Report Transmittal
Phase I Environmental Site Assessment
1535 and 1575 Industrial Avenue
San Jose, California 95112

Dear Mr. Accame:

This report documents a Phase I environmental site assessment for two adjoining parcels of developed land at 1535 and 1575 Industrial Avenue in San Jose, California (the site). If you have any questions about the report or require additional information, please do not hesitate to contact the undersigned at (949) 296-0977 Ext. 102 or at pmiller@avocetenv.com. As always, Avocet Environmental, Inc. appreciates the opportunity to be of service to Panattoni Development Company.

Respectfully submitted,

AVOCET ENVIRONMENTAL, INC.

EXECUTIVE SUMMARY

Avocet Environmental, Inc. (Avocet) has conducted a Phase I environmental site assessment (ESA) for two adjoining parcels of developed land, totaling approximately 3.66 acres¹, at 1535 and 1575 Industrial Avenue in San Jose, California (the site). (Avocet) conducted the Phase I ESA on behalf of Panattoni Development Company, Inc. (Panattoni) for decision-making in the context of Bayshore North Offsite, LLC purchasing and redeveloping the site for commercial/industrial purposes. Avocet conducted the Phase I ESA in general accordance with the scope and limitations of ASTM International (ASTM) Standard E1527-13. The primary purpose of the Phase I ESA is to evaluate the history and current condition of the site and surrounding properties in the context of the use, storage, handling, and disposal of potentially hazardous chemicals or wastes that could have adversely impacted the underlying soil and groundwater. Based on the site's history and current condition, the possible existence of "Recognized Environmental Conditions" (RECs), "Controlled RECs" (CRECs), and "Historical RECs" (HRECs), as defined in ASTM Standard E1527-13 (ASTM, 2013), and "other environmental features" (OEFs) has been evaluated. For Phase I ESA purposes, OEFs are environmental conditions that do not meet the ASTM definition of a REC, CREC, or HREC but which warrant mention for visibility purposes in the context of acquiring and redeveloping the site. OEFs do not necessarily require any action to address their presence or condition but are identified for the sake of thoroughness and completeness. The site location is shown in Figure 1 and an aerial photograph of the site and vicinity is presented in Figure 2. A larger-scale aerial photograph of the site is presented in Figure 3.

SITE OVERVIEW

Prior to being developed in the 1950s, the subject site was agricultural, as was the surrounding area. Based on the available aerial photographs, the site was planted with grass or other ground crops, although there were trees on some of the nearby parcels. The northernmost of the two parcels that comprise the site, at 1575 Industrial Avenue, was developed first, in or before 1956, and the southern portion was first developed in or before 1963. The original buildings are still present at the site, although most have been significantly remodeled and an additional building was added as recently as 2010. There have been numerous tenants at the site in the past, often multiple tenants on the same parcel; however, the site has been used primarily for trucking and trucking-related purposes, notably including freight forwarding and truck repair. Although trucking and related operations predominated, other businesses that occupied the site in the past include various contractors, an ice cream distribution company, and an oil company (Adona Oil Company/Monterey Bay Oil Company). The oil company is listed as occupying 1535 Industrial Avenue in 1986 but apparently for a short time only. It is not clear whether the oil company was in the oil exploration, or services, or distribution business. If the latter, there are no indications it built or installed aboveground storage tanks (ASTs) to store its products. The two parcels that comprise the site are currently owned by Frank Mangione, who also owns and manages the FJM

¹ The acreages and measurements in this report are approximate only and have not been independently verified by Avocet unless specifically indicated otherwise.

Truck and Trailer Center. Parts of the northern parcel, at 1575 Industrial Avenue, are leased to Carpenter Rigging and Exploration Geoservices, but the FJM Truck and Trailer Center (FJM Trucking) occupies the remainder of the site. Carpenter Rigging sells wire rope, slings, shackles, and other rigging equipment to crane operators, contractors, and the like and also assembles custom rigging equipment using standard components. Exploration Geoservices is a hollow-stem auger drilling company.

The southernmost of the two parcels, at 1535 Industrial Avenue, features three buildings and is occupied entirely by the FJM Truck and Trailer Center. The three buildings include an office building, a warehouse with areas for customer service and truck maintenance, and a truck repair shop. Operations and features of potential environmental interest include the use of relatively large quantities of automotive fluids, including engine oil and hydraulic fluid, the generation of related hazardous wastes (i.e., waste oil and the like), a steam clean area, parts cleaning, and engine repair operations. Engine oil, hydraulic fluid, and other automotive fluids are stored in containers ranging from less than 1 gallon to mobile, multi-compartment ASTs with capacities of several hundred gallons. Most, if not all, of the ASTs are believed to be double-walled; however, the smaller containers are stored with and without secondary containment. The steam clean area features a concrete pad sloped toward a blind sump equipped with a float-actuated sump pump. The sump pump discharges to an aboveground "sludge tank" where solids are allowed to settle before being removed and containerized in 55-gallon drums. The aqueous phase gravity flows to an aboveground oil/water separator (OWS). Floating oil and grease are removed from the top of the OWS and drummed, and solids that settle in the OWS are also removed and drummed. Avocet observed numerous 55-gallon drums around the steam clean slab, some labeled as hazardous waste and others not labeled at all. Two parts cleaners were observed in the main maintenance shop: a tub-type mounted over a 30-gallon drum and a static aqueous spray cleaner. Reportedly only water-based solvents are currently used for parts cleaning, but organic solvents were used in the past. In addition to the features observed by Avocet and noted above, two underground storage tanks (USTs) and associated dispensers and product piping were removed from separate excavations at 1535 Industrial Avenue in June 1990. They were a 10,000-gallon UST for diesel fuel and a 1,000-gallon UST for gasoline. Confirmation soil samples from beneath the former USTs contained total petroleum hydrocarbons (TPH) and other fuel constituents at concentrations above then-current screening levels, prompting two cycles of over-excavation and confirmation soil sampling in the diesel tank excavation and three cycles of over-excavation and confirmation soil sampling in the gasoline tank excavation. On completion of these activities, the Santa Clara Valley Water District (SCVWD) recommended case closure, and on April 11, 1991, the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) issued a "no further action" (NFA) letter for the two former USTs at 1535 Industrial Avenue.

The northernmost of the two parcels, at 1575 Industrial Avenue, features three permanent buildings and a modular office trailer (Figure 3). FJM Truck and Trailer Center uses the modular office trailer and the building located in the southeast corner of this parcel as additional space for truck maintenance. The building located in the central portion of this parcel is currently utilized by Exploration Geoservices as an office, and the area around this building is

Phase I Environmental Site Assessment

used for outdoor storage of its drilling equipment, including rigs, augers, and well materials. The northernmost building at 1575 Industrial Avenue is used by Carpenter Rigging for office space and as a workshop for assembling custom rigging equipment on large work benches. Four USTs and the associated dispensers and product piping were removed from 1575 Industrial Avenue between June 1989 and February 1994. Three of the USTs, a 10,000-gallon and two 2,000-gallon tanks, were used to store diesel fuel and the fourth, a 1,000-gallon UST, was used to store gasoline. Although all four USTs appear to have been located alongside one another, they were removed in three separate phases. Confirmation soil samples from beneath the former USTs contained TPH and other fuel constituents at concentrations above then-current screening levels, pursuant to which a capillary zone soil sample and a groundwater grab sample were collected from a boring located hydraulically downgradient of the two 2,000-gallon diesel USTs in 1995. Neither one of these samples contained detectable concentrations of TPH or any other fuel constituents, pursuant to which SCVWD issued an NFA letter for all four of the former USTs at 1575 Industrial Avenue on December 27, 1995.

Solvent recycling operations at the hydraulically upgradient former Solvent Services facility resulted in significant impacts to the vadose zone and groundwater involving tetrachloroethylene (PCE), degradation byproducts thereof, and 1,4-dioxane. Investigations related to the former Solvent Services facility have included the installation of four downgradient monitoring wells in the Industrial Avenue right-of-way and two downgradient monitoring wells within the subject site boundary. Although a significant amount of remediation work has been conducted in the source area at the former Solvent Services facility and downgradient conditions are improving, volatile organic compounds (VOCs) attributable to Solvent Services are present beneath the subject site in groundwater, as evidenced by data from the two onsite monitoring wells, and probably soil vapor. Recent groundwater samples from Well MW-7A, which is located at 1535 Industrial Avenue and screened in the uppermost water-bearing zone, have not contained detectable VOC concentrations, although 1,4-dioxane has been detected sporadically. Recent groundwater samples from the Well MW-9B, which is located at 1575 Industrial Avenue and screened in a deeper water-bearing zone, consistently contain trace concentrations of *cis*-1,2-dichloroethylene (*cis*-1,2-DCE) and other PCE degradation byproducts. In soil vapor, PCE and vinyl chloride concentrations in probes immediately outside the subject site boundary exceed SFBRWQCB's commercial/industrial screening levels. PCE and vinyl chloride may be present in soil vapor beneath the subject site at comparable concentrations.

RECOGNIZED ENVIRONMENTAL CONDITIONS (RECs)

ASTM (2013) defines RECs as:

“ . . . the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.”

Phase I Environmental Site Assessment

1535 and 1575 Industrial Avenue
San Jose, California 95112

Page ES-4
August 3, 2020

ASTM (2013) goes on to define *de minimis* as:

“ . . . a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.”

Based on the subject Phase I ESA, Avocet has identified a single REC at the subject site, as follows:

- **REC 1 –VOC Impacts Attributable to Former Solvent Services.** Solvent recycling operations at the hydraulically upgradient former Solvent Services facility resulted in significant impacts to the vadose zone and groundwater involving PCE, related degradation byproducts, and 1,4-dioxane. Although a significant amount of remediation work has been conducted at the source and downgradient conditions are improving, VOCs attributable to Solvent Services are present beneath the subject site in groundwater, as evidenced by data from two onsite monitoring wells, and probably soil vapor. Recent groundwater samples from Well MW-7A, which is located at 1535 Industrial Avenue and screened in the uppermost water-bearing zone, have not contained detectable VOC concentrations, although 1,4-dioxane has been detected sporadically. Recent groundwater samples from Well MW-9B, which is located at 1575 Industrial Avenue and screened in the deeper water-bearing zone, consistently contain trace concentrations of *cis*-1,2-DCE and other PCE degradation byproducts. In soil vapor, PCE and vinyl chloride concentrations in probes immediately outside the subject site boundary exceed SFBRWQCB’s commercial/industrial Environmental Screening Levels. PCE and vinyl chloride may be present in soil vapor beneath the subject site at comparable concentrations.

There are several references in the records reviewed by Avocet to poor housekeeping that resulted in spills of diesel fuel, oil, and probably other automotive fluids throughout the subject site, and several of the aerial photographs Avocet reviewed show darkened, possibly oil-impacted areas. While it is likely that near-surface soil at the site has been locally impacted by fuel, oil, and other automotive fluids, Avocet believes it is unlikely these impacts would be the subject of enforcement action and as such they are expected to be *de minimis*.

CONTROLLED RECS (CRECS)

ASTM (2013) defines CRECs as a REC:

“ . . . resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

Based on the subject Phase I ESA, Avocet has not identified any CRECs at the subject site.

HISTORICAL RECs (HRECs)

ASTM defines HRECs as:

“. . . a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

Based on the subject Phase I ESA, Avocet has identified two HRECs, sequentially numbered after the REC, at the site, as follows:

- **HREC 2 – Former USTs at 1535 Industrial Avenue.** Two USTs and associated dispensers and product piping were removed from separate excavations at 1535 Industrial Avenue in June 1990. They were a 10,000-gallon UST for diesel fuel and a 1,000-gallon UST for gasoline. Confirmation soil samples from beneath the former USTs contained TPH and other fuel constituents at concentrations above then-current screening levels, prompting two cycles of over-excavation and confirmation soil sampling in the diesel tank excavation and three cycles of over-excavation and confirmation soil sampling in the gasoline tank excavation. On completion of these activities, SCVWD recommended case closure, and on April 11, 1991, the SFBRWQCB issued an NFA letter for the two former USTs at 1535 Industrial Avenue.

HREC 3 – Former USTs at 1575 Industrial Avenue. Four USTs and the associated dispensers and product piping were removed from 1575 Industrial Avenue between June 1989 and February 1994. Three of the USTs, a 10,000-gallon and two 2,000-gallon tanks, were used to store diesel fuel and the fourth, a 1,000-gallon UST, was used to store gasoline. Although all four USTs appear to have been located alongside one another, they were removed in three separate phases. Confirmation soil samples from beneath the former USTs contained TPH and other fuel constituents at concentrations above then-current screening levels, pursuant to which a capillary zone soil sample and a groundwater grab sample were collected from a boring located hydraulically downgradient of the two 2,000-gallon diesel USTs in 1995. Neither one of these samples contained detectable concentrations of TPH or any other fuel constituents, pursuant to which SCVWD issued a NFA letter for all four of the former USTs at 1575 Industrial Avenue on December 27, 1995.

OTHER ENVIRONMENTAL FEATURES (OEFs)

OEFs are potential environmental features or conditions that do not meet the definition of a REC, CREC, or HREC but which may warrant mention in the context of acquiring, clearing, and paving the site for parking. Based on the subject Phase I ESA, Avocet had identified five OEFs, sequentially numbered after the REC and HRECs, at the site, as follows:

- **OEF 4 – *De Minimis* Near-Surface Soil Impacts.** There are several references in the records reviewed by Avocet to poor housekeeping that resulted in spills of diesel fuel, oil, and probably other automotive fluids at various locations throughout the site, and several of the aerial photographs Avocet reviewed show darkened, possibly oil-impacted areas. As such, localized but *de minimis* near-surface soil impacts involving fuel, oil, and/or other automotive fluids could be encountered during site clearance and redevelopment grading.
- **OEF 5 – Steam Clean Area.** The steam clean area behind (west of) the FJM rental center and maintenance shop consists of a large concrete slab sloped toward a subsurface sump equipped with a float-activated sump pump. The sump pump discharges to a “sludge tank,” in which solids settle out, and the clarified aqueous phase gravity flows to an aboveground OWS. Avocet recommends that the current owner remove all of the aboveground steam clean infrastructure and notes that *de minimis* soil impacts could be encountered beneath and around the steam clean slab, particularly around the blind sump.
- **OEF 6 – Solvent Services Monitoring Wells.** The site features two groundwater monitoring wells, Wells 7A and 9B, installed by the responsible party for the hydraulically upgradient former Solvent Services property at 1470 Industrial Avenue. These two wells are currently required to be monitored on an annual basis, and unless they can be eliminated from the monitoring program, they will have to be protected in place during site redevelopment or else destroyed in accordance with California regulations and then reinstalled once redevelopment is complete.
- **OEF 7 – Site-Wide Use of Petroleum, Oils, and Lubricants (POLs).** POLs have been used throughout the site in conjunction with vehicle and equipment maintenance and repair. Waste oil and other automotive fluids are currently being stored inside the maintenance and repair shops at both parcels, with and without secondary containment. Indications of generally *de minimis* surface spills of POLs were noted on both parcels that comprise the site.
- **OEF 8 – Asbestos Containing Materials (ACMs) and Lead-Based Paint and Coatings (LBP).** The buildings at the site were constructed when the use of ACMs and LBP in construction was common. Although the buildings at the site have been significantly refurbished since being built, and although no obvious ACMs were observed, Avocet recommends that pre-demolition surveys for

Phase I Environmental Site Assessment

ACMs and LBP be conducted and that confirmed ACMs and/or LBP be abated, as necessary, prior to general building demolition.

RECOMMENDATIONS

Based on the above, Avocet offers the following recommendations for risk mitigation prior to acquiring the subject site and prior to and during site clearance and redevelopment grading:

- Prior to Bayshore North Offsite, LLC acquiring the site, conduct a Phase II investigation to assess current soil and soil vapor conditions. The Phase II investigation should specifically address residual fuel hydrocarbon concentrations in the former UST areas, known vehicle maintenance and waste oil storage areas, and the existing steam clean area. The Phase II investigation should also specifically assess VOCs in soil vapor that may be attributable to the former Solvent Services facility, either via lateral migration in the vadose zone or via “vapor up” from the underlying groundwater.
- Waste oil and other automotive fluids are currently being stored inside the maintenance and repair shops at the site, with and without secondary containment, in containers ranging from less than a gallon up to waste oil ASTs of a few hundred gallons capacity. Avocet recommends that the current owner remove all of these containers and all hazardous substances and wastes prior to Bayshore North Offsite, LLC acquiring the site. Avocet also recommends that the current owner also be required to remove any sediment from the steam clean sump, steam clean the interior sump surfaces, and then remove all of the aboveground steam clean infrastructure.
- As soon as is appropriate, initiate dialogue with the responsible party for the former Solvent Services facility regarding the disposition of Wells 7A and 9B, specifically whether there is any possibility they could be eliminated from the ongoing and long-term groundwater monitoring program. Unless they can be eliminated from the ongoing monitoring program, the two wells will have to be protected in place during site clearance and redevelopment or else destroyed ahead of time, in accordance with California regulations, and then reinstalled once redevelopment is complete.
- If the existing structures are to be demolished or remodeled, conduct surveys for ACMs, LBP, and “universal wastes” such as fluorescent light ballasts, batteries in emergency light fixtures, refrigerants in air conditioning units, and the like. Confirmed ACMs and damaged LBP should be abated by suitably licensed and experienced contractors prior to general structure demolition or remodeling.
- Although not an absolute recommendation, it may be appropriate to prepare a Soil Management Plan (SMP) to help contractors manage oil-impacted soil that may be encountered at the site during clearance and redevelopment grading. The SMP

Phase I Environmental Site Assessment

1535 and 1575 Industrial Avenue
San Jose, California 95112

Page ES-8
August 3, 2020

should include screening levels to help determine if impacted soil can be reused onsite or must be transported offsite for disposal. Based on the subject Phase I ESA, Avocet does not believe it is required or necessary to involve a regulatory agency to review the SMP or to oversee redevelopment grading.

1.0 INTRODUCTION

This report documents a Phase I environmental site assessment (ESA) for two adjoining parcels of developed land, totaling approximately 3.66 acres², at 1535 and 1575 Industrial Avenue in San Jose, California (the site). Avocet Environmental, Inc. (Avocet) conducted the Phase I ESA on behalf of Panattoni Development Company, Inc. (Panattoni) for decision-making in the context of Bayshore North Offsite, LLC purchasing the site, demolishing the existing improvements, and paving it for parking. Avocet conducted the Phase I ESA in general accordance with the scope and limitations of ASTM International (ASTM) Standard E1527-13. The site location is shown in Figure 1 and an aerial photograph of the site and vicinity is presented in Figure 2. A larger-scale aerial photograph of the site is presented in Figure 3.

1.1 OVERVIEW

Prior to being developed in the 1950s, the subject site was agricultural, as was the surrounding area. Based on the available aerial photographs, the site was planted with grass or other ground crops, although there were trees on some of the nearby parcels. The northernmost of the two parcels that comprise the site, at 1575 Industrial Avenue, was developed first, in or before 1956, and the southern portion was first developed in or before 1963. The original buildings are still present at the site, although most have been significantly remodeled and an additional building was added as recently as 2010. There have been numerous tenants at the site in the past, often multiple tenants on the same parcel; however, the site has been used primarily for trucking and trucking-related purposes, notably including freight forwarding and truck repair. Although trucking and related operations predominated, other businesses that occupied the site in the past include various contractors, an ice cream distribution company, and an oil company (Adona Oil Company/Monterey Bay Oil Company). The oil company is listed as occupying 1535 Industrial Avenue in 1986 but apparently for a short time only. It is not clear whether the oil company was in the oil exploration, or services, or distribution business. If the latter, there are no indications it built or installed aboveground storage tanks (ASTs) to store its products. The two parcels that comprise the site are currently owned by Frank Mangione, who also owns and manages the FJM Truck and Trailer Center (FJM Trucking). Parts of the northern parcel, at 1575 Industrial Avenue, are leased to Carpenter Rigging and Exploration Geoservices, but the FJM Trucking occupies the remainder of the site. Carpenter Rigging sells wire rope, slings, shackles, and other rigging equipment to crane operators, contractors, and the like and also assembles custom rigging equipment using standard components. Exploration Geoservices is a hollow-stem auger drilling company.

The southernmost of the two parcels, at 1535 Industrial Avenue, features three buildings and is occupied entirely by FJM Trucking. The three buildings include an office building, a warehouse with areas for customer service and truck maintenance, and a truck repair shop. Operations and features of potential environmental interest include the use of relatively large quantities of

² The acreages and measurements in this report are approximate only and have not been independently verified by Avocet unless specifically indicated otherwise.

Phase I Environmental Site Assessment

automotive fluids, including engine oil and hydraulic fluid, the generation of related hazardous wastes (i.e., waste oil and the like), a steam clean area, parts cleaning, and engine repair operations. Engine oil, hydraulic fluid, and other automotive fluids are stored in containers ranging from less than 1 gallon to mobile, multi-compartment ASTs with capacities of several hundred gallons. Most, if not all, of the ASTs are believed to be double-walled; however, the smaller containers are stored with and without secondary containment. The steam clean area features a concrete pad sloped toward a blind sump equipped with a float-actuated sump pump. The sump pump discharges to an aboveground “sludge tank” where solids are allowed to settle before being removed and containerized in 55-gallon drums. The aqueous phase gravity flows to an aboveground oil/water separator (OWS). Floating oil and grease are removed from the top of the OWS and drummed, and solids that settle in the OWS are also removed and drummed. Avocet observed numerous 55-gallon drums around the steam clean slab, some labeled as hazardous waste and others not labeled at all. Two parts cleaners were observed in the main maintenance shop: a tub-type mounted over a 30-gallon drum and a static aqueous spray cleaner. Reportedly, only water-based solvents are currently used for parts cleaning but organic solvents were used in the past. In addition to the features observed by Avocet and noted above, two underground storage tanks (USTs) and associated dispensers and product piping were removed from separate excavations at 1535 Industrial Avenue in June 1990. They were a 10,000-gallon UST for diesel fuel and a 1,000-gallon UST for gasoline. Confirmation soil samples from beneath the former USTs contained total petroleum hydrocarbons (TPH) and other fuel constituents at concentrations above then-current screening levels, prompting two cycles of over-excavation and confirmation soil sampling in the diesel tank excavation and three cycles of over-excavation and confirmation soil sampling in the gasoline tank excavation. On completion of these activities, Santa Clara Valley Water District (SCVWD) recommended case closure, and on April 11, 1991, the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) issued a “no further action” (NFA) letter for the two former USTs at 1535 Industrial Avenue.

