Dear Rhiannon Bailard,

The California Geological Survey (CGS) has received the Notice of Preparation of a Draft Environmental Impact Report (DEIR) for the University of California College of the Law, San Francisco Long Range Campus Plan Update and 201 Golden Gate Avenue Mixed-Use Project. Although the Initial Study draft indicates that these topics are intended to be addressed in the DEIR, this email nevertheless conveys the following recommendations from CGS concerning geologic issues related to the project area:

1. Liquefaction Hazards

The project site is located within an earthquake zone of required investigation (ZORI) for liquefaction mapped by CGS. The DEIR and supporting documents should address this hazard as it relates to the design of proposed structures. Additional information is available at the links below: <https://maps.conservation.ca.gov/cgs/EQZApp/app/>
<https://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=regulatorymaps>

2. Ground Shaking Hazards

The project site is not located in an Earthquake Fault Zone mapped by CGS. However, several active faults, including the historically active San Andreas fault, are nearby, and the site could be subject to significant ground shaking. The DEIR and supporting documents should address this hazard as it relates to the design of the proposed structures. Additional information about ground shaking hazard can be obtained at the following sites:
