Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Description: Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 01/27/2020. The 7/9/19 submittal's inventory element was not accepted based on usage of obsolete federal hazardous categories. No re-submittal was made. In addition, ensure that phosphoric acid and oil sludge is removed from the inventory, as those containers are no longer onsite. A re-submittal was made today, so no further corrective action is needed.

Eval Notes: Facility sand blasts and washes metal parts before painting or powdercoating. Sandblaster waste is tested before disposal for each batch. 2012 batches tested high in lead levels and were hazardous. 2015 batch had detectable amounts of chromium and lead but were below STLC regulatory thresholds. Metals are washed in a partswasher the uses water and phosphoric acid. This waste is collected in a 55 gallon container and is marked as oily water (222) separator waste and is managed as hazardous waste on a uniform manifest. Facility has a dry powdercoating booth for powders, and a wet painting booth that uses one single type of solventborne paint. Filters are changed every 3-4 months and disposed of with municipal trash. Wet paint SDS shows that the paint contains no regulated metals. Paint guns are cleaned with acetone and waste is collected in a 55 gallon drum in the painting room. No solid paint bricks or cups were noted during the inspection and trashcans and dumpsters were [Truncated]

Plan (HMBP) inspection. This facility is a powder coating and painting facility. Paint booth filters are replaced every ~4 months in municipal trash as non-hazardous waste. Facility also does sandblasting of various metal parts. Waste from the sandblasting is analyzed before being disposed of. Based on discussion with Mr. Cortez, samples taken may not be fully representative, as they are taken soon after accumulation begins. It was recommended that samples are instead taken when the waste bag is nearly full. The current pile was analyzed early in accumulation, and shown to be hazardous for zinc content. Hazardous waste manifests were reviewed. Training logs and inspection logs were reviewed. Fire extinguishers and absorbent are available and maintained. Emergency information is posted. A parts washer was discontinued from service in 2018. The washer is still onsite, but contains no [Truncated]

Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: HMBP was submitted today. Property owner has been notified. Facility is correctly permitted for the following hazardous materials: - Used oil (360-gallon tank, 2x 55-gallon drums) - New oil (At least 60 gallons of ATF, various other oils) - Oxygen (~900 cubic feet) - Acetylene (~700 cubic feet)
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Other/Unknown
Eval Date: 03-10-2017
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: On-site to perform a Hazardous Waste Generator permit investigation. Business does truck repair. A facility walk-through was conducted with vice president Sheri Lee and president Jim Lee. Both stated that the amount of hazardous materials they store has decreased, along with their operations. The following hazardous waste streams were observed: - used oil: 1 x 376 gal tank - used oil filters: 2 x 55 gal drums (crushed) - grease: 1 x 30 gal drum The following hazardous materials were also observed: - new oil/ ATF/ gear oil: approx. 120 gal - oxygen: 1 x 282 cubic ft cylinder - acetylene: 1 x < 200 cubic ft cylinder - Ar/ CO2: 2 x approx. 300 cubic ft cylinders Notes: - EPA ID CAL000371980 is active. - Mr. Lee stated that coolant is collected and reused, so they never generate any waste coolant. - Several empty cylinders, tanks, and drums were observed on-site, however Mr. Lee stated that they weren't in use and that he would sell them or get them up. Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

RB Case Number: 43S1131
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Trichloroethylene (TCE), Diesel
Site History: The Site is located on the northwest corner of Pomona Avenue and Banard Avenue in a light industrial/commercial area. A large building in the front of the Site was formerly used as an auto repair shop and a wrecking yard (All Stick and Gears). The Site is now used primarily for storage of nursery plants and potted trees. Two 1000-gallon underground storage tanks (USTs) were excavated in 2003. During excavation, it was noted that each USTs had holes in the ends, and that soil beneath the USTs was discolored and smelled of petroleum hydrocarbons. Soil samples collected beneath the tanks contained low concentrations of petroleum hydrocarbons (primarily as diesel). Trichloroethene (TCE), a solvent, was also detected in soil samples collected from the excavation. Groundwater samples collected from site monitoring wells during March 2005 contained concentrations of gasoline and TCE. Concentrations of TCE detected in groundwater samples collected in 2015 indicate that the site meets the criteria in the Assessment too for Closure of low-Threat Chlorinated Sites (July 31, 2009). low threat closure The Santa Clara Valley Water District provided oversight at the site to January 2005, at which time the case was transferred to the County of Santa Clara Environmental Health Department. The case was transferred from the County to the Regional Water Board in August 2005. Groundwater samples collected in 2015 indicated that the site is a candidate for case closure as the concentrations of TCE & other VOCs are below ESLs.

ALLEN HURTA-HAZARDOUS MATERIALS SPECIALIST I WITH HMCD. THE OFFICIAL NOTICE OF INSPECTION WAS DELIVERED TO MR. GERARDO VEGA ON APRIL 19, 2019. I ASKED MR. VEGA HOW OFTEN DOES HE HAVE THE HAZARDOUS WASTES (TRANSMISSION FLUID AND TRANSMISSION CLEANING SOLVENT) REMOVED FROM THE FACILITY AND HE TOLD ME WHEN THE DRUMS ARE FULL HE WILL CALL FOR A PICK UP. HE TOLD ME DUE TO A CASH FLOW PROBLEM IT COULD BE IN EXCESS OF 180 DAYS. I WAS UNABLE TO DETERMINE THE LAST PICKUP DATE DURING THIS INSPECTION BECAUSE MR. VEGA DID NOT HAVE HAZARDOUS WASTE MANIFESTS DOCUMENTING THE PICK UPS OF THE HAZARDOUS WASTE AND THE HAZARDOUS WASTE MARKING LABELS DID NOT HAVE ACCUMULATION START DATES WRITTEN ON THE THE LABELS. MR. VEGA'S FACILITY IS A SMALL QUANTITY HAZARDOUS WASTE GENERATOR AND HAS 180 DAYS TO DISPOSE OF HAZARDOUS WASTES FROM THE FACILITY [Truncated]

Violation Description: Failure to use a DTSC registered hazardous waste transporter to transport hazardous waste or transporting hazardous waste without being a DTSC registered hazardous waste transporter.
Violation Notes: Returned to compliance on 02/07/2020. Used coolant and other hazardous wastes are transported to the company's maintenance yard at 615 Dado St., San Jose for disposal. As long as the facility remains a Very Small Quantity Generator (100kg or less of waste per month), waste may either be hauled off by a registered hauler, or can be transported by facility personnel directly to authorized facilities such as Santa Clara County's Household Hazardous Waste drop-off locations. Transportation to an un-authorized facility is not allowed. If the facility generates more than 100kg of hazardous waste each month, the waste must be transported by a registered hauler.

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 02/05/2020. Propane is listed in the inventory at a quantity of 16 gallons, for use with a forklift. No forklift nor excess propane was noted during the inspection. Mr. Snell stated that no forklift was onsite, and had never been. Ensure this is still the case, and update the inventory as appropriate. Note: 2x 5-gallon propane cylinders were onsite, but used for cooking. Up to 500 gallons of propane used for cooking or heating is exempt from reporting.

Onsite to perform a routine Hazardous Materials Business Plan (HMBP) inspection. Upon discovery that this facility also generates hazardous waste, a hazardous waste inspection was also performed. Completed walkthrough on 1/8/20 with Safety Manager, William Snell. Inspection concluded with delivery of this report on 1/9/20. This facility is a yard for buses used for corporate shuttling. Light maintenance and repair work is performed, as well as washing of the buses. More than 10 spent automotive-type batteries are stored onsite. Batteries are transported to the business' main San Jose facility for ultimate core exchange. It is recommended that batteries are exchanged from this facility. Whether or not transportation to the business' other facility continues, both facilities must comply with requirements listed in 22 CCR 66266.81. A DTSC fact sheet on spent lead-acid batteries was provided. Spill kits, emergency eyewash stations, and fire extinguishers are available [Truncated]

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Notes: Facility does auto repair work in the front half of the back. Mr. Rizo stated that the back center and right side of the shop belongs to Clever Machine shop. The machine shop has multiple parts washers, metal working machines, and a bin of soiled absorbent. Mr. Rizo's shop generates used oil, used antifreeze, used oily solids, and paper and metal oil filters. Inspection included walk-through of the work bays in the single garage shop, walk-through of front lot, inspection of trashcans, and inspection of hazardous waste shipping documents from the past 3 years. Battery core exchange receipts and commercial laundry service receipts for rags were reviewed during the inspection. Facility has adequate spill kit. The following violations were corrected at the time of inspection: G211 Emergency Information Posted (SQG): Emergency information was not posted at the time of inspection. A complete emergency posting was created at the time of inspection. NOTES: 1. Mr. Rizo [Truncated]

Eval Notes: Facility is currently permitted for 1-3 reportable chemicals. Reportable chemicals observed today include: - New oil (2x 55-gallon drums of same oil weight) - Used oil (4x 55-gallon drums) - Used coolant (1x 55-gallon drum) - Used parts washing fluid (2x 30-gallon drums) - Oily debris is also onsite, but could its weight could not be calculated. 2x 55-gallon drums of saturated absorbent, and 1x 55-gallon drum of cartridge filters. It is suspected that the combined weight of these materials is at or greater than 500 pounds, and is thus reportable. In order to remain in the current permit category (BP01), facility must lower at least two materials to below reportable amounts. As discussed with Mr. Rizo, it is recommended that the facility obtains a smaller drum for used coolant, and to dispose of at least one drum of parts washing fluid. As a substitute for one of these, the facility can also prove that the combined weight of oily debris is less than 500 pounds. If [Truncated]

Eval Notes: Onsite for a routine hazardous waste and Hazardous Materials Business Plan (HMBP) inspection. Facility is an auto repair shop. Upon arriving onsite, Mr. Rizo noted that the business has been having trouble obtaining a permanent EPA ID number, and as a result, some wastes have been onsite for longer than expected. In the past, provisional numbers were used temporarily: CAC002978017 and CAC002955051 (both expired in 2018). Notes: - Waste streams include used oil, used coolant, metal filters, cartridge filters, saturated absorbent, and parts washing solution. - A separate business, Clever and Quick Machine Shop, operates in part of this facility. - Employees are regularly trained. - Fire extinguishers were tagged December 2019. - Absorbent is available. - Emergency information is posted. - Customers keep spent battery cores, so none are stored onsite. - Rags are laundered by Aramark. - The facility's garbage dumpster was blocked and unable to be checked. Eval Notes: Facility is a machine shop located at the back of an auto shop (Auto Mecanico Arandas). Facility generates the following wastes: sandblasting waste (~5gal/mo), oily saturated absorbent/rags/sludge (owner estimates it should be ~60 gal/yr), non-empty aerosol cans, scrap metal, commercially laundered oily rags, used oil (skimmed from parts washers), and oily water from cleaning out parts washers. Facility has 2x25 gallon parts washers for large parts, 1x20 gallon parts washer for smaller parts, and 1x80 gallon heated parts washer. 25 gallon washers have filters and oil skimmers but 80 gallon washer and 20 gallon washer must be cleaned out about once per year. Based on current estimates, facility generates about 15-25 gallons of waste per month. Containers are inspected weekly, facility has adequate spill kit, and employees were trained through industry experience. Eval Notes: Facility changed ownership in September of 2017. New owners would like to get rid of waste parts washing liquids and bead blast dust abandoned by previous owner. After this point facility will have 2 parts washing machines (1 serviced by SafetyKleen on a regular schedule), and roughly 50 lbs of bead blast waste every 6 months. Facility also generates hazardous waste metal dust from grinding machine, oily rags (commercially laundered), and non-empty universal waste aerosol cans. No disposals of waste to date. Spill kit is adequate and emergency posting is up-to-date. NOTES: 1. Keep all laundry receipts and hazardous waste disposal records for 3 years. 2. Facility was advised on how to label all wastes and was given labels, training record templates, and weekly inspection templates for use. 3. Scrap metal must be sent to a metal recycler. 4. Citation: 22 CCR 12 66262.23(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.23(a)
Violation Description: Failure to properly complete the Uniform Hazardous Waste Manifest.
Violation Notes: Returned to compliance on 04/25/2017. Observed multiple non-legible hazardous waste manifests that could not be read. Nearly all manifests denote some or all wastes with California state waste code 551 (Laboratory waste chemicals). Facility is not a lab and wastes should not carry the 551 waste code.

Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 04/25/2017. Once items are determined to be a waste and suspected to be hazardous, they are placed in one of the 4 bins at the front of the warehouse and are grouped with similar looking items. A hazardous waste determination is delayed until the hazardous waste hauler arrives on-site to sort this material. A hazardous waste determination must be made at the point of generation.

Eval Type: Routine done by local agency
Eval Notes: Facility receives and stores property acquired by the police department that is being held to be returned to the owner, used as evidence, or auctioned. Facility generates e-waste, universal waste aerosol cans and batteries, and various hazardous wastes like acids, paints, and oils. All biohazardous materials are managed as biohazardous waste and sharps are managed in sharps containers. Any sharps containers holding medication or any prescription medication is sent off-site for management and storage with Narcotics. Occasionally some of these items are returned if they are over-the-counter medications and a hazardous waste determination is made upon return. Facility also stores some materials including fuel inside generators and compressed gases in the back of the warehouse until their use or status as a waste can be determined. These hazardous materials (which are being held because they could potentially be sold/returned/used as evidence) appear to be below Hazardous [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-21-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility paints cabinets and other wood items. Facility generates the following hazardous waste stream: Paint related material (acetone, thinner, paint) Spent spray booth filters are disposed of in the trash. Facility provided data on the paints and reviewed for regulated california metals. Reviewed multiple paints and confirmed that none had any level of regulated metals. Note: Cabinetry paint colors are generally in non-bright colors and these paints often lack metal oxides that are required in the automotive industry to provide a bright colored finish. Facility strips painted surfaces using methylene chloride followed by a thinner wash. stripper and thinner is applied with cloth or sponge and performed over an easel style stand that has a drain that can collect spent stripper/thinner waste that drips down the easel into a 5 gallon container. 5 gallon container is consolidated into paint related material waste drum. Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-01-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility performs steel fabrication and custom welding. Some components are painted as well at contiguous address of 1775 Monterey Rd 46A. Observed 1x5 gal open bucket of thinner in unmarked container in paint area. Foreman indicates that this is thinner and is continuously used to clean spray guns. The cleaning of the guns slowly consumes the thinner and new material is added. Facility does not paint in a spray booth and there are no booth filters to evaluate. Some rags are used with acetone to remove oily film from tube steel. These are continuously reused for cleaning. Welding dust is disposed

Eval General Type: Other/Unknown
Eval Date: 06-14-2018
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: On-site for a permit investigation at the request of the owner. Facility revised painting practices to reduce the amount of hazardous waste generated. Facility now generates waste absorbent paint rollers, some rags stained with paint and paint remover, and occasional hazardous wastes from misc. off-spec or unwanted materials. Facility no longer conducts oil changes or major car maintenance activities on-site. Painting activities fluctuate throughout the year based on the workload, and owner estimates that facility may generate up to 1 paint roller and rag per day for a few weeks at a time, with lulls of generation in between. Currently, owner stated that it would take a few months to fill a 5 gallon bucket with contaminated solids. Observed 1 quart of old brake fluid on-site and less than 5 gallons of contaminated paint solids. All paints are stored in 2 flammables cabinets at the back of the facility. Permit will be adjusted to <100 kg/year, and Mr. Dabak is aware that he [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-17-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site to conduct a Hazardous Materials Business Plan (HMBP) routine inspection. Facility is a restaurant with CO2 on-site for the purpose of carbonizing soft drinks. Walk through was conducted with Eliseo Alvarez, Service Manager. Facility (CERS ID 10754950) submitted HMBP on 1/21/2019. The following materials were observed to be at or above HMBP thresholds: 3 x 405 cf cylinders of CO2 (1215 cf total) Note: inventory reported on CERS lists CO2 quantities at 2750 cf. It is strongly suggested to update quantities to more closely reflect amounts stored on-site. Contact email: ca.3068.sjsungarden@chipotle.com

of mostly expired waterborne material, there may be some materials which meet hazardous waste criteria. Additionally, there is a 55-gallon container labeled Visstar ALK-300E, a low-VOC enamel, which reportedly has been here since the business moved in (the previous owner was also an auto body supplier). Determine whether any of these materials are considered hazardous, either through laboratory testing or generator knowledge, and dispose of them appropriately.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-14-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site for a routine Hazardous Materials Business Plan (HMBP) inspection. During the walkthrough, it was discovered that this facility also generates hazardous waste in the form of paint-related materials from paint mixing as well as expired retail materials. Facility is an auto body supply store, selling paints and paint-related material, body filler, and other such materials. There is a paint mixing area as well. Expired retail materials include a variety of products, many of which are waterborne and may not be considered hazardous. A 55-gallon drum of solvent-based paint-related material is next to the mixing area - this is primarily for expired materials, and not otherwise generated as part of any processes at this facility. Mixing supplies, including cups and strainers, are left to dry before being disposed in the trash. Notes: - Mr. Scholl and the owner are reportedly trained on hazardous waste management. Employees are trained regularly. - Emergency [Truncated]

Violation Date: 01-17-2017
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174

Violation Description: Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.

Violation Notes: Returned to compliance on 02/13/2017. Observations made during inspection, including the significant quantity of dried used oil observed in the hazardous waste container area's secondary containment trough, indicate that hazardous waste container area inspections are not being conducted weekly.

Violation Description: Failure to prevent intentional contamination of used oil with other hazardous waste other than minimal amounts of vehicle fuel.

Violation Notes: Returned to compliance on 02/13/2017. Used brake fluid is currently being commingled with used oil for management as "used oil." Used oil being managed and disposed of as "used oil" cannot be mixed with anything other than minimal amounts of vehicle fuel. Otherwise, the commingled waste (i.e. used oil and used brake fluid mixture) must be managed as a fully-regulated hazardous waste. Please note that "minimal amounts of vehicle fuel" refers to small amounts of engine blow-by from normal use and does not include the intentional mixing of vehicle fuel with used oil.

Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Notes: Returned to compliance on 02/13/2017. One, 55 gallon drum full of used oil was observed to be open when no waste was being added or removed.

Violation Description: Failure to dispose of hazardous waste at a facility which has a permit from DTSC or disposing of hazardous waste at any point which is not authorized according to this chapter.

Violation Notes: Returned to compliance on 02/13/2017. 1) Used oil-saturated absorbent was observed on the floor of the facility next to the used oil drum that is not located within the secondary containment trough, but no container for debris saturated with used oil was observed on-site. Upon inquiry, Mr. Chow stated that used oil-saturated absorbent is disposed of to the trash. Used oil-saturated absorbent must be collected, managed, and disposed of as hazardous waste. 2) Paper-used oil filters were observed to be commingled with metal-encased used oil filters. While the drum and transfer pan accumulating the commingled used oil filters was observed to be un-labeled, a review of the facility's consolidated manifests confirmed that the commingled used filters are managed as "drained used oil filters" and not as hazardous waste. "Drained used oil filters are defined as filters which contain a residue of used oil and can be recycled for their scrap metal value (i.e. metal-encased used oil filters).  Potential Media Affect: Other Groundwater (uses other than drinking water), Soil
 Potential Contaminants of Concern: Diesel
 Site History: Six (6) underground storage tanks (USTs) were removed from the Subject Site between 1987 and 1989, including two gasoline and four diesel USTs. The USTs are identified as a 2,000-gallon diesel removed September 21, 1987; 1,000-gallon gasoline removed February 13, 1988; 550-gallon diesel removed April 19, 1989; 5,000-gallon diesel removed on December 15, 1989; 2,000-gallon unleaded gasoline removed on December 28, 1989; and a 7,000-gallon diesel removed on December 28, 1989. Subsurface investigations began in January 1988 with the installation of groundwater monitoring well (MW-1) following the removal of a UST in September 1987 and subsequent installation of three additional groundwater monitoring wells (MW-2 through MW-4) in February 1990 following the removal of four additional USTs in April and December 1989. The USTs were not replaced. From January 1988 to April 2015, periodic groundwater monitoring and sampling events were conducted. Twenty-three sampling events were conducted in wells MW-5 through MW-7 from July 2003 to April 2015. Ongoing groundwater monitoring demonstrated that no significant sources exist in soil and significant natural attenuation of residual petroleum hydrocarbons in groundwater has occurred. The most recent subsurface investigation results were reported in the Limited Assessment and Groundwater Monitoring Well Sampling Report dated May 15, 2015. Exploratory soil borings advanced specifically to further delineate suspect subsurface impacts away from the former USTs demonstrated that residual

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Returned to compliance on 05/18/2017. Facility last used a hazardous waste manifest to dispose of waste in 1998. Mr. Morales states that these containers have been accumulating for several years, and that some years they will place multiple containers on the pallet while other years they will have no waste. Ensure that hazardous waste is disposed of within 30 days, and that future hazardous waste containers are not held for more than 180 days.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-02-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility has 3 warehouses, with separate unit addresses 199, 196, and 200. The building and yard at 199 has 3 forklifts and only shingles, and does not require a hazardous materials business plan permit. The building at 200 houses all of the materials for single ply roofing and any hazardous waste (this facility holds a separate permit). Today's inspection included a walk-through of the 200 building. Facility submitted their hazardous materials business plan on CERS on 5/25/16 using CERS ID 10348690. While facility sells materials to contractors and the general public, the materials stored at building 200 are not available to the public and are not exempt retail products. Facility has the following hazardous materials above reporting thresholds: 192 gallons of liquid propane 1160 gallons of adhesives part a 400.5 gallons of adhesives part b 555 gallons of low voc adhesive 708.8 gallons of sealing mastic 740 gallons of low voc primer 1250 gallons of acrylic [Truncated]

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site to conduct a routine hazardous waste inspection. Facility is a
construction company that generates hazardous waste in the form of
used oil & used oil/fuel filters from vehicle maintenance (major auto
repair is performed off-site) and off-spec chemicals that are left
over from construction jobs. Performed a facility walk-through and
observed the following hazardous waste in an outdoor storage area:
-Used oil: 5 x 55 gallon drums -Used oil and fuel filters:
Approximately 5-10 filters -Miscellaneous off-spec chemicals: 2 x
large wooden boxes (totaling approximately 100-150 gallons)
Miscellaneous off-spec chemicals are generated as a result of annual
clean-ups of excess materials leftover from construction jobs. A major
clean-up occurred in May 2016 with hazardous waste manifests showing
that a total of 5 tons of hazardous waste was picked-up. WITHIN 3