The northernmost of the two parcels, at 1575 Industrial Avenue, features three permanent buildings and a modular office trailer (Figure 3). FJM Trucking uses the modular office trailer and the building located in the southeast corner of this parcel as additional space for truck maintenance. The building located in the central portion of this parcel is currently utilized by Exploration Geoservices as an office, and the area around this building is used for outdoor storage of its drilling equipment, including rigs, augers, and well materials. The northernmost building at 1575 Industrial Avenue is used by Carpenter Rigging for office space and as a workshop for assembling custom rigging equipment on large work benches. Four USTs and the associated dispensers and product piping were removed from 1575 Industrial Avenue between June 1989 and February 1994. Three of the USTs, a 10,000-gallon and two 2,000-gallon tanks, were used to store diesel fuel and the fourth, a 1,000-gallon UST, was used to store gasoline. Although all four USTs appear to have been located alongside one another, they were removed in three separate phases. Confirmation soil samples from beneath the former USTs contained TPH and other fuel constituents at concentrations above then-current screening levels, pursuant to which a capillary zone soil sample and a groundwater grab sample were collected from a boring located hydraulically downgradient of the two 2,000-gallon diesel USTs in 1995. Neither one of these samples contained detectable concentrations of TPH or any other fuel constituents,

Phase I Environmental Site Assessment

August 3, 2020

pursuant to which SCVWD issued an NFA letter for all four of the former USTs at 1575 Industrial Avenue on December 27, 1995.

Solvent recycling operations at the hydraulically upgradient former Solvent Services facility resulted in significant impacts to the vadose zone and groundwater involving tetrachloroethylene (PCE), degradation byproducts thereof, and 1,4-dioxane. Investigations related to the former Solvent Services facility have included the installation of four downgradient monitoring wells in the Industrial Avenue right-of-way and two downgradient monitoring wells within the subject site boundary. Although a significant amount of remediation work has been conducted in the source area at the former Solvent Services facility and downgradient conditions are improving, volatile organic compounds (VOCs) attributable to Solvent Services are present beneath the subject site in groundwater, as evidenced by data from the two onsite monitoring wells, and probably soil vapor. Recent groundwater samples from Well MW-7A, which is located at 1535 Industrial Avenue and screened in the uppermost water-bearing zone, have not contained detectable VOC concentrations, although 1,4-dioxane has been detected sporadically. Recent groundwater samples from Well MW-9B, which is located at 1575 Industrial Avenue and screened in a deeper water-bearing zone, consistently contain trace concentrations of *cis*-1,2-dichloroethylene (*cis*-1,2-DCE) and other PCE degradation byproducts. In soil vapor, PCE and vinyl chloride concentrations in probes immediately outside the subject site boundary exceed SFBRWQCB's commercial/industrial screening levels, and PCE and vinyl chloride may be present in soil vapor beneath the subject site at comparable concentrations.

1.2 PHASE I ESA OBJECTIVES

The overall objective of the Phase I ESA documented herein is to assess the site in the context of the possible presence of hazardous substances in structures and in the underlying vadose zone and groundwater. Specific objectives of the Phase I ESA are:

- Document the history of the site and surrounding properties in the context of the use, storage, handling, and disposal of potentially hazardous substances.
- Review and evaluate available information related to the investigation and remediation of known subsurface impacts or features.
- Assess the possible presence of previously unidentified hazardous substances that could be present in the subsurface as a result of their past use, storage, handling, or disposal within or near the site.
- Visually survey the existing buildings at the site for the possible presence of asbestos-containing materials (ACMs), lead-based paint and coatings (LBP), "universal wastes" such as fluorescent light ballasts, batteries, and similar, and/or other potentially hazardous materials, although no sampling or measurements were conducted for confirmation purposes.

- Identify “Recognized Environmental Conditions” (RECs), “Controlled RECs” (CRECs), and “Historical RECs” (HRECs), as defined in ASTM Standard E1527-13 (ASTM, 2013).
- Identify “other environmental features” (OEFs), defined for Phase I ESA purposes as existing or former site features or conditions that do not meet the ASTM definition of a REC, CREC, or HREC, but which may be relevant in the context of acquiring and redeveloping the site.

1.3 APPROACH

The subject Phase I ESA was conducted in general accordance with the requirements of ASTM Standard E1527-13 (ASTM, 2013) and included:

- A review of relevant background information, including the history of the site and adjacent properties, past land use, and regional hydrogeologic conditions.
- A review of topographic maps, aerial photographs, and environmental records pertaining to the site.
- An escorted walkover survey of the site and vicinity on June 22, 2020, during which Avocet interviewed Mr. Frank J. Mangione, the owner.
- A review of potential offsite sources of contamination that could adversely impact the subsurface environment beneath the site, including a search of regulatory agency databases and visual surveys of adjoining properties.

The format of this Phase I ESA report is different from that suggested by ASTM; however, all of the elements required by ASTM E1527-13 are included or otherwise addressed.

1.4 LIMITATIONS

This Phase I ESA was performed in general accordance with the scope and limitations of current ASTM practice (ASTM, 2013) and the standard of care customary in the environmental consulting industry as of the date of this report. The conclusions in this Phase I ESA report, including the identification of RECs, CRECs, HRECs, and OEFs, are based on the information available to Avocet from the sources cited; however, Avocet makes no warranty regarding the accuracy or completeness of this information. Moreover, this Phase I ESA specifically excludes any evaluation of geotechnical conditions, the stability of onsite or adjacent slopes or retaining walls, seismicity, flooding hazards, and the possible impact, if any, of electromagnetic fields associated with onsite or nearby electrical facilities. Also, this report cannot and does not include any evaluation of undocumented activities at the site or on adjacent or nearby properties. The exclusions noted above should not be interpreted to mean that every other condition or potential condition has been considered in the subject Phase I ESA.

Phase I Environmental Site Assessment

1535 and 1575 Industrial Avenue
San Jose, California 95112

Page 5
August 3, 2020

Avocet conducted the Phase I ESA at Panattoni's request for decision-making in the context of Bayshore North Offsite, LLC purchasing and redeveloping the site for commercial/industrial purposes. Panattoni Development Company, Inc., Bayshore North Offsite, LLC, and Zions Bancorporation, N.A., dba Vectra Bank Colorado may rely upon the information provided in this Phase I ESA report for a period of 180 days from the date of issue. After 180 days, this Phase I ESA should be updated in accordance with ASTM guidance. Avocet will not be liable for any consequential damages arising from the use of this report for other than its intended purpose, for use of this report beyond 180 days of its issue date, or from unauthorized use by third parties.

1.5 REPORT ORGANIZATION

Including the introduction, this Phase I ESA report is organized into seven sections. Section 2.0 describes the various sources of information utilized in preparing this Phase I ESA report, and Section 3.0 presents a summary of relevant background and regional information. Section 4.0 describes the history and current condition of the site with emphasis on past and ongoing operations involving potentially hazardous substances. Section 5.0 summarizes past environmental investigations and remedial efforts at the site. Section 6.0 describes the properties adjoining the site and summarizes information gathered from a review of environmental databases maintained by local, state, and federal government agencies. Section 7.0 presents a summary and conclusions.

Supporting information is contained in a table, figures, and seven appendices, all of which follow the text of this report. Appendices A and B contain historical topographic maps and historical aerial photographs, respectively, which have been annotated with the site boundary. Appendix C contains Sanborn[®] fire insurance maps of the area west of the site, although the site itself is not covered. Appendix D is a City Directory Abstract summarizing entries recorded in business, telephone, and other directories. Appendix E contains photographs of the site taken during the walkover survey on June 22, 2020. Appendix F contains copies of the NFA letters for the former USTs at 1535 and 1575 Industrial Avenue. Appendix G is a report summarizing information available from a review of environmental databases maintained by local, state, and federal government agencies.

2.0 SOURCES OF INFORMATION

Sources of information utilized in preparing this Phase I ESA report included a walkover survey of the site on June 22, 2020; an interview with the property owner, Frank Mangione; and reviews of historical topographic maps, historical aerial photographs, records available from selected local and state regulatory agencies, databases maintained by local, state, and federal government agencies, and other records available from commercial and online sources.

2.1 TOPOGRAPHIC MAPS

To evaluate the history of the site and past land uses, copies of historical U.S. Geological Survey (USGS) topographic maps published between 1889 and 2012 were obtained from Environmental Data Resources, Inc. (EDR), of Shelton, Connecticut. These maps, which show the approximate site boundary, are included in chronological order in Appendix A.

2.2 AERIAL PHOTOGRAPHS

To further evaluate the site's history, a "Decade Package" of historical aerial photographs was obtained from EDR. EDR's Decade Package generally includes at least one aerial photograph from each decade from the 1920s through the present day. For the subject Phase I ESA, EDR provided aerial photographs taken between 1939 and 2016. The photographs, which show the approximate site boundary, are included in chronological order in Appendix B.

2.3 FIRE INSURANCE MAPS

At Avocet's request, EDR conducted a search for Sanborn[®] fire insurance map coverage. EDR provided Certified Sanborn[®] Maps dated 1961 and 1966, however, the subject site is blank and the maps provide only limited information for certain properties on the opposite side of the 880 Freeway to the west. A copy of EDR's "Certified Sanborn[®] Map Report" is included as Appendix C to this report.

2.4 CITY DIRECTORIES

Telephone and business directories have been published for cities and counties across the United States since the 1700s and often contain potentially useful information on past land uses and the types of business that operated at specific street addresses. EDR extracts information from such directories and consolidates it in its "The EDR-City Directory Abstract," a copy of which is included as Appendix D to this report.

2.5 WALKOVER SURVEY AND INTERVIEWS

Avocet personnel conducted a walkover survey of the site on June 22, 2020 accompanied by Mr. Frank Mangione, the owner. In the course of the walkover survey, Avocet interviewed Mr. Mangione, whose involvement with the site dates back to around 1983, when he began renting part of the maintenance shop at 1535 Industrial Avenue. Mr. Mangione later purchased the properties at 1535 and 1575 Industrial Avenue in or around 1990 and 1992, respectively.

Selected photographs of the site, taken with Mr. Mangione's permission during the walkover survey, are included in Appendix E. The information obtained from Mr. Mangione is integrated into the remainder of this Phase I ESA report and is referenced, as appropriate, as are the site photographs.

2.6 GOVERNMENT DATABASES

To document potential sources of contamination at or near the site, EDR searched environmental databases maintained by local, state, and federal government agencies for the site and for other properties within ASTM-standard radii of the site. EDR's database search is summarized in Section 6.0, and a copy of "The EDR Radius Map™ Report With GeoCheck®" is included in its entirety as Appendix G. As recommended by ASTM, all but a few of the databases searched were "current," i.e., had been updated within 90 days prior to the search date.

In addition to the above, Avocet searched for potentially relevant environmental records pertaining to the site and nearby properties on the GeoTracker and EnviroStor websites maintained by the California Environmental Protection Agency (CalEPA). Relevant information from this review is incorporated or referred to, as appropriate, throughout the remainder of this report.

2.7 INFORMATION FROM LOCAL AND STATE AGENCIES

On June 15, 2020, Avocet contacted selected federal, state, and local regulatory agencies to determine whether they have potentially relevant environmental records pertaining to the two parcels that comprise the site. In particular, Avocet requested records relating to USTs, ASTs, environmental permits, and enforcement orders; reports and correspondence related to site investigation/assessment, soil sampling, monitoring, cleanup/remediation, removal actions, and closures; or any records related to conditions in air, soil, surface water, groundwater, or other environmental media. The agencies contacted and Avocet's interactions with them were as follows:

- Avocet searched the U.S. Environmental Protection Agency (EPA) MyProperty online portal for records related to the known street addresses for the site; however, no records were available.
- Written requests were emailed to the Department of Toxic Substances Control offices in Berkeley and Sacramento. In emails on June 16 and 25, 2020, the Sacramento and Berkeley offices, respectively, indicated they do not have any records pertaining to the subject site.
- A records request form was emailed to Santa Clara County Department of Environmental Health (SCCoDEH), which provided its records via email on June 17, 2020. The records pertained to site inspections, hazardous waste generation, and hazardous materials business plans and are referenced where appropriate throughout the remainder of this report.

Phase I Environmental Site Assessment

- A request form was faxed to the Santa Clara County Fire Department, which responded via email on June 15, 2020 that the site is not within its jurisdiction and that Avocet should contact the San Jose Fire Department (SJFD).
- A written request was emailed to SJFD, which emailed Avocet copies of its records on July 16, 2020. The records included numerous site inspection reports and reports pertaining to UST removals.
- A written request was emailed to SCVWD, which responded that all its environmental files had been transferred to the SCCoDEH.
- A written request was emailed to the SFBRWQCB, including its UST and SLIC (Spills, Leaks, Investigation and Cleanup) divisions. In an email dated June 22, 2020, SFBRWQCB indicated that it does not have any records responsive to Avocet's request.
- An online request to review public records was submitted to the Bay Area Air Quality Management District, which responded via email on June 15, 2020 that it does not have any records responsive to Avocet's request.

2.8 OIL AND GAS RECORDS

To assess the presence of oil and/or natural gas wells at or in the vicinity of the site, Avocet checked online information available from the California Geologic Energy Management Division (CalGEM), formerly known as the Division of Oil, Gas, and Geothermal Resources or DOGGR. The findings of this review are summarized in Section 3.5.

2.9 RADON GAS RECORDS

To assess the possible presence of naturally occurring radon gas in the subsurface in the site vicinity, Avocet reviewed data available from EPA and the California Department of Public Health (CDPH), as summarized in "The EDR Radius Map™ Report With GeoCheck®" (Appendix G). The available radon gas data are summarized in Section 3.5.

3.0 BACKGROUND AND REGIONAL INFORMATION

Background and regional information considered relevant to the subject Phase I ESA includes the site's physiographic setting, nearby surface water features, and regional and local geologic and hydrogeologic conditions.

3.1 PHYSIOGRAPHIC SETTING AND SURFACE WATER

The site is located within the San Francisco Bay Hydrologic region, more specifically in the northern part of the Santa Clara Valley. The Santa Clara Valley runs south-southeast from the southern end of the San Francisco Bay and occupies a structural depression between the Diablo Ranges to the east and the Santa Cruz Mountains to the west. The site is at an elevation of approximately 55 feet above mean sea level, and the natural ground surface slopes gently to the northwest toward San Francisco Bay, the southern margin of which is located approximately 5.9 miles to the north. In terms of surface water, the site is located between Coyote Creek and the Guadalupe River, two of the main water courses that drain the Santa Clara Valley. Coyote Creek flows as close as 3,000 feet to the east of the site and the Guadalupe River flows approximately 1 mile to the west.

3.2 GEOLOGY AND HYDROGEOLOGY

The site is located within the California Coastal Range Physiographic Province. The northwest-trending mountains in this province are the result of seismic activity in the late Pliocene through the mid-Pleistocene. The site area is underlain by a series of alluvial fans made up of Holocene to Pleistocene age alluvium composed primarily of unconsolidated gravel, sand, silt, and clay. The subject site is located within the northern portion of the Santa Clara Plain Subarea of the Santa Clara Valley groundwater basin. Groundwater within the Santa Clara Plain Subarea differs from that in other subareas in that it occurs under almost completely confined conditions. Groundwater in the Santa Clara Plain Subarea generally flows to the northwest, toward San Francisco Bay.

Based on subsurface investigations at the former Solvent Services facility located across Industrial Avenue to the east (Figure 2), there are two relatively well defined stratigraphic units within 100 feet of the ground surface in the site vicinity, both of which contain groundwater (PES Environmental, Inc. [PES], December 28, 2016). The upper unit, typically referred to as Zone A, consists of low permeability silty clay with discontinuous layers of silt and occurs from the ground surface to between 38 and 45 feet below ground surface (bgs). Groundwater in Zone A is generally encountered at between 8 and 14 feet bgs but has occasionally been encountered as shallow as 6 feet bgs (PES, December 28, 2016). Zone A is underlain by significantly more permeable gravelly sands that extend to at least 100 feet bgs, the maximum depth investigated at the former Solvent Services site. At the former Solvent Services site, the upper and lower portions of the underlying gravelly sand layer are referred to as Zone B and Zone C, respectively, although it is not clear whether there is any physical separation, i.e., an aquitard, between the two. Groundwater in Zones B and C is confined and stabilizes in monitoring wells at around the same elevation as groundwater in Zone A. Consistent with the

regional gradient mentioned above, groundwater in Zones A, B, and C flows to the west-northwest, toward San Francisco Bay. Horizontal hydraulic gradients have averaged approximately 0.005 foot per foot in Zone A and 0.001 foot per foot in Zones B and C. Hydraulic conductivity, as estimated from rising and falling head (slug) tests, has ranged from 0.17 to 4.6 feet per day in Zone A to 6.31 to 42.7 feet per day in Zones B and C. Average hydraulic conductivities in the A and B/C zones are 0.51 and 20 feet per day (PES, December 28, 2016). Using these hydraulic conductivities, the measured hydraulic gradients, and typical aquifer parameters, groundwater flow velocities have been estimated at 4.7 feet per year in Zone A and 17 feet per year in Zone B/C (PES, December 28, 2016).

Two groundwater monitoring wells have been installed at the subject site (Figure 3) as part of the investigation for the former Solvent Services facility (Section 6.4.2). Water levels in these wells (MW-7A and MW-9B) have ranged from 6.83 to 13.56 feet bgs and from 5.95 to 13.20 feet bgs, respectively.

3.3 GROUNDWATER QUALITY

The responsible party for the hydraulically upgradient former Solvent Services facility has installed two hydraulically downgradient monitoring wells at the subject site, one screened in Zone A (Well MW-7A) at 1535 Industrial Avenue and the other in Zone B (Well MW-9B) at 1575 Industrial Avenue. In addition, there are two, two-well clusters in the Industrial Avenue right-of-way immediately adjacent to site. The locations of these offsite Solvent Services monitoring wells are shown in Figures 2 and 3.

As discussed in more detail in Section 6.4.1, the principal contaminants at the former Solvent Services facility include PCE, trichloroethylene (TCE), and their degradation byproducts, notably *cis*-1,2-DCE and vinyl chloride. In addition, petroleum hydrocarbons and 1,4-dioxane have been detected in groundwater. In brief, TPH and VOC concentrations in groundwater samples from Well MW-7A have generally been below the laboratory Reporting Limits (RLs) since Well MW-7A was installed in 2005; however, 1,4-dioxane was detected at 84.5 and 97.3 micrograms per liter ($\mu\text{g/L}$) in 2015 and 2019, respectively. There is no drinking water Maximum Contaminant Level (MCL) for 1,4-dioxane; however, the drinking water “Notification Level” (NL) is 1 $\mu\text{g/L}$ and the “Response Level,” at which a drinking water source must be taken out of service, is 35 $\mu\text{g/L}$. Avocet notes that the RL for 1,4-dioxane in the groundwater samples is typically 50 $\mu\text{g/L}$, so it is possible that 1,4-dioxane is consistently present at lower concentrations (PES, April 15, 2020). Groundwater samples from Well MW-9B have consistently contained trace concentrations of *cis*-1,2-DCE and vinyl chloride and occasionally trace concentrations of 1,1-dichloroethane. The interpreted lateral distribution of *cis*-1,2-DCE and vinyl chloride in groundwater in 2016 and 2020, respectively, are shown in Figure 2.

3.4 OIL AND GAS WELLS

CalGEM records available online indicate that the site is not located within the administrative boundary of an oil or gas field. The nearest “prospect” or “wildcat” well to the site is located over 8 miles to the south and is listed as plugged (CalGEM, June 16, 2020). Even allowing for

some inaccuracy in oil well locations, the intervening distance is such that the plugged oil well is unlikely to have impacted the subsurface beneath the subject site.

3.5 RADON GAS

EPA recommends avoiding long-term exposure to radon levels greater than 4 picocuries per liter (pCi/L). The CDPH maintains indoor radon test result records for California sorted by zip code (CDPH, February 2016). In brief, indoor radon measurements were performed throughout the state, and the percentage of buildings with reported radon levels greater than 4 pCi/L within each zip code was reported, along with the number of buildings tested. All but 1 of the 19 buildings tested within the 95112 zip code, in which the subject site is located, contained radon at levels less than 4 pCi/L. In addition to the above, EPA and USGS maintain a Map of Radon Zones for the United States, organized by county (EPA, 2016). According to the map, Santa Clara County is a Radon Zone 2, indicating that radon levels in buildings are expected to be between 2 and 4 pCi/L. EDR's Radius Map Report (Appendix G) indicates that the average radon activity on the ground floor of residential structures within Santa Clara County was 1.1 pCi/L, which is less than EPA's recommended maximum exposure level. Based on the above, naturally occurring radon is unlikely to be of concern in the vicinity of the site.

4.0 SITE HISTORY AND CURRENT CONDITION

This section documents the history of the site and describes current site conditions, with emphasis on existing and former environmental features.

4.1 SITE HISTORY

The history of the site and vicinity has been compiled based on information from the sources outlined in Section 2.0, particularly the historical topographic maps and aerial photographs. For discussion purposes, the site's history has been divided into three sections based on the principal land uses within the site boundary with, to the extent known, the approximate date ranges.

4.1.1 Predevelopment History, 1896 – <1956

The earliest documents reviewed for Phase I ESA purposes were topographic maps published in 1889, 1897, and 1899 (Appendix A). These essentially identical maps indicate that the site was undeveloped, although it could have been agricultural. There were several minor and irregular roads in the area, but little if any of the existing street grid with the exception of what may have been the precursor to present day Gish Road. The 1889, 1897, and 1899 maps show a few small structures along these and other nearby roads, including two immediately northwest of the site; however, none were within the subject site boundary. Based on the small size of the structures, subsequent aerial photographs, and the absence of industry in the area, these structures are assumed to have been residential or agricultural. The three maps also show the existing Southern Pacific Transportation Company railroad track that passes as close as 530 feet to the east of the site (Figure 1).

The first aerial photograph reviewed for Phase I ESA purposes was taken in 1939 (Appendix B) and shows the site and the surrounding area were agricultural. More specifically, the site appears to have encompassed parts of several fields planted with a grass or another ground crop, although some of the nearby fields appear to have been planted with trees. There were several clusters of structures around the site, including to the northwest, west, and southeast; however, there were structures within or close to the site boundary. Consistent with agricultural land use, the structure clusters appear to have included a residence and one or more agricultural outbuildings. The 1939 photograph shows what appears to have been a precursor to present day Industrial Avenue, although it appears to have been unpaved at the time. To the south, the intersection of present day Old Bayshore Highway and Gish Road is visible approximately 1,000 feet south of the site. A dirt road that roughly coincides with the present day parcel boundary crossed through the site from northeast to southwest. Subsequent aerial photographs taken in 1948 and 1950 (Appendix B) show the site remained agricultural, as did the surrounding area, although present-day Old Bayshore Highway had been widened by 1948 and there were a few commercial/industrial structures along either side.

A topographic map published in 1953 (Appendix A) depicts the site as still undeveloped and presumably agricultural; however, Old Bayshore Highway to the southwest had been upgraded to State Highway 101 and the present day 880 Freeway was under construction as State

Highway 17, although it did not extend further south than Old Bayshore Highway. Further west, the 1953 map shows that San Jose Airport had been established on the west side of the Guadalupe River.

