Project location, purpose and outcome:

The Trinity Street Rehabilitation Project consists of pavement rehabilitation of the entire length of Trinity Street in Trinidad, CA. The existing pavement on Trinity Street is exhibiting signs of extreme pavement distress and failure. Trinity Street is a backbone of the City's transportation network and pavement failure would result in significant social and economic impacts to the community (including residents, businesses, and visitors). The purpose of the project is to rehabilitate and extend the useful life of the roadway pavement on Trinity Street. The project includes the replacement of asphalt concrete surfacing (i.e., digouts), edge and conform grinding, hot mix asphalt (HMA) overlay, adjusting utility covers, signage, and thermoplastic pavement striping and markings.

Reasons why project is exempt:

All project components are categorically exempt under Section 15301c – Existing Facilities. Existing streets, utilities, signage, and crosswalks are facilities that will be repaired and treated with minor alternations. These are existing public facilities involving negligible or no expansion of use, and all work would be within the road right of way. In addition, the project does not meet any exceptions to the exemptions (Section 15300.2).
