SUBJECT: PHASE I ENVIRONMENTAL SITE ASSESSMENT
Casa Linda Motel
1669 Monterey Road
San Jose, CA

Dear Mr. Panchal:

At your request and authorization, SALEM Engineering Group, Inc. (SALEM) has conducted this Phase I Environmental Site Assessment (ESA) of the Casa Linda Motel located at 1669 Monterey Road in San Jose, California (subject property). During the course of this assessment, SALEM identified no evidence of Recognized Environmental Conditions (RECs) in connection with the subject property as defined by ASTM E1527-13.

We appreciate the opportunity to assist you with this project. If you have any questions, or if we may be of further assistance, please do not hesitate to contact our office at (408) 577-1090.

Respectfully submitted,

SALEM Engineering Group, Inc.

Project No. 5-422-0270

PHASE I ENVIRONMENTAL SITE ASSESSMENT

**CASA LINDA MOTEL
1669 MONTEREY ROAD
SAN JOSE, CALIFORNIA**

1.0 EXECUTIVE SUMMARY

SALEM Engineering Group, Inc. (SALEM) has conducted a Phase I Environmental Site Assessment (ESA) of the Casa Linda Motel located at 1669 Monterey Road in San Jose, California (subject property). The subject property consists of an approximately 1.79-acre rectangular-shaped property comprised of two parcels (Santa Clara County Assessor's Parcel Numbers [APNs] 456-02-019 and 456-02-020). SALEM conducted this Phase I ESA of the subject property in conformance with the American Society for Testing and Materials (ASTM) E1527-13 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The U.S. Environmental Protection Agency (USEPA) has determined that the ASTM E1527-13 Standard is consistent with the requirements for conducting an "All Appropriate Inquiry" under 40 C.F.R. Part 312. Thus, this Phase I ESA constitutes All Appropriate Inquiry (AAI) designed to identify Recognized Environmental Conditions (RECs) in connection with the previous ownership and uses of the subject property as defined by ASTM E1527-13 and 40 C.F.R. Part 312.

ASTM E1527-13 Section 1.1.1 *Recognized Environmental Conditions* – The term *recognized environmental conditions* is defined as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." The term as further defined by ASTM "is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies." Conditions determined to be *de minimis* are not *recognized environmental conditions*.

SALEM identified no evidence of RECs in connection with the subject property as defined by ASTM E1527-13.

2.0 PURPOSE AND SCOPE OF ASSESSMENT

2.1 Purpose

According to ASTM E1527-13, the purpose of this practice is to define good commercial and customary practice in the United States of America for conducting an *environmental site assessment* of a parcel of *commercial real estate* with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and *petroleum products*. As such, this practice is intended to permit a *user* to satisfy one of the requirements to qualify for the *innocent landowner*, *contiguous property owner*, or *bona fide prospective purchaser* limitation on CERCLA liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"): that is, the practice that constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35) (B).

The Phase I ESA was conducted to identify ‘Recognized Environmental Conditions’ (RECs), ‘Controlled Recognized Environmental Conditions’ (CRECs) and ‘Historical RECs’ (HRECs) as defined by the American Society for Testing and Materials (ASTM) *Designation E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. Section 1.1.1 of the ASTM *Designation E1527-13* defines an REC as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.” The term as further defined by ASTM “is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.” Section 3.2.18 defines a CREC as a “recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).” Section 3.2.42 defines HREC as a “past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and land use limitations, institutional controls, or engineering controls).”

2.2 Scope of Work

The objective of the SALEM Phase I ESA scope of work is to provide an evaluation of RECs at the subject property and potential off-site sources. The scope of work for this Phase I ESA conforms to ASTM E1527-13. SALEM was provided authorization to conduct the Phase I ESA by Mr. Dhaval Panchal with MHP Hospitality, Inc. on March 10, 2022 in accordance with the scope of work outlined in SALEM’s proposal P5-422-0377. In fulfillment of the SALEM scope of work for this Phase I ESA, SALEM was retained to perform the following tasks:

- Acquire readily available information regarding land-use history and property development by reviewing historical aerial photographs, pertinent building permit records, historic city directories, as well as reviewing recent and historic topographic land-use maps of the subject property and surrounding area.
- Reviewing readily available local, state, and federal regulatory agency databases listed in ASTM E1527-13 and compiled by Environmental Data Resources, Inc. (EDR), including but not limited to CERCLA and NPL lists for sites within one mile of the subject property. State databases, including but not limited to CALSITES, Hazardous Substance Account Act, Cortese, SWIS, SWAT, Well Investigation Program (AB1803), and LUST, were reviewed for sites within one mile of the subject property.
- Performing a reconnaissance of the subject property and surrounding areas (up to one-half mile beyond site boundary), with regard to potential off-site sources of degradation to the subject property, which included photograph documentation of subject property conditions, and identification of potential environmental concerns. Interviews with persons knowledgeable of the previous and current ownership and uses of the subject property.
- Identifying aboveground storage tanks and/or indications of underground storage tanks on-site.

-
- In addition to ASTM E1527-13, SALEM recognizes ASTM *Standard Guide for Vapor Encroachment Screening (VES) on Property Involved in Real Estate Transactions* (ASTM E2600-15) as an industry-accepted guideline to determine if a Vapor Encroachment Condition (VEC) exists at the target property. A VES consists of reviewing the Phase I ESA data combined with the application of professional judgment. SALEM evaluates the regulatory agency databases to determine if there are known or suspect contaminated sites within a minimum search distance of the target property. In addition, SALEM attempted to determine whether soil and/or groundwater have been impacted within the critical distances outlined in ASTM E2600-15.
 - Preparing this report of SALEM's findings and recommendations if warranted.

3.0 SITE DESCRIPTION

The subject property consists of an approximately 1.79-acre rectangular-shaped property comprised of two parcels (Santa Clara County APNs 456-02-019 and 456-02-020) located at 1669 Monterey Road in San Jose, California. At the time of SALEM's March 16, 2022 site reconnaissance, the subject property was occupied by the Casa Linda Motel. The motel is comprised of eight single-story structures and an associated asphalt-paved parking lot. The subject property is located in within Section 21, Township 7 South, Range 1 East, Mount Diablo Base and Meridian, San Jose East, California, 7.5-minute United States Geological Survey (USGS) topographic map, dated 2018.

4.0 PHYSIOGRAPHY AND HYDROGEOLOGIC CONDITIONS

The subject property is located within the central portion of the Coast Ranges Geomorphic Province of California. The Coast Ranges generally consist of an alternating series of parallel mountains and valleys located adjacent to the Pacific Coast. The bedrock units that form the range have been disrupted by intense folding, faulting, and crushing that occurred when the range was formed by the processes of plate tectonics. During the Jurassic and Cretaceous Periods (about 150 to 80 million years ago), the Pacific Oceanic Plate, which was progressively moving towards the east, collided with the North American Continental Plate, which was moving toward the west. This collision caused the less rigid Pacific Oceanic Plate to be subducted beneath the North American Continental Plate. The colliding motion of the two plates caused portions of the Pacific Oceanic Crust and overlying marine sediments to be piled onto the North American Continental Plate along the West Coast of California. The resulting chaotic jumble of bedrock units scraped off onto the North American Plate, is known as the "Franciscan Assemblage" and comprises a large portion of the Coast Range Province. Subsequent development of a series of northwest-trending fault zones has further contributed to the deformation of the Coast Range.

According to California Regional Water Quality Control Board (RWQCB) records for the Pomona Ave. – Former Railroad Property Cleanup Program site at the east corner of the intersection of Pomona Avenue and Belleview Avenue, located approximately 545 feet northwest of the subject property, groundwater is reported to be first encountered at a depth of approximately 11 to 14 feet below ground surface (bgs) with groundwater gradient of 0.001 to 0.01 feet per foot towards the northwest. However, local groundwater level and flow direction may vary due to seasonal fluctuations in precipitation, usage demands, geology, and/or surface topography.

5.0 SITE RECONNAISSANCE

A site reconnaissance, which included a visual observation of the subject property and properties within the subject area, was conducted by SALEM's environmental assessor on March 16, 2022. The objective of the site reconnaissance is to identify RECs, including the storage and handling of hazardous substances and petroleum products on or in the vicinity of the subject property which have the potential to environmentally impact on-site soils, surface water and groundwater.

5.1 Observations

Table I summarizes the visual observations made during our site reconnaissance. A discussion of the physical observations follows Table I. Refer to the Site Map (Figure 1) and color photographs following the text for the locations of the features discussed in this section of the report.

TABLE I
Summary of Observations during Site Reconnaissance

FEATURE	OBSERVED	NOT OBSERVED
Structures (existing)	X	
Evidence of past uses		X
Hazardous substances and/or petroleum products (including containers)	X	
Aboveground storage tanks (ASTs)		X
Underground storage tanks (USTs) or evidence of USTs		X
Strong, pungent, or noxious odors		X
Pools of liquid likely to be hazardous materials or petroleum products		X
Drums		X
Unidentified substance containers		X
Pad-mounted/Pole-mounted transformers/capacitors/other PCB-containing equipment		X
Subsurface hydraulic equipment		X
Heating/ventilation/air conditioning (HVAC)		X
Stains or corrosion on floors, walls, or ceilings		X
Floor drains and sumps		X
Pits, ponds, or lagoons		X
Stained soil and/or pavement		X
Stressed vegetation		X
Waste or wastewater discharges to surface or surface waters on subject property (including stormwater)		X
Wells (irrigation, domestic, dry, injection, abandoned, monitoring wells)		X
Septic Systems		X

The subject property consists of an approximately 1.79-acre rectangular-shaped property comprised of two parcels (Santa Clara County APNs 456-02-019 and 456-02-020) located at 1669 Monterey Road in San Jose, California. At the time of SALEM's site reconnaissance, the subject property was occupied by the Casa Linda Motel which consists of eight structures totaling approximately 24,600 square feet. Construction of the facility was done in stages, with the earliest building permit on records dating to 1953. Additional building permits for additions and/or repairs are on file for the subject property dated 1969, 1984, 1987, 1977, 1978, 1996. The subject buildings are of wood frame construction with brick and stucco exterior walls on concrete slab-on-grade foundations with flat built-up roofs. SALEM was not granted access to the interior of the subject buildings. The remainder of the subject property was occupied by asphalt-paved parking and access roads, un-paved recreational vehicle parking, and landscaped areas.

- Hazardous substances and/or petroleum products observed to be stored and handled on the subject property included minor quantities of household cleaning products, as well as propane tanks and retail-sized containers of automotive fluids. These materials were observed in various areas of the

subject property including near the searain storage containers and in personal vehicles parked on the property. No staining of the surface areas in the vicinity of the materials was observed. No drains were observed in the vicinity of these materials.

- During visual observations of the subject property exposed surface soils did not exhibit obvious signs of discoloration. No other obvious evidence (vent pipes, fill pipes, dispensers, etc.) of USTs was noted within the area observed. No standing water or major depressions were observed on the subject property. No indications of former structures, such as foundations, were observed on the subject property.

5.2 Adjacent Streets and Property Usage

Table II summarizes the adjacent streets and properties uses observed during the SALEM’s site reconnaissance.

**TABLE II
Adjacent Streets and Property Use**

DIRECTION	ADJACENT STREET	ADJACENT PROPERTY USE
Northwest	None	Monterey Liquor (1651 Monterey Rd.); Single-Family Residential; Bill’s Treecare & Landscape (12 San Jose Ave.); SBK Monument Shop (26 San Jose Ave.); El Jinete Tires (30 San Jose Ave); San Jose Generator (40 San Jose Ave.); JK Mcars (60 San Jose Ave.); Multi-Tenant Commercial (96 San Jose Ave.)
Northeast	Monterey Road	Finish Masters (1660 Monterey Rd.); Kelly Spicer’s Paper (1660 Monterey Rd.)
Southeast	None	Vacant Car Lot (1675 Monterey Rd.)
Southwest	None	Single-Family Residential

Based on the observed uses of the properties located immediately adjacent to the subject property, it is unlikely that significant quantities of hazardous substances or petroleum products are stored or handled at the adjoining properties.

5.3 Potable Water Source

The water purveyor for the subject property is San Jose Municipal Water (SJMW). The SJMW’s water quality monitoring is an on-going program with water samples obtained on a regular basis. It is the responsibility of the SJMW to provide customers with potable water in compliance with the California State Maximum Contaminant Levels (MCLs) for primary drinking water constituents in water supplied to the public. Water sampling was not conducted to verify water quality.

5.4 Sewage Disposal System

On March 10, 2022, the City of San Jose Public Utilities Division (SJPUD) was contacted regarding sewer service for the subject property. According to SJPUD records, sewer service has been provided to the subject property and vicinity since the 1950s. No sewer violations or records of septic systems are on file for the subject property.

SALEM’s review of historical aerial photographs indicates that a dwelling/building was located within the central portion of the subject property circa 1939. A septic system was likely associated with the former on-site dwelling. However, it is unknown if a septic system is currently located in the vicinity of the former on-site dwelling. The presence of the septic system is not anticipated to adversely impact the subject property due to its use for domestic purposes only. If a septic system is identified during the redevelopment of the subject property, it should be properly abandoned/closed or destroyed in accordance with State and local guidelines.

5.5 Heating and Cooling Source

Heating and cooling systems are fueled by electricity and natural gas provided by Pacific Gas and Electric (PG&E). No exterior condenser indicating air condition units were identified during SALEM's site reconnaissance. No documentation of fuel oil use was identified during review of reasonably ascertainable records and no visual evidence of fuel oil use was identified during the site reconnaissance. There is no indication of past use of a fuel oil AST or UST to have been used at the subject property and for a release to have occurred. However, based upon SALEM's experience, contamination which could be associated with a release would likely present a de minimis condition. If a fuel oil UST is discovered in the future and/or evidence of a release of historical fuel oil is identified, further evaluation may be necessary.

6.0 USER-PROVIDED INFORMATION

A review of a User-provided Title Report and a Phase I ESA User Questionnaire was conducted in order to help identify pertinent information regarding potential environmental impacts associated with the subject property.

6.1 Title Report

A Title Report was not provided for SALEM's review. The Title Report is reviewed to identify potential deed restrictions, environmental liens or activity and use limitations (AULs) which may have occurred on or exist in connection with the subject property. Therefore, SALEM recommends that at the close of the real estate transaction and upon the issuance of the Final Title Report that the Final Title Report be reviewed for potential deed restrictions, environmental liens or AULs associated with the subject property which may reveal evidence of RECs.

6.2 Phase I Environmental Site Assessment User Questionnaire

On March 11, 2022, a Phase I ESA User Questionnaire was completed by Mr. Dhaval Panchal with Casa Linda Motel, LLC. Please refer to Appendix A for a copy of the Phase I ESA User Questionnaire.

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the *user* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete. The user is asked to provide information or knowledge of the following:

- Environmental cleanup liens that are filed or recorded against the site.
- Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry.
- Specialized knowledge or experience of the person seeking to qualify for the LLPs.
- Relationship of the purchase price to the fair market value of the *property* if it were not contaminated.
- Commonly known or *reasonably ascertainable* information about the *property*.
- The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation.

According to Mr. Panchal, to the best of his knowledge as the user of this Phase I ESA, no environmental cleanup liens and no activity or land use limitations have been filed or recorded against the subject property. Mr. Panchal indicated that he did not have knowledge of the past or current spills or chemical releases or environmental cleanups at the subject property. Additionally, Mr. Panchal indicated that the question of whether the purchase price of the subject property reasonably reflects fair market value was not applicable to the real estate transaction.

7.0 SITE USAGE SURVEY

In order to assess the subject property's history, SALEM reviewed a Phase I ESA Owner Questionnaire, historical aerial photographs, building department records, city directories, planning department records and SFIMs.

7.1 Phase I Environmental Site Assessment Owner Questionnaire

On February 17, 2022, a Phase I ESA Owner Questionnaire was completed by Mr. Dhaval Panchal with Casa Linda Motel, LLC, the current owner of the subject property. The Phase I ESA Owner Questionnaire is designed to provide pertinent information regarding potential environmental and historical impacts associated with the subject property. Mr. Panchal reported that he had been familiar with the subject property since 1975 and that the subject property is currently developed as a motel.

According to Mr. Panchal, to the best of his knowledge, no on-site treatment or discharge of waste; no on-site leach fields, dry wells, sumps, or disposal ponds; no use, storage, or disposal of hazardous substances and/or petroleum products; no existing or former USTs or ASTs; no hazardous material spills; no buried materials; no domestic, monitoring, or irrigation wells; or any additional items of environmental concern were associated with the subject property. Mr. Panchal indicated that a previous environmental investigation was conducted of the subject property approximately 10 years ago, documentation of that investigation was not provided for SALEM's review. Please refer to Appendix B for a copy of the completed Phase I ESA Owner Questionnaire.

7.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property and vicinity dated 1939, 1948, 1950, 1956, 1963, 1968, 1970, 1974, 1982, 1993, 1998, 2006, 2009, 2012, and 2016 were reviewed to evaluate changes in land-use for the subject property. The historical aerial photographs were supplied by EDR. Refer to Appendix C for a copy of the EDR-provided aerial photographs. A summary of the aerial photography is provided below:

➤ **1939 Aerial Photograph**

The central portion of the subject property appears to be occupied by a single-family dwelling. A paved road (Monterey Road) adjoins the subject property to the northeast, beyond which is vacant/light industrial land. Vacant land adjoins the subject property to the southeast and southwest. Vacant land and single-family residential development adjoin the subject property to the northwest.

➤ **1948 Aerial Photograph**

The subject property appears to be occupied by a single-family dwelling. A dwelling or office structure is apparent on the central portion of the subject property. Rectangular-shaped motel buildings are apparent along the southeast and northwest property boundaries. Monterey Road adjoins the subject property to the northeast, beyond which is light industrial land. What appears to be an automobile sales lot adjoins the subject property to the southeast. Single-family residential development adjoins the subject property to the southwest. Single-family residential and commercial development adjoin the subject property to the northwest.

➤ **1950 Aerial Photograph**

The conditions on the subject property and adjoining properties appear to be similar to the 1948 aerial photograph.

➤ **1956 Aerial Photograph**

The subject property appears to be occupied by a motel. A small office building is apparent on the central portion of the subject property. Two rectangular-shaped motel buildings are apparent along the southeast property boundary. Monterey Road adjoins the subject property to the northeast,

beyond which is light industrial development. Vacant land adjoins the subject property to the southeast. Single-family residential development adjoins the subject property to the southwest. Single-family residential development adjoins the subject property to the northwest.

➤ **1963 Aerial Photograph**

The subject property appears to be occupied by a motel. Buildings located on the subject property are of similar size and configuration as those observed during SALEM's site reconnaissance. Monterey Road adjoins the subject property to the northeast, beyond which is light industrial development. What appears to be an automobile sales lot adjoins the subject property to the southeast. Commercial development adjoins the subject property to the southwest. Single-family residential development and commercial development adjoin the subject property to the northwest.

➤ **1968 Aerial Photograph**

The conditions on the subject property and all adjoining properties are similar to the 1963 aerial photograph with the exception of the southwest adjoining property which is not depicted in the 1968 aerial photograph.

➤ **1970 Aerial Photograph**

The resolution of the 1970 aerial photograph is too poor to identify property use of the subject property or adjoining properties.

➤ **1974 Aerial Photograph**

The conditions on the subject property and adjoining properties appear to be similar to the 1968 aerial photograph.

➤ **1982 Aerial Photograph**

The conditions on the subject property and adjoining properties appear to be similar to the 1974 aerial photograph.

➤ **1993 Aerial Photograph**

The southwest half of the subject property and adjoining properties to that portion of the subject property appear similar to the 1982 aerial photograph. The northeast portion of the subject property and those adjoining properties adjacent to the northwest are not depicted in the 1993 aerial photograph.

➤ **1998 Aerial Photograph**

The subject property appears to be occupied by a motel. Buildings located on the subject property are of similar size and configuration as those observed during SALEM's site reconnaissance. Monterey Road, which appears to have been widened to six-lanes, adjoins the subject property to the northeast, beyond which is a multi-tenant commercial development. What appears to be an automobile sales lot adjoins the subject property to the southeast. Commercial development adjoins the subject property to the southwest. Single-family residential and commercial development adjoin the subject property to the northwest.

➤ **2006 Aerial Photograph**

The conditions on the subject property and adjoining properties are similar to the 1998 aerial photograph.

➤ **2009 Aerial Photograph**

The conditions on the subject property and adjoining properties are similar to the 2006 aerial photograph.

➤ **2012 Aerial Photograph**

The conditions on the subject property and adjoining properties are similar to the 2009 aerial photograph.

➤ **2016 Aerial Photograph**

The conditions on the subject property and adjoining properties are similar to the 2012 aerial photograph.

7.3 City of San Jose Building Division

On March 10, 2022, a records requests was made to the City of San Jose Building Division (SJBD) for the subject property address of 1669 Monterey Road. According to a representative of SJBD all public records for the subject property are available online at <https://portal.sanjoseca.gov/deployed/sfjsp?interviewID=PublicPropertySearch>. SALEM's review of online records indicated building permits for additions and/or alterations to the subject motel buildings dated 1969, 1984, 1987, 1977, 1978, 1996. No building permits for items of environmental concern which may present an REC to the subject property including, USTs, ASTs, septic systems, demolition, or previous structures were on file for the subject property. Please refer to Appendix D for a list of SJBD records for the subject property.

7.4 City Directories

On March 10, 2022, SALEM contracted with EDR to provide a City Directory Image Report dated 1922 through 2017 for the subject property and adjoining properties. The subject property addresses were listed in the City Directory Image Report in multiple years as being occupied by the Casa Linda Motel from 1975 through 2000. Additionally, a residence, assumed to be a live-in caretaker is listed concurrently with the Casa Linda Hotel listings. No listings for activities or businesses anticipated being associated with the handling, storage, or disposal of significant quantities of hazardous substances and/or petroleum products were noted in the EDR-provided City Directory Abstract for the subject property or adjoining properties. Please refer to Appendix E for a copy of the City Directory Image Report.

7.5 Sanborn Fire Insurance Maps

SALEM reviews SFIMs to evaluate prior land use at the subject property and adjacent properties. SFIMs typically exist for cities with populations of 2,000 or more, the coverage dependent on the location of the property. On March 10, 2022, SALEM contracted with EDR to provide a Fire Insurance Map Abstract indicating the availability of historic SFIMs for the subject property and adjacent properties as far back as 1867. EDR's search of collections at the Library of Congress, University Publications of America, and various public and local sources revealed coverage for the subject property and adjoining properties. Please refer to Appendix F for copies of the SFIMs. The SFIM interpretation is provided below:

➤ **1915 SFIM**

The subject property and northwest, southwest, and southeast adjoining properties are not depicted on the 1915 SFIM. The northeast adjoining properties are depicted as residential.

➤ **1950 SFIM**

The subject property, southwest and southeast adjoining properties are not depicted on the 1950 SFIM. The northwest adjoining property is depicted as Monterey Road/Santa Clara County Line, beyond which is not depicted. The northeast adjoining properties are depicted as residential.

➤ **1961 SFIM**

The subject property is depicted as being occupied by the "Casa Linda Tourist Court" motel. The northwest adjoining property is depicted as Monterey Road/Santa Clara County Line, beyond which

is depicted as “storage yard.” The southwest adjoining property is depicted as an “auto wrecking yard.” The northeast adjoining properties are depicted as residential and commercial.

➤ **1966 SFIM**

The subject property and adjoining properties are depicted similar to the 1961 SFIM with the exception of the northwest adjoining property which is depicted as “trailer storage.”

➤ **1969 SFIM**

The subject property, southwest, and southeast adjoining properties are not depicted on the 1969 SFIM. The northwest adjoining property is depicted as Monterey Road/Santa Clara County Line, beyond which is not depicted. The northeast adjoining properties are depicted as residential.

7.6 Agricultural Chemicals

Review of historical aerial photographs dating to 1939 reveals that the subject property has not been utilized for agricultural purposes. Therefore, the use, storage, and application of agricultural chemicals at the subject site are not considered an environmental concern.

7.7 Phase I Environmental Site Assessment Interview - Previous Owner

SALEM attempted to interview the previous owner of the subject property to provide pertinent information regarding potential environmental and historical impacts associated with the subject property. However, a Phase I ESA interview with the previous owner of the subject property was not reasonably ascertainable.

7.8 Previous Environmental Reports

SALEM was not provided with additional environmental reports for the subject property.

8.0 REGULATORY AGENCY RECORDS REVIEW

SALEM conducted a review of regulatory agency records for the purpose of determining if hazardous materials/hazardous wastes have been stored or handled on the subject property and area properties of environmental concern. The most current records available were reviewed.

California EPA, Department of Toxic Substances Control

SALEM’s March 10, 2022 review of the California Environmental Protection Agency, Department of Toxic Substances Control (DTSC) Envirostor California cleanup sites database available via the DTSC Internet Website which tracks federal superfund sites, state response sites, voluntary cleanup sites, and school cleanup sites, indicated that no records of cleanup sites are on file with the DTSC for the subject property.

The southeast adjoining property located at 1675 Monterey Road is identified as Pick-N-Pull Auto Dismantlers, an open Cleanup Program site. The former Pick-N-Pull Auto Dismantlers is reported to have operated as an automobile wrecking yard from the 1950s through March 2020. Inspections conducted by the City of San Jose Fire Department (SJFD) resulted in violations related to spills and leaks observed throughout the site. Notices of Violation (NOVs) were documented in 1984, 1988, 2002, 2003, 2005, 2010, and 2019. Environmental investigations conducted at the site as part of the redevelopment process in 2020 resulted in designation of the site as an active Cleanup Program site on August 3, 2021. The site is currently listed as “open – site assessment” under the regulatory oversight of Santa Clara County Department of Environmental Health (SCCDEH). Please refer to the SCCDEH section below for a detailed discussion of the adjoining former Pick-N-Pull Auto Dismantlers site conditions.

California Regional Water Quality Control Board

SALEM's March 10, 2022 review of the RWQCB GeoTracker leaking underground storage tank (LUST) database available via the RWQCB Internet Website indicated no records of LUSTs are on file with the RWQCB for the subject property or adjoining properties.

California Division of Oil, Gas, and Geothermal Resources

SALEM reviewed the California Division of Oil, Gas, and Geothermal Resources (DOGGR) website (<http://maps.conservation.ca.gov/doms/index.html>) to evaluate the potential for existing/former oil, gas, or geothermal wells on the subject property or adjoining properties. The subject property is located within DOGGR Coastal District. The subject property vicinity is not located within an oil, gas, or geothermal field. The review of DOGGR information does not indicate that an oil, gas, or geothermal well has been drilled on the subject or adjoining properties.

Santa Clara County Department of Environmental Health

On March 10, 2022, the SCCDEH was contacted regarding records of USTs, historical hazardous/flammable permits, hazardous materials handling, and unauthorized releases of hazardous substances or petroleum products for the subject property address of 1669 Monterey Road. According to a representative with the SCCDEH, no records of registered USTs, historical hazardous/flammable permits, hazardous materials handling, or unauthorized releases of hazardous substances or petroleum products are on file for the subject property.

However, the southeast adjoining property located at 1675 Monterey Road was identified as Pick-N-Pull Auto Dismantlers, an open Cleanup Program site. The former Pick-N-Pull Auto Dismantlers is reported to have operated an automobile wrecking yard from the 1950s through March 2020. Environmental investigations conducted at the site as part of the redevelopment process in 2020 resulted in designation of the site as an active Cleanup Program site on August 3, 2021. In June 2021, an application was filed to begin remediation/redevelopment of the site under the regulatory agency oversight of the SCCDEH. Subsequent site assessment activities have yielded diesel range total petroleum hydrocarbons (TPH-d) in groundwater at concentrations ranging from 310 to 470 micrograms per liter (ug/L), these concentrations are above the Tier 1 Environmental Screening Level (ESL) set at 100 ug/L by the RWQCB. Volatile organic compounds (VOCs) identified in groundwater include acetone at a concentration of 57 ug/l, methyl ethyl ketone (MEK) at concentrations ranging from 5.5 to 22 ug/L, and 2-hexanone at concentrations ranging from 0.64 to 3.5 ug/L; these concentrations are below their respective ESLs. Groundwater was reported to be first encountered at depths ranging from 14 to 17 feet bgs. Lead concentrations were reported ranging from 620 to 27,000 milligrams per kilogram (mg/kg) in shallow soils at the site at two feet bgs and shallower. Soil vapor sampling attempts have been unsuccessful to date due to the nature of the tight subsurface soils found at the site. Based upon various influencing factors including, municipal water supply with no use of local groundwater at the subject property; the low mobility and high ESL of TPH-d; the tight subsurface soils impeding soil vapor migration; and the identification of a responsible party (RP) for assessment and remediation costs, the former Pick-N-Pull Auto Dismantlers Cleanup Program site is deemed to have a low potential to environmentally impact the subject property and therefore, does not present an REC to the subject property. Please refer to Appendix G for copies of SCCDEH records.