4.1.2 Partial Development, <1956 – <1963

An aerial photograph taken in 1956 (Appendix B) shows the northern portion of the subject site, roughly corresponding to 1575 Industrial Avenue, had been developed with the building currently occupied by Carpenter Rigging and the existing FJM Trucking maintenance shop (Figure 3). The southern portion of the site remained undeveloped and appeared fallow. Based on the City Directory Abstract (Appendix D), 1575 Industrial Avenue was occupied by Willig Freight Lines, a trucking company, in 1956, and along the western edge of the developed portion of the site were what appear to have been truck trailers. There appear to have been two large trees along the northern site boundary, and immediately behind (southwest of) the maintenance shop was a dark spot, possibly wet or vegetated. To the north, the adjoining triangular property at 1605 Industrial Avenue had been developed with a warehouse-type building. Based on the City Directory Abstract (Appendix D), this property was probably occupied by Specialty Truck Parts, Inc. (Section 6.3.2). The property at 1590 Industrial Avenue to the northeast had also been developed, and what appear to have been three small homes and a small orchard were located immediately southeast of the site. Across the 880 Freeway to the west, additional commercial/industrial development was in progress.

The new development at and around the site is reflected in a topographic map published in 1961 (Appendix A). The 1961 map also shows that the 101 Freeway had been moved south and widened, leaving Old Bayshore Highway and the complicated on-ramps and off-ramps to the 880 Freeway in their current configuration. Further south, the existing cloverleaf intersection between the 101 and 880 Freeways had also been constructed by 1961. Avocet notes that none of the subsequent topographic maps published in 1968, 1973, 1980, and 2012 provide much, if any, additional information on land use at or around the site.

4.1.3 Additional Development, <1963 – <1982

An aerial photograph taken in 1963 (Appendix B) shows the northern portion of the site much as it had appeared in 1956 but the southern portion of the site, at 1535 Industrial Avenue, had been developed with the building currently being used as the FJM Trucking front office and the eastern portion of the existing FJM Trucking rental center and maintenance shop. EDR's City Directory (Appendix D) lists Azusa Transfer Co. and Pickering Truck and Equipment Repair at 1535 Industrial Avenue in 1963, and at 1575 Industrial Avenue, Interstate Motor Lines Inc. was listed in addition to Willig Freight Lines. Consistent with the nature of the listed businesses, the exterior areas of the site featured numerous truck trailers and there were areas of surface discoloration behind (southwest of) both maintenance shops. By 1963, the adjacent property to the south had been developed with the warehouse that currently adjoins the southeastern boundary of the site. The residential properties mentioned previously were still present to the southeast of the site, although the orchard behind them had been removed and a large warehouse-type building had been constructed in the cleared area. The address associated with this property (1505 Industrial Avenue) is listed in the City Directory Abstract (Appendix D) as being occupied

Phase I Environmental Site Assessment

1535 and 1575 Industrial Avenue
San Jose, California 95112

Page 14
August 3, 2020

by Contractor's Machinery Co. The 1963 photograph also shows that land use in the site vicinity had transitioned from primarily agricultural to primarily commercial/industrial by 1963.

An aerial photograph taken in 1968 (Appendix B) shows the site much as in 1963 except the present day FJM Trucking rental center and maintenance shop had been extended to the southwest to its current size. The 1968 photograph also shows infill development had continued through the 1960s to the northeast of the site, with the construction of several additional industrial properties along the railroad track. More specifically, the adjacent properties to the southeast and northeast had been further developed, as had the property at 1470 Industrial Avenue, which formerly featured the Solvent Services recycling facility (Section 6.4.1).

Aerial photographs taken in 1974, 1982, 1993, and 1998 (Appendix B) show the three buildings at the site have remained more or less unchanged, although the configuration and intensity of the exterior trucking operations was constantly changing. An aerial photograph taken in 2006 (Appendix B) shows the structure now used for storage by Exploration Geoservices had been constructed and FJM Trucking's modular office structure had been installed. An aerial photograph taken in 2009 shows that the existing FJM Trucking repair shop had been built in the southwest corner of the property at 1535 Industrial Avenue.

Based on the above, it appears the subject site has been used primarily for trucking and related activities, including truck repair and freight forwarding. However, the City Directory Abstract (Appendix D) lists several other businesses at the site, including various contractors, an ice cream company, and the Adona Oil Company/Monterey Bay Oil Company. The Adona/Monterey Bay Oil Company is listed at 1535 Industrial Avenue in 1986 and does not appear in any other listings. It is not known how Adona/Monterey Bay Oil Company used the property and there are no references to ASTs or other oil company-type infrastructure at the site.

Records obtained from the SJFD and the SCCoDEH include hazardous materials business plans, hazardous substance inventories, inspection reports, and the like. These documents indicate that a wide variety of hazardous substances have been used at the site over the years, albeit most in small quantities only. Among the hazardous substances used were mineral spirit-base parts cleaning solvent and brake cleaning solvents containing 1,1,1-trichloroethane and PCE. The facility inspection reports, most of which were for the FJM Truck and Trailer Center and its predecessors, indicate that numerous "Notices of Violation" (NOVs) were issued. Most pertained to administrative issues, such as fire extinguishers and the labeling of hazardous waste containers; however, a few mentioned small (*de minimis*) spills of oil and/or other automotive fluids. Invariably, however, the reports do not include enough information to determine where the spills occurred.

4.2 CURRENT SITE CONDITIONS

This section describes current conditions at the site, with emphasis on existing environmental features and the storage, use, and disposal of hazardous substances. The descriptions are based on the observations made by Avocet personnel during an escorted walkover survey of the site on June 22, 2020. Photographs taken, with Mr. Mangione's permission, in the course of the

walkover survey are included as Appendix E and are referenced as appropriate below. As noted previously, FJM Trucking occupies the entire site apart from the areas leased to Carpenter Rigging and Exploration Geoservices.

4.2.1 FJM Trucking Operations, 1535 Industrial Avenue

The southernmost of the two parcels that comprise the site, i.e., Assessor's Parcel Number (APN) 237-30-020 at 1535 Industrial Avenue, features three buildings and is used exclusively by FJM Trucking as a truck and trailer rental and maintenance facility (Photograph E-1). The parcel is paved with asphalt, with concrete aprons in front of the buildings, and is fenced on three sides; there is no fence between it and the northernmost parcel, most of which is also occupied by FJM Trucking operations. Mr. Mangione indicated the parcel was repaved with asphalt in or around 1997.

The approximately 1,000-square-foot FJM Trucking office building fronts onto Industrial Avenue (Figure 3). Built between 1956 and 1963, it is a wood-frame structure on a concrete foundation pad with a stucco exterior and a pitched roof with composite shingles (Photograph E-2). The structure is divided into private offices and features restrooms and a vending machine vestibule at its southwest end (Photograph E-3). In addition to a vending machine, the vestibule also features a gas-fired furnace for the building's forced air heating system. The floor in the vending machine area currently is unfinished concrete; however, it appears it formerly featured 12-inch vinyl floor tile (Photograph E-3)

Immediately behind the FJM Trucking office building is a large warehouse-type building which serves as a trailer rental center and truck maintenance shop (Photograph E-1). The approximately 6,800-square-foot structure features a steel frame and metal-clad walls on a concrete foundation pad with a pitched, metal-clad roof. The northeast end of the warehouse, which dates back to between 1956 and 1963, is built out as a trailer rental center and features a customer service counter and waiting area, behind which are private offices and a door into the maintenance shop. The customer waiting area features display racks for tarpaulins, tie-down straps, and other trailer-related items for purchase. The office area features built-in desks and typical office-type equipment (Photograph E-4). Floor coverings include 12-inch vinyl floor tile and mats. Immediately behind the office area is a tool crib defined by chain link fencing and a staircase up to a mezzanine level (Photograph E-5), which Avocet was informed is used for records storage. Items observed in the tool crib area included power tools, a pallet jack, and a large sink with an electric water heater (Photograph E-6). Behind the tool crib area is the main workshop where trucks and trailers are repaired and maintained (Photographs E-7 through E-16). Based on the aerial photographs in Appendix B, the main workshop was added to the original shop building between 1963 and 1968. There was a single truck (Photograph E-12) and a single "water buffalo" trailer (Photograph E-10) in the shop at the time of Avocet's site visit, but truck maintenance activities reportedly range from routine oil changes to engine replacements. Consistent with these activities, Avocet observed numerous drums and pails of engine oil, hydraulic fluid, and grease and several rectangular ASTs used for waste oil and hydraulic fluid storage (Photographs E-7, E-8, and E-9). The AST capacities were on the order of 250 gallons and most featured castors so they can be wheeled around to different locations (Photographs E-8

Phase I Environmental Site Assessment

1535 and 1575 Industrial Avenue
San Jose, California 95112

Page 16
August 3, 2020

and E-9). Other items observed in the shop included ramps, jacks, engine parts, tool cabinets, work benches, ladders, wooden pallets, welding equipment, and storage racks. Avocet also observed two parts washers: a small, tub-type cleaner mounted over a 30-gallon drum (Photograph E-14) and a larger, aqueous spray cleaner (Photograph E-15). Mr. Mangione stated the enclosed spray cleaner is rarely used and that Safety Kleen removes spent cleaning solvent. Currently only water-based cleaning solvents are used in the parts cleaners; however, organic solvents may have been used in the past. The floor in the maintenance shop is sealed and, where visible, appears to be in good condition with indications of typical *de minimis* drips of oil and other automotive fluids. Avocet also observed that the paint on the underside of the uninsulated roof and the western gable wall is badly damaged and peeling (Photograph E-16). Mr. Mangione stated the structure had been renovated and re-clad within the last 20 years. Avocet did not observe any in-ground or other vehicle lifts in the maintenance shop, nor does it feature any degreasers or a paint spray booth, although FJM Trucking reportedly conducts “touch up” painting using aerosol paint.

The truck repair shop is in the southwest corner of the site and backs onto the Gish Road/Old Bayshore Highway onramp to the northbound lanes of the 880 Freeway (Figure 3). Built between 2006 and 2009, the approximately 1,850-square-foot repair shop features a steel frame and metal-clad walls on a concrete foundation pad with a pitched, metal-clad roof. The underside of the roof and the interior surfaces of the walls are uninsulated, and the interior is open and lit by skylights and fluorescent light fixtures (Photograph E-17). A fire truck was being worked on in the maintenance shop at the time of Avocet’s site visit (Photograph E-17). Items observed in the maintenance shop included tool cabinets, vehicle jacks, wooden work benches, wheels and tire removal equipment, a car battery, a storage rack, a 5-gallon pail of engine oil, two flammables cabinets, and a large AST for waste oil storage. The storage rack was located against the rear (southwest) wall and featured an assortment of 1- and 2-gallon containers of tire lubricant and other automotive fluids, all without secondary containment (Photograph E-18). The two flammables cabinets feature integral secondary containment and were also located against the rear (southwest) wall (Photograph E-19). Both contained small containers (generally less than 1 gallon) of paint, paint-related compounds, and resin (Photograph E-20). The 5-gallon pail of engine oil and the car battery were on the floor near the flammables cabinets (Photograph E-21) and, although they were not provided with secondary containment, the floor in the area did not indicate leakage had occurred. The waste oil AST located near the main entrance door (Photograph E-22) has a capacity on the order of 200 gallons and was labeled with hazardous waste stickers indicating when the accumulation of waste oil began. It is not clear whether the waste oil AST is or was used at its observed location; however, the floor beneath it did not indicate leakage had occurred.

As noted previously, the exterior surfaces at 1535 Industrial Avenue are paved with asphalt except where there are concrete aprons adjacent to the maintenance and repair shop buildings. The asphalt pavement was installed in or around 1997 and appeared in fair condition with only a few patches where Mr. Mangione stated repairs had been necessary. At the time of Avocet’s site visit, a majority of the exterior area was occupied by box trucks and trailers for sale or rent (Photographs E-23, E-24, and E-25). The only obvious feature of potential environmental

Phase I Environmental Site Assessment

1535 and 1575 Industrial Avenue
San Jose, California 95112

Page 17
August 3, 2020

interest is the steam clean area behind (southwest of) the maintenance shop (Photographs E-26, E-27, and E-28). The steam clean facility essentially is a large concrete slab enclosed on three sides by a low concrete curb and sloped to drain to a blind sump (Photograph E-26). Water that accumulates in the sump is pumped to an aboveground clarification system by a float switch-activated sump pump. The clarification system consists of a large high-density polyethylene (HDPE) “sludge tank” in which gravity separation of solids occurs (Photograph E-27). The liquid phase gravity flows from the sludge tank to an aboveground OWS. Floating oil and grease and settled solids are skimmed off or otherwise removed and containerized in 55-gallon drums. Several 55-gallon drums with hazardous waste labels were observed adjacent to the steam clean slab, as were several other drums without labels (Photograph E-28). A few of the drums were within the secondary containment curb but secondary containment was not observed for most of the labeled and unlabeled drums. Avocet understands a lender involved in a refinance required a boring adjacent to the steam clean area; however, the findings of this investigation were not available as of the date of this report.

4.2.2 FJM Trucking Operations, 1575 Industrial Avenue

The northernmost of the two parcels that comprise the site, i.e., APN 237-30-025 at 1575 Industrial Avenue, features three permanent buildings and a modular office trailer. Carpenter Rigging and Exploration Geoservices each occupy one of the permanent buildings and FJM Trucking occupies the third permanent building (a truck maintenance shop) and the modular office trailer. The parcel is paved with asphalt apart from concrete aprons in front of the buildings and an area where the pavement has either completely disintegrated or was not installed. The northernmost parcel is fenced on three sides, but there is no fence between it and the southernmost parcel.

The approximately 1,000-square-foot modular office trailer (Photograph E-29) is located inside the southeastern boundary of APN 237-30-025 but fronts onto and is accessed from APN 237-30-020 at 1535 Industrial Avenue (Figure 3). It is a typical office/construction trailer that Mr. Mangione uses as his personal office. It features typical office furniture, a sofa, and a coffee table. A small space beneath the rear of the office trailer is used to store automotive batteries on secondary containment pallets (Photograph E-30).

The approximately 3,750-square-foot maintenance shop fronts onto Industrial Avenue (Figure 3) and was built between 1950 and 1956. It features a steel frame and metal-clad walls on a concrete foundation pad with a pitched, metal-clad roof (Photograph E-31). The underside of the roof is insulated with what appears to be fiberglass or similar material; however, the interior surfaces of the walls are uninsulated (Photograph E-32). The interior is lit by skylights and suspended fluorescent light fixtures (Photograph E-32). The interior is open apart from a free-standing parts storage and restroom structure fabricated from plywood and drywall (Photograph E-32). There were no trucks in the repair shop at the time of Avocet’s site visit and it appeared as if the building were being vacated. Items observed in the repair shop included tool cabinets, vehicle jacks, file cabinets, various parts, two air compressors, a hydraulic press, and a large AST for waste oil storage. Only one of the air compressors appears to have been used at its current location; the other appeared to be in storage or in transit. The floor beneath the air

compressor that is in use, which is inside the back (southwest) wall (Photograph E-33), features oily residue, although the floor appeared to be in good condition. The floor beneath the hydraulic press was similarly stained with oil (Photograph E-34). The waste oil AST (Photograph E-35) has a capacity on the order of 500 gallons although it may feature multiple compartments. The AST was labelled with hazardous waste stickers indicating when the accumulation of waste oil began. It is not clear whether the waste oil AST is or was used at its observed location, however, the floor beneath it did not indicate leakage had occurred.

As previously noted, the exterior surfaces at 1575 Industrial Avenue are paved with asphalt apart from the areas paved with concrete adjacent to the buildings and an area where the pavement, if any, has completely disintegrated (Photographs E-36, E-37, and E-38). Within the unpaved area Avocet observed a concrete drainage swale (Photograph E-37) and what could have been a former steam clean slab (Photograph E-38), although Mr. Mangione had no knowledge of the slab being used for steam cleaning purposes. At the time of Avocet's site visit, a majority of the exterior area at 1575 Industrial Avenue was occupied by box trucks and trailers for sale or rent (Photograph E-39). Other observed features included a car port beneath which Mr. Mangione stores a boat (Photograph E-40), a canopy for trailer storage (Photograph E-41), a crane, and several shipping containers (Photographs E-36 and 37), which Mr. Mangione stated are used to store records and other nonhazardous materials.

4.2.3 Carpenter Rigging Building, 1575 Industrial Avenue

Carpenter Rigging leases and occupies the northernmost building at the site (Photograph E-42), at 1575 Industrial Avenue, along with a few parking spaces for employee vehicles, although FJM Trucking uses the area around the building for trailer parking. According to its website, Carpenter Rigging sells wire rope, slings, shackles, and other rigging equipment to crane operators, contractors, and the like. Based on Avocet's observations, Carpenter Rigging also assembles custom rigging equipment using standard components.

The Carpenter Rigging building was built between 1950 and 1956 and essentially is a "dock-high" warehouse with attached offices at the northeast end (Photograph E-43). The offices are also dock-high and are accessed by stairs and a sloped ramp (Photograph E-43). The office areas feature private and open offices with drywall walls, suspended ceilings, fluorescent light fixtures, and a stucco exterior finish. The floors feature different types of natural and artificial stone installed by a previous tenant in the stone and granite business. The office areas feature desks and other office-type furniture and equipment and several storage racks containing shackles, canvas slings, and the like (Photographs E-44 and E-45). The "cross-dock" warehouse portion of the building featured spools of wire rope and steel chain, canvas sling materials, and metal shackles used to assemble custom rigging equipment on large work benches (Photographs E-46 through E-50). Related equipment included a propane-powered forklift and oxy-acetylene welding equipment. The interior surfaces in the warehouse, where visible, were uninsulated and the unfinished concrete floor appeared to be in good condition with only minimal or *de minimis* staining. Mr. Mangione stated that he had the Carpenter Rigging building completely refurbished with new aluminum siding in or around 2008 and Carpenter Rigging has occupied it since approximately 2016.

Phase I Environmental Site Assessment

1535 and 1575 Industrial Avenue
San Jose, California 95112

Page 19
August 3, 2020

Avocet did not observe any indications that Carpenter Rigging uses, stores, or disposes of potentially hazardous substances in other than *de minimis* quantities and the business does not appear in any of the databases searched by EDR (Section 6.2).

4.2.4 Exploration Geoservices Lease Area, 1535/1591 Industrial Avenue

An approximately 11,250-square-foot area of the site is fenced off and occupied by Exploration Geoservices, a hollow-stem auger drilling company (Photographs E-51 through E-54). The Exploration Geoservices lease area is within APN 237-30-025, but the street address is listed online as 1535 Industrial Avenue, the same address used by FJM Trucking, although a mailbox at the entrance indicates the address is 1591 Industrial Avenue (Photograph E-53). Regardless, the Exploration Geoservices lease area consists of a small office building, a storage canopy, and a partially paved storage yard in which drilling and related equipment and materials are stored. The office structure occupies approximately 1,200 square feet in the southwest corner of the lease area and appears to be a timber-framed structure with a pitched roof with composite shingles. Avocet was not able to inspect the interior of the office building but was informed that it features enclosed and open office areas and restrooms. In the northwest corner of the Exploration Geoservices lease area is a newer modular office structure (Photograph E-51). The remainder of the yard was occupied by several hollow-stem auger drill rigs, a trailer, a forklift, racked and loose hollow-stem augers, pallets of materials, and employee vehicles (Photograph E-52). In the southwest corner of the storage yard, adjacent to industrial Avenue, Avocet observed approximately 40 empty 55-gallon drums used to containerize drill cuttings (Photograph E-54).

Although it appears that Exploration Geoservices may conduct routine maintenance of its drilling equipment at the site, there were no indications of heavy maintenance or fuel storage or dispensing. Based on Avocet's familiarity with drilling services, it is unlikely that Exploration Geoservices stores or uses potentially hazardous substances in other than *de minimis* quantities, with the possible exception of fuel and other automotive fluids in its vehicles. Avocet did not observe any significant surface staining in the unobstructed areas of the exterior yard and Exploration Geoservices does not appear in any of the databases searched by EDR (Section 6.2).

4.3 ASTM E1527-13 FEATURES

ASTM E1527-13 includes a list of potential environmental features, such as USTs, ASTs, sumps, and the like, that are to be addressed in a Phase I ESA for a commercial or industrial property. The presence or absence of these features is summarized below.

| Potential Environmental Feature or Condition | Absent | Present | Comments |
|--|--------|---------|---|
| Hazardous Substances and Petroleum Products in Connection with Identified Uses | | ✓ | Fresh and waste oil, hydraulic fluid, and other automotive fluids in various containers throughout the site |
| Storage Tanks | | ✓ | ASTs for fresh and waste oil, hydraulic fluid, and other automotive fluids in the maintenance shops |
| Odors | ✓ | | |
| Pools of Liquid | ✓ | | |

Phase I Environmental Site Assessment

1535 and 1575 Industrial Avenue
San Jose, California 95112

Page 20
August 3, 2020

| Potential Environmental Feature or Condition | Absent | Present | Comments |
|---|--------|---------|---|
| Drums | | ✓ | 55-gallon drums in several locations, notably around the steam clean area |
| Hazardous Substance and Petroleum Products Containers | | ✓ | Fresh and waste oil, hydraulic fluid, and other automotive fluids in various containers throughout the site |
| Unidentified Substance Containers | | ✓ | Several 55-gallon drums near the steam clean area were not labelled |
| Polychlorinated Biphenyls (PCBs) | ✓ | | None observed or suspected |
| Heating/Cooling | | ✓ | Buildings feature heating and AC systems |
| Stains or Corrosion | | ✓ | <i>De minimis</i> on floor of maintenance shops |
| Drains and Sumps | | ✓ | Storm drain inlets throughout site and blind sump in steam clean area |
| Pits, Ponds, or Lagoons | ✓ | | |
| Stained Soil or Pavement | ✓ | | |
| Stressed Vegetation | ✓ | | |
| Solid Waste | | ✓ | Trash and hazardous wastes generated. |
| Wastewater | | ✓ | Industrial wastewater from steam clean OWS and sanitary wastewater discharged to local sewer system |
| Wells | | ✓ | Two monitoring wells related to hydraulically upgradient former Solvent Services facility |
| Septic Systems | ✓ | | None observed or suspected |

5.0 PREVIOUS INVESTIGATIONS AND REMEDIATION

A majority of the previous investigations known to have been conducted within the subject site boundary were related to USTs; however, the steam clean area reportedly also was investigated and the responsible party for the former Solvent Services facility across the street at 1470 Industrial Avenue has installed two hydraulically downgradient groundwater monitoring wells at the site. In brief, a total of six USTs, all of which are believed to have been removed, are known to have been operated at two separate locations within the site boundary. The UST-related investigations are summarized below in roughly chronological order and the Solvent Services investigations are summarized in Section 6.4.1. As noted previously, the findings of the investigation in the steam clean area were not available as of the date of this report.