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Inventory submitted on 8/9/19 showed quantities which did not match today's inspection. In some cases, the listed quantity of a chemical appears as if it could be the approximate quantity that is sold wholesale, while other chemicals are reported fully (wholesale plus retail). Please see comments at the bottom of this report for additional details on what was observed onsite today, and what the reportable quantities are. You may choose to report either the reportable quantities or the full quantities, but please specify in submittal comments so that the facility can remain correctly permitted going forward. Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-22-2020
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Onsite for a routine Hazardous Materials Business Plan (HMBP) inspection. Completed walkthrough with Sales Representative, Luis Alcala. This facility sells stucco supplies as both retail and wholesale. According to Mr. Alcala, approximately 95% of products are sold as retail. Facility is currently permitted for 4-6 reportable chemicals. The following chemicals were onsite during the inspection (quantities are estimates, and based off of Mr. Alcala's knowledge of the facility, as well as visual approximation to verify): - Propane (500-gallon tank to refill forklift cylinders) - Topping Mud/Coatings (88,000 lbs in 50-lbs bags) - Lime (50,000 lbs) - Cement (200,000 lbs in 90-lbs bags) The above quantities are total onsite quantities. As stated, approximately 95% of products are sold as retail, so the actual reportable amounts are 5% of the given quantities (except for propane, all of which is reportable). Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-14-2020
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Onsite for a routine hazardous waste inspection. This facility is a one-man auto repair shop. Shop does not generate used coolant. Receipts were reviewed. Mr. Worley began taking used oil and oil filters to a certified drop-off facility (auto parts store) a couple of years ago. Used oil is normally collected in a 5-gallon bottle. 1x 55-gallon drum is kept onsite for backup, but was empty today. Fire extinguishers and absorbent are maintained. Emergency information was posted. Container inspections are performed weekly. The following minor violations were corrected: G020: MARKING OF HAZARDOUS WASTE 1x -5-gallon bottle of used oil was not marked. A full label was attached during the inspection.

 Eval Date: 03-18-2016
 Violations Found: No
 Eval Type: Other, not routine, done by local agency
 Eval Notes: On-site with Lindsay Morgado to conduct a permit investigation for unpaid permit fees. Spoke with Dan Hyland of Geppetto's Workshop at 227 San Jose Av across this shop. Confirmed with Mr. Hyland that Tru-Color Concepts has not been in business at this location for approximately 2 years. Mr. Hyland is now occupying this additional space for a spray booth as part of Geppetto's Workshop. No hazardous waste was observed at this site at this time. The Hazardous Materials Business Plan permit and Hazardous Waste Generator permit will be inactivated with our office. Note: Lindsay Morgado conducted a permit investigation for Geppetto's Workshop at this time as well.

Eval Notes: Onsite for a routine hazardous waste and Hazardous Materials Business Plan (HMBP) inspection. Facility is a pickup truck/van/SUV repair, parts retailer, and dismantler. Hazardous waste ID CAL000425379 is active. Hazardous wastes include used oil, used coolant, drained used oil filters, and oily debris (absorbent, paper towels). Notes: - 1x 30-gallon drum of used coolant was empty during the inspection. Mr. Shobeiri stated that coolant is recycled back into vehicles whenever possible. If requested otherwise by a customer, coolant will be accumulated in the 30-gallon drum, but even this coolant can be sold to customers who request it. As a result, used coolant is never disposed of as a hazardous waste. - Training is adequate. - Mr. Shobeiri conducts weekly inspections of hazardous waste containers. -

Potential Media Affect: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Benzene, Toluene, Xylene, Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline

Site History: Based on the May 2012 groundwater monitoring event and data for the site, Allterra concluded the following: " During this monitoring event, the groundwater flow direction was to the northeast at a gradient of approximately 0.0129 ft/ft, which is generally consistent with previous monitoring events. " The highest levels of dissolved TPHg and benzene in groundwater were detected in MW- 1 at concentrations of 930 g/L and 6.4 g/L, respectively. The highest concentration of TPHd was found in EW-1 (970 g/L). " Petroleum constituents continue to generally show a stable to decreasing trend in each well at the Site. Based on the conclusions presented above, Allterra recommended the following: " Continue with the current

 Potential Media Affect: Other Groundwater (uses other than drinking water), Soil
 Potential Contaminants of Concern: Benzene, Toluene, Xylene, Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline
 Site History: In May 1994 one 550 gallon underground storage tank (UST) was removed from the site. Soils from the UST pit were excavated; however the quantity of soil removed was not reported. On September 18 and 19, 1995, three borings (SB-1 through SB-3) were advanced. Three

additional borings were installed and converted to 2-inch diameter monitoring wells (MW-1 through MW-3). Total Petroleum Hydrocarbons (TPH) as gasoline and TPH as diesel in soil were detected in the vicinity of the former dispenser. Based on analytical results of groundwater samples from monitoring wells and grab groundwater samples from soil borings, diesel fuel was determined to be the predominant groundwater contaminant at the site. Routine groundwater monitoring has been conducted since March 1998. July 2001 A workplan to perform an additional round of groundwater sampling and further define soil and groundwater contamination south and southeast of the former 550-gallon gasoline UST and soil boring SB-2. September 2002 Three additional soil borings (SB-4 through SB-6) were advanced. On August 20, 2003, monitoring wells MW-1 through MW-3 were sampled and reported minimal contamination. Routine groundwater monitoring continued from 2002 to 2010. On October 18, 2010, the DEH issued a No Further Action letter stating no further action was required at the site while the case was reviewed for closure 2013 The County of Santa Clara Department of Environmental Health (DEH) performed a review of the G.I. Trucking, Inc. case against the Low-Threat Closure Policy (LTCP) and determined that additional data was needed to evaluate the site data against all of the LTCP criteria. On June 7, 2013, DEH issued a directive requiring an Additional Site Assessment Work Plan (Workplan) to delineate soil and groundwater contamination, a sensitive receptor survey, and a report summarizing the site assessment work. 2014 Three additional soil borings and one additional monitoring well (MW-5) were installed. Soil samples were collected from the soil borings at various depths and groundwater samples were collected from the five site monitoring wells. 2015 Based on the results of the 2014 investigation, groundwater beneath the site meets the LTCP criteria for case closure.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Description: Chapter 16, Section(s) 2712(b)(1)(G)
Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Flapper valve was verified to activate at 9,837.84 gallons at 89" fuel height. This is at 96.9%, which is not at or below 95% of tank capacity in accordance with 23 CCR 2635(c)(1)(C). A permit is required from our Department for the replacement of the overfill prevention valve.

Eval Notes: Inspection began yesterday and ended today. All underground storage tank (UST) system leak detection equipment was tested yesterday by UST Service Technician Zane Nimmo of Afforda-Test (CSLB Lic. # 341375) and functioned properly except as noted above. Mr. Nimmo has current ICC California UST Service Technician certification (exp. 6/2/2019) and Veeder-Root certification (exp. 9/28/2019). Veeder-Root model 794390-420 sensor monitoring the tank annular space was tested using water to obtain audible and visual Fuel Alarms. Veeder-Root model 794380-205 sensor monitoring the tank top piping was tested using water to obtain audible and visual Fuel Alarms. Piping is a conventional suction system, so fail-safe pump shutdown is not an issue. The Veeder-Root TLS-300C monitoring console is correctly programmed. Reclamation: Not reported
POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Date: 10-15-2018
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 11/13/2018. Observed 1x55 gal drum of used antifreeze/windshield washer fluid being stored open (no lid).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/21/2002
Comments: DTSC conducted a Preliminary Assessment under the PA/SI Grant which found the above described contamination. Between September 1998 and May 2000, soil and groundwater samples were tested for plating shop related compounds. Also, the soil was tested to determine the disposal profile from regrading and placement of concrete pavement across the site. April 2000 soil sampling results showed chromium (250 thru 320 ppm. April 1999 groundwater sampling results showed Chromium (0.84 thru 14 ppm), lead (0.051 thru 5.4 ppm), and nickel (0.46 thru 25 ppm). The 1998 and 1999 soil and groundwater sampling also detected Tetrachloroethene (PCE). The concentration of PCE in soil ranged from 13 to 190 ppm. The concentration of PCE in groundwater ranged from 2.7 to 200 ppb. The site was de-certified based on the results of this assessment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 07/17/2007
Comments: No Further Action letter was issued. Sump was removed in 2000 followed by a soil removal. Sampling data indicates contaminant concentrations below screening levels.

