91 gallons of hydrocarbons were removed. The system was turned off due to inefficient extraction results.

Evaluation:

Eval General Type: Other/Unknown

Eval Date: 10-02-2018

Violations Found: Yes

Eval Type: Other, not routine, done by local agency

Eval Notes: On-site to conduct a hazardous materials business plan permit investigation. Facility, Roofline Supply & Delivery, is a roofing supply distributor. Facility walk through was conducted with Sean Alborzi, Branch Manager. Facility stores asphalt shingles, aerosols, acrylic and silicone coatings, caulk, mastic, and general sealants. Facility sells to contractors and is open to the public. Facility owns 3 forklifts and a propane storage cage. The following hazardous materials were observed above hazardous materials business plan thresholds: propane: 15 x 8 gallon cylinders (including one on each forklift) The facility will be permitted for handling 1-3 hazardous materials above state thresholds. Contact email: salbarzi@rooflinesupply.com

Eval Type: Other, not routine, done by local agency

Eval Notes: On-site to conduct a hazardous waste generator permit investigation. Facility, Roofline Supply & Delivery, is a roofing supply distributor. Facility walk through was conducted with Sean Alborzi, branch manager. Facility stores asphalt shingles, aerosols, acrylic and silicone coatings, caulk, mastic, and general sealants. Mr. Alborzi noted that the facility does not accept returns unless they are able to be resold. Expired items are sent back to manufacturer or are sold at-cost to contractors. No spills have been observed by Mr. Alborzi. Observed in warehouse: waste 55 gallon drum of Rooftek white acrylic roof coating waste 5 gallon bucket of GAF acrylic top coat Mr. Albarzi was unsure of details surrounding waste, including why it was there, since when, and how to handle it. Mr. Alborzi stated that it is very rare for any waste to be handled by facility. Based on these observation, facility will be permitted for generating <100kg of waste per year. Mr. [Truncated]

Completed Document Type: Corrective Measures Study Workplan
Completed Date: 12/16/2015
Comments: The Corrective Measure Study (CMS) Workplan describes the methodology for developing and evaluating the potential corrective measures that will be used to develop the CMS Report for the Site. The CMS Workplan generally follows the requirements in Attachment 5 of the Corrective Action Consent Agreement between DTSC and the Respondents.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: RFI Report
Completed Date: 04/28/2016
Comments: The RCRA Facility Investigation (RFI) report documents the results of an investigation that was performed to determine the nature and extent of releases of hazardous waste or constituents from formerly permitted units, solid waste management units, and other source areas. Soil and groundwater were found to be contaminated with pesticides, total petroleum hydrocarbon, volatile organic compounds (VOCs), and metals. VOCs in soil gas were found in limited areas of the Site. The data gathered during the RFI will be used to prepare a Corrective Measures Study report that will evaluate corrective measures alternatives for the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: RFI Workplan Addendum
Completed Date: 04/03/2014
Comments: The RFI Workplan Addendum summarizes the RFI field program that was started in October 2013, provides preliminary conclusions based on the data collected, defines the remaining data gaps, and presents a scope of work to address the data gaps. The additional investigation activities outlined in the Workplan include drilling and sampling six soil borings, installation and sampling of six groundwater monitoring wells, installation and sampling of a multi-depth soil vapor well, and pneumatic slug testing of six existing monitoring wells.

deeper aquifer was completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Risk Assessment Workplan
Completed Date: 09/23/2014
Comments: DTSC approves the Human Health Risk Assessment Workplan with the recommendation that the potential human health hazards be identified in the section along with the proposed analytical methods, data quality objectives and risk assessment methodologies.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 02/12/2015
Comments: DTSC reviewed the November 2014 Quarterly Monitoring Report and discussed the results with ROUX Associates. It was agreed that step-out sampling was necessary across the street to determine the extent of contamination.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: RFI Workplan Addendum
Completed Date: 03/12/2015
Comments: RFI Workplan Addendum 2 outlines a scope of work to address remaining data gaps. The additional investigation activities included in the Addendum are focused on an area to the west of the site across Old Bayshore Highway and include groundwater and soil gas sampling.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 01/21/2016
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 04/07/2016
Comments: The quarterly groundwater monitoring data were consistent with the previous quarters. However, one observation was made in wells MW-4 and MW-5 that some of the constituents in the analytical results do not meet the Data Quality Objectives. If the comparison criteria are not met during the next quarterly sampling, DTSC requested that a discussion be included in the quarterly monitoring report explaining why the comparison criteria were not met (e.g. interferences because of TPH products).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 07/06/2016
Comments: The report presents the results and findings of the February 2016 quarterly well sampling. A trend analysis was performed using the data from the February 2016 and past groundwater sampling events and showed the February 2016 results were consistent with the previous sampling events. Based on the trend analysis, DTSC concurred with the

recommendation to reduce the groundwater sampling program from quarterly to semi-annual basis. The next semi-annual report will be due to DTSC in November 2016.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Community Profile
Completed Date: 08/31/2016
Comments: The Community Profile describes community demographics and land uses and documents the results of a community survey that was mailed out to determine the potential concerns that the community has or might have regarding health risks and cleanup at the site. It describes anticipated public participation activities. Recommended activities include publishing a notice of the draft Removal Action Workplan, providing a public comment period of 30 days, holding a public meeting if necessary, and preparing a response to public comments.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 12/15/2016
Comments: The report presents the results of groundwater sampling from 13 monitoring wells across the Site on September 7 and 8, 2016. This was the tenth groundwater sampling event and the first semi-annual sampling event for the Site with the current monitoring well network. The results were consistent with the previous monitoring results.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 07/05/2017
Comments: The Semiannual Groundwater Monitoring Report presents the results of the March 2017 sampling event. The groundwater results were consistent with the previous sampling events. Groundwater elevations in both the A-zone and B-zone monitoring wells had increased from the previous sampling event in September 2016.