City of San Jose Fire Department

On March 10, 2022, the SJFD was contacted regarding records of historical hazardous/flammable permits, hazardous materials handling, hazardous/flammable incidents, and/or USTs for the subject property address of 1669 Monterey Road. According to the SJFD, no records of historical hazardous/flammable permits, hazardous materials handling, hazardous/flammable incidents, and/or USTs are on file for the subject property.

Local Area Tribal Records

According to the EDR Radius Map Report, no tribal records are listed for the subject property or adjoining properties.

8.1 Standard Environmental Record Sources

EDR performed a search of federal, state, and local regulatory agency databases for the subject property and surrounding area. The various search distances as required by ASTM E1527-13 extended up to one mile from the subject property. Several agencies have published documents that list businesses or properties which have handled hazardous materials or hazardous waste, or may have had a documented release of hazardous substances or petroleum products. The databases consulted in the course of this assessment were compiled by EDR on March 10, 2022 and represent reasonably ascertainable current listings. SALEM did not verify the locations and distances of every site listed by EDR. SALEM verified locations and distances of the sites SALEM deemed as having a potential to environmentally impact the subject property. The actual location of the off-site properties identified may differ from the EDR listing. Table IV summarizes the listed properties located within the specified ASTM Search Radii. The EDR Radius Map report is included in Appendix H.

0 = No sites in radius identified

--- = Not Searched

The subject property address of 1669 Monterey Road was not identified in the EDR-provided government database report.

The following sites with a reported release of hazardous substances or petroleum products to the subsurface were reported within a one-eighth-mile radius of the subject property:

- The former Pick-N-Pull Auto Dismantling facility at 1675 Monterey Road, located adjoining to the southeast and up-gradient of the subject property, was identified in the EDR-provided Radius Map Report on the CPS-SLIC, CUPA Listings, HAZMAT, and WDS databases as having had an unauthorized release of diesel, VOCs, and lead which impacted soil and groundwater beneath the facility. The former Pick-N-Pull Auto Dismantling Cleanup Program site is under the regulatory agency supervision of the SCCDEH which issued a “open – site assessment” designation on August 3, 2021. Based upon various influencing factors including, municipal water supply with no use of local groundwater at the subject property; the low mobility and high ESL of TPH-d; the tight subsurface soils impeding soil vapor migration; and the identification of a RP for assessment and

remediation costs, the former Pick-N-Pull Auto Dismantlers Cleanup Program site is deemed to have a low potential to environmentally impact the subject property and therefore, does not present an REC to the subject property. Refer to Section 8.0 *Regulatory Agency Records Review* herein for a more detailed discussion of the former Pick-N-Pull Auto Dismantlers Cleanup Program site.

- The An Jan Feed and Pet Supply facility at 1633 South 1st Street, located approximately 383 feet northwest and down-gradient of the subject property was identified in the EDR-provided Radius Map Report on LUST, HIST LUST, Cortese, HIST CORTESE, and CERS databases as having had an unauthorized release of gasoline discovered May 11, 1992 which impacted “soil only” beneath the facility. The An Jan Feed and Pet Supply LUST site was remediated under the regulatory agency supervision of the SCCDEH which issued a “case closed” designation on April 3, 2009. Based upon various influencing factors including the distance of the An Jan Feed and Pet Supply LUST site from the subject property; media impacted (“soil only”); and the current regulatory agency status (“case closed”), the An Jan Feed and Pet Supply LUST site is deemed to have a low potential to environmentally impact the subject property and therefore, does not present an REC to the subject property.
- The San Jose Honda facility at 1610 Monterey Road, located approximately 326 feet north and cross-gradient of the subject property was identified in the EDR-provided Radius Map Report on LUST, HIST LUST, Cortese, HIST CORTESE, and CERS databases as having had an unauthorized release of gasoline reported June 6, 1990 which impacted “soil only” beneath the facility. The San Jose Honda LUST site was remediated under the regulatory agency supervision of the SCCDEH which issued a “case closed” designation on January 22, 1997. Based upon various influencing factors including the distance and cross-gradient location of the San Jose Honda LUST site from the subject property; media impacted (“soil only”); and the current regulatory agency status (“case closed”), the San Jose Honda LUST site is deemed to have a low potential to environmentally impact the subject property and therefore, does not present an REC to the subject property.
- The Pomona Ave. – Former Railroad Property at 1675 Monterey Road, located west of the intersection of Pomona Avenue and Belleview Avenue, approximately 499 feet west and down-/cross-gradient of the subject property, was identified in the EDR-provided Radius Map Report on the CPS-SLIC and CERS databases as having had an unauthorized release of arsenic and lead which impacted “soil only” beneath the facility. The Pomona Ave. – Former Railroad Property Cleanup Program site is under the regulatory agency supervision of the SCCDEH which issued a “open – assessment & interim remedial action” designation on September 27, 2017. Based upon various influencing factors including the distance and cross-gradient location of the former railroad property from the subject property; media impacted (“soil only”); and the identification of a RP for assessment and remediation costs, the Pomona Ave. – Former Railroad Property Cleanup Program site is deemed to have a low potential to environmentally impact the subject property and therefore, does not present an REC to the subject property.
- The All Sticks & Gears facility (General Truck Auto, Lopez Body Work, Vega’s Transmissions) at 1697 Pomona Avenue, located approximately 604 feet south-southwest and cross-gradient of the subject property was identified in the EDR-provided Radius Map Report on EDR Hist Auto, DEED, CERS, CUPA Listings, HAZMAT, LUST, WDS, CIWQS, CPS-SLIC, HIST LUST, RCRA NonGen/NLR, and CERS HAZ WASTE databases as having had an unauthorized release of gasoline discovered November 25, 2003 which impacted soil and groundwater beneath the facility. The All Sticks & Gears LUST/Cleanup Program site was remediated under the regulatory agency supervision of the SCCDEH which issued a “case closed” designation on June 15, 2016.

Based upon various influencing factors including the distance and cross-gradient location of the All Sticks & Gears LUST/Cleanup Program site from the subject property, and the current regulatory agency status (“case closed”), the All Sticks & Gears LUST/Cleanup Program site is deemed to have a low potential to environmentally impact the subject property and therefore, does not present an REC to the subject property.

In general, only hazardous substances or petroleum products released from facilities located approximately up-gradient and within a few hundred feet of the subject property, or in a cross-gradient direction close to the subject property, are judged to have a reasonable potential of migrating to the subject property. This opinion is based on the assumption that hazardous substances or petroleum products generally do not migrate large distances laterally within the soil, but rather tend to migrate with groundwater in the general direction of groundwater flow.

Two orphan sites were identified in the EDR-provided government database report. Based upon SALEM’s visual observations made during our site reconnaissance, as well as various influencing factors including approximate distance from the subject property, the orphan sites are deemed to have a low potential to environmentally impact the subject property.

No engineering control sites, sites with institutional controls, or sites with deed restrictions were listed for the subject property, adjoining, or vicinity properties in the EDR-provided government database report.

No Indian reservations or LUSTs on Indian land were reported on the subject property, adjoining, or vicinity properties in the EDR-provided government database report.

The remaining properties identified by EDR within the specified search radius of the subject property, which appeared on local, state, or federally published lists of sites that have had releases of hazardous substances or petroleum products, were determined through SALEM’s field observations to be of sufficient distance and/or situated hydraulically cross/down-gradient of the subject property, such that impacts to the subject property are not likely.

9.0 POTENTIAL VAPOR ENCROACHMENT CONDITION

Vapor intrusion is a way by which chemicals in soil and groundwater can migrate into indoor air. Chemical vapors moving up through soil and into a building are a potential source of indoor air contamination and may pose a risk to human health. In evaluating the potential for a vapor encroachment condition (VEC) on the subject property, SALEM attempted to determine if there was information indicating that chemicals of concern were located within the “critical distance”, defined as the lineal distance between the nearest edge of a contaminated plume and the nearest target property boundary. Based on ASTM E 2600-15 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*, the “critical distance” is equal to 100 feet, with the exception of dissolved petroleum hydrocarbons, which have a “critical distance” of 30 feet. If non-aqueous phase petroleum hydrocarbons are present, the 100-foot “critical distance” is utilized.

9.1 Vapor Encroachment Screening

SALEM has performed a Vapor Encroachment Screening (Tier 1) in general accordance with the scope and limitations of ASTM Standard Practice E2600-15 for the subject property. The purpose of this Vapor Encroachment Screening (Tier 1) is to identify the existing or potential Vapor Encroachment Conditions (VEC), as defined by ASTM E2600-15, affecting the subject property. As part of the screening, SALEM has completed the following questionnaire, as duplicated from Section X3 of ASTM E2600-15.

TABLE IV
Vapor Encroachment Questionnaire

QUESTION	RESPONSE	COMMENTS
1. Property Type?	Motel	
2. Are there buildings/structures on the subject property?	Yes	
3. Will buildings/structures be constructed on the subject property in the future?	Yes	
4. If buildings exist or are proposed, do/will they have elevators?	Unknown	
5. Type of level below grade (existing or proposed)?	Unknown	
6. Is there ventilation below grade?	No	
7. Sump pumps, floor drains, or trenches (existing or proposed)?	Yes	
8. Radon or methane mitigation system installed?	No	
9. Heating system type (existing or proposed)?	HVAC	
10. Type of fuel energy (existing or proposed)?	Electric/Natural gas	
11. Have there ever been any environmental problems at the subject property?	No	
12. Does/will a gas station operate anywhere on the subject property?	No	
13. Do any tenants use hazardous chemicals in relatively large quantities on the subject property?	No	
14. Have any tenants ever complained about odors in the building or experience health-related problems that may have been associated with the building?	Unknown	
15. Are the operations (or proposed operations to be performed) on the subject property OSHA regulated?	No	
16. Are there any existing or proposed under-ground storage tanks (USTs) or above-ground storage tanks (ASTs) located on the subject property?	No	
17. Are there any sensitive receptors (children, elderly, people in poor health, etc.) that occupy or will occupy the subject property?	No	

TABLE V
Additional VEC Criteria

QUESTION	RESPONSE	COMMENTS
1. Is the subject property known to have current or past contamination?	No	
2. Is contamination of the subject property suspected?	No	
3. Is an <u>adjacent</u> property known to have current or past contamination which may have impacted the subject property?	No	See below
4. Is a <u>nearby</u> property known to have current or past contamination which may have impacted the subject property?	No	
5. Is regional groundwater contamination known to exist beneath the subject property?	No	
6. Are you aware of other conditions which may result in vapor intrusion at the subject property?	No	

The former Pick-N-Pull Auto Dismantling facility at 1675 Monterey Road, located adjoining to the southeast and up-gradient of the subject property, was identified in the EDR-provided Radius Map Report on the CPS-SLIC, CUPA Listings, HAZMAT, and WDS databases as having had an unauthorized release of diesel, VOCs, and lead which impacted soil and groundwater beneath the facility. The former Pick-N-Pull Auto Dismantling Cleanup Program site is under the regulatory agency supervision of the SCCDEH which issued a “open – site assessment” designation on August 3, 2021. In January 2022 a Soil Vapor Extraction test was attempted at the former Pick-N-Pull Auto Dismantling facility. SCCDEH records indicate that the test was unsuccessful because of the inability to obtain soil vapor samples from 15 points across the site due to tight subsurface soils. Additionally, groundwater samples collected at the same time yielded concentrations below ESLs for the constituents of concern. Based upon the results of the Tier 1 Vapor Encroachment Screen, the former Pick-N-Pull Auto Dismantling facility can be ruled out as presenting a VEC to the subject property.

10.0 BUSINESS ENVIRONMENTAL RISKS

10.1 Asbestos-Containing Building Materials

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. Asbestos is commonly used as an acoustic insulator, thermal insulation, fire proofing and in other building materials. Friable asbestos-containing material (ACM), when dry, can be crumbled, pulverized, or reduced to powder by hand pressure. Non-friable ACM can be crumbled, pulverized, or reduced to powder during machining, cutting, drilling, or other abrasive procedures. Friable ACM is more likely to release fibers when disturbed or damaged than non-friable ACM. Exposure to airborne friable asbestos may result in a potential health risk because persons breathing the air may breathe in asbestos fibers. Continued exposure can increase the amount of fibers that remain in the lung. Fibers embedded in lung tissue over time may cause serious lung diseases including: asbestosis, lung cancer, or mesothelioma. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are “presumed asbestos-containing material” (PACM).

The buildings located on the subject property were constructed in approximately 1956 with an addition constructed in 1953 and additional building permits issued in 1969, 1984, 1987, 1977, 1978, 1996. It is unknown if the subject buildings contain ACMs. An asbestos survey of the subject buildings was not included within the scope of this assessment. Prior to conducting any repair, renovation, or demolition work, SALEM recommends conducting an asbestos survey.

10.2 Lead-Based Paint

Lead is a highly toxic metal that affects virtually every system of the body. While adults can suffer from excessive lead exposures, the groups most at risk are fetuses, infants, and children under 6. The Consumer Product Safety Commission banned the use of lead in paint in 1978. Most manufactures, however, had ceased using lead well before this time. Paint applied after 1978 is not considered suspect LBP. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as “Title X,” to protect families from exposure to lead from paint, dust, and soil. Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on lead-based paint (LBP) and LBP hazards before the sale or lease of most housing built before 1978. Sellers, landlords, and their agents are responsible for providing this information to the buyer or renter before sale or lease.

According to Section 1017 of Title X, “LBP hazard is any condition that causes exposure to lead from lead-contaminated dust; bare, lead-contaminated soil; or LBP that is deteriorated or intact LBP present on accessible surfaces, friction surfaces, or impact surfaces that would result in adverse human health effects.” Therefore, under Title X intact lead-based paint on most walls and ceilings is not considered a “hazard,” although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. LBP is defined as any paint, varnish, stain, or other applied coating that has 1.0 mg/cm² (or 5,000 µg/g by weight) or more of lead.

During SALEM’s site reconnaissance, a visual observation of the painted surfaces on the exteriors of the subject buildings was conducted. The paint appeared in good condition with no evidence of significant peeling or damage. Because the existing improvements were constructed prior to 1978, it is possible that LBP is present. However, it is unknown if the on-site buildings contain LBP. A LBP survey was not included within the scope of this assessment.

10.3 Radon

Radon is a naturally occurring gaseous substance resulting from the radioactive decay of uranium to radium and then to radon. Uranium is a common element found in many geologic formations and substrates, particularly igneous and metamorphic rocks. Radon has a half-life of only 3.8 days and decays to its daughter elements (polonium 218, polonium 214, bismuth 214, and lead 214). It is these daughter elements that represent the health hazard commonly associated with radon. Radon gas can enter a building through cracks in the foundation and walls and become attached to dust particles and inhaled which could cause damage to human lung tissue. Radon is measured in picocuries per liter of air (pCi/L). The EPA has an established safe radon level of 4 pCi/L.

Based on the EPA Radon Zone Map of California, the subject property is located within EPA Zone 2, which has a predicted indoor radon screening between 2 and 4 pCi/L. The EDR-provided radon data cites Santa Clara County has 100% of 1st floor spaces with <4 pCi/L. However, radon levels may vary from one area to another and the only way to accurately assess radon gas levels on the subject property is to conduct a radon gas survey, which is beyond the scope of this assessment.

10.4 Mold

Molds are microscopic organisms found virtually everywhere, indoors, and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g. in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding). Mold growths often appear as discoloration, staining, or fuzzy growth on building materials or furnishings and are varied colors of white, gray, brown, black, yellow, and green. In large quantities, molds can cause allergic symptoms when inhaled or through the toxins the molds emit.

SALEM was not granted access to the interior of the subject buildings during the site reconnaissance. No visual evidence of mold or water intrusion that could affect human health or that could create or exacerbate a mold problem were observed in accessible exterior areas of the subject buildings observed during SALEM's site reconnaissance.

11.0 DISCUSSION OF FINDINGS

Historical Uses

The subject property comprises an approximately 1.79-acre rectangular-shaped property comprised of two parcels located at 1669 Monterey Road in San Jose, California (Santa Clara County APNs 456-02-019 and 456-02-020). SALEM's review of historical aerial photographs indicates that a single-family dwelling was located on the central portion of the subject property circa 1939. A septic system was likely associated with the former on-site dwelling. However, it is unknown if a septic system is currently located in the vicinity of the former on-site dwelling. The presence of the septic system is not anticipated to adversely impact the subject property due to its use for domestic purposes only. If a septic system is identified during the redevelopment of the subject property, it should be properly abandoned/closed or destroyed in accordance with state and local guidelines. According to SJPUD records, sewer service has been provided to the subject property and vicinity since the 1950s. The subject property has been occupied by a motel from at least 1953 until the present.

Based on SALEM's site reconnaissance, and contacts with state and local regulatory agencies, the potential for RECs to exist in connection with the historical use of the subject property appears to be low.

Current Uses

At the time of SALEM's March 16, 2022 site reconnaissance, the subject property was occupied by the Casa Linda Motel which consists of eight buildings totaling approximately 24,600 square feet. The subject

buildings are of wood frame construction with brick and stucco exterior walls on concrete slab-on-grade foundations with flat built-up roofs. SALEM was not granted access to the interiors of the subject buildings. The remainder of the subject property was occupied by asphalt-paved parking and access roads, un-paved recreational vehicle parking, and landscaped areas.

Hazardous substances and/or petroleum products observed to be stored and handled on the subject property included minor quantities of household cleaning products, as well as small propane tanks and retail-sized containers of automotive fluids. These materials were observed in various areas of the subject property including near the searain storage containers and in personal vehicles parked on the property. No staining of the surface areas in the vicinity of the materials was observed. No drains were observed in the vicinity of these materials.

During the visual observations of the subject property, exposed surface soils did not exhibit obvious signs of discoloration. No other obvious evidence (vent pipes, fill pipes, dispensers, etc.) of USTs was noted within the area observed. No standing water or major depressions were observed on the subject property. No indications of former structures, such as foundations, were observed on the subject property.

Based on SALEM's, field observations, and contacts with state and local regulatory agencies, the potential for adverse environmental impacts to the subject property associated with current site use appears to be low and therefore, there is a low potential for RECs to exist in connection with the current use of the subject property.

Adjoining Properties

The southwest adjoining property at 1675 Monterey Road is identified as Pick-N-Pull Auto Dismantlers, an open Cleanup Program site. The former Pick-N-Pull Auto Dismantlers is reported to have operated an automobile wrecking yard from the 1950s through March 2020. Environmental investigations conducted at the site as part of the redevelopment process in 2020 resulted in designation of the site as an active Cleanup Program site on August 3, 2021. In June 2021, an application was filed to begin remediation/redevelopment of the site under the regulatory agency oversight of the SCCDEH. Subsequent site assessment activities have yielded TPH-d in groundwater at concentrations ranging from 310 to 470 ug/L. These concentrations are above the Tier 1 ESL set at 100 ug/L by RWQCB. VOCs identified in groundwater include acetone at a concentration of 57 ug/l, MEK at concentrations ranging from 5.5 to 22 ug/L, and 2-hexanone at concentrations ranging from 0.64 to 3.5 ug/L. These concentrations are below their respective ESLs. Groundwater was reported to be first encountered at depths ranging from 14 to 17 feet bgs. Lead concentrations were reported ranging from 620 to 27,000 mg/kg in shallow soils at the site at depths of two feet bgs and shallower. Soil vapor sampling attempts have been unsuccessful to date because of tight subsurface soils found at the site. Based upon various influencing factors including, municipal water supply with no use of local groundwater at the subject property; the low mobility and high ESL of TPH-d; the tight subsurface soils impeding soil vapor migration; and the identification of a RP for assessment and remediation costs, the former Pick-N-Pull Auto Dismantlers Cleanup Program site is deemed to have a low potential to environmentally impact the subject property and therefore, does not present an REC to the subject property.

11.1 Evaluation of Data Gaps/Data Failure

In accordance with ASTM E1527-13 guidance, data gaps represent a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice. Data failure represents the failure to achieve the historical research objects of this practice even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap. The following is a summary of data gaps encountered in the process of preparing this report including an observation as the presumed significance of that data gap to the conclusions of this assessment.

- Some of the intervals between documented sources exceeded five years.
- Absence of a Title Report.

However, taken in consideration with the available information obtained in the course of preparing this report in conjunction with professional experience, there is no evidence to suggest that this data gap might alter the conclusions of this assessment.

12.0 SUMMARY AND CONCLUSIONS

We have performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E1527-13 of the Casa Linda Motel located at 1669 Monterey Road in San Jose, California (Santa Clara County APNs 456-02-019 and 456-02-020), the *property*. Any exceptions to, or deletions from, this practice are described in Section 13 of this *report*. During the course of this assessment, SALEM identified no evidence of RECs in connection with the subject property as defined by ASTM E1527-13.

13.0 LIMITATIONS

This Phase I ESA Report has been prepared for the exclusive use of **MHP Hospitality, Inc.** and their subsidiaries and affiliates. Unauthorized use of or reliance on the information contained in this report, unless given express written consent by SALEM, **MHP Hospitality, Inc.** is strictly prohibited. The following limitations and exceptions apply:

- The scope of work completed was designed solely to meet the needs of SALEM's client. SALEM shall not be liable for any unintended usage of this report by another party. In addition, based on the ASTM guidelines, the ESA is only valid if completed within 180 days of an acquisition or the transaction necessitating the ESA.
- No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. This ESA was designed to reduce, but not eliminate the potential for RECs at the subject property, within reasonable limits of time and cost. The ESA is not intended to be exhaustive or all-inclusive and does not represent a guarantee of the identification of all possible environmental risk.
- An ESA is intended to be a non-intrusive investigation and generally does not include sampling or testing of air, soil, water or building materials. No destructive testing was completed and concealed areas, such as behind walls or within machinery, were not accessed. Testing, if any, is designed solely to meet the needs of the ESA, not to meet any local, state, or federal regulations and should not be utilized as such.
- Information in this report is based on personal interviews, government records, published resources, and various historical documents. Accuracy and completeness of information varies among information sources and is often inaccurate or incomplete. The information utilized in this ESA is from sources deemed to be reliable; however, no representation or warranty is made as to the accuracy thereof. SALEM will have no ongoing obligation to obtain and include information that was not reasonably ascertainable, practically reviewable or provided to SALEM in a reasonable timeframe to formulate an opinion and complete the assessment by the agreed upon due date.

- Unless specifically identified in the scope of work, the ESA excludes consideration of non-ASTM scope issues including, but not limited to, lead in drinking water, asbestos, lead-based paint, industrial hygiene, health and safety, endangered species, wetlands, indoor air quality, vapor intrusion, electromagnetic fields, biological agents, or mold.
- The ESA includes some information that may be relevant to regulatory compliance, but is not intended and shall not be construed as a compliance audit and cannot be considered a verification of regulatory compliance. While the general environmental setting of the subject property is described, this assessment is not intended to be a formal flood plain or wetland determination, and no warranty is made thereof. Depending on its past, present, or future intended use, the property under review may or may not be subject to regulation and permitting under environmental and health and safety laws, such as, but not limited to, the Clean Air Act, the Clean Water Act, the Solid Waste Disposal Act, the Occupational Safety and Health Act, and other federal, state, and local regulations. SALEM assumes no responsibility or liability respecting regulatory permitting or compliance issues.
- Client is advised that if the ESA is obtained with the intent of qualifying the purchaser as an innocent landowner, contiguous property owner, or bona fide prospective purchaser under CERCLA, there will be continuing obligations of due care and responsiveness and additional legal requirements that likely apply to such status. SALEM accepts and undertakes no responsibility as to such requirements and advises that counsel be separately consulted with respect to such requirements.
- The findings and conclusions presented in this Phase I ESA Report are based on field review and observations and on data obtained from the sources listed in the report. The findings of this report are valid as of the present. The passage of time, natural processes or human intervention on the subject property or adjacent properties and changes in the regulations can cause changed conditions which can invalidate the findings and conclusions presented in this report.

14.0 QUALIFICATIONS

This Phase I ESA was conducted under the supervision or responsible charge of SALEM's undersigned environmental professional with oversight from the undersigned registered professional. The work was conducted in accordance with ASTM E1527-13, generally accepted industry standards for environmental due diligence in place at the time of the preparation of this report, and SALEM's quality-control policies.

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Introduction

“In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfield Revitalization Act of 2001 (the ‘Brownfields Amendments’), the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that ‘all appropriate inquiry’ is not completed” - American Society for Testing and Materials (ASTM) E1527-13 Appendix X3: User Questionnaire

1. Are you aware of any environmental cleanup liens against the subject property that are filed or recorded under federal, tribal, state, or local law? NO

2. Are you aware of any activity use limitations (AULs) such as engineering controls, land use restrictions, or institutional controls that are in place at the subject property and/or have been filed or recorded in a registry under federal, tribal, state, or local law? NO

3. As the user of the Phase I Environmental Site Assessment (ESA), do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property or an adjacent property so that you would have specialized knowledge of the chemicals and processes used by this type of business? NO

4. Does the purchase price being paid for the subject property reasonably reflect the fair market value of the subject property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the subject property?

N/A

5. Are you aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example:

A. Do you know the past uses of the subject property?

HOTEL

B. Do you know of specific chemicals that are present or once were present at the subject property?

MOTEL CLEANING SUPPLIES. WE HAVE PEST CONTROL SERVICES

C. Do you know of spills or other chemical releases that have taken place at the subject property?

NO

D. Do you know of any environmental cleanups that have taken place at the subject property?

NO

6. As the user of the Phase I ESA, based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of contamination at the subject property?

NO

I, the user of this Phase I ESA (or authorized representative of the User), do hereby attest that I have carefully considered the questions herein and have presented answers to the best of my knowledge and ability based upon the Responsibilities of the User as required within ASTM E1527-13 guidance.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

SITE ASSESSMENT REPORT
1675 Monterey Road
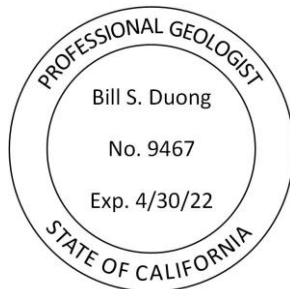

San Jose, California

1.0 INTRODUCTION

This Site Assessment Report has been prepared by Langan Engineering and Environmental Services (Langan) on behalf of A&P Enterprises (A&P) regarding the 1675 Monterey Road property (the Site), located as shown in **Figure 1** in San Jose, California. The report describes completed groundwater testing, attempted soil gas sampling, and further evaluation of lead concentrations in shallow soils in the front (eastern) portion of the Site. The investigation was conducted per a Site Assessment Work Plan developed on behalf of A&P dated November 16, 2021 (Langan, 2021b), and a letter from the Santa Clara County Department of Environmental Health (SCCDEH) dated November 23, 2021 (SCCDEH, 2021b) conditionally approving the proposed investigations with a requested change on the proposed soil gas sampling activities. The Work Plan was originally developed relative to a letter from SCCDEH dated October 21, 2021 (SCCDEH, 2021a).

2.0 SITE BACKGROUND

2.1 Site Location and Size

The Site is located at 1675 Monterey Road in San Jose, California, at the intersection of Monterey Road and Phelan Avenue. The Site encompasses an area of approximately 6.3 acres and includes a 5,300-square foot building along with a series of connected sheds. The Site has a paved lot in the front (approximately eastern 1/5th) portion of the Site, and an unpaved rear (western 4/5^{ths}) portion that is covered with gravel. Site and surrounding features are shown in **Figure 2**.

2.2 Historic Area and Site Use

The Site is currently vacant and was utilized as an automotive wrecking and/or parts sales facility from the 1950s until March 2020 (Langan, 2020a). The surrounding area is primarily commercial and light industrial, except for a mobile home park on an adjacent parcel to the southeast. Other adjacent properties include a motel, an electronics recycling center, a light and ballast company, and a demolition company (formerly an automotive wrecking facility).

2.3 Previous Environmental Investigations

A limited environmental site investigation (ESI) was completed for the Site in May 2020 (Langan, 2020b). The investigation work included the advancement of 12 soil borings to a depth of 10 feet below ground surface (bgs) and the collection of 18 soil samples. The soil samples were analyzed for volatile organic compounds (VOCs) and total petroleum hydrocarbons as gasoline (TPHg), diesel (TPHd), and motor oil (TPHmo). The shallowest samples from each boring were also analyzed for semi-volatile organic compounds (SVOCs) and California Assessment Manual (CAM 17) metals.

The borings identified approximately 2 to 3 feet of gravel and sand with brick and glass fragments interpreted as recent fill, followed by clays and sands interpreted as native soil. No stained soil, hydrocarbon odors, or elevated photoionization detector (PID) readings were observed or detected. VOCs, SVOCs, and TPH were periodically detected in soil, but none exceeded the corresponding residential or commercial/industrial Environmental Screening Levels (ESLs). Arsenic was detected between 3 and 6 milligrams per kilogram (mg/kg), which is above the commercial/industrial ESL of 0.31 mg/kg but generally within the recognized background concentration of soils in the San Francisco Bay Area that often encroach into the 11 to 19 mg/kg range. Lead was detected in several soil samples, but only at concentrations exceeding its commercial/industrial ESL of 320 mg/kg in two samples, SB-1 0.5 foot sample at 558 mg/kg and SB-3 1 foot sample at 351 mg/kg. The historical soil chemistry results data are included in a summary table included in **Appendix A**.

2.4 Conceptual Model for the Site

A conceptual model outlining known environmental conditions, planned Site development, and resultant exposure scenarios was developed and submitted to the SCCDEH in September 2021 (Langan, 2021a).

As summarized in that document, the planned Site developments include the following:

Planned Development Project*	
Primary Features	Subfeatures
New, Asphalt-paved Parking Lot <i>(majority of the Site's 6.29 acres)</i>	- Parking stalls - Concrete curbs
Concrete Staging Pads <i>(four rectangular areas, largest is ~50 by 200 feet, located at Site's east end along Monterey Rd.)</i>	- Guard House <i>(prefab ~8- by 40-foot structure, steel floor, set on concrete pad in the front portion of the Site)</i> - Portable restrooms - Canopy shade structure - Bicycle racks
Stormwater Bioretention Areas	- Six (6) features, ranging from ~800 to 2,000 sq. feet
Perimeter Landscaping Areas	--
<p>*Project is to include: -No exposure of the current soil surface, with bioretention areas constructed after excavation of current soils and placement of approx. 1 foot of new material, and landscape areas including at least 1 foot of new import plant soil. -Limited grading of the Site, as the property is currently mostly flat and near the desired grade. -Some planned offsite movement of soil, sourced where minor grade changes are necessary for construction of the bioretention features and soil is excavated for construction of new subsurface utility lines.</p>	

The document also identified the following potentially complete exposure scenarios:

During Site Development:

Construction Workers

- Ingestion of lead and arsenic after dermal contact with soil
- Inhalation of lead and arsenic from fugitive dust

Neighboring Public

- Inhalation of lead and arsenic from fugitive dust

Post Parking Lot Development:

Utility Workers (during utility repair work)

- Ingestion of lead and arsenic after dermal contact with soil

The conceptual model proposed that each of these scenarios would be addressed via a Soil Management Plan document.

The SCCDEH requested additional sampling at the Site to further develop the conceptual model in the October 2021 letter (SCDEH, 2021a) including groundwater and soil vapor quality information, and additional evaluation of the lead in soil in the front portion of the Site.

3.0 COMPLETED ACTIVITIES

3.1 Pre-Field Activities

A site-specific Health and Safety Plan (HASP) was prepared by Langan as required by the Occupational Health and Safety Administration Standard "Hazardous Waste Operations and Emergency Response" guidelines (29 CFR 1910.120). The HASP was reviewed and signed by Langan personnel and subcontractors performing work at the Site before field operations began.

Drilling permits were not required for the planned activities, with proposed soil borings being less than 45 feet and no permanent monitoring wells. Prior to commencing the field work, Langan notified Underground Service Alert (USA) 48 hours prior to the field work to obtain a USA ticket and retained a private utility clearance subcontractor, Ground Penetrating Radar Systems, LLC (GPRS), to check for underground utilities at the proposed investigation locations. Langan also arranged a C-57 certified driller, PeneCore Drilling, Inc. (PeneCore; C-57 # 906899), and certified analytical laboratory, McCampbell Analytical, Inc. (McCampbell; ELAP # 1644), as subcontractors for the site investigation.

3.2 Groundwater Sampling

Groundwater samples were collected from four soils borings (GW-1 through GW-4) located as shown in **Figure 2**. The locations were selected to provide two sample result pairs, with each pair including an estimated upgradient groundwater point along the southeastern Site boundary and an estimated downgradient point along the northwest Site boundary. The samples were collected as grab samples from exploratory borings advanced using direct push methods to approximately 20 to 30 feet. The samples were collected after placing a temporary 1-inch-diameter polyvinyl chloride (PVC) casing with a 10-foot long well screen segment with 0.010-inch slots into the bottom of the boring, and retracting the direct push drill rods to expose the screen and allow the infiltration of groundwater.

The screens were initially placed across a zone interpreted as first groundwater in each boring located between 17 to 20 feet. Sufficient groundwater entered the GW-1 and GW-2 screens within 30 minutes and groundwater samples were collected. At borings GW-3 and GW-4, the temporary screens remained dry for several hours. Thus both borings were advanced another 10 feet to a total depth of 30 feet bgs and the temporary screens were re-installed. Sufficient water entered boring GW-3 to sample within one hour, but boring GW-4 remained dry. Sufficient water

entered the screen after leaving the screen in place overnight, with the sample collected the next morning.

Groundwater samples were collected using a peristaltic pump equipped with sampling point specific polyethylene tubing. The recovered water was decanted into laboratory-supplied containers. Collected samples were stored in an ice-chilled cooler pending transport to the analytical laboratory. Collected groundwater samples were analyzed for TPHg/d/mo by EPA Method 8015B and VOCs by EPA Method 8260B.

Soil boring logs documenting the encountered conditions and the locations of the temporary screens are included in **Appendix B**.

3.3 Soil Vapor Sampling

Temporary soil vapor sampling borings were installed at three locations near the rear, middle, and front portions of the property identified as points SV-1, SV-2, and SV-3, respectively as shown in **Figure 2**. The points were installed and sampling attempted using the guidelines of the California Department of Toxic Substances Control's (DTSC) documents titled "*Advisory – Active Soil Gas Investigation*" dated July 2015 and "*Final Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air*" dated October 2011.

As per the SCCDEH work plan approval letter (SCCDEH, 2021b), one soil vapor probe was installed at 5 feet bgs and one installed approximately 2 to 3 feet above the first encountered groundwater. First groundwater had been identified in the general area of the SV-1 and SV-3 points at 17 and 20 feet bgs, respectively, and therefore, the deeper sample points were installed to 15 and 17 feet bgs. At point SV-2, the probe screen was initially planned at 17 feet bgs based on an inferred first groundwater of 20 feet at nearby boring GW-3, but too much soil moisture and/or higher than expected groundwater at 16 feet bgs led to a sample point placed at 14 feet bgs via a new boring advanced adjacent to the original boring.

To install the borings used for the soil vapor sampling point, a 2-inch diameter direct push rod was driven to a depth anticipated to be 2 to 3 feet above groundwater. A 1/4-inch diameter disposable Teflon tubing was threaded onto the top of a soil vapor screen implant, and the assembly was then placed into the boring. The soil vapor screen implant was surrounded by approximately 1-foot of sand filter pack. A 1-foot layer of dry bentonite chips was placed above the sand filter pack, followed by hydrated bentonite chips placed above the dry bentonite. The hydrated bentonite creates a seal around the tubing to prevent ambient air intrusion into the

subsurface and into the soil vapor screens. The soil vapor sampling points were allowed to equilibrate for at least two hours after installation before attempting purging and sampling.

The overall planned soil vapor sampling methodology was a shut-in test performed at each probe to confirm the absence of leaks in the laboratory provided sampling equipment, then purging three well volumes of the probe sand pack and tubing, and then sampling. Soil vapor samples were planned to be collected into 1-liter Summa canisters at a flow rate of 150 milliliters per minute (ml/min). Helium was used as a tracer gas around the sampling point, summa canister, and flow controller during purging and sampling as a quality assurance/quality control (QA/QC) measure to confirm the sample integrity.

Shut-in tests were performed at each probe, and indicated no integrity issues with the laboratory supplied-equipment. However, as described below, each probe was found to have very low vapor yield, which made purging and sampling of each sample point infeasible.

- Sampling the deep vapor probe at point SV-1 was attempted first, with a purge canister connected to flush the probe of the desired three purge volumes of the sand pack and tubing prior to sampling. Induced vacuum from the purging increased quickly in the probe with very little to no vapor removed, and within one minute of purging the vacuum gauge for the sample point read a vacuum of 7 inches of mercury (in Hg). The purge can was turned off to allow the vapor to recharge to the point and the vacuum to decrease at least below 5 in Hg. The probe was monitored for a well vacuum at or below this measurement over the course of the next 45 minutes, but did not decrease sufficiently to allow purging to be reinitiated or sampling to be attempted. A similar process was conducted at the shallow probe with very consistent results, including allowing an approximately 30-minute duration for potential vacuum recovery.
- The shallow vapor point at SV-3 was attempted next, but purging was also not successful and the gauge for the sample point again read a vacuum of 7 in Hg within one minute of purging. As with the SV-1 points, the purge can was closed and the probe was allowed to recover and experience a drop in vacuum, but after 15 minutes the induced vacuum had not decreased to or below the 5 in Hg threshold. Similar induced vacuum and a lack of decrease over time was also experienced at the deeper SV-3 probe, and a decision was made to try and collect a vapor sample without additional purging. After opening the sample canister valve, the canister gauge indicated no vacuum decrease (or too little flow

for observable vacuum change) over a span of 5 minutes, and the conclusion was no vapor flow was entering the canister.

- Purging was then attempted at the shallow and deep soil vapor points at SV-2. Purging of each probe failed with similar induced vacuum and no to very slow vapor rebound.

With the field day nearing completion, continued purging and sampling efforts were ceased. The purging difficulty and lack of attaining soil vapor samples was discussed the following work day, with a determination that continuing to attempt purging or direct sampling at the high induced vacuums could compromise the bentonite seals and if a sample was able to be collected, it might not be representative of subsurface conditions. A decision was made to await the receipt of the four collected groundwater samples, and whether the volatile compounds that typically yield soil vapor conditions of concern were detected.

Soil vapor sampling logs documenting the purging and sampling efforts at each probe are included in **Appendix C**.

3.4 Soil Sampling

Soil samples were collected from 10 new, shallow soil borings located as shown in **Figure 2** to further evaluate the elevated lead in soil previously encountered in the soil boring SB-1 and SB-3 areas. At each of the two locations, soil borings were advanced at the previous boring location and approximately 10 feet away in radial (N, S, E, W) directions. The borings were advanced using a direct push drill rig to a depth of 10 feet bgs. Two contingency step-out borings were also advanced at each location approximately 20 feet from the original boring.

Soil samples were collected at 1, 3, 5, 7.5, and 10 feet bgs at each boring, except in boring SB-20 located near previous boring SB-3, where soil core recovery from both the 0 to 5-foot and 5 to 10-foot intervals was less than 12 inches. A second attempt of the SB-20 boring a few feet away yielded similar poor recovery, and ultimately only a sample representing the full 0 to 5 foot interval could be collected. Each sample was cut from a 6-inch portion of the acetate sampling tube, with the ends sealed with Teflon tape and plastic caps, and the sample labeled and placed on ice in a cooler for delivery to the analytical laboratory under chain of custody procedures.

The soil samples at 1 and 3 feet bgs in each of the 10 primary soil borings, and the 0 to 5-foot sample from boring SB-20, were submitted for analysis for lead by EPA Method 6020. The deeper 5, 7, and 10 foot bgs samples were held, to be analyzed per the same method based on shallow

sample results. At the two contingency soil borings, each of the samples were initially held, with decisions on analysis to be determined after the results from the other ten samples. No deeper samples were ultimately analyzed, but one 1-foot sample from a contingency boring (SB-19) was analyzed based results from the adjacent SB-15 boring.

Soil boring logs documenting the encountered conditions at each boring are included in **Appendix B**.

3.5 Investigation-Derived Wastes

One drum of soil cuttings was generated from the drilling activities with water from decontamination disposed of by PeneCore at their staging facility. The soil drum is being profiled for offsite disposal.

4.0 RESULTS

4.1 Encountered Lithology and Groundwater

The upper 2 feet of soil encountered in the soil borings was generally gravelly sands. The material quickly transitioned to a mixture of clays, silty clays, and clayey silts below the 2 foot bgs depth, and generally continued to total explored depths. Intermittent 1- to 2-foot thick zones of sandy silt were observed below 15 feet bgs in selected borings, but the borings were generally void of sand or material with a significant component of sand. As discussed in Section 3.2, first groundwater in each boring was judged to be located between at approximately 17 to 20 feet bgs, with water stabilizing between 14 and 17 feet bgs given time to accumulate in the temporary well points. Groundwater yield was generally low, with the one of the borings requiring deepening and another requiring deepening and additional time overnight for water to accumulate in the temporary well points.

4.2 Groundwater Results

Chemistry results for the four collected grab groundwater samples are summarized in **Table 2** and **Figure 3**, with the certified analytical report included in **Appendix D**. Results included the following items:

- No detected concentrations of TPHg or TPHmo above laboratory reporting limits.

- TPHd detected in samples GW-2, GW-3, and GW-4 between 310 and 470 micrograms per liter ($\mu\text{g/L}$), with the two results above 400 $\mu\text{g/L}$ being on opposite Site boundary lines and areas (northeast and southwest portions of the Site). Sample GW-1 located in the southeast corner of the Site did not contain TPHd above the reporting limit of 100 $\mu\text{g/L}$.
- No detections above laboratory reporting limits of the primary aromatic and chlorinated VOCs, including no benzene, toluene, ethylbenzene, and total xylenes (BTEX), and no primary chlorinated VOCs such as tetrachloroethylene (PCE), trichloroethylene (TCE), or their degradation byproducts. The only detected VOCs included acetone in sample GW-4 at 57 $\mu\text{g/L}$, methyl ethyl ketone (MEK) at concentrations ranging from 5.5 to 22 $\mu\text{g/L}$, and 2-hexanone at 0.64 to 3.5 $\mu\text{g/L}$.

For comparison and analysis purposes, the groundwater results were compared to San Francisco Bay Region Regional Water Quality Control Board Tier 1 and Maximum Contaminant Level (MCL) Priority Environmental Screening Levels (ESLs). As summarized in **Figure 3**, none of the VOCs results approached ESLs values. The three TPHd results did exceed the 100 $\mu\text{g/L}$ Tier 1 and 200 $\mu\text{g/L}$ MCL priority values.

4.3 Lead in the Soil Samples Near SB-1 and SB-3

Lead was detected at concentrations above the commercial ESL of 320 mg/kg in four soil samples:

- 620 mg/kg in the SB-13 1-foot sample (approximately coincident with previous boring SB-1, which contained lead at 558 mg/kg at 0.5 feet)
- 27,000 mg/kg in the SB-15 1-foot sample (10 feet southeast of SB-1)
- 630 mg/kg in the SB-16 1-foot sample (10 feet southwest of SB-1); and
- 5,600 mg/kg in the SB-19 1-foot sample (20 feet southeast of SB-1)

The extent of the elevated lead appears to be confined to a shallow interval up to approximately 1.5 to 2 feet bgs, as the lead content in the underlying soil samples from three of the borings was significantly lower, with detections ranging from 11 to 24 mg/kg which are well below the ESL. An underlying deeper sample was not analyzed in fourth boring (SB-19). Also, each of the collected samples at 3 feet bgs contained less than 30 mg/kg of lead.

As discussed in Section 3.2, a sample could not be collected at 1 foot bgs in boring SB-20 to confirm the original SB-3 result due to low soil recovery in the soil liners. The result from the

sample collected over the non-specific 0 to 5 foot interval included a 11 mg/kg result, aligning with the other results that indicate the elevated lead is confined to the shallowest intervals. The highest lead around the SB-3 location was in the 1-foot sample from boring SB-22 located approximately 10 feet to the southeast, which contained lead at 180 mg/kg. The remaining samples around previous boring SB-3 contained lead at 20 mg/kg or less.

Soil results are summarized in **Table 2** and **Figure 4**. The certified analytical report is included in **Appendix D**.

5.0 CONCLUSIONS

The collected data indicates the following conclusions:

- Groundwater beneath the Site contained concentrations of TPHd narrowly above the 100 µg/L Tier 1 and 200 µg/L MCL priority ESL values, and low concentrations of three VOCs (acetone, MEK, and 2-hexanone) each below ESLs.
- Elevated lead appears present in surface soil in a relatively small area around previous soil boring SB-3, but was detected in step-out samples in the SB-1 area. Current samples partially delineate the elevated lead in the SB-1 area, but with conditions to the southwest, south, southeast, and east not fully characterized. The elevated lead in the SB-3 area appears limited to an area less than 10 radial feet away, with results in each of the four step out borings being less than the 320 mg/kg commercial/industrial ESL and three of the four samples being 20 mg/kg or less.
- Soil vapor yield at the Site was very low, precluding successful collection of soil vapor samples. The low-flow condition is consistent with the low permeability sediments observed at the Site and when combined with few detections of volatile compounds in groundwater, would suggest that vapor migration in the subsurface is not a primary exposure scenario for the Site.
- No significant impact to groundwater is anticipated from the elevated concentrations of lead in soil, given the following:
 - Elevated concentrations of lead appear limited to a shallow interval (approx. 0.5 to 1.5 or 2 foot depths);

- Samples at 3 feet bgs contained lead at 24 mg/kg or less, suggesting very quick attenuation of the higher concentrations;
 - All of the sediments between approximately 2 and 15 feet bgs are low permeability soils consisting of a mixture of clays, silty clays, and clayey silts, which will have limited any vertical migration of the lead ;
 - First groundwater is well below the areas of elevated lead, not being encountered until an estimated 17 to 20 feet bgs (at least 14 feet below the highest concentrations); and
 - The areas with elevated lead in soil have been isolated from infiltrating stormwater via a layer of asphalt pavement, which further reduces the likelihood of lead leaching downward.
- A refined version of potential exposure scenarios for the Site includes additional support for an incomplete scenario for the inhalation of volatiles. A new potential exposure could be exposure to and/or use/consumption of groundwater with TPH, but this scenario is considered not applicable given that groundwater is at least 10 feet deeper than the planned penetration depths of Site features and there are not any known onsite or nearby shallow water production wells.

Proposed next steps include the following:

- Removal of the soil in the SB-1 area with the highest lead, aided either by confirmation testing as excavation is conducted or additional pre-removal soil sampling.
- Preparation of an initial version of a Media Management Plan to provide for potentially complete exposure pathways, with an emphasis on the proposed approach for handling affected soils identified at the Site during Site development.

Langan and Mr. Barry McRay request, on behalf of A&P Enterprises, SCCDEH support of the proposed development plan, pending preparation of an acceptable Media Management Plan.

Table 1
Summary of Groundwater Results
1675 Monterey Road, San Jose, CA

Notes:

Groundwater results were compared to CA RWQCB Groundwater Tier 1 ESLs (July 2019) and Groundwater Direct Exposure Human Health Risk Levels - MCL Priority (January 2019, Revision 2)

RWQCB - Regional Water Quality Control Board

ESL - Environmental Screening Level

NS - No standard

ug/l - Micrograms per liter

ND - Not detected

Q - Qualifier

MDL - Method detection limit

RL - Reporting Limit

DF - Dilution factor

Qualifiers:

R – The sample results are unusable because certain criteria were not met when generating the data. The analyte may or may not be present in the sample.

J – The analyte was positively identified and the associated numerical value is the approximate concentration of the analyte in the sample.

UJ – The analyte was not detected at a level greater than or equal to the reporting limit; however, the reported reporting limit is approximate and may be inaccurate or imprecise.

U – The analyte was analyzed for, but was not detected at a level greater than or equal to the level of the RL or the sample concentration for results impacted by blank contamination.

Exceedance Summary:

10 - Result exceeds CA RWQCB Groundwater Tier 1 ESLs

10 - Result exceeds CA RWQCB Groundwater Direct Exposure Human Health Risk Levels - MCL Priority

10 - RL exceeds screening level

10 - Result exceeds CA RWQCB ESL for Soil Direct Exposure Human Health Risk Levels -
10 - Result exceeds CA RWQCB ESL for Soil Direct Exposure Human Health Risk Levels -

- Legend**
- Approximate site boundary
 - Groundwater Sample
 - Primary Lead Evaluation Soil Sample
 - Contingency Stepout Lead Evaluation Soil Sample
 - Attempted Soil Vapor Sample (Insufficient yield to collect a sample)
 - Previous Soil Sample (2020)
- Results in milligrams per kilogram (mg/kg)
Sample depths in feet below ground surface

Notes:
1. Aerial imagery provided by Langan's subscription to Nearmap.com. Flown on 09/28/2021.
2. All features shown are approximate.
3. Parcel data provided by Santa Clara County, 2021.

Appendix A
Summary of Site Soil Chemistry Results
1675 Monterey Road, San Jose CA

Table with columns for Analyte, CAS Number, Soil Direct Exposure Human Health Risk Levels - Commercial/Industrial - Minimum Commercial, Soil Direct Exposure Human Health Risk Levels - Construction Worker: Any Land Use - Minimum Construction, Task Code, Location, Sample Name, Sample Date, Sample Depth, Unit, and sampling results for Nov 2021 (SB-21, SB-22, SB-23, SB-24) across various parameters (Q, MDL, RL, DF).

Appendix A
Summary of Site Soil Chemistry Results
1675 Monterey Road, San Jose CA

Table with columns: Analyte, CAS Number, Soil Direct Exposure Human Health Risk Levels - Commercial/Industrial - Minimum Commercial, Soil Direct Exposure Human Health Risk Levels - Construction Worker: Any Land Use - Minimum Construction, Task Code, Location, Sample Name, Sample Date, Sample Depth, Unit, and multiple columns for sampling results (Nov 2021 Sampling) across locations SB-21, SB-22, SB-23, and SB-24.

Appendix A
Summary of Site Soil Chemistry Results
1675 Monterey Road, San Jose CA

Notes:

Soil results were compared to CA RWQCB ESLs for Soil Direct Exposure Human Health Risk Levels Residential, Commercial/Industrial and any Construction Worker: Any Land Use (July 2019)
RWQCB - Regional Water Quality Control Board
ESL - Environmental Screening Level
NS - No standard
mg/kg - Milligrams per kilogram
ND - Not detected
Q - Qualifier
MDL - Method detection limit
RL - Reporting Limit
DF - Dilution factor
NA - Not Analyzed
- - not applicable, not reported

Exceedance Summary:

- 10 - Result exceeds CA RWQCB ESL for Soil Direct Exposure Human Health Risk Levels - Residential - Minimum
- 10 - Result exceeds CA RWQCB ESL for Soil Direct Exposure Human Health Risk Levels - Commercial/Industrial - Minimum
- 10 - Result exceeds CA RWQCB ESL for Soil Direct Exposure Human Health Risk Levels - Construction Worker: Any Land Use - Minimum
- 10 - RL exceeds screening level

TEST ENVIRONMENTAL INCHES 750673701_1675 MONTEREY RD.GPJ TEMPLATE_CA-MODIFIED - COPY.GDT 1/14/22

UNIFIED SOIL CLASSIFICATION SYSTEM

Major Divisions	Symbols	Typical Names
Coarse-Grained Soils (more than half of soil > no. 200 sieve size)	Gravels (More than half of coarse fraction > no. 4 sieve size)	GW Well-graded gravels or gravel-sand mixtures, little or no fines
		GP Poorly-graded gravels or gravel-sand mixtures, little or no fines
		GM Silty gravels, gravel-sand-silt mixtures
		GC Clayey gravels, gravel-sand-clay mixtures
	Sands (More than half of coarse fraction < no. 4 sieve size)	SW Well-graded sands or gravelly sands, little or no fines
		SP Poorly-graded sands or gravelly sands, little or no fines
		SM Silty sands, sand-silt mixtures
		SC Clayey sands, sand-clay mixtures
Fine -Grained Soils (more than half of soil < no. 200 sieve size)	Silts and Clays LL = < 50	ML Inorganic silts and clayey silts of low plasticity, sandy silts, gravelly silts
		CL Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, lean clays
		OL Organic silts and organic silt-clays of low plasticity
	Silts and Clays LL = > 50	MH Inorganic silts of high plasticity
		CH Inorganic clays of high plasticity, fat clays
		OH Organic silts and clays of high plasticity
Highly Organic Soils	PT Peat and other highly organic soils	

SAMPLE DESIGNATIONS/SYMBOLS

GRAIN SIZE CHART		
Classification	Range of Grain Sizes	
	U.S. Standard Sieve Size	Grain Size in Millimeters
Boulders	Above 12"	Above 305
Cobbles	12" to 3"	305 to 76.2
Gravel coarse fine	3" to No. 4 3" to 3/4" 3/4" to No. 4	76.2 to 4.76 76.2 to 19.1 19.1 to 4.76
Sand coarse medium fine	No. 4 to No. 200 No. 4 to No. 10 No. 10 to No. 40 No. 40 to No. 200	4.76 to 0.075 4.76 to 2.00 2.00 to 0.420 0.420 to 0.075
Silt and Clay	Below No. 200	Below 0.075

- Sample taken with Sprague & Henwood split-barrel sampler with a 3.0-inch outside diameter and a 2.43-inch inside diameter. Darkened area indicates soil recovered
- Classification sample taken with Standard Penetration Test sampler
- Undisturbed sample taken with thin-walled tube
- Disturbed sample
- Sampling attempted with no recovery
- Core sample
- Analytical laboratory sample
- Sample taken with Direct Push or Drive sampler
- Sonic

- Unstabilized groundwater level
- Stabilized groundwater level

SAMPLER TYPE

- C Core barrel
- CA California split-barrel sampler with 2.5-inch outside diameter and a 1.93-inch inside diameter
- D&M Dames & Moore piston sampler using 2.5-inch outside diameter, thin-walled tube
- O Osterberg piston sampler using 3.0-inch outside diameter, thin-walled Shelby tube
- PT Pitcher tube sampler using 3.0-inch outside diameter, thin-walled Shelby tube
- S&H Sprague & Henwood split-barrel sampler with a 3.0-inch outside diameter and a 2.43-inch inside diameter
- SPT Standard Penetration Test (SPT) split-barrel sampler with a 2.0-inch outside diameter and a 1.5-inch inside diameter
- ST Shelby Tube (3.0-inch outside diameter, thin-walled tube) advanced with hydraulic pressure

Duplicate Sample?	
If duplicate, provide duplicate ID:	

Helium Tracer Test Data	
He in shroud (%)	
He in pump exhaust (ppm)	0

Purge Data	
Purge rate (ml/min)	
Purge start time (24 hour clock)	
Purge end time (24 hour clock)	

Laboratory	Analytical Method	Sample ID	Requested TAT	Submittal Method and Date (Lab pickup, Fed-Ex, etc.)

Other Observations and Details:

Description of Sample Location:

Target Parameters:

- He in shroud should be 10-20%.
- Seal is acceptable when He in pump exhaust is less than 10% of the concentration in shroud.
- Induced pressure for shut-in test must be greater than 7.35 "Hg (i.e. 100 "H₂O).
- No significant loss in pressure during shut-in test after one minute.

"When Quality Counts"

Analytical Report

WorkOrder: 2112078

Report Created for: Langan

1814 Franklin Street, Suite 505
Oakland, CA 94612

Project Contact: Bill Duong

Project P.O.:

Project: 750673701; 1675 Monterey Rd.

Project Received: 12/01/2021

Analytical Report reviewed & approved for release on 12/09/2021 by:

Yen Cao

Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in a case narrative.

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 750673701; 1675 Monterey Rd.
WorkOrder: 2112078

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 750673701; 1675 Monterey Rd.
WorkOrder: 2112078

Analytical Qualifiers

b1 Aqueous sample that contains greater than ~1 vol. % sediment
e2 Diesel range compounds are detected; no recognizable pattern

"When Quality Counts"

Analytical Report

WorkOrder: 2112078 B

Report Created for: Langan

1814 Franklin Street, Suite 505
Oakland, CA 94612

Project Contact: Bill Duong

Project P.O.:

Project: 750673701; 1675 Monterey Rd.

Project Received: 12/01/2021

Analytical Report reviewed & approved for release on 12/13/2021 by:

Jennifer Lagerbom

Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in a case narrative.

Glossary of Terms & Qualifier Definitions

Client: Langan

WorkOrder: 2112078 B

Project: 750673701; 1675 Monterey Rd.

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

"When Quality Counts"

Analytical Report

WorkOrder: 2112078 C

Report Created for: Langan

1814 Franklin Street, Suite 505
Oakland, CA 94612

Project Contact: Bill Duong

Project P.O.:

Project: 750673701; 1675 Monterey Rd.

Project Received: 12/01/2021

Analytical Report reviewed & approved for release on 01/04/2022 by:

Jennifer Lagerbom

Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in a case narrative.

