1. Have any environmental investigations (Phase I, Phase II, TSA) been conducted for the Property?

Please Circle:  Yes / No / Unknown

If Yes, please list the reports that were conducted and provide copies of the reports:

Odec in 2019

2. Have there been any environmental liens or governmental notifications relation to past or current violations of environmental laws with respect to the Property or any business located onsite?

Please Circle: Yes /  No / Unknown

If Yes, please describe below:

3. Have there been any past or current hazardous substances or petroleum products stored at the Property?

Please Circle:  Yes / No / Unknown

If Yes, please describe below:

Site used to be an ARCO station

4. Has the Property ever been involved in site investigations, cleanup actions, or other regulatory requirements regarding potential or known contamination?

Please Circle: Yes / No /  Unknown

If Yes, please describe below:

5. Has there been or is there physical evidence of contamination due to spills, leaks, or other releases of any toxic/hazardous chemicals/substances on the Property?

Please Circle: Yes /  No / Unknown

If Yes, please describe below:

6. Has the Property or any adjacent site ever been used as a gas station, auto repair, dry cleaners, printing facility, photo developing lab, junk yard, landfill, waste treatment/storage facility, recycling facility or has it even been use for industrial, manufacturing, refining, processing, or agricultural purposes? For example, Shell Gas Station, ABC Manufacturing, Mobil Oil, Alta Dena Dairy.

Please Circle:  Yes / No / Unknown

If Yes, please list those businesses.

Was a gas station

7. Have there been any current or former underground storage tanks (USTs) or aboveground storage tanks (ASTs) located onsite?

Please Circle:  Yes / No / Unknown

If Yes, please fill out the following table.

UST or AST	Contents (Gasoline, Paint)	Tank Size (10,000 Gallon)	Date Installed	Date Removed

8. Have there been any in-ground features such as vent pipes, hydraulic hoists, grease interceptors, clarifiers, or groundwater monitoring wells onsite? See Picture Glossary at the end of the questionnaire for examples of these items.

Please Circle:            Yes / No /  Unknown

If Yes, please describe below:

9. Has there been any evidence that fill dirt has been brought onto the Property that originated from a contaminated site or an unknown origin?

Please Circle:            Yes / No /  Unknown

10. Has there been or is there any evidence of stained soil or evidence of any leaks, spills, or stains on the Property?

Please Circle:            Yes /  No / Unknown

If Yes, please list the areas where such stains are or were located.

11. Has there been or is there any evidence that any pits, ponds, or lagoons in connection with waste treatment or waste disposal were located on the Property?

Please Circle:            Yes /  No / Unknown

12. Has there been or is there any evidence of any previous leaks, spills, or stains of substances other than water or foul odors associated with any flooring, drains, walls, ceilings, or exposed grounds on the Property?

Please Circle:            Yes / No /  Unknown

13. Are electrical transformers, switchers, capacitors, or other comparable devices on the premises?

Please Circle:            Yes /  No / Unknown

If Yes, have they been inspected for PCBs or other hazardous toxic substances?

Please Circle:            Yes /  No / Unknown

If inspection reports have been made, please include copies.

14. Has there been or is there any evidence that any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials that have been dumped, buried, or burned at the Property?

Please Circle: Yes / No /  Unknown

15. Is the Property served by a private well? If the Property is connected to the sewer answer "No".

Please Circle: Yes /  No / Unknown

If Yes, is there any evidence of any contaminations that have been identified in the well that exceed regulatory guidelines?

Please Circle: Yes / No / Unknown

If Yes, please describe below:

16. Have there been or are there any businesses at the Property that use chemicals, hazardous substances, or petroleum substances which require permits or licenses to generate, own, use, store, process, or remove from the Property? For example any industrial drums, paint stored in 5-gallon containers, automotive or industrial batteries, damaged automotive or industrial batteries, pesticides, paints, sacks of chemicals, etc.

Please Circle: Yes /  No / Unknown

If Yes, please list the chemicals used onsite.

Regarding those chemicals/hazardous substances, how are they stored, generated, processed, and/or removed from the Property? Please describe below:

If chemicals or wastes are currently stored onsite, please check all the applicable storage methods:

<b>Drums,</b>		<b>Containers</b>	
<b>Tote Tanks</b>		<b>Waste Piles</b>	
<b>Tanks</b>		<b>Pits</b>	
<b>Sumps</b>		<b>Ponds/Lagoons</b>	

17. Has the Property or any building improvements contained lead-based paints, asbestos or polychlorinated biphenyls (PCBs)?

Please Circle: Yes /  No / Unknown

If Yes, please list the areas where such materials were located. For example, lead-based paints on exterior walls, asbestos in floor tiles.

18. Does the Property discharge wastewater, not including sanitary waste or storm water?

Please Circle: Yes /  No / Unknown

If Yes, please the contents of the wastewater below:

19. Please list the utilities that service the Property. If the Property has a private water well (potable water) or septic tank (sewage disposal system), please state that in the appropriate sections.

Municipal Services & Utilities	
Potable Water (e.g. LADWP or City of Burbank)	
Gas/Oil Source for Heating (e.g. The Gas Company)	
Electrical (e.g. Southern California Edison)	
Sewage Disposal System (e.g. City of Compton)	
Solid Waste Disposal (e.g. Waste Management)	

### REMINDER

Please provide any correspondence, documents, and reports that have been conducted for the Property.

April 28, 1989

ARCO Petroleum Company  
P.O. Box 5811  
San Mateo, California 94402  
Attn: Jim Healey

Re: ARCO Station #2010  
2110 Middlefield Road  
Mountain View, CA 9403

Dear Mr. Healey:

On April 16, 1989, a Petro Tite System Test(s) was performed at the above-referenced location. The test was performed by David Plaskett Jr., E.L.I. Technician. The NFPA Code 329.02 criteria for a tight system is a maximum loss of .05 gallons per hour. Because of the almost infinite variables involved, this is not the permission of actual leakage.

During the stand-pipe test procedure, the internal liquid hydrostatic pressure applied to the underground tank system is generally two to three times greater than normal liquid storage pressures. This increase in hydrostatic pressure will amplify the indicated rate of leak accordingly.

**SYSTEM TESTS:**

Tank No. 1 - South  
Size - 8,000 gallons  
Product - Super Unleaded  
The test showed a minus .032 gallons per hour.  
Based on the above criteria, we find the tank tested mathematically tight.

Tank No. 2 - Middle  
Size - 10,000 gallons  
Product - Regular  
The test showed a minus .025 gallons per hour.  
Based on the above criteria, we find the tank tested mathematically tight.

Tank No. 3 - North  
Size - 10,000 gallons  
Product - Unleaded  
The test showed a minus .012 gallons per hour.  
Based on the above criteria, we find the tank tested mathematically tight.

**ENVIRONMENTAL  
LABORATORIES  
INC.**

This concludes our test and findings on April 16, 1989. The test results contained herein are accurate as of the date and time referenced. If you have any questions regarding the results, please contact me. It is your responsibility to notify your local County Health Department, Environmental Health, within thirty (30) days of the results of this test. This notification is required by the California Administrative Code, Title 23 Waters, Chapter 3, Water Resources Control Board, Sub-chapter 16, Underground Tank Regulations, Article 4.30.

We have enjoyed working with you on this project. If you need any further information, please feel free to contact our office.

Sincerely,

  
Jean Shannon  
Office Manager

Test conducted by System on the day of 12 1988

September 30, 1988

Jim Healey  
ARCO Petroleum Company  
P.O. Box 5811  
San Mateo, CA 94402

Re: ARCO Station #2010  
2110 Old Middlefield Road  
Mountain View, CA

Dear Mr. Healey:

On September 18, 1988, a Petro Tite Full System Test(s) was performed at the above-referenced location. The test was performed by David Plaskett Jr., E.L.I. Technician. The NFPA Code 329.02 criteria for a tight system is a maximum loss of .05 gallons per hour. Because of the almost infinite variables involved, this is not the permission of actual leakage.

During the stand-pipe test procedure, the internal liquid hydrostatic pressure applied to the underground tank system is generally two to three times greater than normal liquid storage pressures. This increase in hydrostatic pressure will amplify the indicated rate of leak accordingly.

**FULL SYSTEM TESTS:**

Tank No. 1 - North  
Size - 10,000 gallons  
Product - Unleaded  
The test showed a plus .008 gallons per hour.  
Based on the above criteria, we find the tank tested mathematically tight.

Tank No. 2 - Middle  
Size - 10,000 gallons  
Product - Regular  
The test showed a minus .024 gallons per hour.  
Based on the above criteria, we find the tank tested mathematically tight.

Tank No. 3 - South  
Size - 8,000 gallons  
Product - Premium Unleaded  
The test showed a minus .010 gallons per hour.  
Based on the above criteria, we find the tank tested mathematically tight.

This concludes our test and findings on September 18, 1988. If you have any questions regarding the results, please contact me. It is your responsibility to notify your local County Health Department, Environmental Health, within thirty (30) days of the results of this test. This notification is required by the California Administrative Code, Title 23 Waters, Chapter 3, Water Resources Control Board, Sub-chapter 16, Underground Tank Regulations, Article 4.30.

We have enjoyed working with you on this project. If you need any further information, please feel free to contact our office.

Sincerely,

  
Dean Shannon  
Office Manager

Re: SS#2010 - 2110 Old Middlefield Road (tested 5/11/88)

Dear Mr. Leinweber:

Attached are the May tank test results for the above referenced facility. All systems were tight.

Please call me at (415) 571-2407 if there are any questions.

Very truly yours,

ARCO Products Company  
a division of Atlantic Richfield Company

**Attention:**

This letter is to summarize the tank/line test(s) results at the referenced site.

Tank No.	Capacity	Current Product	Test Results		Date	Tight
			Tank	Prod. Line		
Middle of 3	10,000	Regular	-0.001 gph		5/11/88	Yes
East of 3	10,000	Reg. U/L	+0.012 gph		5/11/88	Yes
West of 3	8,000	Super U/L	+0.008 gph		5/11/88	Yes
		Regular		+0.016 gph	6/11/88	Yes
		Reg. U/L		+0.015 gph	5/11/88	Yes
		Super U/L		+0.018 gph	5/11/88	Yes

These test results are as of the day tested.

If you have any questions please call me at (707) 255-9580.

Sincerely,

Douglas  
 Manager of Environmental Services

18. SPECIAL CONDITIONS AND PROCEDURES TO TEST THIS TANK

See manual sections applicable. Check below and record procedure in log (27).  
 High water table in tank operation

The following allowable test practices for all tests. If not covered here does not apply to double-walled tanks.

Complete section below:

1. Is four pound rule required? Yes  No
2. Height to 1" mark from bottom of tank 154 in
3. Pressure at bottom of tank 4.00 p.s.i.
4. Pressure at top of tank 1.61 p.s.i.
- Depth of burial 40 in
- Tank dia. 92 in
- When 60% 132+ in

NOTES:

The above calculations are to be used for dry soil conditions to establish positive pressure discharge, or when using the four pound rule to compensate for the presence of subsurface water in the tank soil.

Refer to NFPA 30, Sections 2.3.2.2 and 2.7.1 and the tank manufacturer's regarding allowable system test pressures.

19. TANK MEASUREMENTS FOR TSTT ASSEMBLY

Bottom of tank to grade 132 in  
 Add 30" for "T" probe resp. 30 in

18. SPECIAL CONDITIONS AND PROCEDURES TO TEST THIS TANK  Water in tank  (Liquid) being tested with L.V.L.T

See manual sections applicable. Check below and record procedure in log (17)

The maximum allowable test pressure for all tanks. Four pound rule does not apply to distributed tanks.

Complete section below:

1. Is four pound rule required?

Yes  No

2. Height to 12" mark from bottom of tank

154 in.

3. Pressure at bottom of tank

4.001 psia

4. Pressure at top of tank

1.014 psia

NO  High water table in tank construction

19. TANK MEASUREMENTS FOR TEST ASSEMBLY

Bottom of tank to grade 133 in.  
Add 30" for "T" probe only 30 in.  
Total height to assembly -- approximate 163 in.

20. EXTENSION HOSE SETTING

Tank top to grade 39 in.  
Extend hose on suction tube 8" or more below tank top 10 in.

If 1/2" pipe extends above grade, use top of fit.

22. Thermal sensor reading after circulation  
15.537 deg  
69-70 deg

23. Digis per °F in range of expected change

18. SPECIAL CONDITIONS AND PROCEDURES TO TEST THIS TANK

Water in tank  Lines being tested with C.M.S.T.

High water table in tank operation

See manual sections applicable. Check below and record procedure in log (27)

Use maximum allowable test pressure for all tests. Four pound rule does not apply to double-walled tanks.

Complete section below:

- Is four pound rule required? Yes  No
- Height to 12" mark from bottom of tank 154 in
- Pressure at bottom of tank 4.00 P.S.I.
- Pressure at top of tank 1.56 P.S.I.

NOTES:

The above calculations are to be used for dry well conditions to establish a positive pressure advantage, or when using the four pound rule to compensate for the presence of surface hole water in the tank well.

Refer to NFPA 30, Sections 2-3.2.1 and 3.1.2 and the tank manufacturer's piping allowable system test pressures.

19. TANK MEASUREMENTS FOR TSTT ASSEMBLY

Bottom of tank to grade 130 in

Add 30" for "T" probe bay 30 in

Mt. View, CA

**Attention:**

This letter is to summarize the tank/line test(s) results at the referenced site.

Tank No.	Capacity	Current Product	Test Results		Date	Tight
			Tank	Prod.Line		
Southeast	8,000	Super U/L	+.019 gph		03/14/88	Yes
East/Center	10,000	Regular	-.010 gph		03/14/88	Yes
Northeast	10,000	Reg. U/L	-.011 gph		03/14/88	Yes

These test results are as of the day tested.

If you have any questions please call me at (707) 255-9580.

Sincerely,

Douglas  
Manager of Environmental Services

Re: SS #  
2110 Old Middlefield Rd.  
Mountain View, CA

Attention:

This letter is to summarize the tank/line test results at the referenced service station:

Tank No.	Capacity	Current Product	Test Results			Tight
			Tank	Prod. Line	Date	
Outside	300	waste oil	-.045		3/20/87	yes

These test results are as of the day tested.

If you have any question, please call David Becker or James Murphy at (707) 255-9580.

Sincerely,

BECKER INDUSTRIES, INC.

David W. Becker  
Vice-President

Re: Tank Testing  
2110 Old Middlefield Road  
Mountain View, CA

Dear Mr. Healey:

On February 12, 1989, a Petro-Tite System Test(s) was performed at the above-referenced location. The test was performed by David Plaskett Jr., E.L.I. Technician. The NFPA Code 329.02 criteria for a tight system is a maximum loss of .05 gallons per hour. Because of the almost infinite variables involved, this is not the permission of actual leakage.

During the stand-pipe test procedure, the internal liquid hydrostatic pressure applied to the underground tank system is generally two to three times greater than normal liquid storage pressures. This increase in hydrostatic pressure will amplify the indicated rate of leak accordingly.

**SYSTEM TESTS:**

Tank No. 1 - West  
Size - 8,000 gallons  
Product - Super Unleaded  
The test showed a minus .030 gallons per hour.  
Based on the above criteria, we find the tank tested mathematically tight.

Tank No. 2 - Middle  
Size - 10,000 gallons  
Product - Regular  
The test showed a minus .018 gallons per hour.  
Based on the above criteria, we find the tank tested mathematically tight.

**ENVIRONMENTAL  
LABORATORIES  
INC.**

Tank No. 3 - East  
Size - 10,000 gallons  
Product - Unleaded

The test showed a minus .031 gallons per hour.  
Based on the above criteria, we find the tank tested mathematically tight.

This concludes our test and findings on February 12, 1989. If you have any questions regarding the results, please contact me. It is your responsibility to notify your local County Health Department, Environmental Health, within thirty (30) days of the results of this test. This notification is required by the California Administrative Code, Title 23 Waters, Chapter 3, Water Resources Control Board, Sub-chapter 16, Underground Tank Regulations, Article 4.30.

We have enjoyed working with you on this project. If you need any further information, please feel free to contact our office.

Sincerely,

  
Jack Shannon  
Office Manager

RE: ARCO Facility at 2110 Old Middlefield Way, Mountain View

Dear Mr. Winsor:

We are in receipt of your proposed monitoring program for your site at 2110 Old Middlefield Way, Mountain View.

The monitoring plan you are proposing would fall under Option #6. Under this option, an acceptable monitoring program would be as follows:

#### Phase I Free Product Elimination Phase

1. Immediately implement free product recovery operations with the installation of a recovery well into the tank backfill. We have seen these types of clean-up activities go on for years before the site was returned to an acceptable state. Until the clean-up process is completed, Phase II could not be implemented and monthly tank testing would continue.

2. Immediately replace existing waste oil tank. Currently the waste oil tank is not being monitored in any way.

#### Phase II Installation of Pollulert System

1. Install Pollulert System in backfill wells. Prior to installation, application would have to be certified by a Pollulert representative, and approved by the Mountain View Fire Department. After installation, the system would have to be signed off by a Pollulert representative. Install Ronan line monitors. Inventory reconciliation records would be maintained on site and copies would be submitted to the Fire Department on a monthly basis. Finally, annual precision testing of the system is required on all options for single-wall tank monitoring.

If you have any questions regarding the requirements under this particular monitoring option, feel free to contact me at (415) 966-6378. Again, the waste oil tank is currently not being monitored and must either be monitored or removed with permit immediately.

Sincerely,

  
Gary Leinweber  
Hazardous Materials Supervisor

**RE: ARCO Facility 2010 at 2110 Old Middlefield Way**

**Dear Mr. Leinweber:**

As we discussed during our meeting on December 9, 1988, I am submitting a written description of the proposed monitoring program for the subject site. In addition, I have enclosed depth to groundwater and product thickness data from the two tank backfill LDMP's.

The monitoring program we discussed is a phased program intended to comply with the City of Mountain Views underground tank monitoring ordinance while eliminating the labor-intensive and costly system precision testing currently being performed on a monthly basis. The proposed monitoring program is as follows:

**Phase I Free Product Elimination Phase**

1. Immediately implement free product recovery operations with the installation of a recovery well into the tank backfill.
2. Monitor existing LDMPs (T-1 and T-3) installed in the tank backfill and monitoring well BC-1 on a weekly basis. Monitoring data will be submitted to the City of Mountain View monthly. Product thickness measurements in excess of 0.5 ft. will constitute a leak alert. As product thickness declines with product recovery efforts this leak alert level will be reduced accordingly through discussion with the City of Mountain View.
3. Utilize existing containment boxes.
4. Install API Ronan positive shut-off line monitors.
5. Replace existing 25 year old 280 gal waste oil tank. A new double walled 550 gallon tank will be installed with API Ronan interstitial monitoring.

Page 2

**Phase II Installation of Pollulert System**

Following completion of free product recovery operations the weekly monitoring of the LDMP's will cease and the leak detection system described below will commence in addition to items 3, 4 and 5 listed above:

1. Install the Pollulert Fluid/Vapor Detection System in two (2) monitoring wells installed into the tank backfill. The Pollulert system will provide continuous leak detection for the 3 underground gasoline tanks (see attached brochure) even though seasonal groundwater level fluctuations are apparent. This is performed by a floating detector which senses a product layer and fluctuates with the water table.

Since the product lines, gasoline tanks and new waste oil tanks will be monitored continuously in conjunction with inventory control, annual precision testing of the tanks and piping will not be necessary. Please don't hesitate to call me if questions.

Very truly yours,

  
H. C. Winsor  
Manager,  
Environmental Engineering

Proposed Monitoring System  
ARCO Facility 2010  
2110 Old Middlefield Way, Mt. View, Ca.

Proposed Monitoring System:

- \* Existing Overfill Containment Protection
- \* API Rohan Positive Shut Off Line Monitor
- \* Pollulert Fluid Detection System Network *not needed.*
- \* Annual Precision Test
- \* Quarterly Monitoring of Groundwater Wells and Tank Backfill LDMPs

*Quarterly check of well w/ parts*

System Benefits:

- \* Provides Environmental Protection
- \* More stringent than Monitoring Options 2 or 6
- \* Provides Continuous Monitoring Protection
- \* Can be Modified in Future to Place Pollulert Probes in Backfill Wells
- \* Compatible with Remedial Plans
- \* Avoids \$200,000 (+) Tank Replacement Cost

*Tidal Action*

Mr. Frank Wells, Jr.  
ARCO PETROLEUM PRODUCTS  
P.O. Box 2679-T.A.  
Los Angeles, CA 90051

Dear Mr. Wells:

We are in receipt of your letter dated November 29, 1988 requesting approval of water wells/line leak monitors for the Arco station at 2110 Old Middlefield Way, Mountain View. Unfortunately, we cannot approve this proposal.

We do not approve water wells for underground tank monitoring at any facility where groundwater has already been contaminated. The site in question not only has groundwater contamination, but is also influenced by tidal action which tends to move contaminants around. We would be hard-pressed to know if contamination found by any kind of water-monitoring system had come from current tank/piping leakage or washed in by tidal action from off-site. In addition, the purpose of monitoring is to catch leakage before it affects the aquifer, not after.

The line leak detectors would be acceptable, provided they were an approved system and additional monitoring for the tanks (for example, an in-line monitoring system) were proposed. This scenario, along with annual precision testing would fall under Option #5 of our monitoring guidelines.

In addition, monitoring for the waste oil tank would also need to be addressed.

Cut sheets on all proposed monitoring systems and plans showing locations of the systems, etc. would need to be submitted to us prior to any approval.

If you have any questions or would like further information, feel free to call me or Chris Steck at (415) 966-6378.

Sincerely,

  
Gary Leinweber  
Hazardous Materials Supervisor

Mr. Gary Reinweber  
Hazardous Materials Supervisor  
City of Mountain View  
1006 Villa Street  
Mountain View, Ca 94041

Dear Mr. Reinweber,

In view of the problems encountered at ARCO's facility #2010 at 2110 Old Middlefield Way, we seek your approval to replace our current monitoring program of monthly tank integrity testing with the following system:

1. Three groundwater monitoring wells, one each on the North, East, and West sides of the tank field within 10' of the backfill area. Refer to the attached site plan for approximate locations.
2. Line leak detectors to continuously monitor line integrity.

The groundwater monitoring well network will be fitted with the Refluert Fluid detector system (see the attached brochure) which will detect a 1/8" thick gasoline layer on the surface of the water table. Our objective is to monitor for future superimposed releases extending beyond the known present contamination zone while providing the capability to simultaneously remediate the current contamination by the backfill.

As for the contaminated backfill area, we propose to install a product recovery well just within the East side of the tankfield backfill. This will be done to expeditiously remove the existing free product and help ensure the detection of any new releases.

With your approval we would like to install the system immediately. If you have any questions or comments please call me collect at (310)486-1717.

Sincerely,

Frank E. White, Jr.  
Environmental Compliance Coordinator

October 12, 1988

Mr. Matt Thomas  
ADAMS PRECISIONS INSTRUMENTATION CO.  
12410 Benedict  
Downey, CA 90242

Dear Mr. Thomas:

Last week we spoke regarding the current status of the API/Ronan sensor problem. You indicated to me that a representative would be in Mountain View for the next month checking sensors at all the Shell and Unocal stations weekly and supplying us with his information.

You explained that a new sensor is currently being tested and appears to be promising, and indicated that within one month, these new sensors would be installed at the affected stations.

As I explained to you over the phone, we are willing to proceed with this program for one month. At the end of this time frame (approximately the third week in November), we will inspect whatever systems are currently installed at the sites in question. At that time, should we continue to find sensors unable to maintain calibration, stability or accuracy, we will ask that the units be removed and replaced with a Genelco aspirated vapor monitoring system. During the changeover, we will require that tanks and piping be precision tested monthly until the new installations are signed off.

As we discussed, neither you nor I can afford to go out and inspect these sites on a weekly basis. We must have confidence that the monitoring system is functioning as per specifications and is providing accurate and reliable data between inspections.

Since we have been working with you on this problem for a considerable period of time, we will not extend the time frame outlined above.

If you have any questions, feel free to call me or Chris  
Steck at (415) 966-6378.

Sincerely,

Gary Leinweber  
Hazardous Materials Supervisor

RE: Monitoring Proposal  
ARCO Facility 2010  
2110 Old Middlefield Way

Dear Mr. Leinweber:

After receiving your letter of August 22, we have had considerable review and discussions with API/Ronan about your concerns. API/Ronan has assured us in writing that their system will perform to the specifications of their X76LVC sales literature. I have asked Matt Thomas of API to contact your department to clear up any equipment problems and to provide the reliability data you requested. Matt Thomas indicated the week of September 26th was their target date to meet with your department.

The system we propose to use will consist of:

- o Ronan model X76LVC-8-3B-3 HVA - 1 HVC monitor
- o Three JT-H2 line leak sensors
- o Four HV vapor sensors (three in tank field and one next to the waste oil tank)
- o Three X76HVD, 0-20000 PPM input modules
- o One X76HVD, 0-100000 PPM input module

The preliminary site investigation and gas chromatograph sample testing indicated only one well requires the extended range module.

This monitoring system is actually a second tier of protection as the site is undergoing remediation. During remediation the monitoring wells will continue to be periodically sampled. When remediation is complete the performance of the sensing system can be reviewed and alternatives considered if required.

Should vapor levels exceed peak background fluctuations and manual sampling confirms an increase, ARCO would initiate an immediate investigation to determine the cause of the increase.

We do appreciate your concerns and hope that we have answered your questions.

Sincerely,

*M. F. Murphey*

ARCO PETROLEUM PRODUCTS  
515 S. Flower Street  
Box 2679-T.A.  
Los Angeles, CA 90051

Dear Mr. Murphey;

It was a pleasure meeting with you recently to discuss your tank monitoring proposal for station #2010 at 2110 Old Middlefield Way, Mountain View. I am also in receipt of your letter of August 11 regarding same.

We have no problems with the API/Ronan line leak detectors. We would require that the JT-H2 assembly be installed.

As for the vapor monitoring, while we feel that in principal this may be viable, we have reservations about its performance in the field.

Primarily, we have experienced numerous problems with the vapor sensors in the X76HVD units already installed at other sites--sensors that go quickly out of calibration, cannot zero, or won't respond at all after only a few months. Realizing that this is supposedly API/Ronan's tried and true technology, we feel very hesitant about accepting an "experimental" technology such as a 100,000 ppm sensor. For us to approve this system, API/Ronan would have to submit data showing its reliability, ability to be calibrated, linear response characteristics, life expectancy, etc. In addition, we would need to come to some sort of understanding about what actions would be required by Arco should the background levels increase, what those actions should be, degree of increase, etc.

Finally, after these questions are addressed, plans showing installation specifications of all monitoring systems will need to be submitted to our Building Department for review.

Feel free to have API/Rohan's representative or yourself contact me to get the ball rolling.

Sincerely,

Gary Leinweber  
Hazardous Materials Supervisor

Re: Underground Storage Monitoring Program  
at ARCO Service Stations

Dear Mr. Leinweber:

In January, we outlined ARCO's Underground Storage System Monitoring Program. Development of an Automatic Leak Detection Inventory Reconciliation System was a key component of that program. Testing of the automatic inventory reconciliation system is progressing; however, to date, the results of the testing are not conclusive and may not be for some time. In order to expedite bringing our underground storage tanks into compliance with Mountain View's tank monitoring regulations we propose an alternative system be installed within 90 days at:

<u>Facility</u>	<u>Address</u>
2010	2110 Old Middlefield Way

ARCO will use the Ronan X76 Leak Detection System (brochure enclosed). The product lines will each be fitted with a positive shut off Ronan line leak detector and tied into a central alarm panel. Each of the vapor wells in the tank field and adjacent to the waste oil tank will be fitted with a solid state diffusion type vapor sensor also tied into the Ronan monitoring panel.

The equipment we plan to use was specifically selected knowing that there are high existing vapor levels at this site. Ronan has tested each well with their portable equipment and performed laboratory analysis of site vapor samples. Ronan confirmed their vapor monitor can be specially programmed to reliably monitor vapor fluctuations at this facility. As remediation of site soil and groundwater progress and the vapor levels recede, the programming can be periodically adjusted so that we will always be able to detect an increase in vapor levels and trigger the alarm.

Mr. Gary Leinweber  
August 11, 1988  
Page Two

API Ronan equipment has been used in many Santa Clara communities and most of the local agencies are familiar with it. If you would like to review our plans further at a meeting with ARCO or API Ronan, I am sure we could arrange it.

Feel free to call me at (213) 486-0255 if you have any questions.

Sincerely,

*M F Murphey*

Re: Approved Monitoring Systems at ARCO Service Stations 2010 and 6050, Mountain View, California

Dear Mr. Leinweber:

This letter responds to the concerns you addressed to Ms. Karen Schultheis and myself during our February 11, 1988 meeting and those you addressed to Mr. Chris Winsor in your February 9, 1988 letter to him. The City of Mountain View is requiring that ARCO install a monitoring system that would meet State and local monitoring requirements at the two stations by March 15, 1988. Originally you wrote that only Option 5 of the California Underground Storage Regulations (CUSTR) would be allowed to be implemented at the two stations. However, in a mid-February telephone conversation between you and Ms. Schultheis, it was agreed that monthly tank testing (Option 1 of CUSTR) would be an acceptable compliance measure.

Option 1 will begin in March, 1988 at the two ARCO stations. This compliance measure will continue until the tanks and lines are replaced at Station 6050 and an automatic leak detection and inventory reconciliation system (ALD/IRS) is installed at Station 2010. Details of the tank replacement and ALD/IRS program was submitted in Mr. Winsor's January 29, 1988 letter to you.

It is ARCO's understanding that the use of Option 1 will allow the two stations to continue daily operations beyond March 15, 1988.

Please call me at (415) 571-2434 if you have any questions or comments regarding the contents of this letter.

Sincerely,

Kyle A. Christie  
Environmental Engineer

Dear Ms. Schultheis:

We have yet to receive your proposal for monthly full-system precision testing for your Mountain View stations.

Per our earlier telephone conversation, you will submit your proposal for monthly precision testing and complete the initial testing by March 15, 1988. Subsequent requirements are as follows:

- 1) Precision testing will be completed by the 15th of each month;
- 2) We will be notified at least 48 hours in advance of the monthly test date so we can witness the tests;
- 3) Copies of precision test results will be received by this office no later than the 25th of each month;
- 4) 15-gallon overspill protectors will be installed at the Stierlin Road station by March 15, 1988.

Failure to meet any of these requirements will result in closure of the station. Monthly precision testing will continue until a system meeting the requirements of the Mountain View Fire Department and State regulations is installed.

If you have any questions, feel free to call me at (415) 966-6378.

Sincerely,

Gary Leinweber

ARCO PETROLEUM PRODUCTS  
515 South Flower Street  
P.O. Box 2679- T.A.  
Los Angeles, CA 90051

Dear Mr. Winsor:

We are in receipt of your underground tank monitoring proposal dated January 29, 1988, for the service stations in Mountain View, California. Unfortunately, the methods and time frames proposed are totally unacceptable.

We have been in contact with various people in your San Mateo office as well as Brown and Caldwell over the last two years regarding this situation. For your benefit, here is a brief synopsis:

- 1) Monthly vapor monitoring was approved by the Fire and Building Department in March, 1986, with the understanding that this was an interim measure to allow ARCO time to evaluate continuous vapor monitoring systems on the market. BY MARCH 15, 1988, ARCO was to have installed continuous vapor monitoring or other systems that would meet State and local monitoring requirements.
- 2) In March, 1986, baseline vapor readings were taken at both stations. Except for two wells, all wells showed concentrations below 10 ppm.
- 3) Monthly vapor monitoring was not begun until August, 1986. From that time until today, we have received vapor readings consistently greater than 1,000 ppm which is our action level. We continue to get readings in excess of 80,000 ppm on a monthly basis.
- 4) After several letters to ARCO, Brown and Caldwell was hired to begin investigative work at both sites to determine the cause of this contamination.
- 5) The initial report was to have been completed in October, 1987. We have not received this report. Concurrently, I have been in contact with Jeanne Wallberg regarding monitoring require-

ments. I have reminded her of the March 1988 deadline, and also the fact that in-tank monitoring will have to be installed since monthly vapor monitoring is useless with the high level of vapors being reported.

- 6) In August, 1987, we corresponded with ARCO reminding them of the March, 1988 deadline for monitoring.
- 7) In November, 1987, Tidel and Brown and Caldwell put on a work-shop regarding the Tidel monitoring system. Brown and Caldwell stated that by the end of December, a test site for this system would have been determined. This has not been done to date.

As you can see, we have given everyone involved ample warning and time to get these stations into compliance. It is also apparent that the monthly vapor monitoring has not been effective in maintaining the original condition of the soil and groundwater.

The bottom line here is that by March 15, 1988, an approved monitoring system must be installed. Since vapor levels at both sites are so high, only Option #5 will be allowed to be implemented. Requirements for this option are:

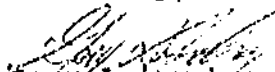

- 1) In-tank level sensor. Veeder-Root TLS-250 and Tidel are examples.
- 2) In-line pipeline leak detectors which completely shut down the pumps. API/Ronan is an example.
- 3) Annual precision tank testing.

When site remediation has been completed and vapor levels have returned to their original baseline, we will certainly consider vapor monitoring.

Please be aware that any stations not in compliance by March 15, 1988 will be CLOSED until such time as they are in compliance. No time extensions will be granted. We trust that ARCO will keep its commitments to us just as we are expected to keep our commitments to them.

If you have any questions, feel free to call me at (415) 966-6378.

Sincerely,

Re: Underground Storage System Monitoring Program  
at ARCO Service Stations

Dear Mr. Leinweber:

This letter presents ARCO's proposed underground storage system monitoring program for stations located in Mountain View, Calif. The program has been designed to comply with Mountain View's underground storage tank monitoring regulations. Locations in Mountain View include:

<u>Fac. #</u>	<u>Address</u>
2010	2110 Old Middlefield Way & Rengsto
6050	790 Stierlin Rd. & Middlefield

### Introduction

ARCO's proposed monitoring program consists of two major components: (1) A Tank Replacement Program consisting of replacement of all tanks and lines at ARCO stations with older steel single-walled underground tanks, and (2) installation and implementation of an Automatic Leak Detection Inventory Reconciliation System that electronically monitors for leaks within the entire storage and dispensing system. A more complete conceptual plan for the Automatic Leak Detection/Inventory Reconciliation System (ALD/IRS) is attached. Following your approval of the proposed program ARCO will implement a pilot test of the ALD/IRS at an ARCO service station located in Santa Clara County. The purpose of the pilot test will be to ensure the effectiveness of the ALD/IRS and to allow your office to review the results. Following completion of the pilot test a complete Hazardous Materials Management Plan will be submitted to your offices for approval.

*design note -  
-7700*

*Was to have  
started in Dec 87*

Mr. Gary Loinweber  
January 29, 1988  
Page Two

Tank Replacement Program

As part of ARCO's proposed monitoring program, ARCO intends to replace all tanks and lines at facilities with older steel single-walled tanks with secondarily contained corrosion-protected equipment. Locations where tanks and lines will be replaced include:

<u>Fac. #</u>	<u>Address</u>
6050	790 Stierlin Road, Mountain View

The schedule for tank replacements will be based on an environmental risk assessment. ARCO is currently implementing similar tank replacement programs throughout the West Coast; therefore, a phased tank replacement schedule dependent on risk is necessitated by budgetary constraints. The individual replacements will occur during the period ending December 31, 1991. During the interim, before the existing equipment is replaced with new double-walled corrosion protected tanks and lines, the following procedures will be followed:

*-not acceptable*

- . Annual fuel system precision test.
- . Existing monitoring wells will continue to be monitored on a monthly basis and results forwarded to your offices.
- . Inventory reconciliation records will be maintained.

The risk assessment to be used to establish the tank and line replacement schedule will be based on site-specific factors including:

- . Age and construction materials (steel or fiberglass) of the tank(s)
- . Depth to groundwater
- . Proximity to water supply well(s)
- . Background water quality (e.g.: brine, currently impacted by other forms of contamination).
- . Current ARCO cleanup action at location.

The risk assessment factors will be collected and evaluated and a finalized replacement schedule will be submitted with the Hazardous Materials Management Plans following completion of the ALD/IRS pilot test.

Mr. Gary Leinweber  
January 29, 1988  
Page Three

Automatic Leak Detection and Inventory Reconciliation System

An Automatic Leak Detection and Inventory Reconciliation System (ALD/IRS) such as Tidel's GTM System uses permanently installed in-tank monitors and computer processing techniques to collect a database of dispenser throughput and tank volume/temperature information. The computer compares the two volumes and signals the operator or ARCO's maintenance center if the differential exceeds specific preprogrammed leak detection limits. A more complete description of the system is described in the attached conceptual program.

To provide your office with an opportunity for a "hands-on" evaluation of the equipment and data, ARCO proposes a pilot study. Your participation in the formulation and implementation of the pilot study is encouraged.

The study will be performed at an ARCO service station located in Santa Clara County to be selected during February. The pilot study is expected to be completed within 8 weeks after installation. Following completion of the pilot study a Hazardous Materials Management Plan will be submitted with the pilot study data and evaluation for your approval. Locations where ARCO intends to install the Tidel GTM System include:

*i.e. 5 tanks  
until 1988 installation*

<u>Fac. #</u>	<u>Address</u>
2010	2110 Old Middlefield Way, Mountain View

Waste Oil Tanks

Locations with existing single-walled waste oil tanks include the following:

<u>Fac. #</u>	<u>Address</u>
2010	2110 Old Middlefield Way, Mountain View
6050	790 Stierlin Road, Mountain View

Mr. Gary Leinweber  
January 29, 1989  
Page Four

At these locations, one of the following monitoring programs is proposed:

1) Monitoring

- . Annual precision tank testing.
- . Manual monitoring existing vapor wells located adjacent to the waste oil tanks. The wells will be monitored on a monthly basis and results forwarded to your offices regularly. To verify that the wells are functioning properly a "tracer" will be added to the waste oil tanks periodically.
- . Inventory reconciliation.

This program is proposed for monitoring at location 2010.

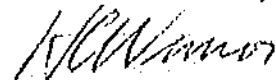

2) Replacement

ARCO intends to replace the single-walled waste oil tank at Station #6050. This replacement will occur during the period ending December 31, 1991. Waste oil tank monitoring at this station will be as described above until the tank is replaced. *- not acceptable*

*if sure, does.*  
The program outlined above represents a departure from ARCO's previous intention to install continuous vapor monitoring systems. ARCO, however, believes the program consisting of tank and line replacements and the automatic leak detection/inventory reconciliation system satisfies the intent of Mountain View's and California's underground storage tank laws and fundamental environmental objectives.

Please feel free to call me at (213) 486-2256 if you have any questions or comments regarding the contents of this letter.

Sincerely,

H. C. Winsor  
Manager  
Environmental Engineering

HCW:lcf

ARCO PETROLEUM PRODUCTS COMPANY  
CONCEPTUAL TANK MONITORING PROGRAM  
USING AN AUTOMATIC INVENTORY RECONCILIATION SYSTEM

Introduction

This conceptual tank monitoring program has been developed by the ARCO Petroleum Products Company (APPC) for implementation at ARCO service stations located within the various cities of Santa Clara County. The program is based on the use of an automatic electronic inventory reconciliation system such as the Tidel GTM System. Currently, this program is proposed for those ARCO facilities which meet the following criteria.

- . Facility storage tanks are not secondarily contained.
- . Facility storage tanks are not scheduled for replacement.

Tidel's automatic inventory reconciliation system is an automatic leak detection/inventory management system for underground storage tanks. This system employs permanently installed in-tank monitors and computer controlled electronic techniques to maintain a database of dispenser throughput volume information and tank volume/temperature information. The host computer program periodically compares the two volume differentials and records the error. An automatic inventory reconciliation system provides continuous tank monitoring with a typical sampling rate of one sample per eight hours. If a potential leak is detected, the data collection program immediately switches to one sample per hour, providing closer inspection of the suspect tank. The program displays the error, tank volume information, and dispenser sales information graphically. The cumulative error is constantly monitored and compared to a preprogrammed leak detection limit established by the local regulatory agency. If this limit is exceeded, the host computer notifies the operator and generates a leak analysis data package for the associated tank.

Equipment

All data is continuously collected electronically (i.e., without dealer intervention) from the tank gauge, located within the individual storage tanks,

and the individual dispensers. The tank gauge collects information regarding product level and temperature. This information is transmitted with the dispenser information to the host computer.

Each dispenser is interfaced to the tank monitor using a communication link. Each tank monitor is connected electronically via phone modem to the host computer. The host computer collects sales (dispensed product) volume, tank volume, and tank temperature information at least three times each day.

The host computer analyzes the data and designates a tank as potentially leaking if the preprogrammed cumulative error threshold is exceeded. If this occurs, a leak analysis package is created by the computer. This package consists of six graphs and two sets of tabular data. The graphs are: 1) Tank Volume, 2) Tank Sales, 3) Product Temperature, 4) Predicted Error, all versus time.

## TANK MONITORING PROGRAM

### 1. Daily Inventory Reconciliation:

Each time a tank level reading is obtained, automatic inventory reconciliation is conducted by the system at a leak detection rate of 0.2 gal/hr or less. A personal computer will be programmed to monitor various allowable variations and will automatically print an "exception report" if any of the programmed allowable variations are exceeded. The PC will be monitored for exception reports each day. Inventory readings for each tank will be read by the computer each shift, i.e., three times per day at 24-hour operating stations and once per day at 8-hour operating stations.

### 2. 30-Day Trend Analysis:

The reconciliation system and associated PC will be programmed to generate a 30-day trend analysis. The analysis will be based on daily averages of losses or gains and will be tabulated. The data included in the trend analysis will be actual gallonages rather than a comparison of cumulative "pluses and minuses." The actual losses or gains will then be compared to Action numbers

which are based on a leak rate of 0.2 gal/hr. The recommended "Action Numbers" for this system will be as follows:

### ACTION NUMBER CHART

<u>30-Day</u> <u>Period No.</u>	<u>Days</u>	<u>Action</u> <u>Number*</u>
1	30	144
2	60	288
3	90	432
4	120	576
5	150	720
6	180	864

\*Action numbers are presented in cumulative gallons lost and are based on a leak rate of 0.2 gal/hr.

If the Action Number is exceeded for any 30 day period, the following steps will be taken by ARCO within 10 days to determine whether or not an unauthorized discharge has occurred:

- 1) Conduct a physical inspection of the facility for signs of leakage, damage, etc.
- 2) Inspect monitoring equipment for correct operation; have monitoring system checked by factory representative.
- 3) Check calibration of station meters and pumps.
- 4) If meters, pumps and monitoring equipment are accurate, conduct a tank integrity test using the inventory reconciliation program in a continuous 24 hour shut-down test.

- 5) Pressure test product lines using a hydrostatic test if the system shut-down does not indicate a loss and prior inspections and checks have indicated that a loss has occurred.

If a loss is detected, the County will be notified within 24 hours.

3. Tank Testing Using the Automatic Leak Detection/Inventory Reconciliation System:

Unlike vadose zone monitoring devices, which cannot provide verified leak rates, the ALD/IRS is programmed to detect leaks of 0.2 gal/hr. This leak rate provides significant environmental protection and as a result, no precision or static tank level gauge testing is proposed. To ensure the initial integrity of the tanks and lines, a precision test will be performed within the six months prior to installation of the Tidel GTM System.

*Does not meet code*

4. Continuous Pipeline Monitoring:

The dispensers and meters for each tank will be electronically connected to the system control panel and the regional computer system. The tie-in between the dispensers, meters, and tanks will eliminate the need for routine pipeline testing. Pipe soundness is determined through the daily evaluation of system throughput versus tank level. This data will be compared to allowable inventory reconciliation variations automatically by the computer system and anytime the allowable variations are exceeded, an exception report will be printed. When a possible leak is detected, the static check mode will determine whether the tank system is losing product. If all meters and dispensers are operating correctly, and the tank is sound, the leak must be occurring in a pipeline. A hydrostatic pipeline test will then be used to verify the leak.

5. Overfill Protection:

The proposed reconciliation system is equipped with both high and low level alarms. The high level alarm is activated when the tank capacity exceeds 95 percent. In addition to the system's overfill alarm ARCO will install overfill containment boxes at the tank fill ports. Overfill containment boxes will be installed concurrent with installation of the Tidel GTM System.

6. Flow Restriction:

All ARCO facility pumps are currently equipped with Red Jacket flow restriction devices which will reduce the flow of the product to 3 gal/min.

7. Reporting Requirements:

Once it has been determined by ARCO's regional environmental engineer that a confirmed release has occurred (i.e., one of the Action Numbers has been exceeded or the allowable inventory reconciliation variations have been exceeded and the difference cannot be explained through equipment malfunction, meter calibration, etc.) a report will be filed within 24 hours. Annual reports will be filed as required.

P.O. Box 5811  
San Mateo, CA 94402

790 STIERLIN ROAD, MOUNTAIN VIEW  
2110 OLD MIDDLEFIELD WAY, MOUNTAIN VIEW

Dear Ms. Schultheis:

As of this date, we have not received results of the investigation by Brown and Caldwell that was to have been completed during the week of October 12, 1987 for the above stations. In addition, well vapor monitoring continues to indicate extremely high levels of vapor, even after these wells were to have been sampled and purged.

Due to the severity of the situation (groundwater contamination), the questionable status of the tanks and piping (precision testing was last completed in March 1987) and the inadequacies of the present monitoring system, a formal hearing is scheduled for February 11, 1988 at 10:00am at the Police and Fire Administration Building at 1000 Villa Street, Mountain View.

At this meeting, we will expect a description of the investigative work performed to date, recommended remedial action, and proposal for an effective monitoring system that will be installed by mid-March 1988 (see previous letter of August 5, 1987 to Hank Sheetz, Arco).

If you have any questions, feel free to call me at (415) 966-6378.

Sincerely,

Gary Leinweber  
Hazardous Materials Supervisor

January 7, 1987

Enclosed is a copy of the December 1987, print-out of the LDMP results of the ARCO Stations that we are monitoring in your jurisdiction.

Please note that we have changed the format, to more easily see trend changes in each well.

A copy of the complete set was sent to ARCO, San Mateo, (Mr. Fred Holgate c/o Karen Schultheis), and a set to Brown and Caldwell, Sacramento (Jeanne Wallberg).

Sincerely,

Jack E. Napper  
President

ENCL:  
JEN/lm

LDMP - Leak Detection and Monitoring Probes are cased wells with screened intervals at or near bottom

Date of Installation - date that the LDMP was installed at the site (by Brown & Caldwell), Pleasant Hill, CA (415) 937-9010

Total Depth - depth from surface to bottom of LDMP, as reported by Brown & Caldwell

Well Diameter (inches) - inside diameter of casing and screen of each LDMP

Screened Interval (feet) - interval of well screen. Screen is horizontal slot cut in casing to allow fluid to enter casing through the sand pack from the surrounding soil (measured from surface, down)

Sand Pack (feet) - interval of sand packing the annulus space between the outside of the casing and the soil or fill that was drilled into (measured from surface, down)

Bentonite Seal (feet) - Interval of Bentonite fill in the annulus of the cased hole to seal and prevent surface fluids from running down into the drilled hole (measured from surface, down)

Soil Analysis Hydrocarbons (ug/kg) - the laboratory results of soil taken at the bottom of each drilled hole in ug/kg (ppa by weight) ie. <10 = less than 10 parts per million

Date - date that LDMP was monitored (month and year)

Ref# - LDMP number as designated by installer

WE - weather conditions and data: see "Remarks" column; at time of day shown in "time" column; data taken or recorded from surface at station; near the tank area. Temperature: F = degrees in Fahrenheit and C = degrees in Centigrade or Celsius. Barometer reading, ie. 29.95 or 30.05 is "inches of mercury". Humidity or Relative Humidity in percent. Wind is in statute miles per hour from the direction shown, ie. 6mph - NNW = a 6 mile per hour wind from the North Northwest (approximately 22.5 degrees west of true North). Type of weather is self-explanatory.

B1 - LDMP number one, type B is "background"; ie. a reference well for showing what is considered "zero" for the station

W1 - LDMP number one, type W is "waste"; ie. a well drilled at or very near the "waste oil" tank or receptical

P1 - LDMP number one type P is "product"; ie. a well drilled at or very near the product pipe lines between the tanks and the pumps

T1 - LDMP number, type T is "tank"; ie. a well drilled into the tank fill area

Time - the time of day that the monitoring and sampling took place

Vapor - In parts per million (ppa)

Vapors; assuming total maximum vapor at a million parts per million

Temp. Cels. - temperature 4 feet below surface, in Celsius

Fluid - is there standing fluid in the hole; yes or no

Dist. to Fluid (feet) - distance down the well to the top of the fluid, if there is any

Sample - was a sample of fluid taken; yes or no

Product - was there floating product on the fluid sampled (line above); yes or no

Blotter - was the above fluid sampled by means of a blotter paper tabs; n = no; p = product; w = water.

Remarks - space to write impressions, thoughts or other data. Cond. = condensation on side of well casing; S1 = slight or slight amount of; Mod = moderate or moderate amount of; Tr = trace or trace amounts of; Abund. = abundant or abundant amount of; Chromat. = chromatogram was run and a copy is on file at ARCO and at WEGE. Sup = traffic box, Christy box, utility box or covered hole in pavement; y = yes; n = no; p = product; w = water.

NA - data for this category Not Available or Not Accomplished (ie. not gathered or generated for some reason) or Not Applicable for obvious reasons

- W E G E -

The above LOMP data provided by Brown & Caldwell, Consulting Engineers  
 Pleasant Hill, California (415) 937-9010

Legend/Abbreviations:

LOMP - Leak Detection and Monitoring Probes are cased wells with screened intervals at or near bottom

Date of Installation - date that the LOMP was installed at the site (by Brown & Caldwell, Pleasant Hill, CA (415) 937-9010)

Total Depth - depth from surface to bottom of LOMP, as reported by Brown & Caldwell

Well Diameter (inches) - inside diameter of casing and screen of each LOMP

Screened interval (feet) - interval of well screen. Screen is horizontal slots cut in casing to allow fluid to enter casing through the sand pack from the surrounding soil (measured from surface, down)

Sand Pack (feet) - interval of sand packing the annulus space between the outside of the casing and the soil or fill that was drilled into (measured from surface, down)

Bentonite Seal (feet) - interval of bentonite fill in the annulus of the cased hole to seal and prevent surface fluids from running down into the drilled hole (measured from surface, down)

Soil Analysis Hydrocarbons (ug/kg) - the laboratory results of soil taken at the bottom of each drilled hole in ug/kg (ppm by weight); ie, <10 = less than 10 parts per million

Date - date that LOMP was monitored (month and year)

Well# - LOMP number as designated by installer

WE - weather conditions and dates see "Remarks" column; at time of day shown in "Time" column; data taken or recorded from surface at station, near the tank area. Temperature F = degrees in Fahrenheit and C = degrees in Centigrade or Celsius. Barometer reading, ie. 29.95 or 30.05 is "inches of mercury". Humidity or Relative Humidity in percent. Wind is in statute miles per hour from the direction shown, ie. 8mph - WNW = a 8 mile per hour wind from the North Northwest (approximately 22.5 degrees west of true North). Type of weather is self-explanatory.

B1 - LOMP number one, type B is "background"; ie. a reference well for showing what is considered "zero" for the station

W1 - LOMP number one, type W is "waste"; ie. a well drilled at or very near the "waste oil" tank or receptical

P1 - LOMP number one type P is "product"; ie. a well drilled at or very near the product pipe lines between the tanks and the pumps

F1 - LOMP number, type F is "fill"; ie. a well drilled into the tank fill area

Time - the time of day that the monitoring and sampling took place

Vapor - In parts per million (ppm)

Vaporst assuming total maximum vapor at a million parts per million

Temp. Cels. - temperature 4 feet below surface, in Celsius

Fluid - is there standing fluid in the hole; yes or no

Dist. to Fluid (feet) - distance down the well to the top of the fluid, if there is any

Sample - was a sample of fluid taken; yes or no

Product - was there floating product on the fluid sampled (line above); yes or no

Blotter - was the above fluid sampled by means of a blotter paper (abl = not; p = product; w = water).

Remarks - space to write impressions, thoughts or other data. Cond. = condensation on side of well casing; Sl = slight or slight amount of; Med = moderate or moderate amount of; Tr = trace or trace amounts of; Abund. = abundant or abundant amount of; Chromat. = chromatogram was run and a copy is on file at ARCO and at WEGE. Trap = traffic box, christy box, utility box or covered hole in pavement; y = yes; n = no; p = product; w = water.

NA - data for this category Not Available or Not Accomplished (ie. not gathered or generated for some reason) or Not Applicable for obvious reasons

August 5, 1987

Mr. Hank Sheetz  
ARCO PETROLEUM PRODUCTS  
2000 Alameda de las Pulgas  
P.O. Box 5811  
San Mateo, CA 94402

Dear Mr. Sheetz:

Attached, please find letters of agreement between Mr. Ken Daly, Hazardous Materials Inspector for Mountain View Fire Dept., Al Sevilla, Business Development Manager of Brown and Caldwell, and Fred Holgate of Arco Petroleum Products.

The agreement states that a continuous vapor monitoring system be installed for all of Arco's underground storage tanks in Mountain View NO LATER THAN MARCH 15, 1988. The monthly monitoring you are now performing was designed as a temporary procedure to allow your company time to evaluate continuous vapor alternatives. As of this date, we are only approving aspirated vapor monitoring systems as "stand-alone" systems. Genelco and Azonic Technology are two such systems installed extensively in Santa Clara county.

We will be happy to discuss any other types of equipment that can be shown to give comparable results. By issuance of this letter, we are attempting to provide you with ample time to get your tanks into compliance with these deadlines.

Please be aware that any stations not in compliance by March 15, 1988 will be CLOSED until such time as they are in compliance. NO TIME EXTENSIONS WILL BE GRANTED.

If you have any questions or would like to discuss your monitoring options further, feel free to call me at (415) 966-6378.

Sincerely,

Gary Leinweber  
Hazardous Materials Supervisor

Mr. Hank Sheetz  
ARCO PETROLEUM PRODUCTS  
2000 Alameda de las Pulgas  
P.O. Box 5811  
San Mateo, CA 94402

Dear Mr. Sheetz:

Attached, please find letters of agreement between Mr. Ken Daly, Hazardous Materials Inspector for Mountain View Fire Dept., Al Sevilla, Business Development Manager of Brown and Caldwell, and Fred Holgate of Arco Petroleum Products.

The agreement states that a continuous vapor monitoring system be installed for all of Arco's underground storage tanks in Mountain View NO LATER THAN MARCH 15, 1988. The monthly monitoring you are now performing was designed as a temporary procedure to allow your company time to evaluate continuous vapor alternatives. As of this date, we are only approving aspirated vapor monitoring systems as "stand-alone" systems. Genelco and Azonic Technology are two such systems installed extensively in Santa Clara county.

We will be happy to discuss any other types of equipment that can be shown to give comparable results. By issuance of this letter, we are attempting to provide you with ample time to get your tanks into compliance with these deadlines.

Please be aware that any stations not in compliance by March 15, 1988 will be CLOSED until such time as they are in compliance. NO TIME EXTENSIONS WILL BE GRANTED.

If you have any questions or would like to discuss your monitoring options further, feel free to call me at (415) 966-6378.

Sincerely,

Gary Leinweber  
Hazardous Materials Supervisor

Mountain View, CA 94041

SUBJ: ARCO Service Stations  
2110 Old Middlefield Rd.  
790 Stierlin Rd.

Dear Mr. Leinweber:

Confirming our telephone conversation of June 30th, enclosed please find copies of the last tank tests at the subject two ARCO locations in your city.

As I indicated to you, our Consulting Engineers, Brown & Caldwell, has already started a preliminary investigation to determine the extent, if any, of the contamination. As soon as they have sufficient information we will be in contact with you. At the same time I am trying to determine if the dealers inventory records indicate any recent product losses.

If you have need to contact me, please call 800 523 5368 ID#184 1304

Thank you

Very truly yours,

*Henry Sheetz*

CITY OF MOUNTAIN VIEW

FIRE DEPARTMENT  
HAZARDOUS MATERIALS SECTION  
(415) 956-6378

1000 VILLA STREET  
MOUNTAIN VIEW, CA 94041

June 15, 1987

Mr. Carl Seward  
ARCO PETROLEUM PRODUCTS  
P.O. Box 5811  
San Mateo, CA 94403

Dear Mr. Seward:

We continue to receive vapor readings at both Mountain View Arco Stations far exceeding the acceptable limits (1000 ppm maximum). This indicates either leaks in tanks or lines, or excessive spillage due to improper handling or overfilling.

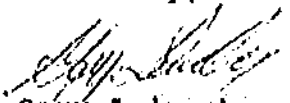

The following is our required procedure when vapor levels exceed 1000 ppm:

- 1) A full system precision test must be performed (on tanks and lines) to determine if there is immediate leakage;
- 2) If the system tests tight, contaminated soil must be removed and replaced with clean fill to lower vapor levels to below 1000 ppm;
- 3) If the system tests tight, overfill protectors must be installed to prevent contamination of the clean fill.

Since this situation has persisted since August of 1986, we feel immediate action is necessary.

Please have precision testing performed at both 790 Stierlin (Station #6050) and 2110 Old Middlefield Way (Station #2010) NO LATER THAN JULY 15, 1987. Be advised that failure to comply constitutes a violation of the Hazardous Materials Storage Ordinance (Chapter 24, MVMC), and may result in civil penalties of up to \$500 per day per violation. If you should have any questions, feel free to call me at (415) 966-6378. Thank you for helping us maintain the cleanliness of our soil and groundwater.

Sincerely,

Gary Leinweber  
Hazardous Materials Specialist

B7 3/17/86	8	1	2.5 - 8	2.0 - 8	1.7 - 2.0	<10

The above LDMP data provided by Brown & Caldwell, Consulting Engineers  
 Pleasant Hill, California (415) 937-9010

Legend/Abbreviations:

LDMP - Leak Detection and Monitoring Probes are cased wells with screened intervals at or near bottom.

Date of Installation - date that the LDMP was installed at the site (by Brown & Caldwell, Pleasant Hill, CA (415) 937-9010)

Total Depth - depth from surface to bottom of LDMP, as reported by Brown & Caldwell

Well Diameter (inches) - inside diameter of casing and screen of each LDMP

Screened Interval (feet) - interval of well screen. Screen is horizontal slots cut in casing to allow fluid to enter casing through the sand pack from the surrounding soil (measured from surface, down)

Sand Pack (feet) - interval of sand packing the annulus space between the outside of the casing and the soil or fill that was drilled into (measured from surface, down)

Bentonite Seal (feet) - interval of Bentonite fill in the annulus of the cased hole to seal and prevent surface fluids from running down into the drilled hole (measured from surface, down)

Soil Analysis Hydrocarbons (ug/kg) - the laboratory results of soil taken at the bottom of each drilled hole in ug/kg (ppm by weight); ie. <10 = less than 10 parts per million

Date - date that LDMP was monitored (month and year)

well# - LDMP number as designated by installer

WE - weather conditions and disto; see Remarks column at time of day shown in 'time' column; data taken or recorded from surface at station, near the tank area. Temperatures F = degrees in Fahrenheit and C = degrees in Centigrade or Celsius. Barometer reading, ex. 29.95 or 79.65 is 'inches of mercury'. Humidity or Relative Humidity in percent. Wind is in statute miles per hour from the direction shown, ex. 8mph - NNR = a 8 mile per hour wind from the North Northwest (approximately 22.5 degrees west of True North). Type of weather is self-explanatory.

R1 - LDMF number one, type R is 'background'; ie. a reference well for showing what is considered 'zero' for the station

W1 - LDMF number one, type W is 'waste'; ie. a well drilled at or very near the 'waste oil' tank or receptical

P1 - LDMF number one type P is 'product'; ie. a well drilled at or very near the product pipe lines between the tanks and the pumps

T1 - LDMF number, type T is 'tank'; ie. a well drilled into the tank fill area

Time - the time of day that the monitoring and sampling took place

Vapor - in parts per million (ppm)

Vapors; assuming total maximum vapor at a million parts per million

Temp. Celc. - temperature 4 feet below surface, in Celsius

fluid - is there standing fluid in the hole; yes or no

Dist. to Fluid (feet) - distance down the well to the top of the fluid, if there is any

Sample - was a sample of fluid taken; yes or no

Product - was there floating product on the fluid sampled (line above); yes or no

Blotter - was the above fluid sampled by means of a blotter paper tab; n = not; p = product; w = water.

Remark - space to write impressions, thoughts or other data. Cond. = condensation on side of well casing; S1 = slight or slight amount of; Mod = moderate or moderate amount of; Tr = trace or trace amounts of; Abund. = abundant or abundant amount of; Chromat. = chromatogram was run and a copy is on file at ARCO and at REBE. Susp = traffic box, christy box, utility box or covered hole in pavement; y = yes; n = not; p = product; w = water.

NA - data for this category, Not Available or Not Accomplished (ie. not gathered or generated for some reason) or Not Applicable for obvious reasons

Mr Gary Seiner  
1000 Villa St.  
Mountain View Ca 94041

Dear Gary,

ARCO will be proposing to perform the following work at all of our facilities within Santa Clara County that presently require monthly LDMP vapor monitoring.

1. Review of all data to determine facilities that may require investigative work.
2. Repair of all LDMP wells as required.
3. Review proposals for installation of continuous monitoring systems.
4. Review proposals for installation of overflow protection boxes.
5. Aspirate all LDMP's before taking readings on next monitoring.

I will keep you advised as to the progress of these items.

Sincerely,

Carl Seward

## CITY OF MOUNTAIN VIEW

Memo to FileDate 3/23/87Memo from Carl SewardSubject UG Tank Monitoring

Carl is also concerned about "high" vapor readings @ the 2 Aico stations. He will have all tanks precision tested sometime this year. In addition they are looking at installing Geoteco units into the vapor wells. They have signed an agreement with Geometrics regarding studying each site & making recommendations. Finally, they are upgrading all wells, i.e. those they can't open, etc.

I asked him to send me a letter outlining their plans & also submit a time frame for the precision testing.

Carl does not know how many tanks have overfills.

87	3/17/86	8	1	2.5 - 8	2.0 - 8	1.7 - 2.0	<10

The above LDMP data provided by Brown & Caldwell, Consulting Engineers  
Pleasant Hill, California (415) 937-9010

Legend/Abbreviations:

LDMP - Leak Detection and Monitoring Probes are cased wells with screened intervals at or near bottom

Date of Installation - date that the LDMP was installed at the site (by Brown & Caldwell, Pleasant Hill, CA (415) 937-9010)

Total Depth - depth from surface to bottom of LDMP, as reported by Brown & Caldwell

Well Diameter (inches) - inside diameter of casing and screen of each LDMP

Screened Interval (feet) - interval of well screen. Screen is horizontal slots cut in casing to allow fluid to enter casing through the sand pack from the surrounding soil (measured from surface, down)

Sand Pack (feet) - interval of sand packing the annulus space between the outside of the casing and the soil or fill that was drilled into (measured from surface, down)

Bentonite Seal (feet) - interval of bentonite fill in the annulus of the cased hole to seal and prevent surface fluids from running down into the drilled hole (measured from surface, down)

Soil Analysis Hydrocarbons (ug/kg) - the laboratory results of soil taken at the bottom of each drilled hole in ug/kg (ppm by weight); i.e. <10 = less than 10 parts per million

Date - date that LDMP was monitored (month and year)

Well# - LDMP number as designated by installer

WE - weather conditions and data; see "Remarks" column at time of day shown in "Time" column, data taken or recorded from surface at station, near the tank area. Temperature: F = degrees in Fahrenheit and C = degrees in Centigrade or Celsius. Barometer reading, i.e. 29.95 or 30.05 is "inches of mercury". Humidity or Relative Humidity in percent. Wind is in statute miles per hour from the direction shown, i.e. 5 mph - NW = a 5 mile per hour wind from the North Northwest (approximately 22.5 degrees west of True North). Type of weather is self-explanatory.

B1 - LOMP number one, type B is "background"; i.e. a reference well for showing what is considered "zero" for the station

W1 - LOMP number one, type W is "waste"; i.e. a well drilled at or very near the "waste oil" tank or receptical

P1 - LOMP number one type P is "product"; i.e. a well drilled at or very near the product pipe lines between the tanks and the pumps

T1 - LOMP number, type T is "tank"; i.e. a well drilled into the tank fill area

Time - the time of day that the monitoring and sampling took place

Vapor - in parts per million (ppm)

Vapors; assuming total maximum vapor at a million parts per million

Temp. Cels. - temperature 4 feet below surface, in Celsius

Fluid - is there standing fluid in the hole; yes or no

Dist. to Fluid (feet) - distance down the well to the top of the fluid, if there is any

Sample - was a sample of fluid taken; yes or no

Product - was there floating product on the fluid sampled (line above); yes or no

Blotter - was the above fluid sampled by means of a blotter paper tab; n = not; p = product; w = water.

Remarks - space for written impressions, thoughts or other data. Cond. = condensation on side of well casing; Sl = slight or slight amount of; Mod = moderate or moderate amount of; Tr = trace or trace amount of; Abund. = abundant or abundant amount of; Chromat. = chromatograph was run and a copy is on file at ARCO and at WEGE. Susp = traffic box, christy box, utility box or covered hole in pavement; y = yes; n = not; p = product; w = water.

NA - data for this category Not Available or Not Accomplished (i.e. not gathered or generated for some reason) or Not Applicable for obvious reasons

The above LDMF data provided by Brown & Caldwell, Consulting Engineers  
 Pleasant Hill, California - (415) 937-9010

Legend/Abbreviations:

LDMF - Leak Detection and Monitoring Probes are cased wells with screened intervals at or near bottom

Date of Installation - date that the LDMF was installed at the site (by Brown & Caldwell, Pleasant Hill, CA (415) 937-9010)

Total Depth - depth from surface to bottom of LDMF, as reported by Brown & Caldwell

Well Diameter (inches) - inside diameter of casing and screen of each LDMF

Screened interval (feet) - interval of well screen. Screen is horizontal slots cut in casing to allow fluid to enter casing through the sand pack from the surrounding soil (measured from surface, down)

Sand Pack (feet) - interval of sand packing the annulus space between the outside of the casing and the soil or fill that was drilled into (measured from surface, down)

Bentonite Seal (feet) - interval of Bentonite fill in the annulus of the cased hole to seal and prevent surface fluids from running down into the drilled hole (measured from surface, down)

Soil Analysis Hydrocarbons (ug/kg) - the laboratory results of soil taken at the bottom of each drilled hole is ug/kg (ppm by weight) of. <10 = less than 10 parts per million

Date - date that LDMF was monitored (month and year)

Well# - LDMF number as designated by installer

WE - weather conditions and date; see "Resa" column; at time of day shown in "line" col. data taken or recorded from surface at station, near the tank area. Temperature; F = degrees in fahrenheit and C = degrees in Centigrade or Celsius. Barometer reading, ie. 29.95 or 30.03 is "inches of mercury". Humidity or Relative Humidity in percent. Wind is in statute miles per hour from the direction shown, ie. 6mph - NW = a 6 mile per hour wind from the North Northwest (approximately 22.5 degrees west of True North).

Type of weather is self-explanatory

RF - LOMP number one, type R is "background"; ie. a reference well for showing what is considered "zero" for the station

WF - LOMP number one, type W is "waste"; ie. a well drilled at or very near the "waste oil" tank or receptical

PF - LOMP number one type P is "product"; ie. a well drilled at or very near the product pipe lines between the tanks and the pumps

TF - LOMP number, type T is "tank"; ie. a well drilled into the tank fill area

Time - the time of day that the monitoring and sampling took place

Vapor - 100 percent or maximum attainable vapor reading at normal temperatures is approximately 550,000 ppa gasoline vapors in air ( moist air) (referenced from pure liquid gasoline at 1,000,000 ppa)

Temp. Cels. - temperature 4 feet below surface, in Celsius

Fluid - is there standing fluid in the hole; yes or no

Dist. to Fluid (feet) - distance down the well to the top of the fluid, if there is any

Sample - was a sample of fluid taken; yes or no

Product - was there floating product on the fluid sampled (line above); yes or no

Blotter - was the above fluid sampled by means of a blotter paper tab and saved to examine later; yes or no

Remarks - space to write impressions, thoughts or other data

Cond. - condensation on side of well casing; Sl = slight or slight amount of; Mod = moderate or moderate amount of; Tr = trace or trace amounts of; Abund. = abundant or abundant amount of; Chromat. = chromatogram was run and a copy is on file at ARCO and at BEGE. Sump = traffic box or covered hole in pavement

NA - data for this category Not Available or Not Accomplished (ie. not gathered or generated for some reason) or Not Applicable for obvious reasons

July 17, 1985

RECEIVED

JUL 19 1985

FIRE DEPT.

Mr. Frank Moe  
Battalion Chief/Fire Marshall  
City of Mountain View Fire  
Department  
1000 Villa Street  
Mountain View, California 94041

11-39-2184-03/1

Subject: Arco Service Station Monitoring Plan

Dear Mr. Moe:

Thank you for your letter of July 8, 1985, approving our proposed monitoring plan for the Arco service stations within your jurisdictions. In response to your question regarding the monitoring waste oil tank, we propose to install a similarly designed probe by the waste oil tank and use hexane as the leak tracer or indicator. A small amount of hexane (no more than a quart) will be added every time the waste oil tank is emptied. The monitoring technique and frequency will be similar to those proposed for the product tanks and pipelines.

I hope that this response adequately addressed your concerns. We will be scheduling the installation of the approved monitoring system within the next 6 months. Please call me if you have any questions or need additional information.

Very truly yours,

BROWN AND CALDWELL

Al Sevilla  
Project Manager

Walnut Creek, CA 94596

PROPOSED MONITORING PLAN FOR ARCO SERVICE STATIONS

Dear Mr. Sevilla:

I approve of your proposed plan for monitoring the Arco service stations at 2110 Middlefield Road and 790 Stierlin Road, with the following exception. Your letter of June 27 made no mention of how you will monitor the waste oil tanks. I know we talked of a tracer in a tank, but would you please define.

Very truly yours,

  
Frank Moe  
Battalion Chief/Fire Marshal

Subject: Installation of Leak Detection and  
Monitoring Probes at ARCO Service  
Station No. 2010, Mountain View, California

Dear Mr. Seward:

This letter presents the procedures used to install leak detection and monitoring probes (LDMPs) in the backfill surrounding underground storage tanks (USTs) and pipelines at ARCO service station No. 2010, 2110 Middlefield, Mountain View, California. This work was performed for ARCO Petroleum Products Company and was authorized by ARCO Construction Contract No. 17943 to provide backfill vapor and groundwater monitoring points in the vicinity of USTs and fuel pipelines. The LDMPs will be used with tank monitoring and testing to detect unauthorized releases of product to soil or groundwater as required by Chapter 24, Mountain View Municipal Code. The LDMPs were installed after the monitoring plan and the Hazardous Materials Management Plan were approved by Mr. Frank Moe of the Mountain View Fire Department. A well permit was obtained from the Santa Clara County Water District for the background LDMP because it was not installed in backfill material (Permit No. 86W0416). These permits are enclosed. Two 10,000 gallon tanks and one 8,000 gallon tank are used for the storage of gasoline. A 250 gallon tank is used for the underground storage of waste-oil. The product tanks and the waste-oil tank were installed in 1979. The following sections of this letter discuss LDMP Installation, Soil Sample Analysis, and Further Monitoring.

#### LDMP Installation

The installation and construction of the LDMPs was done in two stages. A ground penetrating radar (GPR) survey of the site was first used to identify LDMP installation locations free of subsurface obstructions within the tank or pipeline backfill. Norcal

Mr. Carl Soward  
June 9, 1986  
Page 2

Geophysical Consultants of Petaluma, California, did the GPR survey under Brown and Caldwell direction. The second stage, supervised by a Brown and Caldwell geohydrologist, included the installation of two fuel tank LDMPs, two product pipeline LDMPs, one waste-oil LDMP, and one background LDMP on March 17 and March 18, 1986. A Mobile B-53 drill rig, owned and operated by PC Exploration of Roseville, California, and equipped with a 8-inch diameter hollow stem augers, was used to advance each borehole.

The product tank, pipeline, and waste-oil LDMPs range from 5 to 15 feet in depth and terminate in the undisturbed soil below the excavation invert. The background LDMP is 8 feet in depth and was installed in undisturbed material. Figure 1 shows the locations of the LDMPs at the site, and Figure 2 shows the construction of a typical LDMP. Table 1 summarizes the details of the LDMPs. Each LDMP is constructed of a 1-inch or 2-inch diameter schedule 40 polyvinyl chloride (PVC) pipe with 0.020 inch slots placed 0.25 inches apart. The slots extend from 2 feet below grade to the base of the LDMP. All boreholes were backfilled from the bottom of the boreholes to above the screened interval with No. 3 Lapis Luster sand. The annulus above the sand pack is sealed with approximately 6 inches of bentonite pellets or powder overlain by a 6 percent bentonite cement grout. A secure, watertight street box was cemented at grade level with concrete to protect each LDMP. Two 2-inch diameter LDMPs were installed around the tank cluster to monitor groundwater. Groundwater occurs approximately 10 feet below grade.

Borehole logs (enclosed) were recorded during the drilling and construction of each LDMP. Soils were logged using the Unified Soil Classification System. A modified California split-spoon sampler was driven ahead of the augers to provide a soil sample for laboratory hydrocarbon analysis and to aid in classifying the material that was recovered. Drill cuttings consisting of clean soil were sealed in steel barrels prior to off-site disposal in a Class III landfill.

#### Soil Sample Analysis

Laboratory soil analyses were performed by Brown and Caldwell's Emeryville laboratory on soil samples recovered at the bottom of each LDMP borehole (Table 2). Samples were analyzed for fuel constituents using a gas chromatograph with a flame ionization detector using methods described by the California Regional Water Quality Control Board, San Francisco Bay Region. Product tank, product pipeline, and background LDMP soil samples were analyzed for total petroleum fuel hydrocarbons. The waste oil tank LDMP soil sample was analyzed for total petroleum hydrocarbons. Analytical results of each soil sample are included in Table 2.

Further Monitoring

Groundwater monitoring guidelines published by the Santa Clara Valley Water District state that vadose zone wells are to be monitored for vapors monthly, or quarterly when groundwater is present. Vapor monitoring may be performed by attaching an aspirator to a tube fitting at the top of the LDMP. Groundwater level measurements and recovery is done by lowering a ball-valve bailer into the 2-inch diameter LDMP. ARCO is currently evaluating bids from several contractors for monitoring of LDMPs.

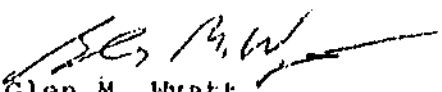

Brown and Caldwell appreciates the opportunity to provide this service for ARCO. If there are any questions on the work described in this letter, please contact us.

Very truly yours,

BROWN AND CALDWELL

PROPOSED MONITORING PLAN FOR ARCO SERVICE STATIONS

Dear Mr. Sevilla:

I approve of your proposed plan for monitoring the Arco service stations at 2110 Middlefield Road and 790 Stierlin Road, with the following exception. Your letter of June 27 made no mention of how you will monitor the waste oil tanks. I know we talked of a tracer in a tank, but would you please define.

Very truly yours,

Frank Moe

Subject: ARCO Petroleum Products Company Leak  
Detection Monitoring Probe Monitoring  
Schedule

Dear Captain Daly:

This transmittal is in response to our discussion early last week regarding a monitoring schedule for the leak detection monitoring probes (LDMPs) installed at two ARCO Petroleum Products Company (ARCO) service stations located in the City of Mountain View at:

2110 Middlefield Road/Rengstorff (No. 2010)  
790 Stierlin/Middlefield (No. 6050)

Based on a discussion between Mr. Carl Seward of ARCO and Mr. Al Sevilla of Brown and Caldwell, ARCO proposes to begin a monthly monitoring program beginning no later than July 1, 1986.

If you have any questions or are in need of additional information, please call Mr. John Nyznyk or me.

Very truly yours,

BROWN AND CALDWELL

INTER-OFFICE MEMORANDUM

DATE: March 11, 1986  
TO: Building Inspection Division  
FROM: Kenneth R. Daly, Hazardous Materials Inspector  
SUBJECT: PLAN CHECK, UNDERGROUND TANK MONITORING PLANS FOR ARCO STATIONS AT 2110 OLD MIDDLEFIELD WAY & 790 STIERLIN ROAD

---

The subject plans identified as "SERVICE STATION SWC MIDDLEFIELD/STIERLIN" and "SERVICE STATION NWC MIDDLEFIELD/RENGSTORFF" - ARCO, INC are approved, subject to the following conditions.

A. MONITORING METHOD AND FREQUENCY

1. Monitoring and/or sampling of the LDMP for vapors shall be completed on a specific time table. Said time table shall submitted to the Fire Department for approval.
2. Monitoring of the LDMP for vapors after March 15, 1988 shall be on a continuous basis.

B. AVAILABLE MONITORING DEVICE

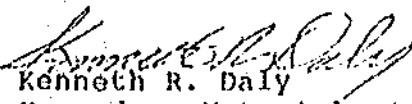

1. Approval of these plans do not constitute approval of the devices listed for use after MARCH 15, 1988 when continuous, stationary, on-site devices must be operational.

C. ACTION PLAN

1. If there is a leak or suspected leak, immediate notification to the FIRE DEPARTMENT is required.
2. Analysis of any and all soil samples or water samples taken as a result of a suspected leak shall be forwarded to the Fire Department.

D. GENERAL REQUIREMENTS

1. Monitoring wells shall be installed as per approved drawings.
2. Monitoring after MARCH 15, 1988 shall meet the requirements of Chapter 24, Mountain View Municipal Code.

  
Kenneth R. Daly  
Hazardous Materials Inspector

Subject: Proposed Monitoring Plan for Arco  
Service Stations

Dear Mr. Moe:

As per our meeting of June 17, 1985, we are submitting on behalf of Arco Petroleum Products Company the proposed monitoring program for the Arco service stations located within the jurisdictions of the Mountain View Fire Department. This proposed monitoring plan applies to the following service stations:

- SS No. 2010      Taghi Lavassani  
                         2110 Middlefield/Rengstarff
- SS No. 6050      James M. Halsne  
                         790 Stierlin/Middlefield

The major items we discussed at the meeting are covered in the proposed plan enclosed herewith including:

1. General description of proposed system.
2. Design and construction details of the leak detection monitoring system.
3. Available monitoring device.
4. Method and frequency of monitoring.
5. Action plan.
6. Reporting procedure.

The following items are in specific response to the concerns expressed during the meeting.

Mr. Frank L. Moe  
June 27, 1985  
Page two

1. As discussed in the proposed plan, the type of monitoring/sampling device will depend on the subsurface condition that will be encountered at each site. For groundwater sampling, a plastic bailer or peristaltic pump will be used for sampling and monitoring for sheen and odor. If an unsaturated condition is encountered, a portable or continuous hydrocarbon detector or analyzer will be used for vapor monitoring. Literature on portable hydrocarbon analyzers presently available is enclosed for your reference.
2. Monitoring of the leak detection system for vapor or groundwater will be done on a monthly basis.
3. Periodic vapor monitoring using a portable device will be carried out for a period of 2 years during which time the use of a continuous monitoring device will be continually evaluated. A continuous monitoring device will be installed any time during the 2 year period as soon as a cost effective and acceptable device is found.
4. A third party will conduct the monitoring and sampling of the leak detection monitoring systems.
5. Any suspected or confirmed release of product determined through the monitoring program will be reported to the fire department immediately.

As discussed at our meeting, we do not foresee the need to apply for a well construction permit from the Santa Clara Valley Water District based on our design of the proposed leak detection system. Please advise us, however, of any other permit needed for installation of the system. We have also enclosed a copy of the design drawings of our proposed system for a typical service station for your review and approval.

It is my understanding from our meeting that you have approved our proposed system subject to the conditions we have agreed to and your review of the enclosed information. We therefore request for your written approval of our plan so that we can proceed with the installation of the leak detection monitoring system.

We greatly appreciate your consideration of our proposed plan and look forward to your approval. Please call me if you have any questions or need additional information on the proposed plan.

Mr. Frank L. Moe

### OPERATING FEATURES

- Easy to understand and operate
- On-the-spot results, time saving and essential when investigating variable conditions
- Portable, completely self-contained, weighs only 5 lb.
- Accurate readings automatically compensated for battery voltage changes, temperature variations and differential air flow
- Ultra sensitive, 2 ppm (4 ppm minimum) detectable concentration
- Versatile operation curves available for most commonly encountered gases and vapors. Easily calibrated for specific vapors
- Recorder output for time-weighted evaluations and permanent records
- Audible alarm warns if meter needle moves upscale or drifts below zero setting
- Precision meter, wide view scale with clear graduations
- Long life sensor, non-reductive and resistant to catalytic poisoning
- Ample battery capacity, over 8 hours continuous operation
- Sturdy construction, high quality components, friction free meter and rugged case

### APPLICATIONS

Wherever flammable liquids are present, the Model TLV is almost indispensable for health, safety and air pollution studies. In certain situations, it may be necessary to supplement readings with time consuming and costly gas chromatography or mass spectrometry methods. But, in most cases, the Model TLV will furnish reliable information to accurately assess contaminant conditions, with an appreciable savings in time and effort.

The predominant advantage of the Model TLV is that it can be used on-the-spot, right where the measurements are most meaningful - in the employee's breathing zone, in the process area, in exhaust ventilation stacks, in tanks and manholes, etc.

### SPECIFIC APPLICATIONS INCLUDE

- Air cleanliness surveys
- Ethylene oxide sterilization
- Explosive atmospheres
- Gas leak detection
- Industrial hygiene studies
- Pollution source analysis
- Respirator fit testing

### PARTIAL LIST OF GASES MEASURABLE WITH THE MODEL TLV SNIFFER

- |                  |                     |
|------------------|---------------------|
| Acetylene        | Methyl chloride     |
| Acetylene        | Methyl chloroform   |
| Benzene          | Methyl ethyl ketone |
| Benzene          | N-butyl acetate     |
| Carbon disulfide | Neoprene            |
| Cyclohexane      | Perfluorobenzene    |
| Ethyl acetate    | Propane             |
| Ethylene oxide   | Styrene             |
| Heptane          | Toluene             |
| Hexane           | Trichloroethylene   |
| Hydrogen         | Trichloroethylene   |
| Methane          | Xylene              |
| Methyl alcohol   |                     |
| Methyl isobutyl  |                     |

### DESCRIPTION

The Model TLV Sniffer utilizes the most modern electronics and sensor design available today. The key to its high sensitivity and stability is a combination of unique features, specially developed by Bacharach.

Intended for both field and laboratory use, the Model TLV is compact, well contained and completely portable. A large, easy-to-read meter and three operating controls are mounted on the front panel. The operating controls consist of fine and coarse zero adjustments and a multi-position on/off/battery check/range selector switch. The Model TLV has three measuring ranges: 0 to 100, 0 to 1000 and 0 to 10,000 ppm.

The meter readout is stable in all positions. It can be used on any surface or when worn with a shoulder strap.

The sampled air enters the instrument through a flame-arrestor, is drawn through the reaction chamber by an integral bellows pump and is then exhausted to the outside of the case. A short length of plastic sample tubing may be used, or an accessory Resistoflex hose and short aluminum probe assembly. The sampling assembly is provided with a dust filter chamber and a quick-connect fitting.

Normally intended for operation from self-contained, rechargeable nickel cadmium batteries, the Model TLV can also be powered from ordinary, size D, flashlight batteries. A solid-state regulator precisely controls the voltage applied to the measuring bridge and automatically compensates for changes in battery voltage. This feature eliminates voltage drift and is an important contributor to the overall performance of the instrument.

An audible alarm is energized if the reading exceeds an adjustable set point. The alarm also provides a warning if the meter needle has not been properly zeroed and drifts down scale, or if the battery output drops below minimum voltage required to sustain normal operation. An earphone can be attached to a socket on the side of the TLV Sniffer case, in areas where ambient noise may obscure the audible signal from the speaker.

The solid-state circuitry is contained on a single fiberglass-PC Board. Precision components are used throughout. Heart of the circuitry is a specially designed monolithic chip. Point to point wiring is reduced to a minimum to ensure trouble-free operation.

### PRINCIPLE OF OPERATION

The Model TLV operates on the heat of combustion principle, a particular physical characteristic of all combustible gases and vapors. The gas sample is passed over two contact mass, resistive elements which serve as opposite arms of a Wheatstone bridge circuit. Both resistive elements are electrically identical.

One element is provided with a platinum catalyst surface and acts as the active sensor, while the other is catalytically inert and acts as a reference element. A unique design of the measuring elements resists the "poisoning" effect of tetraethyl lead, and random concentrations of silicone vapors.

The sample air is drawn over both elements simultaneously. The sampling arrangement automatically compensates for small differences in temperature, pressure and other background conditions of the sample gas, to promote a stable zero condition.

The out-of-balance current of the bridge, which is proportional to the gas concentration, is continuously displayed on a wide-view meter with a linear scale. A socket is provided on the side of the instrument case, for connection to an external potentiometer recorder.

### ORDERING INFORMATION

STOCK NO.	DESCRIPTION
23 730	Model TLV Sniffer, nickel cadmium rechargeable Ni-cad battery, no external power required
23 731	Model TLV Sniffer, flashlight batteries, no external power required
OPTIONAL ACCESSORIES	
23 733	Battery charger with meter plug 115-220VAC
23 724	5 ft. Resistoflex hose and integral dust filter chamber
23 735	Nickel cadmium 2.6V, 1.2 amp/hr. battery with carrying case and strap
23 734	5 ft. Resistoflex hose
23 736	Earphone, 3/8" dia. 24 ohm
23 737	5 ft. Resistoflex hose and aluminum probe assembly

## CENTURY DUAL-MODE ORGANIC VAPOR ANALYZER

### Introduction

New governmental regulations and a general concern for safety have generated a demand for field portable, direct-reading instruments. The CENTURY Dual-Mode Organic Vapor Analyzer was designed to respond to requirements for immediate, on-site data using methods similar to and approaching the accuracy of laboratory instruments.

The CENTURY Organic Vapor Analyzer provides:

- Continuous direct readout of total organic vapor concentration for screening and survey purposes (Mode 1).
- Qualitative and quantitative analyses using the gas chromatographic option (Mode 2).
- Sensitivity to sub parts per million levels of organic vapors in air and parts per billion in water.
- Certification for use in Class I, Division 1, Groups A, B, C, and D hazardous areas.
- Proven field reliability.
- Logarithmic or linear meter readout.
- Complete field portability—5.5 kg (12 lb) package with 8-hour battery powered service life.
- Ease of operation.
- Short analysis time.

**FOXBORO**<sup>®</sup>

Registered Trademark

### Theory of Analysis

The CENTURY Organic Vapor Analyzers utilize a flame ionization detector which is sensitive to the presence of organic vapors delivered to it by means of a small diaphragm air pump.

The detector is composed of a hydrogen delivery system, a sample delivery system, and an electronic amplification and display system. The hydrogen delivery system provides an 8-hour supply of a precisely controlled flow of hydrogen gas to the detector. The sample delivery system provides air to the detector chamber both to maintain the flame and to introduce organic air contaminants for analysis. (See Figure 1.)

In Mode 1, the air sample is delivered continuously to the detector chamber. When an organic vapor is exposed to the hydrogen flame via the air flow, the molecules ionize and a current is carried between the detector electrodes. This current is proportional to the concentration of vapor in the sample. Different compounds will ionize to varying extents in the flame, thus, the meter response of the Organic Vapor Analyzer (OVA) for a given compound is expressed relative to a standard (methane).

With the optional Mode 2, the OVA functions as a portable gas chromatograph utilizing the hydrogen fuel as a carrier gas and the flame ionization detector as the sensor. In this mode, a fixed volume of sample air is injected by means of a valve into the chromatographic column which contains a suitable packing material. At the same time that a sample is introduced to the column, the remaining sample air is directed through an integral charcoal filter (not shown) to provide the detector with a supply of pure air.

While moving through the chromatographic column, the sample constituents are separated based on their interaction with the column packing material. As the constituents leave the column, they are carried to the detector and register on the meter and/or attached chart recorder. The time, measured from the moment of sample injection until the component of interest exits the column, is known as the retention time and serves to identify the compound. The area under the chromatographic peak is proportional to the concentration of the compound in the air sample. The peak height can also be used to determine sample concentration since it closely correlates with peak area. (See Figure 2.)

Figure 1. Organic Vapor Analyzer Schematic

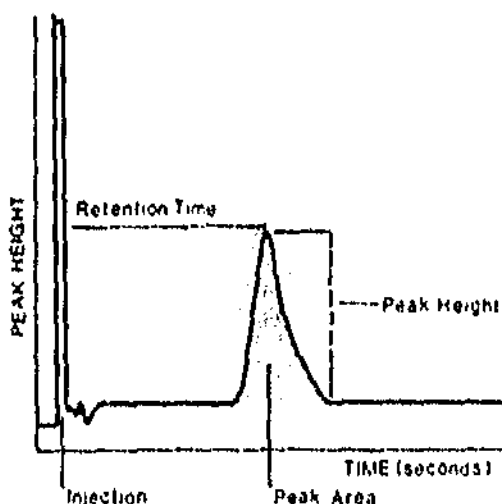

Figure 2. Generalized Chromatogram

#### Applications

The CENTURY Organic Vapor Analyzer can be utilized either as a survey instrument or as a chromatograph for quantitative measurements. Some applications for which the flame ionization detector alone is suitable are:

- Source identification and measurement for fugitive emissions (leaks) as defined by EPA.
- Survey of work areas for locations of vapor build-up.

- Natural gas leak detection.
- Surveys of spill (accident) locations for problem identification.
- Surveys of fire sites to determine arson related cause.
- Surveys of confined entry areas (tanks, ship's holds) where a vapor build-up is suspected.

Some applications for which the chromatographic option may be used are:

- OSHA compliance testing where both qualitative and quantitative data are required.
- Identification of water contamination by head-space analysis.
- Studies of hazardous spill situations.
- Identification of accelerants (solvents) used in an arson-caused fire.
- Analysis of fugitive emissions.

#### Available Column Materials

- B—3% Dilsodecyl Phthalate on ANAKROM A, 60/80 mesh.
- C—10% OV-101 on ANAKROM Q, 60/80 mesh.
- T—10% 1,2,3-tris (2-cyanoethoxy) Propane on ANAKROM C22A, 60/80 mesh.
- PT—Porapak T, 60/80 mesh.
- Other column packing materials are available on request.

Industrial Hygiene Monitoring

Source Identification and Analysis

Leak Survey (Fugitive Emissions)

### Typical Chromatograms

The following samples were run at 0°C, 22°C and 40°C.  
All retention times are in minutes.

- B--3% Dilsodecyl Phthalate on ANAKROM A, AW, 60/80 mesh.
- E--20% Carbowax 400 on ANAKROM C22A, AW, 60/80 mesh.
- G--10% OV-101 on ANAKROM Q, 60/80 mesh.
- T--10% 1,2,3-tris (2-cyanoethoxy) Propane on ANAKROM C22A, AW, 60/80 mesh.
- PT--Porapak T, 60/80 mesh.

### Options and Accessories

The following options and accessories are available for use with the CENTURY Organic Vapor Analyzer:

- Chromatographic option for quantitative analysis.
- Chart recorder for recording and interpretation of chromatograms.
- Septum adaptor for syringe injection of samples onto the chromatographic column.
- Sample dilutor kit for monitoring inert atmospheres or concentrated samples.
- Custom columns.
- Portable Isothermal Pack (PIP) for temperature control of chromatographic columns.
- Tri-Column GC option for rapid analysis of complex samples.

## SPECIFICATIONS

	OVA-108	OVA-128
<b>Readout:</b>	1-10,000 ppm, logarithmic scale	0-10, 0-100, 0-1,000 ppm linear scales
<b>Minimum Detectable Limit (Methane):</b>	0.5 ppm	0.2 ppm
<b>Response Time:</b>	Approx. 2 seconds	Approx. 2 seconds
<b>Fuel for Detector:</b>	Hydrogen	Hydrogen
<b>Carrier Gas for Chromatograph:</b>	Hydrogen (self-contained tank)	Hydrogen (self-contained tank)
<b>Sample Flow Rate:</b>	Approx. 1 litre per minute	Approx. 1 litre per minute
<b>Concentration Alarm:</b>	Audible, user selectable level	Audible, user selectable level
<b>Internal Calibration:</b>	Yes, 2 point	No
<b>Electrical Power:</b>	12 volt, rechargeable battery	12 volt, rechargeable battery
<b>Voltage Output to Recorder:</b>	0.5 volt dc	0.5 volt dc
<b>Flame Out Indication:</b>	Audible and visual	Audible and visual
<b>Service Life in Portable Mode:</b>	8 hours	8 hours
<b>Filters:</b>	Sintered metal, user cleanable	Sintered metal, user cleanable
<b>Mass:</b>	5.5 kg (12 lb)	6.5 kg (12 lb)
<b>Dimensions (sidepack):</b>	Approx. 230 x 300 x 100 mm	Approx. 230 x 300 x 100 mm
<b>Certification (both models):</b>	Factory Mutual Corporation for use in Class I, Division 1, Groups A, B, C, and D, hazardous locations. Similar certification with BASEEFA and Japanese authorities.

# CENTURY Environmental Monitoring Instruments

- Organic Vapor Analyzer
- Programmed Thermal Desorber

**FOXBORO**

# For Today's Environmental Monitoring Needs...

New governmental regulations and a general concern for safety have generated a demand for field portable, direct reading instruments. We have met the requirements for immediate on-site data by adding the CENTURY Organic Vapor Analyzer (OVA) and the Programmed Thermal Desorber (PTD) to our wide selection of environmental monitoring equipment.

CENTURY Organic Vapor Analyzers offer the capability for on-site detection and measurement of hundreds of different organic gases and vapors in accordance with the Occupational Safety and Health Administration (OSHA) and the Environmental Protection Agency (EPA) regulations. The OVA can be utilized as a survey instrument or as a gas chromatograph for quantitative measurements.

These analyzers are field-proven to be durable, yet are lightweight and portable for easy operation, over a wide

range of environmental conditions. All CENTURY analyzers incorporate an integral battery pack and hydrogen supply. The OVA 108 and 128 are Factory Mutual (FM) certified. The analyzers and their various options and accessories permit highly sensitive, on-site, real-time analyses. They eliminate the need for sample collection for later laboratory analysis.

These versatile instruments serve a wide variety of application needs such as monitoring for fugitive emissions (in refineries, petrochemical plants, and chemical plants), OSHA compliance measurements, leak detection, arson investigation, and many more. In addition, personnel tube analysis in industrial hygiene programs can be performed with the PTD which enables monitoring for exposure to hazardous gases and vapors. The many applications for which the OVA and PTD are suited make them a vital addition to any environmental monitoring effort.

## Typical Applications...

### Industrial Hygiene

The industrial hygienist using a combination of survey and chromatographic techniques with the OVA can efficiently and confidently perform studies in the workplace environment on a regular basis.

Benzene, a component of gasoline, is widely used as a solvent. Because it is toxic, and a known carcinogen, the OSHA and EPA have developed standards that specify the concentration of the vapor: OSHA in the workplace environment and the EPA for leaks from equipment. For these applications a portable instrument is needed which is capable of monitoring from 1 ppm to percent concentration levels. The OVA can detect levels of benzene in ambient air to below 0.1 ppm. The OVA can be used in the survey mode to detect total hydrocarbons or used in the chromatographic mode to separate benzene from less toxic components, thereby providing specific, reliable concentration data on this toxic solvent.

Ethylene Oxide is a toxic gas used as a sterilizing agent in the manufacturing and packaging of pharmaceuticals, cosmetics, food, and as a fumigant. It poses a potential health hazard to workers and therefore must be monitored. Levels of ethylene oxide can be easily measured by using the CENTURY OVA in the chromatographic mode. The OVA can identify and quantify ethylene oxide in under 2 minutes at concentration levels as low as 0.1 ppm. It can also provide data on compounds typically used with ethylene oxide such as Freon-12 liquid fluorocarbon, and isopropyl alcohol.

Personal Monitoring is performed by using a vapor sample collection tube and an air sampling pump. OSHA recognizes this as their primary means for measuring worker exposure to toxic gases. The difficulty is in the laboratory analysis. Toxic chemicals such as carbon disulfide must be used to chemically desorb these collected materials. The PTD offers a pre-programmed heating system which safely

and efficiently desorbs sample collection tubes. Samples may be stored for replicate analysis or for later analysis. Furthermore, the PTD offers reusable sample collector tubes which may be filled with charcoal, Tenax, or other commonly used collection media.

## Fugitive Emissions

Fugitive emissions, found in refineries and chemical plants, are defined as a liquid, or vapor leak containing organic substances. These leaks occur in process equipment components such as valves, pumps, and flanges. The EPA is concerned that chemicals escaping from refineries and chemical plants will pose a serious health or explosion hazard to areas nearby. With the recent proposals from the EPA to regulate levels of fugitive emissions, several states have set individual standards or allowable levels of fugitive emissions. The OVA 108, complies with EPA specifications for monitoring fugitive emissions. The 108 has a single logarithmic meter which reads low to high concentrations, from 1 to 10,000 ppm and can rapidly detect a leak source. Higher concentration levels can be monitored by using a simple dilutor assembly. The OVA is certified by Factory Mutual (Class I, Division 1, Groups A, B, C, D) to be safely used in a refinery or petrochemical manufacturing environment. Field portability, sensitivity, and ease of use make it the preferred method to ensure compliance with fugitive emission laws.

## Arson Investigation

Arson fires are a growing problem in the U.S. There are approximately 400 confirmed arson fires each day and actual numbers are probably greater. Technical arson investigation includes on-site chemical vapor analysis to locate evidence of accelerant use and to preserve such evidence for subsequent verification by a crime laboratory. The OVA is a highly sensitive, rugged, portable instrument used to survey the fire site immediately after the fire. Because of its sensitivity, it can detect and identify vapors emitted from small traces of accelerants such as gasoline, acetone, alcohol, etc. that remain in unburned or charred debris. This approach is far superior to simply picking suspicious samples for crime laboratory investigation. By using the OVA to locate high potential evidence of arson right at the fire site fewer negative samples will be produced for crime laboratory analysis while more immediate information will be gained for subsequent investigative work.

## Hazardous Waste and Spill Sites

Hazardous waste and spill sites are largely unknown environments. It is necessary to contain and remove the cause of contamination to minimize possible danger to the general public. In order to efficiently clean up the area, qualitative and quantitative information must be obtained. The OVA is capable of providing this required information. It can be used at the waste site initially to locate an area of high vapor concentration using the survey mode. This would include survey of both stored drums and the surrounding soil which may have become contaminated over a long period of time. Contaminated soil or waste may require more thorough investigation using the chromatographic mode of the OVA to determine the level and the identity of organic compounds present. Analysis may be accomplished on-site or with the OVA to identify samples taken using collector tubes. Sample collector tubes (charcoal, Tenax, etc.), used for perimeter monitoring, have found utility in assessing the extent of hazardous waste and spills prior to cleanup, during cleanup procedures, and after cleanup has been completed. The PTD offers a superb method to desorb and (with the OVA) analyze these samples right at the location.

## Natural Gas Leak Testing

The Department of Transportation (DOT) is concerned that leaking natural gas pipelines can pose a health and explosion hazard. The DOT strongly advises that these leaks be identified and eliminated within 30 days. Leak testing of natural gas pipelines can be successfully accomplished by using the OVA 88. It can be hand held for walkthrough surveys or vehicle-mounted for the rapid and economical detection of gas leaks in municipal areas and over long expanses of underground pipelines. Range limits are from 1 to 100,000 ppm of methane on a single logarithmic meter scale. Portability and ease of use are the reasons why several of the country's largest gas companies use this rugged instrument for their natural gas leak testing requirements.

# Principle of Operation

OVA 38

OVA 108

CENTURY Organic Vapor Analyzers have a variety of applications but they all share the same basic principle of operation—a flame ionization detector which is sensitive to the presence of organic vapors delivered to it by means of a diaphragm pump.

The detector is composed of a hydrogen delivery system, a sample delivery system, and an electronic amplification and display system. The hydrogen delivery system provides an 8 hour supply of a precisely controlled flow of hydrogen gas to the detector. The sample delivery system provides air to the detector chamber both to maintain the flame and to introduce organic air contaminants for analysis.

In the survey mode, the air sample is delivered continuously to the detector chamber. When an organic vapor is exposed to the hydrogen flame via the air flow, the molecules ionize and a current is carried between the detector electrodes. The current is proportional to the concentration of the vapor in the sample. Different compounds will ionize to varying extents in the flame, thus, the meter response of the OVA for a given compound is expressed relative to standard (methane).

In the chromatographic mode, the OVA functions as a portable chromatograph utilizing hydrogen fuel as a carrier gas and the flame ionization detector as the sensor. In this mode, a fixed volume of sample air is injected by means of a

valve onto the chromatographic column which contains a suitable packing material. At the same time that a sample is introduced to the column, the remaining air is directed through an integral charcoal filter to provide the detector with a supply of pure air.

While moving through the chromatographic column, the sample components are separated based on their interaction with the column packing material. As the components leave the column, they are carried to the detector and register on the meter and/or attached chart recorder. The time measured from the moment of sample injection until the component of interest exits the column is known as the retention time and serves to identify the compound. The area under the chromatographic peak is proportional to the concentration of the compound in the air sample. The peak height can also be used to determine sample concentration since it closely correlates with peak area.

OVA 128

## CENTURY Organic Vapor Analyzers 108 and 128

The CENTURY Organic Vapor Analyzers models 108 and 128 are dual mode analyzers that detect and measure hundreds of organic gases and vapors. They provide continuous data on organic vapor concentrations for screening and survey purposes as well as qualitative and quantitative analyses utilizing the chromatographic mode--an option available with the 108 and 128.

The OVA incorporates an extremely sensitive flame ionization detector which monitors total organic vapors to parts per billion (ppb) levels. In the chromatographic mode, a portable chart recorder is powered directly from the analyzer to record chromatograms for interpretation.

The OVA 108 has a single scale logarithmic readout from 1 to 10,000 ppm and is suited for survey work. The OVA 128 has a linear scale available in 3 ranges, 0-10, 0-100, 0-1000. It has greater sensitivity than the 108 in the low range and easier interpretation of chromatograms. Both models are certified for Class I, Division 1, Groups A, B, C, and D hazardous areas.

### Featuring:

- **Flame Ionization Detector**  
Response time of only 2 seconds to obtain total hydrocarbon reading
- **Rugged Construction**  
Proven field reliability
- **Gas Chromatographic Columns**  
Quantitative and qualitative analysis capabilities down to sub-ppm
- **Audible Alarms**  
Notifies user of hydrogen flameout or when a preset concentration level has been reached
- **Rechargeable Battery & Refillable Hydrogen Tank**  
Field portability with 8 hours of continuous operation
- **Factory Mutual Certification**  
Can be used in Class I, Division 1, Groups A, B, C, & D hazardous areas

## CENTURY Organic Vapor Analyzer OVA 88

The OVA 88 is a widely used instrument for leak surveys of natural gas pipelines. It also utilized a flame ionization detector which results in high sensitivity to organic vapors, low noise, a small detector package and a response time of less than 2 seconds.

It can be utilized manually on a walkthrough survey with a standard sample probe or mounted on a vehicle with a separate sample handling manifold for rapid survey of large areas.

This instrument is factory calibrated to read concentrations of methane directly. An exclusive internal calibration feature makes recalibration unnecessary in the field.

### Featuring:

- **Flame Ionization Detector**  
To obtain total hydrocarbon reading
- **Sample Flow Rate of 1-2 LPM**  
Fast response time of 2 seconds
- **Wide Range of Sensitivity**  
Measures 1 to 100,000 ppm of methane in a single logarithmic meter
- **Rugged Construction**  
Proven field reliability
- **Audible Alarms**  
Notifies user of hydrogen flameout or when a preset concentration level has been reached
- **Compact Size**  
Carried via shoulder strap with self contained battery and hydrogen supply
- **Rechargeable Battery & Refillable Hydrogen Tank**  
Field portability with 8 hours of continuous operation

# CENTURY Programmed Thermal Desorber

The CENTURY Programmed Thermal Desorber (PTD) utilizes the principle of thermal desorption to desorb environmental contaminants from sorbent collector tubes. The PTD performs this function automatically. It has the capability to store the desorbed sample in a 300 millilitre chamber and to make replicate sample injections into an OVA or other laboratory gas chromatograph.

The PTD is a new concept in thermal desorption and offers several distinct advantages over currently used desorption techniques. Desorption and storage of samples is automatic. Stainless steel sample tubes are reusable. Time weighted average (TWA) calculations are made simple. Replicate sample injections are possible to increase accuracy. Skilled technicians are not required and since desorption is accomplished by heat, toxic chemicals are not used.

The PTD 132A is designed for desorbing the reusable CENTURY Flare Sample Collector Tubes. These tubes are provided with a variety of sorbent materials and can be loaded and reloaded as often as desired.

The PTD used with the OVA is a powerful analytical tool for the collection and analysis of environmental samples on site. The combination of the OVA and the PTD results in a field proven, rugged, portable system that yields correct answers to questions of worker exposure to hazardous gases and vapors immediately.

## Featuring:

- **Programmable Temperature**  
Sample is not excessively heated and temperature can be set for the packing material in the tube
- **300 cc Collection Chamber**  
Allows for replicate sample injections and simplified TWA calculations
- **Automatic Injection**  
Interfaces with the OVA or any laboratory GC
- **Stainless Steel & PTFE Construction**  
Better desorption efficiency without contamination
- **Fully Automatic Operation**  
Desorption parameters are preprogrammed thereby simplifying the technical expertise required

Pictured above is a CENTURY Flare sample collector tube used to perform area monitoring at a hazardous waste dump site. After sufficient sample collection time, this tube will be thermally desorbed and an analysis performed on site by combining the CENTURY PTD and an OVA used in the chromatographic mode. (Air sampling pump courtesy of E. I. duPont de Nemours & Company, Applied Technology Center)

## A Wide Variety of Accessory Items

To assist you with specific applications, the following accessories for CENTURY Organic Vapor Analyzers and the CENTURY Programmed Thermal Desorber are available from Foxboro:

**Portable Isothermal Pack**—Enables chromatographic work to be performed in outdoor environments where temperatures fluctuate over a wide range. The pack consists of an insulated container that holds a chromatographic column. A space within the column coil receives a variety of temperature control slugs containing ice and water or eutectic salt for temperature control.

**Syringe Adaptor**—Allows direct injections of gas via

syringe and is generally used in laboratory environments.

**Sample Dilutor**—Used to dilute air samples to provide for the monitoring of areas of high concentration.

**Chart Recorder**—Provides a hard copy of chromatograms when using the OVA in the chromatographic mode. This chart recorder attaches to and is powered from the OVA.

**Charcoal Filter Adaptor**—Used when zeroing the OVA in a contaminated environment.

The CENTURY OVA is a portable unit. It and its accessories are shipped and contained in a sturdy, attractive suitcase to go anywhere at anytime.

## OVA Wall Chart

Send today for your free copy of the Chromatographic Column Selection Guide for CENTURY Organic Vapor Analyzers. The Chromatographic Column Selection Guide is a handy reference tool, published by The Foxboro Company to help you select the optimum conditions for a variety of monitoring applications.

This chart lists retention time information for over 100 compounds at two temperatures (0°C and 40°C) and for several column packing materials.

This information is helpful when evaluating applications involving two or more contaminants. It allows you to select the best conditions to obtain optimum results when using the CENTURY Organic Vapor Analyzer.

The Foxboro Company sells and services more than 1,000 products used to measure, analyze, indicate, record, and control such process variables as flow, temperature, pressure, level, and composition. Products range from instruments that sense and transmit these variables to computer-based systems that control entire plants. Industries served include chemical, oil and gas, power, pulp and paper, food, metals, minerals, and textile.

Manufactured in 9 countries, Foxboro products are identical in design and performance around the world, where they are sold and serviced in 160 major industrial areas. Services include engineering, project management, commissioning and startup, maintenance and repair, and training. Corporate offices are located at 38 Neponset Avenue, Foxboro, Massachusetts, U.S.A. 02035.

PROPOSED UNDERGROUND STORAGE  
TANK MONITORING PROGRAM

General Description

The proposed state regulations on underground tank states that the objective of a monitoring program for existing underground storage tanks is to detect unauthorized releases before groundwater is affected. To accomplish that objective and comply with current local regulations and guidelines, a proposed monitoring plan has been developed as described herein.

The leak detection/monitoring system proposed apply specifically to motor vehicle fuels storage tanks. Essentially, the proposed system is a small diameter observation probe installed in the backfill as close to the tank as possible to monitor or detect any leak from each tank using either a permanently installed continuous detection device or a portable analyzer for periodic monitoring. Each observation probe is dedicated to a tank and is installed to the depth of the backfill. It is designed to monitor either or both vapor and groundwater depending on the subsurface condition of the depth of the backfill. Provisions have been made in the design to use the probe for the following leak monitoring conditions:

1. Vapor monitoring using a portable or continuous hydrocarbon detector or analyzer.
2. Groundwater sampling using a plastic bailer or a peristaltic pump.

The same design of observation probe will be used to monitor waste oil tanks. A more detailed description of the design and materials of construction of the proposed system as well as the method of monitoring and reporting is presented in the following paragraphs.

Design and Construction Details

The hydrocarbon leak detection and monitoring probe (LDMP) we propose for underground storage tanks (USTs) is a slotted 1-inch diameter rigid plastic pipe placed vertically in the granular backfill surrounding the UST. The slotted portion of the pipe will extend from 5 feet below ground surface to about 15 feet, or 2 feet below the UST excavation invert (the invert is the contact between the granular backfill surrounding the tank and the underlying undisturbed soil).

The LDMP will be capped at its base and accessible for both soil-air and groundwater monitoring at ground surface. The LDMP has

been designed to provide detection of product loss through monitoring of soil-air component concentrations, particularly the combustibles and organic volatiles. The system can be used for groundwater monitoring if groundwater is encountered above the tank excavation invert. An important feature of the LDMP is its early-warning capability; product can be detected in the UST backfill before it reaches the groundwater (if groundwater level is below the excavation invert).

The LDMP will be constructed using a mobile drill equipped with 6-inch-diameter hollow-stem augers. The probe will be installed through the hollow center of the augers after drilling to the tank excavation invert and after driving a split-spoon sampler to 1.5 feet below the invert. The split-spoon sample of the undisturbed soil beneath the tank excavation invert and grab samples of the granular backfill collected during drilling, will be examined in the field for odors or visual indications of product contamination. The split-spoon sample will be retained for laboratory analysis, if required.

The construction details of a typical LDMP installation is shown on the attached figures. As shown on the location plan, each probe will be located immediate to or between the USTs which are to be monitored. Where possible, a probe should be located where the tank invert is deepest, i.e., in the direction of slope of the tank bottom. The specific positions and number of LDMPs will depend on the site specific conditions as to tank configuration, number of tanks, tank size and construction, and location of fuel lines and other utilities. The probe locations will be selected such that optional definition of a specific source of product can be defined in the even of a product loss.

Construction of an LDMP will require cutting of asphalt or concrete pavement prior to drilling. The cutting will be carried out after all fuel lines and utilities in the construction area have been located. The cut portion of the pavement will be sized for a christy box designed to allow access to and protection of the probe head assembly. After cutting of the pavement, the borehole will then be drilled into and through granular backfill surrounding the UST and terminated in the undisturbed soil below the tank excavation invert but no deeper than 15 feet below the ground surface.

The probe will be placed in the borehole following collection of an 18-inch split-spoon soil sample immediately below the tank excavation invert. Portions of the LDMP may be prefabricated prior to drilling in order to facilitate speed of installation and completion. The 1-inch diameter plastic probe will be comprised of Schedule 40 polyvinyl chloride (PVC) with one end male-threaded and fitted with a female-threaded PVC end cap. This end (the base of the probe) is placed into the open split-spoon sample hole below the tank invert. The lower 10 feet of the probe will be machine-slotted (0.020-inch widths) at 0.25 inch spacings. In a typical installation, the slots will extend from 5 feet to 15 feet below

ground surface. All piping will be steam cleaned immediately prior to insertion or will be cleaned after prefabrication and maintained in clean condition until installation. All drilling and sampling equipment will be maintained such that no cross-contamination of soils or fuels occurs between boreholes.

Proper installation of the LDMP will require backfilling of the borehole/pipe annulus with uniform filter sand or pea gravel. No more than 25 percent of the filtered material will be less than 0.020 inch slot size with a maximum diameter of about 0.10 inch. The granular backfill, or filter, will be brought to 5 feet of ground surface whereupon the annulus will be completed with a neat 6 percent bentonite-cement grout. A watertight christy box will be fitted into the cut pavement and secured by the cement seal. The probe completion will then be carried out as shown on the attached drawing.

#### Monitoring Method and Frequency

The monitoring and/or sampling of LDMP for vapor will be carried out on a periodic basis using either a portable combustible gas detectors or organic vapor analyzers. The monitoring frequency for vapor using portable equipment could range from monthly to quarterly sampling depending on the type and complexity of analytical device. Depending on availability and economics, the LDMP can also be equipped with a continuous vapor monitoring device as shown in the attached drawing. The continuous monitoring device can be equipped with a visual and audible alarm system.

If water table or perched-water conditions are encountered in the borehole groundwater levels and samples can be collected from the LDMP. Access to the LDMP for measurements of fluid levels and collection of samples is through the top of the PVC tee-fitting included in the probe assembly. A 0.75-inch-diameter PVC bailer equipped with a ball-check valve or a peristaltic pump with suitable flexible tubing can be used to extract the fluid sample. Product loss detected by the soil-air monitoring may also be confirmed by measurement of product in the LDMP (if significant volumes of product are involved). However, the first indication of product loss will be a change in soil-air component concentrations; i.e., an increase in combustibility or organic vapors.

Monitoring of the tank will also include daily inventory reconciliation and data logging as an added measure in detecting any gross product loss. Records will be reviewed on a periodic basis to determine any trend or indicators of product loss.

#### Available Monitoring Device

The design of the LDMP provides the flexibility to use either a portable or continuous monitoring device and to adapt to the developing technology in monitoring device and instrumentation. The technology in continuous gas and vapor monitoring is still

developing but there are numerous portable devices available for analyzing combustible gas and vapors including:

- 1. Century dual mode organic vapor analyzer
- 2. H-HU photo ionization detector
- 3. Bacharach combustible gas indicator
- 4. Mine Safety Appliance combustible gas detector

The specific device to use will depend on the sensitivity level required to monitor the vapor.

As mentioned, groundwater if encountered can be sample with with a plastic bailer for the presence of floating product. The dissolved hydrocarbon components in water, however, will have to be analyzed in a certified laboratory.

Action Plan

Data will be analyzed immediately for any potential leak during each sampling/monitoring program. If there is a suspected leak or product loss, a detailed investigation will be conducted immediately. Actions to be taken may include any or all of the following:

- 1. Continuous monitoring or sampling of the vapor or groundwater in the LDMP to determine if the leak is a one-time spill or a continuous leak.
- 2. Detailed review of inventory records.
- 3. Precision testing of suspected leaking or pipeline tank.
- 4. Installation of groundwater monitoring wells per local and state regulations.
- 5. Analysis of soils and water samples.
- 6. Repair or replacement of leaking tank or pipeline.

The specific action plan to be implemented will follow the proposed guidelines of the San Francisco Area Regional Water Quality Control Board (RWQCB) for addressing fuel leaks. The same proposed guidelines will be used in addressing potential contamination during installation of the leak detection monitor probe.

Reporting Procedure

All reporting procedures will be in accordance with local ordinance and state regulations as to reporting suspected or confirmed leaks, recordkeeping, and submittal of report. A report including as built drawings and results of soils and water analysis will be submitted upon completion of installation at each service station.

If the owner/operator does not have a current Hazardous Materials Business Plan (HMBP) which includes these tanks on file with the local agency, provide an 8-1/2" x 11" plot plan of the tanks to be closed. Indicate the nearest cross street to the facility, buildings immediately adjacent to the tanks, location(s) of tanks to be closed, and location of nearby utilities.

This Underground Tank Closure Permit expires 6 months from the date of application. If tanks have not been closed within 6 months, a new closure permit application and appropriate fees may be required.

Facility closure inspections must be scheduled at least 48 hours in advance. Call the appropriate local agency to make necessary arrangements.

I certify that I have read the tank closure guidelines and declare that the above information is correct to the best of my knowledge. The owner of the tank(s) described above is aware of the pending closure. I agree to comply with all applicable city and county ordinances and state laws relating to hazardous materials/wastes, and hereby authorize representatives of local agencies to enter upon the within mentioned property for inspection purposes.

**To:** Steck, Chris  
**Subject:** ARCO Station 2010, compliance sampling requirements  
**Attachments:** un-078.pdf

Chris,

Attached is a list of recommended analyses from UNIDOCs (website below). We will proceed to follow these recommended analyses for our compliance sampling. However I should note that our laboratory, Calscience Environmental Laboratories, is not certified to analyze Oil & Grease under EPA Method 9070 but are certified to analyze for Oil & Grease under EAP Method 1664A which is a regional board approved analysis. Also Calscience does not offer PCBs by 8270, as 8270 includes a full suite of semi-volatile analytes. Instead Calscience will analyze PCBs using EPA Method 8082 which is specific to PCBs. EPA Method 8082 is also a regional board approved analysis.

Also it is our understanding that there was closure for the oil-water separator/clarifier in 1992 and therefore we will not be sampling from this area. Please let us know if this is not the case.

<http://www.unidocs.org/hazmat/ust/closure/index.html>

Please feel free to contact me if you have any questions.

	MTBE, TAME, ETBE, DIPE, and TBA by 8260 for soil and 524.2/624 (8260) for water			
	Metals (Cd, Cr, Pb, Ni, Zn) by ICAP or AA for soil water			
	PCB, <sup>†</sup> PCP, <sup>†</sup> PNA, CREOSOTE by 8270 for soil and 524/625 (8270) for water			

**NOTES:**

1. 8021 replaces old methods 8020 and 8010.
2. 8260 replaces old method 8240.
3. Reference: Table B-1 in Appendix B of "Expedited Site Assessment Tools for Underground Storage Tank Sites: A Guide for Regulators" (EPA 510-B-97-001).

<sup>\*</sup> Optional per Regional Water Quality Control Board (Board), but local agency that regulates UST system may require analysis for Organic Lead. Check with your local agency regarding their requirements.

<sup>†</sup> If found, analyze for dibenzofurans (ICBs) or dioxins (ICP).

Fact Sheet, June 2006

## **ECOLOGY CONTROL INDUSTRIES DRAFT STANDARDIZED PERMIT AVAILABLE FOR COMMUNITY REVIEW**

### **Introduction**

The California Department of Toxic Substances Control (DTSC) has prepared this fact sheet to provide you information regarding the draft Hazardous Waste Facility Standardized Permit prepared for the Ecology Control Industries (ECI) Facility at 255 Parr Boulevard, Richmond, California. DTSC has reviewed ECI's Permit Application, and draft Permit and invites you to send us your comments.

### **Draft permit**

**This permit if granted will allow ECI to:**

- Store empty tanks containing hazardous substances in a designated staging area.
- Clean the tanks and their associated piping. Cleaned tanks are either sent for recycling (metal tanks) or to a disposal site (plastic tanks).
- Store wastewater from tank cleaning in either a 5200-gallon or an 1850-gallon aboveground carbon steel tank. A 250-gallon tank may be used for measuring rinse water used to clean the tanks.
- Store 12 roll-off bins (20 cubic yard each) which contains tank bottom solids and piping affected by the contamination.
- Store sludge or residues removed from tanks in drums or roll off bins. The residues are sent to an appropriate disposal facility.

The above activities are considered hazardous waste treatment and storage and ECI needs a hazardous waste treatment permit from DTSC to perform these activities.

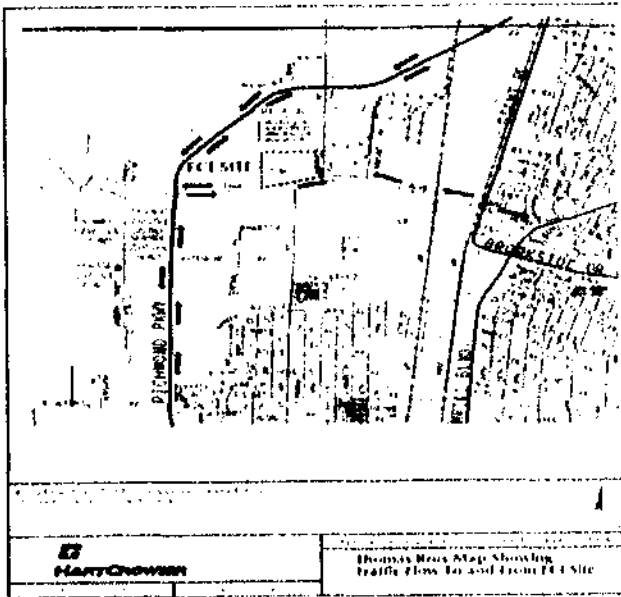

**A Public Hearing will be held on July 10, 2006, at 6:00 PM, at the Richmond Public Library. The Richmond Public Library is located at 325 Civic Center Plaza, Richmond, California 94804. Please call (510) 620-6561 and ask for library hours of operation.**

**The Public Comment Period will run from June 5, 2006, to July 20, 2006. Please send your comments to:**

Pat Thomas, DTSC Project Manager, 8800 Cal Center Drive, Sacramento, California 95826 or email: pthomas1@dtsc.ca.gov. All mail must be received no later than the close of business on July 20, 2006. Emailed comments must be received by DTSC no later than the close of business on July 20, 2006. For Public Participation questions, please call Jesus Cruz - (916) 255-3315.

### Facility History

ECI is located on a nine acre parcel in an industrial area, 150 yards north of San Pablo Creek and two miles west of Interstate 80. The nearest residence is located half a mile away from the facility and the nearest elementary school is also located half a mile away from the facility. In 1998, ECI purchased the tank recycling facility from Erickson Environmental who had operated an environmental service business at the site since 1980. In 1986, Erickson began a tank processing, recycling, and disposal business. ECI continued the same operations under the permit that was issued to Erickson Environmental in 1988 until a DTSC consent order was issued in 2001. The facility is still operating under authority of the 2001 consent order.

### ECI Recycles Storage Tanks

The facility recycles storage tanks previously used to store petroleum products. Tanks are shipped to ECI and unloaded from the flat bed trailers and placed in the Tank Staging Area temporarily. The tanks are transferred from the Tank Staging Area to the Tank Rinse Pad to begin the decontamination process. On the Tank Rinse Pad, each tank is checked for its explosive potential level and percent oxygen before a hole is cut out on the side. The residual solids inside the tank are shoveled out and placed into drums and tested for ignitability. Sludges with free liquids are placed in 55-gallon drums and solids are placed in 20 cubic yard (cy) roll-off bins. The removed solids are characterized as either ignitable or as non-RCRA hazardous waste depending on the lower

explosive level reading. Waste that is determined to be ignitable is managed as hazardous waste and shipped for disposal as flammable waste to a permitted hazardous waste disposal facility. The removed solid waste from oil and diesel tanks is transferred directly into roll-off bins for disposal as non-RCRA hazardous waste and transported to a hazardous waste disposal facility. After removal of the solids and/or sludge, the tank is rinsed with water and visually inspected to verify it is clean. The rinsate water is pumped directly into the 5,200-gallon rinsate holding tank via an air driven double diaphragm pump. The rinsate water may be pumped into a 250-gallon measuring tank to measure the amount of water used to clean each tank if necessary for billing purposes. This rinsate pumping and storage process takes place inside the secondary containment area. The decontaminated fuel tanks are then transferred temporarily to the "clean tank" staging area until they are transported off-site to either a metal recycler or landfill for appropriate disposal. Pipes associated equipment are cleaned similarly and stored in 40 cubic yard bins for recycling.

### DTSC Inspects the Facility

In 2001, a Consent Order was issued by DTSC to ECI for violations that included storage in an unpermitted location and financial assurance which had not been provided to DTSC. The Order also instructed ECI to apply for a permit for a large size Standardized Permit facility. ECI submitted a permit application and provided a financial assurance mechanism, thus returning to compliance.

DTSC investigated a complaint for illegal disposal of hazardous waste in 2003 at the facility. After the

investigation, DTSC determined there was insufficient evidence to support the complaint. However, other violations of hazardous waste laws and regulations were observed at the time. The violations cited include: storage of hazardous wastes in unauthorized or unpermitted areas, and inadequate aisle space between unclean tanks. The violations are outlined in a document called a Summary of Violations, which is available for public review at the information repository at DTSC. On May 15, 2006, DTSC and ECI entered into a Consent Order to settle violations observed during 2003 at the ECI facilities in Richmond and Torrance. ECI agreed to pay \$50,000.00 in penalties and additional \$50,000.00 to reimburse DTSC for its administrative cost. Although the settlement took place recently, the violations were corrected promptly, once they were brought to ECI's attention.

#### California Environmental Quality Act

Under the California Environmental Quality Act (CEQA), DTSC is responsible for evaluating the potential health and environmental risks from the proposed permit. DTSC has prepared an Initial Study for this project in accordance with CEQA. Based on the Initial Study, DTSC finds that the project will not have any significant adverse effects on the environment or human health, therefore, a draft Negative Declaration of impacts has been prepared. The Initial Study, draft Negative Declaration and the draft permit are available for review at the Repositories listed on this fact sheet.

#### Next steps

DTSC will make the final decision on the Hazardous Waste Facility Standardized Permit only after public comments have been received and considered. Anyone who submitted comments regarding the Draft Hazardous Waste Facility Standardized Permit will receive DTSC's Response to Comments document. This document includes all received comments pertaining to the Permit and CEQA Negative Declaration during the 45-day public comment period and DTSC's response to those comments. A copy of "The Response to Comments" will be placed in the information repositories and placed on the DTSC website [www.dtsc.ca.gov](http://www.dtsc.ca.gov).

#### FOR MORE INFORMATION

For questions regarding the Draft Hazardous Waste Facility Standardized Permit, please contact Pat Thomas, DTSC Project Manager, at (916) 255-3630  
[pthomas1@dtsc.ca.gov](mailto:pthomas1@dtsc.ca.gov)

For questions regarding the public participation process, please contact Jesus Cruz at (916) 255-3315 e mail ---  
[Jcruz@dtsc.ca.gov](mailto:Jcruz@dtsc.ca.gov)

For media questions, please contact Ms. Angela Blanchette, DTSC Public Information Officer (510) 540-3732, or E mail [Ablanche@dtsc.ca.gov](mailto:Ablanche@dtsc.ca.gov)

#### INFORMATION REPOSITORIES

You can review the Permit Application, Draft Hazardous Waste Facility Standardized Permit, CEQA Initial Study and the CEQA Negative Declaration at the following location:

Richmond Public Library  
325 Civic Center Plaza  
Richmond, CA 94804  
Call (510) 620-6561---for hours of operation

The full administrative record is available at:

Department of Toxic Substances Control  
700 Heinz Avenue, Suite 200  
Berkeley, CA  
Phone number (510) 540-2122  
Call for an appointment

You may also find information on this project at the DTSC website  
[www.dtsc.ca.gov](http://www.dtsc.ca.gov)

#### NOTICE TO HEARING IMPAIRED INDIVIDUALS

TDD users can obtain information about the site by using the California State Relay Service (888) 877-5378 and ask to be connected with Jesus Cruz at (916) 255-3315.

**§67383.2. Definitions.**

When used in this chapter, the following terms have the meanings given below:

"Closed in place" means left in place and closed without being removed.

"Disposal" has the same meaning as in section 66260.10, except that the term disposal does not include tanks that are closed in place pursuant to the requirements of this chapter or title 23, California Code of Regulations.

"LIA" means the "local implementing agency" or local agency responsible for the enforcement and regulatory oversight of hazardous material storage tanks pursuant to section 25283 of the Health and Safety Code.

"Tank" means a stationary device, designed to contain an accumulation of hazardous waste or hazardous material, which is constructed primarily of nonearthen materials (e.g., wood, concrete, steel, plastic) that provides structural support.

"Tank system" means a hazardous waste or a hazardous material transfer, storage or treatment tank and its associated ancillary equipment and containment system.

NOTE: Authority cited: Sections 25141, 25150, 25159 and 58012, Health and Safety Code. Reference:

Sections

25117, 25124 and 25283, Health and Safety Code.

**HISTORY**

1. New Section filed 8-6-98; operative 8-6-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 32).

**§67383.3. General Standards for Tank Systems.**

(a) Except as provided in subsections (b), (c), and (d) of section 67383.1, any tank system that is identified as a hazardous waste pursuant to chapter 11 of this division, and that is destined to be disposed, reclaimed or closed in place shall be exempt from regulation under this division if the tank system is managed in accordance with all of the requirements of this section:

(1) Prior to initiating cleaning, cutting, dismantling, or excavation of a tank system, the owner or operator of the tank system shall notify the appropriate CUPA in writing of the information specified below. If there is no CUPA, then the owner or operator shall notify the LIA and send a copy to the authorized agency. However, information already provided to the CUPA, authorized agency or LIA pursuant to compliance with another statutory or regulatory requirement need not be resubmitted:

(A) The location of the tank system; \*\*\*\*\*2110 Old Middlefield Way Mountain View, CA 94043\*\*\*\*\*

(B) The date(s) the tank system will be cleaned and/or excavated, or closed in place; \*\*\*\*\*Early September 2008 \*\*\*\*\*

(C) A brief description of the tank system; \*\*\*\*\*3 underground gasoline storage tanks all with 12,000 gallon capacity and 1 waste oil tank with 550 gallon capacity. Additionally there are 2 hydraulic hoists.\*\*\*\*\*

(D) The identification of the hazardous material or hazardous waste last held in the tank supported by:

1. A statement signed by the tank operator certifying the identity of the material or waste last stored or accumulated in the tank; or \*\*\*\*\*Attached document titled "2010 UST pages." \*\*\*\*\*

2. If residuals remain in the tank in sufficient quantity to be collected and analyzed, a chemical analysis of the residual in the tank; \*\*\*\*\*Not Applicable \*\*\*\*\*

(E) The name and credentials of the individual who will provide certification pursuant to subsection (f), when applicable; and \*\*\*\*\*Henry Sorensen, Marine Chemist certification #633 (Attached document titled "HMS Marine Chemist Certificate") \*\*\*\*\*

(F) The intended disposition and destination of the tank system. \*\*\*\*\*The 4 underground storage tanks will be disposed of as non hazardous to the Potrero Hills Class III Landfill, Suisun City, CA 94585, The product piping will be disposed of as non hazardous to the Clean Harbors Buttonwillow Class II Landfill. The Hydraulic Hoists will be recycled at the Adams Steel Anaheim metals recycling facility.\*\*\*\*\*

(b) Except as provided in subsection (c), any of the following procedures may be used for the onsite cleaning and closure of a tank system: \*\*\*\*\*The procedure for onsite cleaning will follow the API procedure identified in section (b) (1). \*\*\*\*\*

(1) American Petroleum Institute, Recommended Practice for the Closure of Underground Petroleum Storage Tanks, API Publication 1604, Third Edition, American Petroleum Institute, 1220 L Street, N.W., Washington, DC 20005, March 1996;

(2) American Petroleum Institute, Safe Entry and Cleaning of Petroleum Storage Tanks, API Publication 2015, American Petroleum Institute, 1220 L Street, N.W., Washington, DC 20005, May 1994;

Unofficial Title 22 © 2005 State of California, all rights reserved. May not be commercially reproduced or sold.

Ch. 32, Pg. 2 02/25/04

(3) National Fire Protection Association, Standard Procedures for Cleaning or Safeguarding Small Tanks and Containers Without Entry, NFPA 327, 1993 Edition;

(4) Procedures approved by the CUPA, authorized agency or LIA.

(c) Non-sparking, cold-cutting tools or a non-sparking cold-cutting process shall be used if the tank held a flammable or combustible material, and the tank, piping and/or appurtenances are to be cut onsite, unless an alternate method is approved by the CUPA, authorized agency or LIA. \*\*\*\*\*Tanks will not be cut on site. Piping will be cut in compliance with these requirements.\*\*\*\*\*

(d) All sludge, scale, debris, residue, and rinseate generated during the tank closure process shall be managed in accordance with all applicable requirements of this division. \*\*\*\*\*Agreed. Any material removed from the inside of the underground storage tanks will be managed as a class 3 flammable waste to a TSDP (DeMenno Kerdoon, Compton, CA) \*\*\*\*\*

(e) At the completion of the cleaning process the tank system shall meet all of the following:

(1) All piping and appurtenances shall be free of product, sludge, rinseate and debris to the extent that no material can be poured or drained from them when held in any orientation (e.g., tilted, inverted, etc).