5.1 DITTO FREIGHT LINES UST REMOVALS, 1575 INDUSTRIAL AVENUE

On May 15, 1989, Ditto Freight Lines (Ditto), a trucking company, submitted an “Underground Tank Closure Plan” and a permit application to the SJFD to remove two USTs from the property at 1575 Industrial Avenue. A sketch map included with the plan shows the two USTs were located inside the northern property boundary and there were as many as four fuel dispensers immediately to the south (Geo-Environmental Technology, May 15, 1989). Based on the sketch map, the approximate locations of the two Ditto USTs are shown in Figure 3. The permit application indicated both tanks had been used to store diesel fuel and were of 1,500-gallon capacity, although after they were removed, the capacities were revised upwards to 2,000-gallons. It appears neither UST had been registered with the State of California and the installation date was not filled in on the forms.

Although not mentioned in the permit application or any of the related records, it appears Ditto was also operating a third, 10,000-gallon UST for diesel storage immediately west of the two USTs to be removed, and a fourth, 1,000-gallon UST for gasoline storage immediately to the east, thereby accounting for the four dispensers mentioned above.

5.1.1 Removal of Two 2,000-Gallon Diesel USTs, June 1989

The two 2,000-gallon diesel USTs were removed on June 6, 1989 with oversight from SJFD. Hand-written SJFD inspection records indicate the USTs were of “unprotected” single-wall steel, and although they were rusted, there were “no obvious holes” and SJFD also noted there were no odors or soil discoloration in the excavation or in the stockpiled overburden soil (SJFD, June 6, 1989). On June 7, 1989, Geo-Environmental Technology collected five confirmation soil matrix samples. Samples DF-1 through DF-4 were collected from the approximately 2 feet beneath the floor of the tank excavation and Sample DF-5 was collected at approximately 5 feet bgs from a hand auger boring next to the dispenser pad (SJFD, June 7, 1989). Hand-written SJFD inspection records indicate some soil staining and odors were noted during sample collection (SJFD, June 7, 1989). The five confirmation soil samples were analyzed for TPH as diesel (TPH-d) and gasoline (TPH-g) and benzene, toluene, ethylbenzene, and total xylenes (BTEX) using the “DHS Method” and EPA Method 8020, respectively (Trace Analysis Laboratory, Inc. June 26, 1989). The results of the analyses were as follows:

Phase I Environmental Site Assessment

| Confirmation Soil Sample Analyses (Units are milligrams per kilogram or mg/kg) | | | | | |
|--|---------|------------|--------------|---------|------------|
| | DF-1 | DF-2 | DF-3 | DF-4 | DF-5 |
| TPH-d | ND<5.0 | 900 | 2,100 | ND<5.0 | 210 |
| TPH-g | ND<0.5 | ND<0.5 | ND<0.5 | ND<0.5 | ND<0.5 |
| Benzene | ND<0.05 | ND<0.05 | ND<0.05 | ND<0.05 | ND<0.05 |
| Toluene | ND<0.05 | ND<0.05 | ND<0.05 | ND<0.05 | ND<0.05 |
| Ethylbenzene | ND<0.06 | ND<0.06 | ND<0.06 | ND<0.06 | ND<0.06 |
| Total Xylenes | ND<0.2 | ND<0.2 | ND<0.2 | ND<0.2 | ND<0.2 |

5.1.2 GTI Soil Investigation, 1989

Later in 1989, Ditto retained Groundwater Technology, Inc. (GTI) to investigate whether the TPH-d reported in the confirmation samples from beneath the former 2,000-gallon USTs could be attributable to the west-adjacent 10,000-gallon UST that was still in service. GTI’s report notes that a soil boring had been drilled “at the side of the tank pit” sometime after the two 2,000-gallon USTs were removed (GTI, October 3, 1989); however, no other information, including the results of any soil sample analyses, was available to Avocet.

In brief, GTI collected soil matrix samples from eight borings, Borings A through H, advanced to depths ranging from 11 to 21.5 feet bgs, and had them analyzed for TPH-d in an onsite mobile laboratory (GTI, October 3, 1989). The copy of the GTI report provided by SJFD was incomplete and did not include the laboratory report, but based on the text of the report, the results were as follows:

| GTI Soil Sample Analyses (Units are mg/kg) | | |
|--|--------------------------------|---|
| Boring No. | Sample Depth (feet bgs) | TPH-d |
| A | 15 | 270 |
| | 20 | 240 |
| B | NA | “Trace levels of diesel below the method detection limit of 25 ppm” |
| C | NA | |
| D | NA | |
| E | NA | |
| F | NA | |
| G | 5 | 480 |
| H | NA | Same as Borings B-F |

Avocet notes that Borings A and G were located close to one another and between the former UST and the still-active 10,000-gallon UST. GTI opined that the “samples analyzed showed highly aged and degraded diesel” (GTI, October 3, 1989) and that the existing 10,000-gallon UST was probably not the source. GTI went on to recommend additional investigation, including that “verified downgradient groundwater” be evaluated for impacts (GTI, October 3, 1989).

Phase I Environmental Site Assessment

The sequence of events after GTI's investigation is not clear; however, on February 15, 1991, Ditto submitted an "Underground Storage Tank Unauthorized Release (Leak)/Contaminated Site Report" to SCVWD indicating that both diesel fuel and gasoline had been released. The reported gasoline release appears to have been related to a 1,000-gallon gasoline UST located to the east (Section 5.1.3).

5.1.3 Removal of 1,000-Gallon Gasoline UST, April 1991

On April 17, 1991, Water Work Corp. (Water Works) removed the 1,000-gallon leaded gasoline UST located immediately east of the two former 2,000-gallon USTs with oversight from SJFD. According to Water Works, the UST had not been used for "seven or eight years" prior to its removal. Upon removal, the UST was inspected and reported to be "in excellent condition with no holes or pitting and only minor rusting" and "neither petroleum staining nor product odor" were noted (Water Work, May 28, 1991). Two confirmation soil matrix samples were collected in conjunction with the 1,000-gallon UST removal. Sample DFL-TPI-9.5'C was collected from the floor of the tank pit at 9.5 feet bgs and Sample DFL-PLE-2' was collected from beneath the dispenser island to the south. Sample DFL-SP1-3', a third sample collected on May 7, 1991, appears to have been from a stockpile of excavated soil. All three samples were analyzed for TPH-g, BTEX, and total lead using EPA Methods 8015, 8020, and 7421, respectively, with the following results:

| Confirmation Soil Sample Analyses (Units are milligrams per kilogram or mg/kg) | | | |
|---|---------------|---------------|------------|
| Sample No. | DFL-TPI-9.5'C | DFL-PLE-2' | DFL-SP1-3' |
| Sample Date | 04/17/1991 | 04/17/1991 | 05/07/1991 |
| TPH-g | ND<1.0 | ND<1.0 | ND<1.0 |
| Benzene | ND<0.005 | ND<0.005 | ND<0.005 |
| Toluene | ND<0.005 | ND<0.005 | ND<0.005 |
| Ethylbenzene | ND<0.005 | 0.0086 | ND<0.005 |
| Total Xylenes | ND<0.005 | 0.0064 | ND<0.005 |
| Lead | 25 | 39 | 22 |

Water Work opined that these results reflected "only minor and equivocal evidence of leakage" and that they posed "no significant threat to groundwater quality." As such, Water Works concluded further investigation was not warranted and that the case should be closed (Water Work, May 28, 1991).

5.1.4 Diesel Spill, September 1991

On September 10, 1991, 10 to 15 gallons of diesel fuel reportedly were spilled because of a "faulty nozzle," presumably on the dispenser associated with the 10,000-gallon diesel UST. According to a "Hazardous Materials Spill Report," it appears Ditto had a backhoe operator dig up the impacted soil and place it on plastic sheeting (City of San Jose, September 10, 1991). SJFD instructed Ditto to dispose of the diesel-impacted soil in accordance with Santa Clara County requirements but there is no mention of confirmation soil sampling in the excavated area.

5.1.5 Removal of 10,000-Gallon Diesel UST, February 1994

On September 11, 1992, the 10,000-gallon diesel UST located immediately west of the two former 2,000-gallon diesel USTs failed a tank integrity test (Petrotek, September 11, 1992). On February 15, 1994, the 10,000-gallon diesel UST was removed with oversight from SJFD, and independent soil sampling was provided by Blaine Tech Services Inc. (Blaine Tech). It appears that Ditto was no longer occupying 1575 Industrial Avenue at the time, and the responsibility for removing the 10,000-gallon UST was assumed by Mr. Mangione, the property owner. Based on the limited information available, it appears the removed tank was a single-wall steel UST and “no holes were found” (Blaine Tech, March 10, 1994). Blaine Tech collected three confirmation soil samples, Samples #2, #3, and #4, in conjunction with the UST removal. Samples #2 and #4 were collected from beneath the ends of the UST at 14 and 15 feet bgs, respectively, and Sample #3 was collected from beneath the fuel dispensing pipeline at 3 feet bgs. It is not clear why Blaine Tech started with Sample #2 and whether Sample #1 was collected. Samples #2, #3, and #4 were analyzed for TPH-d and BTEX. Sample #3, from beneath the fuel piping, contained 170 milligrams per kilogram (mg/kg) of TPH-d, but TPH-d was not detected in Samples #2 or #4 and BTEX were not detected in any of the three samples (Blaine Tech, March 10, 1994).

The 170 mg/kg of TPH-d in Sample #3 exceeded the then-current SFBRWQCB screening level and it appears an attempt was made to “over-excavate” impacted soil (FJM Truck Repair, Inc., May 24, 1994). On July 22, 1994, SCVWD requested additional delineation of TPH-d in soil, specifically referencing the 2,100 mg/kg reported in Sample DF-3 in June 1989 and the 170 mg/kg reported in Sample #3 above. SCVWD’s July 22, 1994 letter also mentioned earlier requests for additional site assessment that had not been complied with.

5.1.6 Additional Assessment and Case Closure, 1995

Pursuant to SCVWD’s request, FJM Trucking retained Geo Plexus, Inc. (Geo Plexus) to conduct a limited additional subsurface assessment. Specifically, on November 10, 1995, Geo Plexus drilled a single soil boring (Boring EB-1) to 19.5 feet bgs at a location reported to be hydraulically downgradient of the former 2,000-gallon USTs. Soil matrix samples were collected at regular intervals and groundwater was encountered at approximately 17 feet bgs. Reportedly, no indications of fuel contamination were observed while drilling and sampling. Soil Sample S-1, collected in the capillary fringe at 15 to 15.5 feet bgs, and a groundwater grab sample collected at an unspecified depth were analyzed for TPH-d, TPH-g, and BTEX using EPA Methods 8015 and 8020, respectively. However, none of these compounds were detected in either sample. The RLs for TPH-d and TPH-g in soil and groundwater were 1.0 mg/kg and 50 micrograms per liter ($\mu\text{g/L}$), respectively. The RLs for BTEX in soil and groundwater were 0.005 mg/kg and 0.5 $\mu\text{g/L}$, respectively.

Based on the absence of residual contamination, SCVWD issued a case closure summary and an NFA letter on December 27, 1995 for all four of the USTs operated by Ditto at 1575 Industrial Avenue. A copy of the December 27, 1995 NFA letter is included in Appendix F.

5.2 UST REMOVALS AND REMEDIATION, 1535 INDUSTRIAL AVENUE

On June 7, 1990, FJM Trucking had two USTs removed from separate locations along the southeast side of the FJM Rental Center and Maintenance Shop at 1535 Industrial Avenue. They were a 10,000-gallon UST used for diesel fuel storage and a 1,000-gallon UST used for gasoline storage. The approximate locations of the former USTs are shown in Figure 3. The installation dates for the two USTs are not known and reportedly they had been emptied and taken out of service approximately 10 years earlier (i.e., in or around 1980).

5.2.1 UST Removals, June 1990

Avocet has not been able to locate a report documenting the removal of the two USTs; however, SJFD field inspection records noted dark soil staining along the full length of the 10,000-gallon diesel UST, which was attributed to overfilling, and a “tar” odor. In addition, SJFD noted “heavy pitting” at one end of the tank, examination of which created a small hole (SJFD, June 7, 1990). SJFD also noted a “few holes” in the 1,000-gallon gasoline tank and a “slight product odor” in the excavation (SJFD, June 7, 1990). Two confirmation soil samples (Samples A and B) were collected from beneath the 10,000-gallon diesel UST and one confirmation soil sample (Sample C) was collected from beneath the 1,000-gallon gasoline UST. Samples A and B were analyzed for TPH-d and BTEX using EPA Methods 8015 and 8020, respectively, and Sample C was analyzed for TPH-g and BTEX using the same methods. The results of the analyses (FJM Truck Repair, June 26, 1990) are barely legible but appear to be as follows:

| Confirmation Soil Sample Analyses (Units are milligrams per kilogram or mg/kg) | | | |
|---|--------------|--------------|--------------|
| Sample No. | A | B | C |
| TPH-d | ND<1.0 | 600 | Not Analyzed |
| TPH-g | Not Analyzed | Not Analyzed | 210 |
| Benzene | 0.01 | 0.0065 | 0.17 |
| Toluene | 0.029 | ND<0.005 | 0.34 |
| Ethylbenzene | 0.018 | 0.0072 | 0.94 |
| Total Xylenes | 0.069 | 0.03 | 2.8 |

5.2.2 Over-Excavation, July-September 1990

Based on the above, FJM Trucking notified SJFD that it planned to over-excavate 4 to 5 feet “in the contaminated area” and collect additional confirmation soil samples (FJM Truck Repair, June 26, 1990). It appears there were actually three phases of over-excavation and confirmation soil sampling on July 5, August 3, and September 21, 1990 (Environmental/Engineering Consultants [E2C], October 15, 1990), as follows:

- On July 5, 1990, after the first phase of over-excavation, E2C collected five confirmation soil samples from the diesel UST excavation and had them analyzed for TPH-d. TPH-d was detected in Samples DS-1 and DMN-1 at concentrations of 4.2 and 45 mg/kg, respectively. On August 3, 1990, after additional over-excavation, E2C collected Sample MD-1 from beneath the location of

Phase I Environmental Site Assessment

Sample DMN-1 and had it analyzed for TPH-d; however, TPH-d was not detected with a RL of 1 mg/kg.

- On July 5, 1990, after the first phase of over-excavation, E2C collected five confirmation soil samples from the gasoline UST excavation and had them analyzed for TPH-g and BTEX. TPH-g and total xylenes were detected in three samples at concentrations up to 25 mg/kg and 14 micrograms per kilogram ($\mu\text{g}/\text{kg}$), respectively. On August 3, 1990, after a second phase of over-excavation, E2C collected three additional confirmation samples and had them analyzed for TPH-g and BTEX. One of the three samples (Sample MG-1) contained 1.2 mg/kg of TPH-g, 8.2 $\mu\text{g}/\text{kg}$ of toluene, 35 $\mu\text{g}/\text{kg}$ of ethylbenzene, and 240 $\mu\text{g}/\text{kg}$ of total xylenes. On September 21, 1990, after a third phase of over-excavation, E2C collected a final confirmation sample (Sample FJMG-1) and had it analyzed for TPH-g and BTEX. Sample FJMG-1 contained 3.7 $\mu\text{g}/\text{kg}$ of toluene but no other fuel constituents were detected.

E2C also collected samples of stockpiled soil from the two UST excavations and used the results to profile the soil for offsite disposal. E2C noted that the 3.7 $\mu\text{g}/\text{kg}$ of toluene in Sample FJMG-1 was well below potentially applicable screening levels and opined that NFA was required (E2C, October 15, 1990). Avocet understands the stockpiled soil was subsequently transported to the Zanker Road Landfill and the two UST excavations were backfilled with “clean soil” (SCVWD, March 29, 1991).

5.2.3 Case Closure, March 1991

SCVWD concurred with E2C’s recommendation and on March 29, 1991 submitted a “Case Closure Recommendation” to the SFBRWQCB. SFBRWQCB concurred with SCVWD’s recommendation and on April 11, 1991 issued an NFA letter for the two former USTs at 1535 Industrial Avenue. A copy of SFBRWQCB’s April 11, 1991 NFA letter is included as Appendix F to this report.

5.3 PHASE I ESA, ERAS, APRIL 2020

In early 2020, ERAS Environmental, Inc. (ERAS) conducted a Phase I ESA for the subject site on behalf of Mr. Mangione. ERAS conducted a site inspection and much of the same research as Avocet for the subject Phase I ESA. ERAS identified groundwater contamination attributable to the former Solvent Services facility as a CREC and the former USTs at 1535 and 1575 Industrial Avenue as HRECs. Avocet does not disagree with the former USTs being identified as HRECs but notes that Figure 2 in the ERAS Phase I ESA report, entitled “Property Site Plan,” shows the two former 2,000-gallon USTs (Section 5.1.1) in what Avocet believes is the wrong location. Specifically, ERAS shows these two former USTs south of the building currently occupied by Carpenter Rigging, whereas the documents reviewed by Avocet indicate they were located to the north, just inside the northern site boundary (Figure 3). Avocet notes, however, that information pertaining to the former UST locations is limited to hand-drawn sketches, none of them to scale, and many without reliable reference points. As such, the former UST locations shown in Figure 3 should be considered approximate only. As discussed in Section 6.4.1, Avocet

Phase I Environmental Site Assessment

1535 and 1575 Industrial Avenue
San Jose, California 95112

Page 27
August 3, 2020

considers groundwater contamination attributable to the former Solvent Services facility a REC, as there are no active control measures in place and the case has not yet been closed. However, based on the very low residual VOC concentrations in groundwater beneath the subject site, the distinction between a REC and a CREC is not critical in this case.

6.0 ADJOINING AND NEARBY PROPERTIES

This section summarizes a search by EDR of environmental databases maintained by local, state, and federal government agencies and describes properties adjoining the subject site and selected nearby properties. The descriptions of adjoining and selected nearby properties are based on Avocet's observations from public rights-of-way, information included in EDR's report (Appendix F), and information available from the GeoTracker and EnviroStor websites maintained by CalEPA.

6.1 DATABASE LISTINGS

EDR's search encompassed over 90 databases maintained by local, state, and federal government agencies, including all of the databases specified in ASTM E1527-13, Section 8.2.1. The "target property" addresses used by EDR for records search purposes were 1535, 1551, and 1575 Industrial Avenue, San Jose, California 95112. EDR's June 4, 2020 Radius Map Report with GeoCheck[®], which is included in Appendix G, identifies numerous listings within ASTM-recommended search radii. These listings are summarized in Table 1; however, in the interest of brevity and making relevant information more accessible, the following summaries focus on those database listings considered potentially relevant to the objectives of the subject Phase I ESA, specifically those pertaining to the subject site and to nearby properties with documented hazardous substance releases with the potential to have impacted the site. Other properties and database listings not considered indicative of a hazardous substance release, database listings for hydraulically downgradient properties, and database listings with "Closed – Case Completed" status have generally been screened out. It is noted in this regard that inclusion in certain of the databases searched is not, in and of itself, an indication that hazardous substances have been released or that the subsurface beneath the properties is contaminated. For example, inclusion in the HAZNET or similar databases indicates that the generator is following the proper procedures. Similarly, the fact that USTs or ASTs are or were operated at a property and were registered with the state is not, in and of itself, of concern unless the tank(s) had leaked, in which case the property should be included in other databases.

6.2 TARGET PROPERTY LISTINGS

The databases in which the target property addresses of 1535, 1551, and 1575 Industrial Avenue appear are summarized below. Avocet notes that spelling errors and/or different uses of abbreviations or punctuation often result in multiple listings in the same databases. That said, the database listings, complete with spelling errors, are as follows:

Phase I Environmental Site Assessment

| Address | Company | Database | Comment |
|------------------------|-------------------------------|--|---|
| 1535 Industrial Avenue | FJM Truck Repair, Inc. | RCRA NonGen / NLR | Indicates the facility does not presently generate hazardous waste |
| | | RGA LUST | Pertains to the removal of former USTs and subsequent investigation |
| | | FINDS, ECHO | Pertains to the storage and/or generation of permitted chemicals |
| | | SWEEPS UST | Pertains to the former USTs |
| | | LUST, HIST LUST, HIST CORTESE, CERS, CUPA Listings, HAZMAT, CERS HAZ WASTE | Pertains to the removal of former USTs and subsequent investigation and the storage and/or generation of hazardous waste |
| | | HAZNET, HWTS | Pertains to the generation and storage of hazardous materials associated with vehicle maintenance and repair |
| | FINDS | Pertains to the storage and/or generation of permitted chemicals | |
| | Frank Mungione Repair | HWTS | Pertains to the generation and storage of hazardous materials associated with vehicle maintenance and repair |
| | Ditto Industries | HIST UST | Pertains to the presence of former USTs |
| 1551 Industrial Avenue | FJM Truck Repair, Inc. | CUPA Listings, HAZMAT | Pertains to the preparation of a Hazardous Material Business Plan for the facility and generation and storage of hazardous materials associated with vehicle maintenance and repair |
| | Ditto Freight Lines | HWTS | Pertains to the generation and storage of hazardous materials associated with vehicle maintenance and repair |
| 1575 Industrial Avenue | Frank Mangione | HWTS | Pertains to the generation and storage of hazardous materials associated with vehicle maintenance and repair |
| | Ditto Freight Lines | FINDS | Pertains to the storage and/or generation of permitted chemicals |
| | | LUST, HIST CORTESE, CERS | Pertains to the removal of former USTs and subsequent investigation |
| | | RGA LUST | Pertains to the removal of former USTs and subsequent investigation |
| | | HAZNET, HWTS | Pertains to the generation and storage of hazardous materials associated with vehicle maintenance and repair |
| | | HIST UST, LUST, HIST LUST, SWEEPS UST | Pertains to the removal of former USTs and subsequent investigation |
| | Streicher Mobile Fueling Inc. | HAZNET, HWTS | Pertains to the generation and storage of hazardous materials associated with vehicle maintenance and repair |
| Volt Telecon Corp | HWTS | Pertains to the generation and storage of hazardous materials associated with vehicle maintenance and repair | |

In brief, the target property listings summarized above are consistent with the site’s history and none suggest site conditions beyond those documented elsewhere in this report.

6.3 ADJOINING PROPERTIES TO THE NORTH AND NORTHEAST

The subject site is bordered to the north by Bothwell Corporation at 1590 Industrial Avenue and the former Specialty Truck Parts, Inc. property at 1605 Industrial Avenue (Figure 2).

6.3.1 Bothwell Corporation, 1590 Industrial Avenue

The property at 1590 Industrial Avenue is listed in the SWEEPS UST, RCRA-SQG, RCRA NonGen/NLR, and CUPA Listings databases under two different business names: Bothwell Corporation and Coast Fuel Injection, Inc. Bothwell Corporation, the current occupant, is a commercial concrete and electrical contractor. The property appears to be Bothwell Corporation's headquarters as well as a laydown yard for equipment and materials, including trucks and electrical supplies. The RCRA NonGen/NLR listing indicates that Bothwell Corporation does not presently generate hazardous waste. Prior to Bothwell Corporation, Coast Fuel Injection, Inc. operated a vehicle repair business that specialized in rebuilding turbochargers, diesel pumps, and fuel injectors. The RCRA-SQG listing pertains to the generation of hazardous waste related to vehicle maintenance and repair activities during Coast Fuel Injection's occupancy. The SWEEPS UST listing indicates that Coast Fuel Injection operated a 1,000-gallon UST for waste oil at the property; however, no other records are available pertaining to the status or current disposition of this UST. Avocet notes that the 1590 Industrial Avenue address is not featured on the GeoTracker or EnviroStor websites maintained by CalEPA, and based on regional groundwater flow to the northwest, the Bothwell Corporation property is hydraulically crossgradient of the subject site. Absent information to the contrary, there is no reason to suspect that ongoing or past operations at 1590 Industrial Avenue are likely to have impacted the subject site.

6.3.2 Former Specialty Truck Parts Facility, 1605 Industrial Avenue

The property at 1605 Industrial Avenue is listed in the LUST, HIST LUST, SWEEPS UST, HIST CORTESE, CUPA Listings, HAZMAT, RCRA-LQG, RCRA NonGen/NLR, and AST databases. The current owner of the property, which was being redeveloped at the time of Avocet's site visit, is listed as LBA RVI Company, a real estate investment group, but in the past the property was occupied by Specialty Truck Parts, Inc., a truck supply and repair business. The property featured one 1,000-gallon UST for gasoline, which was removed in October 1991. The approximate location of the former UST is shown in Figure 2. Soil sampling conducted in conjunction with the UST removal indicated the presence of TPH-g in soil at concentrations up to 2,800 mg/kg and benzene at concentrations up to 31 mg/kg. Pursuant to these results, approximately 60 cubic yards of gasoline-impacted soil was over-excavated to a total depth of 13 feet bgs in November 1991. Confirmation soil samples collected from the floor of the excavation contained TPH-g and benzene at concentrations up to 650 and 8.4 mg/kg, respectively (Environmental Restoration Services, February 8, 1996).

In January 1994, six borings were advanced in the vicinity of the former UST to 20 feet bgs. Soil samples were collected at intervals until groundwater was encountered, reportedly at between 15 and 18 feet bgs, at which point groundwater grab samples were also collected from

Phase I Environmental Site Assessment

1535 and 1575 Industrial Avenue
San Jose, California 95112

Page 31
August 3, 2020

each boring. The groundwater grab samples contained significantly elevated concentrations of TPH-g and BTEX, as follows (Applied Geosciences, Inc., February 24, 1994):

| Groundwater Grab Sample Results January 1994 | |
|---|-------------------------------|
| Compound | Concentration Range (µg/L) |
| TPH-g | 9,400 – 350,000 |
| Benzene | 2,600 – 23,000 |
| Toluene | 54 – 3,900 |
| Ethylbenzene | 1,300 – 11,000 |
| Xylenes | 150 – 22,000 |
| Lead | 31.5 – 373 |

To further evaluate subsurface conditions, four groundwater monitoring wells were installed between October 1995 and December 1996 at the approximate locations shown in Figure 2. Samples from Wells MW-1, MW-2, and MW-3 reportedly did not contain detectable concentrations of TPH-g, BTEX, or methyl *tert*-butyl ether (MTBE); however, samples from Well MW-4, which was drilled in the immediate vicinity of the former UST, consistently contained elevated concentrations of these fuel constituents (WellTest, Inc., September 13, 2015). Groundwater flow was interpreted to be to the west, the hydraulic gradient was relatively flat, and quarterly groundwater monitoring indicated that the dissolved hydrocarbon plume did not appear to be migrating.

To address the source area around the former UST, 19 additional borings were advanced in 2001 to further delineate contaminants in soil and groundwater, and 12 of the borings were used to inject hydrogen peroxide solution to treat contaminated groundwater (WellTest, Inc., August 1, 2013). Additional remediation included three dual-phase extraction pilot tests conducted between 2012 and 2014. The first pilot test was conducted using only Well MW-4 and the contaminant recovery rates reportedly were poor. However, the two subsequent pilot tests reportedly removed 3.76 and 80.26 pounds of gasoline, respectively. As part of the later pilot tests, eight additional monitoring wells (Wells MW-5 through MW-12) were installed in the source area (WellTest, Inc., June 10, 2014). Additional quarterly groundwater monitoring was conducted through the third quarter of 2015, at which time the maximum groundwater contaminant concentrations were as follows (WellTest, Inc., September 13, 2015):

| Groundwater Conditions Third Quarter 2015 | |
|--|---------------------------------|
| Analyte | Maximum Concentration (µg/L) |
| TPH-g | 24,000 |
| Benzene | 3,700 |
| Toluene | 520 |
| Ethylbenzene | 3,400 |
| Xylenes | 6,500 |
| MTBE | 9.6 |

Phase I Environmental Site Assessment

1535 and 1575 Industrial Avenue
San Jose, California 95112

Page 32
August 3, 2020

Based on the above as well as the determination that the groundwater plume was stable and less than 100 feet in length, the case was recommended for closure pursuant to California's Low Threat Closure Policy (SCCoDEH, January 14, 2016). The monitoring wells at the property were subsequently destroyed and on September 21, 2016, SCCoDEH issued an NFA letter.

Based on groundwater flow to the northwest, the former UST at the former Specialty Truck Parts, Inc. property is hydraulically downgradient or crossgradient of the subject site. Based on the groundwater flow direction, the intervening distance (over 300 feet), and that the gasoline impact in groundwater was of limited extent, there is no reason to suspect that past operations at the former Specialty Truck Parts, Inc. property are likely to have impacted the subject site.

6.4 ADJOINING PROPERTIES TO THE EAST

The subject site is bounded to the east by the Industrial Avenue right-of-way, on the far side of which are the properties at 1470 and 1540 Industrial Avenue.

6.4.1 Former Solvent Services Company, 1470 Industrial Avenue

The former Solvent Services property was a solvent recycling facility and is listed in the CUPA Listings, HAZMAT, CERS HAZ WASTE, RCRA-SQG, CPS-SLIC, DEED, Cortese, RCRA NonGen/NLR, and CPS-SLIC databases. Most of the listings pertain to the past handling and generation of hazardous wastes, including solvents. The CPS-SLIC listing pertains to ongoing investigation and remediation at the property. The property is currently occupied by Lewis and Tibbitts, Inc., an underground utility construction contractor, which uses it for equipment and materials storage.

Solvent Services reportedly occupied the property between 1971 and 1974 but the related subsurface contamination was not discovered until 1997 (Ropers, Majeski, Kohn, & Bentley, April 28, 1998). In brief, numerous subsurface investigations have shown that the vadose zone and shallow groundwater had been significantly impacted by chlorinated solvents, notably PCE, TCE, and their degradation byproducts *cis*-1,2-DCE and vinyl chloride. Other contaminants detected in groundwater included petroleum hydrocarbons and 1,4-dioxane. Remedial actions at the property have included the removal of two USTs, the excavation of approximately 3,200 tons of solvent-impacted soil, and enhanced reductive dechlorination (ERD) by injecting Hydrogen Release Compound (HRC) into groundwater (PES Environmental, Inc., April 20, 2006). HRC was also applied to the bottom of the remedial excavation, the approximate limits of which are shown in Figure 2. The property is deed restricted to limit future uses to industrial purposes only, to prohibit the use of the underlying groundwater for potable purposes, and to require that SFBRWQCB be notified prior to disturbing potentially contaminated soil. The UST removals and remedial excavation were completed in 2002, the groundwater ERD program was completed in 2005, and a long-term groundwater monitoring program is currently in effect at the property (PES Environmental, Inc., April 20, 2006).

Based on subsurface investigations at the former Solvent Services facility, there are two relatively well defined stratigraphic units within 100 feet of the ground surface in the site vicinity, both of which contain groundwater (PES, December 28, 2016). The upper unit,

Phase I Environmental Site Assessment

typically referred to as Zone A consists of low permeability silty clay with discontinuous layers of silt and occurs from the ground surface to between 38 and 45 feet bgs. Groundwater in Zone A is generally encountered at between 8 and 14 feet bgs but has occasionally been encountered as shallow as 6 feet bgs (PES, December 28, 2016). Zone A is underlain by significantly more permeable gravelly sands that extend to at least 100 feet bgs, the maximum depth investigated at the former Solvent Services site. The upper and lower portions of the underlying gravelly sand layer are referred to as Zone B and Zone C, respectively, although it is not clear whether there is any physical separation, such as an aquitard, between the two. Groundwater in Zones B and C is confined and stabilizes in monitoring wells at around the same elevation as groundwater in the Zone A. Consistent with the regional gradient mentioned above, groundwater in Zones A, B, and C flows to the west-northwest, toward San Francisco Bay.

The Solvent Services groundwater monitoring program involves a network of onsite and offsite wells, several of which are located in two- or three-well clusters. Two of the hydraulically downgradient monitoring wells are within the subject site boundary, one screened in Zone A (Well MW-7A) and the other in Zone B (Well MW-9B). In addition, there are two, two-well clusters in the Industrial Avenue right-of-way immediately adjacent to site. The locations of these offsite Solvent Services monitoring wells are shown in Figures 2 and 3. The lateral distribution of *cis*-1,2-DCE in groundwater as of 2016 (Figures 2 and 3) shows that this degradation byproduct had migrated beneath the subject site (PES Environmental, Inc., November 28, 2006). Vinyl chloride, another degradation byproduct, was interpreted as extending as far downgradient as Wells MW-5A/B/C (in the Industrial Avenue right-of-way) as of 2020 but a majority of the vinyl chloride plume was within the former Solvent Services property boundary.

With respect to the two Solvent Services wells within the subject site boundary, VOC concentrations in groundwater samples from Well MW-7A have generally been below the laboratory RLs since Well MW-7A was installed in 2005; however, 1,4-dioxane was detected at 84.5 and 97.3 µg/L in 2015 and 2019, respectively. There is no drinking water MCL for 1,4-dioxane; however, the drinking water NL is 1 µg/L, and the “Response Level” at which a drinking water source must be taken out of service, is 35 µg/L. Avocet notes that the RL for 1,4-dioxane in the Solvent Services groundwater samples is typically 50 µg/L so it is possible 1,4-dioxane is consistently present at lower concentrations (PES, April 15, 2020). Groundwater samples from Well MW-9B have consistently contained trace concentrations of *cis*-1,2-DCE and vinyl chloride and occasionally trace concentrations of 1,1-dichloroethane.

Two rounds of post-remediation subsurface investigation were conducted at the former Solvent Services property in 2018 and 2019. These investigations focused primarily on post-remediation VOC concentrations in soil vapor. Four of the investigation locations were located within the Industrial Avenue right-of-way, near the southeastern boundary of the subject site (Figure 3). The concentrations of PCE and its degradation byproducts in these soil vapor sampling locations were as follows (PES Environmental, Inc., December 13, 2019):

Phase I Environmental Site Assessment

| SFBRWQCB Screening Levels | | | | | |
| Commercial ESL | | 67 | 100 | 1,200 | 5.2 |

As indicated above, the reported concentrations of PCE in the June 26, 2018 soil vapor samples from Probes SV1 and SV2 exceeded the 2019 SFBRWQCB commercial/industrial Environmental Screening Level (ESL), as do the reported concentrations of vinyl chloride in samples from Probes SV3 and SV14, and although vinyl chloride was not detected in Probes SV1 and SV2, the RLs were either close to or above the ESL (PES Environmental, Inc., December 13, 2019). Based on these results, particularly the data from Probe SV1, which is located closest to the subject site, soil vapor impacts attributable to releases at the former Solvent services facility may be present beneath the subject site.

6.4.2 Mobile Truck Repair of Silicon Valley, 1540 Industrial Avenue

The property at 1540 Industrial Avenue, which is currently occupied by Mobile Truck Repair of Silicon Valley, is listed in the CUPA Listings, SWEEPS UST, HIST UST, HIST CORTESE, and RCRA NonGen/NLR databases. The CUPA listing pertains to the generation of waste oil at the property, but the RCRA NonGen/NLR listing indicates hazardous waste is no longer generated at the property. The UST listings pertain to two 6,000-gallon USTs for gasoline, one 6,000-gallon UST for diesel fuel, and one 550-gallon UST for waste oil. Although no other records were readily available pertaining to the status or current disposition of these USTs, the fact they are listed in the HIST UST database suggests they have been removed. Moreover, the property is not featured on GeoTracker or EnviroStor and is not listed in any other databases that would suggest a release has occurred from the USTs or other sources at the property. Absent information to the contrary, there is no reason to suspect that ongoing or past operations at 1540 Industrial Avenue are likely to have impacted the subject site, although Avocet notes it is directly upgradient based on groundwater flow to the northwest.

6.5 ADJOINING PROPERTIES TO THE SOUTH

The site is bounded to the south by 1495 and 1505 Industrial Avenue. The current occupant of 1495 Industrial Avenue is Marble and Stone Solutions, Inc., a contractor that specializes in installations of countertops in kitchens and bathrooms. The 1495 Industrial Avenue address is not listed in any of the databases searched by EDR, nor is it featured on the GeoTracker or EnviroStor websites. Absent information to the contrary, there is no reason to suspect that ongoing or past operations at 1495 Industrial Avenue are likely to have impacted the subject site.

The property at 1505 Industrial Avenue is current occupied by Fence, Deck, & Patio, Inc., which provides custom construction for residential backyards but is listed in the HIST UST, HIST

CORTESE, EDR Hist Auto, and CUPA Listings databases. These listings are associated with Case and Power Equipment and The Gear Shop, assumed to have been previous occupants. Based on the database listings, the property featured at least two USTs for gasoline storage, one of 500-gallon capacity and the other of 1,000-gallon capacity. Although no other records were readily available pertaining to the status or current disposition of these USTs, the fact they are listed in the HIST UST database suggests they have been removed. The EDR Hist Auto listing indicates the property previously operated as an automotive transmission repair shop, suggesting that there is a history of the use of hazardous materials associated with automotive repair. The CUPA listing indicates that The Gear Shop generated less than 5 tons per year of hazardous waste associated with vehicle repair. While the database listings indicate that hazardous materials and hazardous waste have been used and generated at the property, they are not necessarily indicative that a release has occurred. Avocet notes that the responsible party for the former Solvent Services facility (Section 6.4.1) installed Well MW-7 at 1535 Industrial Avenue, near the shared boundary with the subject south-adjointing property at 1505 Industrial Avenue. If contamination attributable to the USTs or other activities at 1505 Industrial Avenue had impacted the subject site, groundwater samples from Well MW-7 would likely reflect those impacts. However, groundwater samples from Well MW-7 have been relatively free of contamination since its installation in 2005. Based on the available information and absent information to the contrary, there is no reason to suspect that ongoing or past operations at 1505 Industrial Avenue are likely to have impacted the subject site.

6.6 ADJOINING PROPERTIES TO THE WEST

The subject site is bounded to the west by the 880 Freeway, which was constructed in the 1950s. In terms of environmental concerns, the freeway is a potential source of aerially deposited lead (ADL). ADL refers to lead deposited on the shoulders of freeways as a result of the past use of leaded gasoline. Although the use of leaded fuel has been prohibited in the United States since the 1980s, it is possible for ADL to be present in unpaved soil adjacent to highways built prior to the elimination of leaded gasoline. That said, much of the site is believed to have been paved since it was first developed in the 1950s and near-surface soils have since been periodically disturbed during repaving and other site improvements. The presence of pavement and soil disturbance make it unlikely the subject site has been impacted by ADL.

Beyond the 880 Freeway are additional commercial/industrial properties; however, they are all located hydraulically downgradient of the subject site based on groundwater flow to the northwest. Based on the absence of GeoTracker or EnviroStor cases, the intervening distance, and the groundwater flow direction, it is unlikely the subject site has been impacted by operations at the commercial/industrial properties across the 880 Freeway to the west.

7.0 CONCLUSIONS AND RECOMMENDATIONS

This section presents the conclusions of the Phase I ESA for 1535 and 1575 Industrial Avenue in terms of identified and sequentially numbered RECs, HRECs, and OEFs, the locations of which are shown in Figure 4.

7.1 RECOGNIZED ENVIRONMENTAL CONDITIONS (RECS)

ASTM (2013) defines RECs as:

“. . . the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.”

ASTM (2013) goes on to define *de minimis* as:

“. . . a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.”

Based on the subject Phase I ESA, Avocet has identified a single REC at the subject site, as follows:

- **REC 1 –VOC Impacts Attributable to Former Solvent Services.** Solvent recycling operations at the hydraulically upgradient former Solvent Services facility resulted in significant impacts to the vadose zone and groundwater involving PCE, related degradation byproducts, and 1,4-dioxane. Although a significant amount of remediation work has been conducted at the source and downgradient conditions are improving, VOCs attributable to Solvent Services are present beneath the subject site in groundwater, as evidenced by data from two onsite monitoring wells, and probably soil vapor. Recent groundwater samples from Well MW-7A, which is located at 1535 Industrial Avenue and screened in the uppermost water-bearing zone, have not contained detectable VOC concentrations, although 1,4-dioxane has been detected sporadically. Recent groundwater samples from the Well MW-9B, which is located at 1575 Industrial Avenue and screened in the deeper water-bearing zone, consistently contain trace concentrations of *cis*-1,2-DCE and other PCE degradation byproducts. In soil vapor, PCE and vinyl chloride concentrations in probes immediately outside the subject site boundary exceed SFBRWQCB’s commercial/industrial ESLs. PCE and vinyl chloride may be present in soil vapor beneath the subject site at comparable concentrations.

There are several references in the records reviewed by Avocet to poor housekeeping that resulted in spills of diesel fuel, oil, and probably other automotive fluids throughout the subject

site, and several of the aerial photographs Avocet reviewed show darkened, possibly oil-impacted areas. While it is likely that near-surface soil at the site has been locally impacted by fuel, oil, and other automotive fluids, Avocet believes it is unlikely these impacts would be the subject of enforcement action and as such they are expected to be *de minimis*.

7.2 CONTROLLED RECs (CRECs)

ASTM (2013) defines CRECs as a REC:

“ . . . resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). ”

Based on the subject Phase I ESA, Avocet has not identified any CRECs at the subject site.

7.3 HISTORICAL RECs (HRECs)

ASTM defines HRECs as:

“ . . . a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). ”

Based on the subject Phase I ESA, Avocet has identified two HRECs at the site, sequentially numbered after the REC as follows:

- **HREC 2 – Former USTs at 1535 Industrial Avenue.** Two USTs and associated dispensers and product piping were removed from separate excavations at 1535 Industrial Avenue in June 1990. They were a 10,000-gallon UST for diesel fuel and a 1,000-gallon UST for gasoline. Confirmation soil samples from beneath the former USTs contained TPH and other fuel constituents at concentrations above then-current screening levels, prompting two cycles of over-excavation and confirmation soil sampling in the diesel tank excavation and three cycles of over-excavation and confirmation soil sampling in the gasoline tank excavation. On completion of these activities, SCVWD recommended case closure, and on April 11, 1991 the SFBRWQCB issued an NFA letter for the two former USTs at 1535 Industrial Avenue.

HREC 3 – Former USTs at 1575 Industrial Avenue. Four USTs and the associated dispensers and product piping were removed from 1575 Industrial

Avenue between June 1989 and February 1994. Three of the USTs, a 10,000-gallon and two 2,000-gallon tanks, were used to store diesel fuel and the fourth, a 1,000-gallon UST, was used to store gasoline. Although all four USTs appear to have been located alongside one another, they were removed in three separate phases. Confirmation soil samples from beneath the former USTs contained TPH and other fuel constituents at concentrations above then-current screening levels, pursuant to which a capillary zone soil sample and a groundwater grab sample were collected from a boring located hydraulically downgradient of the two 2,000-gallon diesel USTs in 1995. Neither one of these samples contained detectable concentrations of TPH or any other fuel constituents, pursuant to which SCVWD issued an NFA letter on December 27, 1995 for all four of the former USTs at 1575 Industrial Avenue.

7.4 OTHER ENVIRONMENTAL FEATURES (OEFs)

OEFs are potential environmental features or conditions that do not meet the definition of a REC, CREC, or HREC but which may warrant mention in the context of acquiring, clearing, and paving the site for parking. Based on the subject Phase I ESA, Avocet had identified five OEFs at the site, sequentially numbered after the REC and HRECs as follows:

- **OEF 4 – *De Minimis* Near-Surface Soil Impacts.** There are several references in the records reviewed by Avocet to poor housekeeping that resulted in spills of diesel fuel, oil, and probably other automotive fluids at various locations throughout the site, and several of the aerial photographs Avocet reviewed show darkened, possibly oil-impacted areas. As such, localized but *de minimis* near-surface soil impacts involving fuel, oil, and/or other automotive fluids could be encountered during site clearance and redevelopment grading.
- **OEF 5 – Steam Clean Area.** The steam clean area behind (west of) the FJM Trucking rental center and maintenance shop consists of a large concrete slab sloped toward a subsurface sump equipped with a float-activated sump pump. The sump pump discharges to a “sludge tank” in which solids settle out, and the clarified aqueous phase gravity flows to an aboveground OWS. Avocet recommends that the current owner remove all of the aboveground steam clean infrastructure and notes that *de minimis* soil impacts could be encountered beneath and around the steam clean slab, particularly around the blind sump.
- **OEF 6 – Solvent Services Monitoring Wells.** The site features two groundwater monitoring wells, Wells 7A and 9B, installed by the responsible party for the hydraulically upgradient former Solvent Services property at 1470 Industrial Avenue. These two wells are currently required to be monitored on an annual basis, and unless they can be eliminated from the monitoring program, they will have to be protected in place during site redevelopment or else destroyed in accordance with California regulations and then reinstalled once redevelopment is complete.

- **OEF 7 – Site-Wide Use of Petroleum, Oils, and Lubricants (POLs).** POLs have been used throughout the site in conjunction with vehicle and equipment maintenance and repair. Waste oil and other automotive fluids are currently being stored inside the maintenance and repair shops at both parcels, with and without secondary containment. Indications of generally *de minimis* surface spills of POLs were noted on both parcels that comprise the site.
- **OEF 8 – ACMs and LBP.** The buildings at the site were constructed when the use of ACMs and LBP in construction was common. Although the buildings at the site have been significantly refurbished since being built, and although no obvious ACMs were observed, Avocet recommends that pre-demolition surveys for ACMs and LBP be conducted and that confirmed ACMs and/or LBP be abated, as necessary, prior to general building demolition.