Glossary of Terms & Qualifier Definitions

Client: Langan

WorkOrder: 2112078 C

Project: 750673701; 1675 Monterey Rd.

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

8 September 2021

Mr. Gerald O'Regan
 Santa Clara County Department of Environmental Health
 1555 Berger Drive, Suite 300
 San Jose, CA 95112

**Re: Conceptual Site Model Summary
 1675 Monterey Road Site
 San Jose, California**

Dear Mr. O'Regan:

In accordance with the request of Mr. Barry McRay and on behalf of A&P Enterprises, Langan Engineering and Environmental Services, Inc. (Langan) is providing environmental engineering services related to development of the 1675 Monterey Road site (the Site). A&P Enterprises, has entered into the Santa Clara County Department of Environmental Health (SCCDEH) Site Mitigation Program, for the Site. The program enrollment was to satisfy the City of San Jose's request for environmental consultation by SCCDEH. The proposed development is the upgrade of the former Pick-n-Pull automobile staging and parts scavenging commercial property, with the new planned Site use being an asphalt-paved parking lot for the staging of logistic delivery vans. Langan has been engaged for environment support.

In conjunction with submittal of this letter, A&P Enterprises will also be uploading two existing environmental documents to the newly created GeoTracker file for the Site (case #T10000017226) for your review.

The salient project details are summarized below:

The Proposed Development Project

The proposed development project is a new parking lot facility, with approximately 95% of the parcel covered with asphalt and/or concrete and no permanent structures. A summary of the project is below:

Planned Development Project**	
Primary Features	Subfeatures
New, Asphalt-paved Parking Lot <i>(majority of the Site's 6.29 acres)</i>	- Parking stalls - Concrete curbs
Concrete Staging Pads <i>(four rectangular areas, largest is ~50 by 200 feet, located at Site's east end along Monterey Rd.)</i>	- Guard House <i>(prefab ~8- by 40-foot structure, steel floor, set on concrete pad in the front portion of the Site)</i> - Portable restrooms - Canopy shade structure - Bicycle racks
Stormwater Bioretention Areas	- Six (6) features, ranging from ~800 to 2,000 sq. feet
Perimeter Landscaping Areas	--
**Project is to include: -No exposure of the current soil surface, with bioretention areas constructed after excavation of current soils and placement of approx. 1 foot of new material, and landscape areas including at least 1 foot of new import plant soil. -Limited grading of the Site, as the property is currently mostly flat and near the desired grade. -Some planned offsite movement of soil, sourced where minor grade changes are necessary for construction of the bioretention features and soil is excavated for construction of new subsurface utility lines.	

A copy of the proposed facility configuration is included as **Attachment A**.

The entirety of the grading and related soils handling would be completed under a Soils Management Plan, to be prepared and implemented under the oversight of an environmental practitioner with a California Professional Engineer (PE) or Professional Geologist (PG) license.

Excavations are not planned to extend deeper than 4 feet below ground surface (bgs), and will not be encountering groundwater beneath the Site, which is at least greater than 10 feet bgs.

History of the Site

The Site was most recently the location of the self-service automobile scrap, "Pick-n-Pull" business. Pick-n-Pull ceased operation circa March 2020. Onsite activities included storage of automobiles, the sale of motor vehicle parts, and an auto glass repair/installation business. The facility contained an approximately 5,300-square foot (sf), one-story warehouse building constructed by 1956, a series of connected sheds that formed an L-shape that were constructed by 2006, a gravel staging area for the automobiles, and an asphalt-paved parking lot. Historical operations at the Site before the Pick-n-Pull automobile scrapping business appear to have included other automobile wrecking / part salvaging businesses dating back to mid-1950s, with a 1961 Sanborn Map suggesting fiberglass products manufacturing in one small structure near the southwestern edge of the Site. Prior to the establishment of the automobile wrecking / scrapping business, the Site appears to have included miscellaneous structures with established areas of vegetation and pathways, possibly residences or barns with small scale agriculture and/or limited cultivation. Additional Site history information is available within the Phase I Environmental Site Assessment report (Langan, 2020a), that is being submitted to SCCDEH via the GeoTracker website.

Existing Soil Quality

An environmental investigation was completed in May 2020, with results summarized in a Phase II Environmental Site Assessment technical memorandum (Langan, 2020b). This document is also being submitted to SCCDEH via the GeoTracker website. A summary of the investigation is included in the following table.

May 2020 Evaluation of Soil Quality	
Investigation Points and Sampling	-12 soil borings <i>(seven to 5 feet bgs, five to 10 feet bgs)</i> -18 collected soil samples <i>(two samples from six of borings—typically 1 to 3 and 4 to 5 feet bgs (one sample from the other six borings, with depth varying)</i>
Observations	No visual or olfactory indications of volatile compounds.
Chemical Testing	Samples chemically tested for a combination of: -Total petroleum hydrocarbons as diesel and motor oil -Volatile Organic Compounds (VOCs) -Semi Volatile Organic Compounds (SVOCs) -Metals
Results	• Limited VOCs, SVOCs, and TPH periodically detected in collected soil samples – - <u>None</u> exceeding RWQCB residential or commercial/industrial ESLs

May 2020 Evaluation of Soil Quality	
Results (contd.)	<ul style="list-style-type: none"> • Arsenic detected in shallow soil sample, typically between 3 and 6 milligram per kilogram (mg/kg) (exceeding the commercial/industrial ESL of 0.31 mg/kg) <ul style="list-style-type: none"> - <i>Background concentrations for Arsenic in the San Francisco Bay Area soils are typically recognized to be up to 11 to 18 mg/kg</i> • Lead was detected between 4 and 34 mg/kg in eight samples, and at 100 to 558 mg/kg in four samples. <ul style="list-style-type: none"> - <i>Only two of the lead results (558 mg/kg at SB-1-0.5 feet and 351 mg/kg at SB-3-1 feet) exceed the commercial/industrial ESL of 320 mg/kg, and <u>none</u> of the samples exceed the US EPA commercial/industrial Regional Screening Level (RSL) of 800 mg/kg.</i> - <i>The two higher lead results being at SB-1 and SB-3 (both located on eastern-most portion of Site where auto wrecking was not historically centered), suggests a localized hotspot, independent from the larger salvage operations.</i>

Summary tables and figures from the Phase II evaluation are included in **Attachment B** for ease of reference.

A 95% upper confidence evaluation of the lead results has been conducted, and is summarized below. :

95% Upper Confidence Evaluation of Lead Results	
Number of Samples	12
Min / Max	4.77 / 558 mg/kg
Mean concentration	118.7 mg/kg
95% UCLs	216.9 mg/kg (Johnson, 1978) 232.2 mg/kg (Chen , 995)

Calculated UCLs support a conclusion that the statistical population of lead in Site soils is not above the 320 mg/kg commercial / industrial ESL. A copy of the 95% UCL output is included as **Attachment C**.

In summary, the collected data supports the following conclusions:

- No visual or olfactory indications of affected soils and limited and nominal TPH, VOC, and SVOC detections in Site soils including none above ESLs, are an overall indication of limited to inconsequential impacts to soil from the historic automobile wrecking/scraping operations.

- The highest lead in shallow soils in two soil borings at the eastern-most portion of the Site, suggest the lead is not sourced from the historic automobile wrecking/scraping activities and are not indicative of a larger, overall Site concern.

- The 95% UCL calculation of combined lead results, demonstrate a low overall health risk, given an overall population concentration well below the 320 mg/kg commercial/industrial ESL.

The overall conclusion is that the automobile salvage yard has not impacted soil quality to the point of direct health risks, and that the likelihood of affects to soil vapor and/or groundwater is very low given few to no indications of the volatile compounds in the subsurface.

Potential Exposure Routes and Proposed Controls

The potential exposure scenarios for the Site include the following items:

During Site Development:

Construction Workers

Ingestion of lead and arsenic after dermal contact with soil

Inhalation of lead and arsenic from fugitive dust

*Inhalation of volatiles from exposed soil --
(NOT ANTICIPATED based on Site soil data,
INCOMPLETE with expected air circulation*

Neighboring Public

Inhalation of lead and arsenic from fugitive dust

*Inhalation of volatiles from exposed soil --
(NOT ANTICIPATED based on Site soil data,
INCOMPLETE with distance and air circulation*

Post Parking Lot Development:

Delivery Van Drivers

*Ingestion of lead and arsenic after dermal contact with soil, and inhalation of volatiles --
INCOMPLETE pathways with all Site soils covered,
and van drivers not in contained structures*

Security Personnel

*Ingestion of lead and arsenic after dermal contact with soil, and inhalation of volatiles --
INCOMPLETE pathways with all Site soils covered,
and guard building being solid floor over concrete.*

*Utility Workers
(during utility repair work)*

Ingestion of lead and arsenic after dermal contact with soil

*Inhalation of volatiles
NOT ANTICIPATED based on Site soil data*

Symbology
 Potentially Complete Exposure Pathway
 INCOMPLETE and/or NOT ANTICIPATED Pathway

There are no projected exposure pathways relative to Site groundwater, given that groundwater is at least as deep as 10 feet bgs and there are no excavations planned below 4 feet bgs.

Each of the complete scenarios, and the not anticipated scenarios, will be addressed via the planned Soil Management Plan document, with the following controls:

Item	Planned Control
Ingestion of Lead and Arsenic by Direct Dermal Contact	<ul style="list-style-type: none">- Those working in contact with known affected Site soils to be supervised by a hazardous materials trained professional- All invasive work to be conducted under a Health and Safety plan with ongoing monitoring
Potential Lead and Arsenic in Fugitive Dust	<ul style="list-style-type: none">- Wetting of exposed soil during construction work- Monitoring for dust at Site perimeters
Inhalation of Volatiles	<ul style="list-style-type: none">- Visual screening by a Project supervisor- Instrument screening if stained or affected soils are detected by a hazardous materials trained professional

In addition, the proposed Soils Management Plan will include descriptions (flow charts) of actions if unexpected conditions, such as heavily affected soils, are encountered.

CONCLUSION

On behalf of A&P Enterprises, Langan, and Mr. Barry McRay request SCCDEH concurrence on the characterization of the Site conditions and support of the proposed development plan, pending preparation of an acceptable Soils Management Plan.

Langan requests a phone teleconference to further discuss the Site, the topics addressed in this letter, and planned elements of a Site Soils Management Plan. Assuming the proposed direction is deemed suitable, Langan would propose to submit the plan for SCCDEH review and approval.

The undersigned can be reached at akerr@langan.com or 510.333.9051.

Sincerely,

Langan Engineering and Environmental Services, Inc.

Andrew Kerr, PG
Associate

Langan 2020b Data Summary Tables and Figures

Table 1
Summary of Soil Results
DXC8_P1 - 1675 Monterey Road, San Jose, CA

Table with 30 columns: Analyte, CA RWQCB ESL Direct Exposure Human Health - Residential (Shallow Soil), CA RWQCB ESL Direct Exposure Human Health - Commercial/Industrial (Shallow Soil), Location (Sample Name, Sample Date, Sample Depth, Unit), and four SB-1, SB-2, SB-3, SB-3 sections (each with Result, Q, MDL, DF).

Table 1
Summary of Soil Results
DXC8_P1 - 1675 Monterey Road, San Jose, CA

Table with columns for Analyte, CA RWQCB ESL Direct Exposure Human Health - Residential (Shallow Soil), CA RWQCB ESL Direct Exposure Human Health - Commercial/Industrial (Shallow Soil), Location (Sample Name, Sample Date, Sample Depth, Unit), and sampling locations SB-9, SB-10, SB-11, SB-12. Each sampling location includes results for Result, Q, MDL, and DF. The table lists various organic chemicals and a section for Metals, including Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Lead, Mercury, Molybdenum, Nickel, Selenium, Silver, Thallium, Vanadium, and Zinc.

Notes:

CA RWQCB ESLs _ California Regional Water Quality Control Board, San Francisco Bay Region, Environmental Screening Levels (July 2019). Minimum (lower) value between the listed Cancer Risk and non-Cancer Hazard values.

RWQCB - Regional Water Quality Control Board

NS - No standard

mg/kg - Milligrams per kilogram

ND - Not detected

Q - Qualifier

MDL - Method detection limit

RL - Reporting Limit

DF - Dilution factor

feet bgs - feet below ground surface

TPH - Total Petroleum Hydrocarbons

-- and NA = not applicable, not available

Qualifiers:

U - The analyte was analyzed but not detected

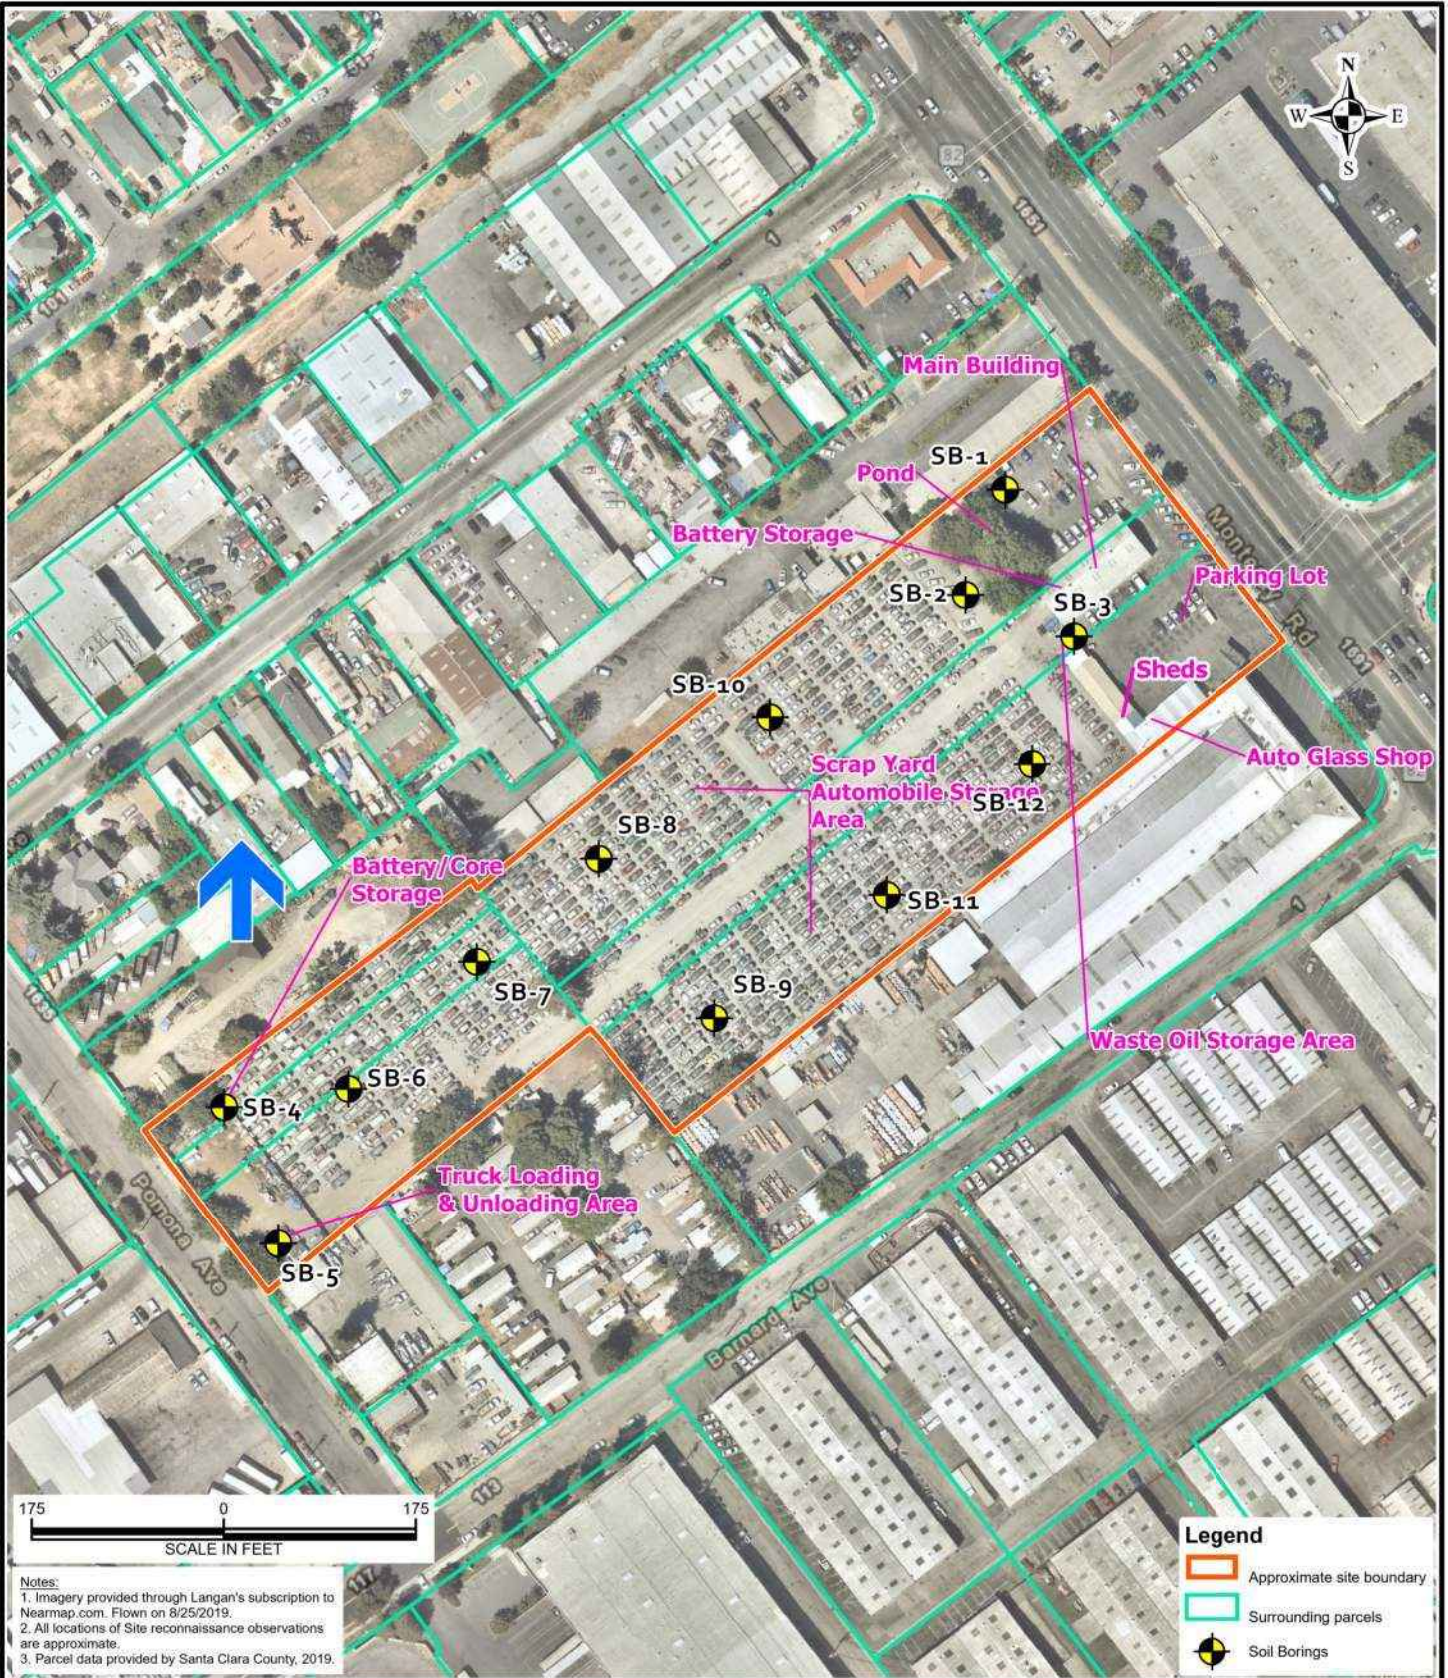

J - Estimated value. The target analyte concentration is below the RL but above the MDL.

Exceedance Summary:

10 - Result exceeds CA RWQCB ESL for Soil, Direct Exposure Human Health Risk Levels - Residential - Minimum

10 - Result exceeds CA RWQCB ESL for Soil, Direct Exposure Human Health Risk Levels - Commercial/Industrial - Minimum

10 - MDL exceeds screening level

EXECUTIVE SUMMARY

Langan Engineering & Environmental Services, Inc. (Langan) has prepared this Phase I Environmental Site Assessment (Phase I ESA) on behalf of Amazon (the “User”) for the DXC8_P1 property located at 1675 Monterey Road, in San Jose, Santa Clara County, California (the “Site”). The Site is identified as Assessor’s Parcel Number (APN) numbers 45602021, 45602022, 45602023, 45602024, 45602025, and 45602027. The Site is also identified as 1687 Monterey Road. This Phase I ESA was completed in compliance with the American Society for Testing Materials (ASTM) Standard Practice E1527-13 and the United States Environmental Protection Agency’s (USEPA) All Appropriate Inquiry (AAI) Rule; however, Langan was unable to complete a Site reconnaissance due to the requirements of the current Bay Area shelter-in-place order associated with the current coronavirus (COVID-19) outbreak. The inability to complete the Site reconnaissance is considered a significant data gap that may alter the conclusions of this Phase I ESA.

The approximately 6.29-acre Site is currently improved with an approximately 5,300-square feet (sf), one-story main warehouse building constructed by 1956 and a series of connected sheds that together form an L-shape to the south of the warehouse that were constructed by 2006. The remaining area of the Site is an asphalt-paved parking lot. The Site is currently vacant, but operated as an automobile wrecking yard from the 1950s until March 2020. The most recent tenant (Pick-n-Pull) utilized the Site as a self-service automobile scrap yard. Recent Pick-n-Pull operations included sales of motor vehicle parts, storage of automobiles, recycling of used oil and oil filters, and auto glass sales. An additional historical use in the southwestern portion of the Site in the 1960s was fiberglass products manufacturing. According to the Santa Clara County Office of the Assessor, the owner of Site Parcel 45602025 is “McRay, Barry B Trustee Et Al” and the owner of the remaining Site parcels is “Pampalone, Anthony L Et Al.”

The Site is bound by a motel and auto wrecker to the northwest; Monterey Road, followed by an office supply store, barber shop, and furniture store to the northeast; Pomona Avenue, followed by a metal supplier, seafood distributor, a parking lot, and a light fixture repair shop to the southwest; and a trailer park and an electronic recycling company to the southeast. The Site is located in the heavy industrial zoning district, which is intended for industrial uses with nuisance or hazardous characteristics.

The objective of this Phase I ESA was to identify the presence or likely presence, use, or release on the Site of hazardous substances or petroleum products as defined in ASTM E1527-13 as Recognized Environmental Conditions (RECs).

The Phase I ESA identified the following RECs associated with the Site:

- **REC-1 – Historical Site Operations:** The Site was utilized as an automobile wrecking yard from the 1950s until March 2020. According to a 2019 Hazardous Material Business Plan (HMBP) for Pick-n-Pull, diesel fuel was used for equipment, oils were drained from customer vehicles and cores and then hauled off the Site and recycled by vendor, batteries were removed from cars and hauled off the Site for recycling by a vendor, and oily absorbent/dirt was hauled off the Site by a vendor for recycling. The most recent inspection by the San Jose Fire Department (SJFD) on August, 26 2019 resulted in violations related to various spills and leaks that were observed throughout the Site. The leaks were documented as appearing to be from heavy equipment and

were believed to be oil. A follow-up inspection to determine compliance was to be completed, but Langan was not provided documentation indicating this follow-up inspection was completed. Similar violations were reported from 2002, 2003, 2005, and 2010. SJFD records indicate that a spill of 15 gallons of hydraulic occurred in 1991 that was reportedly cleaned up, but no regulatory closure information is available. A 2010 inspection noted the presence of a 4,500- to 5,000-gallon oil/water separator at the Site; the location was not provided. According to SJFD records, inspections from 1984 to 1988 for Valley Auto Wreckers (previous Site tenant) indicated this previous tenant was observed to be storing combustible materials, flammable liquid, welding and cutting, waste, oxygen, propane, diesel, waste oil, and waste gas in above ground storage containers. Spills or releases of regulated substances associated with historical automobile wrecking operations have likely impacted soil, groundwater, and/or soil gas conditions at the Site.

- **REC-2 - Historical and Current Operations at Adjacent and Surrounding Facilities:** Historical and current operations/uses on adjacent and surrounding properties has included automobile and truck repair, electronics scrap recycling, manufacturing, machine shops, and gasoline filling stations. One or more of these properties is located in the inferred hydraulically-up-gradient direction of the Site and have documented releases of regulated substances and histories of violations. Releases of regulated substances at these surrounding properties have likely impacted groundwater and/or soil gas conditions at the Site.

The following Business Environmental Risk (BER) was identified:

- **BER-1 - Potential ACM, LBP, PCBs in Building Materials:** The main building was constructed by 1956. Based on the age of the building, the building materials may contain asbestos-containing materials (ACM), lead-based paint (LBP), and/or polychlorinated biphenyls (PCBs).

No Historical RECs (HRECs), Controlled RECs (CRECs), de minimis conditions, or conditions of environmental interest (COEI) were identified.

Additional information related to the above listed RECs and BER can be found within the body of this report.

1.0 INTRODUCTION

Langan Engineering & Environmental Services, Inc. (Langan) has prepared this Phase I Environmental Site Assessment (Phase I ESA) on behalf of Amazon (the "User") for the DXC8_P1 property located at 1675 Monterey Road, in San Jose, Santa Clara County, California (the "Site"). The Site is identified as Assessor's Parcel Number (APN) numbers 45602021, 45602022, 45602023, 45602024, 45602025, and 45602027. The Site is also identified as 1687 Monterey Road. A United States Geological Survey (USGS) Site Location Map is included as Figure 1. This Phase I ESA was completed in general accordance with the American Society for Testing Materials (ASTM) Standard Practice E1527-13 and the United States Environmental Protection Agency's (USEPA) All Appropriate Inquiry (AAI) Rule.

The purpose of this Phase I ESA is to identify Recognized Environmental Conditions (RECs) in connection with the Site using the methodology recommended by ASTM and the AAI Rule. Specifically, the ASTM methodology is referred to as "*Standard Practice for Environmental Site Assessments; Phase I Environmental Site Assessment Process, Designation E1527-13*." The USEPA's AAI Rule was designed to establish federal standards and practices for conducting all appropriate inquiries. The AAI Rule, which incorporates the ASTM E1527-13 standard, is used to establish the innocent landowner defense under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and to provide additional liability protection for contiguous property owners and bona fide prospective purchasers.

For the purpose of this ESA report, a REC is defined as follows:

"The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."

A Historical REC (HREC) is defined as follows:

"A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

A Controlled REC (CREC) is defined as follows:

"A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by

regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

A Business Environmental Risk (BER) is defined as follows:

"A risk that can have a material environmental or environmental-driven impact on business associated with the current or planned use of a parcel of commercial real estate."

A de minimis conditions is defined as follows:

"A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

1.1 Scope of Work

In general, the scope of this Phase I ESA consisted of reviewing readily available information and environmental data relating to the Site; conducting interviews with individuals knowledgeable about the Site; reviewing readily available maps and records maintained by federal, state, and local regulatory agencies; and conducting a Site reconnaissance. The specific scope of this assessment included the following:

- Due to the requirements of the current Bay Area shelter-in-place order associated with the current Coronavirus (COVID-19) outbreak, a Site reconnaissance could not be completed. This is considered a significant data gap that may alter the conclusions of this Phase I ESA, and is discussed in Section 7.2.
- A review of responses to the Owner/Operator and User/Client Questionnaires. Copies of any completed questionnaires are included in Appendix B.
- A review and interpretation of readily available historical documents, such as topographic maps, aerial photographs, tax maps, city directories, and historical maps to identify prior site activities on and in the vicinity of the property. In addition, online records including Santa Clara's Office of County Assessor Parcel Map, the City of San Jose's Property Search, and a San Jose Zoning Map were reviewed. Copies of the reviewed documents are included in Appendix C.
- A review of previous environmental reports and other pertinent documents associated with the Site. Copies of any previous environmental reports are included in Appendix D.
- A review of responses from federal, state and local agencies to requests made under the Freedom of Information Act (FOIA). Copies of the responses are included in Appendix D.

- A review of readily available environmental databases maintained by the USEPA, state, and local agencies as provided by Environmental Data Resources, Inc. (EDR) and described within the Regulatory Review Section of this report. The EDR report is provided in Appendix E.

1.2 Limitations of the Assessment, Significant Assumptions, and Deviations

This Phase I ESA was conducted by Langan and is limited to the services agreed to with Amazon and no other services beyond those explicitly stated should be inferred or are implied.