Completed Document Type: Monitoring Report
Completed Date: 10/18/2019
Comments: According to the revised Memorandum, groundwater elevations increased in all A-zone and B-zone wells relative to elevations measured in September 2018. COCs (pesticides, VOCs, SVOCs, petroleum, and metals) concentrations were largely consistent with concentration ranges observed during previous sampling events.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 05/15/2019
Comments: This Progress Report provides updates for the period from February 1, 2019 through April 30, 2019 as outlined in Attachment 6 of the Corrective Action Consent Agreement, dated April 15, 2013. The Progress Report did not note any problems or potential problems, or actions taken and/or planned to rectify problems for this reporting period.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 06/14/2019
Comments: The Site Inspection for Potential for Vapor Intrusion Technical Report (Report) provides updated documentation of the main office building and an adjoining trailer containing overflow office space. The office building is described as slab on grade. The utilities present include electrical as well as sanitary sewer connections to the kitchen and bathrooms. The adjoining trailer is elevated and is not directly located on the concrete slab. The Report states that the concrete slab surface appears intact and in good condition. The layout of the southern portion of the site remains relatively unchanged since initially inspected during the 2016 RCRA Facility Investigation. There is a trailer office elevated several feet off the concrete surface that is located along the southeast edge of the property, but no other buildings.

Completed Document Type: Other Report
Completed Date: 10/22/2003
Comments: This RCRA Facility Assessment concludes that soil contamination "above regulatory guidelines" remains at the site and recommends further action.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 06/03/2009
Comments: This is the scope of work or workplan that accompanies the Site Conditions Report. The workplan describes activities necessary to complete sufficient characterization of contamination at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Discovery
Completed Date: 06/04/1981
Comments: FACILITY IDENTIFIED ACTIVE SITE ID'D FROM RWQCB FILES

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 01/18/2002
Comments: Site screening referred to the Hazardous Waste Management program where a RCRA Facility Assessment is currently being done.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 06/03/2009
Comments: This report summarizes the past available data and makes recommendations for additional testing to fill gaps in the data.

Site ID: 540548
CERS ID: 853138
CERS Description: Industrial Facility Storm Water

Evaluation:

Eval General Type: Case Development Inspection
Eval Date: 10-25-2018
Violations Found: No
Eval Type: Industrial Storm Water Enforcement Follow-up
Eval Notes: The facility did not submit their 2017-18 AR. They are aware of this and working with their consultant to submit the report next week. This is a cans and plastic recycling facility. The storm drains are fitted with filter fabric. I did not observe any issues at this site.

FINDS:

Registry ID: 110002946199
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail_disp_program_facility?p_registry_id=110002946199

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RISK AND TECHNOLOGY REVIEW

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE MASTER

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Latitude: 37.3711462558517
Longitude: -121.90971493721
Case Type: Cleanup Program Site
Case Worker: MBR
Local Agency: Not reported
RB Case Number: 43S0985
File Location: Regional Board
Potential Media Affected: Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor

Potential Contaminants of Concern: * Chlorinated Solvents - PCE

Site History: Background The site is located at 413 Reynolds Circle located in the Reynolds Circle Industrial Park in San Jose, California. The site is currently vacant and land use in this area is primarily industrial and commercial. A dry cleaner formerly occupied the site and past dry cleaning operations contaminated site soils and groundwater with solvents. Site Investigation Since 2003, environmental investigations have been conducted at the site to determine the amount of solvent contamination present in soil and groundwater. These investigations indicate that the top one to three feet of soil is contaminated with the solvent tetrachloroethene (PCE) and groundwater underneath the site contains the solvent trichloroethene (TCE). Based on concentrations of TCE detected in groundwater and the groundwater flow direction, groundwater contamination is centered in 413 Reynolds Circle and 414 Roberson Lane and does not extend beyond the property boundaries.

Status Date: 06/06/2018
Case Worker: TLF
RB Case Number: Not reported
Local Agency: SANTA CLARA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 2017-02f
Potential Media Affect: Not reported
Potential Contaminants of Concern: Benzene, Diesel, Ethylbenzene, Gasoline, Toluene, Xylene
Site History: The site is currently occupied by an 8,000-square foot two-story office building and associated parking lot. The site is in a mixed commercial/industrial area. A service station operated on site from approximately 1961 to 1985. Site investigation included approximately 15 soil borings, 3 monitoring wells, and 3 soil vapor probes. There is no record of UST removal; however, geophysical surveys performed at the site in June 2005 and August 2017 did not identify anomalies that would suggest a UST remains. Constituents of concern have been detected in soil and groundwater on site above environmental screening levels (ESLs). The maximum historical concentration observed in soil was 837 parts per million (ppm) TPH as diesel. The maximum concentration observed in groundwater during the November 2017 monitoring event was 761 parts per billion (ppb) TPH as diesel. The DEH has determined that the plume is stable or decreasing, and residual contamination and associated risks are expected to reduce with time.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERS Description: Chemical Storage Facilities

Violations:

Site ID: 394144
Site Name: GREENWASTE RECOVERY
Violation Date: 03-28-2014
Citation: HSC 6.7 25290.1(e) - California Health and Safety Code, Chapter 6.7, Section(s) 25290.1(e)

Violation Description: Failure to maintain the interstitial space under constant vacuum, pressure, or hydrostatic such that a breach in the primary or secondary containment is detected before the liquid or vapor phase of the hazardous substance stored in the UST tank is released into the environment. (Product Tight)

Violation Notes: Returned to compliance on 04/29/2014. The Veeder Root 420 annular sensor on the 10,000 gallon B-20 tank was inoperable and unable to trigger audible/visual alarm during testing. Following maintenance and cleaning of the sensor from the service technician the sensor was tested operational by dipping it in water. This is the 3rd year where maintenance and cleaning was required to initiate proper operation of the sensor. Make sure all UST monitoring equipment that is continuously monitoring secondary containment areas is capable of detecting a leak and signaling an audible/visual alarm.

Violation Source: CERS

Site ID: 394144
Site Name: GREENWASTE RECOVERY
Violation Date: 12-18-2017
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: Failure to describe in the SPCC Plan facility security measures including: 1. How access to the oil handling, processing, and storage areas is secured and controlled. 2. How master flow and drain valves are secured. 3. How unauthorized access to starter controls on oil pumps is prevented. 4. How out-of-service and loading/unloading connections of oil pipelines is secured. 5. The appropriateness of security lighting to both prevent acts of vandalism and assist in the discovery of oil discharges.

Violation Notes: Returned to compliance on 01/17/2018. Section 5 of SPCC Plan does not address the appropriateness of security lighting to both prevent acts of vandalism and assist in the discovery of oil discharges.

Violation Description: Failure to address in the SPCC Plan the type of oil and storage capacity for each fixed container, and either the type of oil and storage capacity for each mobile or portable container, or an estimate of the potential number of mobile or portable containers, the types of oil, and anticipated storage capacities.

Violation Notes: Returned to compliance on 06/08/2017. THE SPILL PREVENTION CONTROL AND COUNTERMEASURES (SPCC) PLAN INVENTORY CAPACITY OF TWO ABOVEGROUND STORAGE TANKS CONTAINING MOTOR OIL AND HYDRAULIC FLUID INSIDE THE MAINTENANCE SHOP DID NOT HAVE THE RIGHT CAPACITIES LISTED ON THE SPCC INVENTORY STATEMENT. THE INVENTORY STATEMENT LISTED THE ABOVEGROUND TANKS AS 480 GALLONS WHEN THE TANKS WERE ACTUALLY 360 GALLONS IN CAPACITY. REVERIFY ALL FACILITY ABOVE GROUND TANK CAPACITIES AND

Violation Date: 03-17-2017
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 05/12/2017. A microbial wastewater treatment system is used to remove used oil from the wastewater generated from engine compartment and gear hub degreasing, truck cleaning, and shop parts washing/degreasing activities. Current practice is to dispose of the sludge waste (the sediment sludge in dewatering hoppers) as non-hazardous trash. A hazardous waste determination using generator knowledge or laboratory testing must be conducted on the sediment sludge to determine if they hazardous waste criteria or are G used oil. G If determined to meet hazardous waste criteria or determined to be used oil, it must be collected, managed, and disposed of in accordance with all applicable hazardous waste requirements. Provide documentation of the hazardous waste determinations to HMCD for review.

Violation Date: 03-16-2017
Citation: HSC 6.7 25291(a)(1) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(a)(1)

Violation Description: Failure to construct, operate, and maintain primary containment as product-tight.

Violation Notes: Returned to compliance on 05/12/2017. Wetness and fuel residue was observed in the UDC pan for the dispenser associated with tank G T1G and monitored by the Incon TS-1000 monitoring console and minor leaks of renewable diesel were observed along the piping located within the dispenser. Upon initial investigation, the service technician stated that he believes the minor leaks may be coming from a faulty solenoid and several broken o-rings. Continue to investigate the source of the leaks and provide a scope of work plan to HMCD as to how the leaks will be corrected. If a repair is needed, a retrofit permit from our office may be necessary.

Site Name: GREENWASTE RECOVERY
Violation Date: 03-20-2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, - 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, - 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: OVERFILL PREVENTION EQUIPMENT WAS NOT INSPECTED AT LEAST ONCE ON OR BEFORE OCTOBER 13, 2018. THE OVERFILL PREVENTION EQUIPMENT WAS TESTED JANUARY 29, 2019. NEXT INSPECTION IS DUE 36 MONTHS FROM OCTOBER 13, 2019 (BEFORE OCTOBER 13, 2021).

Site ID: 394144
Site Name: GREENWASTE RECOVERY
Violation Date: 03-16-2017
Citation: HSC 6.7 Multiple - California Health and Safety Code, Chapter 6.7, Section(s) Multiple
Violation Description: UST Program - Administration/Documentation - General - Must include violation description, proper statute and regulation citation in the "comment" section.
Violation Notes: Returned to compliance on 05/12/2017. Facility failed to provide a means of monitoring for water intrusion and for removing the water by the owner or operator. ---- A large quantity of oily sludge, asphalt sediment, and other dark brown/black sludge and sediment types was observed in the piping sump. The facility operators stated that washwater infiltrating the sump from the nearby vehicle washing station has been an ongoing issue. Upon removing the tank annular sensor from UST G T1,G it was discovered that approximately 13.5 inches of liquid was accumulating in the tank annular space. No fuel alarm was noted from the past year, because the sensor was lifted above the liquid level (see violation T120). The liquid was then removed from the tank annular space by the service technician. The liquid was observed to be clear in color and of similar viscosity to

Eval Notes: On-site to witness UST secondary containment (SB989) testing conducted by Advanced Fuel Services, Inc. Service Technician Michael Stromecki. Confirmed that Mr. Stromecki has all required certifications. The following components are subject to SB989 testing and were tested on 3/29/2018: - two tanks (T1; T2) - two under dispenser containment (UDC) pans (one for T1; one for T2) Note that both UST systems have single-walled, safe suction piping pursuant to 23CCR 2636(a)(3). 10G Hg of vacuum was pulled on both tank annular spaces. The tank annular spaces held vacuum for over 60 minutes and passed SB989 testing. Note that tank T1 pulls vacuum at a much slower rate than tank T2. Initially, the service technician believed that the T1 tank annular space was failing testing, but further evaluation confirmed that the tank annular space just needed more time to reach equilibrium at 10" Hg. Both UDC pans were tested with the Incon Sump Test system and immediately failed [Truncated]

Eval Notes: On-site to shadow DTSC Environmental Scientist, Brennan A. Ko-Madden, during his records review and universal waste handling inspection report issuance. At GreenWaste Environmental Compliance Officer, Joseph Lovelace's request, a limited follow-up inspection regarding the wastewater treatment system and discussion of un-corrected hazardous waste violations issued in the HMCD Official Notice of Inspection Report on 3/29/2017 was conducted after Mr. Ko-Madden completed his inspection. A visual inspection of the treatment system was conducted to verify that the treatment system is no longer treating used oil, oil mixed with water, or oil/water separation sludges, as stated in the return to compliance documentation. Per Mr. Lovelace, all engine, gear hub, and equipment/parts washing and degreasing activities were suspended right after the 3/29/2017 inspection report issuance and the only activities currently conducted in the wash pad area are exterior vehicle washing to [Truncated]

BAY AREA EQUIPMENT REPAIR (Continued)

S104572192

Eval Notes: Underground storage tank (UST) system repair and retrofit construction inspection. Both USTs have been converted to "safe suction" product piping in conformance with 23 CCR 2636(a)(3). This was verified by witnessing the inrush of air and loss of fuel in the lines into the tanks as prime was lost when the plugs on the check valves located directly below the suction pumps in the fuel dispensers were opened. The suction lines between the tank tops and the under dispenser containment (UDC) sumps are now exempt from requirements to be equipped with secondary containment (and interstitial monitoring). The piping penetrations in the UDC sump for the East UST (10,000 gallon tank) have been repaired using split repair boots in accordance with the approved project plans. The sump was tested today by UST Service Technician Eddie Martinez of Advanced Fuel Services, Inc. using the Incon TS-ST5 accelerated hydrostatic test apparatus and passed. Mr. Martinez has current California [Truncated]

Eval Type: Routine done by local agency

Eval Notes: While on-site to conduct a routine hazardous waste inspection, it was observed that the facility operates an on-site hazardous waste treatment system to treat hazardous waste generated from truck, sweeper, engine compartment, and gear hub washing and degreasing and parts/equipment washing and degreasing. The washing and degreasing activities are conducted in the concrete-bermed wash pad area located in the center of the facility and primarily consists of used oil, water, oily wastes, and food wastes. Water is primarily used for washing/degreasing activities, but on occasion Clearblu Env Ecoblast Degreaser is mixed with water for dirtier washes. The wastes flow into the treatment system through the sumps and lift stations located throughout the wash pad area. Absorbent G snakesG and G pigsG surround the sumps and lift stations to collect larger metal fines and debris prior to the wastes entering the treatment system. When spent, the absorbent is managed as hazardous waste. [Truncated]

Eval Date: 12-18-2017

Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: NOTES TO FACILITY: 1) SPCC Plan does not include an attachment to record oil-handling personnel training and annual briefings. Strongly recommend including a training record attachment with the Plan [40CFR 112.7(f), HSC 25270.4.5(a)]. 2) If the facility intends to begin using the wastewater treatment system as a used oil/oily water PBR treatment system again, then the PBR tanks would become subject to APSA. Ensure that the SPCC Plan is amended to include the treatment tanks and a full SPCC Plan is prepared and implemented within 6 months following the amendment [40CFR 112.6(a)(2)(ii), HSC 25270.4.5(a)]. On-site for a routine aboveground petroleum storage act (APSA) inspection with Hazardous Materials Specialist I, Robin Ward. Facility walk through and initial records review began on 12/13/2017 and was completed along with the inspection report issuance on 12/18/2017. Observed the following petroleum tanks and containers subject to APSA: (SW Corner of Bldg D - Oil [Truncated])

Local Case Number: 06S1E32D02f
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: 1985 In later reports, it is noted that 4 monitoring wells (2 groundwater and 2 vadose) were installed in June. Documentation of the well installation were not found in the file. 1989 In October, the underground storage tanks (USTs) were precision tested and a gasoline and a diesel UST failed. 1990 In July, the 4 USTs and piping were removed and replaced at the site. The USTs were reported to be in good condition upon removal. 12 soil samples were collected from approximately 11 feet below the ground surface (ft bgs) and were reported to contain low to non-detectable concentrations of the constituents of concern (COCs). It was reported that a monitoring well (MW3) was destroyed during the UST removal activities. Based on the presence of odors beneath the unleaded and diesel USTs, additional soil was removed to approximately 20 feet. The remainder of the excavation was deepened to 15 feet to accommodate the new USTs. 2 confirmation soil samples (UV1 and DC1) were collected and were not reported to have concentrations of the COCs present above the laboratory reporting limits. Approximately 600 cubic yards of soil were removed. Following removal of the piping, 4 soil samples were collected from 2-3 ft bgs and were reported to have maximum concentrations of 10,000 parts per million (ppm) Total Petroleum Hydrocarbons (TPH) as Gasoline (TPHg), 95 ppm Benzene, 690 ppm Toluene, 180 ppm Ethylbenzene, and 950 ppm Xylenes in sample P2. Sample P2 was collected beneath the northeastern fuel dispenser. Based on odors in this area, an exploration hole was dug and the impacted soil appeared to extend to at least 8 ft bgs. No soil samples were collected and the soil was replaced in the excavation. Approximately 50 cubic yards of soil were removed. Piping was installed parallel and adjacent to each pump island such that it could possibly be used in the future for remediation. The soil generated during this work was stockpiled onsite. The ultimate disposition of the soil was not reported. 1992 In May, the Responsible Party filed for bankruptcy. 1993 In January, 1 monitoring well (MW3) was installed to 45 ft bgs and 6 soil borings (B1 through B6) were also advanced onsite. 19 soil samples were collected and reported to contain low to non-detectable concentrations of the COCs. 3 monitoring wells (MW1 through MW3) were sampled and reported to have maximum concentrations of 0.51 parts per billion (ppb) Benzene, 1.4 ppb Toluene, and 0.54 ppb Xylenes. The detections were reported for the sample collected from well MW2 west of the USTs. 1994 In

U001603057

December, periodic groundwater monitoring commenced at the site. No work was conducted at the site between 1996 and 1999. 1999 In October, the dispensers were replaced at the site. 5 soil samples (S1 through S5) were collected and reported to contain a maximum concentration of 9,000 ppm TPH as Diesel (TPHd) in sample S4; all other COCs were not reported to be present above the laboratory reporting limits. Sample depths were not reported. In September, the monitoring wells were sampled and reported to contain up to 3.1 ppb Methyl tert-Butyl Ether (MtBE); all other COCs were not reported to be present above the laboratory reporting limits. No work was conducted at the site between 2000 and 2001. 2001 In August, an enhanced leak detection test was run on the UST system at the site and the system failed. It reported that there were vapor releases occurring in the area of the fill/vapor recovery risers. In December, 9 geoprobe borings (GB1 through GB9) were advanced onsite for the collection of grab groundwater samples. 9 grab groundwater samples were collected and reported to contain maximum concentrations of 63 ppb TPHg, 4.1 ppb Ethylbenzene, 24 ppb Xylenes, and 11,000 ppb MtBE. The maximum MtBE concentration was reported in the sample collected from boring GB3 located near the southwestern corner of the UST excavation. 2002 In January, 3 soil borings (BH1 through BH3) and one well (MW4) were advanced onsite. 8 soil samples were collected and reported to have maximum concentrations of 1.7 ppm MtBE and 0.43 ppm Tert Butyl Alcohol (TBA). No work was conducted at the site between 2002 and 2004. Periodic groundwater monitoring recommenced in 2004. 2004 In September, 7 borings (EB1, EB2 and EB4 through EB8) were advanced to 25 ft bgs onsite. In October, 1 boring (EB3) and 1 well (STMW5 later known as MW5) were advanced offsite. 49 soil samples were collected and reported to contain maximum concentrations of 15 ppm TPHg, 15 ppm MtBE and 0.63 ppm TBA. The maximum TPHg and MtBE were reported in the soil sample collected at 20 ft bgs in boring EB2 located near the southwestern corner of the UST excavation. Groundwater was encountered in borings around 20 ft bgs. EB3 was advanced to 45 ft bgs near the southwestern corner of the UST excavation for the collection of a deeper groundwater sample; which was not reported to have concentrations of the COCs present above the laboratory reporting limits. 2006 In May, containment beneath 4 dispensers and piping were replaced at the site. 8 soil samples were collected and reported to contain maximum concentrations of 230 ppm TPHd and 17 ppm Lead. Between 2006 and 2008 the only ongoing activity was groundwater monitoring. 2008 In February, the wells were inspected using downhole submersible cameras. Based on the inspection, it was concluded that wells MW1 and MW2 are screened in the shallow portion of the water-bearing zone, wells MW4 and MW5 are screened in the middle portion of the water bearing zone and well MW3 is screened in the deeper portion of the water bearing zone. 2010 In March, 4 soil borings (SB1, SB3 and SB4) were advanced onsite. Boring SB2 was not advanced due to previous sampling in close proximity. 3 soil samples were collected and were not reported to have concentrations of the COCs present above the laboratory reporting limits. 4 grab groundwater samples were collected and reported to have maximum concentrations of 1,900 ppb TBA; all other constituents were not reported to be present above the laboratory reporting limits. The maximum TBA concentration was reported in the sample collected from SB4 advanced between MW2 and MW4. It was later reported that during the March investigation, groundwater was encountered around 40 ft bgs and quickly rose to 20 ft bgs,

indicating confined groundwater conditions. 2012 In March, 6 soil borings (B1, B2, B4 through B6 and B8) were advanced to 44.5 ft bgs. 2 other planned borings were not advanced due to utilities. 19 soil samples were collected and were only reported to have 3 detections of TBA (maximum concentration of 0.099 ppm at 25 ft bgs in B1); all other COCs were not reported to be present above the laboratory reporting limits. TBA was detected in samples collected in borings B1 and B8. Boring B1 was advanced near the UST excavation and boring B8 was advanced downgradient of the pump islands. 3 deeper monitoring wells (MW6 through MW8) were installed to depths of 46 and 50 ft bgs. The final depth of the wells was based on drill rig refusal. 3 soil samples were collected from the soil-groundwater interface and were not reported to have concentrations of the COCs present above the laboratory reporting limits. Following installation, the wells and all site wells were re-surveyed and the new wells were added to the groundwater monitoring program. An attempt was made to collect depth discrete samples from the site wells using a Solinst Discrete Interval Sampler. 2 samples were collected from wells MW1 through MW5 and 3 samples were collected from wells MW6 through MW8 for a total of 19 grab groundwater samples. MtBE concentrations ranged from non-detect to 1.7 ppb and TBA concentrations ranged from non-detect to 1,800 ppb. MtBE was only reported for samples collected from the shallower wells (MW1 through MW6). During drilling, a shallow perched groundwater zone was observed at 13 ft bgs in a clayey sand lense above an underlying clay layer. An attempt was made to collect grab groundwater samples in the borings of this shallow groundwater, but insufficient groundwater entered the boreholes. An underlying groundwater zone (Zone A) extends from about 15 to 44 ft bgs and appears to be semi-confined. The underlying Zone B (clayey gravelly well-graded sand layer from 49-50 ft bgs) is confined and is the most permeable zone observed beneath the site. 2013 In January, 2 well pairs (MW9 A/B and MW10 A/B) were installed to 35 and 55 ft bgs. The new wells were added to the groundwater monitoring program. 2014 In November, 2 soil boring pairs (SB1 A/B and SB2 A/B) were advanced across the street in a parking lot to depths of 48 and 60 ft bgs for the collection of grab groundwater samples. 4 grab groundwater samples were collected and only the sample SB1B (48 ft bgs) was reported to contain 0.7 ppb MtBE; the other samples did not have detections of MtBE or TBA. 2015 In March, the final groundwater monitoring event was conducted and reported maximum concentrations of 1.6 ppb MtBE and 520 ppb TBA in wells MW3 and MW5, respectively.

Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Not reported
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 157826
Site Name: Summit Steel Works
Violation Date: 09-16-2019
Citation: 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)
Violation Description: Failure to keep records of any test results, waste analyses, or other determinations made in accordance with section 66262.11 for at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal.
Violation Notes: Returned to compliance on 10/16/2019. Facility currently disposes of solids and sludge from the plasma cutter in the municipal trash. Bob French, Maintenance Manager, indicated that hazardous waste testing was performed on this waste stream and results supported a non-hazardous waste determination. Locate analytical test results or re-evaluate/test the waste stream. Additionally, facility performed analytical testing of grinding dust and results indicated it was hazardous waste zinc. Facility unable to locate these analytical test results. Locate analytical test results.

Citation: 22 CCR 12 66262.23(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.23(a)
Violation Description: Failure to properly complete the Uniform Hazardous Waste Manifest.
Violation Notes: Returned to compliance on 10/16/2019. The following uniform hazardous waste manifests were improperly completed: 006489624SKS shipped on 4-10-2018 (Latex Paints), - inaccurate shipping description. Facility maintenance manager, Bob French, confirmed that latex paint has not been shipped off in these years. Waste stream is likely used antifreeze. All manifests (eg. 006489620SKS shipped on 4-10-2018) for used oil used a shipping description that does not describe used oil and instead describes "NA3082, Hazardous waste, Liquid, N.O.S., (lead, benzene), 9, PG III". Use the shipping name "Non RCRA hazardous waste liquid (used oil)" on all future shipments.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERS Description: Chemical Storage Facilities

Violations:

Site ID: 78056
Site Name: TUNG TAI GROUP
Violation Date: 03-01-2017
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 03/02/2017. HMBP inventory submitted on CERS did not include 1 x 55 gal. motor oil, 1 x 55 gal. hydraulic oil, and 1 x 250 gal. diesel.
Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 78056
Site Name: TUNG TAI GROUP
Violation Date: 03-01-2017
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1
Violation Description: Failure to notify property owner in writing that the business is subject to the business plan program and has complied with its provisions.
Violation Notes: Returned to compliance on 03/02/2017. A property owner notification was not made.
Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-01-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Facility manages oily water from scrap chips draining out and then places the oily water/coolant waste into a 250 gallon stainless metal tote. The oily water waste is hauled by Excel Environmental Services. The last pick-up was 1-11-17 (720 gallons). There is also oily water collected during rain events around the facility. Discussed the management of metal fines. Facility management allegedly will inspect and review shipments of scrap waste from machine shops and does not accept metal fines. Discussed the 100 micron rule (dust size particles) in California. It was noted that some of the yard showed some visible signs of metal fines and/or normal dust/debris from operations, management indicated the material was dirt. Also discussed the saturation of sawdust and oily absorbent materials when soaking up oil drips and small spills. Saturated absorbents are to be reviewed and a hazardous waste determination made as needed. The 1 x 250 gallon

Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-29-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Facility manages water based paints with take back/Paint Care program via Clean Harbors. 1 x 55 gallon drum of waste thinner is stored onsite in the haz cabinet/shed on the back end of property.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Diesel, Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
Site History: The CCTE property is currently occupied by a Peterbilt truck sales yard and service shop. A total of five USTs were removed from the site between 1986 and 1995. The site occupies approximately 3.2 acres of land. Due to the relatively large distances between former UST areas at the site, three general areas are designated and discussed below. One 500 gallon waste oil UST was removed from Area A by Petrotek in 1986. Upon removal of the UST, Chips Environmental Consultants, Inc. collected and tested a soil sample from a depth of 8 feet below the former UST. The sample had a waste oil concentration of 6,100 mg/kg. In 1990 The Environmental Construction Company collected a soil sample at a depth of 10.5 feet below grade at the location of the former UST. The sample contained oil and grease at a concentration of 340 mg/kg. The sample was also tested for diesel (<5 mg/kg) and for benzene, toluene, ethyl-benzene, and xylenes, and halogenated organic compounds (results all <5 mg/kg). Excavation at the location of the former waste oil UST was recommended at that time. In 1992 Applied Geosciences and Aplan Construction excavated soil at this location. The final dimensions of the excavation were approximately 14 feet by 17 feet with a depth of approximately 12 feet (approximately 105 bank cubic yards). The excavated soil was disposed of at Vasco Road Landfill in Livermore, California. Applied Geosciences concluded that significant concentrations of hydrocarbons were not present to the

1000387145

south, west, and north sides of the excavation. The eastern excavation sidewall contained concentrations of oil and grease at 20,000 mg/kg near the property line. However, Highway 101 was adjacent to that location, and thus the excavation was terminated. In December 1993, Applied Remediation Company installed a groundwater monitoring well (MW-1) in the estimated down gradient direction, west of the former waste oil UST. In January 1996, Applied Remediation Company installed two additional monitoring wells, MW-3 and MW-4, just outside the former excavation limits. MW-3 was installed on the easterly side and MW-4 was installed on the north side of the excavation. Two USTs were removed from Focus Area B by Petrotek in 1986. The USTs were a 1,000 gallon gasoline UST and a 8,000 gallon diesel UST. One 1,000 gallon gasoline UST was removed in 1986. Upon removal of the UST, Chips Environmental Consultants, Inc. collected and tested a sample at 10 feet below grade at the center of the former UST. The sample had a TPHg concentration of 150 mg/kg. In 1990 The Environmental Construction Company collected a soil sample from this location at a depth of 10.5 feet. The sample contained gasoline at a concentration of 340 mg/kg. The sample was also tested for diesel (<5 mg/kg), and for benzene, toluene, ethyl-benzene, and xylenes, and halogenated organic compounds (HVOC) (results all <5"mg/kg). Excavation at the location of the former gasoline UST was recommended. In 1992 Applied Geosciences and Apland Construction excavated at the location of the former 1,000 gallon gasoline UST. The final dimensions of the excavation measured approximately 13 feet by 22 feet with a depth of approximately 12 feet (approximately 127 bank cubic yards). The excavated soil was disposed of at Vasco Road Landfill in Livermore, California. In December 1993, Applied Remediation Company installed monitoring well MW-2 in the estimated down gradient direction, northwest of the former gasoline UST. Historical groundwater monitoring chemical data are presented in Tables 3 - 6. The groundwater monitoring data indicate the absence of gasoline and related compounds (BTEX) over a period spanning approximately 8 years. Based on a letter from Ms. Michelle Martin of the SCVWD, sampling at MW-2 was discontinued in 2001. One 8,000 gallon diesel fuel UST was removed in 1986. Chips Environmental Consultants, Inc., collected one sample from under each end of the former UST, at depths of 14.0 and 14.5 feet. The samples did not contain TPHd above detection limits (<0.1 mg/kg). In 1990 The Environmental Construction Company collected a soil sample at this location from a depth of 15 feet. The sample did not contain TPHd above the detection limit (<5 mg/kg). Excavation at the location of the former diesel fuel UST was not recommended at that time. In December 1992, Applied Remediation Company installed monitoring well MW-2 in the estimated down gradient direction, northwest of the former diesel UST. Subsequent testing through 2001 indicated non-detection of gasoline and BTEX compounds and low levels (maximum of 200 "g/l diesel. Based on a letter from Ms. Michelle Martin of the SCVWD, sampling at MW-2 was discontinued in 2001. One 10,000 gallon gasoline UST and one 10,000 gallon diesel UST were removed by D & D Management Consultants in October 1995. The gasoline fuel UST was removed in 1995. Groundwater was present in the UST pit at a depth of 10.5 feet below grade. A water sample was collected from the pit and analyzed by Priority Environmental Labs for gasoline (17,000 "g/L). Soil samples were collected from the soil-water interface in the pit, from below the piping, and from below the former dispensers. The sample exhibited gasoline concentrations ranging from <1 to 240