7.5 RECOMMENDATIONS

Based on the above, Avocet offers the following recommendations for risk mitigation prior to acquiring the subject site and prior to and during site clearance and redevelopment grading:

- Prior to Bayshore North Offsite, LLC acquiring the site, conduct a Phase II investigation to assess current soil and soil vapor conditions. The Phase II investigation should specifically address residual fuel hydrocarbon concentrations in the former UST areas, known vehicle maintenance and waste oil storage areas, and the existing steam clean area. The Phase II investigation should also specifically assess VOCs in soil vapor that may be attributable to the former Solvent Services facility, either via lateral migration in the vadose zone or via “vapor up” from the underlying groundwater.
- Waste oil and other automotive fluids are currently being stored inside the maintenance and repair shops at the site, with and without secondary containment, in containers ranging from less than a gallon up to waste oil ASTs of a few hundred gallons capacity. Avocet recommends that the current owner remove all of these containers and all hazardous substances and wastes prior to Bayshore North Offsite, LLC acquiring the site. Avocet also recommends that the current owner also be required to remove all of the aboveground steam clean infrastructure.
- As soon as is appropriate, initiate dialogue with the responsible party for the former Solvent Services facility regarding the disposition of Wells 7A and 9B, specifically whether there is any possibility they could be eliminated from the ongoing and long-term groundwater monitoring program. Unless they can be eliminated from the ongoing monitoring program, the two wells will have to be protected in place during site clearance and redevelopment or destroyed ahead of time, in accordance with California regulations, and then reinstalled once redevelopment is complete.

Phase I Environmental Site Assessment

1535 and 1575 Industrial Avenue
San Jose, California 95112

Page 40
August 3, 2020

- If the existing structures are to be demolished or remodeled, conduct pre-demolition surveys for ACMs, LBP, and “universal wastes” such as fluorescent light ballasts, batteries in emergency light fixtures, refrigerants in air conditioning units, and the like. Confirmed ACMs and damaged LBP should be abated by suitably licensed and experienced contractors prior to general structure demolition or remodeling.
- Although not an absolute recommendation, it may be appropriate to prepare a Soil Management Plan (SMP) to help contractors manage oil-impacted soil that may be encountered at the site during clearance and redevelopment grading. The SMP should include screening levels to help determine if impacted soil can be reused onsite or must be transported offsite for disposal. Based on the subject Phase I ESA, Avocet does not believe it is required or necessary to involve a regulatory agency to review the SMP or to oversee redevelopment grading.

Respectfully submitted,

AVOCET ENVIRONMENTAL, INC.

Philip Miller, P.E.
Principal

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Avocet Environmental, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

Certified Sanborn® Map Report

06/04/20

Site Name:

1535 & 1575 Industrial Avenue
1535 & 1575 Industrial Avenue
San Jose, CA 95112
EDR Inquiry # 6081598.3

Client Name:

Avocet Environmental, Inc.
1 Technology Drive Suite C515
Irvine, CA 92618-0000
Contact: Jessica Satterlee

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Avocet Environmental, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

TARGET PROPERTY: ADDRESS NOT IDENTIFIED IN RESEARCH SOURCE

The following Target Property addresses were researched for this report, and the addresses were not identified in the research source.

Address Researched

1535 & 1575 Industrial Avenue

Address Not Identified in Research Source

2001, 1982, 1978, 1974, 1968, 1965, 1964, 1962, 1960, 1955, 1950, 1946, 1945, 1942, 1940, 1936, 1935, 1931, 1930, 1926, 1925, 1922

Appendix E

Site Photographs

E-1. Looking northwest at FJM Truck & Trailer Center at 1535 Industrial Avenue with rental center/maintenance shop in center (06/22/2020).

E-2. Looking northeast at FJM office building at 1535 Industrial Avenue with door into vending machine area and restrooms at left (06/22/2020).

E-3. Looking northeast into vending machine area and restrooms at FJM office building at 1535 Industrial Avenue with evidence of former 12-inch VFT (06/22/2020).

E-4. Office/customer service counter in trailer rental center in maintenance shop at 1535 Industrial Avenue (06/22/2020).

E-5. Looking southwest from office area in trailer rental center at 1535 Industrial Avenue into tool crib area with stairs to mezzanine storage area in background (06/22/2020).

E-6. Looking northwest into tool crib area in truck maintenance building at 1535 Industrial Avenue (06/22/2020).

E-7. Looking southeast at drums and pails of oil and hydraulic fluid in truck maintenance building at 1535 Industrial Avenue with oil ASTs in background (06/22/2020).

E-8. Looking southeast at mobile ASTs for oil and hydraulic fluid in truck maintenance building at 1535 Industrial Avenue (06/22/2020).

E-9. Looking southeast at mobile AST for synthetic oil with drums of oil and grease in background in maintenance shop at 1535 Industrial Avenue (06/22/2020).

E-10. New engines parts on floor in maintenance shop at 1535 Industrial Avenue (06/22/2020).

E-11. Looking northwest at water buffalo trailer in maintenance shop at 1535 Industrial Avenue with truck in background (06/22/2020).

E-12. Looking southwest at truck in maintenance shop at 1535 Industrial Avenue with work bench and welding equipment in foreground (06/22/2020).

E-13. Looking at northwest corner of maintenance shop at 1535 Industrial Avenue with tub-type parts washer at right and enclosed spray cleaner in far background (06/22/2020).

E-14. Looking northwest at tub-type parts washer in maintenance shop at 1535 Industrial Avenue (06/22/2020).

E-15. Looking northwest at enclosed spray parts washer in maintenance shop at 1535 Industrial Avenue (06/22/2020).

E-16. Damaged and peeling paint on inside of gable wall and underside of roof in maintenance shop at 1535 Industrial Avenue (06/22/2020).

E-17. Looking southwest into repair shop at 1535 Industrial Avenue with storage rack against rear wall (06/22/2020).

E-18. Storage rack for automotive fluids and tire removal equipment inside rear wall in repair shop at 1535 Industrial Avenue (06/22/2020).

E-19. Two flammables cabinets in northwest corner of repair shop at 1535 Industrial Avenue (06/22/2020).

E-20. Paint and resin containers in smaller of two flammables cabinets in northwest corner of repair shop at 1535 Industrial Avenue (06/22/2020).

E-21. Battery and 5-gallon pail of engine oil adjacent to larger of the two flammables cabinets in northwest corner of repair shop at 1535 Industrial Avenue (06/22/2020).

E-22. Waste oil AST inside main door into repair shop at 1535 Industrial Avenue (06/22/2020).

E-23. Looking northwest at trailer hook-up area outside maintenance building at 1535 Industrial Avenue with front office at right (06/22/2020).

E-24. Looking southwest at paved area adjacent to maintenance building at 1535 Industrial Avenue (06/22/2020).

E-25. Looking west at trailers and box trucks for sale or rent along western boundary of 1535 Industrial Avenue with 880 Freeway in background (06/22/2020).

E-26. Blind sump in steam clean slab behind (southwest of) maintenance building at 1535 Industrial Avenue (06/22/2020).

E-27. Steam cleaning equipment and aboveground clarification system behind (southwest of) maintenance building at 1535 Industrial Avenue (06/22/2020).

E-28. 55-Gallon drums, some unlabeled, adjacent to steam clean slab behind (southwest of) maintenance building at 1535 Industrial Avenue (06/22/2020).

E-29. Looking southwest at rear of FJM modular office structure at 1575 Industrial Avenue, with battery storage at right and stored boat and crane in background (06/22/2020).

E-30. Battery storage beneath rear of FJM modular office structure at 1575 Industrial Avenue (06/22/2020).

E-31. Looking southwest at truck repair shop at 1535 Industrial Avenue (06/22/2020).

E-32. Looking northwest at free-standing office/restroom structure inside truck repair shop at 1535 Industrial Avenue with surplus compressor in middle ground left (06/22/2020).

E-33. Air compressor inside southwest wall of truck repair shop at 1535 Industrial Avenue with oily residue on floor beneath (06/22/2020).

E-34. Hydraulic press inside northwest corner of truck repair shop at 1535 Industrial Avenue with oily residue on floor beneath (06/22/2020).

E-35. AST for waste oil inside truck repair shop at 1535 Industrial Avenue (06/22/2020).

E-36. Unpaved area adjacent to 880 Freeway at 1575 Industrial Avenue with Carpenter Rigging building in distance and shipping containers in middle ground (06/22/2020).

E-37. Looking northeast at unpaved area behind maintenance shop at 1575 Industrial Avenue with drainage swale in foreground and suspected steam clean slab in middle ground (06/22/2020).

E-38. Looking northeast at suspected steam clean slab behind maintenance shop at 1575 Industrial Avenue (06/22/2020).

E-39. Looking northwest at FJM trailers for sale or rent along northeastern site boundary near Carpenter Rigging building at 1575 Industrial Avenue (06/22/2020).

E-40. Boat in storage beneath car port behind (southwest of) modular office trailer at 1575 Industrial Avenue (06/22/2020).

E-41. Trailers in storage beneath canopy behind (southwest of) modular office trailer at 1575 Industrial Avenue (06/22/2020).

E-42. Looking northwest at Carpenter Rigging building at 1575 Industrial Avenue (06/22/2020).

E-43. Looking southwest at Carpenter Rigging building at 1575 Industrial Avenue (06/22/2020).

E-44. Storage area in Carpenter Rigging building at 1575 Industrial Avenue (06/22/2020).

E-45. Storage area in Carpenter Rigging building at 1575 Industrial Avenue (06/22/2020).

E-46. Looking southwest through storage area and into workshop in Carpenter Rigging building at 1575 Industrial Avenue (06/22/2020).

E-47. Interior of workshop in Carpenter Rigging building at 1575 Industrial Avenue (06/22/2020).

E-48. Interior of workshop in Carpenter Rigging building at 1575 Industrial Avenue (06/22/2020).

E-49. Interior of workshop in Carpenter Rigging building at 1575 Industrial Avenue (06/22/2020).

E-50. Interior of workshop in Carpenter Rigging building at 1575 Industrial Avenue (06/22/2020).

E-51. Looking southwest into Exploration Geoservices yard at 1575 Industrial Avenue, although address may be 1591 Industrial Avenue (06/22/2020).

E-52. Looking southwest at drilling rigs and hollow-stem augers in Exploration Geoservices yard at 1575 Industrial Avenue, although address may be 1591 Industrial Avenue (06/22/2020).

E-53. Entrance into Exploration Geoservices yard at 1575 Industrial Avenue, although address may be 1591 Industrial Avenue (06/22/2020)

E-54. Looking south at hollow-stem augers and empty drums in Exploration Geoservices yard at 1575 Industrial Avenue, with FJM maintenance shop in background (06/22/2020).

Mr. Frank Mangione
F J M Truck Repair
1535 Industrial Avenue
San Jose, CA 95112

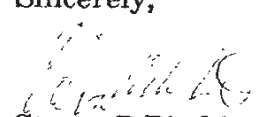

Re: FJM Truck Repair, 1535 Industrial Ave, San Jose, Santa Clara County
Site Code: 35G

Dear Mr. Mangione:

The Santa Clara Valley Water District has submitted a report which summarizes the investigation and cleanup of fuel hydrocarbon pollution at the above referenced site, and recommends that the case be closed. Regional Board staff have reviewed this report and concur with this recommendation. Therefore, based on available information, it appears that further investigation and cleanup of fuel hydrocarbons is not necessary. Further work could be required if conditions change or a water quality threat is discovered at the site.

If you have any questions, please contact Penny L. Silzer of my staff at (415) 464-1331.

Sincerely,

Steven R Ritchie
Executive Officer

Dear Mr. Dalke:

Subject: Case Closure for Site Code 35G, FJM Truck Repair, 1535 Industrial Avenue, San Jose, California, 95112

I am pleased to submit to you the District's case closure recommendation for F J M Truck Repair, 1535 Industrial Avenue, San Jose, CA. Based on available information, the District believes this site does not appear to pose a threat to groundwater.

Please contact me with any questions or concerns as you proceed with the resolution of this case.

Sincerely,

ORIGINAL SIGNED BY

David J. Chesterman
Supervising Engineer

SANTA CLARA VALLEY WATER DISTRICT
CASE CLOSURE RECOMMENDATION
F J M TRUCK REPAIR
1535 INDUSTRIAL AVENUE
SAN JOSE CA 95112
MARCH 26, 1991

INTRODUCTION

The purpose of this memorandum is to provide the basis of the Santa Clara Valley Water District (District) staff recommendation for case closure of the subject site. This basis includes a description of the site history and an evaluation of the site investigation results and source removal action.

SITE INFORMATION

Site History

This site is located in East San Jose. The current business activity at the site is the repair of trucks. The surrounding land use is mainly commercial (Attachments 1 and 2).

Tank Information

Two metal tanks of different capacities, and their associated piping were removed from this site by Santa Clara Valley Oil on June 7, 1990. The first tank (Tank #1), of unknown age, had a capacity of 10,000 gallons and was used to hold diesel. The second tank (Tank #2), also of unknown age, had a capacity of 1,000 gallons and was used for gasoline (Attachment 3). According to the engineering consultant's report, both tanks had not contained any product in the past ten years.

The condition of the tanks was described in the Inspector's Tank Closure Report. There was heavy pitting on one end of Tank #1 and a 4 mm hole was created in the tank while it was inspected. Tank #2 had a few holes in it, though none larger than 4 mm.

An Unauthorized Release Form, filed by the San Jose Fire Department on July 6, 1990, was received at the District.

Responsible Party and Cost Recovery Information

The following responsible party has been notified that District oversight costs are provided under contract with the State Water Resources Control Board (State Board) and that oversight charges will be recovered from the responsible party by the State Board.

The Responsible Party (RP) is: F J M Truck Repair
1535 Industrial Avenue
San Jose, CA 95112

The RP's contact is: Mr. Frank Mangione (408) 298-5110

CASE CLOSURE EVALUATION

This section provides a brief description and evaluation of the investigation accomplished to date, beneficial uses of groundwater aquifers underlying and adjacent to the site, immediate source removal, and preliminary characterization of the soil and groundwater pollution.

Investigative Methods Used

Both tanks were removed on June 6, 1990. The pit excavated to remove Tank #1 had stains at both ends of the pit. There was a tar odor immediately below the tank. Two soil samples (A & B) were taken at the stained ends of the pit, about two-foot beneath the tank. Samples A and B appeared to be of heavy clay with no odor.

The second pit, excavated to remove Tank #2, showed rust colored sand beneath the tank with no odor. One soil sample (C) was taken about two-foot beneath the tank. Sample C appeared to be a heavy clay with a slight product odor.

Samples A, B, and C were sent to Sequoia Analytical Laboratory in Redwood City, California. The samples were analyzed for Total Petroleum Hydrocarbons (TPH) using EPA Method 3550/8015, and for benzene, toluene, ethyl benzene, and xylenes (BTEX) using EPA method 5030/8020.

The excavated soil was stockpiled for further sampling and analyses. In an October 1990 report prepared by Environmental Engineering Consultants, Inc., the results of further sampling in the excavation pits and stockpile were presented. Soil sampling was conducted on July 5, 1990 (10 samples from the pits), on August 3, 1990 (four samples from the pits) and again on September 21, 1990 (two samples from the stockpile and one sample from the gasoline tank excavation pit). These soil samples were analyzed for TPH and BTEX by the National Environmental Testing Laboratory in Santa Rosa, California.

Both Sequoia Analytical Laboratory and National Environmental Testing Laboratory, Inc. are certified by the California Department of Health Services for the analyses conducted on the samples. All samples were collected, preserved, and transported in accordance with the requirements of the State Water Resource Control Board.

Extent of Soil Pollution

Sample A did not contain a detectable concentration of TPH diesel (TPHd, Attachment 4). Samples B and C contained concentrations of 600 ppm TPHd and 210 ppm TPH gasoline (TPHg), respectively (Attachments 5 and 6). Samples A, B, and C contained detectable concentrations of BTEX, except sample B contained no detectable concentration of Toluene.

Five of the ten soil samples taken in July, 1990 contained detectable concentrations of TPHg, TPHd, and Xylenes. Two of the samples (DS-1 and DMN-1) taken from the diesel tank excavation pit contained 4.2 ppm and 45 ppm TPHd, respectively. Three samples taken from the gasoline tank excavation pit (G1-S, G2-S, and G3-N) contained 15 ppm, 25 ppm, and 2 ppm TPHg, respectively, with Xylenes being detected in these samples at concentrations of 8 ppb, 14 ppb, and 12 ppb, respectively (Attachments 7 and 8).

One of the four samples taken in August, 1990 contained detectable concentrations of TPHg and TEX. Sample MG-1, taken from the gasoline excavation pit contained 1.2 ppm TPHg, 8.2 ppb

Toluene, 240 ppb Xylenes, and 35 ppb Ethylbenzene (Attachments 7 and 8). In summary, these results indicate maximum residual soil concentrations beneath the former tank locations of 4.2 ppm TPHd, 1.2 ppm TPHg, 8.2 ppb Toluene, 240 ppb Xylenes, and 35 ppb Ethylbenzene.

Samples FJM-S and FJM-N were taken from the stockpiled soil in September, 1990. FJM-S contained 4.1 ppb Toluene and sample FJM-N contained 630 ppm TPHd. A third sample, FJMG-1, also taken in September, 1990, contained 3.7 ppb Toluene (Attachments 7 and 8).

The Atterberg limits test performed on a representative sample from the excavation pits exhibited a plasticity index of 17.5. This is a moderately high value with respect to clay content (Attachment 9).

Local and Regional Hydrogeology

The groundwater sensitivity number assigned to the subject site is 3 based on a scale of 1 to 4 (4 being the most sensitive). Groundwater was not encountered during the excavation of the tanks nor when sampling was done. Data from existing wells within a half-mile radius indicate depth to water is expected to be approximately 25 feet below ground surface (Attachments 10 and 11).

Extent of Groundwater Pollution

The quality of groundwater beneath the subject site was not investigated. There are no groundwater monitoring wells on-site.

Beneficial Uses

The existing and potential beneficial uses of the groundwater aquifers underlying and adjacent to the site include water supply for domestic, municipal, agricultural, and industrial use.

Tank Removal and Soil Remediation

One 10,000-gallon diesel tank and one 1,000-gallon gasoline tank and their associated piping were excavated, removed, and disposed of properly. The soil from the excavated pits was stockpiled at the site, and was sampled and analyzed over a three-month period. According to the responsible party, the stockpiled soil will be hauled away by a licensed hauler to the Zanker Road Landfill in mid-May 1991 and the excavation pits have already been backfilled with clean soil.

STAFF RECOMMENDATIONS

Based on the results of laboratory analyses conducted on soil samples obtained from the subject site, District staff have concluded that a threat to groundwater from the product tanks, and associated piping does not appear to exist at this site and that the Regional Water Quality Control Board's (RWQCB) objectives have not been compromised.

The investigation was performed in accordance with state and local guidelines and the results indicate that no significant soil contamination has resulted from the reported releases at the site. District staff recommend that the RWQCB conclude this case with final appropriate procedures.

ATTN: Mr. Frank Mangione
SUBJECT: SUPPLEMENTAL DATA
1535 Industrial Avenue
San Jose, California

Gentlemen:

E₂C, Inc., is presenting herein supplemental data related to our observations performed at the subject site.

The tanks at the subject site were in active for the past 10 years. Both the gasoline and diesel tanks were void of product during the inactive period.

The soils that were at the bottom of the excavation consisted of silty clays with very minor amounts of sand. We performed an atterberg limits test on a representative sample of this soil and determine that it's plasticity index is 17 ½. This value is considered to be moderately high with respect to clay content, and therefore will retard the vertical migration of petroleum products.

Should you have any questions or require supplemental information, please do not hesitate to contact us.

Sincerely,

Kendall W. Price, C.E.G./R.E.A.
President

Dear Ms. Mangione and Messrs Mangione:

Subject: Underground Storage Tank Case Closure—Ditto Freight Lines, 1575 Industrial Avenue, San Jose, CA; Case No. 14-002

This letter confirms the completion of site investigation and remedial action for the underground storage tanks formerly located at the above-described location. Enclosed is the Case Closure Summary for the referenced site for your records.

Based upon the available information, including the current land use, and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground storage tank release is required.

This notice is issued pursuant to a regulation contained in Title 23, California Code of Regulations, Division 3, Chapter 16, Section 2721(e). If a change in land use is proposed, the owner must promptly notify this agency.

Please contact Mr. Lane R. Davis at the Santa Clara Valley Water District's Camden Office, (408) 927-0710, extension 2698, if you have any questions in this matter.

Sincerely,

| Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes | | |
| Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes | | |
| Does corrective action protect public health for current land use? District staff does not make specific determinations concerning public health risk. However, it does not appear that the release would present a risk to human health. | | |
| Site Management Requirements: None | | |
| Should corrective action be reviewed if land use changes? No | | |
| Monitoring Wells Decommissioned: No | Number Decommissioned: 0 | Number Retained: 0 |
| List Enforcement Actions Taken: None | | |
| List Enforcement Actions Rescinded: None | | |

V. ADDITIONAL COMMENTS, DATA, ETC.

| |
|---|
| <p>Considerations and/or Variances:</p> <p>1989- Two 2,000-gallon tanks (one gasoline, one diesel) were removed. Twenty-one hundred parts per million (ppm) Total Petroleum Hydrocarbons as Diesel (TPHD) was detected beneath the diesel tank; 210 ppm TPHD was detected 1.5 feet beneath the dispenser. No Benzene Toluene, Ethylbenzene, or Xylenes (BTEX) were detected. No holes were detected in either tank.</p> <p>1991- One 1,000-gallon gasoline tank was removed. No holes were detected in the tank. No Total Petroleum Hydrocarbons as Gasoline (TPHG) or BTEX compounds were detected beneath the tank; minor Ethylbenzene and Xylenes was detected 2 feet beneath the dispenser.</p> <p>1994- One 10,000-gallon diesel tank was removed. No holes were detected in the tank. No TPHD or BTEX was detected beneath the tank; 170 ppm TPHD was detected 3 feet beneath the dispenser.</p> <p>1995- One exploratory boring was placed within 5 feet of the 1989 tank pit area. Soil was collected at the soil/groundwater interface and a grab groundwater sample was also collected. No TPHD, TPHG, or BTEX was detected in the samples.</p> <p>Conclusions:</p> <p>Based upon confirmation soil and groundwater samples, District staff has concluded that a continuing threat to groundwater from petroleum hydrocarbons does not exist at this site and that Regional Water Quality Control Board objectives have not been compromised. The investigation was performed in accordance with state and local guidelines. District staff recommends closure for this case.</p> |

VI. LOCAL AGENCY REPRESENTATIVE DATA

| | |
|--|---------------------------------|
| Prepared by: Lane R. Davis | Title: Assistant Engineer |
| Signature:  | Date: 12-22-95 |
| Approved by: James S. Crowley, P.E. | Title: Associate Civil Engineer |
| Signature:  | Date: 12-22-95 |

This closure approval is based upon the available information and with the provision that the information provided to this agency was accurate and representative of site conditions.

Attachments:

1. Site Map
2. Analytical Results

This document and the related CASE CLOSURE LETTER, shall be retained by the lead agency as part of the official site file.