Langan has performed a Phase I ESA of the Site utilizing a standard of good commercial and customary practice that is in general accordance with the ASTM E1527-13 and the 40 Code of Federal Regulations (CFR) Part 312 Standards and Practices for AAI. Significant deviations were not made to the above referenced standards.

The findings and recommendations presented in this report are professional opinions based solely upon Langan's visual observations of the Site and the immediate Site vicinity, and upon Langan's interpretations of the readily available historical information, conversations with persons knowledgeable about the Site, and other readily available information, as referenced in the report. These recommendations are intended exclusively for the purpose stated herein, at the Site indicated, and for the project indicated.

This report is intended for the sole use of Amazon. The scope of services performed during this investigation may not be appropriate for other users, and any use or re-use of this document, or the findings, conclusions, or recommendations presented herein is at the sole risk of said user.

This study was not intended to be a definitive investigation of possible contamination at the Site. The purpose and scope of this investigation was to determine if there is reason to suspect the possibility of contamination at the Site. This report is intended to be used in its entirety. No excerpts may be taken to be representative of the findings of this assessment.

Opinions and recommendations presented in this report apply to Site conditions and features as they existed at the time of Langan's Site reconnaissance, and those reasonably foreseeable. They cannot necessarily apply to conditions and features of which Langan is unaware and has not had the opportunity to evaluate.

Langan cannot act as insurers and cannot "certify" that a site is free of environmental contamination, and no expressed or implied representation or warranty is included or intended in our reports, except that our services were performed, within the limits prescribed by our client, with the customary thoroughness and competence of our profession.

2.0 SITE DESCRIPTION

2.1 Site Use

The northeastern end of the Site is currently improved with an approximately 5,300-square feet (sf), one-story warehouse building constructed by 1956 and a series of connected sheds that form an L-shape to the south of the warehouse that were constructed by 2006. The remaining area of the Site is an asphalt-paved parking lot. The Site is currently vacant, but operated as a self-service automobile scrap yard until March 2020 (Pick-n-Pull). Operations included sales of motor vehicle parts, storage of automobiles, recycling of used oil and oil filters, and auto glass sales. NAICS (National Industry Classification System Codes) classified Pick-n-Pulls former operations at the Site as a recyclable material merchant wholesaler. According to the Santa Clara County Office of the Assessor, the owner of Site Parcel 45602025 is “McRay, Barry B Trustee Et Al” and the owner of the remaining Site parcels is “Pampalone, Anthony L Et Al.”

Improvements at the Site are summarized in the following table:

Site Improvements	
Size of the Site	Approximately 6.29 acres
Buildings/Spaces/Structures	One approximately 5,300-sf, one-story warehouse building constructed in the mid-to-late 1980s and a series of connected sheds that together form an L-shape to the south of the warehouse that were constructed by 2006.
Unimproved Areas	None
Surface Water	None
Potable Water Source	San Jose Water Company
Sanitary and Storm Sewer Utilities	San José-Santa Clara Regional Wastewater Facility
Electrical Utilities	Pacific Gas & Electric
Construction Completion Date	By 1956
General Construction Type	Unknown*
Cooling and Ventilation System Type	Two air conditioning units
Heating System Type	No heating system
Emergency Power	Unknown*

*Because a Site reconnaissance was not completed, these features could not be determined.

2.2 Surrounding Land Use

Based on a review of aerial imagery, the Site is located within an urban area characterized by commercial and light-industrial buildings. The Guadalupe River is located approximately 3,500 feet west of the Site. Adjoining and surrounding property usage is summarized in the following table and shown on Figure 3:

Direction	Parcel Number	Adjoining Properties	Surrounding Properties
Northeast	Monterey Rd		Railroad followed by commercial properties
	47708008	Kelly Paper (office supply store), barber shop, and furniture store (1666 and 1696 Monterey Road),	
Northwest	45602020	Casa Linda Motel (1669 Monterey Highway)	Commercial properties
	45602019		
	45602018	Auto Wrecker (1650 Pomona Avenue)	
Southwest	Pomona Ave		Commercial properties
	45601027	Sunnyvale Seafood Corporation (1651 Pomona Avenue)	
	45601029	Charron Metals Corporation and parking lot (1675 Pomona Ave)	
Southeast	45602030	Glencore Electronics Recycling (1693 Monterey Road)	Barnard Avenue followed by commercial properties
	45602029	Trailer Park (111 Barnard Avenue)	
	45602026	Light and Ballast Company (1686 Pomona Avenue)	

2.3 Physical Setting

2.3.1 Topography

The Site appears on the 2012 USGS 7.5-minute series topographic quadrangle map for San Jose East. According to the USGS quadrangle map, the elevation of the Site is approximately 110 feet above mean sea level. Based on Site observations and the topographic quadrangle map, the Site is characterized by generally level terrain with a gentle slope to the northeast.

2.3.2 Geology

According to review of the California Department of Conservation Map on-line interactive geologic map (<http://maps.conservation.ca.gov/cgs>) the Site is located within the Coast Ranges geomorphic province, which consists of northwest-trending mountain ranges and valleys. The Site is situated in a basin between the Santa Cruz Mountains and the Diablo Range, and is underlain by Quaternary-age alluvium, lake, playa, and terrace deposits. In addition, according to the City of San Jose Permit Center website, the Site is in an area with concern for liquefaction.

2.3.3 Hydrogeology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flow towards areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeologic network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, and coverage by impervious surfaces. Other factors influencing groundwater include depth to bedrock, the presence of artificial fill, and variability in local geology and groundwater sources or sinks.

The closest surface water bodies appear to be the Guadalupe River located approximately 3,600 feet west at its closest point and Coyote Creek located approximately 4,600 feet northeast at its closest point. The Guadalupe River and Coyote Creek flow north-northwest and feed into the San Francisco Bay at a point approximately 10 miles northwest of the Site. Based on the local topography and proximity to nearby surface water features, the inferred groundwater flow direction at the Site is to the northwest towards the Guadalupe River and the San Francisco Bay. According to the EDR Report for the Site (Appendix E), there are no mapped wetlands at the Site; the closest mapped wetland is approximately 3,500 feet to the southwest of the Site. The central and eastern portion of the Site is located within a 100-year flood zone (1 percent annual chance of flood), as shown on Figures 2 and 3.

3.0 RECORDS REVIEW

3.1 Historical Use Information

Langan reviewed the documents referenced below for the Site and surrounding area. Copies of historical aerial photographs, historical Sanborn Maps, historical USGS topographic maps, city directory abstract, Santa Clara County Real Property Search online records, and zoning map are included in Appendix C.

Reference	Dates
Aerial Photographs	1939, 1948, 1950, 1956, 1963, 1974, 1982, 1993, 2006, 2009, 2012 and 2016
Historical Sanborn Maps	1915, 1950, 1961, 1966 and 1969
Historical USGS Topographic Quadrangles	1889, 1897, 1899, 1953, 1961, 1968, 1973, 1980, and 2012
City Directory Abstract (available business directories, including city, cross-reference, and telephone directories)	1960 through 2014

Reference	Dates
Santa Clara County Office of the Assessor	Email correspondence received on April 17, 2020
Google Earth Imagery	1993 through 2019

The following is a summary of relevant information for the Site, adjoining properties, and surrounding area based on our review of the above historical references.

3.1.1 Site

Based on a review of the above references, Site use and other pertinent information is summarized below.

- Late 1880s to 1950s: The Site appears to be undeveloped land adjacent to a railroad line to the northeast from 1889 to 1899 (USGS Topographic Maps). A road and a small stream both running southeast to northwest bisect the western portion of the Site during this period. A few small structures are visible in the southwestern and northeastern portion of the Site in 1939 to 1950 (Aerial Photographs). The majority of the Site appears to be vegetated with cleared paths during this period, and the former road and stream bisecting the Site are no longer visible. The adjoining railroad line to the northeast appears to have been repurposed as a road by 1948 (Aerial Photographs).
- Mid-1950s to mid-1960s: By 1956, the Site is developed with the present-day warehouse in the northeastern end of the Site and approximately 20 additional buildings (aerial photographs). The central and eastern portions of the Site are labeled as "Auto Wrecking Yard" in 1961 and 1966; the existing warehouse is labeled "Auto Parts", and the remaining buildings in this area have similar labels related to automobile parts storage. In 1961, the western portion of the Site is predominantly single-family homes, but three buildings are labeled as "Fiberglass Products MFG", "Wood Sawing", and "Office" (Sanborn Maps). In the 1963 aerial photograph, vehicles are observed across the exterior portions of the eastern two thirds of the Site. In 1966, all but one of the buildings in the western portion have been razed, and the remaining building is labeled as vacant (Sanborn Maps).
- Late 1960s to 2017: The Site appears relatively unchanged through 1982 (Aerial Photographs). By 1993, all buildings in the northeastern portion of the Site have been razed, with the exception of the existing warehouse building (aerial photographs). City directory listings for addresses associated with the Site included:
 - 1675 Monterey Road - Valley Auto Wreckers in 1975 and Self-Serve Auto Wreckers from 1985 to 1991.
 - 1687 Monterey Road - Surplus Enterprises Surplus Goods, Spatola Jim Surplus

Enterprises, and Baskett Bill Surplus Enterprises in 1975, B&D Automotive in 1986, New T&L Autobody & Repairing in 1991, and Moray Shirley in 2000. The Site was occupied by Pick-n-Pull from at least 1992 to present day (Sanborn Maps and City Directory Abstract).

By 2006, an L-shaped structure has been constructed in the northeastern portion of the Site (Aerial Photographs).

- Current: According to the Santa Clara County Office of the Assessor, the owner of Site Parcel 45602025 is “McRay, Barry B Trustee Et Al” and the owner of the remaining Site parcels is “Pampalone, Anthony L Et Al.” The Site is zoned as heavy industrial, which is intended for industrial uses with nuisance or hazardous characteristics (SanJoseCA.gov).

Based on our review of the above historical references, the historical use of the Site for manufacturing and auto wrecking operations is considered a REC due to the potential for releases of hazardous substances or petroleum products associated with these operations to have impacts soil, groundwater, and/or soil gas quality at the Site.

3.1.2 Adjoining and Surrounding Properties

By 1939 (earliest aerial photograph), surrounding properties were a mix of nearby large buildings indicative of commercial/light-industrial use, with residential properties and agricultural land (orchards and low-lying crops) in the outer surrounding areas. During the following decades, the agricultural land was replaced with large buildings until the surrounding area was generally fully developed by the early 1990s (topographic maps, aerial photographs, and Sanborn maps).

The following adjoining or surrounding area properties are of environmental interest based on their current or historical use.

Adjoining Properties

- 1696 Monterey Road (northeastern adjoining property) included Motors West Kawaski from 1985 to 1986 and Auto Sport in 1991 (City Directory Abstract).
- 1695 Monterey Road (southeastern adjoining property) included Recycling Inc in 2006 and Micro Metallics Corporation from 1991 to 2014 (City Directory Abstract). Included Pacific Electric Manufacturing Corporation and Ditz Brothers Tractor Sales & Services, and two steel butane tanks from 1950 to 1969 (Sanborn Maps).

Surrounding Properties

- 1699 Monterey Road (approximately 223 feet southeast – inferred up-gradient) included Peninsula Machinery & Equipment Company from 1961 to 1975 (City Directory Abstract and Sanborn Maps).

- 42 Barnard Avenue (approximately 280 feet southeast – inferred up-gradient) included an electronic plating company from 1960 to 1986 (City Directory Abstract).
- 44 Barnard Avenue (approximately 280 feet southeast – inferred up-gradient) included San Jose Nail & Strapping Supply Building Materials in 1966 (City Directory Abstract).
- 60 Barnard Avenue (approximately 280 feet southeast – inferred up-gradient) included General Electric Warehouse in 1970 (City Directory Abstract).
- 64 Barnard Avenue (approximately 340 feet southeast – inferred up-gradient) included General Electric Atomic Power Equipment Warehouse in 1960, a farm and irrigation equipment manufacturer from 1960 to 1963, and Custom Air and Electronics Co Refrigeration in 1975 (City Directory Abstract).
- 63 San Jose Avenue (approximately 380 feet northeast – inferred cross-gradient) included a gasoline station in 1969 (Sanborn Maps).
- 75 Phelan Avenue (approximately 365 feet northeast – inferred cross-gradient) included sheet metal manufacturing, auto repair shops, medical supplies distributor, and electronics companies from 1985 to 2014 (City Directory Abstract).
- 1775 Monterey Road (approximately 390 feet southeast – inferred up-gradient) included Hurst Industries Turbine Pump Manufacturing from 1950 to 1969 (Sanborn Maps). Included Dynacase Manufacturing, F&F Steel, Roadside Service, Used Tires & Wheels, R&R Refrigeration & Air, Farmer Jones Used Tire, A&A Auto Detail, Auto Body Repair, Santa Clara Foam Company, Gillis Manufacturing Company, Orco Power Equipment & Supply, T&J Automotive Repair, Edfred Chemical Company, Transmission Equipment Sales, Genie Rubber Products Manufacturing, 16 Continental Iron Works, All Tranz Parts and Cores, and South Bay Auto between 1975 and 2006 (City Directory Abstract).
- 1610 Monterey Road (approximately 410 feet north –inferred down-gradient) included ACA Automotive Service from 2010 to 2014 (City Directory Abstract).
- 88 Phelan Avenue (approximately 415 feet northeast – inferred cross-gradient) included Quality Body & Paint Shop from 1985 to 1991, Hondas Only Auto Center in 1985 and 1986, Saigon Auto Center from 1996 to 2000, and Lee Diesel Service from 2010 to 2014 (City Directory Abstract).
- 1660 Monterey Road (approximately 430 feet northeast – inferred cross-gradient) included California Concrete Products in 1957 and Amer Pipe & Construction Co in 1963 (City Directory Abstract).
- 95 Phelan Avenue (approximately 490 feet northeast – inferred cross-gradient) included a machine shop, a glass company, and a boat repair company between 1980 and 2014 (City Directory Abstract).

- 1611 Monterey Road (approximately 510 feet northwest – inferred down-gradient) included Advance Auto Tech Inc from 2010 to 2014 (City Directory Abstract).
- 115 Phelan Avenue (approximately 670 feet northeast – inferred cross-gradient) included a precision machining company, manufacturing companies, technology services, a furniture warehouse, electronics companies, and a welding shop between 1980 and 2014 (City Directory Abstract).
- 1720 Monterey Road (approximately 670 feet east – inferred cross-gradient) included National Steel in 1996 (City Directory Abstract).
- 1800 Monterey Road (approximately 775 feet southeast – inferred up-gradient) included Scrap Metal Purchasing and LMC Metals from 1975 to 1991 (City Directory Abstract).

Potential releases of hazardous substances and/or petroleum products at the above adjoining and surrounding area properties may have adversely impacted groundwater and/or soil vapor quality at the Site. One or more of these properties may be discussed in Section 3.2 below.

3.2 Regulatory Review

Langan reviewed an environmental database search report, prepared by EDR, for the Site and surrounding area. The EDR report is a listing of properties identified on select federal and state standard source environmental databases within the approximate search radius specified by ASTM Standard Practice for E1527-13. This information is reported to Langan by EDR, and to EDR by government sources; therefore, neither Langan nor EDR can verify the completeness and accuracy of the database information. Langan reviewed each environmental database on a record-by-record basis to determine if certain sites identified in the report are suspected to represent a potential impact to the Site. Descriptions of regulatory databases are provided in the EDR report. A copy of regulatory database information was provided by EDR and is included in Appendix E. The following is a summary of records for the Site, adjoining properties, and surrounding properties with potential environmental concerns.

3.2.1 Site

The database review indicated that the Site is listed in the Resource Conservation and Recovery Act (RCRA) Non-Generator / No Longer Reporting (NonGen/NLR), Facility Index System (FINDS), Facility and Manifest Data (HAZNET), National Pollutant Discharge Elimination System (NPDES), California Integrated Water Quality System (CIWQS), California EPA Regulated Site Portal Data (CERS), Hazardous Material Facilities (HAZMAT), Certified Unified Program Agency (CUPA), Waste Discharge System (WDS), Enforcement & Compliance History Information (ECHO), and California EPA Hazardous Waste (CERS HAZ WASTE) databases. The Site is identified in the RCRA database as a

Non-Generator in 2000; no waste code information was provided and no RCRA violations were reported. Some additional hazardous waste generation information was provided in the HAZMAT, CERS HAZ WASTE, CERS, CUPA and HAZNET databases. Hazardous waste classes from 2016 and 2017 included waste oil and mixed oil. Two violations were noted from February 12, 2014 related to failure to submit inventory reports and failure to complete a Hazardous Materials Business Plan (HMBP). The current status of these violations was not reported. Another listing indicated a HMBP has been developed for 4 to 6 chemicals and that this facility reportedly generates between 100 kilograms and 5 tons per year. The facility was described as a used oil recycling location and inventory observed at the Site during inspections included lead acid batteries, used oil, and used antifreeze.

The Site was listed in the NPDES and CIWQS databases as having an active industrial storm water permit. According to the CERS database, a storm water violation was reported in 1992 due to inadequate paperwork and the facility was ordered to improve BMPs (best management practices); additional information was not provided. The FINDS and ECHO listings are related to the RCRA listing and the NPDES listing; no additional information was provided.

As discussed in Section 3.1.1, the former automobile wrecking/recycling operations at the Site, which involved hazardous waste generation, are considered a REC.

3.2.2 Adjoining Properties

Below are summaries of adjoining properties of concern in regards to possible contamination at the Site. The northeastern adjoining properties were not identified in any of the EDR databases.

Northwestern Adjoining – Pomona Auto Wreckers (1650 Pomona Avenue) – inferred down-gradient

This facility is listed in the CUPA database. According to the CUPA database, this facility generates waste oil. No additional information was provided and this facility was not listed in any other database. Based on the absence of known spills, this facility is not considered a REC.

Northwestern Adjoining – V's Demolition Corporation/V's Tear-Off Incorporated (1646 Pomona Avenue – inferred cross-gradient)

The facility is listed in the RCRA-NonGen/NLR, CUPA, HAZNET and HAZMAT databases. The facility is listed as a non-generator as of February 1999. The facility handled transportation of hazardous waste, and no RCRA violations were reported. The CUPA listing reports the facility in the waste oil generators program. The HAZNET listing reports 0.114 tons of waste oil and mixed oil being handled at the facility. The method of handling

is listed as recovery or reclamation for reuse. The HAZMAT listing reports the facility as an auto wrecking / miscellaneous simple facility. Based on the absence of RCRA violations or known spills, these listings are not considered a REC.

Southwestern Adjoining – Charron Metals Corp/Loop Transportation (1675 Pomona Avenue) – inferred up- to cross-gradient

This facility is listed in the CUPA, NPDES, HAZMAT, WDS, CIWQS, and CERS databases. The CUPA database indicates that Loop Transportation, Inc. generates waste oil only and a HMBP has been developed for 1 to 3 chemicals. The CERS database identified Charron Metals Corp. as a chemical storage facility. The HAZMAT database indicates that Charron Metals Corp is an out-of-business auto wrecker. The WDS database indicates that Charron Metals Corp. was an industrial facility that treated and/or disposed liquid or semisolid wastes and that it was under waste discharge requirements. The NPDES and CIWQS databases indicate that Charron Metals Corp has a terminated industrial storm water permit that operated from 1996 to 2017. Based on the absence of noted violations and known spills, these listings are not considered a REC.

Southeastern Adjoining – Glencore Recycling, LLC (1695 Monterey Highway) – inferred up-gradient)

This facility is listed in Superfund Enterprise Management System (SEMS-ARCHIVE), Corrective Action Report (CORRACTS), RCRA Treatment, Storage, and Disposal (TSDF), RCRA Large Quantity Generator (LQG), EnviroStor Database (ENVIROSTOR), Statewide Spills, Leaks, Investigations, and Cleanups Cases (CPS-SLIC), CERS HAZ WASTE, Financial Assurance Database (US FIN ASSUR), 2020 Corrective Action Program List (2020 COR ACTION), CUPA, Emissions Inventory Data (EMI), Permitted Facilities with Inspections / Enforcements (ICE), Manifest Information (MANIFEST), NPDES, CERS, EnviroStor Permitted Facilities Listing (HWP), CIWQS, and HAZMAT databases. This facility is a processor of precious-metal-bearing electronic scraps. This facility is listed in the SEMS-ARCHIVE database with a status from 1987 of “No Further Remedial Action Planned (NFRAP)-Site does not qualify for the National Priority List (NPL) based on existing information.” According to the CORRACTS database, investigations at this facility began in 1993 and case notes from 2011 indicate that human exposures are under control and migration of contaminated groundwater is under control. This facility was listed as TSDF facility and as a LQG since 1980. Numerous RCRA violations were noted from 1985 to 2016 that later achieved compliance. According to the CUPA database, this facility was listed in the CPS-SLIC database with a status of “Completed – Case Closed” as of June 7, 2016. The case notes stated:

Micro Metallics operated as an electronic, scrap metal recycling center. On October 29, 1981, ponded rainwater was pumped from a processing area into an unpaved area. Upon realization that the discharged water contained cyanide, the

Regional Water Quality Control Board was notified of the release. Micro Metallica took steps to conceptualize the lateral and vertical extent of the release and remediate contamination. In this process, 230 cubic yards of contaminated soil was removed in February and May of 1982. Monitoring wells were installed and sampled regularly showing a decline in contamination, below maximum contaminant levels. A new occupant is currently at the site, Xstrata, they conduct the same operations as the former Micro Metallica.

According to the EMI database, multiple violations have been identified at the facility between 1999 and 2019; the most recent violation (2019) was listed as minor and was related to a financial records review. This facility was listed in the NPDES database with an active industrial storm water permit.

Because of the nature of its operations, its extensive history of violations, the known impacts to groundwater, and its location directly upgradient of the Site, this facility is considered a REC.

Northeastern Adjoining – RAM Products (1666 Monterey Rad) – inferred down- to cross-gradient)

This facility is listed in CUPA database as a generator of between 100 kilograms and 5 tons of hazardous waste per year. This facility was not listed in any other database. Based on the lack of violations and known spills, these listings are not considered a REC.

3.2.3 Surrounding Area Properties

Based on our review of surrounding area property listings, most of the nearby listings were either: (1) closed by the regulatory agency, (2) located in the inferred hydrologically down-gradient direction from the Site, (3) determined to be a significant distance from the Site, and/or 4) determined not to have a potential impact on the Site based on our review of available database information. However, the following properties in the surrounding area are of environmental interest.

Vegas Transmissions, Lopez Auto Body, Former All Stick and Gears, and others (1697 Pomona Avenue – Approximately 220 feet south and inferred up-gradient)

The facility is listed in the Leaking Underground Storage Tanks (LUST), WDS, CIWQS, CUPA, HAZMAT, Deed Restriction Listing (DEED), CERS, CERS HAZ WASTE, HAZMAT, EDR HIS AUTO, Fuel Leak List (LUST REG 2), Cleanup Program Sites – Spills, Leaks, Investigations, and Cleanups (CPS-SLIC), and HIST LUST databases, as summarized below.

The LUST report does not provide any details regarding the nature of the spill or impacted material. The facility is reported as undergoing a preliminary site assessment beginning in December 2003 and pollution characterization beginning in April 2004 in the LUST REG

2 database. The facility is listed in the database in January 2004 in the HIST LUST database. The listing reports the facility in the DEED database as completed with case closed, and a deed date in February 2006. The facility status is listed as closed as of June 2016 in the CPS-SLIC database. The impacted material is listed as groundwater other than for drinking water, and soil. The contaminants listed are trichloroethylene and diesel. The notes state that the facility was historically an auto wrecking yard and repair shop but was later used for storage of nursery plants and potted trees. Two 1,000-gallon USTs were excavated in 2003. During excavation, holes in the USTs were discovered and the soil below them was stained and smelled of petroleum. Soil and groundwater samples indicated contamination. Samples taken 10 years later, in 2015, indicated that the facility was eligible for closure and the case was closed in 2016.

The WDS listing describes the facility as industrial and treats or disposes of liquid or semisolid wastes from servicing, producing, manufacturing, or processing operation of whatever nature. The status is listed as active. The listing reports that the facility is a minor threat to water quality. The CIWQS listing reports a NPDES permit effective in April 1992 through October 2004. Under the name "Lopez Auto Body," the CUPA listing reports that the facility generates less than 10 gallons per year of chemicals. Under the name "Vegas Transmissions," the CUPA listing reports the facility generates up to 5 tons per year of chemicals. In the HAZMAT database, the facility is listed as an auto wrecking/miscellaneous simple facility under the name "Lopez Auto Body," and the facility is listed as an auto repair facility under the name "Vegas Transmissions" in San Jose. The facility is listed as a historical auto repair shop in EDR HIST AUTO database under various names throughout 1989 and 2008.

The facility is listed as a hazardous waste generator in the CERS HAZ WASTE database. In the CERS database, under the name "Former All Stick and Gears," the listing reports the cleanup program site for the facility. Under the name "Vegas Transmissions" the facility is listed as a chemical storage facility, with violations for failing to provide training, failure to obtain identification number, failure to properly label hazardous waste accumulation containers, administration/documentation, failure to inspect hazardous waste storage areas weekly, failure to submit a business plan, and failure to dispose of hazardous waste with proper permits in April 2019, administration/documentation in June 2016, failure to provide a business plan, administration/documentation, failure to post pertinent information, failure to test and maintain as necessary, and failure to obtain an identification number in May 2018, and many more throughout 2016 to 2019. Notes in a violation from April 2019 remarked that there were numerous oil stains throughout the facility. It is unclear whether or not these violations are open or if compliance has been achieved.

Based on the Site's proximity to this up-gradient property, the history of violations and known impacts to soil and groundwater are considered a REC.

First Quality Bumper, Jesse Transmission, P&G Investment, and others (1775 Monterey Highway – Approximately 375 feet southeast and inferred up-gradient)

The facility is listed in the CUPA, LUST, CERS HAZ WASTE, HAZNET, NPDES, HAZMAT, CERS, HIST LUST, RCRA-NonGen/NLR, EDR HIST AUTO, and Hazardous Waste & Substance Site List (HIST CORTESE) databases, as summarized below.

The LUST listing reports a spill of gasoline which impacted soil in January 1992. A No Further Action (NFA) determination was issued in December 1995. The facility is listed in the HIST LUST database in October 1993 and has a closure date of December 1995. The LUST REG 2 database lists the facility with a status of case closed.

In the EDR HIST AUTO database, the facility is listed as a general automotive repair shop from 1989 to 1993 under the names “New T&L Auto Body & Rep” and “Thi Thu Nguyen,” and automotive transmission repair shop under the name “Six Shift Transmission” in 2012. The facility is listed as a hazardous waste generator in the CERS HAZ WASTE database. The CUPA listing reports the facility under the name “First Quality Bumper,” as generating less than 10 gallons per year. Under the name “Jesse Transmission,” the facility is listed as generating up to 5 tons per year of chemicals. Under the name “TZ Autobody” the facility is reported to generate under 10 gallons per year. Under the name “Hoge Brothers Inc,” the facility generates up to 5 tons of chemicals per year.

The facility is listed for generation of 0.075 tons of inorganic solid waste in 2017 in the HAZNET database. The waste was disposed of via storage, bulking, and or transfer off-site. The HAZMAT listing reports the facility as a furniture refinishing/machining shop. The facility is in the HIST CORTESE database under the name “P&G Investment Company.” The facility has a NPDES permit in 2016, and is listed as a RCRA-NonGen/NLR in September 2011. No violations are identified. The facility has violations in the CERS database for failure to determine if wastes generated are hazardous, failure to complete waste manifests, and failure to provide training in June 2017. It is unclear whether or not compliance has been achieved or if these violations are still open.

Based on the proximity to this up-gradient property, the history of violations and spills are considered a REC.

Leo Recycle / San Jose Collision Center and others (215 Leo Avenue – Approximately 1,160 feet east and inferred cross- to up-gradient)

This facility is listed in the CUPA, RCRA NONGEN/NLR, Solid Waste Facility/Landfill (SWF/LF), CERS HAZ WASTE, CERS TANKS, NPDES, HAZMAT, CERS, RCRA-SQG, FINDS, ECHO, and HIST CORTESE databases. The SWF/LF database identified this facility as an inert waste processor and transferor with a permitted throughput of 1,500 tons per day. CERS classifies the facility as a hazardous waste generator and a solid waste and recycling site with aboveground petroleum storage. CERS lists a series of violations

that occurred in 2015 and 2018 as a result of inspections. These violations include: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method, failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years, failure to inspect hazardous waste storage areas on a minimum weekly basis, failure to accumulate hazardous waste in a container that is in good condition, and failure to properly label hazardous waste accumulation containers. Information on whether or not these violations have been corrected is not available. A previous tenant, Alongi Brothers, is noted as having been a small quantity generator which stored ignitable waste (D001), corrosive waste (D002), cadmium (D006), lead (D008), benzene (D018), and methyl ethyl ketone (D035). Based on the distance from the Site in a cross-gradient direction, this facility is not considered a REC.