1000387145

mg/kg, with the highest detection occurring under the fuel dispenser. On November 2, 1995, D & D Management Consultants, Inc. excavated approximately 20 cubic yards of contaminated soil from below the gasoline (and diesel) fuel dispensers. Only limited excavation could be completed as the former fuel dispensers were adjacent to the building (see Figure 2). Four soil samples were collected from the excavation at 8 feet below grade and contained gasoline ranging from 15 to 280 mg/kg. In May 1997, Applied Remediation Company conducted a soil vapor survey for TPHg (gasoline) and BTEX compounds, using vapor adsorptive Gore-Sorbers. The hydrocarbon plume appeared to be concentrated at the building wall, adjacent to the former fuel dispensers where the former excavation was terminated. The hydrocarbon plume extends under the building structure. Based on the results of the soil vapor survey, additional borings were drilled and one additional monitoring well (MW-5) was installed inside the building in February 1998. Three additional soil borings were drilled in December 1998; two of the borings were converted to monitoring wells MW-6 and MW-7. Historical groundwater monitoring data are presented in Tables 3 - 6. The data indicate that the most elevated concentrations of TPHg and BTEX compounds occur at MW-5, inside the building. Lesser concentrations of hydrocarbons are present at MW-6 and MW-7. The plume appears relatively compact, consistent with the documented release from the former dispensers, where excavation was not feasible. One 10,000 diesel fuel UST was removed in 1995. Groundwater was present in the UST pit at a depth of 10.5 feet below grade. A water sample was collected from the pit and analyzed by Priority Environmental Labs for TPHd; however none was detected (<50 "g/L). Soil samples collected from the soil-water interface in the groundwater-filled pit and from below the piping dispensers contained diesel ranging from <1 mg/kg to 43 mg/kg. Soil excavation was conducted at the location of the former dispenser on November 2, 1995, in conjunction with the former gasoline dispenser excavation (see above discussion). The four previously described soil samples indicated one detection of diesel at a concentration of 130 mg/kg (the other three samples were <1.0 mg/kg). As described above, Applied Remediation Company subsequently conducted a soil vapor survey (May 1997). The survey was followed by soil borings and well installation, also described above.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-02-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Emergency Procedures were updated today by Robert Raymond. Important Note: the waste oil and fuel filters include paper filters and are currently marked as hazardous waste. Consolidated manifests reviewed by CleanTech do not indicate a "waste code" appropriate for this waste stream. Please indicate to this agency the disposal method being used for the waste oil and fuel filters. Recommendation: Segregate waste aerosols and manage as universal waste where appropriate.

activities that were performed from October through December 2015 and activities projected to occur during the first quarter of 2016 (January through March). During the fourth quarter 2015, activities performed included groundwater monitoring and presenting the results, additional investigation to delineate the vertical extent of impacts by volatile organic compounds at monitoring well MW-10, and the submittal of the revised RCRA Facility Investigation Addendum.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 05/24/2016
Comments: No activities were reported for the quarter in the Quarterly Progress Report, First Quarter 2016, since semi-annual groundwater monitoring is performed and the results are presented in the reports submitted for the second and fourth quarters of the year.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 10/10/2016
Comments: The Quarterly Progress Report, Second Quarter 2016, describes activities that were performed during the second quarter 2016 and activities projected to occur during the third quarter of 2016. Activities performed during the second quarter 2016 included groundwater monitoring and the finalization of the Human Health Risk Assessment Workplan. Activities for the third quarter 2016 include the preparation of the Human Health Risk Assessment Report and the finalization of the RCRA Facility Investigation Report Addendum and Cone Penetrometer Testing Report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 11/07/2016
Comments: The activities reported for the third quarter of 2016 were the submittals of the Revised Second Quarter 2016 Groundwater Monitoring Report, the Revised Human Health Risk Assessment Workplan, and the Human Health Risk Assessment Report. No groundwater monitoring occurred during the quarter since the semi-annual groundwater monitoring is performed and the results are presented in the reports submitted for the second and fourth quarters.

Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 02/16/2017
Comments: The Quarterly Progress Report, Fourth Quarter 2016, describes activities that were performed from October through December 2016 and activities projected to occur during the first quarter of 2017 (January through March). During the fourth quarter 2016, activities performed included groundwater monitoring and presenting the results, and the submittal of the Human Health Risk Assessment Report

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 01/14/1993
Comments: The report documents and presents the results of a site assessment that was performed to determine if soil had been impacted at the former aboveground storage tanks area. The sampling results indicated the soil was impacted with mineral spirits and petroleum hydrocarbons from the surface to the groundwater table (approximately 20 feet below ground surface).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 05/03/2017
Comments: The quarterly progress report describes activities that were performed during the first quarter of 2017. No groundwater monitoring activities were reported for the quarter since groundwater monitoring is performed during the second and fourth quarters of the year. The Corrective Measures Study Workplan was submitted during the quarter.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 12/14/2017
Comments: DTSC approval of the Quarterly Groundwater Monitoring Report. The results were consistent with the previous results. The next Quarterly Monitoring Report is due to DTSC by October 30, 2017.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 09/12/2018
Comments: DTSC approved the quarterly progress report that describes activities that were performed during the third quarter of 2017. DTSC have minor comments on the Report that should be corrected in future reports.

Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 06/30/2015
Comments: The 2014 4th Quarter Progress Report describes the activities that were performed during the quarter and presents the next quarter activities. During the 4th quarter, Safety-Kleen collected groundwater samples from all nine monitoring wells and presented the results as part of the semiannual monitoring program for the site. Several volatile organic compounds (PCE, TCE, and CFC) were detected that have not been detected in groundwater since 2001 to 2002. The monitoring wells were resampled and the results were consistent with the historical detections. It was determined that residual equipment contamination resulted in a false positive detections and the Standard Operating Procedures for decontaminating equipment were updated to prevent this from reoccurring. For the next quarter (1st Quarter 2015), Safety-Kleen will conduct soil vapor/indoor air sampling. No groundwater monitoring activities are planned for the next quarter.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 10/22/2015
Comments: The Second Quarter 2015 Progress Report describes activities that were performed from April through June 2015 and activities projected to occur during the third quarter of 2015 (July through September 2015). During the second quarter 2015, activities performed included groundwater monitoring and presenting the results, submittal of the second soil vapor/indoor air sampling report, discussions with DTSC about additional investigation around monitoring well MW10, and preparation of a risk assessment work plan.