related compounds. Also, the soil was tested to determine the disposal profile from regrading and placement of concrete pavement across the site. April 2000 soil sampling results showed chromium (250 thru 320 ppm). April 1999 groundwater sampling results showed Chromium (0.84 thru 14 ppm), lead (0.051 thru 5.4 ppm), and nickel (0.46 thru 25 ppm). The 1998 and 1999 soil and groundwater sampling also detected Tetrachloroethene (PCE). The concentration of PCE in soil ranged from 13 to 190 ppm. The concentration of PCE in groundwater ranged from 2.7 to 200 ppb. The site was de-certified based on the results of this assessment.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Potential Contaminants of Concern: Gasoline
 Site History: This site use was a wholesale roofing company in 1992 when the tanks were removed. A well company (C&N Pump) and a masonry contractor (E&T Masonry) presently occupy the site. The fuel tanks, two 500 gallon gasoline, were removed in July 1992 by Trump Brothers. Soil samples indicated that soil below the fuel tanks contained gasoline. Available information did not indicate that the additional excavation was performed to removed soil impact and the excavated soil had been returned to the tank excavation. Since the tank removal, various investigative and remedial activities have been performed at the site as listed in the preceding report summary. The surrounding parcels are used for commercial purposes. An appliance company (Horbat Corporation) currently occupies the adjacent building southwest of the site at 325 Phelan Avenue (APN 477-09-023). Adjoining the site to the northwest is the rear of the property at 1670 S. 7th Street (APN 477-09-30) which is an open storage area. Another open area lies to the northeast and is identified as 345 Phelan Avenue (APN 477-09-13). Southeast of the site is Phelan Ave. across which lie properties that are occupied by various commercial businesses (APN numbers 477-26-6,7,43, and 50).

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Citation: HSC 6.5 25160.2 - California Health and Safety Code, Chapter 6.5, Section(s) 25160.2
Violation Description: Failure of a generator of hazardous waste that meets the conditions to be transported on a consolidated manifest to comply with one or more of the required consolidated manifesting procedures and retain copies of receipts for three years.
Violation Notes: Returned to compliance on 02/27/2020. The drum of used coolant had a pickup date of 4/29/19. The only receipt available for used coolant showed a date of 8/28/17. Mr. Collins stated that coolant is always drained at the same time as oil (approximately every 90 days). Ensure that coolant is listed on the receipt each time the hauler actually drains coolant. Note: This is a repeat violation from a 12/22/16 inspection.

Completed Document Type: Voluntary Cleanup Consultation

Completed Date: 08/02/2000

Comments: Only received one comment during the comment period for the PPA from Stauffer management Company indicating that they uprchased the proeprty in 1973 and sold the property "as is" to Regency Monarch Development Corporation in 1985. Regency Monarch is obligated to idemnify Stauffer for any claims relating to environmental probllems or hazardous materials. Stauffer and its successor corporations reserve their rights to contest any liability connected to the Site. DTSC did ot receive any other comments which would cause the agreement to be amended. Therefore, with this clarification, DTSC considers the PPA final.

Potential Contaminants of Concern: Gasoline
Site History:

1988 In January, 2 soil samples (1A and 1B) were collected from borings advanced at either end of an underground storage tank (UST) at the site. The samples were collected between 7.5 and 8 feet below the ground surface (ft bgs). The samples were composited prior to being analyzed and were reported to contain 6.1 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline (TPHg), 0.24 ppm Toluene, and 0.16 ppm Xylenes. These soil samples were collected prior to abandoning the UST in place. It was reported that the UST was removed from service in November 1987 when during a scheduled test a leak occurred. An unknown quantity of fuel was lost and the contents of UST were removed. 1991 In September, an angled boring was advanced to 10.5 feet at an angle of 53 degrees in order to obtain a sample from beneath the abandoned UST. Soils encountered were reported to have a distinct fuel odor. A soil sample (Soil, #1) is estimated to have been collected from 8.5 ft bgs and was reported to contain 550 ppm TPHg, 0.53 ppm Ethylbenzene, and 0.77 ppm Xylenes. 1995 In October, 2 borings (SB-A and SB-B) were advanced onsite to 18.5 and 15.5 ft bgs, respectively. Groundwater was encountered between 11 and 14 ft bgs. 3 soil samples were collected and reported to have maximum concentrations of 320 ppm TPHg, 3.2 ppm Benzene, 2.1 ppm Toluene, 4.9 ppm Ethylbenzene, and 16 ppm Xylenes. Grab groundwater samples were collected from each boring. SB-A was reported to contain 110,000 part per billion (ppb) TPHg, 9,600 ppb Benzene, 1,100 ppb Toluene, 3,500 ppb Ethylbenzene, and 13,000 ppb Xylenes. Sample SB-B collected approximately 42 feet downgradient of the UST was reported to contain very low concentrations of Toluene and Xylenes. TPHg and Benzene were not reported to be present above the laboratory reporting limits. 1997 In July, 3 monitoring wells (MW1 through MW3) were installed to 23 ft bgs onsite. 6 soil samples were collected and reported to contain maximum concentrations of 360 ppm TPHg, 1 ppm Benzene, 0.48 ppm Toluene, 5.1 ppm Ethylbenzene, and 12 ppm Xylenes in the sample collected from MW2 at 15.5 ft bgs. Well MW2 is located downgradient of the UST. Initial samples collected from the monitoring wells reported maximum concentrations of 36,000

ppb TPHg, 3,800 ppb Benzene, 230 ppb Toluene, 1,600 ppb Ethylbenzene, and 3,700 ppb Xylenes. Routine monitoring of the wells began at this time. 1999 In April, 5 hydropunch borings (SB2-A through SB2-E) were advanced to 28-40 ft bgs. Soil samples were collected from boring SB2-A only and reported to contain maximum concentrations of 320 ppm TPHg, 2.1 ppm Benzene, 0.9 ppm Toluene, 7.9 ppm Ethylbenzene and 19 ppm Xylenes. These concentrations decrease with depth to below the laboratory reporting limits for all constituents in the deepest sample collected at 35.5 ft bgs. 13 depth discrete grab groundwater samples were collected from the borings and reported to have maximum concentrations of 88,000 ppb TPHg, 18,000 ppb Benzene, 1,900 ppb Toluene, 3,800 ppb Ethylbenzene, 12,000 ppb Xylenes, and 160 ppb Methyl tert-Butyl Ether (MtBE) in the sample collected at 18 ft bgs in boring SB2-A. In August, 1 monitoring well (MW4) was installed offsite to 20 ft bgs. No soil samples were reported to have been submitted for chemical analysis. 2002 In September and October, 7% hydrogen peroxide solution was added to wells MW1 through MW3 on a weekly basis. Approximately 185 gallons of solution were added during this time. Rebound was observed within 2 quarters in well MW2. 2003 In July and August, hydrogen peroxide solution was added to well MW2 on a weekly basis. Approximately 95 gallons of solution were added. Again, rebound was observed within 2 quarters in well MW2. 2006 In April, 2 wells (MW5 and EW1) were installed to 22-25 ft bgs. 7 soil samples were collected and reported maximum concentrations of 1,600 ppm TPHg, 8 ppm Benzene, 1.9 ppm Toluene, 27 ppm Ethylbenzene, and 42 ppm Xylenes. MtBE was not reported to be present in any of the samples above the laboratory reporting limits. The maximum concentrations were reported for the sample collected in EW1 at 16.5 feet and concentrations decreased in deeper samples. In July, a two-phase extraction (TPE) test was conducted on wells EW1 and MW2. Based on the test, it was recommended to implement dual phase extraction (DPE) with down-well pumps coupled with soil vapor extraction (SVE). 2007 In January, well MW2 was drilled out and re-installed as a 4-inch extraction well MW2A to 30 ft bgs. 2009 In June, a soil vapor survey was conducted.