R&R Processing (1805 Little Orchard Street – Approximately 1,300 feet south-southwest and inferred cross-gradient)

This facility is listed in the CUPA, RCRA-NonGen/NLR, CERS HAZ WASTE, RCRA-SQG, FINDS, ECHO, HAZNET, and ENVIROSTOR databases, as summarized below.

The CERS HAZ WASTE database describes the facility as a hazardous waste generator. The ENVIROSTOR facility type is listed as a tiered permit and the cleanup status is listed as inactive and needs evaluation. The HAZNET database reports a generation of wastes including inorganic solid waste and alkaline solution with metals, disposed of via landfill in 1999.

The CUPA listings reports that under the name "R&R Processing," the facility is listed as generating 5 to 25 tons per year under the permit-by-rule program. Under the name "PTH Solutions," the facility is listed as generating waste oil only in the hazardous materials business plan program. Under the name "Wildwood Workshop Co," the facility is listed as generating up to 5 tons per year. Under the name "PN Machining," the facility is listed as generating up to 100 kg per year. Under the name "S&W Precision Machining," the facility is listed as generating less than 10 gallons per year. Under the name "Rainbow Press," the facility is listed as generating under 100 kg per month of silver.

RCRA listings report the facility as a non-generator as of July 2017 under the name "P.N. Machining." The facility is listed as a transporter of hazardous waste. No violations were identified. The facility is listed as a SQG as of September 1996 under the name "R&R Processing." Historically, the facility was listed as a SQG in January 1986, March 1992, and a large quantity generator (LQG) in April 1994 and September 1996. The FINDS listing is related to the RCRA listing, but provides no further information. The ECHO listing reports the facility as active in the RCRA database, and shows the facility is in the Air Emissions Inventory (EIS). No violations were identified.

Based in its distance and cross-gradient location, this facility is not considered a REC.

Spartan Planting (275 Leo Avenue – Approximately 1,470 feet east and inferred cross-gradient)

The facility is listed in the SEMS-ARCHIVE, State Response Sites (RESPONSE), ENVIROSTOR, CUPA, HAZMAT, and CERS databases. The SEMS-ARCHIVE listing reports that the facility is not on the NPL and has a status of No Further Remedial Action Planned (NFRAP). The RESPONSE listing gives the facility a description of "Site Cleanup Program." The status for the facility is listed as NFA as of July 2007. The chemicals of concern are chromium, lead, nickel, and tetrachloroethylene in soil. The ENVIROSTOR listing is related but provided no further information. The CUPA listing reports that the facility generates less than 100 kg per year. The HAZMAT database designates the facility as an auto wrecking/miscellaneous simple facility. The CERS listing reports a description of "State Response." Based on the NFA status and cross-gradient location, these listings are not considered a REC.

Manthey Nursery (327 San Jose Avenue – Approximately 1,500 feet west-southwest and inferred cross-gradient)

This facility is listed in the ENVIROSTOR database and is a wholesale plant nursery. The nursery uses and stores various pesticides including Avid U-15EC and Ortho Isotox. The status in ENVIROSTOR is listed as inactive and needs evaluation. In 2006, site screening was approved by USEPA. However, confirmation samples were not taken, and therefore re-evaluation is necessary under DTSC. Based on its distance and cross-gradient location, this facility is not considered a REC.

Pepper Lane / Stauffer Chemical (1931 Monterey Road – Approximately 1,560 feet southeast and inferred up-gradient)

This facility is listed in the RESPONSE, ENVIROSTOR, LUST REG 2, Fuel Leak Site Activity Report (HIST LUST SANTA CLARA), HIST CORTESE, and CERS databases. According to the LUST and CERS databases, a UST leak was identified in 1985 and the case was closed in 1992 after a cleanup was completed. According to the RESPONSE and ENVIROSTAR databases, a Voluntary Cleanup Agreement was signed in 1999 relating to impacts of ACM, PAHs, and PCBs in soil that called for a cleanup to unrestricted land use standards, and a NFA determination was awarded. Based on the regulatory closure for the identified environmental cases, these listings are not considered a REC.

Almaden Property, Louis Smith Property, and Lew Smith (1545 Almaden Road – Approximately 1,785 feet west and inferred cross-gradient)

The facility is listed in the ENVIROSTOR, CPS-SLIC, Enforcement Action Listing (ENF), CERS, and Superfund Enterprise Management System (SEMS) databases. The ENVIROSTOR listing reports the facility is not on the NPL. The facility was reportedly historically used as a paint/depaint facility. Chemicals of concern include halogenated

solvents, hydrocarbon solvents, and oxygenated solvents, among other VOCs and SVOCs. Soil is listed as the impacted media. In August 1995, the facility reported a completed site screening, involving the removal of two USTs. Soil and groundwater were contaminated, and approximately 3,700 cubic yards of soil was removed from the facility. In-situ bioremediation was utilized to meet drinking water standards. The cleanup order was rescinded in June 1997 when drinking water standards were achieved. The CPS-SLIC listing reported a completed case date in July 1993. The ENF listing reports industrial inorganic chemicals associated with the facility. The facility status is listed as historical as of June 2005. The CERS listing reports the facility as a cleanup program site. The SEMS listing reports the facility as not on the NPL. Cleanup at the facility began in October 1986 and was finished by March 1989. Based on its distance and cross-gradient location, this facility is not considered a REC.

Lorentz Barrel & Drum (1515 S 10th St – Approximately 2,500 feet north-northeast and inferred down- to cross-gradient)

Lorentz Barrel & Drum is listed in the NPL, SEMS, Sites With Institutional Controls (US INST CONTROL), ENVIROSTOR, Calsite Database (CALSITE), Historical UST (HIST UST), Superfund Lien Information (LIENS 2), DEED, RCRA-NonGen/NLR, Records of Decision (ROD), Potentially Responsible Parties (PRP), Integrated Compliance Information System (ICIS), Superfund Consent Decrees (CONSENT), Bond Expenditure Plan (CA BOND EXP PLAN), FINDS, ECHO, and CORTESE databases. This facility is a federal Superfund site and was proposed to be placed on the NPL on June 24, 1988. Some substances listed on the NPL database include 1,1-dichloroethene, tetrachloroethene, 1,1,1-trichloroethane, trichloroethylene, benzene, chromium, lead, pesticides, chloroform, and VOCs. The facility operated as a drum recycling facility from 1946 to 1987. Drums containing solvents, pesticides, and other substances from a various sources were cleaned, recoated, and sold for reuse. In 1987, the facility was ordered to permanently close and the owner was sentenced to 2 years in prison and fined 2.04 million dollars. Sampling by CDHS consultants revealed extensive contamination in soil and groundwater onsite and off-site. In 1988, The EPA implemented an expedited response action which consisted of the following activities: drum inventory; construction of decontamination facilities; removal of polychlorinated biphenyl (PCB) contaminated pits, which were later backfilled with clean soil and capped; removal, recycling, or treatment of thousands of gallons of processed plant liquids; removal of 15 tons of contaminated scrap; and design of a surface water control plan, which was submitted to EPA for implementation. EPA installed a chip seal over approximately two thirds of the five-acre site. A total of 21,286 drums, 1,330 tons of scrap metal, and 2,982 cubic yards of contaminated soil were removed from the facility.

In 1992, monitoring wells were installed and a treatment system for shallow groundwater was completed by extraction and treatment followed by discharging the treated water

into a storm sewer. In 1994, the EPA completed 3 separate removal actions: (1) Removal of 5 buildings and the process equipment and scrap within including 17 sumps, 7 tanks and several debris stockpiled. At the end of the remedial action, 1,033 tons of industrial wastes, 15 tons of liquid hazardous waste, and 73 tons of solid hazardous waste was shipped off-site for disposal. (2) Removal of 1,200 drums, 150 drums containing solvents, 350 drums containing debris, and 23 drums containing ash and liquids. Removal of tanks, vats, sumps, and process equipment. Removal of 1.18 tons of asbestos containing building materials. (3) Paving of previously and newly exposed surface soil resulting from the above removal actions. Paving was completed using a chip seal material. Approximately 4.25 acres were sealed.

A land use restriction was recorded on the property in 2005 whereby residences, hospitals, day care facilities, food cultivation, and groundwater extraction were prohibited at the facility. A 2006 soil investigation concluded that PCE, TCE, and metals including arsenic were present in the soil, however, all contaminants were present at concentrations below human health screening levels or established background levels. In 2015, the fourth five-year review report noted that the migration of 1,4-dioxane is unable to be controlled and is resulting in diffusion of contamination from the A/B aquitard to Zone A soil and Zone B groundwater.

Langan reviewed the USEPA's Superfund Site online portal for this facility on April 17, 2020. According to the USEPA website, human exposure is under control, but there is insufficient data to determine if the migration of contaminate groundwater has stabilized. According to the September 29, 2010 Third Five-Year Review Report for the facility (which is available online at the USEPA website), groundwater flow at this facility is to the north away from the Site.

Based on this facility's distance from the Site and its down-gradient location, this facility is not considered a REC.

Premier Recycle (260 Leo Avenue – Approximately 1,470 feet northeast and inferred cross-gradient)

This facility is listed in the SWF/LF, CERS HAZ WASTE, California Hazardous Materials Incident Reporting System (CHMIRS), CUPA LISTINGS, NPDES, HAZMAT, WDS, CIWQS, and CERS databases. The SWF/LF database includes a permit date of January 6, 2014 as a large volume transfer/processing facility. Reportedly, the facility underwent monthly inspections and accepted construction, demolition, inert, metals, and wood waste. The permitted throughput and permitted capacity of the facility are both listed as 550 tons per day. The CERS HAZ WASTE database describes the facility as a hazardous waste generator with Site ID 58660 and CERS ID 10350751. According to the CHMIRS database, the facility received an Office of Emergency Services (OES) notification on June 29, 2003 and OES Incident No. 3-3286. This incident pertains to when an unknown

amount of water run-off from fire-fighting operations impacted the storm drain on June 28, 2003. No further details regarding Incident No. 3-3286 were provided. The CUPA database reports that the facility generates between 100 kg and 5 tons of hazardous waste per year with a program description of "Hazardous Materials Business Plan (HMBP) facility, 10-15 chemicals." The CIWQS database reports a storm water industrial regulatory measure that was effective August 8, 2000. The NPDES database reports an active status with status date August 8, 2000 and March 2018. The receiving water name is documented as City of San Jose Storm Water. The San Jose HAZMAT database indicates the facility is an auto wrecking/miscellaneous simple facility and lists the name as "Out of Business" on February 7, 2014. The WDS database lists the facility as active and industrial. The facility is reportedly a minor threat to water quality with Category C complexity. Category C is defined as "Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds". Multiple administrative violations are reported in the CERS database from 2005 to 2015, including failure to complete/submit a business plan when storing/handling a hazardous material at or above reportable quantities, failure to ensure employees are familiar with the handling and compliance of hazardous waste regulations and emergency response, failure to submit emergency response documentation, failure to submit inventory reports, and failure to submit annual reports. Other violations include a 55-gallon container containing used oil was reportedly opened without filters being actively drained into it, failure to properly label hazardous waste accumulation containers, failure to properly label various categories of universal waste, failure to properly dispose of hazardous waste at an authorized location, and notice of non-compliance for non-filters. It is unclear if these violation have achieved compliance.

Based on its distance and cross-gradient location, this facility is not considered a REC.

3.2.4 Orphan Listings

According to EDR, an orphan listing is a property that cannot be mapped due to poor or inadequate address information. Upon further research, Langan concluded that the two orphan listings are not considered properties of concern for one or more of the following reasons: (1) closed by the regulatory agency, (2) located in the inferred hydrologically down-gradient direction from the Site, (3) determined to be a significant distance from the Site, and/or 4) determined not to have a potential impact on the Site based on our review of available regulatory database information.

3.2.5 Water Wells, Injection Wells and Oil and Gas Wells and Facilities

A review of the Geospatial section of the EDR Regulatory Database Report (Appendix D) and the California Geologic Energy Management Division (CalGEM) map

(<https://maps.conservation.ca.gov/doggr/wellfinder/#openModal/-118.94276/37.12009/6>) did not identify any water wells on the property. The EDR report identified 16 water wells within 1 mile of the Site. The EDR report identified six water wells approximately 1,800 feet northeast of the Site. Further review of the CalGEM map did not identify any oil, gas, or injection wells within one mile of the Site.

3.3 User/Owner Provided Information

3.3.1 Previous Environmental Reports

No previous environmental reports were provided for review.

3.3.2 User Questionnaire

Per ASTM E1527-13, a user questionnaire was provided to the User to inquire about specialized information related to the Site. To date, completed questionnaires have not been provided to Langan; however, Tracey Schwartz, Principal – EHS Due Diligence and Remediation of Amazon indicated that she has no specialized knowledge of environmental conditions on the Site. If information becomes available that alters the conclusions of this report, an addendum will be issued.

3.3.3 Owner-Operator Questionnaire

As of the date of this report, an owner-operator questionnaire has not yet been returned.

4.0 SITE RECONNAISSANCE

Due to the requirements of the current Bay Area shelter-in-place order associated with the current COVID-19 outbreak, a Site reconnaissance could not be completed. This is considered a significant data gap that may alter the conclusions of this Phase I ESA, and is discussed in Section 7.2.

5.0 INTERVIEWS

5.1 Property Representatives

Walt Stephenson, Managing Director with Cushman & Wakefield

Langan conducted a telephone interview with Walt Stephenson on April 16, 2020. Mr. Stephenson indicated that Pick-n-Pull vacated the Site at the end of March 2020. Mr. Stephenson indicated that Pick-N-Pull utilized the facility as a self-serve automobile scrap yard. According to Mr. Stephenson, the main warehouse building was utilized as an office/customer area. Customers would enter this area to find out where in the scrapyard lot that a type of automobile could be located. Mr. Stephenson indicated it was his understanding that all automobiles were drained of all fluids prior to placement in the scrapyard. Mr. Stephenson indicated he is unaware

of any previous environmental reports for the Site. Mr. Stephenson indicated that the warehouse building does not have heat but does have two air conditioning units. Additional relevant information regarding the Site that was provided by Mr. Stephenson is included in various portions of this report where appropriate.

5.2 Federal, State and/or Local Government Officials

Federal, state, and local officials were not interviewed as part of this Phase I ESA; however, the agencies were contacted via email correspondence, telephone interviews, and/or online requests to obtain available records of environmental concerns, violations, and/or permits pertaining to the Site, as summarized below:

- USEPA – Database search;
- Santa Clara County Fire Department – Email sent to administrative, fire bureau, and communications representatives;
- San Jose Municipality – Submitted an online request and an email to building and planning departments;
- Santa Clara County – Email sent to public health department and county clerk;
- Certified Unified Program Agency (CUPA) – Email sent to program manager, the public CUPA email address, and to the San Jose fire department;
- California Environmental Protection Agency (CEPA) – Submitted an online request;
- Department of Toxic Substances Control (DTSC) – Submitted an online request;
- Regional Water Quality Control Board (RWQCB) – Submitted an online request; and
- City of San Jose Permit Center – Performed an online search.

Complete responses to the FOIA requests have not yet been received from the San Jose Municipality, and the Certified Unified Program Agency. Should pending responses alter the conclusions provided within this report, we will issue the modified conclusions as an addendum. In addition, the Site was not identified in the GeoTracker and EnviroStor online databases. The following FOIA responses were received:

USEPA

Langan performed a search of the USEPA MyEnvironment, MyPropertyInfo, and ECHO databases on April 20, 2020. The Site was identified in the ECHO, RCRA, Multisystems, and Facility Detail Report databases (FINDS). The Multisystems listing indicates a general permit was issued to the Site on July 1, 2015 and expires June 30, 2020. No open violations were reported. The FINDS, ECHO, and RCRA results are consistent with the available regulatory database information discussed in Section 3.2.1 of this report and copies of the database information are included in Appendix D.

Santa Clara County Department of Health

The Department of Planning and Development responded on November 27, 2019, stating that the department does not maintain records for the property. A copy of the department's response is included in Appendix D.

Santa Clara County Department of Planning and Development

The Department of Planning and Development responded on December 2, 2019, stating that the APNs requested are in the City of San Jose, and therefore the department does not maintain records for the property. A copy of the department's response is included in Appendix D.

CEPA

CEPA provided Langan documents via email on December 3, 2019. The documents included three Notice of Inspection records, a San Jose Business Activity Document, a 2017 letter from The Santa Clara Department of Environmental Health requesting submittal of a HMBP, and 2012 and 2013 HMBP submittals. The Department of Environmental Health issued violations to Pick-n-Pull in 2002. These violations included: inability to provide hazardous waste generator permit, hauling waste oil to a recycling vendor without leaving a receipt or record, unlabeled containers of waste oil, open waste containers, delinquency in weekly inspections by staff, and no records of waste transferred from facility were available. Pick-n-Pull addressed the violations within 30 days. The California Environmental Reporting System document indicates that Pick-n-Pull's submittal for facility information and hazardous materials inventory have been accepted as administratively complete on September 9, 2019. The report shows that Pick-n-Pull stores hazardous materials on site and classifies the facility as a Hazardous Waste Generator and reports that the Site does not contain any USTs. The Hazardous Materials and Wastes Inventory Matrix Report indicates that Pick-n-Pull stores motor oil, new car batteries, used car batteries, diesel fuel, oily/absorbent dirt, used oil filters, and waste oil.

San Jose Fire Department

The San Jose Fire Department provided HAZMAT records via email on December 3, 2019, including Hazardous Material Business Plan (HMBP) and inspection documents for Pick-n-Pull. HMBP Documents stated that diesel fuel is used for equipment, oils are drained from customer vehicles and cores and then hauled off site and recycled by vendor, batteries are removed from cars and hauled offsite for recycling by a vendor, and oily absorbent/dirt is hauled offsite by a vendor for recycling. Additionally, a spill was reported to the San Jose Fire Department by Pick-n-Pull on March 11, 1991. According to a March 11, 1991 Hazardous Materials Spill Report, a release of 15 gallons of hydraulic oil onto soil occurred (location not provided) on March 10, 1991. The contaminated soil was reportedly shoveled by the owner who also attempted to pump a pond, but resorted to using absorbent pads to remove oil from the water. According to a 2003 Stormwater Map, the pond is located to the west of the building/south of the parking lot. Evergreen Environmental Services was documented as the contractor that removed the material from the Site. The spill report did not indicate whether or not follow-up action was required, and

no other documentation regarding this incident was provided. Pick-n-Pull received multiple violations from the San Jose Fire Department over time. Violations pertained to illumination, maximum allowable quantity per control area, spill control and secondary containment for liquid, inspection, testing, and maintenance, storage under stairs, and insufficient secondary containment for used batteries. The most recent inspection date of August, 26 2019 resulted in violations and indicates that various spills and leaks were observed throughout the site. The leaks were documented as appearing to be from heavy equipment and were believed to be oil. An inspection to determine compliance with the August 26, 2019 notice was reportedly to be conducted on or after September 23, 2019. No further information regarding compliance is provided. Inspections also took place from 1984 to 1988 for Valley Auto Wreckers, past tenants of the Site, and indicated that the tenants were storing combustible materials, flammable liquid, welding and cutting, waste, oxygen, propane, diesel, waste oil, and waste gas in above ground storage containers.

City of San Jose Building Department

The Building Department responded on December 4, 2019, stating that all documents are available online for free. The department included instructions to access these permits. On December 5, 2019, a search was performed in the San Jose Permits website, and a variety of permits associated with the Site were identified. These included electrical permits, partial demolition of canopy and building, plumbing and or gas piping, and construction of a type V building access. A copy of the department's response and these documents is included in Appendix D.

Department of Toxic Substances Control

The DTSC responded on December 4, 2019, stating that they maintain no records for the Site. A copy of the response is provided in Appendix D.

Regional Water Quality Control Board (RWQCB)

The RWQCB responded to Langan's request on December 6, 2019 stating that they did not have any additional file information for the Site, however, an NOI permit and annual reports relating to Industrial Stormwater are available online in the Stormwater Multiple Application and Report Tracking System (SMARTS). Langan searched SMARTs on April 20, 2020 and located a Stormwater Pollution and Prevention Plan (SWPPP) submitted by Pick-n-Pull Auto Dismantlers, LLC on November 21, 2018. Potential pollutants recorded include total suspended solids (TSS), oil and grease, metals (aluminum, iron, and lead), coolants, washer fluids, and other corrosive materials (acids and bases). Potential pollutant sources include material receiving of supplies and end-of-life vehicles, vehicle setting/displaying/storage, customer vehicle parts pulling, customer sales and returns, customer used oil drop-off, vehicle core removal and de-wiring, waste management, and routine equipment maintenance and repairs. A copy of this document is included in Appendix D.

San Jose Environmental Services Department

The San Jose Environmental Services Department responded to Langan's request via email on December 11, 2019 and provided copies of various inspection reports. Violations were noted from inspections in 2003, 2005, and 2010. A 2003 inspection noted violations related to residual spills and leaks across the entire Site. A 2005 inspection noted similar observations of leaks/stains, and also requested that covers be provided for compactors, dumpsters, and recycle bins. A 2010 inspection requested that drip pans be used under automobiles and also noted that a 4,500- to 5,000-gallon oil/water separator is located at the Site that is serviced annually. The available information indicates the violations were resolved.

In addition, an evacuation map dated July 22, 2003 for the Site was provided that showed the locations of various features, including waste oil storage area, a pond, and a core/battery storage area. These features are labeled on Figure 2. Copies of the department's response and these documents is included in Appendix D.

City of San Jose Permit Center

Langan searched the Permit Center on-line database on April 15, 2020. Historical permits associated with development at the Site were identified, but none were of environmental concern. In addition, information about liquefaction concerns was identified and discussed in Section 2.3.2 of this report. A copy of these documents is included in Appendix D.

6.0 NON-SCOPE CONSIDERATIONS

6.1 Radon

Radon is a colorless, odorless radioactive gas that results from the natural breakdown of uranium minerals in soil, rock, and water, which subsequently enters the atmosphere. Radon can concentrate in buildings, entering through cracks and other penetrations of a building foundation. Some areas are more likely to have elevated concentrations of radon than others, reflecting subsurface lithological conditions.

According to Federal Area Radon information provided by EDR, Santa Clara County is a Radon Zone 2 (indoor average greater than 2 and less than 4 picocuries per liter [pCi/L]) and the one site tested in Santa Clara County had a reading less than 4 pCi/L. The state radon database information indicate that only one of the 19 tests in the Sites' tested had a radon result above 4 pCi/L. The USEPA recommends indoor air radon levels should be less than 4 pCi/L. Based on available information, there is low potential for elevated radon levels at the Site.

6.2 Asbestos-Containing Material, Lead-Based Paint, PCBs, and Mold

A formal survey to identify asbestos-containing material (ACM), lead-based paint (LBP), PCB-containing material, and/or mold was not conducted as part of this Phase I ESA. Because the

main building at the Site was built by 1956, it is possible that ACM, LBP, and/or building related PCBs are present.

7.0 EVALUATION

7.1 Findings and Opinions

Due to the requirements of the current Bay Area shelter-in-place order associated with the current COVID-19 outbreak, a Site reconnaissance could not be completed. This is considered a significant data gap that may alter the conclusions of this Phase I ESA.

The Phase I ESA identified two RECs and one BER associated with the Site, as discussed in detail below.

A REC was identified associated with historical Site operations; the Site was utilized as an automobile wrecking yard from the 1950s until March 2020. In addition, the Site has a history of violations and small spills associated with historical automobile wrecking operations. Spills or releases of regulated substances associated with historical automobile wrecking operations have likely impacted soil, groundwater, and/or soil gas conditions at the Site. A second REC was identified associated with historical and current operations/uses on adjacent and surrounding properties, which have included automobile and truck repair, electronics scrap recycling, manufacturing, machine shops, and gasoline filling stations. One or more of these properties is located in the inferred hydraulically-up-gradient direction of the Site and have documented releases of regulated substances and histories of violations. Releases of regulated substances at these surrounding properties have likely impacted groundwater and/or soil gas conditions at the Site.

One BER was identified. The main building was constructed by 1956. Based on the age of the building, the building materials may contain ACM, LBP, and/or PCBs.

No HRECs, CRECs, de minimis conditions, or conditions of environmental interest (COEIs) were identified.

7.2 Deviations and Data Gaps

In order to address data gaps, additional sources of information may be consulted. According to AAI, Section 312.20 (g), "to the extent there are data gaps (as defined in section 312.10) in the information developed...that affect the ability of persons (including the environmental professional) conducting the all appropriate inquiries to identify conditions indicative of releases or threatened releases...such persons should identify such data gaps, identify the sources of information consulted to address such data gaps, and comment upon the significance of such data gaps." According to ASTM E 1527-13, Section 8.3.2.3, "historical research is complete when either: (1) the objectives in 8.3.1 through 8.3.2.2 are achieved; or (2) data failure is encountered. Data failure occurs when all the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met...If data failure

is encountered, the report shall document the failure and, if any of the standard historical sources were excluded, give the reasons for the exclusion."

This Phase I ESA was completed without significant data gaps other than the following:

- FOIA Responses - Responses to certain FOIA requests have not yet been received. This data gap is not expected to alter the conclusions of this Phase I ESA. If information is received later pertaining to this data gap that alters the conclusions of this Phase I ESA, an Addendum will be issued that includes a summary of the new information with modified conclusions.
- Site Reconnaissance - Due to the requirements of the current Bay Area shelter-in-place order associated with the current COVID-19 outbreak, a Site the reconnaissance could not be completed. Because the Site has been used as an automobile wrecking yard that handled regulated substances, this is considered to be a significant data gap that may alter the findings and conclusions of this Phase I ESA.

7.3 Conclusions

This Phase I ESA was conducted in general accordance with the ASTM Practice E1527-13 (Standard Practice for ESA: Phase I ESA Process) and the EPA AAI Rule. The objective of this Phase I ESA was to identify the presence or likely presence, use, or release on the Site of hazardous substances or petroleum products as defined in ASTM E1527-13 as a REC. Due to the requirements of the Bay Area shelter-in-place order associated with the current COVID-19 outbreak, a Site reconnaissance could not be completed. This is considered a significant data gap that may alter the conclusions of this Phase I ESA.

The Phase I ESA identified the following RECs associated with the Site:

- **REC-1 – Historical Site Operations:** The Site was utilized as an automobile wrecking yard from the 1950s until March 2020. According to a 2019 HBMP for Pick-n-Pull, diesel fuel was used for equipment, oils were drained from customer vehicles and cores and then hauled off the Site and recycled by vendor, batteries were removed from cars and hauled off the Site for recycling by a vendor, and oily absorbent/dirt was hauled off the Site by a vendor for recycling. The most recent inspection by the SJFD on August, 26 2019 resulted in violations related to various spills and leaks that were observed throughout the Site. The leaks were documented as appearing to be from heavy equipment and were believed to be oil. A follow-up inspection to determine compliance was to be completed, but Langan was not provided documentation indicating this follow-up inspection was completed. Similar violations were reported from 2002, 2003, 2005, and 2010. SJFD records indicate that a spill of 15 gallons of hydraulic occurred in 1991 that was reportedly cleaned up, but no regulatory closure information is available. A 2010 inspection noted the presence of a 4,500- to 5,000-gallon oil/water separator at the Site; the location was not provided. According to SJFD records, inspections from 1984 to

1988 for Valley Auto Wreckers (previous Site tenant) indicated this previous tenant was observed to be storing combustible materials, flammable liquid, welding and cutting, waste, oxygen, propane, diesel, waste oil, and waste gas in above ground storage containers. Spills or releases of regulated substances associated with historical automobile wrecking operations have likely impacted soil, groundwater, and/or soil gas conditions at the Site.

- **REC-2 - Historical and Current Operations at Adjacent and Surrounding Facilities:** Historical and current operations/uses on adjacent and surrounding properties has included automobile and truck repair, electronics scrap recycling, manufacturing, machine shops, and gasoline filling stations. One or more of these properties is located in the inferred hydraulically-up-gradient direction of the Site and have documented releases of regulated substances and histories of violations. Releases of regulated substances at these surrounding properties have likely impacted groundwater and/or soil gas conditions at the Site.

The following Business Environmental Risk (BER) was identified:

- **BER-1 - Potential ACM, LBP, PCBs in Building Materials:** The main building was constructed by 1956. Based on the age of the building, the building materials may contain ACM, LBP, and/or PCBs.

No HRECs, CRECs, de minimis conditions, or COELs were identified.

7.4 Environmental Professional Declaration

Langan declares that, to the best of its professional knowledge and belief, that the personnel who performed this Phase I ESA meet the definition of *Environmental Professional* as defined in Subsection 312.10 of 40 Code of Federal Regulations (CFR) 312 and that they have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. These professionals have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

This Phase I ESA was prepared by Project Scientist Thomas Stasny, Staff Geologist Brynn Yochim, and Staff Engineer Christina Rogers, and reviewed by Project Geologist Katherine Linnell. Resumes outlying their qualifications are provided in Appendix F.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 01/25/2022 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 01/25/2022 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/25/2022 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 9 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/25/2021 has revealed that there are 15 CA ENVIROSTOR sites within approximately 1 mile of the target property.

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 13 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 55 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 09/30/2017 has revealed that there is 1 2020 COR ACTION site within approximately 0.25 miles of the target property.

CA CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CA CUPA Listings list, as provided by EDR, has revealed that there are 135 CA CUPA Listings sites within approximately 0.25 miles of the target property.

CA HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSTATES]. This listing is no longer updated by the state agency.

A review of the CA HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 36 CA HIST CORTESE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 9 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Summary Details:

Conditions at proposal October 15, 1984): Lorent Barrel Drum Co. recycles drums at a plant in San Jose, Santa Clara County, California. The 5-acre site is surrounded by residential, industrial, and business areas. On-site monitoring wells are contaminated with trichloroethane, trichloroethylene, 1,1-dichloroethylene, and tetrachloroethylene, according to analyses conducted by a consultant to Lorent. Contamination is believed to have resulted from overflowing sumps and spills. About 250,000 people obtain drinking water from wells within 3 miles of the site. Lorent is working with the California Regional Water Quality Control Board (CRWQCB) to determine the extent of ground water contamination. The board issued a Cleanup and Abatement Order to the company in August 1983. The plant received Interim Status under Subtitle C of the Resource Conservation and Recovery Act (RCRA) when the company filed Part A of a permit application. On March 25, 1981, EPA removed the facility as a treatment, storage, or disposal facility because it was not engaged in hazardous waste activities. This is one of 19 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status February 1986): In March 1985, EPA and the California Department of Health Services (CDHS) discovered over 300 drums containing phenols, methylene chloride, and PCBs stored on the Lorent property. In response to action by the Santa Clara District Attorney, the company removed the drums. CRWQCB is overseeing the Lorent investigation to determine the extent of ground water contamination. CDHS will oversee the investigation of soil contamination. On February 7, 1986, the Santa Clara County District Attorney filed a complaint against the company for violation of State hazardous waste laws. The facility has been shut down until procedures for compliance are developed. Status June 24, 1988): EPA is proposing to place this previously proposed RCRA site on the final NPL. The company is classified as a non-filer. Hence, it satisfies a component of EPA's NPL/RCRA policy. In July 1987, the owner of the Lorent site was ordered to shut it down permanently, sentenced to 2 years in jail, and fined 2.04 million. Recent sampling by CDHS consultants has shown extensive contamination in soil and ground water, both on- and off-site. In addition to the chlorinated organics identified earlier, pesticides, metals, and PCBs are present. On December 1, 1987, EPA took over as lead agency for a remedial investigation/feasibility study (RI/FS) at the site. In February 1988, CDHS completed an expedited response action consisting of excavating soil with high concentrations of PCBs. In March 1988, EPA and CDHS completed removal of 1,000 drums of hazardous materials. All materials were transported to regulated disposal facilities. The site was then graded and the surface sealed to control drainage. In May 1988, EPA completed an engineering evaluation cost analysis for systems to pump and treat shallow contaminated ground water. Status October 4, 1989): EPA has placed this site on the NPL. EPA completed the RI/FS. Following a period of public

comment, a Record of Decision was signed in September 1988 finalizing the remedy as treatment of ground water with an on-site ultraviolet light oxidation system. EPA is currently designing an off-site extraction system and an on-site treatment facility. EPA is also investigating the extent of the contamination in soils and on structures and expects to complete an RI/FS for the overall site in early 1990.

Completed Info:

Completed Area Name: Newark Group property
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction
Completed Date: 06/10/2005
Comments: Deed restriction recorded for property currently owned by the Newark Group. Residences, hospitals, day care facilities, food cultivation, and groundwater extraction are prohibited at the site. Cap interference is also prohibited.

Completed Area Name: Newark Group property
Completed Sub Area Name: Not reported
Completed Document Type: Consent Settlement - Administrative
Completed Date: 04/22/2005
Comments: Consent Order signed. The Newark Group agreed to pay response costs incurred by DTSC and to abide by the terms of the site deed restriction.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Record of Decision - Amendment
Completed Date: 03/10/1998
Comments: US EPA approved a ROD amendment for groundwater treatment process.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Record of Decision w/ESD
Completed Date: 05/21/1998
Comments: US-EPA approved an ESD for soil remediation.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 09/28/1998
Comments: Preliminary close-out report finalized. Report documents completion of construction activities for OU1 and OU2. Remaining response consists of operation and maintenance of groundwater treatment system, soil vapor extraction system, and cap.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 05/15/1998
Comments: Cap design completed. Design calls for 229,000 square feet of 3" asphalt concrete pavement with 6" layer of aggregate base.

Comments: Remedial design report approved. Report outlines plans for design, installation, and O&M of SVE system and asphalt cap.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 09/30/1994
Comments: EPA completed 3 separate removal actions: (1) Removal of 5 buildings and the process equipment and scrap within including 17 sumps, 7 tanks and several debris stockpiled. At the end of this RA, 1033 tons of industrial wastes, 15 tons of liquid hazardous was and 73 tons of solid hazardous waste was shipped off-site for disposal. (2) Removal of 1200 drums, 150 drums containing solvents, 350 drums containing debris, and 23 drums containing ash and liquids. Removal of tanks, vats, sumps, and process equipment. Removal of 1.18 tons of asbestos containing building materials. (3) Paving of previously and newly exposed surface soil resulting from the above removal actions. Paving used a chip seal material. Approximately 4-1/4 acres were sealed.

Completed Date: 10/15/1993
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Record of Decision
Completed Date: 08/26/1993
Comments: EPA issued ROD for soil operable unit. The ROD addresses soil/source remediation.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 04/22/1993
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 03/30/1992
Comments: Shallow groundwater treatment system completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 06/28/1991
Comments: Remedial design for groundwater completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Record of Decision
Completed Date: 09/30/1988
Comments: EPA issued a ROD for the shallow groundwater operable unit. The remedy includes extraction/treatment of shallow groundwater and discharge of treated water to the storm sewer.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 08/30/1988
Comments: Completed EE/CA for shallow groundwater expedited response action. Groundwater pump-and-treat system was determined to be an effective method for remediating the shallow groundwater.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 03/30/1988
Comments: Implemented an Expedited Response Action (ERA). The ERA consisted of the following activities: drum inventory; construction of decontamination facilities; removal of polychlorinated biphenyl (PCB) contaminated pits, which were later backfilled with clean soil and capped; removal, recycling, or treatment of thousands of gallons of processed plant liquids; removal of 15 tons of contaminated scrap; and design of a surface water control plan, which was submitted to EPA for implementation. EPA installed a chip seal over approximately two thirds of the five-acre site. Demobilization occurred at the end of March 1988. A total of 21,286 drums, 1,330 tons of scrap metal, and 2,982 cubic yards of contaminated soil were removed from the site.

contamination in surface soils, subsurface soils, groundwater, surface water, air, and structures evaluated. Fate and transport of PCBs, pesticides, VOCs, base/neutral and acid extractable compounds, metals, and dioxins/furans discussed. Current and future exposure pathways included in baseline risk assessment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 02/01/1987
Comments: Preliminary Site Assessment completed. Report summarizes site characteristics, site history, known soil and groundwater conditions, hydrogeology, surface hydrology, and risks to nearby receptors.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 06/19/1992
Comments: Six addenda to the Remedial Investigation include: report of monitoring well installations in Zone B, C, and D aquifers; results of shallow soil investigation on Recycled Fibers, Inc. property; update to the risk assessment for soils; results of the investigation of four conduits near the leading edge of the plume; results of soil sampling; results of installation and sampling of a monitoring well in the Zone C aquifer.

Completed Area Name: Newark Group property
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Plan Amendment
Completed Date: 08/01/2006
Comments: Soil investigation concluded that pesticides, PCE, TCE, and metals including arsenic were present in soil, however, all contaminants were present at concentrations below human health screening levels (or established background). The proposed design for the repairs includes removal of 1,424 square feet of concrete and asphalt, replacement of the cap in these areas with slab and AC over 12" of aggregate, and sealing of 4,000 linear feet of less severe cracks with joint sealant.

Completed Area Name: Shallow Groundwater
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 12/27/2007
Comments: 2007 GW monitoring report reviewed by DTSC and found to be adequate.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Unilateral Order (I/SE, RAO, CAO, EPA AO)
Completed Date: 02/23/1987
Comments: DTSC issued RAO for soil and groundwater contamination resulting from drum reconditioning business.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Consent Order
Completed Date: 01/27/2004
Comments: Consent decree signed to recover DTSC response costs from the primary

large quantity generators.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Consent Decree
Completed Date: 05/23/1995
Comments: Administrative order on consent signed for de minimis settlement. The settlement pertains to 89 parties, each contributing less than 1% of the drums recycled at the facility.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Consent Decree
Completed Date: 09/23/1996
Comments: Administrative consent order signed for the 2nd round of cost recovery de minimus settlement. Settling parties contributed less than 1% of total drums recycled at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Consent Decree
Completed Date: 09/16/1997
Comments: Administrative consent order signed for the 3rd round of the cost recovery de minimus settlement. Settling parties contributed less than 1% of total drums recycled at the site.

Completed Area Name: 10th Street Land Management property
Completed Sub Area Name: Not reported
Completed Document Type: Consent Order
Completed Date: 01/23/2002
Comments: DTSC signed Prospective Purchaser Agreement with 10th Street Land Management. Property will be used as a long-term storage yard for commercial and construction vehicles. Settling respondent to maintain site cap and enter into a land use covenant.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 01/16/2008
Comments: Not reported

Completed Area Name: 10th Street Land Management property
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 11/16/2006
Comments: Site inspection found compliance with land use covenant on 10th Street Land Management property.

Completed Area Name: Newark Group property
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 11/16/2006
Comments: Site inspection found compliance with land use covenant on Newark Group property.

Completed Document Type: Land Use Restriction
Completed Date: 03/06/2002
Comments: Deed restriction recorded for property owned by 10th Street Land Management. Residences, hospitals, day care facilities, food cultivation, and groundwater extraction are prohibited at the site. Interference with site cap and remediation system are also prohibited. Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Consent Decree
Completed Date: 10/07/1992
Comments: Seven respondents signed agreement to conduct a limited removal action at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Consent Decree
Completed Date: 09/30/1989
Comments: EPA issued a Consent Decree with 11 PRPs to implement the groundwater remediation recommended by the ROD. In May 1989, EPA conducted an investigation, identifying approximately 200 companies who had delivered drums and barrels to the former drum recycling facility.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Unilateral Order (I/SE, RAO, CAO, EPA AO)
Completed Date: 06/30/1987
Comments: Determined noncompliance with the RAO issued in February 1987.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 09/21/2010
Comments: DTSC reviewed the 5-year report and did not have any comments and concurs with the USEPA recommendations in the report and the finding that the selected remedy continues to be protective in the short-term. Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 07/30/2010
Comments: DTSC have reviewed the shallow groundwater treatment monitoring report and has no comments. This is a USEPA and WaterBoard lead site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Feasibility Study Workplan
Completed Date: 12/19/2011
Comments: The USEPA has approved the feasibility study workplan for Lorentz Barrel and Drum. The draft Sampling and Analysis Plan and the draft Quality Assurance Project Plan is due January 4th, 2012.

Comments: Lorentz Barrel and Drum submitted the 2011 Annual Groundwater Monitoring Report No. 43.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 01/31/2012
Comments: Groundwater treatment report for September 2011 - December 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 12/16/2011
Comments: Annual groundwater monitoring report from December 1, 2010 through November 30, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Record of Decision w/ESD
Completed Date: 11/22/2013
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 09/01/2015
Comments: The Fourth Five-Year Review Report identified as a remedy performance issue that the migration of 1,4-dioxane may not be controlled and there is continued diffusion of contamination from the A/B aquitard to Zone A soil vapor and Zone B groundwater. The remedies for OU-1 and OU-2 were determined to be protective of human health and the environment; however, in order for the remedies to be protective in the long-term, the Focused Feasibility Study needs to be completed in order to evaluate the current remedies for both OU-1 and OU-2 and make recommendations to modify the existing remedies or select new remedies for both OUs. .

Environmental Interest/Information System:

SUPERFUND NPL
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Violation Date: 08-27-2019
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes: Returned to compliance on 10/16/2019. Facility does not have a hazardous waste ID.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 132123
Site Name: MAC PEREZ & SON STREET RODS
Violation Date: 08-27-2019
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Observed 1x 5-gallon container labeled as thinner in the back of the lot. Determine whether this is a waste or good product. If it is a hazardous waste, dispose of it immediately. Observed 1x 5-gallon can with a rust-colored solidified material also in the back. Determine whether this is a hazardous waste, and if so, dispose of it immediately.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 08-02-2018
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: On-site with Xavier Dupree of HMCD to perform a Hazardous Waste Generator permit investigation in response to the owner stating that business operations have decreased. Mac Perez and Son Street Rods does auto body and painting. Consent for a facility walk-through was obtained from Owner, Mac Perez. No hazardous waste containers were observed, however due to the nature of the business, it is determined that a hazardous waste generator permit is needed. Observed various non-empty plastic paint cups with miscellaneous paints and liquids. Observed approx. 3 x 5 gal cans of paint thinner as open, contents unknown. Observed various aerosol cans that may or may not be in use. Observed other paint contaminated materials such as paint sticks and rags. Based on these observations, the business is correctly permitted as a Hazardous Waste Generator, <10 gal/ year. Notes: - No EPA ID number. DTSC Form 1358 was provided and Mr. Perez was given guidance on how to fill it [Truncated]

Eval Type: Other, not routine, done by local agency
Eval Notes: On-site with Ethan McDermott, Hazardous Materials Technician, to perform a permit investigation as a result of unpaid permit fees. Perez and Son, is an auto body repair shop. The Owner Mac Perez, states that he does not generate hazardous waste anymore. Mr. Perez states that he was originally permitted for unused paint; however, he has downsized his business. Mr. Perez states that he now gives the unused paint product to his customers after the completion of the repair job. At the time of inspection I observed a step can of used towels. Mr. Perez states that he uses the towels to wipe down the cars before he paints and polish the vehicles. Mr. Perez launders the rags himself. Additionally, I observed one cylinder of oxygen at 284 csf. Mr Perez states that he will downsize the cylinder within 30 days. Mr. Perez does not currently have an EPA ID number. Further investigation is needed to determine if a Hazardous Waste Permit is still required.

Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-27-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site to perform a routine hazardous waste inspection. NOTES: - Facility is a one-man auto restoration shop which rarely does small paint jobs. - Containers are inspected weekly. - Fire extinguishers were serviced 11/29/18. - Absorbent is available. - This shop has an oxygen/acetylene torch, with the oxygen cylinder at 282 cubic feet. Mr. Perez stated that he intends to dispose of this as soon as possible. Please contact HMCD within 30 days to verify that the cylinder is gone, or this facility will be permitted for a Hazardous Materials Business Plan. The following documents were provided today: - UN-051 (Emergency Procedures) - DTSC Form 1358 - A hazardous waste label Per HSC 25187.8, the following minor violations were corrected during this inspection: G020: MARKING OF HAZARDOUS WASTE Observed 1x 5-gallon can of waste thinner without any hazardous waste markings. A completed hazardous waste label was attached during the inspection. G211: [Truncated]

 Name: SAN JOSE GENERATOR
 Address: 40 SAN JOSE AV
 City,State,Zip: SAN JOSE, CA 95125
 Site ID: 150590
 CERS ID: 10352575
 CERS Description: Hazardous Waste Generator

Violations:

Site ID: 150590
 Site Name: SAN JOSE GENERATOR
 Violation Date: 09-04-2019
 Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31

Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violation Notes: Returned to compliance on 11/26/2019. The area around the 55-gallon drum of used oil is not clear, so any potential small leaks would not be able to be detected for a lengthy period of time (there is no secondary containment for this drum).

Violation Division: Santa Clara County Environmental Health

Site Name: SAN JOSE GENERATOR
Violation Date: 09-04-2019
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11

Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violation Notes: Returned to compliance on 11/26/2019. Mr. Vargas stated that absorbent is used to clean small spills. After a single use, absorbent is bagged and given to a neighbor for disposal. Determine whether this single-use absorbent meets hazardous waste criteria, and if so, dispose of it properly. Management of saturated absorbent was also discussed with Mr. Vargas. A 30-gallon drum of waste parts washing solvent has been on-site since the previous ownership. Mr. Vargas stated that Safety Kleen had said a while ago that they would pick it up, but never did. Determine whether this waste solvent meets hazardous waste criteria, and dispose of it properly.

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-04-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes:

On-site to perform a routine inspection for the following permits: - 2201 (Hazardous waste generator: waste oil only) NOTES: - Facility is a one-man alternator and starter repair shop. Mr. Vargas took ownership approximately three years ago, and has been operating under the previous owner's permit. - Fire extinguishers were serviced 5/17/19. - Absorbent is available. - Rags are commercially laundered. - A sand blaster is on-site and used to blast aluminum plates. Sand media is filtered through a sieve, with large particles such as paint chips being removed. These large particles are disposed of in trash. - Discussed with Mr. Vargas that the facility meets Hazardous Materials Business Plan thresholds at the moment. Mr. Vargas stated that the 55-gallon drum of used oil would be swapped out for a smaller one within the next month. A new HMBP permit will be issued approximately 30 days from today, unless HMCD is notified that the drum has been swapped. The [Truncated]

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit a site map with all required content.

Violation Notes: The site map submitted on 1/29/19 is inaccurate: Adjacent streets identified include "West 7th Street" and "North Phelan Avenue" - 7th Street is not designated in the west-east direction, and Phelan Ave is not designated by any direction. In addition, Monterey Ave., which the storefront faces, is not identified on the map at all. The building itself is facing the wrong direction (the front door seems to be facing 7th St., and the back door faces where Monterey Rd. would be). Given the incorrect orientation of the building, it is unclear whether the evacuation staging area and storm drain shown on the map are accurate. Finally, internal roads (including the parking lot(s) are not identified; the map makes it appear that the building is directly adjacent to both 7th St. and Phelan Ave. (it should be noted that 7th St. is actually quite a distance away, with many buildings between this one and the street itself).

Violation Description: 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Failure to ensure employees are familiar with the handling and compliance of hazardous waste regulations and emergency response.

Violation Notes: FACILITY MANAGER WAS UNAWARE OF THE REQUIREMENTS TO PROPERLY SUBMIT, MANAGE AND RETAIN COPIES OF UNIFORM HAZARDOUS WASTE MANIFESTS (BOTH THE REQUIREMENT TO SUBMIT GENERATOR COPIES TO DTSC WITHIN 30 DAYS AND THE REQUIREMENT TO RECEIVE THE SIGNED TSDF COPIES OF THE UNIFORM HAZARDOUS WASTE MANIFEST WITHIN 60 DAYS AND TO RETAIN THE HAZARDOUS WASTE MANIFESTS FOR 3 YEARS FOR REVIEW BY THE ADMINISTRATING AGENCY) THE FACILITY MANAGER NEEDS TRAINING TO BE FAMILIAR IN PROPER UNIFORM HAZARDOUS WASTE MANIFESTING PROCEDURES.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 116480
Site Name: FinishMaster, Inc. #233
Violation Date: 09-04-2019
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: A 55-gallon drum of liquid paint-related material had a date marking of "6/5" with no year. Multiple employees confirmed that no waste has been added to this drum for a "long time" (multiple years).

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-04-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: - CERS ID 10138157. - Most recent HMBP electronically submitted on 1/29/19 (facility info, inventory) and 2/1/19 (emergency response and training plans). - Training documentation was reviewed. This facility is currently permitted for 7-9 HMBP chemicals. The majority of chemicals on-site are for retail and wholesale (this location is roughly 70% wholesale, 30% retail). The only HMBP-threshold chemicals on-site that are not for retail sale are: - Liquid paint-related material (55 gallons) UNRESOLVED ISSUE: It is unclear whether chemicals which may go out as retail or wholesale products are subject to the retail exemption in CA Health and Safety Code section 25507(b)(5). If so, the HMBP permit will be updated to BP01. If not, the permit will be re-evaluated based on reported amounts in the most recent HMBP. Mr. Garcia also stated that the 55-gallon drum of paint-related material may be removed from this site completely, since it is not in use anymore. If that is and [Truncated]

container with a tight-fitting lid. - A spill kit is available. - Personnel are trained annually. INFORMATION REQUEST: Branch Manager, Carlos Garcia, was able to provide bills of lading showing shipments of various hazardous materials to a FinishMaster distribution center. However, no hazardous waste manifests were available. Mr. Garcia stated that when waste (including expired retail products) is picked up, the bills of lading are what is given to the store by the transporter, Reddaway. Other than expired retail products, the only hazardous waste on-site is liquid [Truncated]

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violations:
Site ID: 22693
Site Name: CRS DRYWALL INC
Violation Date: 02-21-2017
Citation: HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22
Violation Description: Failure to properly manage used oil and/or fuel filters in accordance with the requirements.
Violation Notes: Returned to compliance on 04/25/2017. Observed 1 used oil filter outside of a proper container. Place filter in a closed, labeled container.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-21-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Onsite for a routine hazardous waste and Hazardous Materials Business Plan (HMBP) inspection. This facility does oil maintenance work on fleet vehicles. The only wastes are used oil and drained used oil filters. Hazardous waste ID CAL000321190 is active. Notes: - Receipts were reviewed. - Fire extinguishers and absorbent are available and maintained. - Emergency information is posted. - Hazardous waste containers are inspected weekly. The following minor violations were corrected during the inspection: G020: MARKING OF HAZARDOUS WASTE 1x 55-gallon drum of used oil had a complete label, but was marked with accumulation start date of 2/21/17.
Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-21-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: CERS ID 10345423. Most recent HMBP submittal was through FrontCounter on 8/19/19. Training documentation was reviewed. Facility has one reportable chemical: - Used oil (55 gallons) Property owner is also business owner.
Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-21-2017
Violations Found: No

Eval Type: Routine done by local agency
Eval Notes:

Facility does dry wall installation in the field and does oil changes on facility trucks. Facility generates used oil, lightly soiled rags/absorbent, and used metal oil filters. Facility does not drain antifreeze or work on brakes for vehicles. Inspection included walk-through of warehouse, vehicle workshop, outdoor perimeter, and inspection of trashcans. Documents for disposal of used oil for the past three years were reviewed, and facility generates an average of 5 gallons of oil per month. Ms. Silveira was given information on how to disposed of hazardous waste with the county small business disposal program. Fire extinguishers are annually serviced, spill kit is adequate, and emergency posting is up-to-date. EPA ID CAL000321190 is currently active. The following violations were corrected at the time of inspection: G020 Marking of hazardous waste: 1x55 gallon container of used oil had no hazardous waste label. A label was affixed at the time of inspection. [Truncated]

Eval Type: Routine done by local agency
Eval Notes: Facility is permitted as BP02. Reportable chemicals onsite include: - ATF/engine oil (220-gallon tank of ATF, ~85 gallons of engine oil) - Mineral spirits (55-gallon drum) - Oily water/parts washer waste (45-gallon washer, 55-gallon washer) - Used oil (4x 55-gallon drums) Property owner notification verified. HMBP (CERS ID 10354765) submitted through FrontCounter today (2/12/20).

Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-12-2020
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Onsite for a routine hazardous waste and Hazardous Materials Business Plan (HMBP) inspection. Facility is a transmission repair shop. Hazardous waste ID CAL000356984 is active. Notes: - Rags are commercially laundered. - Brake shavings are recycled. - Aerosol cans are fully emptied before disposal in trash. - Reviewed three years of manifests. - Training appears to be adequate. - Fire extinguishers and absorbent are both available and maintained. - Emergency information was posted. - This facility's permit will be adjusted from 2201 (generates waste oil only) to 2205 (generates 100kg to <5 tons per year); facility also generates waste parts wash fluid (prior to 2019, this was shipped as "oily water"). Additional action items: - Observed many small spills throughout the facility. Ensure spills are cleaned up immediately or soon after they occur. - Two consolidated manifest receipts for used oil printed only the first name of the employee who signed. Ensure [Truncated]

<p>Latitude: 37.31061 Longitude: -121.8694 Facility Type: Permitted - Operating Facility Size: Standardized Series A Supervisor: TARYN STOKELL BUCK Site Code: 200265, 510419 Senate District: 15 Assembly District: 27 Public Information Officer: Not reported Commercial Offsite Facility Types: EW / PC / Plastics, Precious Metal / Metal Quarterly Update: QUARTERLY UPDATE Quarterly Update Period: July through September 2021</p> <p>The Glencore Recycling facility is currently operating under a permit that is effective through May 6, 2022. No permitting regulatory activity has occurred. Permitted activities are not affected by March 19, 2020 California Covid-19 Stay-at-Home Order. FACILITY DESCRIPTION/HISTORY The Glencore Recycling LLC facility (Facility) is located at 1695 Monterey Highway, on the corner of Barnard Avenue and Monterey Highway, in San Jose, California. The site is bordered by Barnard Avenue to the southeast and Monterey Highway to the northeast. The Facility is located on approximately 2.2 acres of land zoned Heavy Industrial (HI) by the City of San Jose. The site was used for heavy manufacturing operations beginning in the 1930s. In the mid 1960s, several members of the Levin family acquired the property and operated a used equipment sales business affiliated with their nearby ferrous scrap yard. A metal recycling operation was established at this location under the name Micro Metallics Corporation in the early 1970s. The owner sold the business to Noranda Inc., a publicly traded company, in 1984. The underlying property is still held by a private company associated with the Levin family. In 2003, Noranda re-organized its US recycling operations under the name Noranda Recycling Inc. Noranda changed names to Falconbridge and then to Xstrata Copper Canada following a series of mergers and acquisitions. The Facility and business names were changed to Xstrata Recycling Inc. in August 2007 to conform to the new parent company. In July 2013, Xstrata Recycling Inc. changed its legal name to Glencore Recycling Inc. In December 2015, Glencore Recycling Inc. changed its legal name to Glencore Recycling LLC. Operations at the Facility include the processing of different types of materials for metals recovery including the following: electronic scrap, components, manufacturing byproducts, wastes, concentrates, and residues. Tray furnaces are used to bake materials</p> <p>Project Manager Lead: NANCY TU Project Manager: Not reported Permit Type: Standardized Permit Effective Date: 05/06/2012 (OP), Permit Expiration Date: 05/06/2022 (OP), Calenviroscreen Score: 71-75% Total Planned Hours: Not reported Total Planned Amount: Not reported Total Actual Hours: 0</p> <p>Activities: EPA ID: CAD069124717 Facility Type: Permitted - Operating Facility Name: GLENCORE RECYCLING LLC Project Manager: Not reported Project Manager Lead: NANCY TU Supervisor: TARYN STOKELL BUCK</p>	<p>QUARTERLY UPDATE Quarterly Update Period: July through September 2021</p> <p>The Glencore Recycling facility is currently operating under a permit that is effective through May 6, 2022. Comments:	Disposed as HW on 5/10/05.
Unit Names:	TANKSTR3 - ZORBTAN
Event Description:	Closure - RECEIVE CLOSURE CERTIFICATION
Actual Date:	06/30/2005
EPA ID:	CAD069124717
Facility Type:	Permitted - Operating
Facility Name:	GLENCORE RECYCLING LLC
Project Manager:	Not reported
Project Manager Lead:	NANCY TU
Supervisor:	TARYN STOKELL BUCK
Facility Size:	Standardized Series A
Facility Status:	OPERATING PERMIT
Activity Type:	Closure
Final Date:	Not reported
Type:	STND
Title Description:	Partial Closure, Tank Closed
Due Date:	Not reported
Comments:	Per closure acknowledgment letter.
Unit Names:	TANKSTR3 - ZORBTAN
Event Description:	Closure - CLOSURE PLAN APPROVED
Actual Date:	01/21/2005

Waste Code:	D011
Waste Description:	SILVER
Waste Code:	D035
Waste Description:	METHYL ETHYL KETONE
Waste Code:	F002
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS

CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: F008
Waste Description: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F009
Waste Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: K069
Waste Description: EMISSION CONTROL DUST/SLUDGE FROM SECONDARY LEAD SMELTING.

Waste Code: P015
Waste Description: BERYLLIUM

Waste Code: P029
Waste Description: COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)

Waste Code: P030
Waste Description: CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED

Waste Code: P098
Waste Description: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

Waste Code: P099
Waste Description: ARGENTATE (1-), BIS(CYANO-C)-, POTASSIUM (OR) POTASSIUM SILVER CYANIDE

CPS-SLIC:

Name: FORMER MICRO METALLICS
Address: 1695 MONTEREY HIGHWAY
City,State,Zip: SAN JOSE, CA 95112
Region: STATE
Facility Status: Completed - Case Closed
Status Date: 06/07/2016
Global Id: T10000009004
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 37.31061
Longitude: -121.86943
Case Type: Cleanup Program Site
Case Worker: Not reported
Local Agency: Not reported
RB Case Number: 2189
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Cyanide
Site History: Micro Metallics operated as an electronic, scrap metal recycling center. On October 29, 1981, ponded rainwater was pumped from a processing area into an unpaved area. Upon realization that the discharged water contained cyanide, the Regional Water Quality Control Board was notified of the release. Micro Metallics took steps to conceptualize the lateral and vertical extent of the release and remediate contamination. In this process, 230 cubic yards of contaminated soil was removed in February and May of 1982. Monitoring wells were installed and sampled regularly showing a decline in contamination, below maximum contaminant levels. A new occupant is currently at the site, Xstrata, they conduct the same operations as the former Micro Metallics.

Name: GLENCORE RECYCLING LLC
Address: 1695 MONTEREY HWY
City,State,Zip: SAN JOSE, CA
EPA ID: CAD069124717
County: Not reported
Mechanism type: X
Mechanism Type Description: STANDBY TRUST FUND
Cost estimate: 530000
Face value: 0
Effective date: 2013-09-03 00:00:00
Provider: CITIBANK, N.A.
EPA region: 9

Name: GLENCORE RECYCLING LLC
Address: 1695 MONTEREY HWY
City,State,Zip: SAN JOSE, CA
EPA ID: CAD069124717
County: Not reported
Mechanism type: I
Mechanism Type Description: INSURANCE
Cost estimate: 2000000
Face value: 2000000
Effective date: 2010-04-21 00:00:00
Provider: CHUBB CUSTOM INS.
EPA region: 9

Name: GLENCORE RECYCLING LLC
Address: 1695 MONTEREY HWY
City,State,Zip: SAN JOSE, CA
EPA ID: CAD069124717
County: Not reported
Mechanism type: L
Mechanism Type Description: LETTER OF CREDIT
Cost estimate: 530000
Face value: 530000
Effective date: 2010-02-10 00:00:00
Provider: THE BANK OF NOVA SCOTIA
EPA region: 9

Name: GLENCORE RECYCLING LLC
Address: 1695 MONTEREY HWY
City,State,Zip: SAN JOSE, CA 95112
Site ID: 393896
CERS ID: 10093210
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 393896
Site Name: Glencore Recycling LLC
Violation Date: 03-21-2017
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 04/20/2017. Majority of collection containers in the assay lab still list the facility name as Xstrata.
Violation Division: Santa Clara County Environmental Health
Violation Program: HWLQG
Violation Source: CERS,

Site ID: 393896
Site Name: Glencore Recycling LLC
Violation Date: 03-21-2017
Citation: 22 CCR 12 66262.42 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.42
Violation Description: Failure to complete the Uniform Hazardous Waste Manifest exception requirements.
Violation Notes: Returned to compliance on 04/20/2017. Manifest 011946498JJK, shipped 11/3/14 was noted as being without the TSDf copy at the facility and without an exception report having been filed.

Site ID: 393896
Site Name: Glencore Recycling LLC
Violation Date: 04-13-2009
Citation: HSC 6.67 Multiple Sections - California Health and Safety Code, Chapter 6.67, Section(s) Multiple Sections
Violation Description: RCRA Large Quantity Generator Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 05/13/2009.
Violation Division: Santa Clara County Environmental Health
Violation Program: HWLQG
Violation Source: CERS,

Site ID: 393896
Site Name: Glencore Recycling LLC
Violation Date: 03-21-2017
Citation: HSC 6.5 25160(b)(1)(C) - California Health and Safety Code, Chapter 6.5, Section(s) 25160(b)(1)(C)
Violation Description: Failure to send a legible copy of each hazardous waste manifest to the Department within 30 days of each shipment of hazardous waste.
Violation Notes: Returned to compliance on 04/20/2017. Generator copies of manifests are not being submitted to DTSC. Out of State (and out of country) "receiving facility" copies are not being submitted to DTSC either by the TSDf or by the generator as required by HSC.
Violation Division: Santa Clara County Environmental Health
Violation Program: HWLQG
Violation Source: CERS,

Site ID: 393896
Site Name: Glencore Recycling LLC
Violation Date: 03-21-2017
Citation: 22 CCR 12 66262.23(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.23(a)
Violation Description: Failure to properly complete the Uniform Hazardous Waste Manifest.
Violation Notes: Returned to compliance on 04/20/2017. Manifests used to ship potentially F-listed waste contaminated sweeps/solids to Glencore-Horne Smelter are shipped with a DOT shipping name "hazardous waste solids, n.o.s" without including in parenthesis, the two most prevalent constituents of the waste.
Violation Division: Santa Clara County Environmental Health
Violation Program: HWLQG

Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-11-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site to conduct a routine hazardous waste inspection. Facility operates a single bay auto body shop with 1 paint booth. Performed a walk-through and observed the following hazardous waste: -Waste paint sludge with solvents: 1 x 55 gallon drum Mr. Hoang stated that this wastestream is generated through periodic cleaning of spray guns. Regarding the paint booth, Mr. Hoang stated that paint booth filters are changed-out approximately every 3 months and not are being managed as a hazardous waste. At time of inspection, the filters appeared to be relatively clean. Mr. Hoang stated he does not allow them to get "too dirty" as that degrades their performance. At this time, no hazardous waste determination will be required on this waste. The following violations were corrected at time of inspection: -G020, hazardous waste markings, a label was affixed to drum of waste paint sludge with solvents -G211, emergency posting, posting was affixed to wall of [Truncated]

CERS ID: 10346704
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 89800
Site Name: ADVANCE AUTO TECH
Violation Date: 08-27-2019
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Returned to compliance on 09/26/2019. 1x 55-gallon drum of used coolant had an accumulation start date of 8/25/16. 1x 30-gallon drum of oily solid debris (paper filters) had an accumulation start date of 8/17/16. The ~220-gallon tank of used oil had an accumulation start date of 4/4/18. Ensure these drums are picked up immediately, and continue to dispose of hazardous waste within 6 months of accumulation.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 89800
Site Name: ADVANCE AUTO TECH
Violation Date: 08-27-2019
Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)

Violation Description: Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.

Violation Notes: Returned to compliance on 09/26/2019. Based on the number and types of violations observed today, facility personnel are not adequately trained.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 89800
Site Name: ADVANCE AUTO TECH
Violation Date: 08-17-2016
Citation: HSC 6.5 25250.7(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25250.7(a)

Violation Description: Failure to prevent intentional contamination of used oil with other hazardous waste other than minimal amounts of vehicle fuel.

Violation Notes: Returned to compliance on 09/02/2016. The facility combines used brake fluid with the used oil for disposal as "used oil." Used brake fluid is not considered "used oil" and cannot be combined for disposal as "used oil." Begin collecting, managing, and disposing of the used brake fluid separately from used oil as hazardous waste.

Violation Source: CERS,

Site ID: 89800
Site Name: ADVANCE AUTO TECH
Violation Date: 08-27-2019
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 09/26/2019. The following hazardous waste containers were not fully marked: - 2x 30-gallon portable drums of used oil (hazardous waste labels were attached, but all written information was very faded)

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 89800
Site Name: ADVANCE AUTO TECH
Violation Date: 08-17-2016
Citation: HSC 6.5 25201(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25201(a)

Violation Description: Failure to dispose of hazardous waste at a facility which has a permit from DTSC or disposing of hazardous waste at any point which is not authorized according to this chapter.

Violation Notes: Returned to compliance on 09/02/2016. Paper-only used oil filters are co-mingled with the metal-encased used oil filters in the 55 gallon drum labeled as "drained used oil filters." Paper-only filters cannot be recycled for their scrap metal content and therefore cannot be managed under the exclusion management requirements for metal-encased used oil filters. Begin accumulating paper-used oil filters separately from metal-encased used oil filters and manage the paper used oil filters as fully regulated hazardous waste (i.e. "debris saturated with used oil.")

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 89800
Site Name: ADVANCE AUTO TECH
Violation Date: 08-27-2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Notes: Returned to compliance on 08/27/2019. The inventory submitted on 7/9/19 listed used coolant at a volume of 30 gallons, but the drum observed on-site was 55 gallons.

Violation Description: Business Plan Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 08/19/2016. Facility failed to electronically submit a HMBP within 30 days from the date HMCD notified the facility that they are subject to HMBP requirements and a HMBP must be submitted. -- The facility was inspected on 1/4/2012 and an Official Notice of Inspection Report (NOI) was issued. The NOI cited the facility for not submitting a Hazardous Materials Business Plan (HMBP) when storing hazardous materials/wastes at or above HMBP-reportable thresholds and instructed the facility that a HMBP must be submitted within 30 days. As of 8/17/2016, the facility has not submitted a HMBP. -- Electronically submit a HMBP within 30 days [HSC 25508(a)(2)].

Violation Date: 08-27-2019
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 09/25/2019. Sam Le stated that metal shavings are thrown into regular trash. No shavings were observed in the trash today, but recycling of metal shavings had been discussed during the last routine inspection at this facility on 8/17/16. If metal shavings meet hazardous waste criteria, they must be managed accordingly. Observed one 5-gallon bucket of ECO 290 vinyl sheet flooring adhesive next to the parking lot, which had leaked out of the bucket onto the ground into a semi-solid state (the safety data sheet describes the consistency as "buttery", and the color "white", which is consistent with what was observed). Owner, Hanson Le, stated that this did not belong to the shop, and was likely left here by an unknown party. This spill was cleaned up during the inspection. If the material is hazardous, dispose of it as such.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 89800
Site Name: ADVANCE AUTO TECH
Violation Date: 08-27-2019
Citation: HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22
Violation Description: Failure to properly manage used oil and/or fuel filters in accordance with the requirements.
Violation Notes: Returned to compliance on 09/26/2019. 1x 55-gallon drum of drained used oil and fuel filters had an accumulation start date of 8/24/16. Ensure this drum is picked up immediately, and dispose of metal filters within one year of accumulation going forward.

Eval Notes: - Permit level is consistent with hazardous materials observed on-site (used oil, new oil, and used coolant were above HMBP thresholds). - CERS ID 10346704. - Most recent HMBP electronically submitted on 7/9/19. - Property owner is same as business owner.

Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-27-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site to perform a routine inspection for the following permits: - 2205 (Hazardous waste generator: 100 kg to <5 tons/year) - BP01 (Hazardous Materials Business Plan (HMBP): 1-3 chemicals) NOTES: - Facility is an auto repair shop. - State ID CAL000224690 is active. - Containers are inspected weekly. - Tanks are inspected daily. - Consolidated manifest receipts were reviewed. - Absorbent is available. Disposal of saturated absorbent was discussed. - Rags are commercially laundered. - Discussed separation of brake fluid and used oil. - Emergency information is posted. The following documents were provided today: - UN-091 (Auto Repair Fact Sheet) - UN-103 (HMBP Training Record) G412: CONTAINER MARKING: USED OIL/FUEL FILTERS 1x 55-gallon drum of metal oil filters also contained gas filters, but was labeled only as "Drained Used Oil Filters". This was corrected during the inspection.

Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-17-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On-site to conduct a routine hazardous waste inspection. The facility conducts general automotive repair work and routinely generates used oil, used antifreeze, metal-encased used oil filters, and paper-used oil filters. Used brake fluid is occasionally generated, but on a very infrequent basis. NOTES TO FACILITY: - Ensure that all containers that formerly held a hazardous material or hazardous waste are fully empty of all pourable or scrapable material prior to trash disposal/recycling. If the container cannot be fully emptied, then manage the contaminated container as hazardous waste. - Ensure that all aerosol cans are fully empty of contents and propellant if disposed of as trash/non-hazardous recycling. If the aerosol can cannot be completely emptied of contents or propellant, manage as universal waste or hazardous waste. - Ensure that all collected brake shavings are recycled and not disposed of as trash. Notes: - CA EPA ID Number: CAL0003224690 (ACTIVE) - [Truncated]

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

City,State,Zip: SAN JOSE, CA 95112
Site ID: 79932
CERS ID: 10356610
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 79932
Site Name: VALLEY LAPPING INC
Violation Date: 08-18-2017
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 09/12/2017. Observed significant amount of Solvent-based parts washer in the secondary containment that 2 solvent parts washer uses. Owner indicated that this is a chronic issue and some parts are too large to fit inside the parts washer so some cleaning solvent may fall outside of the parts washer unit. Solvent in secondary containment can present an air hazard and fire risk. Remove any unavoidable liquid accumulation in secondary containment consistent with the wet-floors guidance that directs cleanup to happen at end of shift or no later than daily.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 79932
Site Name: VALLEY LAPPING INC
Violation Date: 08-18-2017
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 09/12/2017. Facility does not have documented initial and annual training of employees as it relates to a hazardous materials emergency response.

Violation Date: 08-18-2017
Citation: 22 CCR 12 66262.23(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.23(a)
Violation Description: Failure to properly complete the Uniform Hazardous Waste Manifest.
Violation Notes: Returned to compliance on 09/12/2017. Manifest # 005978456SKS was used to inadequately ship 5 drums of 300 lbs of Rags, solids, and absorbents contaminated aluminum oxide, diesel, and/or lapping oil as "UN1993, Waste Flammable Liquids, N.O.S, (Mineral spirits, petroleum distillates), 3, PG III. Owner confirmed this is not an accurate description of the waste being shipped. Additionally, manifest # 005786236SKS (and many others) were used to describe petroleum distillates parts washer liquid as "NA1993 Waste Combustible Liquid, N.O.S. (Petroleum Naphtha) PG III and EPA waste code D039. Owner confirmed there is no tetrachloroethylene/perchloroethylene in the waste. REVIEW MANIFEST AND PROFILES AND ENSURE SHIPPING DESCRIPTION REFLECTS ACTUAL WASTE STREAM.

Violation Date: 08-23-2016
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violation Notes: Returned to compliance on 08/23/2016. The facility stores hazardous materials/wastes at and above HMBP reportable thresholds, but has never submitted a HMBP. It is of note that the facility has already scheduled an appointment for HMBP-submittal assistance with HMCD later today (8/23/2016).

Violation Source: CERS,

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-23-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes:

On-site to conduct a routine hazardous waste inspection. The facility conducts routine maintenance and repairs on Harley Davidson motorcycles. - Used oil is the only hazardous waste generated and accumulated by the facility. Used oil is collected in small trays that are placed underneath the bikes and immediately transferred into one of the four, 16 gallon drums used for used oil accumulation. The 2 x 16 gallon drums accumulating used oil are closed. ENSURE THAT ALL CONTAINERS USED TO ACCUMULATE HAZARDOUS WASTE ARE KEPT CLOSED WHEN WASTE IS NOT BEING ADDED OR REMOVED. - Metal-encased used oil filters are returned to the motorcycle owner for recycling. Discussed accumulation of metal-encased used oil filters as "drained used oil filters" for the scrap metal recycling value and provided a label for accumulation. - Used rags are collected for commercial laundering and documentation of laundering is available on-site. - Aerosol cans are completely empty of contents and [Truncated]

propane, brake cleaner aerosols, greases, and lubricants are on-site, but below HMBP-reportable thresholds. NOTES TO FACILITY: - Ensure that you certify that your HMBP is accurate and up-to-date and re-submit the HMBP via FrontCounter on an annual basis.

Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-04-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: - Permit level is consistent with hazardous materials observed on-site: -- Used oil (4x 15-gallon drums) -- Oil (1x 55-gallon drum) -- Propane (3x 10-gallon cylinders) - CERS ID 10355512. - Most recent HMBP electronically submitted on 11/1/18. - Property owner was notified after facility's previous inspection. Additionally observed 1x >200 cubic-foot cylinder of nitrous oxide. Mr. Williams stated that this belonged to a customer who had recently left it for temporary storage, and that the customer would be picking it up within a few days.

Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-04-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On-site to perform a routine inspection for the following permits: - 2201 (Hazardous waste generator: waste oil only) - BP01 (Hazardous Materials Business Plan (HMBP): 1-3 chemicals) NOTES: - Facility is a one-man motorcycle repair shop. - State ID CAL000314783 is active. - Containers are inspected daily. - Consolidated manifest receipts were reviewed. - Fire extinguishers were serviced 4/8/19. - Absorbent is available. - Rags are commercially laundered. - Emergency information is posted. Per HSC 25187.8, the following minor violations were corrected during this inspection: G020: MARKING OF HAZARDOUS WASTE 4x 15-gallon used oil drums had hazardous waste labels, but the markings were faded. These were all corrected during the inspection. G023: CONTAINER OPEN 4x 15-gallon used oil drums were open without active addition or removal of waste. The drums were closed during the inspection.

Violation Notes: General
MR. VILLARREAL DID NOT RESPOND TO THE OFFICIAL NOTICE OF INSPECTIONS FROM A HAZARDOUS WASTE GENERATOR AND HAZARDOUS MATERIALS BUSINESS PLAN INSPECTION THAT WAS CONDUCTED ON JULY 12, 2012 AND JUNE 8, 2015. I PROVIDED MR. VILLARREAL COPIES OF THE JULY 12, 2012 AND JUNE 8, 2015 INSPECTION REPORTS THAT WERE ISSUED TO HIM. MOST OF THE VIOLATIONS I OBSERVED TODAY WERE PREVIOUS REPEAT VIOLATIONS THAT WERE NOTED ON THE JULY 12, 2012 OR JUNE 8, 2015 OFFICIAL NOTICE OF INSPECTION REPORTS. CORRECT ALL VIOLATIONS WITHIN 30 DAYS AND SEND THE SIGNED RETURN TO COMPLIANCE CERTIFICATION WITHIN 35 DAYS TO HMCD.

OPEN 55 GALLON PAINT SOLVENT DRUMS A STRONG SOLVENT SMELL PERMEATED THROUGHOUT THE FACILITY. THIS WAS A REPEAT VIOLATION FROM THE LAST INSPECTION CONDUCTED ON JUNE 8, 2015. IMMEDIATELY IMPROVE HOUSEKEEPING THROUGHOUT THE SHOP.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 39004
Site Name: J'S FINISHING
Violation Date: 12-12-2016
Citation: 40 CFR 1 265.35 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.35

Violation Description: Failure to maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.

Violation Notes: TWO WOODEN PALLETS WERE BLOCKING THE TWO 55 GALLON DRUMS OF WASTE PAINT SOLVENT LOCATED IN THE TWO FLAMMABLE LIQUID CABINETS. DO NOT BLOCK FLAMMABLE LIQUID CABINETS. ADEQUATE AISLE SPACE MUST BE MAINTAINED FOR THE MOVEMENT OF PERSONNEL AND RESPONSE EQUIPMENT IN AN EMERGENCY. THE TWO PALLETS WERE REMOVED FROM THE FLAMMABLE LIQUID CABINETS.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 39004
Site Name: J'S FINISHING
Violation Date: 06-08-2015
Citation: 40 CFR 1 262.34(d)(5)(ii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(ii)

Violation Description: Failure to post, next to the telephone, Emergency Information (SQG) containing the location of emergency equipment, contact names and numbers.

Violation Notes: EMERGENCY RESPONSE INFORMATION WAS NOT POSTED NEXT TO THE TELEPHONE AS REQUIRED. I PROVIDED MR. VILLARREAL WITH A SAMPLE COPY OF THE EMERGENCY PROCEDURES POSTING AND TOLD HIM TO FILL IT OUT ALL THE REQUIRED INFORMATION SUCH AS EMERGENCY COORDINATORS WITH PHONE NUMBERS AND POST NEAR A TELEPHONE AND TO MAKE A MAP OF HIS FACILITY TO SHOW THE LOCATIONS OF ALL FIRE EXTINGUISHERS, SPILL CONTROL EQUIPMENT AND ANY FIRE ALARMS AS WELL AS EVACUATION ROUTES AND LOCATIONS OF HAZARDOUS MATERIALS AND HAZARDOUS WASTE CONTAINERS.

MR. VILLARREAL HE NEEDED TO IMPROVE HOUSEKEEPING THROUGHOUT THE FACILITY TO MINIMIZE THE POSSIBILITY OF A FIRE, EXPLOSION OR ANY UNPLANNED RELEASE OF HAZARDOUS WASTE. I TOLD HIM TO KEEP ALL CONTAINERS CLOSED AND PUT THE CLOTH RAGS IN A FIREPROOF CONTAINER. I TOLD HIM TO PROPERLY DISPOSE OF ALL EMPTY PAINT CANS IN THE SOLID DEBRIS DUMPSTER ONLY IF THEY WERE COMPLETELY EMPTY. BECAUSE OF THE STRONG SOLVENT SMELL THROUGH OUT THE FACILITY I CAUTIONED MR. VILLARREAL ABOUT LEAVING FLAMMABLE PAINT RELATED MATERIALS CONTAINERS OPEN TO THE AIR AS THIS COULD CAUSE A FIRE OR EXPLOSION.

Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 39004
Site Name: J'S FINISHING
Violation Date: 03-22-2017
Citation: Un-Specified
Violation Description: Hazardous Waste Generator Program - Administration/Documentation - General Local Ordinance
Violation Notes: THE FACILITY HAS NO VALID HAZARDOUS WASTE GENERATOR PERMIT. MR JOSE VILLARREAL FAILED TO PAY FOR ANNUAL HAZARDOUS WASTE PERMIT FEES FOR CALENDAR YEARS 2012, 2013, 2014, 2015 AND 2016. MR. VILLARREAL WAS OFFERED A PAYMENT PLAN ON DECEMBER 13, 2016 AND HAS FAILED TO MAKE ONE PAYMENT TO MEET THE CONDITIONS OF THE PAYMENT PLAN. WITHIN 5 WORKING DAYS MAKE PAYMENTS FOR JANUARY 1, 2017, FEBRUARY 1, 2017 AND MARCH 1, 2017 TO MEET THE CONDITIONS OF THE PAYMENT PLAN. I TOLD MR. VILLARREAL HE IS OPERATING WITHOUT A VALID HAZARDOUS WASTE GENERATOR PERMIT. I GAVE HIM A COPY OF THE PAYMENT PLAN HE SIGNED ON DECEMBER 13, 2016. I TOLD HIM THIS IS A LEGAL BINDING DOCUMENT AND FAILURE TO MEET THE MONTHLY PAYMENTS MAY LEAD TO ENFORCEMENT ACTION.

Site Name: K K PRECISION MACHINING INC
Violation Date: 10-13-2015
Citation: HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description: Haz Waste Generator Program - Operations/Maintenance - General
Violation Notes: Returned to compliance on 12/09/2015. 1 x 55 gallon empty, coolant drum was observed during the inspection and was not labeled with the date it was emptied.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 40868
Site Name: K K PRECISION MACHINING INC
Violation Date: 10-13-2015
Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Description: Failure to ensure employees are familiar with the handling and compliance of hazardous waste regulations and emergency response.
Violation Notes: Returned to compliance on 12/09/2015. Employees have not been adequately trained on hazardous waste management. A flyer for free hazardous waste training was provided at the time of inspection.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 40868
Site Name: K K PRECISION MACHINING INC
Violation Date: 09-19-2019
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 10/10/2019. Observed a small amount of liquid in a trash can lid. Mr. Khuu stated this was coolant which spilled out during maintenance of the machine yesterday. The liquid had coloration which indicated it might have a small amount of tramp oil in it. Mr. Khuu stated this liquid was destined to be poured into a scrap metal drum. Determine whether this liquid is re-usable. If not, it must be collected and managed as hazardous waste. Aside from dragout in the metal chips, excess coolant such as this must either be re-used or collected and managed as waste. Some liquid was also observed at the base of a drill press. Determine whether this liquid contains any used oil, and if so, manage it as hazardous waste.

S112206452

Violation Description: Section(s) 25505.1
Failure to notify property owner in writing that the business is subject to the business plan program and has complied with its provisions.

Violation Notes: Returned to compliance on 12/09/2015.

Violation Division: Santa Clara County Environmental Health

Violation Program: HMRRP

Violation Source: CERS,

Site ID: 40868

Site Name: K K PRECISION MACHINING INC

Violation Date: 10-13-2015

Citation: HSC 6.5 25189.5(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25189.5(a)

Violation Description: Failure to properly dispose of hazardous waste at an authorized location.

Violation Notes: Returned to compliance on 12/09/2015. Owner confirmed that used coolant is disposed of with scrap metal recycling in scrap metal drums. Waste coolant can either be separated from scrap metal and collected, managed, and disposed of as hazardous waste or the entire drum of waste coolant/scrap metal mix must be managed as hazardous waste.

Violation Division: Santa Clara County Environmental Health

Violation Program: HW

Violation Source: CERS,

Site ID: 40868

Site Name: K K PRECISION MACHINING INC

Violation Date: 10-13-2015

Citation: 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)

Violation Description: Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.

Violation Notes: Returned to compliance on 12/09/2015. Free flowing coolant was observed in 5 gallon buckets for collecting scrap metal, a mop bucket, and in 55 gallon drums for scrap metal accumulation throughout facility. A waste determination needs to be made in order to determine whether the coolant is usable or is a waste. If coolant is no longer usable, it must be collected and managed as hazardous waste. Provide documentation to inspector of waste determination.

non-ferrous metals. Scrap metal is separated by metal and collected in 55 gallon drums throughout the facility for metal recycling. Receipts for scrap metal recycling for the last year were reviewed during the inspection. Owner stated that coolant in machines has never been emptied and replaced. Facility continues to re-use coolant in the machines with small amounts of new coolant being added as needed. Small, residual amounts of free flowing, used coolant was observed in 5 gallon buckets, small containers, a mop bucket, and 55 gallon drums throughout the facility. Owner was informed that any waste coolant that can no longer be used in the machining process must be collected and properly managed as hazardous waste. No waste coolant was accumulated onsite at the time of [Truncated]

Eval Division: Santa Clara County Environmental Health
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-19-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Facility stores 1x 55-gallon drum of coolant, and has 6 CNC machines with coolant (each 40 gallons or less). Coolant used is Castrol Hysol 6754, which is considered an irritant. The HMBP threshold for irritants is 550 gallons, and as such, this facility will not require an HMBP permit going forward.

Eval Division: Santa Clara County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-19-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Onsite to perform a routine hazardous waste and Hazardous Materials Business Plan (HMBP) inspection with Hazardous Materials Specialist Jon Blazo from this office. Completed walkthrough with owner, Thien Khuu. Facility is a machine shop which manufactures parts for the semiconductor industry. Facility primarily uses 6061 aluminum. State ID CAL000283462 is active. All scrap metal is collected for recycling. No metal was observed in the trash dumpster. Mr. Khuu stated that coolant in the machines has never had to be replaced. Some manual deburring and sanding occurs; if any metal shavings from these processes generates particles less than 100 microns in size, it is not eligible for scrap metal recycling; if the shavings also meet hazardous waste criteria, then they must be managed as such. Employees are trained. Fire extinguishers are annually serviced.

Name: EMINENCE FRONTS GRAPHICS
Address: 115 PHELAN AV 9
City,State,Zip: SAN JOSE, CA 95112
Site ID: 28217
CERS ID: 10344640
CERS Description: Hazardous Waste Generator

Violations:

Site ID: 28217
Site Name: EMINENCE FRONTS GRAPHICS
Violation Date: 12-02-2016
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 12/13/2016. Facility was missing one manifest from 12/17/2015 (manifest no. 005133007SKS). Obtain a copy of this manifest to retain on-site and forward a copy to our office for review.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS,

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-02-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility does screen printing and generates hazardous waste mineral spirits used to wash printer parts (30 gallon parts washer) which is delivered for disposal with the Household Hazardous Waste collection facility. Facility also uses wash booths to clean print screens. These booth catch ink, surfactant, and emulsion remover and their waste was sampled and sent for a 96 hour fish bioassay in 2004 with Block Environmental (LC50>750). Rags are commercially laundered by Aramark. Facility has an active EPA ID number (CAL 000286252), fire extinguishers are annually serviced, spill kit is adequate, and emergency posting is up to date. Inspection included walk-through of work areas with 2 printers, laser printing room, ink mixing station, printer parts washing station, upstairs screen washing station, and inspection of trashcans and disposal documentation for the past 3 years. Mr. Ascitto stated that employees are trained in hazardous waste management through meetings and that [Truncated]