 PETROLEUM HYDROCARBONS AS DIESEL,
 BENZENE, TOLUENE, XYLENES AND
 ETHYLBENZENE
 AT ANAMETRIX, INC.

SAMPLING PERFORMED BY DON WELTZ
 DIAGRAM PREPARED BY LI PAN

ANALYSIS DATA SHEET - TOTAL PETROLEUM HYDROCARBONS AS DIESEL
ANAMETRIX, INC. (408) 432-8192

Anametrix W.O.: 9402169
Matrix : SOIL
Date Sampled : 02/15/94
Date Extracted: 02/16/94

Project Number : FL MANGIONE
Date Released : 02/23/94
Instrument I.D.: HP23

| Anametrix I.D. | Client I.D. | Date Analyzed | Reporting Limit (mg/Kg) | Amount Found (mg/Kg) | Surrogate %Rec |
|----------------|--------------|---------------|-------------------------|----------------------|----------------|
| 9402169-01 | 2 | 02/18/94 | 10 | ND | 96 |
| 9402169-02 | 3 | 02/18/94 | 100 | 170 | 94 |
| 9402169-03 | 4 | 02/18/94 | 10 | ND | 98 |
| BF16H1F1 | METHOD BLANK | 02/18/94 | 10 | ND | 96 |

Note : Reporting limit is obtained by multiplying the dilution factor times 10 mg/Kg.
The surrogate recovery limits for C25 are 30-130%.

ND - Not detected at or above the practical quantitation limit for the method.
TPHd - Total Petroleum Hydrocarbons as C10-C28 is determined by GCFID following sample extraction by EPA Method 3510.

All testing procedures follow California Department of Health Services (Cal-DHS) approved methods.

* The Method Reporting Limit must be multiplied by the Reporting Limit Multiplication Factor (RLMF) to achieve the compound's reporting limit in the analysis.

ND : Not detected at or above the reporting limit for the analysis as performed.
 TPHg : Determined by GC/FID following sample purge & trap by EPA Method 5030.
 BTEX : Determined by modified EPA Method 8020 following sample purge & trap by EPA Method 5030.

Lab Control Limits for surrogate compound p-Bromofluorobenzene are 53-147%.
 All testing procedures follow California Department of Health Services (Cal-DHS) approved methods.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes

EXECUTIVE SUMMARY

available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2020 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/23/2020 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/23/2020 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 14 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 01/27/2020 has revealed that there are 29 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

CA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the CA SWF/LF list, as provided by EDR, has revealed that there are 3 CA SWF/LF sites within approximately 0.5 miles of the target property.

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 16 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 4 CA UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State and tribal voluntary cleanup sites

CA VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the CA VCP list, as provided by EDR, and dated 01/27/2020 has revealed that there are 2 CA VCP sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

CA HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the CA HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there is 1 CA HIST Cal-Sites site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 21 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/23/2020 has revealed that there are 49 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CA CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CA CUPA Listings list, as provided by EDR, has revealed that there are 150 CA CUPA Listings sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

CA HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the CA HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 65 CA HIST CORTESE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

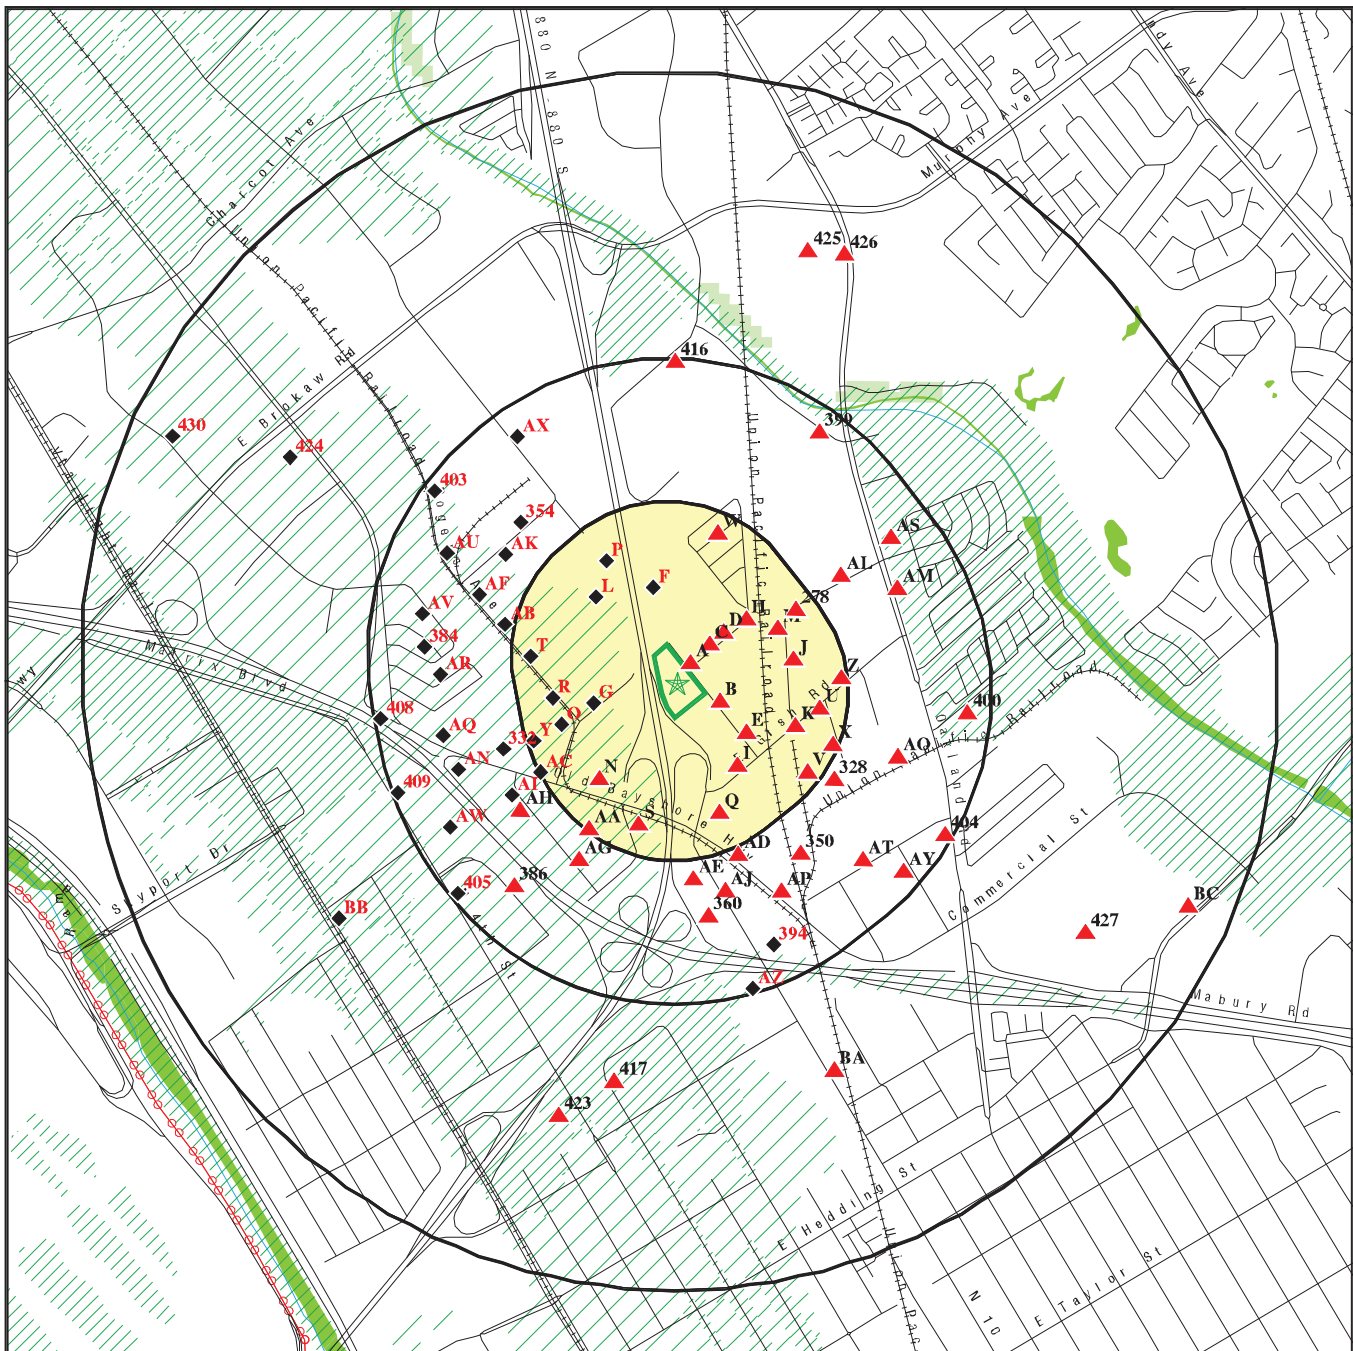

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Name: FJM TRUCK & TRAILER CENTER
Violation Date: 04-30-2014
Citation: 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)
Violation Description: Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.
Violation Notes: Observed the waste sludge from steam cleaning operations in 2 x 55 gallon metal drums outside the shop, they were labeled as hazardous waste, the hazardous property was not checked. Also noted the waste sludge is hauled by Icon as Non-Hazardous. It is unknown if the waste sludge is hazardous waste. However, the owner Frank Mangione indicated he only uses the steam cleaning unit for washing truck frames and no engine parts. A hazardous waste determination is required for all wastes by using generator knowledge or conducting a hazardous waste determination at a state certified laboratory.

CERS Description: Chemical Storage Facilities

Violations:
Site ID: 44290
Site Name: LEWIS & TIBBITTS INC
Violation Date: 03-12-2019
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Observed eighteen 5-gallon buckets of SS-1 tack oil. Mr. Gonzalez stated that the tack oil is brought back from job sites and mixed into asphalt to be transported to an asphalt contractor. Determine whether or not the tack oil is a hazardous waste.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 44290
Site Name: LEWIS & TIBBITTS INC
Violation Date: 03-12-2019
Citation: 22 CCR 23 66273.31(a) - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.31(a)
Violation Description: Failure of the universal waste handler to prevent improper disposal of universal waste, or to transfer universal waste to the appropriate destination facility.
Violation Notes: Observed three aerosol cans that were not completely empty in a garbage can. Ensure aerosol cans are used until empty before disposing in regular garbage, or else manage as universal waste.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 44290
Site Name: LEWIS & TIBBITTS INC
Violation Date: 03-12-2019
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Tank of used coolant had a hazardous waste label which was missing contact information, hazardous properties, and physical state.

Violation Date: 03-12-2019
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Hazardous Waste Generator Program - Operations/Maintenance - General
Violation Notes: Three 55-gallon polycarbonate drums that previously held a degreaser did not have empty dates marked.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 44290
Site Name: LEWIS & TIBBITTS INC
Violation Date: 03-12-2019
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: An 80-gallon drum of used coolant had an accumulation start date of 3/2/18.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 44290
Site Name: LEWIS & TIBBITTS INC
Violation Date: 03-12-2019
Citation: 40 CFR 1 265.33 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.33
Violation Description: Failure to test and maintain as necessary all facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment to assure its proper operation in time of emergency.
Violation Notes: Facility has an emergency shower/eyewash station. Mr. Gonzalez stated that they have not been maintaining this station, and have portable eyewash kits for use. Either decommission the emergency shower, or keep it maintained.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERS:

Name: GREEN EARTH MANAGEMENT
Address: 650 KINGS ROW
City, State, Zip: SAN JOSE, CA 95112
Site ID: 375212
CERS ID: 10646683
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 375212
Site Name: GREEN EARTH MANAGEMENT
Violation Date: 07-17-2019
Citation: 40 CFR 1 265.32 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.32

Violation Description: Failure of the facility to maintain the following emergency equipment or equivalents: 1) An internal communications or alarm system; 2) A device, such as a telephone (immediately available at the scene of Operations/ Maintenance) or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or State or local emergency response teams; 3) Portable fire extinguishers, fire control equipment, spill control equipment, and decontamination equipment; and 4) Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems.

Violation Notes: Observed no fire extinguishers in the waste storage area. Facility owner, Jim Piazza, showed me that they were recently serviced, but had not yet been returned to their correct locations.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 375212
Site Name: GREEN EARTH MANAGEMENT
Violation Date: 07-17-2019
Citation: 22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7

Violation Description: Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2) By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.

Violation Notes: The following hazardous material containers were reported to be empty and did not have a date on them in which it they were emptied: -1 x 55 gallon "O'Reilly" retail green and white metal drum -1 x 55 gallon

green drum -3 x 55 gallon drums of new oil Labels were provided to the facility during the inspection.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 375212
Site Name: GREEN EARTH MANAGEMENT
Violation Date: 07-17-2019
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: The following hazardous waste containers were inadequately marked or labeled: 1 x 30 gallon red trash can was being used to stored soiled uniforms, but was labeled as "Waste Paints and thinners". Remove this hazardous waste label to avoid confusion for employees. Note: This container is not compatible with the hazard contents listed on this label. 1 x 80 gallon overpack drum of used oil was missing "hazardous waste", accumulation start date, composition, physical state, hazard properties, facility information; 13 x 5 gallon buckets of used oil were missing "hazardous waste", accumulation start date, composition, physical state, hazard properties, facility information. Hazardous waste labels were provided to the facility.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 375212
Site Name: GREEN EARTH MANAGEMENT
Violation Date: 10-24-2016
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)

Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.

Violation Notes: Per the State of California's Hazardous Waste Tracking System, the facility has had at least two hazardous waste pick-ups by Safety-Kleen within the past 3 years, but no Uniform Hazardous Waste Manifests have been retained by the facility. Provide a copy of each hazardous waste manifest from the past 3 years to HMCD for review.

Violation Date: 07-17-2019
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple

Violation Description: Hazardous Waste Generator Program - Training - General
Violation Notes: As per 22 CCR 67386.12, an employer managing Treated Waste Wood (TWW) shall provide training for all employees handling TWW and all employees that may reasonably be expected to contact TWW. A record of the training shall be maintained for a period of three years and available for review. Jim Piazza stated that the current employees have not received any official training for how to handle TWW. Training shall include: (1) all applicable requirements of the California Occupational Safety and Health Act of 1973 (ch. 1, part 1, div. 5 (commencing with - 6300) of the Labor Code), including all rules, regulations, and orders relating to hazardous waste; (2) procedures for identifying and segregating TWW; (3) safe handling practices; (4) requirements of the alternative management standards; and (5) proper disposal methods. Corrective Actions: Within 30 days, provide documentation of TWW training to the inspector.

Site ID: 375212
Site Name: GREEN EARTH MANAGEMENT
Violation Date: 07-17-2019
Citation: HSC 6.95 25510(a) - California Health and Safety Code, Chapter 6.95, Section(s) 25510(a)

Violation Description: Failure to report a release or threatened release of a hazardous material to the unified program agency and to OES.

Violation Notes: Observed a released of an unknown amount of used oil onto a concrete slab exposed to the environment with no containment berm. This release appears to have originated from a large drip pan with about 5 gallons of used oil in it stored on top of a metal shelf near the center of the facility. The facility operator, Jim Piazza, acknowledged that there is a small crack in the drip pan. Submit the spill report with control number to the inspector for verification.

Violation Date: 10-24-2016
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Three paint roller brushes and trays contaminated with paint were observed in the facility's trash dumpster. The paint on the brushes and trays was dried at the time of inspection, but it is unknown as to whether the paint was wet when deposited into the dumpster. Mineral spirits, enamels, and other paint-related materials were also observed near the paint trays currently being used on the work floor, as well as in the paint-accumulation area. Please note that dried paint may still meet hazardous waste toxicity criteria (e.g. metal concentrations above hazardous waste thresholds). If waste paint-related material and debris contaminated with waste paint is determined to be hazardous waste pursuant to the text below, begin collecting, managing, and disposing as hazardous waste. Provide documentation of the hazardous waste determination to the inspector for review.

Violation Description: Hazardous Waste Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General
As per 22 CCR 67386.7, a Treated Waste Wood (TWW) handler is prohibited from sending or taking TWW to a place other than a TWW facility, or a TWW approved landfill. As per Jim Piazza, he separates out treated wood from the other woody debris and puts into dumpster which then goes to a landfill. No disposal records were available to demonstrate proper disposal to an approved disposal site. As per 22 CCR 67386.3, TWW shall not be commingled with other waste prior to disposal, stored in contact with the ground, or recycled with or without treatment. Observed multiple large pieces of treated wood waste commingled in with the wood debris ready to be chipped and used as mulch. A DTSC Requirements for Generators of Treated Wood Waste Fact Sheet was provided to the facility during the last inspection on 10/24/2016. Additionally, the previous report also included guidance from the inspector on how to specifically manage treated wood waste. As a result, this violation [Truncated]

Eval General Type: Other/Unknown
Eval Date: 10-18-2018
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: On-site with Senior Hazardous Materials Specialist Ruben Williams, to perform a permit investigation as a result Jim Piazza reporting that his business has reduced the chemical inventory as the result of a fire. A walk through of the facility of was conducted with the owner Jim Piazza. The following reportable inventory was observed: 2 x 154 cubic ft. cylinder oxygen 1 x 55 gal drum of used oil Below reportable threshold: 1 x 124 cubic ft. cylinder acetylene This facility also stores approximately six 5 gal. propane tanks for employee heaters, and an 8 gal. propane tank for a forklift. Mr. Piazza states that he will contact our office when the container for used oil is downsized, and one of the oxygen cylinders is removed. HMCD will remove the HMBP permit once the chemical inventory is reduced. Currently, balance of \$845.25 is due. Mr. Piazza has agreed to make monthly payments of \$100.00.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Case Worker: AC
RB Case Number: 14-440
Local Agency: SANTA CLARA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 06S1E31A07f
Potential Media Affect: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: Benzene, Ethylbenzene, Gasoline, MTBE / TBA / Other Fuel Oxygenates, Toluene, Xylene
Site History: In October 1991, one 900 gallon underground storage tanks (UST) was removed from the site. Subsurface contamination was observed and reported during the UST removal and the fuel leak investigation case was opened in November 1991. Contaminants detected in soil and groundwater include TPHg, Benzene, Toluene, Ethylbenzene, Xylenes (BTEX), and Methyl tert Butyl Ether (MtBE). Several rounds of site investigation have adequately defined the nature and extent of contamination which is confined to the property boundaries. Soil excavation and dual-phase extraction were used to remediate subsurface contamination. Twelve monitoring wells have been installed

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or

| Description: | A CalTrans supervisor picked up 2 containers from the roadway appearing to be airtanks. He took them to the CalTrans yard in the rear of his pickup. When it started to rain the canisters began to appear as if they were smoking. The CalTrans yard has been evacuated at this time of 20-30 employees. San Jose fire is on scene at this time investigating the incident. There are no injuries reported at this time. |

facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: Failure to comply with one or more of the following requirements: 1. Have record of inspections and integrity tests signed by the appropriate supervisor or inspector. 2. Keep written procedures and records of inspections and integrity tests for at least three years. 3. Keep comparison records.

Violation Notes: During records review the APSA daily inspection logs provided were for; June 2017-June 2018. No other logs or records were provided at the time of this inspection. Inspection logs must be kept for at least 3 years and these must be made available during an inspection. Ensure that inspections of the aboveground tanks and all other areas subject to APSA are inspected and logged as required by your SPCC plan.

Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)

Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.

Violation Notes: The Hazardous Materials Business Plan (HMBP) has not been amended electronically via CERS since the last inspection out at this facility on 06/12/18. Within 30 days amend the HMBP electronically via CERS.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: Failure to engineer or update each container installation in accordance with good engineering practice to avoid discharges and/or failure to by provide at least one of the following devices on each container installation: 1. An audible or visual high liquid level alarm. 2. High liquid level pump cutoff devices. 3. Audible or code signal communications between tank gauger and pumping station. 4. A fast response system for determining liquid levels, such as computers, telepulse or direct vision gauges.

Violation Notes: The overfill prevention probe for the gasoline tank could not be tested during this inspection, as the float for the probe was stuck at the bottom of the tank. This float needs to be repaired/or replaced and it needs to be tested for functionality. If the probe is repaired with a new one, a permit from our Department will be required. An inspector from our office needs to be present at the time this overfill prevention probe is tested. Notify our office within 30 days how this issue will be resolved.

Violation Date: 06-12-2018
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Hazardous Waste Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General
Violation Notes: (CCR Title 22, Section 67386.9) Based on my records review this facility generates about 20 cubic yard = 5.4 tons = 10,800 pounds of treated wood waste (TWW) each time it gets disposed of. Based on Bill of Ladings provided during this inspection in 2017 there were 3 shipments of 20 cubic yard each of TWW disposed off which at that point it required the appropriate notification be made to DTSC. A notification needs to be made electronically at this site; http://www.dtsc.ca.gov/PollutionPrevention/ToxicsInProducts/Treated_Wood_Waste.cfm An on-line notification can be made. Additionally, all of the past shipments of TWW were taken to Potrero Hills Landfill, Suisun, CA. It was undetermined at the time of this inspection if this particular landfill can accept/treat TWW. Within 30 days provide to our office in writing the following information; 1) A copy of the notification made to DTSC on the TWW per year. 2) Confirmation from the landfill that they in fact can accept/ treat [Truncated]

Eval Notes: Field inspection at this site took place on 6/1/18 and 6/5/18. Inspection report was issued today via e-mail to Mr. Ramirez. The following people were present during this inspection, Jack Barba, Ruben Magallanes, and Terry Gutierrez. Testing of the sensors of the above ground tank took place on 6/1/18 and testing was conducted by; Mike Stromecki with Advance Fuel Systems. Mr. Stromecki has current State and manufacturers certifications. The following components were tested and passed; - Diesel Overfill alarm was tested during inspection and provided an audible/visual alarm at the panel. - Emergency Shut-off switch was tested during this inspection and functioned as properly. Notes: 1) Employee training was reviewed during this inspection for; Paul Ramirez, Jack Barba, and Ruben Magallanes and it's shown to be current. Additionally, other employee training is given to personnel and it's documented on the BMP Tailgate Meeting Reports. Copies of these training were [Truncated]

Eval Notes: Facility generates small amounts of oily absorbent, expired fusees (flares), diesel emulsion wastes routinely. Also generate treated wood wastes. TWW placed in 40 yard roll off bin. shipped approximately every 60 days to Recology Hay Road facility using BOL. Emergency information is posted throughout the facility. Please ensure that information is updated to reflect recent changes in emergency contacts. Empty containers are marked with dates, generally return all pesticide containers to the supplier. Noted multiple step cans marked "oily rags" which contained rags which were not oily and did not appear to be contaminated. Spill kits and absorbent noted throughout the facility. Extinguishers present at all areas. Last serviced December 2014. Reviewed manifests for 2014 and 2013. NOTE: noted many aerosol cans in areas throughout the facility, but no disposal options for cans. Please ensure that cans are empty (no propellant/no contents) before disposing in scrap [Truncated]

Eval Notes: Owner Luyen Pham indicated he re-uses his thinner waste from paint gun cleaning activities in a one gallon container. Discussed handling of waste sludge at bottom of container and Luyen indicated he does not generate much sludge at the bottom of container. Make sure waste paint/thinner wastes are managed as hazardous wastes and stored in proper containers with proper markings when they are accumulated. Hazardous Waste blank labels were provided today for hazardous waste containers with sludge that cannot be re-used. Prior to shipping hazardous waste offsite for disposal, please contact DTSC - California EPA at 1-800-618-6942 to obtain a california EPA ID number.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Date: 05-15-2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, - 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: INSPECTION OF THE OVERFILL EQUIPMENT HAS NOT BEEN INSPECTED AT LEAST ONCE BEFORE OCTOBER 13, 2018. **SUBSEQUENT INSPECTION ARE DUE 36 MONTHS FROM OCTOBER 13, 2018 AND NOT THE DATE OF TEST PERFORMED. CONDUCT OVERFILL INSPECTION WITHIN THE NEXT 30 DAYS.