	Potential Media Affected:	Soil
	Potential Contaminants of Concern:	Asbestos - Naturally Occurring Asbestos (NOA), Lead
	Site History:	The site is comprised of the following properties: 164, 170 and 198 W. Alma Avenue and 1424 and 1438 Little Orchard Street. This is the southeast corner of the intersection of W. Alma Avenue and Little Orchard Street. It is believed that the property address following re-development will be 198 W. Alma Avenue. All parcels are being combined and redeveloped as a K-5 public elementary school. Sampling reported the presence of lead and naturally occurring asbestos (NOA). The lead appears to be related to debris and lead-based paint used on the structures, which date back to circa 1915. Soil with Lead concentrations exceeding TTLc to be removed from the site. Soil with lead exceeding 80 ppm will be placed in a consolidation cell under the planned parking lot. Impacted soil to be capped with soil and asphalt. NOA concentrations did not exceed hazardous waste levels and will be handled in accordance with the DTSC advisor for schools.

 RB Case Number: 06-077
 Local Agency: SANTA CLARA COUNTY LOP
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Local Case Number: 07S1E16E01f
 Potential Media Affect: Other Groundwater (uses other than drinking water), Soil
 Potential Contaminants of Concern: Benzene, Toluene, Xylene, MTBE / TBA / Other Fuel Oxygenates, Gasoline
 Site History: Site History: One 1,000-gallon gasoline fuel underground storage tank (UST) was removed from the site in 1989. Limited excavation of approximately 40 cubic yards of contaminated soil was completed in 1990; however, according to records, the excavated soil was aerated on site and reused as backfill. Investigative work at the site has included soil, groundwater, and soil vapor investigations. Site Management Requirements: The site is located at the end of Smith Avenue in a heavy commercial/light industrial area of San Jose. Residual contamination in soil, groundwater, and soil vapor remains at the site that could pose an unacceptable risk under certain site

development activities such as, but not limited to, site grading, excavation, or the installation of water wells. Therefore, the impact of the potential disturbance of any residual contamination or the installation of water well(s) near the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures. The DEH and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 08/28/1995
Comments: Completed Site Screening. In August 1985, the two underground storage tanks (USTs) were removed. Soil and groundwater beneath these tanks were sampled and found to be contaminated with a variety of solvents. The SF Regional Water Quality Control Board (RWQCB) began oversight of the site in July 1986. In August 1991, approximately 3,700 cubic yards of contaminated soil was removed. In-situ bioremediation was implemented in 1995 as a means of meeting drinking water standard. The RWQCB rescinded its cleanup order on June 18, 1997 when drinking water standards were attained.

Local Case Number: 07S1E21A08f
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Trichloroethylene (TCE), Diesel
Site History: Phase II investigation submitted that included a soil boring adjacent to what appears to be a fill port for an underground storage tank. Records indicate a gasoline UST was present onsite and was reported to have been taken out of service circa 1988. The UST was to be filled with slurry due to its close proximity to a building. There is no documentation of the UST being properly closed in place. Soil and groundwater samples were reported to have concentrations of Diesel. Groundwater samples were also reported to contain 1,2-Dichloroethane and Trichloroethane.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Citation: HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description: Haz Waste Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General
Violation Notes: Facility is allowing excess paint to dry in cups and containers before disposing of excess paint. Employee confirmed that dried waste paint is disposed of in waste paint drum, but dried waste paint was observed in trash. Pursuant to HSC 25123.5(a), "treatment" is defined as any method, technique, or process... designed to change the physical, chemical, or biological character or composition of any hazardous waste. If facility continues to dry excess paint in order to re-use cups, ensure that dried and liquid waste paint is collected in waste paint related material drum. Otherwise, facility must cease process of drying waste paint before disposal, obtain a treatment permit, or provide documentation to HMCDD as to why this process is not considered treatment.

Violation Date: 04-30-2019
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 05/01/2019. One 55-gallon drum of unidentified liquid (approximately 60% full) is stored in the used oil area. Mr. Nguyen first stated that this was used coolant, but was informed by an employee that it was not coolant, and had been there for a long time. Using either generator knowledge, or laboratory testing, determine whether this drum contains a hazardous waste, and if so, dispose of the waste appropriately.

Violation Description: Haz Waste Generator Program - Operations/Maintenance - General
Violation Notes: No accumulation date was marked on used oil filter drum and bill of ladings were available for review for used oil filter pick-up. Facility confirmed that it has been over 1 year since their last used oil filter pick-up. Ensure that used oil filters are not stored on-site for longer than 1 year.

Violation Date: 04-30-2019
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 07/18/2019. Observed used oil spilled on top of one drum. Some used oil drums were open at the time of inspection. A 55-gallon drum of unidentified liquid was also open. Observed one drained used oil filter and one uncased used oil filter in a ~3-gallon tub of oil. Ensure that the uncased filter is properly managed as hazardous waste. The metal-cased filter may also be managed as hazardous waste, or may be picked up and sent for metal recycling in accordance with section 66266.130 of the California Code of Regulations.

Violation Description: Failure to include all of the following in the Contingency Plan: 1) A description of actions the facility personnel shall take response to fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water at the facility; 2) The plan shall describe arrangements agreed to by local police departments, fire departments, hospitals, contractors, and State and local emergency response teams to coordinate emergency services; 3) The plan shall list names, addresses, and phone numbers (office and home) of all persons qualified to act as emergency coordinator and this list shall be kept up to date. Where more than one person is listed, one shall be named as primary emergency coordinator and others shall be listed in the order in which they will assume responsibility as alternates; 4) The plan shall include a list of all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment), where this equipment is required. This list shall be kept up to date. In addition, the plan shall include the location and a physical description of each item on the list, and a brief outline of its capabilities; 5) The plan shall include an evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This plan shall describe signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the primary routes could be blocked by releases of hazardous waste or fires). 6) The plan shall include the current telephone number of the California Emergency Management Agency; and 7) If the owner or operator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate hazardous waste management provisions that are sufficient to comply with the re
Violation Notes: Returned to compliance on 12/16/2015. Eval Date: 11-12-2015
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility produces flexible circuitry as a job shop Generate waste waters from plating and cleaning which are treated onsite. Generate ammonia waste and sludge. Plate copper both electroless and electroplated (acid copper- no CN) Have ammonia etch line for copper circuitry. Reviewed the following: manifests for 2013-2015, inspection records, training plan and records, contingency plan, SB14 plan, NOTE: Waste sludge from ammonia line is shipped as D002/D004. No arsenic noted in process (D004). PLEASE INVESTIGATE WHY WASTE IS BEING SHIPPED WITH THIS WASTE CODE. NOTE: It was indicated that soldermask waste is bagged and placed in the sludge drum for disposal. PLEASE ENSURE THAT THE WASTE PROFILE FOR THE WASTE IN WHICH IT IT BEING PLACED ACCOUNTS FOR THIS WASTE. No bagged soldermask waste was noted in the waste drums on the day of inspection.

TSCA SUBMITTER

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Refining (WIT) is a precious metal recycler. WIT is located at 538 Phelan Avenue in San Jose, California in Santa Clara County. The nearest residential area is located approximately 1/8 mile away. The nearest school is located approximately 1/2 mile away. WIT began operations in 1981, reclaiming precious metals from scrap printed circuit (PC) boards, scrap electronic chips, scrap metals and spent cyanide plating solution from offsite generators. The owner/operator of the facility is Mantrex Inc. dba WIT Sales and Refining. In 2000, the facility owner changed from WIT Sales and Refining to Mantrex Inc. dba WIT Sales and Refining. The most recent permit renewal included the processing of additional waste streams such as spent gold iodine etch solution, spent platinum solution, spent palladium solution, and solid wastes containing trace amounts of precious metals (i.e., filters, wipes and metal sweeps), and the addition of a new precious metal electrolytic recovery treatment unit. PERMITTING REGULATORY DESCRIPTION/ HISTORY WIT is currently permitted under a Standardized Hazardous Waste Facility Permit, small quantity Series C. The Standardized Hazardous Waste Facility Permit became effective on September 12, 1997 and expired on September 12, 2007. WIT submitted a permit renewal application in February 2007, which was granted in March 2016. The Small Quantity Series C Standardized Permit authorizes WIT to operate a hazardous waste storage and treatment facility to reclaim precious metals from offsite-generated reactive cyanide waste and non-hazardous scrap metals and scrap PC boards. In 1993, DTSC granted Interim Status Authorization to the Permittee to continue to operate this storage and treatment facility until DTSC made a final decision on the Permittee s permit application. In 1997, DTSC issued a Standardized Haza

Toxic Substances Control Division (DHS) requesting withdrawal of their Part A Permit Application for status as a treatment, storage, and disposal facility. GE stated that they did not store wastes on-site for more than 90 days, did not treat wastes on-site, did not dispose of wastes on-site, and did not accept wastes from other sites. As such, they requested that their status be changed to that of solely a generator of hazardous wastes since their operations at the site were on-going.

Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 03/02/1988
Comments:

The U.S. Environmental Protection Agency (EPA) requested that the California Department of Health Services, Toxic Substances Control Division (DHS) send more information about General Electric's (GE) facility in order for them to update their records. U.S. EPA had received the letter sent by DHS to GE on March 2, 1987, stating that DHS recognized GE as solely a generator and rescinding their Interim Status Document. U.S. EPA indicated that they were unable to make the final determination on GE's status as a treatment, storage, and disposal facility or change the Hazardous Waste Management Data System database to reflect any change in their status until they had sufficient information.

Completed Date: 03/02/1987
Comments:

The Department of Health Services, Toxic Substance Control Division (DHS) responded to General Electric's (GE) request for withdrawal of their Part A Permit Application and rescission of their Interim Status Document. This correspondence notified GE that DHS no longer considered them as a treatment, storage, or disposal facility and that GE's Interim Status Document had been rescinded. The letter also notified GE that they must continue to comply with applicable regulations as a generator of hazardous wastes, and that they must file a new facility permit if they wish to operate a hazardous waste facility in the future.

Comments:

The U.S. Environmental Protection Agency (EPA) received and reviewed additional information sent by the California Department of Health Services, Toxic Substances Control Division (DHS) in response to EPA's previous request dated February 29, 1988. DHS presented EPA with the previous General Electric (GE) facility inspection reports and a notification of hazardous waste activity indicating generator only status on June 7, 1988. U.S. EPA stated that they recognized GE as solely a generator, and indicated that they would update their database accordingly.

Nuclear Energy Facility. GE filed a Resource Conservation and Recovery Act Hazardous Waste Part A Permit Application for the Facility on November 13, 1980 for the wastes generated during operations at the facility. GE was granted an Interim Status Document on December 17, 1981 by the Department of Health Services (DHS). GE requested that DHS withdraw their RCRA Part A Permit Application on March 26, 1985 and requested a change in their status to that of being solely a generator of hazardous waste because they did not store hazardous wastes on site for more than 90 days. The Motor Plant Facility ceased operations in 1986 and instead became used for warehousing purposes for the GE Nuclear Energy Business Group. On March 2, 1987, DHS approved the withdrawal of GE's Part A Permit Application. U.S. EPA confirmed the withdrawal of GE's Part A Permit Application on June 20, 1988. The GE Nuclear Energy facility was licensed by the U.S. Atomic Energy Commission, now known as the U.S. Nuclear Regulatory Commission (NRC), as a fuel development and manufacturing operation for Nuclear Power Plants in 1967. Manufacturing activities at the GE Nuclear Energy facility ceased in the 1970s. GE decided to decommission most of the facility, but maintained a smaller area in Building A at the site for radioactive materials. The Department of Health Services, Radiological Health Branch licensed the facility for radioactive materials. The NRC oversaw decommissioning activities between the 1970s and 1985. In 1985, the NRC performed a confirmation survey and terminated GE's license for fuel development and manufacturing operations. On January 24, 1994, GE's California Radioactive Materials License was terminated. GE began soil and groundwater investigation at the site in August 2000. In October 2000, GE voluntarily entered into the Spills, Leaks, Investigations, and Cleanup (SLIC) Program managed by the

Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	This site has been proposed for listing on the NPL. At this time, DHS believes that the responsible parties will be unable to pay for the cleanup. Therefore, it is expected that EPA will fund 90 percent of the final remedial action and DHS will be required to fund the remaining 10 percent.
Site Description:	Located one block from Kelly Park, this facility had been operating as a drum collecting, reconditioning and resale business between 1946 and 1987. Drums, formerly containing solvents, pesticides and other materials from numerous sources were cleaned, recoated and sold for reuse.
Hazardous Waste Desc:	Chlorinated organic solvents, polychlorinated biphenyls and vinyl chloride have been detected in the ground water and surface water. Approximately 5,000 cubic yards of contaminated soils containing hazardous concentration of heavy metals (copper, nickel, lead, zinc, chromium, cadmium) and pesticides (DDT, DDD and DDE) are still present.
Threat To Public Health & Env:	The primary threats to the public health and environment are exposure to contaminated ground water, contaminated surface water runoff, contaminated airborne dust, and exposure and direct contact with contaminated soil. Three public water supply systems are within 2,000 feet of the contamination.
Site Activity Status:	RI/FS work plan prepared by DHS have been turned over to EPA for implementaion. DHS implemented expedited response actions (ERAs) at a cost of \$4 million. The ERAs included construction of decontamination facilities; removal of 24,615

steel drums and 2,000 polyethylene drums, several budles of containers marked radioactive, contaminated debris and 4 tons of scrap metal. The hot spot ERA removed was 4,500 cubic yards of contaminated soil. In addition, EPA and DHS disposed of 2,100 drums containing hazardous waste liquids. The DHS surface water control plan and site cap was implemented by EPA's Emergency Response Team. As of December 1987, EPA agreed to accept lead responsibility for long term site cleanup. The imminent and substantial endangerment posed by the Lorentz site was completely abated by DHS. EPA is currently proceeding with treatment of the shallow ground water. Long term remediation will be done by EPA.

Violation Description: Failure of the double-walled pressurized piping to be continuously monitored with a system that activates an audible and visual alarm or stops flow at the dispenser when a leak is detected.

Violation Notes: Returned to compliance on 03/01/2019. (Rear Tanks) Tank 1 and Tank 3 STP sump sensors when tested initially by the technician provided a positive shut-down condition at the turbines. However, when the technician was tagging the sensors and putting them back in the sumps in it's original position, both sensors would go into alarm and would not come out of alarm. Technician replaced one of the STP sump sensor (T3) with a like-for-like, however this did not solve the problem. At the time of the completion of this testing, the veeder root console stayed in alarm for the two STP sumps for Tank 1 and Tank 3. Make the necessary repairs and retest these sensors. Contact our office to witness the retests of these two sensors.

Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violation Notes: Returned to compliance on 08/28/2018. Bus garage shop; - Observed an oil spill around the used oil aboveground tank. Ensure that all spills are cleaned up properly and that spill clean up is managed accordingly. Bay 9- Compressor Table; - Observed used oil inside the plastic secondary containment for the compressor table with oil in it. The secondary containment is meant to be kept dry at all times and does not serve as primary containment. Ensure that the used oil is removed immediately and that this area is kept clean and dry. Clean up all spills observed during this inspection and clean them up accordingly.