Eval Notes: ON SITE WITH JACK BAIL AN ICC CERTIFIED UST TECHNICIAN WITH PEARSON EQUIPMENT AND MAINTENANCE COMPANY, INC TO WITNESS THE ANNUAL MONITORING CERTIFICATION. CERTIFICATIONS FIELD VERIFIED, ICC TECHNICIAN #5244242 EXP: 8-21-14, AND FRANKLING FUELING LEVER 2 EXP: 2-27-16. THE INSPECTION BEGAN MAY 6, 2014 AND CONCLUDED TODAY. THE FOLLOWING COMPONENTS WERE TESTED AND PASSED -LIQUID SENSOR IN THE ANNULAR SPACE-TRIGGERED AN AUDIBLE/VISUAL ALARM -LIQUID SENSOR IN THE SUMP-TRIGGERED AN AUDIBLE/VISUAL ALARM -LIQUID SENSOR IN THE UNDER DISPENSER CONTAINMENT-TRIGGERED AN AUDIBLE/VISUAL ALARM

Eval Division: Santa Clara County Environmental Health
Eval Program: UST
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 05-08-2018
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: ON SITE WITH CHAD WHITE AN ICC CERTIFIED TECHNICIAN WITH UST ALLTECH PETRO TO OVERSEE THE TRIENNIAL SB989 TEST. MR. WHITE'S ICC CERTIFICATION EXP:2/23/2020 AND CALDWELL SYSTEM EXP: 4/13/2020. THE FOLLOWING COMPONENTS WERE TESTED AND FOUND OPERABLE -PRODUCT PIPING TESTED AT 5 PSI FOR 60 MINUTES WITHOUT A LOSS. -TANK WAS PLACED UNDER 5 INCHES OF VACUUM FOR 60 MINUTES. -SUMP TESTED HYDROSTATICALLY FOR 30 MINUTES USING THE CALDWELL SYSTEM. -UNDER DISPENSER CONTAINMENT TESTED HYDROSTATICALLY FOR 30 MINUTES USING THE CALDWELL SYSTEM.

Eval Division: Santa Clara County Environmental Health

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
STATE MASTER

Case Type: Cleanup Program Site
Case Worker: REG
Local Agency: Not reported
RB Case Number: 43S0972
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Aquifer used for drinking water supply
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, * *
CIS-1,2-DICHLOROETHYLENE, Trichloroethylene (TCE)
Site History: Volatile organic compounds (VOCs) released at the Gorilla Circuits site have polluted soil and groundwater, with groundwater pollution extending offsite. Maps of the groundwater pollutant plume produced for the Gorilla Circuits site indicate that the groundwater pollutant plume impacts the southern portion of the adjacent property (Aqua Science, Inc., December 26, 2007, Groundwater Monitoring Report). Additional groundwater remedial actions are to take place at and near the Site in 2018.

Violation Notes: to air, soil, or surface water which could threaten human health or the environment.
Returned to compliance on 02/01/2018. Liquid noted in most containment structures in plating area, most piping and waste containment trenches. Crystals noted outside containment behind tank 430 on sulfuric etch cleaner. Crystals behind doors under CuPosit line. Lots of standing liquid in containment and outside containment on ramp in and around stencil wash/ tanks 179 and 180; crystals in containment at loading end of automated plate line; liquid in containment in dry film room;

Violation Division: Santa Clara County Environmental Health
Violation Program: HWLQG
Violation Source: CERS

Site ID: 34001
Site Name: GORILLA CIRCUITS
Violation Date: 12-19-2017
Citation: 22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)

Violation Description: Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, and tank systems authorized under Permit-by-Rule, Conditional Authorization, and Conditional Exemption or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.

Violation Notes: Returned to compliance on 03/29/2018. Facility was able to provide a draft tank assessment but could not locate the PE stamped/signed copy. A copy of the stamped document should be uploaded to CERS with annual renewal in 2018.

Site ID: 34001
Site Name: GORILLA CIRCUITS
Violation Date: 12-19-2017
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple

Violation Description: Tiered Permitting - Administration/Documentation - General
Violation Notes: Returned to compliance on 04/04/2018. Current closure cost estimate exceeds \$10,000 but no financial mechanism has been established. In discussion with facility has been disclosed that current cost estimate does not take into account valuation of property. See corrective action below OR re-do closure cost estimate to include offsetting property valuation.

Violation Source: CERS

Site ID: 34001
Site Name: GORILLA CIRCUITS
Violation Date: 07-09-2015
Citation: 22 CCR 15 66265.31 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.31

Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health or the environment.

Violation Notes: Observed free liquid below tank #258 - Sulfuric Acid inside secondary containment of board plating and processing area. The free liquid indicated approximately pH 1 on field pH paper. On 4/24/15 this violation was noted for free liquids inside secondary containment in plating areas. Spills, dragout and small leaks are not cleaned up when they occur and the current operational procedures do not appear adequate to maintain this area in a manner to minimize the possibility of a release.

Violation Date: 07-09-2015
Citation: HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description: RCRA Large Quantity Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General
Violation Notes: Facility had a recorded discharge to the publicly owned treatment works (POTW) of a hazardous waste (pH of 12.6). Duration of discharge is estimated to be 5 minutes. According to facility, unintentional discharge is believed to have occurred when an operator dumped a developer solution (sodium hydroxide based) to Sump #2 during routine preventative maintenance activities (PM's). Prior correspondence with City of San Jose Environmental Services Division have indicated that Gorilla Circuits has no way to stop a discharge once in the sumps located below grade in the waste treatment area.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-19-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility operates four onsite treatment units. FTU1: 17 tank/container treatment system consisting of three collection sumps (in which incidental neutralization may occur to commingling), pH buffering tank, filter and ion exchange, sand filtration (for pumice particulate material). System accepts waste at front end from metal bearing wastes, pH buffers, and removes via ion exchange. Once metal removed, commingled with non-metal bearing wastes and further pH adjusted and metal scrubbed. Pumice wastes with copper are processed through separator and sand filter prior to being added to original collection sump and mixture with other metal bearing wastes. Filter media is removed and managed as hazardous waste as efficiency drops. Batch treated wastes from FTU2, FTU3, and FTU4 are combined with untreated

Citation: 22 CCR 45 67450.3(c)(8) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(8)
Violation Description: Failure to maintain, reproduce, and provide the following documents at the facility where the FTU is operating: 1) The waste analysis plan for the treatment operation; 2) The written inspection schedule; 3) All training documents; 4) The contingency plan; 5) A copy of the most recent treatment notification and a copy of the most recent acknowledgement received from the Department, CUPA or authorized agency; 6) A copy of any local Air District permit and other permits required for the operation of the FTU; 7) A copy of the closure plan; 8) A copy of documents related to the environmental investigation and any cleanup, abatement or other necessary remedial action taken; and 9) Documentation of any convictions, judgments, settlements, or orders resulting from any action by any local, State, or federal environmental or public health enforcement agency concerning the operation of the facility within the last three years, as the documents would be available under the California Public Records Act.
Violation Notes: The current waste analysis plan is incomplete. Current plan does not include details as noted in #1-4 below. This is a repeat violation from 4/24/15 inspection report, and it was recommended on 4/24/15 to include rationale in your plan specifying the reason for each tier selected, the current plan does not include this information.

Violation Date: 01-06-2015
Citation: 22 CCR 45 67450.7 - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.7

Violation Description: Failure of the owner or operator of a facility who operates a transportable treatment unit (TTU) or fixed treatment unit (FTU) under a permit by rule to complete a corrective action program at the facility. The corrective action shall consist of a phase 1 environmental assessment, which shall be submitted within one year of the initial notification of permit by rule treatment, and a subsequent corrective action conducted as necessary to protect human health and the environment for all releases of hazardous waste or constituents from any solid or hazardous waste management unit at the facility, regardless of the time at which waste was placed in the unit.

Violation Notes: Returned to compliance on 07/17/2015. Facility has not yet submitted a complete Phase I Environmental Assessment Checklist to DTSC and HMCD.

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility operates four onsite treatment units. FTU1: 17 tank/container treatment system consisting of three collection sumps (in which incidental neutralization may occur to to commingling), ph buffering tank, filter and ion exchange, sand filtration (for pumice particulate material). System accepts waste at front end from metal bearing wastes, pH buffers, and removes via ion exchange. Once metal removed, commingled with non-metal bearing wastes and further pH adjusted and metal scrubbed. Pumice wastes with copper are processed through separator and sand filter prior to being added to original collection sump and mixture with other metal bearing wastes. Filter media is removed and managed as hazardous waste as efficiency drops. Batch treated wastes from FTU2, FTU3, and FTU4 are combined with untreated wastes in Sump 1 (tank 640) for additional processing. Reviewed the following onsite treatment related documentation: CERS submittal containing application dated [Truncated]

Address: 1509 BERGER DR
City,State,Zip: SAN JOSE, CA 95112
Site ID: 34001
CERS ID: 110018992081
CERS Description: US EPA Air Emission Inventory System (EIS)

Violations:
Site ID: 34001
Site Name: GORILLA CIRCUITS
Violation Date: 12-19-2017
Citation: 22 CCR 15 66265.31 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 02/01/2018. Liquid noted in most containment structures in plating area, most piping and waste containment trenches. Crystals noted outside containment behind tank 430 on sulfuric etch cleaner. Crystals behind doors under CuPosit line. Lots of standing liquid in containment and outside containment on ramp in and around stencil wash/ tanks 179 and 180; crystals in containment at loading end of automated plate line; liquid in containment in dry film room;

Violation Date: 12-19-2017
Citation: 22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)
Violation Description: Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, and tank systems authorized under Permit-by-Rule, Conditional Authorization, and Conditional Exemption or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.
Violation Notes: Returned to compliance on 03/29/2018. Facility was able to provide a draft tank assessment but could not locate the PE stamped/signed copy. A copy of the stamped document should be uploaded to CERS with annual

renewal in 2018.
Violation Division: Santa Clara County Environmental Health
Violation Program: PBR
Violation Source: CERS

Site ID: 34001
Site Name: GORILLA CIRCUITS
Violation Date: 07-09-2015
Citation: 22 CCR 45 67450.3(c)(8) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(8)
Violation Description: Failure to maintain, reproduce, and provide the following documents at the facility where the FTU is operating: 1) The waste analysis plan for the treatment operation; 2) The written inspection schedule; 3) All training documents; 4) The contingency plan; 5) A copy of the most recent treatment notification and a copy of the most recent acknowledgement received from the Department, CUPA or authorized agency; 6) A copy of any local Air District permit and other permits required for the operation of the FTU; 7) A copy of the closure plan; 8) A copy of documents related to the environmental investigation and any cleanup, abatement or other necessary remedial action taken; and 9) Documentation of any convictions, judgments, settlements, or orders resulting from any action by any local, State, or federal environmental or public health enforcement agency concerning the operation of the facility within the last three years, as the documents would be available under the California Public Records Act.
Violation Notes: The current waste analysis plan is incomplete. Current plan does not include details as noted in #1-4 below. This is a repeat violation from 4/24/15 inspection report, and it was recommended on 4/24/15 to include rationale in your plan specifying the reason for each tier selected, the current plan does not include this information.

Violation Description: RCRA Large Quantity Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General

Violation Notes: Facility had a recorded discharge to the publicly owned treatment works (POTW) of a hazardous waste (pH of 12.6). Duration of discharge is estimated to be 5 minutes. According to facility, unintentional discharge is believed to have occurred when an operator dumped a developer solution (sodium hydroxide based) to Sump #2 during routine preventative maintenance activities (PM's). Prior correspondence with City of San Jose Environmental Services Division have indicated that Gorilla Circuits has no way to stop a discharge once in the sumps located below grade in the waste treatment area.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-19-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility operates four onsite treatment units. FTU1: 17 tank/container treatment system consisting of three collection sumps (in which incidental neutralization may occur to to commingling), pH buffering tank, filter and ion exchange, sand filtration (for pumice particulate material). System accepts waste at front end from metal bearing wastes, pH buffers, and removes via ion exchange. Once metal removed, commingled with non-metal bearing wastes and further pH adjusted and metal scrubbed. Pumice wastes with copper are processed through separator and sand filter prior to being added to original collection sump and mixture with other metal bearing wastes. Filter media is removed and managed as hazardous waste as efficiency drops. Batch treated wastes from FTU2, FTU3, and FTU4 are combined with untreated wastes in Sump 1 (tank 640) for additional processing. Reviewed the following onsite treatment related documentation: CERS submittal containing application dated [Truncated]

CERS ID: 263132
CERS Description: Industrial Facility Storm Water

Violations:

Site ID: 34001
Site Name: GORILLA CIRCUITS
Violation Date: 12-19-2017
Citation: 22 CCR 15 66265.31 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violation Notes: Returned to compliance on 02/01/2018. Liquid noted in most containment structures in plating area, most piping and waste containment trenches. Crystals noted outside containment behind tank 430 on sulfuric etch cleaner. Crystals behind doors under CuPosit line. Lots of standing liquid in containment and outside containment on ramp in and around stencil wash/ tanks 179 and 180; crystals in containment at loading end of automated plate line; liquid in containment in dry film room;

Violation Program: HWLQG
Violation Source: CERS

Site ID: 34001
Site Name: GORILLA CIRCUITS
Violation Date: 12-19-2017
Citation: 22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)
Violation Description: Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, and tank systems authorized under Permit-by-Rule, Conditional Authorization, and Conditional Exemption or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.

Violation Notes: Returned to compliance on 03/29/2018. Facility was able to provide a draft tank assessment but could not locate the PE stamped/signed copy. A copy of the stamped document should be uploaded to CERS with annual renewal in 2018.

Citation: 22 CCR 45 67450.7 - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.7
Violation Description: Failure of the owner or operator of a facility who operates a transportable treatment unit (TTU) or fixed treatment unit (FTU) under a permit by rule to complete a corrective action program at the facility. The corrective action shall consist of a phase 1 environmental assessment, which shall be submitted within one year of the initial notification of permit by rule treatment, and a subsequent corrective action conducted as necessary to protect human health and the environment for all releases of hazardous waste or constituents from any solid or hazardous waste management unit at the facility, regardless of the time at which waste was placed in the unit.
Violation Notes: Returned to compliance on 07/17/2015. When complete, send a copy of the Phase I checklist to DTSC and this agency.

Eval Notes: Facility operates four onsite treatment units. FTU1: 17 tank/container treatment system consisting of three collection sumps (in which incidental neutralization may occur to commingling), pH buffering tank, filter and ion exchange, sand filtration (for pumice particulate material). System accepts waste at front end from metal bearing wastes, pH buffers, and removes via ion exchange. Once metal removed, commingled with non-metal bearing wastes and further pH adjusted and metal scrubbed. Pumice wastes with copper are processed through separator and sand filter prior to being added to original collection sump and mixture with other metal bearing wastes. Filter media is removed and managed as hazardous waste as efficiency drops. Batch treated wastes from FTU2, FTU3, and FTU4 are combined with untreated wastes in Sump 1 (tank 640) for additional processing. Reviewed the following onsite treatment related documentation: CERS submittal containing application dated [Truncated]

Hazardous Waste Summary:

- . Waste code: 131
- . Waste name: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

- . Waste code: 132
- . Waste name: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

- . Waste code: 181
- . Waste name: Other inorganic solid waste

- . Waste code: 221
- . Waste name: Waste oil and mixed oil

- . Waste code: 352
- . Waste name: Other organic solids

- . Waste code: 711
- . Waste name: Liquids with cyanides > 1000 mg/l

- . Waste code: 726
- . Waste name: Liquids with nickel > 134 mg/l

- . Waste code: 791
- . Waste name: Liquids with pH < 2

- . Waste code: 792
- . Waste name: Liquids with pH < 2 with metals

- . Waste code: D002
- . Waste name: CORROSIVE WASTE

- . Waste code: D003
- . Waste name: REACTIVE WASTE

. Waste name: CHROMIUM
. Waste code: D008
. Waste name: LEAD
. Waste code: D011
. Waste name: SILVER
. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.
. Waste code: F007
. Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 14400
Waste code: D004
Waste name: ARSENIC

FINDS:

Registry ID: 110018992081
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110018992081

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
OSHA ESTABLISHMENT
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS Description: Chemical Storage Facilities

Violations:

Site ID: 375210

Site Name: GREAT AMERICA TOWING

Violation Date: 10-25-2016

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Notes: 1 x 330 gallon plastic tote of BlueDEF, diesel exhaust fluid, is routinely stored on-site and was observed during inspection, but is not included on the facility's HMBP.

Violation Division: Santa Clara County Environmental Health

Violation Program: HMRRP

Violation Source: CERS

Site ID: 375210

Site Name: GREAT AMERICA TOWING

Violation Date: 10-25-2016

Citation: 22 CCR 23 66273.31(a) - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.31(a)

Violation Description: Failure of the universal waste handler to transfer universal waste to the appropriate destination facility.

Violation Notes: One brake cleaner aerosol can containing both contents and propellant was observed in the trash can next to the trash dumpster. Aerosol cans must be empty of both contents and propellant if discarded as trash or recycled. If the aerosol can cannot be completely emptied of contents and propellant, then it must be managed as universal waste-aerosol cans or fully regulated hazardous waste.

Violation Division: Santa Clara County Environmental Health

Violation Program: HW

Violation Source: CERS

Site ID: 375210

Site Name: GREAT AMERICA TOWING

Violation Date: 10-25-2016

Citation: HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22

Violation Description: Failure to properly manage used oil and/or fuel filters in accordance with the requirements.

Violation Notes: The facility only generates metal-encased used oil filters. All used oil filters are collected in a 5 gallon container and transferred to the facility's Redwood City location where they are consolidated and sent for scrap metal recycling. Bills of lading for the transportation of the used oil filters are not generated. Ensure that a bill of lading that includes all of the below-listed information is generated for each used oil filter shipment and a copy of the bill of lading is kept on the premises for a period of three years. NOTE: The drained used oil filters must be transported in a closed, rainproof container that is capable of containing any used oil that may separate from the filters placed inside. Containers shall be labeled as G drained used oil filtersG and show initial date of accumulation or receipt on each container of filters [22CCR 66266.130(c)(3)]. A completed "drained used oil filter" label was provided at the time of inspection.

Name: FEDEX SJCRT
Address: 1709 JUNCTION COURT
City,State,Zip: SAN JOSE, CA 95112
Site ID: 531909
CERS ID: 839062
CERS Description: Industrial Facility Storm Water

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-01-2018
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: The facility sorts and ships packages. I did not observe any active discharge and staining at the facility. The facility's operations are conducted inside the building and packages loaded into the trucks at the loading docks. I observed the leaves falling from trees have covered/clogged one of the storm drain inlets. The facility is in Level 1 ERA for TSS due to decomposing and disintegration of tree leaves. I did not observe any sediment tracking within the facility.

 Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002801479

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS ID: 10345753
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 124638
Site Name: INTEX AUTO PARTS
Violation Date: 08-21-2018
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit the Business Activities Page and/or Business Owner Operator Identification Page.

Violation Notes: Inventory disclosure in August 2018 accounts for 30 gallons of used battery electrolyte. Observed at least 80 batteries on site during walkthrough, with electrolyte volume exceeding 30 gallons.

Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 124638
Site Name: INTEX AUTO PARTS
Violation Date: 08-21-2018
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)

Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: Per Mr. Ho, training is generally provided monthly on various topics in a "tailgate" setting, but not documented. Training not documented includes evacuation and emergency response. Copy of log provided with report.

Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 124638
Site Name: INTEX AUTO PARTS
Violation Date: 08-21-2018
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit a site map with all required content.

Violation Notes: Map does not indicate the location of the storm drain along the north west fence line, does not note scale, and needs a key to indicate what "E" is.

Violation Division: Santa Clara County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-21-2018

Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: Facility is a automotive parts and fluids distribution center. CERS ID 10345753, last submittal 8/19/18 through Front Counter portal. Annual submittals noted in 2018, 2017, 2016. Site has policy regarding

acceptance of broken/open batteries for core value- does not accept.
Site has policy regarding broken fluid bottle from supplier- refuse to accept Generally hazardous materials on site in quart to 5 qt bottle size. Do have 2x55 ATF, both to be sold as is without dispensing.
NOTES: 1. Due to changes in law, site is no longer required to disclose consumer product hazardous materials (Health and Safety Code 25507(b)(5)). The following materials which were previously disclosed remain subject to disclosure--Battery electrolyte (for forklift) and used batteries. 2. Observed 2x55 gallon poly drums on south side of building, both determined to have tops cut and be empty. Strongly recommend marking the drums as "EMPTY". 3. Fire extinguishers were noted with last [Truncated]

Violation Notes: Waste, and starting accumulation date.
2 x 55 gallon metal drums of used oil/waste coolant were not properly marked with details; information illegible.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-22-2015
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: The tumbler is used to clean up edges on various metal parts, the tumbler wastewater is added to the waste oil/coolant drum. Owner/Operator Hen Tran indicated that the waste oil disposal company allows them to place wastewater from tumbler in waste oil drums. Please provide information from North Valley oil on proper tumbler wastewater disposal.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site ID: 121519
Site Name: HANS AUTO REPAIR & SERVICES
Violation Date: 04-15-2019
Citation: 22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7

Violation Description: Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.

Violation Notes: Observed one non-empty 1 gal container of antifreeze in the dumpster. Ensure that all containers are completely empty of any pourable or scrapable materials before disposing in the dumpster.

Violation Date: 04-15-2019
Citation: HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22
Violation Description: Failure to properly manage used oil and/or fuel filters in accordance with the requirements.
Violation Notes: Currently, according to Mr. Tran, metal cased used oil filters and cartridge filters are being accumulated indefinitely in 2 x 55 gal drums, then sorted into metal cased and cartridge filters. No accumulation of cartridge filters only was observed. Cease the practice of commingling containers before final separation. Sort metal cased and cartridge filters at initial generation into separate containers.