Use a procedure that demonstrates the system works as well as at installation. Use applicable manufacturer guidelines, industry codes, engineering standard, or professional engineer approval. Performed by a certified service technician or a licensed tank tester.
Violation Notes: Returned to compliance on 06/27/2018. (Front Tanks) - The UDC's could not be tested during this inspection because according to the technician the electrical conduit is located lower into the under dispenser containment and any water will damage the electrical conduit and fail the test. However, when the SB989 was conducted 3 years ago on 1/26/2015 showed that all UDC's were tested and passed using the accelerated INCON tester with no loss of water. Technician told me that at that time he passed the test by testing only at 2 inches of water from the bottom of the UDC. There is spray paint inside each of the UDC's to show the level it was previously tested at (photographs were taken). This test is not valid for this component as the testing must be performed in accordance with manufacturers/or industry standards. For the Bravo UDC containment boxes these must be tested at 4 inches of water above the highest penetration, in this case it will be four inches above the hexagon ring where the product piping is [Truncated]

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Based on my observations and document review during this inspection, it appears that the hazardous waste (paint related materials) stored in the hazardous waste storage area near the maintenance side has been stored on-site for longer than 180 days due to the large amount of hazardous waste observed during this inspection. Violation Description: Failure of leak detection equipment to be located such that equipment is capable of detecting a leak at the earliest possible opportunity.

Violation Notes: Returned to compliance on 03/09/2017. (NORTH SIDE TANKS) DURING THIS INSPECTION TECHNICIAN WAS UNABLE TO TEST THE TANKS LOCATED ON THIS SIDE. THE VEEDER ROOT PANEL WAS IN A WARM START AND TECHNICIAN WAS UNABLE TO RETRIEVE ALARM HISTORY OR DO ANYTHING ELSE TO THE PANEL BECAUSE THE VEEDER ROOT PANEL WAS UNABLE TO FUNCTION. TECHNICIAN BEGAN TESTING THE STP SENSOR AND ANNULAR SENSOR FOR TANK 1 BUT EITHER SENSOR WAS UNABLE TO GO INTO AN AUDIBLE/VISUAL ALARM/OR PROVIDE A POSITIVE SHUT-DOWN CONDITION AT THE TURBINE. THE TECHNICIAN THINKS IT MAYBE AN ISSUE WITH THE VEEDER ROOT CONSOLE. AT THIS TIME, THIS UST SYSTEM IS CURRENTLY NOT BEING MONITORED. DO NOT DISPENSE ANY FUEL FROM THESE TANKS UNTIL THIS ISSUE IS RESOLVED. MAKE NECESSARY REPAIRS/ RETEST ALL MONITORING SENSORS CONNECTED TO THIS VEEDER ROOT PANEL. ALL MONITORING COMPONENTS MUST BE RETESTED AT A LATER TIME AND MUST BE WITNESS BY AN INSPECTOR FROM OUR DEPARTMENT.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

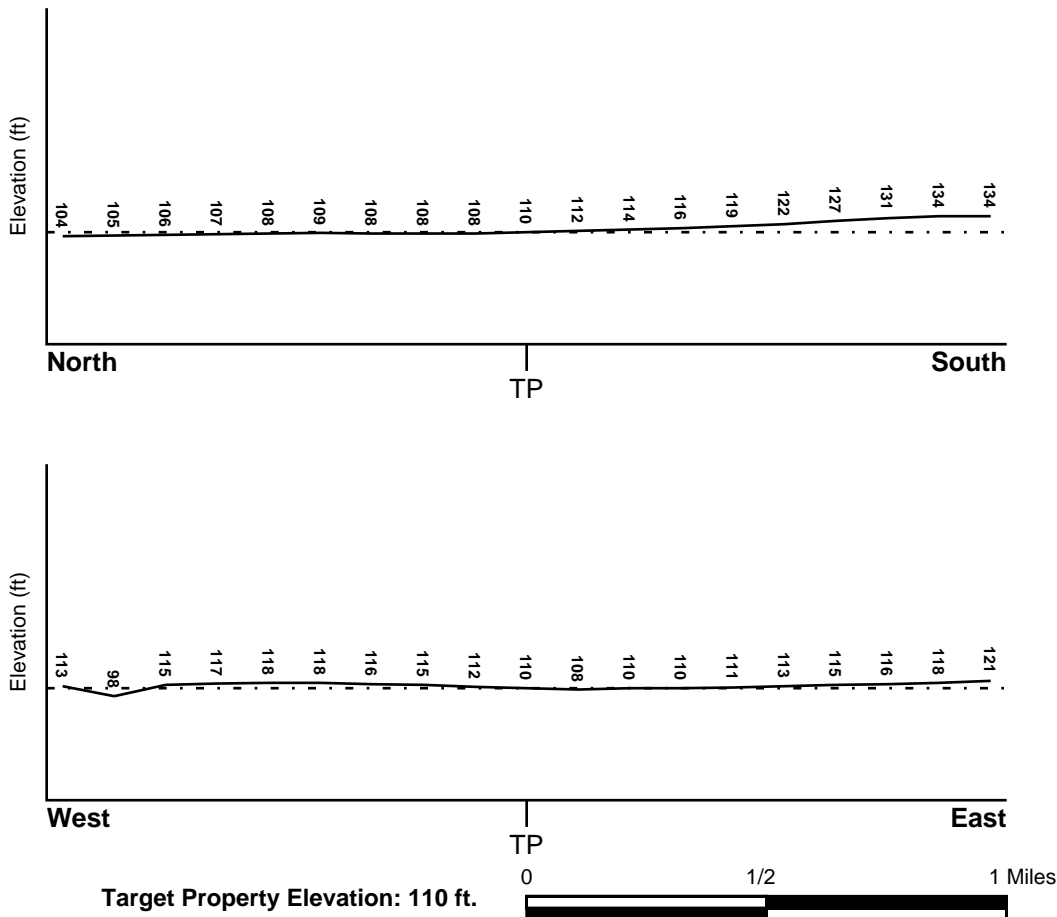

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile SE
Site Name:	Stauffer Chemical Co.
Site EPA ID Number:	CAD063566442
Groundwater Flow Direction:	North
Measured Depth to Water:	30 feet in the area north of the site.
Hydraulic Connection:	An aquitard separates the surficial and lower aquifers, but a hydraulic connection exists between these aquifers within 0.75 miles of the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

1994 to 2003 – Senior Engineer/Vice President, Morhol, Inc., Anaheim, California
1988 to 1994 – Project Engineer, Leighton & Associates, Inc., Irvine, California

PROFESSIONAL BACKGROUND

Geotechnical Investigations: Responsible for staff supervision, client relations, technical review, budget preparations, and profit/loss statements. Provided project management for geotechnical engineering projects for industrial plants, school and hospital sites, wastewater treatment plants, bridges and culverts, sewer lines, stadiums, embankments, service stations, commercial developments, industrial facilities, and landfills. Experienced in a broad range of geotechnical engineering applications such as shallow and deep foundation investigation, slope stability, pavement design, liquefaction potential, ground improvement, soil suitability and availability assessment, soil-cement treatment, soil-lime stabilization, erosion control, landfill construction, septic system design, as well as field and laboratory soil testing.

Construction Testing & Inspection Services: Responsible for overseeing Special Inspectors, testing laboratory personnel and procedures, client relations, technical review of reports, and insure conscientious cost management. Oversee the testing of concrete, post-tension cables, soil, welding, and construction materials to insure conformance to current building standards and codes. Report the results of materials tested to the appropriate agencies and companies.

Environmental Engineering: Provide detailed Phase I investigative site reports. Conduct environmental audits and provide recommendations for corrective measures. Extensive experience in lithologic logging and sampling in consolidated and unconsolidated material for environmental exploration. Provide recommendations for the management of underground storage tanks and hazardous waste.