\*\*\*\*\*Agreed \*\*\*\*\*

(2) The tank, upon inspection, shall be visually free of product, sludge, scale (thin, flaky residual of tank contents), rinseate and debris, except that residual staining caused by soil and waste consisting of light shadows, slight streaks, or minor discolorations, and soil and waste in cracks, crevices, and pits may be present. \*\*\*\*\*Agreed \*\*\*\*\*

(A) The inspection to verify that the requirements of subsection (e)(2) are met shall be conducted

1. through an existing manhole in the tank or one newly installed in the tank, or through holes cut into the tank wall in accordance with the requirements of this section so as to allow for visual inspection of the entire tank interior, without the need to enter the tank physically or \*\*\*\*\*The inspection will occur through the existing manhole in the tank.\*\*\*\*\*

2. If the tank is not cut, following cleaning, by using a light with an internal inspection lamp approved for Class I, Division I locations, a mirror to reflect light into the container, or other appropriate device upon approval of the CUPA, authorized agency or LIA. \*\*\*\*\*The process of inspecting the tanks will be performed using a light with an internal inspection lamp approved for Class I, Division I locations and a mirror to reflect light into the container. \*\*\*\*\*

(B) If the tank held a hazardous material or hazardous waste that had the potential to generate flammable vapors, and the tank was cut onsite, a combustible gas indicator (CGI) which is properly calibrated shall be used to measure the concentration of flammable vapor at the top, center and bottom of the cut tank. The concentration of flammable vapor shall be zero percent of the Lower Explosive Limit (LEL) for the material that was contained in the tank; and the oxygen concentration shall be the same as that of the ambient air, approximately 20.8%; \*\*\*\*\*Not Applicable as the tanks will not be cut on site. \*\*\*\*\*

(C) If the tank held a hazardous material or hazardous waste that had the potential to generate flammable vapors, is intended to be transported, and was not cut onsite, the tank shall be cleaned and inerted using one of the methods listed in subsection (b), inspected pursuant to subsection (e)(2)(A)2 and transported in accordance with the provisions of section 67383.5. (The tank shall be inspected to ensure that it meets the conditions of paragraph (2) of this subsection before it is inerted.) \*\*\*\*\*Agreed \*\*\*\*\*

(D) If a tank has been cut onsite, but it is not to be transported offsite or closed in place, it shall be cleaned using one of the methods specified in subsection (b) and inspected pursuant to subsection (e)(2)(A)1. \*\*\*\*\*Not Applicable as the tanks will not be cut on site.\*\*\*\*\*

(f) The cleaned tank system shall be certified as meeting the standards of paragraphs (e)(1) and (2) of this section by the CUPA, authorized agency or LIA, or one of the following professionals, certified or registered in California: \*\*\*\*\*The professional will be a Certified Marine Chemist \*\*\*\*\*

(1) certified industrial hygienist;

(2) certified safety professional;

(3) certified marine chemist;

(4) registered environmental health specialist;

(5) registered professional engineer; or

(6) registered environmental assessor, Class II, as defined in section 25570.3, Health and Safety Code; or

(7) a contractor properly licensed by the Contractor's State License Board (CSLB) to contract for the removal of underground storage tanks and who holds a Hazardous Substance Removal Certification issued by the CSLB.

(g) The certificate issued pursuant to subsection (f) of this section shall be submitted on the Hazardous Waste Tank Closure Certification page of the Unified Program Consolidated Form (x/99), Appendix E of Title 27 CCR, or an alternative version or a computer generated facsimile as allowed pursuant to Title 27, CCR, Sections 15610 and 15620. The submittal must include the Business Activities Page, and the

Business Owner/Operator pages of the Unified Program Consolidated Form (x/99). \*\*\*\*\*Attached document titled " 2010 Bus Activities and Owner Operator"\*\*\*\*\*

The certificate shall include the following: \*\*\*\*\* Agreed \*\*\*\*\*

- (1) the tank owner's name and address;
- (2) the address of tank closure site;
- (3) the tank's State Identification number, if applicable;
- (4) the statement that the tank is visually free of product, sludge, scale, rinseate and debris;
- (5) if applicable, the tank's interior atmosphere readings for concentrations of flammable vapor and oxygen;
- (6) the name, professional classification, registration or certification number if applicable, signature, address and phone number of the certifying person; and
- (7) the date and time of certification.

(h) Copies of the certificate shall be provided to the following: \*\*\*\*\* Agreed\*\*\*\*\*

- (1) CUPA, authorized agency or LIA;
  - (2) owner and/or operator of the tank system;
  - (3) the contractor responsible for the removal of the tank system; and
  - (4) the recycling or disposal facility to which the tank is transported.
- (i) A copy of the certificate shall accompany the tank to the recycling/disposal facility. \*\*\*\*\* Agreed \*\*\*\*\*
- (j) A person who treats a tank by employing physical methods to satisfy the standard in subsection (e)(2) is authorized to perform such treatment for purposes of Health and Safety Code Section 25201.

Unofficial Title 22 © 2005 State of California, all rights reserved. May not be commercially reproduced or sold.

NOTE: Authority cited: Sections 25141, 25150, 25159 and 58012, Health and Safety Code. Reference: Sections 25117, 25124 and 25201, Health and Safety Code.

#### HISTORY

1. New section filed 8-6-98; operative 8-6-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 32).
2. Amendment of subsections (a)(1), (b)(4), (c), (e)(2)(A)2., (g) and (h)(1) filed 1-8-99 as an emergency; operative 1-8-99 (Register 99, No. 2). A Certificate of Compliance must be transmitted to OAL by 5-10-99 or emergency language will be repealed by operation of law on the following day.
3. Amendment of subsections (a)(1), (b)(4), (c), (e)(2)(A)2., (g) and (h)(1) refiled 5-7-99 as an emergency; operative 5-7-99 (Register 99, No. 19). A Certificate of Compliance must be transmitted to OAL by 9-7-99 or emergency language will be repealed by operation of law on the following day.
4. Amendment of subsections (a)(1), (b)(4), (c), (e)(2)(A)2., (g) and (h)(1) refiled 9-3-99 as an emergency; operative 9-3-99 (Register 99, No. 36). A Certificate of Compliance must be transmitted to OAL by 1-3-2000 or emergency language will be repealed by operation of law on the following day.
5. Amendment of subsections (a)(1), (b)(4), (c), (e)(2)(A)2., (g) and (h)(1) refiled 12-29-99 as an emergency; operative 1-3-2000 (Register 99, No. 53). A Certificate of Compliance must be transmitted to OAL by 5-2-2000 or emergency language will be repealed by operation of law on the following day.
6. Certificate of Compliance as to 12-29-99 order transmitted to OAL 2-29-2000 and filed 4-11-2000 (Register 2000, No. 15).

#### §67383.4. Management Procedure to Close Hazardous Material or Hazardous Waste Tank Systems in Place.

The owner or operator of a tank system to be closed in place shall do all of the following:

- (a) Comply with Section 25298 of the Health and Safety Code, if applicable.
- (b) Obtain CUPA, authorized agency or LIA approval to close the tank system pursuant to Title 23, CCR, section 2672(c), if applicable.
- (c) Clean the tank and comply with all of the requirements of section 67383.3.
- (d) After the provisions of section 67383.3 are met, fill the tank with a solid inert material.

NOTE: Authority cited: Sections 25141, 25150, 25159 and 58012, Health and Safety Code. Reference: Sections 25117 and 25124, Health and Safety Code.

#### HISTORY

1. New section filed 8-6-98; operative 8-6-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 32).
2. Amendment of subsection (b) filed 1-8-99 as an emergency; operative 1-8-99 (Register 99, No. 2). A Certificate of Compliance must be transmitted to OAL by 5-10-99 or emergency language will be repealed by operation of law on the following day.
3. Amendment of subsection (b) refiled 5-7-99 as an emergency; operative 5-7-99 (Register 99, No. 19). A Certificate of Compliance must be transmitted to OAL by 9-7-99 or emergency language will be repealed by operation of law on the following day.

4. Amendment of subsection (b) refilled 9-3-99 as an emergency; operative 9-3-99 (Register 99, No. 36). A Certificate of Compliance must be transmitted to OAL by 1-3-2000 or emergency language will be repealed by operation of law on the following day.

5. Amendment of subsection (b) refilled 12-29-99 as an emergency; operative 1-3-2000 (Register 99, No. 53). A Certificate of Compliance must be transmitted to OAL by 5-2-2000 or emergency language will be repealed by operation of law on the following day.

6. Certificate of Compliance as to 12-29-99 order transmitted to OAL 2-29-2000 and filed 4-11-2000 (Register 2000, No. 15).

**§67383.5. Transportation of Uncut Tanks that Contained Hazardous Material or Hazardous Waste.**

Any tank intended to be transported, that is not cut onsite, has been cleaned pursuant to the provisions of section 67383.3, and has the potential to generate flammable vapors, shall be subject to the following requirements for transportation:

(a) The tank's interior atmosphere shall be inerted with carbon dioxide or with another inert gas approved by the CUPA, authorized agency or LIA to levels sufficient to preclude explosion or to lower levels as required by the local agency; \*\*\*\*\*Agreed \*\*\*\*\*

(1) If the tank will be inerted with carbon dioxide, dry ice may be used at a minimum of 1 pound of dry ice per 45 gallons of tank volume (22.2 pounds per 1000 gallons of tank capacity) or bottled CO<sub>2</sub> may be used to inert the tank until the tank meets the required levels. \*\*\*\*\*Dry ice will be utilized to inert the tanks at the rate of 1lb. of dry ice per 45 gallons of tank volume.\*\*\*\*\*

(2) All LEL readings shall be taken with a CGI that has been properly calibrated. The readings shall be taken at the top, center and bottom of the tank before the tank is loaded onto the transport vehicle.

(b) All openings in the tank shall be plugged, except for a 1/8 inch vent. \*\*\*\*\*Agreed, the manhole will be rebolted to the tank prior to transport. Any other opening except for the 1/8" opening will be plugged.\*\*\*\*\*

(c) All cracks, holes, or other damaged sections shall be plugged. If holes or cracks in the tank walls, piping or appurtenances could allow the release of hazardous constituents, the tank, piping and/or appurtenances shall be wrapped in plastic sheeting or another appropriate barrier compatible with and capable of containing the release. If the barrier becomes contaminated during use, it shall be managed in accordance with the applicable requirements of this division. \*\*\*\*\*Agreed, all piping will be free of any liquids prior to placing into a roll off container. The tanks will not contain any constituents that will release from the tanks prior to or during transport.\*\*\*\*\*

Chris,

Here is hopefully the information that you need to issue your approval. Please contact me either way, once you have had a chance to review. Belshire has provided this information, I am just forwarding this off to you. Musco is ready to schedule tank pull upon your approval and everyone's dates match.

Thank you,

**Jeff Scott**

Re: PROJECT WORK PLAN  
ARCO Facility #2010  
2110 Old Middlefield Road  
Mountain View, California

Musco Excavators, Inc. (Musco) proposes to remove three 12,000 gallon underground gasoline tanks, one 550 gallon used oil tank and two under ground hoists at the former ARCO facility located at 2110 Old Middlefield Road in Mountain View, California.

The following procedures will be implemented prior to and during the removal process.

The site is currently surrounded by six foot temporary fencing, which will remain in place during the entire project and secured to prevent unnecessary entrance by the public. Prior to beginning the excavation USA will be contacted a minimum 48-hours prior to mark utilities, notification will be made to OSHA for the excavation and Bay Area Air Quality Management District will be provided with their 5-working day notice for the tank removal. No Smoking signs will be placed around the perimeter of the fence and a minimum 40BC rated portable fire extinguisher will be centrally located on-site.

With the tanks being emptied of product, dispensers removed and product lines purged; we will proceed in exposing the tanks. All excavated soil and pea gravel generated while uncovering the tanks, collecting samples or removed upon the field inspectors request will be placed in such a way as to not mix clean with potentially impacted soil and covered with 6 mil visqueen and secured for reuse or export at a later date.

Once the tanks are exposed, Belshire will be on-site to over see cleaning and transportation of the tanks, hoists, lines and rinsate using the following proposed process:

1. Post "No Smoking" signs in conspicuous locations around the tank area.
2. Use an LEL/O2 meter calibrated within last 30 days to measure volatile vapors and percentage of oxygen in the tank's interior. A certified marine chemist, Henry Sorensen, will oversee all LEL/O2 measurements.

3. Remove all possible remaining fluids via vacuum truck & hoses using proper grounding and bonding procedures.
4. Triple-rinse the tank's interior using a 2,000 psi cold water pressure washer, also grounded and bonded. Pump all rinseate using a 2" non sparking stinger lowered through the bung at the low end of each tank.
5. Obtain LEL/O2 readings again.
6. Introduce pellet dry ice into the tanks under the oversight of the marine chemist. The amount of dry ice will be determined by the tank volume as outlined in the California Code of Regulations, Title 22, Division 4.5, Chapter 32.
7. The marine chemist will certify the tanks clean and inert upon visually confirming absence of all sludge and LEL of 0% by taking readings at the top, center and bottom of each tank and providing a completed Hazardous Waste Tank Closure Certification.
8. Tanks will be loaded on LD Transportation (sub to Belshire) dropdeck flatrack trailers by way of an excavator provided by Musco and secured with no less than four (4) - 4" webbing style straps each. All openings in the tanks shall be plugged, except for a 1/8" vent. Tanks will be transported, from the site the same day as the removal, as a non-hazardous waste under a bill of lading to Potrero Hills Landfill in Suisun City, California.
9. The hoists will be removed by Musco and laid flat. Nieto and Sons Trucking (sub to Belshire) will cut open a window and vacuum out hydraulic oil remaining in the hoist. The interior will then be pressure washed. Rinseate will be transported by Nieto and Sons Trucking along with rinseate from the tank cleaning to Demenno Kerdoon in Compton, a licensed hazardous waste recycling facility. The hoists will be loaded onto a stakebed truck and recycled as scrap metal.
10. LD Transportation will provide a 40 yd bin for the product piping, which will be removed and loaded by Musco. Under California Health and Safety Code 25143.12, piping can be transported as non-hazardous waste to a Class I or II Landfill, which will be Buttonwillow.

Once the tanks, lines and hoists have been removed, soil samples will be collected by SAIC in the presence of the field inspector. The location and manner of sampling and analyses shall be in accordance with Regional Water Quality Control Board (RWQCB) guidelines and as directed by the field inspector. A minimum of three soil samples are required per tank, one from each end and one from the middle. In the case of groundwater, side-wall samples may be obtained at the high water level along with a ground water sample and will be analyzed according to the RWQCB guidelines. Less sampling will be required from under the waste oil tank and hoist area. Soil samples shall be collected from under each dispenser and along every 20 linear feet of piping trench or change in trench direction. All samples will be collected from two feet of native soil. It will be the discretion of the field inspector if stockpile samples will be collected. Samples will be immediately transported in a chest on ice to Cal Science Laboratories in Garden Grove, California for analysis. Results could be available in as few as 24-hours or as long as one week and if contamination is present, SAIC will work with the Lead Agency to develop a site remediation plan. While awaiting analytical results, the excavation areas will be barricaded with delineators, which will be wrapped with caution tape.

Once the excavations are rendered clean the stockpiled pea gravel will be utilized to backfill. If the stockpiled soil is clean this will also be used with additional engineered fill being imported, placed and compacted. The material will be placed in 8" - 12" lifts,

2110 Old Middlefield Road  
August 21, 2008  
Page 3 of 3

witnessed by a licensed geotechnical firm and tested to confirm a minimum 90% compaction has been achieved based on test method ASTM D 1557. A final compaction report will be generated and available for review, if necessary.

Please feel free to contact Musco if additional information is necessary or to discuss the content above.

Respectfully,

**MUSCO EXCAVATORS, INC.**

## HEALTH AND SAFETY PLAN

### 1.0 INTRODUCTION

Personnel involved in Field Investigations and Remediation at sites where hazardous wastes may be present are potentially exposed to a variety of hazards including:

- \* Inhalation of toxic airborne contaminants.
- \* Skin contact with contaminated soil and water.
- \* Presence of flammable / combustible vapors.
- \* Oxygen-Deficient atmospheres.
- \* Heat stress due to protective clothing and environmental conditions.
- \* Physical standards inherent to field operation (e.g., working near heavy equipment or at remote locations.)

Adequate planning is needed prior to performing work at these sites to minimize the risk of employee injury or illness.

#### 1.1 Purpose

The purpose of the Health and Safety Plan for this particular site is to provide personnel protection standards and mandatory safety practices, procedures, and contingencies while performing the tasks outlined in the Scope of Work. This Health and Safety Plan addresses the following regulations and guidance:

- \* Occupational Safety and Health Administration (OSHA) Standards for General Industry, 29 CFR (especially 29CFR 1910. 120 "Hazardous Waste Operations and Emergency Response.")
- \* OSHA Standards for Construction Industry, 29 CFR 1926.
- \* National Institute of Occupational Safety and Health (NIOSH), OSHA, U.S. Environmental Protection Agency (EPA), and the U.S. Coast Guard "Occupational Safety and Health Guidance Manual for Hazardous Waste Site Activities," October 1985.

#### 1.2 Responsibilities

The chain of command for safety and health-related issues during investigations, remediation, and tank removal activities at the site is delineated below. Musco Excavators, Inc. is to be in overall control of the Health and Safety activities at the site. Property owner and Musco Excavators, Inc must approve any modification in this Health and Safety Plan.

All Musco Excavators, Inc. and subcontractor personnel must follow the requirements of this Health and Safety Plan. Any unsafe conditions must be promptly reported to the Site Safety and Health Officer (SSHO), who will be Bryan Musco, or his appointed, qualified person.

The SSHO responsibilities include:

- \* Reviewing and confirming any changes in personal protective clothing or respiratory protective requirements.
- \* Reviewing all Health and Safety Documentation.
- \* Reviewing all on-site ambient air monitoring results.
- \* Providing site-specific training, as required, to all personnel assigned to work at the site.
- \* Stopping work when unacceptable Health Safety Risk exists.
- \* Providing a Health and Safety briefing to all site visitors.
- \* Supervising decontamination to ensure complete decontamination of all personnel, tools and equipment.
- \* Supervising the distribution, use, maintenance, and disposal of personnel protective clothing and equipment.

### 1.3 List of Personnel with 40-hour OSHA, 20 CFR for this Project

Bryan Musco and Duarte Silva

## 2.0 RISK ANALYSIS

This section assesses the chemical and physical hazards that are known to exist at the site and those that may be created by the remediation efforts. Table 2 summarizes the hazards associated with each of these tasks. The hazard analysis has been divided into three critical areas:

- \* Exposure: Expected frequency of exposure to a hazard;
- \* Probability: Likelihood of an injury upon exposure to a hazard;
- \* Consequence: Probable degree of injury or effect an injury will have on the effectiveness of a team member.

An explanation of the letters denoting the degrees of exposure, and consequence is provided at the end of the table.

Contaminants most likely to become encountered during field operations at the site are the Petroleum Hydrocarbons and Metals listed in Table 1. A list of the occupational exposure limits and signs and symptoms of exposure is also listed in Table 1.

Most work required in this project might potentially expose personnel to materials that may contain any or all of these contaminants. Any personnel entering the site shall be informed of all hazards associated with these contaminants.

The physical hazards expected to be present during site investigation activities include:

- \* Saw Cutting
- \* Snapping Cables, Slings and Rope
- \* Drilling Equipment
- \* Moving Equipment
- \* Heavy Equipment
- \* Sharp Objects
- \* Loose Foundations
- \* Open Pits or Ditches
- \* Excessive Noise
- \* Fire/Explosions
- \* Buried Utility Lines
- \* Energized Overhead and Underground Power Lines
- \* Heat Stress

## 3.0 PROCEDURES TO MITIGATE HAZARDS

This section describes those procedures to be followed in order to ensure the avoidance of operational hazards, as discussed previously. These hazards include mechanical, electrical, chemical, acoustical, biological, and temperature hazards. Those hazards associated with confined spaces are not anticipated to occur, and are not discussed.

### 3.1 Mechanical Hazards

The following procedures shall be followed during all phases of the operation to reduce those risks associated with mechanical equipment:

- \* Stay well clear of drill rods and augers while they are rotating and being hoisted. Extreme care is to be exercised when steel cables are being used to lift the drilling apparatus from the ground.
- \* Stand clear of the operating circle of excavators, backhoes, etc.

- \* Equipment maintenance schedules are the responsibility of each individual contractor. Equipment is to be checked daily. Any equipment deemed by a Musco Excavators, Inc. employee to be in an unsafe state of repairs, or operated in an unsafe manner shall be shut down until corrective action is taken. Equipment safety features, such as back-up alarms, shall be checked daily.

### **3.2 Electrical Hazards**

The following procedures shall be followed during all phases of operation, in order to reduce those risks associated with electrical hazards:

- \* Underground Service Alert (1-800-422-4133) will be contacted prior to site activities to locate the presence of underground cables, utility lines, pipes, and storage vessels at the proposed sites where soils borings will be placed.
- \* The local power company shall be contacted, in order to verify the minimum allowable clearance from high-voltage power lines. Under no circumstances will any person, piece of equipment, or phase of operation come within 10 feet of overhead power lines.
- \* If the work area is unavoidably close to buried or overhead power lines, the power shall be turned off, with the circuit breaker locked and tagged out.
- \* All electrical equipment is to be properly grounded, and under no circumstances are any modifications to be made to any piece of electrical equipment. All electrical equipment is to be inspected daily for damaged leads or plugs. Any piece of equipment that is damaged shall not be used on the site, and shall, in fact, be removed from the site for disposal or repair.
- \* If splicing wires must connect electrical equipment, the source shall be de-energized first; the breaker box locked out and appropriately tagged by the person who is to perform the splicing operation. All connections are to be appropriately taped. Once the splicing operation is complete, the person who performed the splice shall bring the source back into operation.
- \* Each person that has cause or need to use a piece of electrical equipment shall ensure that he/she is fully familiar with the equipment's operation and features.

### **3.3 Chemical Hazards**

To reduce the possibility of injury due to chemical hazards, personnel shall wear those pieces of Personal Protective Equipment as specified by the task, in section 5.0 (Personal Protective Equipment.) Air monitoring shall be conducted to evaluate respiratory and explosion hazards. The instruments and action levels to be used are listed in Table 3. The Musco Excavators, Inc. employee conducting each field task shall be responsible for performing the specified air monitoring. In order to ensure the protection of off-site public health, site perimeter air monitoring for volatile organic will be performed (see Section 6.0, Perimeter Monitoring.) If airborne levels of contaminants consistently exceed 5ppm background levels at the perimeter of the site, the work will be stopped; the suspected source of the contamination will be covered to eliminate emissions. A decision will then be made as to how to proceed with the work and how to more fully characterize and reduce the airborne emissions.

### **3.4 Acoustical Hazards**

In order to prevent hearing impairment, the use of earplugs or earmuffs shall be required for all personnel when heavy equipment is in use at the site. However, should any personnel develop pain in the ear due to work-site noise; they shall immediately don a set of earplugs or muffs. Noise levels will also be controlled to conform to local ordinances.

### **3.5 Biological Hazards**

In order to reduce the risk of biological contamination, Personal Protective Equipment, described in Section 5.0, shall be worn for each specific task. This protective equipment shall be removed, and hands and face washed prior to contact with the mouth, by the hands, for such purposes as eating, drinking, or smoking. Smoking shall only be permitted in those areas designated by SSHO.

### **3.6 Heat Stress**

All personnel entering the work area should be familiar with the signs and symptoms of heat stress. These include:

- \* Heat Exhaustion--Dizziness, light-headedness, slurred speech, rapid pulse, confusion, fainting, fatigue, copious perspiration, cool skin that is sometimes pale and clammy, and nausea.
- \* Heat Stress--Hot, dry, flushed skin; delirium, and coma (in some cases.)

Resting frequently in a shaded area and consuming large quantities of fresh, potable water can prevent heat stress. If heat exhaustion symptoms are observed, the person will be required to rest in a shaded area and consume liquids. If symptoms are widespread and observed frequently, an appropriate work/rest regimen will be instituted. This may involve limiting the work period so that after one minute of rest, a person's heart rate (HR) does not exceed 110 beats per minute.

If the HR is higher than 110 beats per minute, the next work period should be shortened by 33 percent, while the length of the rest period stays the same. If the HR is 110 beats per minute at the beginning of the next rest period, the following work cycle should be shortened by 33 percent. Resting HR should be determined prior to start of on site activities. A healthy individual's resting HR is usually 60 to 70 beats per minute. If symptoms of heat stress are observed, the victim will be transported to the nearest hospital immediately. Workers should not hesitate to seek medical attention if heat stress is suspected.

### 3.7 Confined Space Hazards

When work is to be done in an area where the natural circulation of fresh air or the ability to readily escape the site is restricted, that site shall be considered a confined space, and the following guidelines shall be followed:

- \* Personnel shall monitor the levels of oxygen, combustible gasses, and organic vapors prior to entering. Under no circumstances shall the space be metered if the following levels are exceeded:
  1. Oxygen content is less than 19.5%
  2. Combustible gas level is greater than 3% of the LEL.
  3. Total hydrocarbons are greater than the action levels defined in Table 3 of this section, if all air contaminants have not been identified.
- \* Personnel shall monitor the levels of oxygen, combustible gasses, and organic vapors continuously while inside the confined space. If the values stated in the above are exceeded, the space shall be evacuated immediately.
- \* At least one additional person, who shall be present for the express purpose of monitoring the personnel in the space, shall be within sight and call of those personnel within the space, while remaining outside of the space proper. This person shall have, readily available to him; all rescue equipment necessary to remove personnel who may require extraction from the space and the site. This equipment shall include, but not be limited to, respiration equipment of the same level as those used by the personnel in the space, first aid equipment, including compresses, harness, and all the extraction equipment.
- \* Portable fans or blowers shall be used to introduce fresh air into the confined space. These fans or blowers shall be located on the upwind side of the space. The space shall not be entered until values of oxygen, organic vapors, and combustible gasses are brought below and measured below their respective action levels.
- \* No personnel shall enter any unshored or unsupported excavation with a depth greater than 5 feet, or with unstable geological conditions.

## 4.0 TRAINING

### 4.1 Site Workers

All personnel who will perform on site tasks shall be trained by U.S. Department of Labor, Occupational Safety and Health Administration (OSHA) standard, 29 CFR 1910.120, Hazardous Waste Operations and Emergency Response. Training will include:

- \* A minimum of 40 hours initial instruction off site is required for those personnel conducting invasive fieldwork at the site. Proof of training shall be required to be present at the site.

- \* A minimum of 3 days of actual field experience under the direct supervision of a trained, experienced supervisor.
- \* Regulatory officials at the site shall be required to have completed at least 24 hours of initial instructions, and shall present training certification as requested.
- \* A minimum of 8 hours of refresher training annually.
- \* First Aid and CPR training.
- \* Additional training, which addresses any unique or special hazards.

All personnel entering the site shall be requested to present proof of current training. Failure to present such certification shall result in removal from the site.

#### **4.2 On Site Management and Supervisors**

On site management and supervisors shall receive at least 8 additional hours of specialized training on managing such operations.

#### **4.3 Pre-entry Orientation Session**

Prior to entering the site, personnel shall attend a daily pre-entry orientation session presented by the SSHO, which addresses the following issues. All personnel shall verify attendance of this daily meeting by signing the Safety and Health Plan Review Record (Appendix A.)

#### **4.4 Degree and Nature of Potential Health and Safety Hazards**

The health effects and hazards of the chemicals identified or suspected to be on the site shall be discussed. The physical and chemical properties of the contaminants. The most likely route of exposure and possible adverse consequences of working on the site if proper safety procedures are not observed or if protective fails or is improperly worn shall be reviewed. Other hazards, which are unique to site operations, shall be presented.

#### **4.5 Personal Protective Equipment**

Personnel shall be instructed in the use, care, maintenance, limitations, and fitting of personnel protective equipment. Respirator training shall conform to ANSI Z88.2 (1980) and OSHA 29 CFR 1910.134. Personnel shall not be fit tested or issued a respirator if facial hair interferes with the face-to-face piece seal of the respirator.

Qualitative fit testing shall be performed annually. Records of the fit testing shall be maintained. Positive/negative fit testing shall be performed by the user each time a respirator is donned.

#### **4.6 Decontamination Procedures**

The procedures, materials, equipment, and facilities specific to the site will be discussed during the morning briefing by the SSHO.

#### **4.7 Accepted Practices**

Specific safe work practices, which must be adhered to during the site operations will be discussed. This will include procedures for entering and exiting the site, and accepted and unaccepted practices within the personnel decontamination area.

#### **4.8 Emergency Procedures**

Procedures for responding to emergencies as specified in the Emergency Response Plan shall be covered.

### **5.0 PERSONAL PROTECTIVE EQUIPMENT**

All respiratory protective equipment must be approved by the National Institute for Occupational Safety and Health (NIOSH) /Mine Safety and Health Administration (MSHA.) The minimum protective equipment requirements for each site task shall be Level D. However, should airborne monitoring indicate organic vapors consistently in excess of 1-2 ppm, the level of protection shall be upgraded to Level C1. If monitoring indicates organic vapors consistently in excess of 5 ppm, the level of protection shall be up graded to Level C2.

### **5.1 Levels of Protection**

#### **Level D Protection**

The following personal protection equipment is required to be worn by all on-site personnel:

- \* Poly/cotton reusable coveralls or long sleeve shirts and long pants
- \* Steel toe boot/shoes
- \* Earplugs or muffs
- \* Hardhat
- \* Nitrile gloves (if contact with potentially contaminated soil or water is expected)
- \* Safety glasses
- \* Neoprene or butyl rubber boots or latex boot covers (if contact with potentially contaminated soil or water is expected)

#### **Level C1 Protection**

- \* One-half or full face respirator with high efficiency organic vapor cartridges with dust filter

#### **Level C Protection**

- \* Cloth coveralls
- \* Steel-toed boots with waterproof covers, or steel-toed rubber boots
- \* Hardhat
- \* Ear plugs or ear muffs
- \* Nitrile gloves
- \* Safety glasses
- \* Full-face respirator with high efficiency organic vapor cartridges with dust filter

### **5.2 Maintenance and In-Use Inspection of Protective Equipment**

Effective use of protective equipment requires that the equipment be properly used, maintained, and inspected periodically during the day. Procedures will be presented during pre-entry training.

### **5.3 Gloves/Body coverings**

Gloves and coveralls will be regularly inspected and replaced if torn. Coveralls will be laundered daily at a minimum. Reusable gloves will be decontaminated whenever exiting work areas.

### **5.4 Respirators**

Site conditions are not anticipated to require respiratory protection, therefore, no respirators are expected to be necessary. However, respirators shall be inspected and checked daily for leaks both visually and with negative and positive pressure checks on the wearer. Respirator cartridges will be replaced daily or more frequently if excessive resistance develops. All respirator maintenance will be performed by the SSHO. The type of respirators used will be equipped with high efficiency organic vapor cartridges and dust filters.

Respirator exterior will be wet-wiped whenever exiting work areas, as specified in Section 8. Respirators will be rinsed with a solution containing a sanitizer recommended by the respirator manufacturer. Respirators will be hung to drip dry and, if not used daily, will be placed inside plastic bags for protection against dust.

## **6.0 ENVIRONMENTAL MONITORING**

### **6.1 Real Time Air Monitoring**

A total volatile organics instrument shall be used to periodically monitor airborne concentrations of contaminants on site. A photo ionization detector (PID) (e.g., hNu or OVM) or equivalent and explosimeter/oxygen meter will be used to screen excavated soils for volatile organic compound contamination. The PID will also be used to measure and record employee breathing zone levels of organic vapors and gasses.

The monitoring program may be increased, reduced, or modified by the SSHO, based on site conditions and monitoring results. All monitoring will be accomplished under the direction of the SSHO, who will interpret the

results.

The air-monitoring program will include sufficient monitoring of air quality in work zones and other on-site areas to assess levels of employee exposure, determine that the work zone designations are valid, and verify that the respiratory protection being worn by personnel is adequate. The air-monitoring program is also designed to ensure that contaminants are not migrating off site to minimize exposure of near by populations and/or workers. Air monitoring shall be conducted at 15 minute intervals, unless it is determined that air monitoring may occur at less frequent intervals. These less frequent intervals would be the result of ambient air movement (wind,) or through the reduction of the air threat through verification monitoring. Such changes to plan will be logged.

Monitoring shall be conducted:

- \* When work begins on a different portion of the site.
- \* When contaminants other than those previously identified are being handled.
- \* When a different type of operation is initiated.
- \* If a sufficient reasonable interval has passed so that exposures may have significantly increased.

Measurements shall be taken at the anticipated source and in the breathing zone of site personnel.

Instruments shall only be used by employees who have been trained in the proper operation, use limitation, and calibration of the monitoring instrument and who have demonstrated the skills necessary to operate the instrument.

### **6.2 Perimeter Monitoring**

Monitoring shall be conducted at least two times each day, with a total volatile organics direct-reading instrument, at location upwind and downwind at the perimeter of the site. Measurements shall also be taken periodically downwind of each active sampling site to assess the potential for off-site migration. If airborne levels of contamination exceed background levels for a sustained period of time at the perimeter of the site, the work area shall be expanded to encompass all area subjected to the elevated levels. If airborne levels of contaminants exceed background levels by 5 ppm at the perimeter of the site, the work will be stopped, the suspected source of the contamination (borehole or production well) will be covered to eliminate emissions.

If airborne levels of contaminants exceed background levels, a decision will then be made as to how to proceed with the work and how to more fully characterize the airborne emissions.

### **6.3 Field Instruments**

Two types of PID vapor analyzers are available for on-site screening during field operations: hNu Model PI 101 and/or Thermo Environmental Instruments 580A or 580B.

The Gastech Flammable Gas Detector shall be used to measure explosion/oxygen levels. Equivalent instruments may be used.

Calibration of instruments will be performed prior to field use on a daily basis. Calibration methods as specified in manufacturers-supplied manuals for each instrument will be followed. A two-point calibration is performed on portable gas analyzers using hydrocarbon-free air as the zero point and a manufactured calibration gas as the high point. A gas-analyzed instrument is considered to be accurate if readings of the standards are within 20 percent of the actual concentration of standard gas.

### **6.4 Record Keeping Requirements**

The result of air monitoring readings shall be recorded on standard air monitoring data forms. A calibration and maintenance log for each instrument shall also be maintained. Records shall also be kept of all significant events, addendum's, or changes to level of protection.

### **6.6 Heat Stress Monitoring**

Ambient temperatures at the site combined with the requirements for PPE use may contribute to heat stress. When ambient temperatures reach or exceed 70 degrees Fahrenheit, body temperatures will be monitored using fever strips or oral thermometers and heart rates will be monitored when heat stress conditions may occur. Work-rest regimens will be adjusted accordingly. (see Section 3.6)

## **7.0 SITE CONTROL**

A check-in and checkout system will be used to control and record each employee and piece of equipment inside the site boundaries. Only personnel identified as "authorized" will be permitted to enter the site. A Master list of authorized personnel will be available and will only include personnel who have received the appropriate training and certification required by this Health and Safety Plan and OSHA requirements.

### **7.1 Work Zones**

Work zones are designated to prevent employees, visitors, and the surrounding environment from exposure to contamination during all aspects of site remediation activities. All work zones and support areas will be established by Musco Excavators, Inc. Movement of personnel and equipment between zones and on and off site will be controlled by means of designated access points. Minimum personnel protective equipment for work in each zone is described in Section 5.0.

### **7.2 Work Areas**

The work areas encompass the surface areas around the boundary of the property. It is anticipated that this will be a Level D area and be utilized during invasive operations.

### **7.3 Safe Work Practices**

Safe work practices, which must be followed by all site workers, include:

- \* Eating, drinking, chewing gum or tobacco, and smoking are prohibited in the work and decontamination areas.
- \* Do not sit or kneel in areas of obvious contamination.
- \* Hands and face must be thoroughly washed upon leaving the work area.
- \* Repair or replace immediately any defective PPE.
- \* Personnel must not take prescription drugs unless specifically approved by a qualified physician.
- \* If respirators are required, facial hair that interferes with the face-to-face piece fit of the respirator will not be permitted.
- \* Contact lenses will not be permitted to be worn when the potential for chemical splash exists or when full face-piece respirators are required.
- \* Personnel on the site must use the buddy system; visual contact must be maintained between team members at all times.

### **7.4 Daily Start-Up and Shutdown Procedures**

The following protocols will be followed daily prior to start of work activities:

- \* The SSHO will review site conditions to determine if modification of work and safety plans are needed.
- \* Personnel will be briefed and updated on any new safety procedures.
- \* All safety equipment will be checked for proper function.
- \* The SSHO will ensure that first aid equipment is readily available.
- \* The SSHO will indicate appropriate air monitoring.

The following protocol will be followed at the end of daily operations and before breaks:

- \* All personnel will proceed through appropriate decontamination procedure and facilities.

## **8.0 DECONTAMINATION**

### **8.1 General**

Employees will be trained in decontamination procedures that will be implemented when employees, or equipment enter work or decontamination areas. Decontamination will be performed to minimize potential contamination of the equipment and the spread of contamination from one zone to another.

### **8.2 Personnel**

If it becomes necessary to upgrade the level of protection from Level D to Level C or above, no worker, except under emergency situations, will leave the work area without going through the proper decontamination sequences.

Before leaving the work area, personnel will wash boots and outer gloves at the decontamination area. The wash solution will be a simple detergent and water solution. Outer disposable clothing will be removed and placed in 8-mil plastic bags for disposal. Exterior surfaces of respirators will be wet-wiped, then respirators will be removed and placed in a plastic bag for temporary storage and cleaning.

### **8.3 Respirator Decontamination**

When required, respirators will be cleaned daily by the individuals to whom they have been assigned. Each individual will be responsible for cleaning and maintaining his/her own respirator.

A washbasin or sink, with solution containing sanitizer recommended by the manufacturer, will be provided in the decontamination area for final rinsing of respirators at the end of the day. Respirators will then be hung to drip dry and, if not used daily, will be placed inside plastic bags for protection against contamination. Respirator cartridges will be changed at least daily or more frequently if sampling data indicate potential saturation concentrations exist or breathing resistance becomes difficult. The SSHO will also spot check respirators to ensure that they all remain clean and are properly maintained and stored.

### **8.4 Equipment Decontamination**

If in Level C or above an equipment being used in the work area will be subject to complete decontamination procedures before the equipment is removed from these areas. Equipment and vehicles which contact potentially contaminated soil will be decontaminated using a steam cleaner or hot water pressure washer. Wastewater will be contained in all holding tank or drums for further disposal at an appropriate facility. All contaminated items will be carefully inspected and/or decontaminated to the satisfaction of the SSHO before being taken off site.

## **9.0 EMERGENCY RESPONSE PLAN**

On site emergencies will ultimately be handled by off site emergency support personnel. Initial response and first aid treatment, however, will be available on site.

In case of a hazardous material emergency, the senior supervisor on site will assume full control and direction of the emergency response as the Incident Commander. The Incident Commander will work with the SSHO to identify and evaluate hazards. All emergency responders and communications will be coordinated and controlled through the Incident Commander.

### **9.1 Emergency Equipment**

Emergency equipment for the work areas will be kept in the decontamination area. The equipment will include:

- \* Portable emergency eye wash with a capacity for providing clean water at a rate of at least 0.4 gallons per minute for a 15-minute period.
- \* Two 20-lb multipurpose (ABC-rated) fire extinguishers.
- \* An adequately stocked first aid kit.

Another adequately stocked first-aid kit and an emergency siren will be available in the support area.

### **9.2 Pre-Emergency Planning**

Prior to start of work, Musco Excavators, Inc. will contact local authorities to inform them of the start date and anticipated scope of work. First aid kits at least one Musco Excavators, Inc. employee trained in first aid and cardiopulmonary Resuscitation (CPR) will be on site at all times during remedial activities.

### **9.3 Emergency Recognition and Prevention**

Emergency conditions that may be anticipated at the site include:

- \* Medical emergency
- \* Heavy equipment accident
- \* Discovery of unanticipated buried hazards
- \* Poisonous snakes and spiders
- \* Overexposure of personnel to on site contaminants
- \* Heat Stress

To ensure that hazard recognition and accident prevention protocols are being maintained, personnel must follow the requirements of the Health and Safety Plan.

### **9.4 Operations Shutdown**

Operations shutdown may be mandated by Musco Excavators, Inc. on recommendation from the SSO or by the emergency response Incident Commander. Conditions warranting work stoppage will include:

- \* Uncontrolled fire
- \* Uncovering potentially dangerous buried material
- \* Any condition immediately dangerous to life and health or the environment
- \* Heat stress illness exhibited by the crew
- \* Air contaminant concentrations in excess of the protection factors afforded by the respirators in use.

When any of these conditions exist, operations will be stopped and the site secured. All personnel will leave the work area until the Incident Commander has determined that operations may resume.

### **9.5 Fire and Explosion Response Procedures**

Fire on site can be started by natural events, work activities, or the activities of others. There shall be a multipurpose (ABC-rated) fire extinguisher on hand at all times. Personnel will be instructed in the use of these fire extinguishers and to attempt control of only very small fires. The procedure for using a fire extinguisher is to pull the safety pin, point at the base of the flames, and discharge the extinguisher by sweeping the flames from a distance of about 6 feet. The extinguisher operator should move in as the flames are being put out. Musco Excavators, Inc. will inform the local fire district immediately in case of any fire when its support will be required.

### **9.6 Evacuation From Work Areas**

If an on-site emergency occurs, the Incident Commander will sound the site emergency alarm. All workers will meet at a pre-designated area located in the support area. An Employee head-count will be performed to ensure all workers are accounted for.

In case of an emergency, evacuated employees may be decontaminated rapidly by removing exterior clothing. If the worker is critically injured in the work area, the worker may be removed immediately from the area--DO NOT take the time to decontaminate the injured worker; seek medical attention immediately.

### **9.7 Emergency Medical Treatment and First Aid**

Only minor injuries will be treated on site. They will be treated with the first-aid kit available on site.

For major injuries, contact 911. The phone number for the hospital, fire, and ambulance is 911. A complete list of emergency telephone numbers and route to nearest hospital is provided in Appendix B.

**EXPLANATIONS**

**Exposure:** The frequency of exposure to the hazard event.

- A = Continuously
- B = Frequently
- C = Occasionally
- D = Seldom

**Probability:** The likelihood that an injury will occur upon exposure to the hazard event.

- A = Certain or almost certain
- B = Likely, not unusual, 50/50 chance of occurring
- C = Unusual, would generally occur less than 50% of the time
- D = Improbable, very low chance of occurrence

**Consequence:** The degree of injury resulting from exposure to the hazard event of significant enough degree to cause an injury.

- A = Fatality
- B = Serious injury, including chemical exposure, requiring hospitalization
- C = Moderate injury, including chemical exposure, requiring on-site first aid treatment
- D = Minor injury, including chemical exposure, requiring on-site first aid treatment
- E = Chemical, acoustical, or other exposure above the Threshold Limit Value (TLV) or other recommended standard that may not produce immediate acute effects, especially for chronic toxicants

TABLE 3

AIR MONITORING INSTRUMENTATION AND ACTION LEVELS

<u>Hazard</u>	<u>Instrument</u>	<u>Reading</u>	<u>Location</u>	<u>Action</u>
Respiratory	PID/Draeger Tube	1-2 ppm	Breathing	Don Respirator (Modified D)
Respiratory	PID/Draeger Tube	5ppm	Breathing	Don Level C (Protection)
Respiratory	PID/Draeger Tube	10 ppm	Breathing	Leave Area
Explosion	Combust. Gas Meter	10% LEL	Ambient Air	Vent Area
Explosion	Combust. Gas Meter	20% LEL	Ambient Air	Leave Area
Oxygen Deficiency	Oxygen Meter	19.5%	Oxygen Ambient Air	Leave Area

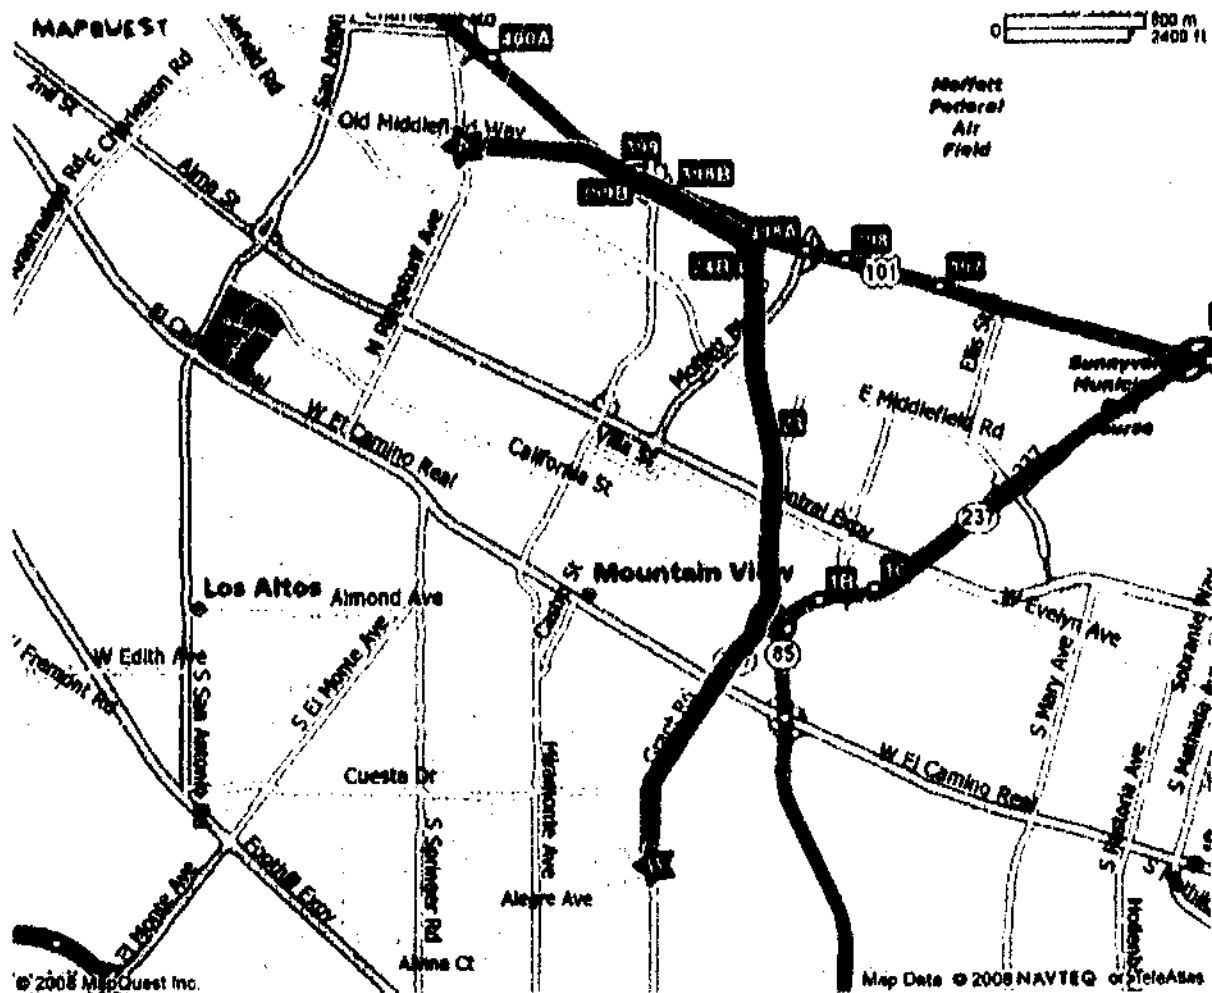

Apparent exposure level above the background ambient air concentration. Background levels may change due to factors such as weather and location of work site.

High efficiency organic vapor cartridges with dust filters shall be used.

As each chemical constituent is identified through soil and surface water testing, specific action levels will be determined. These site-specific action levels and any modifications to safety procedures presented in this plan shall be incorporated in future revisions. It is presently anticipated that chemical hazards will warrant the division of the work site into work, decontamination area prior to entering the support area. The support and decontamination area will be upwind of the work site. No visitors shall be allowed to approach the work site unless they are properly trained and under the supervision of delegated Musco Excavators, Inc. personnel.

## HOSPITAL DIRECTIONS

1. Start out going EAST on OLD MIDDLEFIELD WAY toward N RENGSTORFF AVE. (0.4 mi)
2. Merge onto US-101 S toward SAN JOSE (0.6 mi)
3. Merge onto CA-85 S via EXIT 398B toward CUPERTINO/SANTA CRUZ (1.9 mi)
4. Merge onto CA-237 W/MOUNTAIN VIEW ALVISO RD via EXIT 22A toward CA-82 N/EL CAMINO REAL/MOUNTAIN VIEW (0.6 mi)
5. CA-237 W/MOUNTAIN VIEW ALVISO RD becomes GRANT RD.
6. End at 2600 Grant Rd, Mountain View

**1.0 INTRODUCTION**

This plan establishes requirements and provides guidelines for worker safety during various field procedures performed by Belshire Environmental Services, Inc. (Belshire) personnel. The purpose of this plan is to identify procedures for avoiding hazards from on-site chemicals, avoiding personal injury from on-site equipment, and for responding to serious exposure or accident. The safety rules presented in this plan cannot cover every eventuality, and it is therefore expected that all workers involved will exercise good judgment in all safety matters.

**2.0 SITE INFORMATION****Belshire Job#:**

**Job description: Triple rinse, inert & transport for disposal three (3) – 12,000 gallon Gasoline Underground Storage Tanks, one (1) 550 gallon waste oil tank and two (2) hydraulic hoists**

**Project Manager: Glen Vanderveen**

**Site Safety Officer: Ron Rodriguez**

**Site Description:**

**Client: BP West Coast Products, LLC**

**Facility#: 2010**

**Site Address: 2110 Old Middlefield Way**

**City, State: Mountain View, CA**

A site map is included on the following page.

Hospital location, directions and maps are provided at the end of this document.

### 3.0 AUTHORITY AND RESPONSIBILITIES

#### 3.1 Belshire Environmental Services, Inc.

Prior to initiation of site activities, a site safety meeting will be held with all personnel working on the project. At this meeting the designated Site Safety Officer will review the Health and Safety Plan procedures with all site personnel. The meeting will verify that all personnel will have 1) been properly trained in health and safety procedures, 2) been explained the importance of the use of respirators, and 3) understood this Health and Safety Plan and all applicable procedures.

The Site Safety Officer will maintain a record of onsite operations. Information recorded will include such items as working hours, names and times of subcontractors/visitors entering and leaving the site, background-readings, and all information important to health and safety.

#### 3.2 Subcontractors

Each subcontractor will also be held accountable for the safe and healthful performance of work by each of their employees, subcontractors, or support personnel who may enter the site. Subcontractors are required to ensure that all employees, visitors, subcontractors, and their supplier/vendors, comply with the provisions of this Health and Safety Plan and the minimum standards set forth under the CAC, Title 8, Industrial Relations, Chapter 4, Division of Industrial Safety, Subchapter, 4, Construction Safety Orders while on the work site and during the execution of tasks assigned by Belshire.

Each subcontractor is required to know the safety regulations as they apply to operations. The provisions of this Health and Safety Plan will be strictly enforced along with the regulations issued by federal, state, and local governments, where applicable. Noncompliance with this Health and Safety Plan will be treated the same as noncompliance with any contract provision.

Each subcontractor will be required to designate a Safety Representative. The Safety Representative is responsible for the safe and healthful performance of work by his/her work force and that of his/her subcontractors.

### 4.0 HAZARD ASSESSMENT

#### 4.1 Chemicals

Underground storage tank systems may contain petroleum hydrocarbons with chemical compounds partially consisting of Benzene, Toluene, Ethylbenzene, and Xylene. These chemical constituents of gasoline are hazardous in sufficient concentrations, and workers should be protected against inhalation of vapors and from direct contact with gasoline contaminated soil.

##### 4.1.1 Types of Exposure

###### 4.1.1.1 Inhalation Exposure

According to the National Institute for Occupational Safety and Health (NIOSH) Pocket Guide to Chemical Hazards, dated September 1985, the exposure limit

for Benzene is 10 parts per million (ppm); the exposure limit for Toluene is 100 ppm; Ethylbenzene is 100 ppm; and xylene is 100 ppm. If the concentration in the breathing space at the work area is less than 10 ppm, Level D protection will be required. If the concentration in the breathing space is between 10 and 249 ppm, Level C protection with half-face respirators will be required. If the concentration in the breathing space is between 250 ppm and 999 ppm, full-face respirators will be required. If the concentration exceeds 1000 ppm, work will be stopped and appropriate measures will be taken to mitigate the exposure source (e.g., soil stockpiles will be covered, tank sump lids will be replaced, dispenser doors will be closed, etc.).

#### 4.1.1.2 Dermal Exposure

Repeated daily contact with petroleum hydrocarbons would be expected to irritate the skin. For this reason, direct skin contact will be avoided by wearing protective gloves. However, if contact does occur, the exposed areas will be washed with soap and water and rinsed thoroughly.

#### 4.1.1.3 Ingestion

Petroleum hydrocarbons can enter the body by ingestion. Because of this, eating and drinking will not be allowed within a 25-foot exclusion zone. Hands and face should be washed prior to eating and drinking.

#### 4.1.2 Levels of Protection

Based on Site Characterization Investigation findings, the level of protection required will be determined. It is anticipated that Level D protection will be required at most locations. However, safety equipment commensurate with Level C protection will be kept on the site at all times during the program and, if necessary, will be utilized. As stated in Section 3.1.1 above, Level C protection equipment will be utilized if breathing space monitoring indicates concentrations of organic vapors between 10 and 249 ppm. If conditions warrant the use of Level B or Level A protection, all work will cease and appropriate measures shall be taken to mitigate the exposure source. Work will resume when appropriate safety procedures are developed and implemented.

##### Level D Protection:

Level D protection will consist of personal protective equipment consisting of hard hat, boots, and safety glasses where appropriate.

##### Level C Protection:

Level C protection will consist of personal protective equipment consisting of hard hat, rubber boots, solvent resistant gloves, Tyvek coveralls, half-face respirator and safety goggles. If it is necessary to utilize Level C protection, a decontamination area will be setup.

#### 4.1.3 Exposure Monitoring

The breathing space at the site will be monitored with an appropriate organic vapor analyzer. The organic vapor analyzer will be calibrated per manufacturer's requirements.

#### 4.2 Work Near Vehicle Traffic

All personnel working near vehicle traffic shall wear an approved orange safety vest or other appropriate clothing. The work area shall also be protected with appropriate placards, barricades, traffic cones, and/or boundary tape.

#### 4.3 Fire

Petroleum hydrocarbons can be highly flammable and vapor accumulating could flash and/or explode if ignited. For this reason, there will be no open flame within 25 feet of the exclusion zone. When appropriate, non-sparking tools will be used.

#### 4.4 Noise

Hearing protection shall be worn when working around or near heavy equipment with high noise levels (exceeding 84 dB) or when the Site Safety Officer deems necessary.

#### 4.5 Head Injury

Belshire personnel and their subcontractors will wear hard hats when working in areas where there is a potential for injury to the head from falling objects, inside of any fenced construction site, at any job where heavy machinery is present, and any time the Site Safety Officer deems necessary.

#### 4.6 Heat Stress

Heat stress is one of the most common and potentially serious health problems encountered during prolonged outside work activity on hot sunny days. Containers of water will be made available to workers outside exclusion zone.

#### 4.7 UV Light Exposure

Sunscreens of protection factor 15 (or greater), and UV tinted safety glasses shall be made available as needed.

#### 4.8 Trap Hazards (If Appropriate)

The site safety officer shall survey the work area to identify open manholes, pits, trenches, or similar hazards that could potentially impact work activities and shall ensure that these locations are periodically checked during the day.

### **5.0 SITE SPECIFIC HEALTH AND SAFETY REQUIREMENTS**

#### 5.1 Personnel Protection

Personnel protection equipment for activities covered by this Health and Safety Plan include a hard hat, shirt, long pants, and work boots (Level D). Latex gloves will be required when handling equipment, parts, soil or other material that could contain or be contaminated with petroleum hydrocarbons. Safety glasses should be worn when working around equipment or moving parts and as needed elsewhere. Hearing protection should be used when working around heavy equipment and/or when noise levels exceed 84dB. When upgrading to Level C protection, half-face respirators with high efficiency organic vapor cartridges and Tyvek coveralls should be worn by site

personnel.

#### 5.2 Personnel and Equipment Decontamination

Personnel decontamination will involve the washing of hands and face with soap and water within the decontamination area after removal of protective gear and prior to eating or drinking. Respirators, gloves, and hardhat will be washed in a liquid soap and water wash. Tyvek, if worn, will be placed in a plastic bag and disposed of.

#### 5.3 Site Control/Work Zone

Once work begins at the site, no one will be allowed within the exclusion zone without appropriate protective gear and training as required by this Health and Safety Plan. The Site Safety Officer will not allow visitors within the work zone unless they comply with these safety requirements.

#### 5.4 Eating/Drinking

Eating and drinking will not be permitted within the exclusion zone.

#### 5.5 Fire

No smoking or open flame will be allowed within 25 feet of the exclusion zone.

### **6.0 SAFETY GUIDELINES AND PROCEDURES**

#### 6.1 General Guidelines During Operations

Safety requires the attention and cooperation of every worker and site visitor. Before commencing any work, the work area shall be surveyed to identify potential hazards that could impact the work to be performed. Some examples include, identification of overhead obstructions prior to raising equipment extension, identification of carbon monoxide sources before entering tanks sumps and excavations and identification of ignition sources prior to working around hydrocarbon impacted soil or petroleum equipment.

The work area should be secured to protect Belshire employees, other workers and visitors from equipment and vehicle traffic as well as to keep the general public at a safe distance. Soil stockpiles and open trenches should also be secured. This should be done through the use of delineators, fencing or other appropriate barricades.

Throwing or dropping tools will not be permitted. All tools should be carefully passed by hand between personnel or a hoist line should be used.

The consumption of alcoholic beverages or other depressants or chemical stimulants will not be permitted prior to starting work or while on the job.

"Horsing around" on the job site should never be allowed, even when operations have ceased or equipment is shut down.

#### 6.2 Overhead and Buried Utilities

The use of soil moving equipment on a site within the vicinity of electrical power lines and other utilities requires that special precautions be taken by all personnel. Overhead

and buried utilities should be located, noted and emphasized on site location plans. When overhead electrical power lines exist at or near a site, consider all wires to be alive and dangerous.

Before raising equipment extensions on a site in the vicinity of power lines, walk completely around the equipment. Determine what the minimum distance from any point on the equipment to the nearest power line will be prior to raising equipment extensions. Do not raise the equipment extensions or operate equipment if this distance is less than 20 feet.

Underground electricity is as dangerous as overhead electricity. Be aware and always suspect the existence of underground utilities such as electrical power, gas, petroleum, telephone, sewer, and water.

### 6.3 Confined Space Entry

This project should not include a confined space entry.

### 6.4 Lock-out/Tag-out

If site operations may require work on equipment that is electrically charged then the Belshire Lockout/Tagout procedure shall be implemented by the Site Safety Officer. This could include, but is not limited to, gasoline/diesel dispensers, submersible turbine pumps, and underground storage tank monitoring systems.

**7.0 EMERGENCY RESPONSE PROCEDURES**

In the event of fire, explosion, injury, or other accident, contact the appropriate site emergency response group. Site emergency telephone numbers listed below are for emergency services.

Fire Department: 911

Ambulance: 911

Paramedics 911

Belshire Environmental Services, Inc.: (949) 460-5200

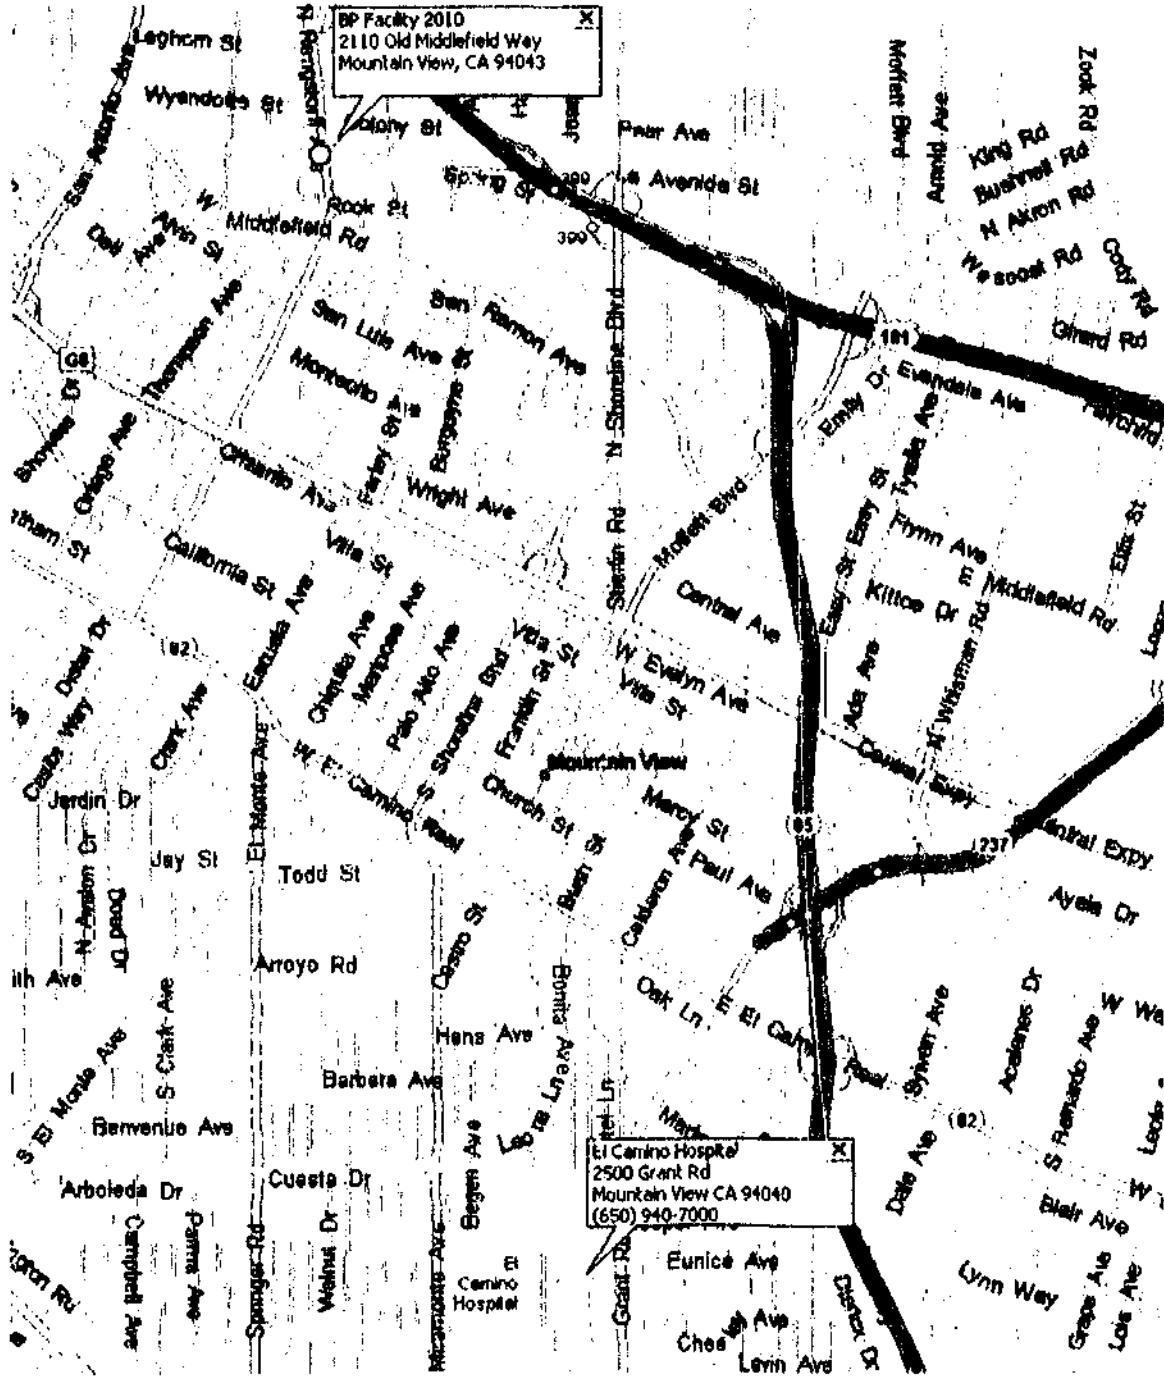

Nearest Hospital:

El Camino Hospital  
2500 Grant Rd  
Mountain View CA 94040  
(650) 940-7000

Directions and maps to El Camino Hospital are provided at the end of this document.

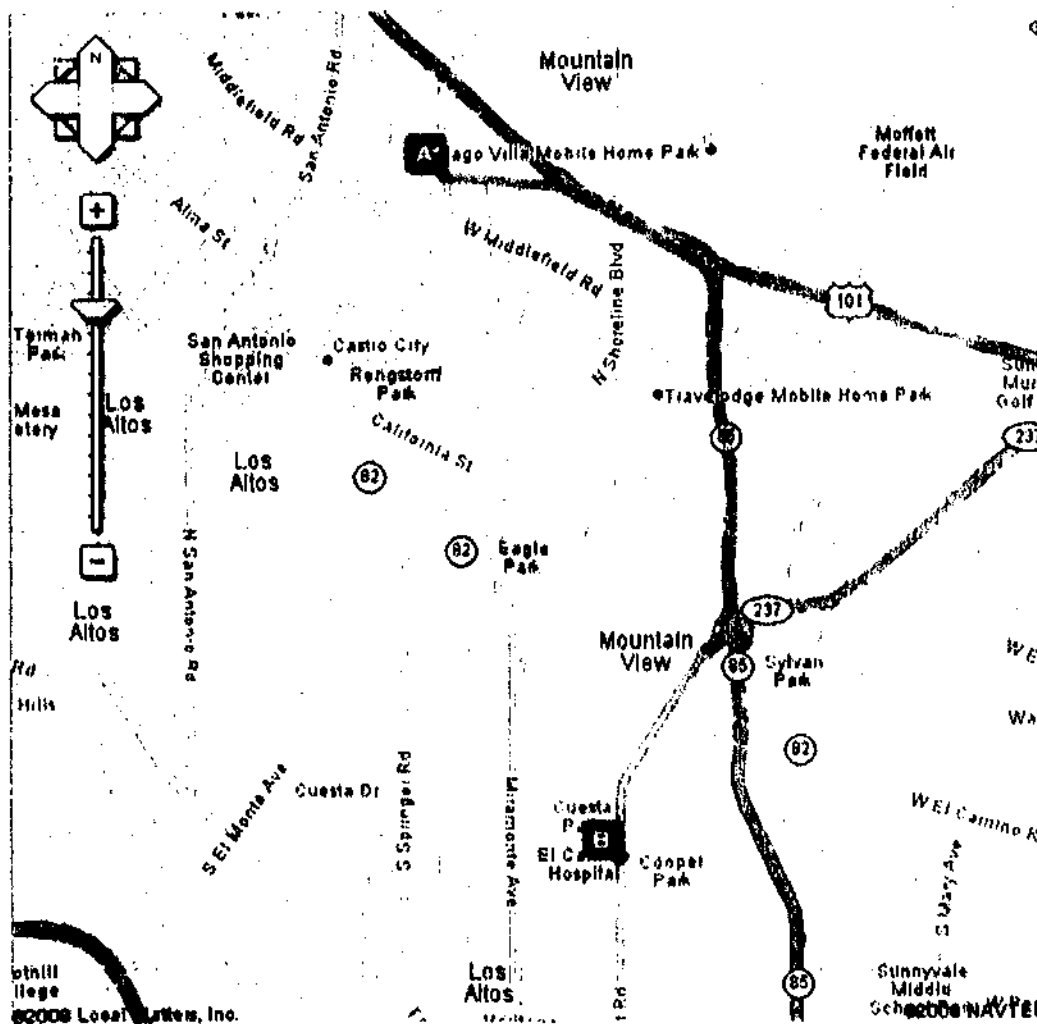

**HOSPITAL LOCATION:**  
El Camino Hospital  
2500 Grant Rd  
Mountain View CA 94040  
(650) 940-7000

**DIRECTIONS TO HOSPITAL:**

- Exit **BP Facility 2010** at 2110 **OLD MIDDLEFIELD WAY, MOUNTAIN VIEW**, heading **EAST** toward **N RENGSTORFF AVE**
- Take entrance ramp to **US-101 S** toward **SAN JOSE (0.4 mile)**
- Take exit **398B** to **CA-85 S** toward **CUPERTINO / SANTA CRUZ (0.6 mile)**
- Bear **RIGHT** on **CA-237 W (1.8 miles)**
- **MERGE** on to **CA-237 W (0.3 mile)**
- **CA-237 W** becomes **GRANT RD (0.2 mile)**
- Turn **Right** on **North Drive (0.8 mile)**
- Follow signs to **Emergency Room**

**SITE AND SAFETY PLAN FOR**

• UNDERGROUND STORAGE TANK- REPAIRS, REMOVAL, INSTALLATIONS •

• INVESTIGATION/REMEDICATION OF CONTAMINATED SITE • MONITORING WELL & SOIL BORING •

As indicated throughout the plan, selected sections should only be filled out by people with technical expertise in health and safety issues. In addition, State organizations using this plan should set up a system to ensure that: (1) The plan is used properly; and (2) staff follows proper safety procedures. Attach copies of employee certification in hazardous waste/hazardous materials/underground storage tanks. Certifications are for employees who will be working at the job site. All selections are to be completed as appropriate.

**PART I** (Section I-IV) should be completed prior to the site visit and turned in with permit application.

**SECTION I. GENERAL SITE INFORMATION**

SITE NAME AND ADDRESS: \_\_\_\_\_

CONTACT PERSON AND PHONE NUMBER: \_\_\_\_\_

SITE IDENTIFICATION NUMBER: \_\_\_\_\_

PROPOSED DATE(S) OF SITE WORK: \_\_\_\_\_

**SECTION II. DESCRIPTION OF ACTIVITY**

PURPOSE OF ACTIVITY:

- |  |   |
|--|---|
| <input type="checkbox"/> New Tank Installation         | <input type="checkbox"/> Tank Closure                           |

## HEALTH AND SAFETY REMINDERS

<i>ACTIVITY</i>	<i>POTENTIAL HAZARD</i>
Is excavation going to be performed?	If so, hazards associated with construction machinery are possible.
Is excavation in a "known" clean area?	If not, toxic exposure could occur.
Have underground utilities and overhead power lines been identified and marked?	If not, the potential for electrocution, toxic Exposure and flooding exist.
Are excavations shored/supported properly?	If not, slope failure could result in physical injury and asphyxiation
Has air monitoring been conducted in the excavation prior to entrance?	If not exposure to toxic chemicals explosive and oxygen deficient atmospheres could occur.
Is the crane (or other lifting equipment) designed for the specific lift in question at the given boom angle?	If not catastrophic equipment failure could occur.
Is the wire used for the lift appropriate and has it been inspected for integrity?	If not, wire breakage can occur, resulting in serious injury or fatality.
Is the tank integrity testing being performed correctly? Is pressurization to the maximum of 5 psi? Has the integrity of the pressure gauge been checked? Is someone assuring that the gauge is functioning properly (not sticking)?	If not, overpressurization could lead to tank rupture and subsequent injury.
Is entry/work in a confined area being performed? Is it necessary to enter sewers, manholes, basements, excavations, tanks?	If so, potential hazards associated with injury, exposure, fire/explosion, asphyxiation and biological hazard exists.
Is appropriate monitoring being performed prior to and during confined space entry/work?	If not, potential for fire/explosions, asphyxiation and toxic exposure potential exist.
Is product handling/transfer being performed?	If so, the potential for fire/explosion, toxic exposure and spills exist.
Is appropriate caution being taken to eliminate all sources of sparks including static electricity? Have personnel working in potential explosive atmospheres left all potential spark producing materials (lighters, matches, keys, etc.) behind?	If not, incidental sparks could initiate a fire/explosion.
Is appropriate monitoring being performed during product transfer?	If not, the potential for fires, explosions, and toxic exposure exists.
Is appropriate protective clothing being used to prevent exposures?	If not, the potential for exposure exists.
Is the UST inerted or ventilated?	If not, the potential for explosion, fire and asphyxiation exist.

## **1.0 INTRODUCTION**

---

On behalf of Atlantic Richfield Company (ARC), a BP affiliated company, Stantec Consulting Corporation (Stantec), has prepared this report to document environmental work completed as part of facility removal and site demolition activities conducted at Former ARCO Service Station No. 2010, located at 2110 Old Middlefield Way in Mountain View, California (Figures 1, and 3). The work was conducted in accordance with the requirements of the Santa Clara Valley Water District (SCVWD) and the City of Mountain View Fire Department (CMVFD). Science Applications International Corporation (SAIC), BP's executing supplier, provided oversight during well destruction and facility removal activities. SAIC's *Well Destruction and Site Demolition Data Package*, certified by a SAIC California Professional Geologist, is presented as Attachment A. Musco Excavators, Inc. performed the facility removal activities. The purpose of Stantec and SAIC's project involvement was to observe and document the following activities:

- On July 18, 2008, Stantec personnel conducted a limited asbestos and lead survey to identify, and estimate quantities of, lead and asbestos containing materials at the site. Results of the survey are presented in the *Asbestos Building Materials and Lead-Based Paint Survey Report* included as Attachment B. Remediation of asbestos and lead-based paint as identified and reported in the Stantec report was reportedly completed by a certified-licensed abatement contractor prior to site demolition.
- Removed the remaining aboveground equipment associated with the former ISOC ® remediation system;
- Observed and documented the destruction of five (5) groundwater monitoring wells, four (4) leak detection monitoring probes (LDMPs), and one (1) unknown observation well under the direction of a SCVWD inspector;
- Observed and documented the removal and disposal of three (3) 12,000-gallon underground storage tanks (USTs), one (1) 550-gallon waste oil UST, UST rinsate, all associated product piping, four (4) fuel dispensers, and two (2) hydraulic hoists from the site;
- Collected soil and groundwater samples beneath the USTs, hydraulic lifts, fuel lines, and dispensers under the direction of the CMVFD Hazardous Materials Specialist;
- Analyzed soil and groundwater samples collected from beneath the USTs, hydraulic lifts, fuel lines, and dispensers; and
- Prepared a summary report documenting the well destructions, UST facility removal, waste disposal, soil and groundwater sampling, soil and groundwater sample analytical results.

Discussions of the completed scopes of work are presented following brief summaries of the site location, former facility description, and site background.

**Stantec**

**FORMER ARCO SERVICE STATION NO. 2010  
WELL DESTRUCTION AND SITE DEMOLITION REPORT**

October 13, 2008

---

**2.0 SITE LOCATION AND FACILITY DESCRIPTION**

---

The site is a former ARCO retail gasoline station that is currently a vacant lot. The site is located at the intersection of Rengstorff Avenue and Old Middlefield Way in a primarily commercial area of Mountain View, California (Figure 2). A service station building, three 12,000-gallon gasoline USTs, one 550-gallon UST, and associated product lines and dispensers were formerly present at the site. All fueling facilities were removed during the recently completed scope of work as documented below.

### **3.0 SITE BACKGROUND**

---

In March 1986, Brown and Caldwell (BC) installed six leak detection and monitoring probes (LDMPs) at the site. Monthly monitoring of vapors in the product line and USTs and LDMPs revealed hydrocarbon concentrations at concentrations consistently greater than 10,000 parts per million (ppm).

In June 1987, BC conducted a site visit and observed approximately 2 inches of free phase petroleum product (free product) in LDMPs T1 and T3.

In August 1987, and in June through August 1988, the free product, which measured from a trace to 0.50 ft in thickness, was pumped from T1 and T3. A total of approximately 2 gallons of free product was removed. During this time, free product was not observed in well BC-1 (installed in September 1987) or any of the other LDMPs.

The USTs were replaced in May 1989. Impacted soil identified at the east end of the USTs was over excavated to the first groundwater, encountered at approximately 8 feet below ground surface (ft bgs). Soil generated during the excavation was removed from site, while pea gravel was aerated on-site and placed around the new USTs. LDMPs T1 and T-3 and well BC-1 were destroyed during the excavation activities. Well BC-1 was replaced with well BC-1A in November 1989.

Between 1987 and 1994, thirteen groundwater monitoring and extraction wells were installed at the site (BC-1A [replacement for BC-1], BC-2 through BC-5, P-6, P-7, E-1, E-2, S-1 [installed for the adjacent off-site property owner], MW-1A1, and MW-1A2). In addition, two dual completion air sparge and vapor extraction wells were installed (SP-1/V-1 and SP-2/V-2). Free product thicknesses ranging from 0.01 ft to 0.10 ft were observed in well BC-2 between June 1990 and February 1991. Free product has not been observed in well BC-2 since February 1991, nor has it been observed at any time in any of the other monitoring wells (other than the LDMPs discussed above).

In July 1993, PEG performed a soil vapor extraction (SVE) test using well V-1 as the extraction well and wells BC-2, P-6, and V-2 to monitor pressure influence. PEG calculated an effective radius of influence approximately 10 ft with a maximum vacuum of 125 inches of water and maximum induced flow rate of 15 cubic ft per minute (cfm). PEG also conducted an air sparge (AS) and an AS/SVE test using well SP-1 as a helium injection point, well P-6 as the extraction well during the AS/SVE test, and wells BC-2, P-6, and SP-2 as monitoring points. PEG found that radial propagation of helium in the saturated zone could be detected 45 ft from the injection well, and that the actual radial propagation could be expected to be greater.

In October 1999, Pinnacle Environmental Solutions conducted a Soil and Water Investigation (SWI). Pinnacle recommended collecting three additional groundwater samples using a Cone Penetrometer (CPT) and Hydropunch methods to define the downgradient and westerly lateral extent of dissolved Methyl tert-Butyl Ether (MtBE) in groundwater, and to assess if the plume would reach abandoned wells in the vicinity. Pinnacle also recommended ascertaining the status of three "active" water supply wells in the vicinity of the site to help assess the potential

**FORMER ARCO SERVICE STATION NO. 2010  
WELL DESTRUCTION AND SITE DEMOLITION REPORT**October 13, 2008

---

influence of those wells on the movement of the MtBE impacted groundwater originating from the Site. The SCVWD concurred with these recommendations in their letter dated April 20, 2000.

On July 18, 2001, SECOR installed four off-site groundwater monitoring wells, P-8 through P-11. Wells P-8, P-9, and P-11 were positioned to facilitate for a transect of monitoring wells in a north-south configuration, generally perpendicular to the groundwater flow direction. The purpose of the transect was to further assess concentrations of MtBE detected in groundwater in the downgradient direction from the site, and to better evaluate plume stability over time.

From November 26 to December 1, 2001 SECOR advanced soil boring B-4, collecting depth-discrete groundwater samples at depths of approximately 60 and 175 ft bgs, and saturated soil samples at depths of 112, 161, and 175 ft bgs, to delineate the vertical extent of the dissolved hydrocarbon plume. The sampling results indicated that the abandoned irrigation wells reported to exist in the immediate vicinity of the site did not appear to be contributing to the vertical migration of the MtBE plume to lower aquifers. Well E-7 was installed in December 2001.

In January 2002, a combination groundwater extraction and dual phase extraction pilot test was performed. During the test, approximately 20.9 pounds of petroleum hydrocarbons were removed from soil and groundwater.

On March 1, 2002, SECOR submitted a *Remedial Alternative Feasibility Study and Interim Remedial Action Plan* recommending the combined use of in-situ Submerged Oxygen Curtain (ISOC) diffusers along with on- and off-site well sampling to monitor for natural attenuation.

In October 2002, the product dispensers and related double-walled fiberglass piping were removed by a contractor under the supervision of URS. Five soil samples were collected from the product line trenches at depths of approximately 5 feet bgs and eight soil samples were collected from the dispenser excavation at depths of approximately 2 feet bgs. Three of the thirteen samples (S-D3-2, S-D6-2 and S-D8-2) reported total petroleum hydrocarbon as gasoline range organics (GRO) in concentrations ranging from 1.8 to 130 parts per million (ppm). MTBE was also detected in these samples at concentrations up to 900 ppm. All other sampling locations reported as non-detect. No additional over-excavation was performed and new dispenser and associated piping were replaced in approximately the same location.

On June 17, 2003, SLR International Inc. (SLR) supervised the installation of well P-13 in the northern portion of the site. On June 18, 2003 SLR personnel began to install an ISOC system along the northern portion of the site. Oxygen delivery tubing was installed from a remediation compound to wells SP-2, P-6, E-7, BC-2 and P-13 and SLR began oxygen delivery on June 19, 2003. An *ISOC System Pilot Test Evaluation* was submitted by SLR to the SCVWD on November 18, 2004, which concluded that "the ISOC system appears to have effected increases in dissolved oxygen, followed by increases in heterotrophic plate count in wells throughout the plume. The increases in aerobic microbial activity increased the rate of natural attenuation of degradation of the dissolved benzene and MTBE plume." (SLR, November 18, 2004) The ISOC System remained in operation until the fourth quarter of 2005.

## 4.0 COMPLETED SCOPE OF WORK

---

The following information is presented to document well destruction and facility demolition activities conducted at the site. Field data summarized in this report is also presented in SAIC's *Well Destruction and Site Demolition Data Package* (Attachment A). Discussions of specific scopes of work completed at the site are presented below.

### 4.1 HEALTH AND SAFETY

Prior to conducting work at the site, a site-specific *Health and Safety Plan* (HASP) was prepared as required by the Occupational Health and Safety Administration (OSHA) Standard "Hazardous Waste Operations and Emergency Response" guidelines (29 CFR 1910.120). The document was reviewed and signed by all onsite consulting personnel and any subcontractors under their control performing work at the site.

### 4.2 PERMITTING AND PRECONSTRUCTION SITE MEETING

Musco Excavators, Inc. obtained permits to remove the three 12,000-gallon capacity fiberglass gasoline USTs, one 550-gallon waste oil UST, two hydraulic lifts, and associated piping from the CMVFD. SAIC obtained permits from the SCVWD for destruction of the monitoring and observation wells. Copies of permits obtained for the work are presented in Attachment A. On August 5, 2008, SAIC performed a site visit to observe the condition of the existing monitoring and observation wells and collect well construction information. Field observations by SAIC are included in Attachment A and summarized below.

During the site visit, SAIC documented the condition of monitoring wells E-1, E-3, E-4, E-5, and E-6 located within the footprint of the gasoline UST excavation. The condition of Leak Detection Monitoring Probe (LDMP)-W6 located within the footprint of the waste oil excavation was observed and documented. Conditions of LDMPs P4, P5, and B7 located in native soil were also documented prior to destruction. Monitoring wells E-3, E-4, E-5, and E-6 were observed to be constructed of 5-inch diameter polyvinyl chloride (PVC) casings located at the corners of the gasoline USTs. LDMP-W6 was observed to be located near the waste oil UST and constructed of 0.75-inch diameter PVC casing. All of the casings of E-3, E-4, E5, and E-6 were observed to be slotted up to near surface grade. Based upon field observations, it appears that these were UST cavity monitoring wells with the well screens (casings) placed within the backfill of the UST cavities at the time the USTs were last replaced.

An unknown well was observed to be located east of the gasoline USTs, and was considered to be in danger of being damaged during tank removal. SAIC contacted Mr. Mamerto Jorvina of the County of Santa Clara Department of Environmental Health (CSCDEH) for approval to destroy the unknown well. Mr. Jorvina approved destruction of the unknown well. The former well and LDMP locations are illustrated on Figures 2 and 3.

### **4.3 FORMER REMEDIATION SYSTEM COMPONENT REMOVAL**

Prior to starting the site demolition activities, personnel from SAIC removed the remaining aboveground equipment associated with the former ISOC ® remediation system on August 12, 2008. Field notes of the system removal activities (Attachment A) indicate that an aboveground remediation manifold and 220 cubic foot oxygen cylinder were removed from the site by SAIC.

### **4.4 WELL DESTRUCTION**

Between August 26 and September 9, 2008, SAIC oversaw RSI Drilling during the destruction of six monitoring/observation wells and four LDMPs at the site. The monitoring/observation wells (unknown well, E-1, E-3, E-4, E-5, and E-6) and LDMPs (LDMP-B7, LDMP-W6, LDMP-P4, and LDMP-P5) which were destroyed by overdrilling, were cleared for underground utilities by air-knifing and/or hand-augerger the borehole around the wells to five feet below ground surface (bgs).

#### **4.4.1 Well Destruction by Over-drilling**

On August 26, 2008, the unknown well was over-drilled using a drill rig equipped with 10-inch diameter hollow stem augers. Field notes included in Attachment A indicate the 4-inch diameter well casing was removed from the borehole relatively intact. The borehole was then backfilled with neat cement grout and completed to grade with concrete.

#### **4.4.2 Well Abandonment by Grouting**

Monitoring well E-1 and LDMP-B7 were abandoned in accordance with Santa Clara Valley Water District guidance on August 29, 2008. SAIC observed RSI pour neat cement grout into the well casings and allowed the grout to seal the wells under the force of gravity. Field notes included in Attachment A indicate that because well E-1 was partially screened across the pea gravel backfill of the gasoline UST complex, only approximately 30 gallons of grout were poured into well E-1 in order to avoid filling the pea gravel filled UST complex with neat cement grout.

#### **4.4.3 Well Destruction by Excavation**

Tank cavity observation wells E-3, E-4, E-5, and E-6 and LDMPs P4, P5, and W6 were excavated and removed on September 9, 2008. SAIC personnel were present to observe removal of the well casings and probes using an excavator bucket. Prior to removal of all the underground fueling structures, wells E-3, E-4, E-5, and E-6 were excavated from the backfill of the gasoline USTs. Due to its proximity to the gasoline UST excavation, well E-1 (previously grouted in place) was also removed by excavation. LDMP-W6 was removed from the waste oil UST excavation and LDMPs P4 and P5 were excavated from native soil near the product lines and dispensers. The SAIC field data package (Attachment A) indicates that prior to being disposed of; the wells were labeled and laid out for a SCVWD Inspector to examine.

#### **4.4.4 Well Destruction Completion Notices**

All monitoring/observation wells (unknown well, E-1, E-3, E-4, E-5, and E-6) and LDMPs (LDMP-B7, LDMP-W6, LDMP-P4, and LDMP-P5) were properly destroyed under SCVWD inspection. SCVWD Well Destruction Completion Notices are included in Attachment A. Well completion details are summarized in Table 5.

#### **4.4.5 Well Destruction Waste Profiling and Disposal**

Drill cuttings and excess grout was stored onsite in DOT approved 55-gallon drums pending profiling and transportation for offsite disposal. SAIC personnel collected one four point composite sample from the drums for laboratory analysis. Soil samples were retained in stainless steel sleeves, labeled, placed on ice, and transported to Calscience Environmental Laboratories, Inc. (CEL) of Garden Grove, California under appropriate chain-of-custody documentation. The soil samples were analyzed for gasoline range organics (GRO) by Environmental Protection Agency (EPA) Method 8015B (Modified), BTEX, MTBE by EPA Method 8260B, and lead by EPA Method 6010B. The drums are scheduled to be removed by Belshire Environmental Services, Inc. (Belshire) for proper offsite disposal. The non-hazardous waste manifest will be included in the next quarterly groundwater monitoring report.

#### **4.5 DISPENSER, FUEL LINE, AND UST REMOVAL**

Prior to UST removal, Belshire thoroughly rinsed and evacuated the USTs to remove any petroleum residue remaining in the tanks. Approximately 444 gallons of residual fuel and rinsate water generated during the tank cleaning operation were transported to DeMenno Kerdoon in Compton, California for recycling. The Uniform Hazardous Waste Manifests documenting proper transport and disposal of the rinsate water are presented in Attachment A.

On September 11, 2008, Musco Excavators, Inc. (Musco) removed three 12,000-gallon double walled fiberglass USTs used to store gasoline. The USTs were present in a common excavation south of the station building. One 550-gallon double walled fiberglass UST used to store waste oil was removed from a separate tank pit located west of the station building. In preparation for UST removal, Musco rendered the three 12,000-gallon USTs and one 550-gallon UST inert with dry ice. After confirmation by Mr. Chris Steck of the City of Mountain View Fire Department (CMVFD) and Mr. Henry Sorensen, Certified Marine Chemist, that the USTs were properly inerted, Musco removed the USTs from the excavations for inspection. All four USTs appeared to be in good condition, with no apparent holes or cracks visually observed. The USTs were transported Potrero Hills Landfill in Suisun City, California, for disposal. Product piping and miscellaneous debris was removed from the site by Belshire and transported to Clean Harbors Inc. in Bultonwillow, California, for disposal. Field notes detailing the work performed and copies of waste disposal manifests are included in Attachment A.

##### **4.5.1 Gasoline UST Soil Sampling**

On September 11, 2008, confirmation soil samples were collected by SAIC under the direction of Mr. Chris Steck of the CMVFD. An excavator was used to retrieve native soil for sample collection from multiple locations along the sidewalls of the UST excavation at the groundwater interface of approximately 8 feet bgs. SAIC personnel collected soil samples from the excavator bucket using a stainless steel spatula. Two 4-ounce glass jars of soil were collected at each soil sample location. The spatula was washed in a phosphate-free laboratory detergent, such as Liquinox or the equivalent. Soil samples collected from the UST pit were screened for hydrocarbon vapors using a portable photo-ionization detector (PID).

Six UST pit sidewall soil samples (T-1W, T-1E, T-2W, T-2E, T-3W, and T-3E) were collected in native soil at a depth of approximately 8 feet bgs. The maximum PID reading of 173 parts per million (ppm) was recorded for sample T-3E and the other five soil samples ranged from 0.0 to 76.8 ppm. Soil sample locations are featured on Figure 3.

October 13, 2008

---

#### **4.5.2 Gasoline UST Soil Sample Analyses**

Soil samples collected for chemical analysis were retained in 4-ounce glass jars, labeled, sealed with custody labels, placed on ice, and transported to CEL of Garden Grove, California under appropriate chain-of-custody documentation. The soil samples were analyzed for GRO by EPA Method 8015B (Modified); BTEX, MTBE, di-isopropyl ether (DIPE), ethyl-t-butyl ether (ETBE), tert-amyl methyl ether (TAME), tert-butanol (TBA), 1,2-dichloroethane (1,2-DCA), and 1,2-dibromoethane (EDB) by EPA Method 8260B, and lead by EPA Method 6010B.

#### **4.5.3 Waste Oil UST Soil Sampling**

On September 11, 2008, confirmation soil sample T-4E was collected by SAIC under the direction of Mr. Chris Steck of the CMVFD. The soil sample was collected at 8 feet bgs using a backhoe to retrieve native soil from the east sidewall of the waste oil UST excavation. The soil sample was collected using a stainless steel spatula and two 4-ounce glass jars as discussed in Section 4.5.1. The PID reading for sample T-4E was 45.9 ppm. The soil sample location is depicted in Figure 3.

#### **4.5.4 Waste Oil UST Soil Sample Analyses**

Soil sample T-4E collected for chemical analysis was retained in 4-ounce glass jars, labeled, placed on ice, and transported to CEL of Garden Grove, California under appropriate chain-of-custody documentation. Soil sample T-4E was analyzed for GRO by EPA Method 8015B (Modified); BTEX, MTBE, DIPE, ETBE, TAME, TBA, 1,2-DCA, and EDB by EPA Method 8260B. The sample was also analyzed for lead by EPA Method 6010B.

#### **4.5.5 Fuel Line and Dispenser Soil Sampling**

On September 11, 2008, fuel line and dispenser confirmation soil samples were collected by SAIC under the direction of Mr. Chris Steck of the CMVFD. Fuel line soil samples P-1, P-2, and P-3 were collected at depths ranging from approximately 4 to 6 feet bgs. Dispenser soil samples D-1, D-2, D-3, and D-4 were collected at depths ranging from approximately 4 to 5 feet bgs. Soil samples were collected using a stainless steel spatula and 4-ounce glass jars and methods discussed in Section 4.5.1. The maximum PID reading of 320 ppm was recorded for sample D-2 and the other six soil samples ranged from 0.0 to 148 ppm. Soil sample locations are featured on Figure 3.

#### **4.5.6 Fuel Line and Dispenser Soil Sample Analyses**

Soil samples collected for chemical analysis were retained in 4-ounce glass jars, labeled, placed on ice, and transported to CEL of Garden Grove, California under appropriate chain-of-custody documentation. Soil sample T-4E was analyzed for GRO by EPA Method 8015B (Modified); BTEX, MTBE, DIPE, ETBE, TAME, TBA, 1,2-DCA, and EDB by EPA Method 8260B. The sample was also analyzed for lead by EPA Method 6010B.

#### **4.5.7 Groundwater Sampling**

Due to the shallow groundwater conditions encountered in the gasoline and waste oil UST excavations, groundwater samples were collected in the center of both excavations using a disposable bailer. Groundwater samples EX-1 and EX-2 were collected at approximately 8 feet bgs by SAIC personnel. All samples were placed in US EPA approved containers, labeled,

**Stantec****FORMER ARCO SERVICE STATION NO. 2010  
WELL DESTRUCTION AND SITE DEMOLITION REPORT**October 13, 2008

---

placed on ice, and transported to CEL of Garden Grove, California under appropriate chain-of-custody documentation.

**4.5.8 Groundwater Sample Analyses**

Groundwater samples EX-1 and EX-2 were analyzed for GRO by EPA Method 8015B (Modified); BTEX, MTBE, DIPE, ETBE, TAME, TBA, 1,2-DCA, and EDB by EPA Method 8260B. The samples were also analyzed for lead by EPA Method 6010B.

Groundwater sample EX-2 was collected from the waste oil UST excavation and, in addition to the GRO, BTEX, and fuel oxygenate analyses listed above, was also analyzed for diesel range organics (DRO) by EPA Method 8015B (Modified), oil and grease by EPA Method 1664A, CAM 5 metals by EPA Method 6010B, polychlorinated biphenyls (PCBs) by EPA Method 8082, volatile organic compounds (VOCs) by EPA Method 8260B, and semi-volatile organic compounds (SVOCs) by EPA Method 8270C.

**4.6 HYDRAULIC LIFT SOIL SAMPLING AND ANALYSES**

Soil samples H-1N and H-2S were collected in native soil under the hydraulic lifts at 8 feet bgs using an excavator and sampling methods previously described in Section 4.5.1. Soil samples H-1N and H-2S had PID readings of 5.0 ppm and 2.0 ppm, respectively.

Soil samples H-1N and H-2S were analyzed for GRO and DRO by EPA Method 8015B (Modified); BTEX, MTBE, DIPE, ETBE, TAME, TBA, 1,2-DCA, and EDB by EPA Method 8260B, oil and grease by EPA Method 1664A, CAM 5 metals by EPA Method 6010B, PCBs by EPA Method 8082, VOCs by EPA Method 8260B, and SVOCs by EPA Method 8270C.

**4.7 UST BACKFILL ACTIVITIES**

The SAIC *Well Destruction and Site Demolition Data Package* presented as Attachment A indicates that the original fill and pea gravel was reused to backfill the UST excavations, following approval from Mr. Steck. Soil compaction testing was performed by Michelucci and Associates, Inc. (Michelucci) of Burlingame, California. A copy of the Michelucci *Engineering Observation and Testing of Backfill, Underground Tank Removal* report is presented as Attachment C. The Michelucci report indicates that stabilization fabric was placed on top of the pea gravel in the UST excavations and "quarry fines" from Stevens Creek Quarry was used as backfill on top of the stabilization fabric. Compaction test results indicate that the former gasoline and waste oil tank excavations were compacted to at least 90%.

**4.8 SOIL SAMPLE ANALYTICAL RESULTS**

The certified analytical laboratory results for soil samples collected at the site on September 11, 2008, are summarized in Tables 1 and 2. Copies of the certified analytical laboratory reports and chain-of-custody documentation are presented in Attachment D.

October 13, 2008

---

#### **4.8.1 Gasoline UST Soil Sample Analytical Results**

GRO was reported in four of six soil samples collected from the gasoline UST excavation at concentrations ranging from 19 mg/kg (T-3W) to 1,700 mg/kg (T-1E). Ethylbenzene and xylenes were only reported in one gasoline UST soil sample (T-1E) at concentrations of 1.7 and 0.93 mg/kg, respectively. Lead was reported in all six soil samples at concentrations ranging from 0.700 mg/kg to 5.90 mg/kg. All other constituents analyzed were reported as not detected at or above the laboratory reporting limits.

#### **4.8.2 Waste Oil UST Soil Sample Analytical Results**

GRO was reported in sample T-4E at a concentration of 220 mg/kg. Lead was reported at a concentration of 2.65 mg/kg. All other constituents analyzed were reported as not detected at or above the laboratory reporting limits.

#### **4.8.3 Fuel Line and Dispenser Soil Sample Analytical Results**

GRO was detected in three of seven soil samples at concentrations ranging from 260 mg/kg (D-2) to 910 mg/kg (P-1). Ethylbenzene and xylenes were reported in three of seven fuel line and dispenser soil samples at maximum concentrations of 0.64 and 0.67 mg/kg (D-1), respectively. The fuel oxygenate MTBE with a concentration of 0.0014 mg/kg was only reported in sample P-1. The fuel oxygenate TBA was reported in sample P-1 at a concentration of 0.012 mg/kg and in sample D-2 at a concentration of 0.031 mg/kg. Lead was reported in all seven soil samples at concentrations ranging from 0.933 mg/kg to 5.52 mg/kg. All other constituents analyzed were reported as not detected at or above the laboratory reporting limits.

#### **4.8.4 Hydraulic Lift Soil Sample Analytical Results**

Oil and grease were reported in samples H-1N and H-2S at concentrations of 34 mg/kg and 43 mg/kg, respectively. GRO, DRO, BTEX, fuel oxygenates, PCBs, VOCs and SVOCs were not detected in the samples at concentrations above the laboratory reporting limits. CAM 5 metals were reported above the laboratory method reporting limits in both hydraulic lift soil samples collected. A discussion of analytical results is presented below in Section 5.0.

### **4.9 GROUNDWATER SAMPLE ANALYTICAL RESULTS**

The analytical results for groundwater samples EX-1 and EX-2 collected at the site on September 11, 2008, are summarized in Tables 3 and 4. Copies of the certified analytical laboratory reports and chain-of-custody documentation are presented in Attachment D.

#### **4.9.1 Gasoline UST Groundwater Sample Analytical Results**

GRO was reported in groundwater sample EX-1 collected from the gasoline UST excavation at a concentration of 760 micrograms per liter ( $\mu\text{g/L}$ ). Benzene was reported at a concentration of 19  $\mu\text{g/L}$ . Toluene was reported at a concentration of 37  $\mu\text{g/L}$ . Ethylbenzene was reported at a concentration of 1.1  $\mu\text{g/L}$  and xylenes were reported at a concentration of 130  $\mu\text{g/L}$ . Lead was reported at a concentration of 19.7  $\mu\text{g/L}$ . All other constituents analyzed were reported as not detected at or above the laboratory reporting limits.

#### **4.9.2 Waste Oil UST Groundwater Sample Analytical Results**

GRO was reported in groundwater sample EX-2 collected from the gasoline UST excavation at a concentration of 240,000 µg/L. DRO was reported in sample EX-2 at a concentration of 2,200 µg/L. The certified analytical laboratory report indicates that the quantitation of unknown hydrocarbon(s) in sample EX-2 is based on diesel. Ethylbenzene was reported at a concentration of 580 µg/L and xylenes were reported at a concentration of 1,800 µg/L. Lead, chromium, nickel and zinc were reported at concentrations above the laboratory method reporting limits. The following VOCs and SVOCs were reported in sample EX-2:

- Naphthalene – 260 µg/L (by EPA 8270C) – 340 µg/L (by EPA 8260B);
- 1-Methylnaphthalene – 200 µg/L;
- 2-Methylnaphthalene – 110 µg/L;
- n-Butylbenzene – 160 µg/L;
- Isopropylbenzene – 150 µg/L;
- n-Propylbenzene – 550 µg/L;
- 1,2,4-Trimethylbenzene – 1,100 µg/L; and
- 1,3,5-Trimethylbenzene – 340 µg/L.

All other constituents analyzed were reported as not detected at or above the laboratory reporting limits. A discussion of analytical results is presented below in Section 5.0.

## **5.0 DISCUSSION OF ANALYTICAL RESULTS**

---

Low concentrations of lead were reported in all soil samples collected. Concentrations of lead, cadmium, chromium, nickel, and zinc were also reported in the hydraulic lift soil samples and waste oil UST groundwater sample. The concentrations of metals are within the range of background soil concentrations presented in the Kearney Foundation March 1996, *Background Concentrations of Trace and Major Elements in California Soils* and, therefore, do not appear to be associated with the former automotive service station and retail fueling operations at the site.

The concentration of GRO reported in grab groundwater sample EX-2 appears higher than recent and historical groundwater concentrations reported in groundwater samples collected from groundwater monitoring wells at the site. The higher GRO concentration in the grab groundwater sample collected may be expected considering the soil disturbance activities conducted during the waste oil UST excavation and removal. The action of disturbing residual petroleum hydrocarbons present within the waste oil UST excavation and collecting a grab sample from the groundwater surface would likely result in higher hydrocarbon concentrations. Hydrocarbon concentrations reported in groundwater samples from the existing monitoring wells appear more indicative of actual groundwater quality at the site. Historical groundwater monitoring and analytical data are summarized in Table 6. Groundwater flow direction and gradient data are summarized in Table 7.

## **6.0 SUMMARY OF FINDINGS**

---

Prior to UST and facility removal operations, six monitoring/observation wells and four LDMPs were properly destroyed under SCWWD inspection.

Musco successfully removed and disposed of three 12,000-gallon double walled fiberglass USTs, one 550-gallon single walled fiberglass waste oil UST, two hydraulic lifts, four fuel dispensers, and associated product piping from the site. The UST removal and collection of compliance soil and groundwater samples was completed under the direction of Mr. Chris Steck of the CMVFD.

Soil compaction test results indicate that the former gasoline and waste oil UST excavations were backfilled and compacted to at least 90%.

Laboratory analysis of soil and groundwater samples collected during facility removal operations indicated the presence of impacts to the subsurface. Since the site is the subject of ongoing environmental monitoring and remediation work, no further investigation is recommended at this time.

## 7.0 LIMITATIONS AND CERTIFICATION

---

This report was prepared in accordance with the scope of work outlined in Stantec's contract and with generally accepted professional engineering and environmental consulting practices existing at the time this report was prepared and applicable to the location of the site. It was prepared for the exclusive use of Atlantic Richfield Company, a BP affiliated company, for the express purpose stated above. Any re-use of this report for a different purpose or by others not identified above shall be at the user's sole risk without liability to Stantec. To the extent that this report is based on information provided to Stantec by third parties, Stantec may have made efforts to verify this third party information, but Stantec cannot guarantee the completeness or accuracy of this information. The opinions expressed and data collected are based on the conditions of the site existing at the time of the field investigation. No other warranties, expressed or implied are made by Stantec.

**SAIC Well Destruction and Site  
Demolition Data Package**

October 3, 2008

AN: 06384.20080930.002

Mr. Dan Schreiner  
Stantec Consulting Corporation  
3017 Kilgore Road, Suite 100  
Rancho Cordova, California 95670

**Re: Well Destruction and Site Demolition Data Package**  
ARCO Service Station No. 2010  
2110 Old Middlefield Way  
Mountain View, California

Field Work Performed: August and September 2008

### GENERAL INFORMATION

Data Submittal Prepared/Reviewed by: Regina Bussard  
Phone Number: (408) 364-4720  
On-Site Supplier Representative: SAIC

### SCOPE OF WORK PERFORMED

- 1) Removed the remaining aboveground equipment associated with the former iSOC® remediation system on August 12, 2008.
- 2) Drilled-out an observation well (unknown designation) with 10-inch diameter hollow stem augers on August 26, 2008.
- 3) Destroyed one monitoring well (B-1) and one leak detection monitoring probe (LDMP)-B7 by grouting methods per Santa Clara Valley Water District guidance on August 29, 2008.
- 4) On September 9, 2008, during preparation for the removal all the underground fueling structures, wells B-3, B-4, B-5, and B-6 were excavated from the backfill of the gasoline underground storage tank (UST) complex, LDMP-W6 was excavated from the backfill of the waste oil tank, and LDMP-P4 and LDMP-P5 were excavated from native soil. Due to its proximity to the excavation, Well B-1 was also pulled from the UST backfill. Before being disposed of, the wells were labeled and laid out for a Santa Clara Valley Water District inspector to examine.

5) On September 11, 2008, SAIC collected soil and groundwater samples during the removal of three 12,000-gallon gasoline USTs, one 550-gallon waste oil UST, all associated product piping, four fuel dispensers, and two hydraulic hoists by Musco Excavators, Inc. The compliance samples were collected as directed by Hazardous Materials Specialist Chris Steck, R.E.A. with the City of Mountain View Fire Department. Soil samples were collected from the sidewalls of the gasoline and waste oil UST excavations at the groundwater interface approximately 8 feet below ground surface (bgs); they were also collected from beneath the product piping, fuel dispensers, and hydraulic hoists. Groundwater samples were collected from the center of the gasoline and waste oil UST excavations. All samples were analyzed in accordance with the *Recommended Minimum Verification Analyses for Underground Storage Tank Leaks* prepared by the San Francisco Bay Regional Water Quality Control Board.

- a. The gasoline UST excavation was approximately 46.5 feet long, 35 feet wide and 10 feet deep. The waste oil tank excavation was approximately 14 feet long, 11.5 feet wide and 8 feet deep. The original fill and pea gravel was reused to backfill the excavations. Belshire Environmental Services, Inc. coordinated transport and disposal of all the underground fueling structures. Prior to removal, the USTs were emptied and triple rinsed. The rinsate water was collected by a vacuum truck and disposed of at Siemens Water Technologies Corporation in Vernon, California. The USTs were transported to Potrero Hills Landfill in Suisun City, California, and the piping and miscellaneous debris was transported to Clean Harbors Inc. in Buttonwillow, California; all structures were subsequently destroyed.

This submittal presents data collected during well destruction and site demolition activities at ARCO Service Station No. 2010. The attachments include field and sampling procedures, field notes, well destruction and UST removal permits, utility clearance documentation, well destruction completion notices, photographs, chain-of-custody documentation and waste disposal documentation. The information is being provided to the Atlantic Richfield Company Scoping Supplier for use in preparing a report for regulatory submittal. This package is limited to the presentation of collected data and does not include data interpretation, conclusions or recommendations.

Please contact me at (408) 364-4720, should you have any questions or require additional information.

Sincerely,

SCIENCE APPLICATIONS INTERNATIONAL CORPORATION

*Regina Bussard*

## EXPLANATION

### GASOLINE TANK EXCAVATION

Three 12,000 gallon double-walled, fiberglass tanks were removed (T1-T3).

- EX-1 Groundwater Sample Location - collected at an approximate depth of 8 ft. belowground surface (bgs)
  - T1-W Soil Sample Locations - all collected from the sides of the excavation at an approximate depth of 8 ft. to 8.5 ft bgs
- + Monitoring Well BC-1A

**Re: Product Line Removal and Upgrade Soil Sampling Report  
ARCO Service Station No. 2010  
2110 Middlefield Road  
Mountain View, California  
URS Project No. 38485978**

Dear Mr. Danziger:

URS Corporation Americas (URS) has prepared this report on behalf of BP West Coast Products, LLC to document soil sampling conducted during the removal and replacement of product lines and dispensers only, at the site referenced above.

### **Site Background**

The site is located at 2110 Middlefield Road, Mountain View, California (Figures 1 and 2). Currently, the site is operated as an ARCO gasoline service station. The site is bounded by Rengstorff Avenue to the east, Old Middlefield Road to the south, and commercial buildings to the north and west. The majority of the property is concrete and asphalt paved.

Current site structures include three double-walled fiberglass gasoline underground storage tanks (USTs), two pump islands with eight dispensers, and a convenience store. Currently there is no active remediation at this site, however groundwater monitoring is conducted on a quarterly basis.

### **Soil Sampling – Dispensers and Line Sampling**

On October 21, 2002, prior to collecting soil samples, all sampling locations were reviewed, marked in the field, and approved by Mr. Chris Steck, with the City of Mountain View Fire Department. Prior to sampling, all dispensers and related double walled fiberglass piping was removed by the contractor, AESE Covey. URS personnel inspected the fuel pipelines for any observable cracks or deterioration. In addition, sampling locations were inspected for any soil staining and hydrocarbon odor to help determine if soil over-excavation was performed. No observable cracks, deterioration, soil staining or odors were reported and therefore no over-excavation was necessary. URS personnel collected soil samples from the contractor operated backhoe bucket, in addition to using a hand auger after the backhoe bucket had excavated to the appropriate depth. Samples were collected as follows:

Five soil samples (designated S-L1-5 through S-L5-5) were collected at an approximate depth of 5 feet below ground surface (bgs) in the product line trenches (Figure2).

URS Corporation  
500 12th Street, Suite 200  
Oakland, CA 94607 4014  
Tel: 510.893.3600  
Fax: 510.874.3268

Eight soil samples (designated S-D1-2 through S-D8-2) were collected at a depth of 2 feet bgs at the former dispenser stands (Figure 2).

Soil samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg) by EPA Method 8015B; benzene, toluene, ethylbenzene, and total xylenes (BTEX) and methyl tert-butyl ether (MTBE) by EPA Method 8021B. Samples were submitted to a California State Certified laboratory, Sequoia Analytical Laboratory in Morgan Hill, California for analysis.

Three of the thirteen samples analyzed resulted in TPHg concentrations ranging from 1.8 to 130 parts per million (ppm) at dispenser locations S-D3-2, S-D6-2 and S-D8-2. In addition BTEX and MTBE concentrations were also reported at these locations, with the highest MTBE concentration at S-D3-2 (900 ppm), and trace MTBE concentrations at S-L2-5. All other sampling locations reported as non-detect (Table 1). Based on these soil sample analytical results and per the approval of Mr. Steck, no soil over-excavation was performed.

### **Stockpile Sampling and Disposal**

The soil excavated during the removal and replacement of the product lines and dispensers was stockpiled separately at the site pending disposal. Analytical results from the product line trenches were used to profile the stockpiled soil. On November 5, 2002, Dillard Environmental removed approximately 130 tons of soil, and transported it to Republic Services, Vasco Road Landfill a Class II landfill located in Livermore, California.

Field and laboratory procedures are presented as Attachment A. Laboratory analytical reports and chain-of-custody documentation are presented as Attachment B. Copies of the Waste Manifests are presented as Attachment C.

### **Conclusions**

Based on the analytical data collected during the product line and dispenser island upgrades URS concludes the following:

- No additional over-excavation was performed at this site since no obviously stained or strong hydrocarbon odors were encountered in the field while sampling, and based on subsequent soil sample analytical results.
- All pre-existing double-walled fiberglass product lines and fuel dispensers were removed and replaced in approximately the same locations, backfilled with pea gravel, and paved with concrete.
- An Unauthorized Release Report was not submitted because the site is active and already has a known release. Groundwater at the site is currently monitored on a quarterly basis and future remediation efforts are scheduled.

Mr. Kurt Danziger  
December 11, 2002  
Page 3 of 11

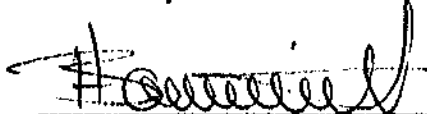

This report is based on data, site conditions, and other information that are generally applicable as of the date of the report, and the conclusions and recommendations herein are therefore applicable only to that time frame.

Background information, including but not limited to previous field measurements, analytical results, site plans, and other data has been furnished to URS by BP West Coast Products LLC, its previous consultants, and/or third parties that URS has used in preparing this report. URS has relied on this information as furnished. URS is not responsible for nor has it confirmed the accuracy of this information.

Should you have any questions or comments regarding this report, please contact Keith Woodburne with URS at (510) 893-3600.

Sincerely,

URS Corporation Americas

Henry Barrientos  
Project Engineer

Keith Woodburne  
Project Manager

TPH	* Total purgeable petroleum hydrocarbons using EPA Method 8015, modified							
BTEX	* Benzene, toluene, ethylbenzene, total xylenes using EPA Method 8021B							
MTBE	* Methyl Tertiary Butyl Ether							
ppb	* Parts per billion							
ppm	* Parts per million							
ND	* Less than stated laboratory detection limit							

**Attachment A**  
**Field and Laboratory Procedures**

**SOIL SAMPLING**

Soil samples were collected by advancing 2-inch-diameter brass sample liners into undisturbed soil, or soil removed from an excavation by a backhoe bucket. Soil samples for chemical analysis were retained in the brass liners, labeled, and capped with Teflon sheets and plastic end caps. The samples were then placed on ice, and transported to the laboratory accompanied by the appropriate chain-of-custody documentation.

**LABORATORY ANALYSIS OF SOIL SAMPLES**

Soil samples were analyzed for total petroleum hydrocarbons as gasoline, BTEX and MTBE, by EPA Methods 8015B and 8021B, respectively.

RE: ARCO #2010, Mountain View, Ca  
Sequoia Report: MLJ0599 RECREATE

Enclosed are the results of analyses for samples received by the laboratory on 10/22/02 11:00. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tim Costello For Latonya Pell  
Project Manager

#### Notes and Definitions

- A-01 The closing calibration was outside acceptance limit by -17%. This should be considered in evaluating the results.
- HC-12 Hydrocarbon pattern is present in the requested fuel quantitation range but does not resemble the pattern of the requested fuel.
- QM-07 The spike recovery was outside control limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
- QR-02 The RPD result exceeded the control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.
- S-01 The surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interferences.
- S-02 The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

**WASTE APPROVAL FORM/NON-HAZARDOUS WASTE MANIFEST**

**WASTE STREAM INFORMATION**

Date	11/1/2002		
Generator	ARCO #2010		
Generator Location	2110 Old Middlefield	Mountain View	CA
SWIC Number	1001863		
Bill To	Dillard Environmental		
Approval Date	11/1/2002		
Expiration Date	11/1/2003		
Waste Description	Soil / ADC EXCLUDING soils from S-DH-21		
Management	ADC Area 2		

The above is a representation of the Vasco Road Landfill. It must be understood that management of the waste for disposal must be in accordance with the facility's permit and applicable federal, state, and local regulations. The approval is based upon a review of the information provided by the generator and is contingent upon the receipt at the disposal facility of a waste material essentially equivalent in chemical composition and physical properties to that defined above.

A NUMBER OF ONE SHOULD ACCOMPANY EACH LOAD. ONE COPY WILL BE RETAINED BY THE VASCO ROAD LANDFILL.

**WASTE STREAM INFORMATION**

Date	11/1/2002		
Generator	ARCO #2010		
Generator Location	2110 Old Middlefield	Mountain View	CA
SWIC Number	1001863		
Bill To	Dillard Environmental		
Approval Date	11/1/2002		
Expiration Date	11/1/2003		
Waste Description	Soil / ADC EXCLUDING soils from S-08-21		
Management	ADC Area 2		

The above is a recommendation of the Vasco Road Landfill. It must be understood that management of the waste for disposal must be in accordance with the facility's permit and applicable federal, state, and local regulations. The approval is based upon a review of the information provided by the generator and is contingent upon the receipt at the disposal facility of a waste material essentially equivalent in chemical composition and physical properties to that outlined above.

A MINIMUM OF ONE SIGNED AND COMPLETED COPY OF THIS FORM MUST ACCOMPANY EACH LOAD. ONE COPY WILL BE RETAINED BY THE VASCO ROAD LANDFILL.

**RE: SECONDARY CONTAINMENT TESTING - POST CONSTRUCTION**

ARCO Facility No.: 02010  
Facility Address: 2110 OLD MIDDLEFIELD WAY, MOUNTAIN VIEW, CA 94043

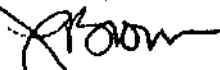

Per California Water Resources Control Board requirements, secondary containment testing has been performed at the site identified above after the completion of a UST system installation/upgrade. All secondary components have passed testing requirements. A copy of the results is attached.

<u>Test Date</u>	<u>Pages</u>
11/15/02	3

Please note that a six-month test will also be scheduled at the site. Your agency will be notified prior to the test per regulatory requirements.

ARCO is committed to the compliance of all environmental laws that govern the safe operations of its facilities. Should you have any questions or concerns regarding testing activities at this facility, please do not hesitate to call Chris Moul, BP Environmental Compliance Specialist for this facility at (503) 234-3890, or myself at (949) 450-1010.

Sincerely,

Jim Brown  
Project Manager  
Belshire Environmental Services, Inc.

## Field Inspection Report for Underground Tank Installation

Address: 2110 Old Middlefield Way Facility Name: ARCO  
 Building Job Card on Site? YES

**TANKS:**

Test at 3-5 psl for 30 minutes minimum, or verify vacuum gauge for 30 minutes minimum.

Date					
Tank Size					
Serial No.					
Construction					
Product					
<b>Outer Tank</b>					
Press./Vacuum Reading:					
Time for Test:					
Holiday Test Results:					
<b>Inner Tank</b>					
Press./Vacuum Reading:					
Time for Test:					

**PRODUCT LINES**

Test at 150% of standard operating pressure, but no less than 40 psi for 30 minutes. Soap down all joints and inspect.

Date: 10/28/02 Length of Test: > 24 hours Primary Pipe Construction: FIBERGLASS  
 Test Pressure: 75 psi Test Results: ALL PASSED

**CATHODIC PROTECTION** (for Steel and Fiberglass-Clad Steel Only) N/A

A potential drop of -850 mV (-0.85 V) must be maintained between ground and tank/piping. Isolated piping runs must be tested separately and contain accessible test leads.

*On back, record: 1) Measured potentials for all tanks, and 2) Description of each piping run and its measured potential.*

**SECONDARY CONTAINMENT OF PRODUCT LINES**

For Double-Wall Pipe or "Total Containment" Pipe: Pressurize to 5 psi for 30 minutes.  
 For Collection Sumps: Fill sump with water, mark liquid level with paint, and inspect after 4 hours.

Date: 10/30/02 Secondary Containment Type (Be Specific): FIBERGLASS  
 Test Pressure: 6 psi Pressure Maintained for: > 12 hrs  
 Sump Liquid Level Maintained for: 24 hours

**Before Backfilling:** Review basic tank layout, piping layout, locations of monitoring sumps and vents, etc. and verify that they agree with approved plans: 11/18/02 KURT DANUVER  
 (Date) (Inspector)

**MISCELLANEOUS:**

Dispenser Containment: Fill with water, mark liquid level with paint, and inspect after 4 hours.  
Liquid Level Maintained for: > 12 hrs.

Overspills: Fill with water, mark liquid level with paint, and inspect after 4 hours.  
Liquid Level Maintained for: > 12 hrs.

- 11/14/02 15-Gallon Overspills Installed
- 11/14/02 Overfill Valves Installed in Fill Tubes of All Tanks Ball Float
- 11/14/02 Emergency Shutoff Within 75' of Dispensers, Labeled, and Clearly Visible
- 11/14/02 Tank Fill Risers Labeled with Product Name
- 11/14/02 Shear (Impact) Valves Installed Under Each Product Dispenser
- 11/14/02 All Vapor Recovery Lines Connected Under Dispenser
- 11/14/02 Boots on Secondary Lines in Sumps & Under Dispensers Are Removed to Allow Drainage
- 11/14/02 Vent Lines Protected From Water Intrusion

**MONITORING SYSTEM**

Date: 11/14/02. Monitoring System for Tanks: VEEDER ROOT  
 Inspection Results: ALL PASSED 794390-407 - ANNUAL  
 Monitoring System for Piping: VEEDER ROOT  
 Inspection Results: ALL PASSED 794380-208  
 Monitoring System for Waste Oil: VEEDER ROOT - SAME AS ABOVE  
 Inspection Results: ALL PASSED  
 Factory Authorized Rep: RANDY BLANCH. Written Approval Received On 11/14/02.

**SYSTEM PRECISION TEST**

Type of Test: Vaporless MPG, INC. MODEL 300. Date Conducted: 11/15/02.  
 Test Results Reviewed and Approved on 11/18/02 by KURT DANZGER  
 (Inspector)

**INSPECTION LOG:**

Date	Start Time	End Time	Description
<u>10/28/02</u>	<u>1:30</u>	<u>1:50</u>	<u>PRIMARY PRODUCT PIPING PRESSURE TEST</u>
<u>10/29/02</u>	<u>1:30</u>	<u>1:50</u>	<u>SECONDARY PIPING CONTAINMENT PRESSURE TEST</u>

## MONITORING SYSTEM CERTIFICATION

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

### A. General Information

Facility Name: Arco 2010 Bldg. No.: 2010  
 Site address: 2110 Old Middlefield City: Mountain View Zip: 94043  
 Facility Contact: \_\_\_\_\_ Contact Phone No. (650) 968 9325  
 Make/Model of Monitoring System: TLS-350 Date of Testing/Service: 11/17/02

### B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate equipment inspected/serviced

Tank ID: Unleaded master

- In tank gauging probe. Model: 90-107
- Annular Space or vault sensor. Model: 0794390-407
- Piping sump / Trench sensor. Model: 0794380-208
- Fill sump sensor. Model: 0794380-208
- Mechanical Line Leak Detector. Model: N/A
- Electronic Line Leak Detector. Model: 179215
- Tank Overfill / High Level sensor. Model: N/A

Tank ID: unleaded slave

- In tank gauging probe. Model: 90-107
- Annular Space or vault sensor. Model: 0794390-407
- Piping sump / Trench sensor. Model: 0794380-208
- Fill sump sensor. Model: 0794380-208
- Mechanical Line Leak Detector. Model: N/A
- Electronic Line Leak Detector. Model: N/A
- Tank Overfill / High Level sensor. Model: N/A

Tank ID: Super

- In tank gauging probe. Model: 90-107
- Annular Space or vault sensor. Model: 0794390-407
- Piping sump / Trench sensor. Model: 0794380-208
- Fill sump sensor. Model: 0794380-208
- Mechanical Line Leak Detector. Model: N/A
- Electronic Line Leak Detector. Model: 179216
- Tank Overfill / High Level sensor. Model: N/A

Tank ID: split

- In tank gauging probe. Model: \_\_\_\_\_
- Annular Space or vault sensor. Model: \_\_\_\_\_
- Piping sump / Trench sensor. Model: \_\_\_\_\_
- Fill sump sensor. Model: \_\_\_\_\_
- Mechanical Line Leak Detector. Model: \_\_\_\_\_
- Electronic Line Leak Detector. Model: \_\_\_\_\_
- Tank Overfill / High Level sensor. Model: \_\_\_\_\_

Tank ID: \_\_\_\_\_

- In tank gauging probe. Model: \_\_\_\_\_

  - Dispenser Containment Floats and chains.
- Dispenser ID: \_\_\_\_\_
  - Dispenser Containment Sensor. Model: \_\_\_\_\_
  - Shear Valves.
  - Dispenser Containment Floats and chains.
- Dispenser ID: \_\_\_\_\_
  - Dispenser Containment Sensor. Model: \_\_\_\_\_
  - Shear Valves.
  - Dispenser Containment Floats and chains.
- Dispenser ID: \_\_\_\_\_
  - Dispenser Containment Sensor. Model: \_\_\_\_\_
  - Shear Valves.
  - Dispenser Containment Floats and chains.
- Dispenser ID: \_\_\_\_\_
  - Dispenser Containment Sensor. Model: \_\_\_\_\_
  - Shear Valves.
  - Dispenser Containment Floats and chains.

**C. Certification** - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturer's guidelines. Attached to this Certification is information necessary to verify that this information is correct and a plot plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have attached a copy of the report; (check all that apply):

System set-up       Alarm history report

Technician Name: Randy Brown      Signature: [Signature]

Certification No. 563395593      License No.: \_\_\_\_\_

Testing Company Name: AESIE Covey      Phone No.: (909) 623-2502

Site Address: 309 E Commercial, Pomona, CA 91767      Date of Testing: 11.14.02

D. Results of Testing/Serviceing

Complete the checklist.

- YES  NO Is the audible alarm operational?
- YES  NO Is the visual alarm operational?
- YES  NO Were all sensors visually inspected, functionally tested, and confirmed operational?
- YES  NO Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
- YES  NO  N/A If alarms are relayed to a remote monitor station, is all communications equipment operational?
- YES  NO  N/A For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut down? (check all that apply)  Sump Trench Sensor;  Dispenser Containment Sensor. Did you confirm positive shut down due to leaks and sensor failure/disconnection?  YES  NO.
- YES  NO  N/A For tank systems that utilize the monitor systems the primary tank overflow warning device, is the overflow warning alarm visible and audible at the tank fill point and operating properly? If so, at what percent of the tank capacity does the alarm trigger? 90 %
- YES  NO Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in section E, below.
- YES  NO Was liquid found inside any secondary containment systems designed as dry systems? (check all that apply)  Product;  Water. If yes, describe causes in section E, below.
- YES  NO Was monitoring system set-up reviewed to ensure proper settings? Attach set-up reports, if applicable.
- YES  NO Is all monitoring equipment operational per manufacturer's specifications?

E. Comments: waste oil sensors were installed and operational before I left the site

**F. IN-Tank Gauging / SIR Equipment:**

- Check this box if tank gauging is used only for inventory control.
- Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

*N/A*

- YES  NO Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
- YES  NO Were all tank gauging probes visually inspected for damage and residue buildup?
- YES  NO Was accuracy of system product level reading tested?
- YES  NO Was accuracy of system water level readings tested?
- YES  NO Were all probes reinstalled properly?
- YES  NO Were all items on the equipment manufacturer's maintenance checklist completed?

\* In the section H below, describe how and when these deficiencies were or will be corrected

**G. Line Leak Detection (LLD):**

- Check this box if LLDs are not installed.

Complete the following checklist:

- YES  NO  N/A For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (check all that apply) simulated leak rate:  3 gph  0.1gph  0.2gph
- YES  NO Were all LLDs confirmed operational and accurate within regulatory requirements?
- YES  NO Was the testing apparatus properly calibrated?
- YES  NO  N/A For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
- YES  NO  N/A For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
- YES  NO  N/A For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
- YES  NO  N/A For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails to test?
- YES  NO  N/A For electronic LLDs, have all accessible wiring connections been visually inspected?
- YES  NO  N/A Were all items on the equipment manufacturer's maintenance checklist completed?

\* In section H, below, describe how and when these deficiencies were or will be corrected

Re: ARCO Work on Underground Storage Tank Systems

Dear Bill and Joe:

Pursuant to our agreement, this letter provides notice that ARCO is going to perform work at the following site.

On Monday, October 14, 2002, ARCO will begin construction at the following site:

ARCO Station No. 2010  
2110 Old Middlefield @ Rengstorf  
Mountain View, California 94043  
Project: UDC/Lines/Dispensers/Sumps  
Contractor: AESE Covey  
Contact: Jim Gonzales 909-208-0662

FAX 909-673-4792

We expect that the scope of work will involve the cutting of asphalt or concrete.

Site Supervisor Luis Montoya CISEL 909-208-0912

O'MELVENY & MYERS LLP

William Carter, Esq. and Joseph Johns, Esq., October 8, 2002 - Page 2

Please give me a call if you have any questions.

Very truly yours,

James R. Asperger  
of O'MELVENY & MYERS LLP

**XERXES<sup>®</sup>**  
CORPORATION

November 14, 2002

Mr. Kurt Danzinger  
City of Mt. View Fire Department  
Hazmat Specialist  
VIA FACSIMILE TO (650) 903-6122

Dear Mr. Danzinger

This letter is to inform you that Fiberglass Unlimited has been certified by Xerxes Corporation to work on all of our FRP Products since 1992. Fiberglass Unlimited is a prestigious FRP company, whom has the utmost capabilities. Xerxes is proud to have them as our only Northern California Field Service Company.

In regards to the work that will be performed at ARCO ss#6050 Shoreline / Middle Field Rd. in the City of Mt. View, CA Xerxes warranty on these tanks will not start anew; however, it will continue for the duration as stated in the original warranty based upon the date of original purchase. In addition, there will be a one year warranty on materials and workmanship for any work done on these tanks. This warranty will be in effect as long as the tanks are (or were) installed in accordance with Xerxes' written specifications and published installation instructions. You should always consult state and local codes when installing underground storage tanks.

Please call me if you have any questions.

Sincerely,

Danny Garcia  
Field Service Manager

#### 6.0 Dispenser Mounting

- 6.1 Tighten Down Fasteners

#### 7.0 Guide Specifications

- 8.1 Short Form
- 8.2 Long Form

## 1.0 INTRODUCTION

The *Gooflex*® System requires the use of dispenser sumps or dispenser pans as a means of secondary containment for the plumbing and piping connections located beneath the dispenser. These sumps also provide surface access to piping connections and provide a clean and dry environment for future service and maintenance. Dispenser sumps and dispenser pans are installed just beneath the above ground fuel dispensing units. Dispenser sumps are non-corrosive, chemically compatible and structurally suitable for underground burial applications.

### 1.1 General Information

This product manual contains useful information about all models of dispenser sumps and pans. It is recommended that this manual be read prior to specifying and installing under dispenser containers. The installation practices shall comply with the installation instructions contained within this product manual in order for the product warranty to be valid.

### 1.2 Independent Testing

All Environ dispenser sumps and dispenser pans are listed with Underwriters Laboratories, Inc. (UL®). The dispenser sump / pan frames were tested to UL's "Standard Testing Procedure for Underground Dispenser Sumps and Tank Sumps" and are listed under file #MH117938. These tests verified the frame's ability to withstand a lateral impact from all sides and permit proper activation of a shear valve in the event of a knockover. The integrity of the sump itself was conducted in accordance with UL's "Standard Testing Procedure for Underground Dispenser Sumps and Tank Sumps" and is listed under file #MH10391. This test program tested the sump's fluid compatibility as well as its ambient and low temperature physical properties.

### 1.3 Liquid Tightness

Dispenser sumps are open at the top and are sheltered from the weather by the dispenser housing. Most dispenser sumps and dispenser pans provide a 1" vertical lip above the surface of the island to prevent any surface run-off from entering the container. All pipe and conduit entries are required to be sealed with flexible entry boots.

### 1.4 Structural Integrity

All dispenser sumps and dispenser pans have a metal framework at the top of the container which has an anchoring lip for anchoring the frame assembly directly into the concrete island. This is important because the stabilizer bars, which secure shear valves, are attached directly to this frame assembly. All polyethylene dispenser sumps and dispenser pans are rotationally molded of a tough polyethylene material which should not crack or puncture.

**1.5 Chemical Compatibility**

All dispenser sumps and dispenser pans are made of either fiberglass or polyethylene plastic material; both of which are chemically inert and have a long history of underground burial applications. Polyethylene and fiberglass have been used in storage containers designed for containment of a long list of chemical solvents, hydrocarbon and alcohol based fuels. All seals are made of specially formulated Buna-N Rubber compound which has been independently tested to insure its compatibility with a wide assortment of chemicals. These tests include measuring the material's retention of physical properties and determining the capability of the compound to withstand exposure.

**1.6 Corrosion Resistance**

All metal framework components are either powder coated, galvanized or zinc plated for excellent long term corrosion protection. The entry seal fasteners are made of stainless steel. All of these metallic components are accessible from inside the sump. The sump body is non-metallic and will never corrode.

**2.0 SPECIFYING DISPENSER CONTAINMENT**

Environ offers a wide variety of under dispenser containers to accommodate the most common types and sizes of product dispensers. The selection of the appropriate type of under dispenser container depends on the following:

**2.1 Junction Applications**

Dispenser containers used in junction applications occur only in pressure piping systems with series pipe routing (from one dispenser to the next). This application uses the tee fitting to interconnect one flexible pipe section to the next, as well as branching off vertically to the fuel dispenser.

**2.2 Terminating Applications**

Dispenser containers used in terminating applications are typically at the end of pressure piping systems with series routed piping. They are located under all dispensers of suction piping systems with direct routed piping. They are also located under all dispensers of pressure piping systems with branch routed piping. This application uses the elbow fitting attached to a riser pipe assembly to attach one flexible pipe section to the fuel dispenser.

**2.3 Dispenser Containment Models**

Five types of dispenser containers are available for use with the Geoflex® piping system. They include:

**2.3.1 Shallow Dispenser Pans**

These containment pans are used primarily for conventional rigid piping systems where entry through the bottom of the pan is performed. This containment pan requires the use of pipe entry boots, conduit entry boots and stage II entry boots. Refer to the dispenser directory within the Environ products price list to select the appropriate dispenser sump model.

**2.3.2 Deep Dispenser Pans**

These deep dispenser pans have a total depth of 14 inches requiring the riser pipe to enter the pan through the bottom only. This application allows for adequate fall back to the tank by simply adjusting the height of the riser pipe. It does, however, require the pipe fitting to be located outside the container. For this reason, only composite double wall fittings with Geoflex®-D flexible piping should be used for this application. Refer to the dispenser directory within the Environ products price list to select the appropriate dispenser sump model.

**2.3.3 Shallow Dispenser Sumps**

These lower profile dispenser sumps have a total height of 19 inches, permitting the Geoflex® pipe to exit out of the dispenser sump at a very high elevation, which is ideal for suction piping systems requiring slope back directly to the tank. They may also be used in pressure piping systems that are run in series and use an interstitial monitoring system where sloping back to the tank is not required.

**2.3.4 Deep Dispenser Sumps**

These higher profile dispenser sumps have a total height of 30 inches permitting the Geoflex pipe to exit out of the dispenser sump at a very low elevation which is ideal for pressure piping systems requiring slope back indirectly to the tank. They are also recommended for use with pressure piping systems run in series which require piping fall back to the tank. These dispenser sumps are height adjustable to accommodate piping fall requirements between all containment sumps.

**2.3.5 Extended Dispenser Sumps**

These higher profile dispenser sumps have a total height of 36 inches permitting the Geoflex pipe to exit out of the dispenser sump at a very low elevation which is ideal for pressure piping systems requiring slope back indirectly to the tank. They are also recommended for use with pressure piping systems run in series which require piping fall back to the tank. These dispenser sumps are height adjustable to accommodate piping fall requirements between all containment sumps.

**2.3.5 Fiberglass Dispenser Sumps**

These higher profile dispenser sumps have total height of 30 inches permitting the Geoflex pipe to exit out of the dispenser sump at a very low elevation which is ideal for pressure piping systems requiring slope back indirectly to the tank. They are also recommended for use with pressure piping systems run in series which require piping fall back to the tank. These dispenser sumps are height adjustable to accommodate piping fall requirements between all containment sumps. Because of its two piece design, connection of all fittings is easier than in standard one piece dispenser sumps.

**3.0 DISPENSER MOUNTING FRAMES**

All dispenser containment models share the same type of metal frame assembly. The frame assembly is specifically sized to accommodate one or more types of makes and models of product dispensers. All metal side struts, which secure the adjustable stabilizer bars, are directly anchored into the concrete using side anchors. The side struts also allow for convenient mounting of any type of leak detection probes. Specifically located anchor bolts are used to secure the dispenser frame to the concrete island.

**4.0 GENERAL INSTALLATION INSTRUCTIONS**

The different types of dispenser containment pans and sumps have similar installation procedures but also have some specific differences. The following instructions under this section concern only those general installation procedures which are consistent with all dispenser pans and sumps.

**4.1 Dispenser Containment Mounting**

The dispenser container frame has side anchors as well as a wide metal flange containing anchor bolts for secure anchoring to a concrete island. The proper anchoring of dispenser frames is very important to secure stabilizer bars, which are fitted with shear valves. There are three typical types of mounting applications and they are described as follows:

**4.2 Metal Island Form Mounting**

For new or extensive retrofit applications, pre-engineered metal island forms are used. These metal island forms may or may not have adjustable or fixed support bars for mounting of the dispenser sump or pan's metal frame assembly.

**Fitted With Support Bars:**

Metal Island forms typically have adjustable metal supports which support and fasten the dispenser sump or pan's metal frame assembly.

**No Support Bars**

For metal island forms with no supports, two pieces of lumber should be used to span across the island form to support and fasten a dispenser sump or pan's metal frame assembly.

**Retrofit Mounting**

For retrofit applications, it is possible to enlarge the opening in the concrete to accept the insertion of the dispenser pan unit. Expandable anchor bolts must be installed to secure the dispenser pan frame and the dispenser.

**4.3 Installing Anchors**

Install the provided anchor bolts in the designated holes of the mounting frame to accommodate the model of dispenser to be installed.

**4.4 Installing Stabilizer Bars**

Two strut spring nuts must be inserted into each of the two side struts of the containment sump.

**IMPORTANT:** Spring nut must be locked in place prior to installing stabilizer bar.

Fasten the stabilizer bars with the provided bolts loosely to permit movement from side to side movement of the bar for positioning purposes. Firmly tighten down the bolts after the shear valve has been plumbed to the dispenser.

**IMPORTANT:** Stabilizer bars must be tightened down securely to the side strut after the dispenser has been mounted.

**4.5 Specifying Shear Valves**

Shear valves need to be securely mounted to the stabilizer bar to insure that they will activate in the event of impact. There are two types of shear valves which may be used.

**4.5.1 Environ Shear Valves**

This type of shear valve has a built-in mounting plate for direct mounting to a stabilizer bar. When using this type of shear valve, it is not necessary to order the shear valve mounting plate. Only the stabilizer bar itself is required.

**4.5.2 Standard Boss Mount Shear Valves**

Shear valves having boss mounts can be used providing the valve mounting plate is attached. Attach the plate using the three flat-head socket screws provided with a 1/4" allen wrench. It is necessary to order shear valve mounting plates with those types of shear valves.

**NOTE:** U-bolt mounted shear valves will not function with the stabilizer bar.

**4.6 Mounting Shear Valves**

Insert the two strut spring nuts into the stabilizer bar strut and fasten the valve mounting plate, with the pre-attached riser assembly, loosely to the strut using the two 1/2" bolts. Tighten down bolts firmly only after shear valves have been plumbed to the dispenser.

**IMPORTANT:** Shear Valves must be tightened down securely on to stabilizer bar after dispenser has been mounted.

**5.0 SPECIFIC INSTALLATION INSTRUCTIONS**

The following installation instructions refer more specifically to the different containment applications available with each type of dispenser containment pan or sump. Environ recommends hydrostatic testing all sumps after installation to check for proper sealing of joints and connections.

**5.1 Shallow Dispenser Pan Assemblies**

Shallow dispenser pans are primarily designed for conventional rigid piping systems to seal flexible connector entries through the bottom of the pan. Follow these installation instructions for this application:

Step 1: Install pan entry boots in pan bottom.

Step 2: Install stabilizer bars to the side struts.

Step 3: Install shear valve mounting plate to the shear valve (if required).

Step 4: Install shear valve adapter seal to shear valve.

Step 5: Attach the flexible connector to shear valve.

Step 6: Drop flexible riser assembly down through the entry boot and connect mounting plate to stabilizer bar.

Step 7: Install conduit entry boots (CFB-3075) into bottom of pan.

Step 8: Install anchor bolts at required hole locations.

**5.1.1 Conduit Entry Boots**

These rubber entry seals are designed specifically for use in the bottom of shallow dispenser pans because of their small size. These boots install vertically into the bottom of the pan in the same manner in which flexible entry boots are installed into the side wall of a containment sump.

**5.1.2 Pan Entry Boots**

Shallow dispenser pans require the installation of pan entry boots to seal all flexible connector entries. Using the entry boot template, drill out 1/4" bolt holes and then drill out the entry opening using a 2-1/2" hole saw. Insert the studs of the boot from underneath the pan and into the rubber boot located inside the pan. Next, install the nut fasteners above the compression ring. Once the flexible riser has been installed through the entry boot, tighten the band clamp around the shear valve adapter.

**5.1.3 Stage II Pipe Entries**

If the particular application incorporates stage II vapor recovery, the rigid pipe entries can be sealed using the stage II entry boots. Using the entry boot template, drill out 1/4" bolt holes and then drill out the entry opening using a 2-1/2" hole saw. Insert the studs of the boot from underneath the pan and into the corrugated rubber boot located inside the pan. Next, install and tighten the nut and bolt fasteners above the compression ring. Attach the steel reducer bushing (1-1/2" x 1") to the flexible riser assembly. After the assembly has been installed through the entry boot, tighten the band clamp around the steel reducer bushing using the 3" X 2" rubber reducer.

**5.1.4 Reducer Seals**

A variety of bushings and reducers are available to seal pan entry boots, stage II entry boots and flexible isolation tubes. Refer to the Environ products price list for the correct seal to use for your application.

**5.1.5 Flexible Isolation Tubes**

These rubber tubes are used to dielectrically isolate a metal flex connector. The tube is sized to slide over and seal to either 2" or 3" rigid piping. To seal to a 2" pipe, use the 3" x 2" rubber reducer seal. After the primary pipe has been tested, shift the isolation tube up and over the pipe entry boot's cuff located below the pan. Tighten the band clamps located at the upper and lower end of the isolation tube. Apply no more than 5 psi air pressure for integrity testing.

**5.2 Deep Dispenser Pan Assemblies**

Deep dispenser pans are primarily designed for GeoFlex® piping systems using coax couplings & fittings with riser jacket kits. All riser pipe entries are made through the bottom of the pan. Follow these installation instructions for this application:

- Step 1: Install stabilizer bars to the side struts of the sump.
- Step 2: Install flexible entry boots in pan bottom.
- Step 3: Install shear valve to the mounting plate (as required.)
- Step 4: Attach coax adapter and riser pipe to shear valve.
- Step 5: Slide riser jacket assembly over riser pipe (refer to flexible piping manual for details).
- Step 6: Insert riser pipe assembly through flexible entry boot.
- Step 7: Install conduit entry boots (CEB-3075) into bottom of pan.
- Step 8: Attach shear valve assembly to stabilizer bar.
- Step 9: Install anchor bolts at required hole locations.

**6.2.1 Pipe Entries**

The installation of all flexible entry boots must be completed prior to the installation of the riser pipe assembly. Determine the correct pipe entry location in the bottom of the pan so that there is direct alignment with the dispenser inlet fitting.

**6.2.2 Riser Pipe Assemblies**

Refer to the the GeoFlex® piping manual for a detailed description of available riser pipe design options and assembly procedures for this deep dispenser pan application using coax fittings & couplings with riser jackets.

**6.3 Shallow, Deep and Extended Dispenser Sump Assemblies**

Both deep and shallow dispenser sumps may be used for GeoFlex piping systems using coax, swivel and barbed couplings & fittings. Follow these installation instructions for

Step 1: Install anchor bolts at required hole locations.

Step 2: Locate and install Flexible Entry Boots in sump side panel.

Step 3: Install Stabilizer Bars to the side struts.

Step 4: Install Shear Valve Mounting Plate to the Shear Valve (if required).

Step 5: Attach the riser pipe to Shear Valve.

Step 6: Install Shear Valve to Stabilizer bar.

Step 7: Install Conduit Entry Boots into side of sump

this application:

**6.3.1 Sump Height Adjustment**

Deep and extended dispenser sumps are height adjustable to allow for pipe fall back to the tank. Shortening the height of a dispenser sump requires disconnecting the frame assembly, cutting the riser section to the desired height and then re-assembling the frame assembly. The easiest means of adjusting the pipe entry height without cutting down the dispenser sump's riser is to install the flexible entry boot at a higher entry level in the side-wall of the sump.

**6.4 Fiberglass Dispenser Sump**

Fiberglass dispenser sumps are available with separate base and riser sections for easy connections of pipe couplings and fittings.

**6.4.1 Assembly of the Fiberglass Dispenser Sump**

Step 1: Locate flexible entry boot centers and install boots in the side wall of the base. Refer to the flexible entry boot installation manual for proper installation of the boot.

Step 2: Insert sections of piping through flexible entry boots and attach to fittings inside the dispenser sump base.

Step 3: Rough sand both of the connecting flanges of the base and riser sections of the sump. This will remove any oxidation and should provide a suitable bonding surface. Locate the dispenser sump riser onto the dispenser sump base.

Step 4: Apply properly mixed fiberglass resin at the base of the riser joint.

Step 5: Install stabilizer bars to dispenser sump riser frame. Attach shear valves to stabilizer bars. Install anchor bolts to the dispenser sump frame.

## 6.0 DISPENSER MOUNTING

After all riser pipe assemblies have been loosely installed into either a dispenser sump or a dispenser pan, mounting of the product dispenser may be completed. The stabilizer bars and valve plate assembly are designed to provide multi-directional side-to-side positioning of the shear valve as well as providing up to 1" of up and down movement. This will greatly assist in the connection of the shear valve to the product dispenser.

### 6.1 Tighten Down Fasteners

Once all the shear valves have been connected to the inlet fittings of the product dispenser, all stabilizer bars and valve plate fasteners must be securely tightened. Make sure all spring nuts are in absolute horizontal alignment prior to final tightening of the bolt fastener.

**WARNING:** Failure to properly secure stabilizer bar and valve plate fasteners could prevent the shear valve from activating in the event of a dispenser knock-over.

## 7.0 GUIDE SPECIFICATIONS

The following specifications are provided as general guidelines to specify under dispenser containment:

### 7.1 Short Form

The contractor shall provide liquid-tight dispenser containers located under each fuel dispenser as manufactured by Environ Products, Inc. Containers shall house and permit access to the plumbing components located under each product dispenser. Containers shall be installed in accordance with manufacturer's current installation instructions.

### 7.2 Long Form

#### 7.2.1 Design

The under dispenser container shall be of such a design as to permit access to all associated fittings and valves located directly below an above ground dispenser. The frame of the container shall be sized to fit the framework of the dispenser and permit anchoring of the dispenser directly into a concrete slab.

#### 7.2.2 Product Compatibility

All components and accessories of the dispenser container shall be chemically compatible with the products to be distributed and with chemicals found naturally in the ground environment.

#### 7.2.3 Corrosion Resistance

All dispenser container components which come in contact with the ground environment shall be made of non-metallic material

or protected by materials which prevent corrosion.

#### 7.2.4 Structural Integrity

All components shall be designed and constructed of materials strong enough for their intended use. The dispenser containers shall not collapse, crack or break due to ground movement, backfill stress or high ground water pressures.

#### 7.2.5 Pipe & Conduit Entries

All dispenser containers shall be fitted with pipe and conduit entry seals which are semi-absorbent to ground movement and sufficiently flexible enough to permit angled entries up to 15 degrees without leaking under liquid head pressures of up to three feet.

#### 7.2.6 Liquid Tightness

All dispenser containers shall prevent outside surface and ground water from coming into the container and prevent any product originating from within the sump from escaping into the underground environment. Environ recommends hydrostatic testing on all sumps after installation to check for proper sealing of joints and connections.

#### 7.2.7 Height Adjustability

All deep type dispenser containers shall be field height adjustable to accommodate different tank and piping burial depths.

#### 7.2.8 Anchoring & Stabilization

Dispenser containers shall provide a means of securing the above-ground dispenser unit, shear valve and piping.

- **Dispenser anchoring:** Dispenser containers mounting frames shall be of such a design that the base frame of the product dispenser is mounted directly over the concrete slab and not cantilevered.
- **Shear Valve Stabilization:** Dispenser containers shall provide a metal framework including one or more fully adjustable stabilizer bars to securely attach a shear valve in such a manner that the valve will properly activate in the event of a dispenser knock-over.

#### 7.2.9 UL<sup>®</sup> Testing

Under dispenser containers shall be tested and listed by Underwriters Laboratories to meet the following listings:

- NON-METALLIC UNDERGROUND PIPING FOR FLAMMABLE LIQUIDS
- NON-METALLIC SECONDARY CONTAINMENT PIPING SYSTEMS FOR UNDERGROUND PIPING FOR FLAMMABLE LIQUIDS
- MISCELLANEOUS DISPENSING DEVICE ACCESSORIES
- FLAMMABLE AND COMBUSTIBLE LIQUID TANK ACCESSORIES

#### 7.2.10 Leak Detection

Under dispenser containers shall be equipped with a leak detection sensor which shall be capable of activating a remote alarm and/or turn-off a submersible pump or product dispenser in the event a collection of 1/4" of product or 6" of water inside the dispenser container.

### Dispenser Sumps

#### Dispenser Containment Sumps

The GeoFlex® System requires the use of Dispenser Sumps as a means of secondary containment for the under-dispenser plumbing and piping connections. They also provide surface access to these connections and provide a clean and dry environment for future service and maintenance. This type of containment sump is installed just beneath the above ground fuel dispensing units.

Three types of dispenser containment sumps are used with the GeoFlex Piping System. The first is the "Shallow Dispenser Sump" which can be used with both suction and pressure piping systems. The second and third are the "Deep Dispenser Sump" and the "Extended Dispenser Sump", both used primarily for pressure piping systems which are run in series. Refer to the "Dispenser Directory" within the Environ Products Price List to select the appropriate Dispenser Sump model.

### Assembly Instruction

**Step 1**  
If not using an Environ shear valve install the shear valve mounting plate to a boss mounted shear valve using the three flat-headed socket screws provided. Requires the use of a 1/4" Allen Wrench

**Step 2**  
After the mounting plate has been connected to the shear valve, connect the riser pipe to the bottom of the shear valve.

**Step 3**  
Install the elbow connection to the threaded riser pipe (Installation of Tee Connections is similar.)

**Step 4**  
Install the Stabilizer Bar Kits to the side struts of the dispenser sump. Do not install the valve plates at this time.

**Step 5**  
Install the necessary amount of Conduit Entry Boots into the desired location on the side of the dispenser sump (Refer to F.E.B. Instructions for proper installation)

**Step 6**  
Install the necessary amount of Flexible Entry Boots into the desired locations on the side of the dispenser sump. (Refer to F.E.B. Instructions for proper installation)

**Step 7**  
Install the provided anchor bolts in the specific holes of the mounting frame to accommodate the model dispenser to be installed.

**Step 8**  
Install the riser pipe/shear valve assembly to the stabilizer bar inside the dispenser sump.

**Optional Sump Access Boot**

**Step 9**  
Connect the coupled piping to the plumbing connection inside the dispenser sump

#### Specifying Shear Valves

When specifying what type and brand of shear valves are to be used, consider these design specifications:

- The shear valve must be a "boss mount" type for attachment to the shear valve bracket and stabilizer bar. "U-bolt" type shear valves will not work with this type stabilizer bar.

- If the *Petro-Trip I™* is to be installed, the shear valve must have a fusible link assembly which will release easily with a trip wire

## Island Installation

### Metal Island Forms

A typical installation application for dispenser sumps is to mount them inside pre-engineered metal island forms. It is important that the sump be mounted in such a manner that the top of the outside frame is flush with the concrete surface of the finished island. Each dispenser sump is fitted with an "End Bracket" at each end of the sump for mounting to

some type of support bar. Adjustable support bars are available with some types of pre-engineered metal island forms. Other island forms may require additional field installed support bars. Refer to the details below for additional information.

### Top Frame Support

Fasten the sump end brackets to two pieces of lumber which will span across the metal island form and secure the sump.

### Under Frame Support

Set the sump end brackets over two metal cross supports which span across the metal island form and secure the sump.

### Top Frame Support

Existing concrete islands can be modified to accommodate the dispenser sump by enlarging the pipe access opening.

## Sump Variations

### Height Adjustability

All dispenser sumps offer a wide range of height adjustability, if required. The easiest means of adjusting the pipe entry height is to install the *Flexible Entry Boot* at a higher entry level. If that procedure does not provide adequate entry height, the riser section can be cut down to the desired height by disconnecting the frame assembly.

### Pipe Entry Locations

For standard pipe burial applications, the piping should enter at the lowest possible entry point in the sump. For determining the correct pipe entry location for the dispenser model to be used, refer to the *Pipe Entry Guide* provided with each sump unit. Refer to the *Flexible Entry Boot* installation instructions for proper installation of all pipe entries.

## Backfill Requirements

### Backfilling Dispenser Sumps

Approved backfill materials for Environ Dispenser Sumps shall meet the following specifications:

#### Pea Gravel:

Rounded pea gravel is permitted with a maximum diameter of 1/8" and a maximum diameter of 3/4".

#### Crushed Stone:

Crushed stone is permitted providing it shall be washed clean and be of the free flowing type with an angular stone size between 1/8" and 1/2". (Meets ASTM C-33 paragraph 9.1 requirements.)

#### Sand

River or other approved sand is permitted providing it shall be washed clean and is free flowing. When backfilling, make sure sand is evenly distributed and packed around the piping.

**NOTE:** All bedding and backfill material should be dry and free from ice, snow and debris. Using material other than those described above without written approval from Environ Products Inc. will void the product warranty.

**FIELD INSPECTION REPORT FOR UNDERGROUND TANKS**

Dear Mr. Steck,

Enclosed is a copy of our invoice for the inspection of the Ronan system that we performed at the Arco station located at 2110 Middlefield Road, Mountain View. As you can see by the comments on the invoice, the system was operating properly at the time of our inspection.

Please let us know if you should need any additional information or if you should have any questions.

Sincerely,

A handwritten signature in cursive script that reads 'Mark W. Able'.

TERMS

Sometimes one service call does not resolve all specific problems due to defective equipment or intermittent problems not present or which cannot be duplicated when our Service Technician is at your premises. Some equipment requires removal on one trip, in-house repair, and another trip for reinstallation.

Charges will be made for each service call at rates in effect at time of service. We, therefore, cannot warrant solutions to all problems on one service call.

Repaired or replacement component parts and/or equipment is warranted for 90 days.

Time "Arrived" and time "Departed" recorded by our Service Technician will be the guideline used in recording of repair time and charges. It is the customer's responsibility to audit and verify times recorded on the invoice by our Service Technician while he is on your premises. We cannot and will not alter any time charges billed after our Service Technician has left your premises.

RED JACKET PISTON LEAK DETECTOR  
TEST GUIDE LINE

Description of Work: PETRO-TITE LINE TEST ALL (3)  
PRODS. & RUN LEAK DETECTOR TEST.

INSTALL TESTING EQUIPMENT, ENSURE LINE PRESSURE IS ZERO.

Product	PSI with Bibcock CLOSED (1)	PSI with Bibcock OPEN (2)	Open dispenser Nozzle, Line Pressure (3)	Does leak detector work Properly (4)
Unleaded	OK	22 PSI	20-22 PSI	YES
Super	OK	22 PSI	20-22 PSI	YES
Regular	OK	22 PSI	20-22 PSI	YES
Diesel	N/A	22 PSI	20-22 PSI	N/A

- (1) Pressure should increase in approx. two seconds.
- (2) Open or close bibcock valve to 22 PSI allowing product to pour into bucket. (Flow rate approx. 3 gallons per hour.)
- (3) Put nozzle in bucket. Open nozzle. Watch flow rate. (Flow rate should be 1½ - 3 gallons per minute.)
- (4) If the pressure goes to FULL LINE (Pressure approx. 26 PSI), Leak Detector is not working properly. But, if PSI stays at approx. 20 - 22 PSI, the Leak Detector is functioning properly.

- 2) Alarm conditions shall be promptly reported to a local service contractor AND THE MOUNTAIN VIEW FIRE DEPARTMENT (650-903-6821).
- 3) All alarms shall be investigated and a cause determined within 5 working days. If the cause of the alarm cannot be determined by this time, an unauthorized release is assumed and the permittee shall take all necessary actions to address such a release, including, but not limited to, closure of the affected tank(s) and piping.
- 4) All minor unauthorized releases, including product spills, shall be cleaned up immediately with absorbent.

July 27, 1998

Derek Reichart  
Ted's Arco #2010  
P.O. Box 6038  
Artesia CA 90702-6038

**SUBJECT: COMPLIANCE WITH 1998 UNDERGROUND TANK UPGRADE REQUIREMENTS**

Dear Derek Reichart:

Enclosed please find an "Underground Storage Tank Upgrade Compliance Certificate" for one or more of your sites in the City of Mountain View. This certificate verifies that your underground storage tank system is in compliance with all applicable local, State, and Federal upgrade requirements. Please keep this certificate in a safe but accessible place as you may get requests for copies from various environmental agencies as well as fuel delivery companies.

During the next few months, we will be installing compliance tags on the fill risers of your underground tanks. These tags will alert fuel delivery personnel that the tank has met the upgrade requirements. After December 22, 1998, it will be illegal to deliver fuel to untagged tanks.

Finally, an upgrade certificate sticker is also required to be posted in a visible area of your facility. Some facilities have indicated they will post the stickers themselves. For those facilities, we have enclosed them with this letter. Otherwise, we will post them for you during our upcoming site visits.

If you have any questions, or misplace any certificates or stickers, contact us at the above number for a replacement.

Sincerely,

Gary Leinweber, CHMM, REA  
Environmental Safety Manager

CA Cert. No. 07221

An upgrade compliance certificate has been issued in connection with the operating permit for the facility indicated below. The certificate number on this facsimile matches the number on the certificate displayed at the facility.

Instructions to the Issuing agency: Use the space below to enter the following information in the format of your choice: name of owner; name of operator; name of facility; street address, city, and zip code of facility; facility identification number (from Form A); name of issuing agency; and date of issue. Other identifying information may be added as deemed necessary by the local agency.

Date of Issue: 7/23/98

Facility ID Number: 1288

Facility Name: Ted's Arco

Facility Address: 2110 Old Middlefield Way

Owner Name: Arco Products Co.

Operator Name: Taghi Lavassani

Issuing Agency: City of Mountain View Fire Department

## Definitions of Terms

### TANKS

**Overspill/Size:** The overspill box sits on top of the tank at grade level and is designed to catch any product and spillage from the delivery hose. Sizes of these range from 5 gallon to 25 gallon capacity.

**Overfill:** The overfill is a device which fits down into the fill riser of the tank and has a flapper valve which closes when product in the tank has reached 80-90% of the tank capacity during delivery. It is designed to prevent overfilling the tank.

**Cath. Prot.:** Cathodic protection is an electrical method for preventing steel tanks/piping from corrosion due to electrolytes in the soil and water.

#### **Tank Monitoring Systems:**

**Annular Space:** The system used to monitor the annular space of your double-wall tanks (doesn't apply to single-wall tanks).

**Frequency:** How often the annular space sensor performs its monitoring function.

**Alarm?:** Does the annular space sensor have alarm capabilities?

**Annular Space:** Describes the condition of the annular space for double-wall tanks only. These may be "dry", "water-filled", or "brine-filled".

### PIPING

**Pressure/Suction:** Describes if the piping delivers product via pressure or suction.

**Construction-Primary Pipe:** Describes the type of pipe carrying product. These may be "Fiberglass", "Steel", etc..

**Construction-Secondary Containment:** Describes the type of material used to secondarily contain the primary pipe. These may be: "Fiberglass pipe", "Total Containment flex", "FiberTrench", etc.

**Pipeline Monitoring Systems, Sumps:** Describes the system used to monitor the sumps in secondarily-contained piping systems only.

**Pipeline Monitoring Systems, Aud/Vis Alarm?:** Does the pipeline monitoring system have an audible and visible alarm?

**Slow Flow?:** When the pipeline monitoring system goes into alarm, does it reduce the flow of product through the piping?

**Pump Shutdown?:** When the pipeline monitoring system goes into alarm, does it completely shut down the product through the piping?

CITY OF MOUNTAIN VIEW

February 18, 1992

Ms. Sharon Douglas  
Mr. Courtland Holman  
ARCO  
17315 Studebaker Road  
Cerritos, CA 90701-1448

For Permitted Facility at: 2110 Old Middlefield Way  
Mountain View, CA

Dear Ms. Douglas & Mr. Holman:

Recently, you reviewed and updated information regarding your underground storage tank and piping system. Using this information, we analyzed the new California underground tank regulations which became effective August 1991, and have determined that the indicated items below will need to be installed/upgraded at your site to remain in compliance:

DUE DATE

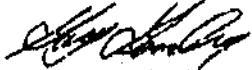

- Steel tanks must be either: 1) replaced with double-wall tanks, or 2) supplied with cathodic protection and lined with an interior coating (Sec. 2662(b))..... Dec. 22, 1998
- Tanks must be supplied with overflow protection in each fill riser (Sec. 2663(a))..... Dec. 22, 1998
- Tanks must be supplied with 15 gallon overspill containers (Sec. 2663(a)) ..... Dec. 22, 1998
- Single-wall pressurized steel piping must be replaced with double-wall fiberglass piping (Sec. 2664(b))..... Dec. 22, 1998
- All primary piping must be precision tested annually (unless secondary containment piping sensors shut down pumps when activated) (Sec. 2641(c) & 2664(d)) ..... Dec. 22, 1998
- Pipeline leak detectors capable of activating during a 3 gph leak at 10 psi must be installed on pressurized piping (Sec 2664(c)) ..... July 1, 1992
- Pipeline leak detectors must be upgraded to completely shut down the pumps when a leak is detected. (Sec. 2641(f))..... Dec. 22, 1998
- Pipeline leak detectors must be tested annually (Sec. 2641(i)) ..... Dec. 22, 1998

We realize that some of these upgrades are extremely costly, so we are giving you advanced notice to allow you to plan and budget for them over the next several years.

Once you have decided on a plan of action, call us at 415-903-6378 so that we can review your proposal and work with you through its implementation.

If you have any specific questions about these requirements, or would like a copy of the California Underground Storage Tank Regulations, call us at 415-903-6378. We'll also be happy to sit down with you to meet and discuss these requirements in more detail.

Sincerely,

Gary Leinweber  
Hazardous Materials Manager

III. Tank Characteristics

Tank No.	Product	Size	Single/ Double Wall	Construction Type	Overspill Size	Cathodic Protect?	Inst. Date
1	Regular	12K	Double-Wall	Fiberglass	Yes/15gal	N/A	6/89
2	Unleaded	12K	Double-Wall	Fiberglass	Yes/15gal	N/A	6/89
3	Super	12K	Double-Wall	Fiberglass	Yes/15gal	N/A	6/89

# MONITORING SYSTEM CERTIFICATION

*For Use By All Jurisdictions Within the State of California*

*Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3 Title 23, California Code of Regulations*

This form must be used to document testing and servicing of monitoring equipment. If more than one monitoring system control panel is installed at the facility, a separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

\* If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

**C. Certification**

I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct, and a Site Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the (Check all that apply):  System set-up  Alarm history report

Technician Name (print): DENNIS RUE Signature: *Dennis Rue*  
 Certification No.: 008-05-1610 License No.: \_\_\_\_\_  
 Testing Company Name: Tanknology Phone No.: (800) 800-4833

# Monitoring System Certification

Site Address: 2110 OLD MIDDLEFIELD WAY

Date of Testing/Service: 02/20/2008

## D. Results of Testing/Service

Software Version Installed: 123.01

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No *		Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No *		Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No *		Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No *		Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input type="checkbox"/> Yes	<input type="checkbox"/> No *	<input checked="" type="checkbox"/> N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No *	<input type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? (check all that apply) <input checked="" type="checkbox"/> Sump/Trench Sensors; <input checked="" type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No *	<input type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overflow warning device (i.e.: no mechanical overflow prevention valve is installed), is the overflow warning alarm visible and audible at the tank fill points(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? <u>80</u> %
<input type="checkbox"/> Yes *	<input checked="" type="checkbox"/> No		Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input type="checkbox"/> Yes *	<input checked="" type="checkbox"/> No		Was liquid found inside any secondary containment systems designed as dry systems? (check all that apply) <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No *		Was monitoring system set-up reviewed to ensure proper settings? Attach set-up reports, if applicable.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No *		Is all monitoring equipment operational per manufacturers' specifications?

\* In Section E below, describe how and when these deficiencies were or will be corrected.

## E. Comments:

ALL THREE FUEL TANKS HAVE TLM SUMPS WITH 208 SENSORS LOCATED AT LOWEST POINT.

## Secondary Containment Testing Report Form

*This form is intended for use by contractors performing periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.*

Test Leak Rate (ml/min)(gph)	189	189			
PASS or FAIL	PASS	PASS			

Comments: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

This letter certifies that the annual leak detector tests were performed at the above referenced facility according to the equipment manufacturers procedures and limitations and the results as listed are to my knowledge true and correct. The mechanical leak test detector test pass/fail is determined using a low flow threshold trip rate of 3 gph at 10 PSI.

UST Leak Detection Inspection Worksheet (02/05)

Address 2110 Old Mill Rd - Fall

Date 2/19/08

Business Name: AVIO

Contact: Tankology

Leak Detection Program:

- Tanks: Electronic Liquid Sensors
- Piping: Electronic Liquid Sensors

I. General

1) Inspect overspill container of each tank.

- Any missing overspill containers? No
- Record any overspill container with free product that cannot be drained into the tank: None

2) Verify that overspill containment has been tested by a third party contractor within the last year.

- Last annual overspill test date: 2/17/07
- Has this been completed within the last year? Yes

3) Inspect overflow prevention device of each tank (flapper valve or equivalent).

- Any missing overflow prevention devices? No

4) Inspect manway sump of each tank.

- Any liquid in the sumps from rain or product? No

5) Remove facoplate from each dispenser and inspect:

- Any crimped or collapsed hoses? No
- Any leaking pipes or joints? No
- Any loose or missing fittings or hose connectors? No
- Any exposed electrical wires? No
- Any open conduit? No
- Any missing shear valves? No
- Area under the dispensers dry? Yes

6) Inspect shear valves for operation:

- Have all shear valves been tested for activation? Yes Do any not work? No
- Are float/chain mechanisms tensioned properly? Yes

7) Inspect Emergency Shut-Off switch:

- Is it located within 75" of any dispenser? Yes
- Is it labeled? Yes
- Is it working (test with one product)? Yes

8) *Inspect fire extinguishers*

- Are they located within 75 feet of all pumps/dispensers?
- Are they located in accessible areas?
- Have they been serviced within the last 12 months?
- Are they rated 2-A:20-B:C minimum?

Yes

9) *Inspect signage* Are the following signs posted and within sight of each dispenser?

- Smoking Prohibited: \_\_\_\_\_
- Vehicles Must Stop During Fueling Operations: \_\_\_\_\_
- Dispensing into Unapproved Containers is Prohibited: \_\_\_\_\_
- For unsupervised locations only, the emergency sign shown below: MI

<b>IN CASE OF FIRE OR SPILL</b>
1. Use emergency pump shutoff!
2. Report the accident!
Fire Department: Call 911
Facility Address

10) *Verify annual testing of mechanical or electronic line leak detector.*

- Required
- Not required—sensor in sumps shut off turbine pumps.
- Not applicable—suction system

- Date of last test: \_\_\_\_\_
- If last test was conducted over a year ago, indicate how re-test will be performed:  
 \_\_\_\_\_ Tested on site with test equipment. Results: \_\_\_\_\_

\_\_\_\_\_ Tested by third-party. Date of test: \_\_\_\_\_ . Results: \_\_\_\_\_

11) *Verify that the leak detection systems are functioning.*

- Is there power to all leak detection systems? Yes

12) *Determine current alarm status.*

- Describe current alarm conditions for each detection system: \_\_\_\_\_

13) *Verify electrical continuity of leak detection system.*

- Has leak detection system been tested for electrical continuity (so that breaks in the wiring cause an alarm condition)? Yes. Test results: OK
- Does a simulated loss of power shut down the turbine? Yes

14) *Verify daily inspection log.*

- Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? \_\_\_\_\_
- Is the log up to date? \_\_\_\_\_ . If not, date of last entry was: \_\_\_\_\_

15) Verify that cathodic protection is working properly. If not, complete the cathodic protection work sheet and record observations.

MM

16) Verify 3rd party alarm monitoring, if applicable.

- Alarm test date: \_\_\_\_\_ Alarm test time: \_\_\_\_\_
- Alarm verification date: \_\_\_\_\_ Alarm verification time: \_\_\_\_\_
- Alarm company: \_\_\_\_\_

MM

17) Verify certification of all monitoring equipment has been completed within the last year.

- Last annual certification date: 2/27/07
- Has this been completed within the last year? Yes

18) Verify secondary containment testing has been completed within the last 3 years.

- Last secondary containment test date: 4/19/06
- Has this been completed within the last 3 years? Yes

19) Verify designated UST operator is conducting monthly visual inspections.

- Results of monthly visual inspections are recorded and include:
  - Review of alarm history for the previous month and documenting alarm was responded to;
  - Inspecting for presence of water, debris, or gas in spill containers;
  - Inspecting for presence of water, debris, or gas in under-dispenser containment and checking location of monitoring sensors;
  - Inspecting for presence of water, debris, or gas in containment sumps and checking location of monitoring sensors; and
  - Checking that all required testing and maintenance has been completed

20) Verify designated UST operator is conducting annual training.

- Training documentation includes:
  - Operation of USTs following BMPs;
  - Employee's role regarding monitoring equipment;
  - Employee's role regarding spills and overfills; and
  - Name of contact person for emergencies and alarms.
- At least one employee present during operation hours is trained.
- A list of trained employees is on site.
- All new employees have been trained within 30 days of hire.

## II. Liquid Sensors

1) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.

Record observations: \_\_\_\_\_

2) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypad lights light.

Record results: \_\_\_\_\_

3) POLLULERT FD 103. Verify that internal magnet is in a test position. After access is closed, the Program followed by the Test key. Refer to pages 27-28 of the Operator manual to perform diagnostic test

Record results: \_\_\_\_\_

4) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm

Record results: \_\_\_\_\_

5) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

6) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

7) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.  
Are all appropriate LED lights activated? \_\_\_\_\_

8) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.

Record results: \_\_\_\_\_

9) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge in water.

Record results: \_\_\_\_\_

10) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

11) API/RONAN LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

12) API/RONAN LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

13) API/RONAN LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
\_\_\_ Sensors Removed \_\_\_ Tested by CGI \_\_\_ Record Results: \_\_\_\_\_

14) API/RONAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.  
Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

15) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.  
Record results: \_\_\_\_\_ *OK*

16) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.  
Record results: \_\_\_\_\_ *N/A*

17) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
 Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_ *OK*

18) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.  
Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

19) VEEDER-ROOT ILS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection). To determine that each probe has alarmed, and to reset it, complete the following steps:

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.

Sometimes one service call does not resolve all specific problems due to defective equipment or intermittent problems not present or which cannot be diagnosed when our Service Technician is at your premises. Some equipment requires removal on one trip, in-house repair, and another trip for reinstallation. Charges will be made for each service call at rates in effect at time of service. We, therefore, cannot warrant solutions to all problems on one service call. Time "Arrived" and time "Departed" recorded by our Service Technician will be the guideline used in recordation of repair time and charges.

It is the customer's responsibility to audit and verify times recorded on the invoice by our Service Technician while he/she is on your premises. We cannot and will not alter any time charges billed after our Service Technician has left your premises.

# MONITORING SYSTEM CERTIFICATION

*For Use By All Jurisdictions Within the State of California*

*Authority Cited: Chapter 6.7, Health and Safety Code, Chapter 16, Division 3, Title 23, California Code of Regulations*

This form must be used to document testing and servicing of monitoring equipment. If more than one monitoring system control panel is installed at the facility, a separate certification or report must be prepared for each monitoring system control panel by the technician who performed the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

\* If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

**C. Certification**

I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Site Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the (Check all that apply):  System set-up  Alarm history report

Technician Name (print): KRISTOPHER BELL Signature:   
 Certification No.: B33700 License No.: \_\_\_\_\_  
 Testing Company Name: Tankology Phone No.: (800) 800-4633  
 Site Address: 8501 N. MoPac Expressway, suite 400, Austin, TX 78759 Date of Testing/Servicing: 02/22/2007

# Monitoring System Certification

Site Address: 2110 OLD MIDDLEFIELD WAY

Date of Testing/Service: 02/22/2007

## D. Results of Testing/Service

Software Version Installed: 123.01

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*		Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*		Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*		Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*		Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	<input checked="" type="checkbox"/> N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	<input type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? (check all that apply) <input checked="" type="checkbox"/> Sump/Trench Sensors; <input checked="" type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	<input type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overflow warning device (i.e.: no mechanical overflow prevention valve is installed), is the overflow warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? <u>99</u> %
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No		Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No		Was liquid found inside any secondary containment systems designed as dry systems? (check all that apply) <input type="checkbox"/> Product. <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*		Was monitoring system set-up reviewed to ensure proper settings? Attach set-up reports, if applicable.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*		Is all monitoring equipment operational per manufacturers' specifications?

\* In Section E below, describe how and when these deficiencies were or will be corrected.

## E. Comments:

## Monitoring System Certification

Site Address: 2110 OLD MIDDLEFIELD WAY

Date of Testing/Service: 02/22/2007

### F. In-Tank Gauging / SIR Equipment

- Check this box if tank gauging is used only for inventory control  
 Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Were all tank gauging probes visually inspected for damage and residue buildup?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Was accuracy of system product level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Was accuracy of system water level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Were all probes reinstalled properly?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Were all items on the equipment manufacturers' maintenance checklist completed?

\* In the Section H, below, describe how and when these deficiencies were or will be corrected.

### G. Line Leak Detectors (LLD) :

- Check this box if LLDs are not installed

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input checked="" type="checkbox"/> 3 g.p.h <input type="checkbox"/> 0.1 g.p.h <input type="checkbox"/> 0.2 g.p.h
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No		Were all LLDs confirmed operational and accurate within regulatory requirements?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No		Was the testing apparatus properly calibrated?
<input type="checkbox"/> Yes	<input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No		Were all items on the equipment manufacturers' maintenance checklist completed?

\* In the Section H, below, describe how and when these deficiencies were or will be corrected.

### H. Comments:

ATG HAD IT'S OWN SUMP WITH A 208 SENSOR IN IT

## Secondary Containment Testing Report Form

*This form is intended for use by contractors performing periodic testing of USI secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable) should be provided to the facility owner/operator for submittal to the local regulatory agency.*

Electronic Leak Detector Test Data Sheet

Station: 12020 Date: 2-22-07

Address: 210 Old Mill Road

Test Information

	1	2	3	4	5
Product	87	91			
Manufacturer	VR	VR			
Model	PLD	PLD			
Line Bleed Back (ml)	210	155			
Check Valve Holding Pressure (psi)	19	19			
Test Leak Rate (ml/min) (gph)	189.20	189.20			
PASS or FAIL	PASS	PASS			

Comments:

This letter certifies that the annual leak detector tests were performed at the above referenced facility according to the equipment manufacturer's procedures and limitations and the results as listed are to my knowledge true and correct. The mechanical leak detector test pass/fail is determined using a low flow threshold trip rate of 3 gph at 10 PSI.

Summary of Violations, Notice to Comply, Violation Code • Observations, and Required Corrective Actions	Corrective Actions Taken
--	-----------------------------

**FIRE CODE PROGRAM VIOLATIONS:**

•All violations corrected. Thank you.

**UNDERGROUND STORAGE TANK PROGRAM VIOLATIONS:**

UST-3.4•Each tank fill opening must be equipped with approved overfill prevention equipment which cannot allow manual override and must either:

- a) Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or by triggering an audible and visual alarm; or
- b) Restrict flow to the tank at least 30 minutes prior to tank overfill, provided that the restriction occurs at no more than 95% of tank capacity and triggers an audible and visual alarm at least 5 minutes prior to tank overfill; or
- c) Provide positive shutoff of flow to the tank when the tank is no more than 95% full.

Repair/Replace overfill protection devices for the following tanks: (23 CCR §2635(b) or §2665): **VISUAL ALARM NOT OPERATING PROPERLY.**

**Location:** exterior alarm.

\*\*\*\*\*

**COMMENTS:**

**NOTICE TO COMPLY:** Please submit a letter to this department no later than 3/22/2007 describing the actions you have taken to correct the violations listed in this inspection notice. Failure to correct the above violations may result in administrative fines, civil or criminal penalties.

*The Following Violations Have Been Observed During This Inspection:*

FIRE CODE PROGRAM VIOLATIONS:

FC-1.1 Provide/Restore address numbers so they are plainly visible and legible from the street fronting the property (minimum 6" in height). When structures are set back more than 150' from the street, larger numbers shall be required. In the event the structure is not visible from the street, the address numbers shall be posted adjacent to the driveway entrance as well as on the structure. Post address numbers. (CFC §901.4.4). **Location: 1-INCH ADDRESS NUMBERS ARE NOT LEGIBLE FROM STREET. REPLACE WITH LARGER NUMBERS.**

FC-8.4 For "A-3", "B", "F", "M", "S" and church occupancies, exit doors shall be openable from the inside without the use of a key or any special knowledge or effort. EXCEPTION: Key-locking hardware may be used on the main exit if there is a readily visible sign in 1 inch letters adjacent to the door stating "This Door To Remain Unlocked Whenever The Building Is Occupied." When unlocked, the door must be free to swing without operation of any latching device. Modify main exit to meet this requirement. (CBC §1003.3.1.8). **Location: PROVIDE "THIS DOOR TO REMAIN UNLOCKED DURING BUSINESS HOURS" SIGN ABOVE MAIN DOOR.**

FC-13.4 Remove all multiplug adapters (cube adapters or multiplug extension cords). (CFC §8507). **Location: SHOP AND OFFICE. REPLACE CUBE ADAPTERS WITH LISTED POWER TAPS (SURGE PROTECTORS).**

FC-13.7 Extension cords shall be maintained in good condition, without splices, deterioration or damage. Repair/replace damaged or frayed wiring. (CFC §8506.2.5). **Location: REPLACE DAMAGED EXTENSION CORD IN SHOP AREA.**

HAZARDOUS MATERIALS PROGRAM VIOLATIONS:

•No violations observed.

UST Leak Detection Inspection Worksheet (02/05)

Address: 2110 OLD MIDDLEFIELD WAY

Date: 2/22/07

Business Name: ARCO 5MO6 PROD STAL #02010

Contact: TANK NOLOGY

Leak Detection Program:

- Tanks: Electronic Liquid Sensors
- Piping: Electronic Liquid Sensors

I. General

1) *Inspect overspill container of each tank.*

- Any missing overspill containers? NO
- Record any overspill container with free product that cannot be drained into the tank: \_\_\_\_\_

2) *Verify that overspill containment has been tested by a third party contractor within the last year.*

- Last annual overspill test date: 3/13/06
- Has this been completed within the last year? YES

3) *Inspect overfill prevention device of each tank (flapper valve or equivalent).*

- Any missing overfill prevention devices? BALL FLOAT

4) *Inspect manway sump of each tank.*

- Any liquid in the sumps from rain or product? NO

5) *Remove faceplate from each dispenser and inspect:*

- Any crimped or collapsed hoses? NO
- Any leaking pipes or joints? NO
- Any loose or missing fittings or hose connectors? NO
- Any exposed electrical wires? NO
- Any open conduit? NO
- Any missing shear valves? NO
- Area under the dispensers dry? YES

6) *Inspect shear valves for operation:*

- Have all shear valves been tested for activation? YES Do any not work? NO
- Are float/chain mechanisms tensioned properly? N/A

7) *Inspect Emergency Shut-Off switch:*

- Is it located within 75" of any dispenser? YES
- Is it labeled? YES
- Is it working (test with one product)? YES

8) *Inspect fire extinguishers:*

- Are they located within 75 feet of all pumps/dispensers? YES
- Are they located in accessible areas? YES
- Have they been serviced within the last 12 months? YES
- Are they rated 2-A:20-B:C minimum? YES

9) *Inspect signage. Are the following signs posted and within sight of each dispenser?*

- "Smoking Prohibited": YES
- "Vehicles Must Stop During Fueling Operations": YES
- "Dispensing into Unapproved Containers is Prohibited": YES
- For unsupervised locations only, the emergency sign shown below: N/A

IN CASE OF FIRE OR SPILL
1. Use emergency pump shut-off!
2. Report the accident!
Fire Department: Call 911
Facility Address

10) *Verify annual testing of mechanical or electronic line leak detector.*

- Required
- Not required—sensor in sumps shut off turbine pumps.
- Not applicable—suction system

- Date of last test: \_\_\_\_\_
- If last test was conducted over a year ago, indicate how re-test will be performed:  
    \_\_\_\_\_ Tested on site with test equipment. Results: \_\_\_\_\_  
    \_\_\_\_\_ Tested by third-party. Date of test: \_\_\_\_\_ . Results: \_\_\_\_\_

11) *Verify that the leak detection systems are functioning.*

- Is there power to all leak detection systems? YES

12) *Determine current alarm status.*

- Describe current alarm conditions for each detection system: NONE

13) *Verify electrical continuity of leak detection system.*

- Has leak detection system been tested for electrical continuity (so that breaks in the wiring cause an alarm condition)? YES. Test results: OK
- Does a simulated loss of power shut down the turbine? YES

14) *Verify daily inspection log.*

- Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? YES
- Is the log up to date? YES. If not, date of last entry was: \_\_\_\_\_

15) Verify that cathodic protection is working properly (if applicable).

- Complete the cathodic protection worksheet and record violations: N/A

16) Verify 3rd party alarm monitoring, (if applicable).

- Alarm test date: \_\_\_\_\_ Alarm test time: \_\_\_\_\_
- Alarm verification date: \_\_\_\_\_ Alarm verification time: \_\_\_\_\_
- Alarm company: \_\_\_\_\_

17) Verify certification of all monitoring equipment has been completed within the last year.

- Last annual certification date: 3/13/06
- Has this been completed within the last year? YES

18) Verify secondary containment testing has been completed within the last 3 years.

- Last secondary containment test date: 7/24/06
- Has this been completed within the last 3 years? YES

19) Verify designated UST operator is conducting monthly visual inspections.

- Results of monthly visual inspections are recorded and include:
  - Review of alarm history for the previous month and documenting alarm was responded to;
  - Inspecting for presence of water, debris, or gas in spill containers;
  - Inspecting for presence of water, debris, or gas in under-dispenser containment and checking location of monitoring sensors;
  - Inspecting for presence of water, debris, or gas in containment sumps and checking location of monitoring sensors; and
  - Checking that all required testing and maintenance has been completed

20) Verify designated UST operator is conducting annual training.

- Training documentation includes:
  - Operation of USTs following BMPs;
  - Employee's role regarding monitoring equipment;
  - Employee's role regarding spills and overfills; and
  - Name of contact person for emergencies and alarms.
- At least one employee present during operation hours is trained.
- A list of trained employees is on site.
- All new employees have been trained within 30 days of hire.

## II. Liquid Sensors

1) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.

Record observations: \_\_\_\_\_

2) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypad's light.

Record results: \_\_\_\_\_

3) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.  
Record results: \_\_\_\_\_

4) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.  
Record results: \_\_\_\_\_

5) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.  
Record results: \_\_\_\_\_

6) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

7) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.  
Are all appropriate LED lights activated? \_\_\_\_\_

8) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.  
Record results: \_\_\_\_\_

9) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.  
Record results: \_\_\_\_\_

10) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

11) API/ROGAN LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.  
Record results: \_\_\_\_\_

12) API/ROGAN LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.  
Record results: \_\_\_\_\_

13) API/IRONAN LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection)  
Sensors Removed  Tested w/CGI  Record Results: \_\_\_\_\_

14) API/IRONAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.  
Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

15) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.  
Record results: OK

16) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.  
Record results: N/A

17) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
 Sensors Removed  Tested w/CGI. Record Results: OK

18) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.  
Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

19) VEEDER-ROOT ILS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection). To determine that each probe has alarmed, and to reset it, complete the following steps:

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.  
Record results: \_\_\_\_\_

8.1 "MIND BUSINESS HOURS"

1.1? ADDRESS SIGN - NOT VISIBLE FROM STREET

13.7 Damaged Ext. Cord in Shop

13.8 CODE ADAPTERS (1/10/07)  
CHECK

13.9 - OVERFILL - Red Valve not operating properly

677 East Lockwood, Lodi, CA 95240  
Phone (209) 365-1246 Fax: (209) 210-0009

February 14, 2007

## Testing Notification To:

**Agency Name:** MOUNTAIN VIEW - HAZ/MAT PROGRAM  
**Contact:** CHRIS STECK / SCOTT  
**Phone:** 650-903-6816  
**Fax:** 650-903-6101

## Schedule

### Test Site

**Name:** ARCO (BP)  
**Site #:** 02010  
**Address:** 2110 OLD MIDDLEFIELD WAY  
MOUNTAIN VIEW, CA 94043

**Test Date:** 2-22-07

**Time** 9 AM

Tanknology will conduct the following test(s):

- ◆ MONITOR, LDs
- ◆ SPILL BUCKETs
- ◆
- ◆ B-STOP
- ◆ SHEAR
- ◆ SURVEY

Please fax reply to (209) 365-1543 if you plan to witness the test. \_\_\_\_\_

Confirmation number (if applicable): \_\_\_\_\_

Please let us know if any of your agency information has changed.

### CONFIDENTIALITY NOTICE

This message is intended for the individual or entity for which it is addressed and may contain information that is legally privileged, confidential, and exempt from disclosure. If the reader of this message is not the intended recipient, you are hereby notified that any dissemination, distribution, or copying of this communication is strictly prohibited. If you received this communication in error, please notify us immediately by telephone to arrange for the return of the original material.

Thank you!

## Transmittal

**Date:** May 18, 2006

**TO:** City of Mountain View Fire Department  
Attn: Chris Steck  
1000 Villa Street  
Mountain View, CA 94041

**FROM:** Jim Brown

**Sent Via:** FedEx Ground  
**Ref#** 3586731 10009542

**RE:** Secondary Containment Testing  
ARCO# 2010  
2110 Old Middlefield Way  
Mountain View, CA 94043

Quantity	Description
1	Secondary Containment Test performed on 4/24/06.

**Comments:**

Please do not hesitate to call me at (949) 460-5200 if you have any questions or concerns regarding this work.

Jim Brown  
Project Manager

## Secondary Containment Testing Report Form

*This form is intended for use by contractors performing periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.*

### TEST NO. 1 - FACILITY INFORMATION

Page 1 of 1

Facility Name: ARCO #2010 - Test No. 1	Date of Testing: 4/24/06
Facility Address: 2110 Old Middlefield Way, Mt. View, CA 94043	
Facility Contact:	Phone:
Date Local Agency Was Notified of Testing:	
Name of Local Agency Inspector (if present during testing):	

### TESTING CONTRACTOR INFORMATION

Company Name: ABLE Maintenance		
Technician Conducting Test: James Moore

## Secondary Containment Testing Report Form

*This form is intended for use by contractors performing periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.*

### TEST NO. 2 - FACILITY INFORMATION

Page 1 of 2

Facility Name: ARCO #2010 - Test No. 2	Date of Testing: 4/24/06
Facility Address: 2110 Old Middlefield Way, Mt. View, CA 94043	
Facility Contact:	Phone:
Date Local Agency Was Notified of Testing:	
Name of Local Agency Inspector (if present during testing):	

### TESTING CONTRACTOR INFORMATION

Company Name: ABLE Maintenance	
Technician Conducting Test: James Moore	
Credentials: <input checked="" type="checkbox"/> CSLB Licensed Contractor	<input type="checkbox"/> SWRCB Licensed Tank Tester
License Type: A, B, Haz, C10	License Number: 312844

RE: ARCO #2010  
2110 Old Middlefield Way  
Mountain View, CA

Dear CUPA,

Enclosed is the annual Monitoring System Certification, Electronic line leak detector test data sheet, and the spill/overfill containment box test data sheets for the Arco facility listed above. In addition, enclosed is the service call for the failed 87 LLD and the response by Service Station Systems. SSS retested the 87 LLD and it passed test.

Please call me with any questions at (800) 525-5857 x6233.

Sincerely,

  
John Schetter

# MONITORING SYSTEM CERTIFICATION

*For Use By All Jurisdictions Within the State of California*  
 Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3 Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. If more than one monitoring system control panel is installed at the facility, a separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

**A. General Information**

Facility Name: ARCO #2010, CC 18022908

\* If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

**C. Certification**

I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct, and a Site Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the (Check all that apply):  System set-up  Alarm history report

# Monitoring System Certification

Site Address: 2110 OLD MIDDLEFIELD WAY

Date of Testing/Service: 03/13/2006

## D. Results of Testing/Service

Software Version installed: 123.01

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*		Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*		Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*		Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*		Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	<input checked="" type="checkbox"/> N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	<input type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes, which sensors initiate positive shut-down? (check all that apply) <input checked="" type="checkbox"/> Sump/Trench Sensors; <input checked="" type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	<input type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overflow warning device (i.e.: no mechanical overflow prevention valve is installed), is the overflow warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? <u>90</u> %
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No		Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No		Was liquid found inside any secondary containment systems designed as dry systems? (check all that apply) <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*		Was monitoring system set-up reviewed to ensure proper settings? Attach set-up reports, if applicable.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*		Is all monitoring equipment operational per manufacturers' specifications?

\* In Section E below, describe how and when these deficiencies were or will be corrected.

## E. Comments:

87 P.L.D FAILED. REPLACED SIPHON JET VALVE ON 87 SLAVE , UNABLE TO CHANGE 87 MASTER SIPHON JET VALVE. REPORTED AND NEEDS TO BE RETESTED.

# Monitoring System Certification

Site Address: 2110 OLD MIDDLEFIELD WAY

Date of Testing/Service: 03/13/2006

## F. In-Tank Gauging / SIR Equipment

- Check this box if tank gauging is used only for inventory control.  
 Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Were all tank gauging probes visually inspected for damage and residue buildup?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Was accuracy of system product level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Was accuracy of system water level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Were all probes reinstalled properly?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Were all items on the equipment manufacturers' maintenance checklist completed?

\* In the Section H, below, describe how and when these deficiencies were or will be corrected.

## G. Line Leak Detectors (LLD) :

- Check this box if LLDs are not installed.

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input checked="" type="checkbox"/> 3 g.p.h <input type="checkbox"/> 0.1 g.p.h <input type="checkbox"/> 0.2 g.p.h
<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No		Were all LLDs confirmed operational and accurate within regulatory requirements?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No		Was the testing apparatus properly calibrated?
<input type="checkbox"/> Yes	<input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No		Were all items on the equipment manufacturers' maintenance checklist completed?

\* In the Section H, below, describe how and when these deficiencies were or will be corrected.

**Electronic Leak Detector Test Data Sheet**

Station # 20115 Date MARCH 13, 2006

Address 2110 OLD MIDDLEFIELD C.S.1

MOUNTAIN VIEW, CA

**Test Information**

	1	2	3	4	5
Product	B7-M	<del>87-M</del>	<del>87-M</del>		
Manufacturer	VR	VR			
Model	P110	179272	179210		
Line Bleed Back (ml)		140			
Check Valve Holding Pressure (psi)	31	27	27		
Test Leak Rate (ml/min) (gph)	189/min	189/min			
PASS or FAIL	F	F			

INCONCLUSIVE

Comments: 87 MASTER LD FAILED, CHANGED SIPHON JET VALUE.

LINE NEEDS TIME TO DURG.

This letter certifies that the annual leak detector tests were performed at the above referenced facility according to the equipment manufacturers procedures and limitations and the results as listed are to my knowledge true and correct. The mechanical leak detector test pass/fail is determined using a low flow threshold trip rate of 3 gph at 10 PSI.

Inspected By: Contractor TANKNOLOGY

Technician A. CRUZ Lic# 0018-05-1503

Revision 5/01

## Secondary Containment Testing Report Form

*This form is intended for use by contractors performing periodic testing of LIST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.*

# MONITORING SYSTEM CERTIFICATION

*Use By All Jurisdictions Within the State of California*

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3 Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. If more than one monitoring system control panel is installed at the facility, a separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

### A. General Information

Facility Name: ARCO #2010, CC 18022909 City: MOUNTAIN VIEW CA Zip: 94043

### C. Certification

I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturers' guidelines. Attached to this certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct, and a Site Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the (Check all that apply):  System set-up  Alarm history report

# Monitoring System Certification

Site Address: 2110 OLD MIDDLEFIELD WAY

Date of Testing/Service: 03/13/2006

## D. Results of Testing/Service

Software Version Installed: 123.01

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No *		Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No *		Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No *		Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No *		Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input type="checkbox"/> Yes	<input type="checkbox"/> No *	<input checked="" type="checkbox"/> N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No *	<input type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? (check all that apply) <input checked="" type="checkbox"/> Bump/Trench Sensors; <input checked="" type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No *	<input type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overflow warning device (i.e.: no mechanical overflow prevention valve is installed), is the overflow warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? <u>00</u> %
<input type="checkbox"/> Yes *	<input checked="" type="checkbox"/> No		Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input type="checkbox"/> Yes *	<input checked="" type="checkbox"/> No		Was liquid found inside any secondary containment systems designed as dry systems? (check all that apply) <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No *		Was monitoring system set-up reviewed to ensure proper settings? Attach set-up reports, if applicable.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No *		Is all monitoring equipment operational per manufacturers' specifications?

\* In Section E below, describe how and when these deficiencies were or will be corrected.

## E. Comments:

87 PLLD FAILED. REPLACED SIPHON JET VALVE ON 87 SLAVE, UNABLE TO CHANGE 87 MASTER SIPHON JET VALVE. REPORTED AND NEEDS TO BE RETESTED.

# Monitoring System Certification

Site Address: 2110 OLD MIDDLEFIELD WAY

Date of Testing/Service: 03/13/2006

## F. In-Tank Gauging / SIR Equipment

- Check this box if tank gauging is used only for inventory control.  
 Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Were all tank gauging probes visually inspected for damage and residue buildup?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Was accuracy of system product level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Was accuracy of system water level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Were all probes reinstalled properly?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	Were all items on the equipment manufacturers' maintenance checklist completed?

\* In the Section H, below, describe how and when these deficiencies were or will be corrected.

## G. Line Leak Detectors (LLD) :

- Check this box if LLDs are not installed.

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input checked="" type="checkbox"/> 3 g.p.h <input type="checkbox"/> 0.1 g.p.h <input type="checkbox"/> 0.2 g.p.h
<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No		Were all LLDs confirmed operational and accurate within regulatory requirements?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No		Was the testing apparatus properly calibrated?
<input type="checkbox"/> Yes	<input type="checkbox"/> No	<input checked="" type="checkbox"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No		Were all items on the equipment manufacturers' maintenance checklist completed?

\* In the Section H, below, describe how and when these deficiencies were or will be corrected.

## H. Comments:

## Secondary Containment Testing Report Form

*This form is intended for use by contractors performing periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.*

UST Leak Detection Inspection Worksheet (02/05)

Address: 7110 Old Millfield

Date: 3/13/02

Business Name: ARCO

Contact: Townology

Leak Detection Program:

- Tanks: Electronic Liquid Sensors
- Piping: Electronic Liquid Sensors

I. General

- 1) *Inspect overflow container of each tank.*
  - Any missing overflow containers? No
  - Record any overflow container with free product that cannot be drained into the tank: \_\_\_\_\_
- 2) *Verify that overflow containment has been tested by a third party contractor within the last year.*
  - Last annual overflow test date: 2/22/02
  - Has this been completed within the last year? No
- 3) *Inspect overflow prevention device of each tank (flapper valve or equivalent).*
  - Any missing overflow prevention devices? No
- 4) *Inspect manway sump of each tank.*
  - Any liquid in the sumps from rain or product? No
- 5) *Remove faceplate from each dispenser and inspect:*
  - Any crimped or collapsed hoses? No
  - Any leaking pipes or joints? \_\_\_\_\_
  - Any loose or missing fittings or hose connectors? \_\_\_\_\_
  - Any exposed electrical wires? \_\_\_\_\_
  - Any open conduit? \_\_\_\_\_
  - Any missing shear valves? \_\_\_\_\_
  - Area under the dispensers dry? Yes
- 6) *Inspect shear valves for operation:*
  - Have all shear valves been tested for activation? Yes Do any not work? No
  - Are float/chain mechanisms tensioned properly? Yes
- 7) *Inspect Emergency Shut-Off switch:*
  - Is it located within 75" of any dispenser? Yes
  - Is it labeled? Yes
  - Is it working (test with one product)? Yes

8) *Inspect fire extinguishers:*

- Are they located within 75 feet of all pumps/dispensers? Y Y
- Are they located in accessible areas? Y
- Have they been serviced within the last 12 months? Y
- Are they rated 2-A:20-B:C minimum? Y

9) *Inspect signage. Are the following signs posted and within sight of each dispenser?*

- "Smoking Prohibited": OK
- "Vehicles Must Stop During Fueling Operations": Y
- "Dispensing into Unapproved Containers is Prohibited": Y
- For unsupervised locations only, the emergency sign shown below: N/A

<b>IN CASE OF FIRE OR SPILL</b>
1. Use emergency pump shutoff
2. Report the accident
Fire Department: Call 911
Facility Address

10) *Verify annual testing of mechanical or electronic line leak detector.*

- Required
- Not required—sensor in sumps shut off turbine pumps.
- Not applicable—suction system

- Date of last test: \_\_\_\_\_
- If last test was conducted over a year ago, indicate how re-test will be performed:

\_\_\_\_\_ Tested on site with test equipment. Results: \_\_\_\_\_

\_\_\_\_\_ Tested by third-party. Date of test: \_\_\_\_\_ . Results: \_\_\_\_\_

11) *Verify that the leak detection systems are functioning.*

- Is there power to all leak detection systems? Y Y

12) *Determine current alarm status.*

- Describe current alarm conditions for each detection system: None

13) *Verify electrical continuity of leak detection system.*

- Has leak detection system been tested for electrical continuity (so that breaks in the wiring cause an alarm condition)? Y Y. Test results: OK
- Does a simulated loss of power shut down the turbine? Y Y

14) *Verify daily inspection log.*

- Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? Y Y
- Is the log up to date? Y Y. If not, date of last entry was: \_\_\_\_\_

15) Verify that cathodic protection is working properly (if applicable):

- Complete the cathodic protection worksheet and record violations: W/A

16) Verify 3rd party alarm monitoring, (if applicable).

- Alarm test date: \_\_\_\_\_ Alarm test time: \_\_\_\_\_ W/A
- Alarm verification date: \_\_\_\_\_ Alarm verification time: \_\_\_\_\_
- Alarm company: \_\_\_\_\_

17) Verify certification of all monitoring equipment has been completed within the last year.

- Last annual certification date: 2/17/07
- Has this been completed within the last year? NO

18) Verify secondary containment testing has been completed within the last 3 years.

- Last secondary containment test date: 5/16/07
- Has this been completed within the last 3 years? Yes

19) Verify designated UST operator is conducting monthly visual inspections.

- Results of monthly visual inspections are recorded and include:
  - Review of alarm history for the previous month and documenting alarm was responded to;
  - Inspecting for presence of water, debris, or gas in spill containers;
  - Inspecting for presence of water, debris, or gas in under-dispenser containment and checking location of monitoring sensors;
  - Inspecting for presence of water, debris, or gas in containment sumps and checking location of monitoring sensors; and
  - Checking that all required testing and maintenance has been completed

20) Verify designated UST operator is conducting annual training.

- Training documentation includes:
  - Operation of USTs following BMPs;
  - Employee's role regarding monitoring equipment;
  - Employee's role regarding spills and overfills; and
  - Name of contact person for emergencies and alarms.
- At least one employee present during operation hours is trained.
- A list of trained employees is on site.
- All new employees have been trained within 30 days of hire.

## II. Liquid Sensors

1) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.

Record observations: \_\_\_\_\_

2) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light.

Record results: \_\_\_\_\_

3) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.

Record results: \_\_\_\_\_

4) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record results: \_\_\_\_\_

5) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

6) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

7) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.

Are all appropriate LED lights activated? \_\_\_\_\_

8) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.

Record results: \_\_\_\_\_

9) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

10) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

11) API/ROGAN LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

12) API/ROGAN LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

13) API/ROGAN LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

14) API/ROGAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.  
Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

15) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.  
Record results: \_\_\_\_\_ *OK*

16) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.  
Record results: \_\_\_\_\_ *N/A*

17) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
 Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_ *OK*

18) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.  
Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

19) VEEDER-ROOT ILS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection). To determine that each probe has alarmed, and to reset it, complete the following steps:

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.  
Record results: \_\_\_\_\_

20) VEEDER-ROOT ILS-350 LIQUID SENSOR. Verify probe function in *manway of tanks*.  
Remove probes and submerge in water.

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.

Record results: \_\_\_\_\_

21) VEEDER-ROOT DISPENSER SENSOR. Verify probe function in *dispensers*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_ 01/

22) BEAUDREAU DISPENSER SENSOR. Verify probe function in *dispenser pans*. Remove probe from holder. Place probe in black cup.

Record results: \_\_\_\_\_

**Beaudreau System 800 Alarm Reset Procedure:**

1. The display will read:   Disp #XX Status  
  Fuel: ALARM
2. Press escape, display will read:                                   Main Menu  
  Monitoring Mode
3. Press the Right Arrow key until "Alarm Control" appears.
4. Press "ENTER".
5. Display shows "Clear Alarm".
6. Press "ENTER".
7. The display will show the current sensor in alarm.
8. Press "ENTER".
9. Display will show alarm cleared.
10. Press "ESC" twice to return to Monitoring Mode.

677 East Lockeford, Lodi, CA 95240

**Testing Notification To:**

**Agency Name:** MOUNTAIN VIEW - HAZ/MAT PROGRAM

**Contact:** GARY LEINWEBER

**Phone:** 650-903-6378

**Fax:** 650-903-6122

JA

**Schedule**

~~XXXXXX~~ (CALIFORNIA) or Tech

<u>Test Site</u>	
<b>Name:</b>	ARCO
<b>Site #:</b>	2010
<b>Address:</b>	2110 OLD MIDDLEFIELD WAY MOUNTAIN VIEW, CA 94043

916-997-9087

**Test Date:** 3-13-06

**Time** 9 AM

Tanknology will conduct the following test(s):

- ◆ MONITOR, LDs
- ◆ SPILL BUCKETS
- ◆ E-STOP
- ◆ SHEAR
- ◆ SURVEY
- ◆

Please fax reply to (209) 365-1543 if you plan to witness the test. \_\_\_\_\_

Confirmation number (if applicable): \_\_\_\_\_

Please let us know if any of your agency information has changed.

Thank you!

# MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California  
 Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

### A. General Information

Facility Name: ARCO PRODUCTS COMPANY Service Station No.: 2010

Site Address: 2110 OLD MIDDLEFIELD WAY City: MOUNTAIN VIEW Zip: 94041

Facility Contact Person: John Schuler Contact Phone No.: (209)649-3335

Make/Model of Monitoring System: VR7LS 350 plus Date of Testing/Service: 2-22-05

### B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

<p>Tank ID: <u>81 waste</u></p> <p><input checked="" type="checkbox"/> In-Tank Gauging Probe: Model: <u>847390 -109</u></p> <p><input checked="" type="checkbox"/> Annular Space or Vault Sensor: Model: <u>794390 -407</u></p> <p><input checked="" type="checkbox"/> Piping Sump/Trench Sensor(s): Model: <u>794380 -708</u></p> <p><input checked="" type="checkbox"/> Fill Sump Sensor(s): Model: <u>794380 -708</u></p> <p><input checked="" type="checkbox"/> Mechanical Line Leak Detector: Model: _____</p> <p><input checked="" type="checkbox"/> Electronic Line Leak Detector: Model: <u>PLLD</u></p> <p><input checked="" type="checkbox"/> Tank Overfill/High-level Sensor: Model: _____</p> <p><input checked="" type="checkbox"/> Other, Specify equip. type and model in Section E on Page 2</p>	<p>Tank ID: <u>71</u></p> <p><input checked="" type="checkbox"/> In-Tank Gauging Probe: Model: <u>847390 -109</u></p> <p><input checked="" type="checkbox"/> Annular Space or Vault Sensor: Model: <u>794390 -407</u></p> <p><input checked="" type="checkbox"/> Piping Sump/Trench Sensor(s): Model: <u>794380 -708</u></p> <p><input checked="" type="checkbox"/> Fill Sump Sensor(s): Model: <u>794380 -708</u></p> <p><input checked="" type="checkbox"/> Mechanical Line Leak Detector: Model: _____</p> <p><input checked="" type="checkbox"/> Electronic Line Leak Detector: Model: <u>PLLD</u></p> <p><input checked="" type="checkbox"/> Tank Overfill/High-level Sensor: Model: _____</p> <p><input checked="" type="checkbox"/> Other, Specify equip. type and model in Section E on Page 2</p>

\*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at this facility.

C. Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturer's guidelines. Attached to this Certification is information (e.g. manufacturer's checklist) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report(s) (check all that apply):  System set-up  Alarm history report

Technician Name (Print): Carl Allen Signature: \_\_\_\_\_

Monitoring System Certification

Site Address: 2010 2110 OLD MIDDLEFIELD WAY, MOUNTAIN VIEW, CA 94041 Date of Testing/Service: 2-22-05

D. Results of Testing/Service

Software Version Installed: n3.01

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? (Check all that apply) <input checked="" type="checkbox"/> Sump/Trench Sensors; <input checked="" type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? <input checked="" type="checkbox"/> Yes; <input type="checkbox"/> No.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overflow warning device (i.e. no mechanical overflow prevention valve is installed), is the overflow warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 95%
<input checked="" type="checkbox"/> Yes*	<input type="checkbox"/> No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input checked="" type="checkbox"/> Yes*	<input checked="" type="checkbox"/> No	Was liquid found inside any secondary containment system designed as dry systems? (Check all that apply) <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was monitoring system set-up reviewed to ensure proper settings?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is all monitoring equipment operational per manufacturer's specifications?

\* In Section E below, describe how and when these deficiencies were or will be corrected.

**F. In-Tank Gauging / SIR Equipment:**

- Check this box if tank gauging is used only for inventory control  
 Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

\* In the Section H, below, describe how and when these deficiencies were or will be corrected.

**G. Line Leak Detectors (LLD):**

- Check this box if LLDs are not installed.

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input checked="" type="checkbox"/> 3 g.p.h. <sup>1</sup> ; <input type="checkbox"/> 0.1 g.p.h. <sup>2</sup> ; <input type="checkbox"/> 0.2 g.p.h. <sup>2</sup> Notes: 1. Required for equipment start-up certification and annual certification. 2. Unless mandated by local agency, certification required only for electronic LLD start-up.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was the testing apparatus properly calibrated?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

\* In the Section H, below, describe how and when these deficiencies were or will be corrected.

**H. Comments:**

Arco Products Company

### Electronic Leak Detector Test Data Sheet

Station #: 2010 Date: 2/22/2005  
 Address: 2110 OLD MIDDLEFIELD WAY  
MOUNTAIN VIEW

#### Test Information

	1	2	3	4	5
Product	R7	91			
Manufacturer	V.R	VR			
Model	PLLD	PLLD			
Line Bleed Back (mi)	200	140			
Check Valve Holding Pressure (psi)	20	20			
Test Leak Rate (ml/min) (gph)	1.87	1.87			
PASS or FAIL	PASS	PASS			

Comments:

---

---

---

This letter certifies that the annual leak detector tests were performed at the above referenced facility according to the equipment manufacturers procedures and limitations and the results as listed are to my knowledge true and correct. The mechanical leak detector test pass/fail is determined using a low flow threshold trip rate of 3 gph at 10 PSI.

## Secondary Containment Testing Report Form

This form is intended for use by contractors performing periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

### 1. FACILITY INFORMATION

Facility Name: <u>ARCIS SA # 2010</u>	Date of Testing: <u>2-22-05</u>
Facility Address: <u>2110 Old Middlefield Way, Mountain View, CA 94043</u>	
Facility Contact: <u>John Salmer</u>	Phone: <u>(209) 649-3335</u>
Date Local Agency Was Notified of Testing: <u>48 hours prior</u>	
Name of Local Agency Inspector (if present during testing):	

### 2. TESTING CONTRACTOR INFORMATION

Company Name: <u>Tait Environmental Systems</u>		
Technician Conducting Test: <u>Patrick Herrmann</u>		
Credentials: <u>CSLB Licensed Contractor</u>	SWRCB Licensed Tank Tester	
License Type: <u>A ASB HAZB C-10</u>	License Number: <u>588098</u>	
Manufacturer	Manufacturer Training Component(s)	Date Training Expires

### 3. SUMMARY OF TEST RESULTS

Component	Pass	Fail	Not Tested	Repairs Made	Component	Pass	Fail	Not Tested	Repairs Made
<u>91 Fill</u>	<u>X</u>								
<u>91 Vapor</u>	<u>X</u>								
<u>87 Master Fill</u>	<u>X</u>								
<u>87 Master Vapor</u>	<u>X</u>								
<u>87 Slave Fill</u>	<u>X</u>								
<u>87 Slave Vapor</u>	<u>X</u>								
<u>Waste oil</u>	<u>X</u>								

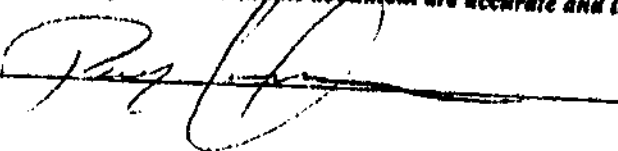

If hydrostatic testing was performed, describe what was done with the water after completion of tests:

Test water was placed into a 55 gallon drum, labeled hazardous waste and left on-site.

#### CERTIFICATION OF TECHNICIAN RESPONSIBLE FOR CONDUCTING THIS TESTING

*To the best of my knowledge, the facts stated in this document are accurate and in full compliance with legal requirements*

Technician's Signature: \_\_\_\_\_

Date: 2-22-05

UNDERGROUND TANK  
SAFETY NOTICE

Business Name: Arco Business Phone: \_\_\_\_\_  
Business Address: 2110 Old Mt. Diablo Blvd Business Contact: TIAH  
Date: 2/22/05 Start Time: 9 End Time: 10:30 Inspector: JAH SPECIC  
Inspection Number (circle one): 2/3/4/5

A REASONABLE DEGREE OF COMPLIANCE EXISTS AT THIS TIME.  
 CITY AND STATE CODE REQUIRES COMPLIANCE WITH THE ITEMS LISTED BELOW:

1. ADMINISTRATIVE:

- a. Daily Inspection Log (MVCC 24.19.g)  
A daily inspection log verifying that your leak detection: (1) has power, and (2) is/is not in alarm, must be maintained on the premises and available for review by the Fire Department. Call (415) 903-6378 to obtain copies of a sample inspection log.
- b. Notification of Alarms (MVCC 24.25.a.2.(a))  
You must immediately report an alarm from any leak detection equipment to the Fire Department at (415) 903-6821. You have five (5) working days to determine the cause for the alarm. If no cause can be found, it is assumed that a tank/piping failure has taken place and the affected tank/piping shall be closed until the cause for the alarm can be determined.

2. TANKS/PIPING SYSTEM:

The following items were noted as requiring corrective action:

- a. Dispenser Fittings/Hoses: \_\_\_\_\_
- b. Sub-Pumps/Manways: \_\_\_\_\_
- c. Overfill/Overspill Devices: \_\_\_\_\_
- d. Emergency Shut-Off: \_\_\_\_\_

3. LEAK DETECTION SYSTEM(S) FOR TANKS/PIPING:

All leak detection systems must be maintained in proper working order. The following items were noted as requiring corrective action:

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

Additional Requirements and/or Comments: \_\_\_\_\_

\_\_\_\_\_  
A REINSPECTION SHALL BE CONDUCTED IN FIVE DAYS. ADDITIONAL INSPECTIONS AFTER THE FIRST REINSPECTION ARE BILLED AT \$40.00/HOUR/MAN, ONE-HOUR MINIMUM.

\_\_\_\_\_  
ALL VIOLATIONS HAVE BEEN CORRECTED. THANK YOU!

1. The first section of the document discusses the initial findings of the investigation, which were conducted over a period of several months.

2. It is noted that the data collected during this phase is preliminary and subject to further review and analysis.

3. The following table provides a summary of the key findings identified during the initial phase of the investigation.

4. The results of this initial phase suggest a strong correlation between the variables studied, although further research is needed to confirm these findings.

5. In conclusion, the initial phase of the investigation has provided valuable insights into the complex nature of the problem being studied.

6. It is recommended that further research be conducted to explore the underlying causes of the observed phenomena and to develop effective strategies for addressing these issues.

7. The findings of this initial phase will serve as the foundation for the subsequent phases of the investigation.

8. The data collected during this phase is being made available to the relevant stakeholders for their review and comment.

9. The results of this initial phase are being disseminated to the appropriate personnel to ensure that they are kept abreast of the latest developments.

10. The findings of this initial phase are being used to inform the development of a comprehensive report on the investigation.

11. The results of this initial phase are being used to inform the development of a comprehensive report on the investigation.

12. The findings of this initial phase are being used to inform the development of a comprehensive report on the investigation.

13. The results of this initial phase are being used to inform the development of a comprehensive report on the investigation.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that this is crucial for the company's financial health and for providing reliable information to stakeholders.

2. The second part of the document outlines the specific procedures for recording transactions. It details the steps from initial entry to final review, ensuring that all necessary information is captured and verified.

3. The third part of the document addresses the role of the accounting department in this process. It highlights the need for clear communication and collaboration between different departments to ensure the accuracy and timeliness of the records.

4. The fourth part of the document discusses the challenges associated with maintaining accurate records. It identifies common pitfalls and provides strategies to avoid them, such as regular audits and the use of standardized procedures.

5. The fifth part of the document concludes by reiterating the importance of this process and the commitment of the company to maintaining the highest standards of accuracy and transparency.

6. The sixth part of the document provides a summary of the key points discussed throughout the document. It serves as a quick reference for anyone involved in the accounting process.

7. The seventh part of the document includes a list of references and resources used in the preparation of this document. This includes relevant accounting standards and industry best practices.

8. The eighth part of the document contains a list of appendices, which provide additional details and supporting information for the main text.

9. The ninth part of the document discusses the impact of technology on the accounting process. It explores how modern software solutions can streamline operations and reduce the risk of errors.

10. The tenth part of the document addresses the future of accounting. It discusses emerging trends and technologies that are expected to shape the industry in the coming years.

11. The eleventh part of the document provides a detailed overview of the company's accounting policies. It outlines the principles and methods used to record and report financial information.

12. The twelfth part of the document discusses the role of the internal audit function. It explains how internal audits help to ensure the integrity and reliability of the financial statements.

13. The thirteenth part of the document includes a list of abbreviations and acronyms used throughout the document. This helps to clarify any potentially confusing terms.

14. The fourteenth part of the document contains a list of footnotes, which provide additional information and references for the data presented in the document.

15. The fifteenth part of the document includes a list of references, which cite the sources of the information used in the document.

UST Leak Detection Inspection Worksheet (02/05)

Address: 710 W Middlefield

Date: 2/20/07

Business Name: ARCO

Contact: JAIT

\*\*\*\*\*  
Leak Detection Program:  
--Tanks: Electronic Liquid Sensors  
--Piping: Electronic Liquid Sensors  
\*\*\*\*\*

I. General

- 1) *Inspect overspill container of each tank.*
  - Any missing overspill containers? NO
  - Record any overspill container with free product that cannot be drained into the tank: None
- 2) *Verify that overspill containment has been tested by a third party contractor within the last year.*
  - Last annual overspill test date: 2/21/07
  - Has this been completed within the last year? Yes
- 3) *Inspect overfill prevention device of each tank (flapper valve or equivalent).*
  - Any missing overfill prevention devices? Ball Float
- 4) *Inspect manway sump of each tank.*
  - Any liquid in the sumps from rain or product? NO
- 5) *Remove faceplate from each dispenser and inspect:*
  - Any crimped or collapsed hoses? NO
  - Any leaking pipes or joints? \_\_\_\_\_
  - Any loose or missing fittings or hose connectors? \_\_\_\_\_
  - Any exposed electrical wires? \_\_\_\_\_
  - Any open conduit? \_\_\_\_\_
  - Any missing shear valves? \_\_\_\_\_
  - Area under the dispensers dry? Yes
- 6) *Inspect shear valves for operation:*
  - Have all shear valves been tested for activation? Yes Do any not work? NO
  - Are float/chain mechanisms tensioned properly? Yes
- 7) *Inspect Emergency Shut-Off switch:*
  - Is it located within 75" of any dispenser? Yes
  - Is it labeled? \_\_\_\_\_
  - Is it working (test with one product)? \_\_\_\_\_

8) Inspect fire extinguishers:

- Are they located within 75 feet of all pumps/dispensers? Yes
- Are they located in accessible areas? \_\_\_\_\_
- Have they been serviced within the last 12 months? \_\_\_\_\_
- Are they rated 2-A:20-B:C minimum? \_\_\_\_\_

9) Inspect signage. Are the following signs posted and within sight of each dispenser?

- "Smoking Prohibited": Yes
- "Vehicles Must Stop During Fuelling Operations": \_\_\_\_\_
- "Dispensing Into Unapproved Containers Is Prohibited": \_\_\_\_\_
- For unsupervised locations only, the emergency sign shown below: NA

<b>IN CASE OF FIRE OR SPILL</b>
1. Use emergency pump shutoff
2. Report the accident!
Fire Department: Call 911
Facility Address

10) Verify annual testing of mechanical or electronic line leak detector.

- Required
- Not required—sensor in sumps shut off turbine pumps.
- Not applicable—suction system

• Date of last test: 2/17/04

• If last test was conducted over a year ago, indicate how re-test will be performed:  
Tested on site with test equipment. Results: \_\_\_\_\_  
Tested by third-party. Date of test: \_\_\_\_\_ . Results: \_\_\_\_\_

11) Verify that the leak detection systems are functioning.

- Is there power to all leak detection systems? Yes

12) Determine current alarm status.

- Describe current alarm conditions for each detection system: None

13) Verify electrical continuity of leak detection system.

- Has leak detection system been tested for electrical continuity (so that breaks in the wiring cause an alarm condition)? Yes. Test results: shut down
- Does a simulated loss of power shut down the turbine? Yes

14) Verify daily inspection log.

- Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? Yes
- Is the log up to date? Yes. If not, date of last entry was: \_\_\_\_\_

15) Verify that cathodic protection is working properly (if applicable): NY  
• Complete the cathodic protection worksheet and record violations: \_\_\_\_\_

16) Verify 3rd party alarm monitoring, (if applicable). NY  
• Alarm test date: \_\_\_\_\_ Alarm test time: \_\_\_\_\_  
• Alarm verification date: \_\_\_\_\_ Alarm verification time: \_\_\_\_\_  
• Alarm company: \_\_\_\_\_

17) Verify certification of all monitoring equipment has been completed within the last year.  
• Last annual certification date: 7/2/07  
• Has this been completed within the last year? Y

18) Verify secondary containment testing has been completed within the last 3 years.  
• Last secondary containment test date: 5/6/07  
• Has this been completed within the last 3 years? Y

19) Verify designated UST operator is conducting monthly visual inspections.  
• Results of monthly visual inspections are recorded and include:  
 Review of alarm history for the previous month and documenting alarm was responded to;  
 Inspecting for presence of water, debris, or gas in spill containers;  
 Inspecting for presence of water, debris, or gas in under-dispenser containment and checking location of monitoring sensors;  
 Inspecting for presence of water, debris, or gas in containment sumps and checking location of monitoring sensors; and  
 Checking that all required testing and maintenance has been completed

20) Verify designated UST operator is conducting annual training. NY at 11/17/07  
• Training documentation includes:  
\_\_\_ Operation of USTs following BMPs;  
\_\_\_ Employee's role regarding monitoring equipment;  
\_\_\_ Employee's role regarding spills and overfills; and  
\_\_\_ Name of contact person for emergencies and alarms.  
  
\_\_\_ At least one employee present during operation hours is trained.  
\_\_\_ A list of trained employees is on site.  
\_\_\_ All new employees have been trained with 30 days of hire.

## II. Liquid Sensors

1) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.  
Record observations: \_\_\_\_\_

2) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light.  
Record results: \_\_\_\_\_

3) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.

Record results: \_\_\_\_\_

4) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record results: \_\_\_\_\_

5) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

6) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

7) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.

Are all appropriate LED lights activated? \_\_\_\_\_

8) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.

Record results: \_\_\_\_\_

9) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

10) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

11) API/ROGAN LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

12) API/ROGAN LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

13) API/ROGAN LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

14) API/ROGAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

15) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*.

Remove probe from holder. Submerge probe in water or turn upside down.

Record results: OK

16) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: NA

17) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

X Sensors Removed \_\_\_ Tested w/CGI. Record Results: OK All submerged

shut down when any liquid sensor is activated.

18) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

19) VEEDER-ROOT ILS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection). To determine that each probe has alarmed, and to reset it, complete the following steps:

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.

Record results: \_\_\_\_\_

20) VEEDER-ROOT ILS-350 LIQUID SENSOR. Verify probe function in *manway of tanks*.  
Remove probes and submerge in water.

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.

Record results: \_\_\_\_\_

21) VEEDER-ROOT DISPENSER SENSOR. Verify probe function in *dispensers*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

22) BEAUDREAU DISPENSER SENSOR. Verify probe function in *dispenser pans*. Remove probe from holder. Place probe in black cup.

Record results: \_\_\_\_\_ *DK*

**Beaudreau System 500 Alarm Reset Procedure:**

- 1. The display will read:                                   Disp #XX Status  
   Fuel: ALARM
- 2. Press escape, display will read:                   Main Menu  
   Monitoring Mode
- 3. Press the Right Arrow key until "Alarm Control" appears.
- 4. Press "ENTER".
- 5. Display shows "Clear Alarm".
- 6. Press "ENTER".
- 7. The display will show the current sensor in alarm.
- 8. Press "ENTER".
- 9. Display will show alarm cleared.
- 10. Press "ESC" twice to return to Monitoring Mode.

RE: ARCO #2010  
2110 Old Middlefield Way  
Mountain View, CA

Dear Kirt Dansager,

Please find the annual Monitoring System Certification, Electronic line leak detector test data sheet, and the spill/overflow containment box tests for the Arco facility listed above.

Please call me with any questions at (800) 525-6857 x6233.

Sincerely,

John Schetter  
Environmental Compliance Specialist  
US Convenience Retail Business

# MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California  
 Authority Cited: Chapter 6.7, Health and Safety Code, Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

## A. General Information

Facility Name: ARCO PRODUCTS COMPANY Service Station No.: 2010

Site Address: 2110 OLD MIDDLEFIELD WAY City: MOUNTAIN VIEW Zip: 94043

Facility Contact Person: John Scheller Contact Phone No.: 214-649-3335

Make/Model of Monitoring System: VR TCS 350 Plus Date of Testing/Service: 2/24/04

## B. Inventory of Equipment Tested/Certified

Check the appropriate boxes to indicate specific equipment inspected/serviced:

\*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at this facility.

C. Certification - I certify that the equipment identified in this document was inspected/serviced in accordance with the manufacturer's guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report; (check all that apply):  System set-up  Alarm history report

Technician Name (Print): Craig Black Signature: Craig Black

Certification No.: 1356 License No.: 588-098

Testing Company Name: TAIT ENVIRONMENTAL SYSTEMS Phone No.: (714) 560-8222

**F. In-Tank Gauging / SIR Equipment:**  
2110 OLD MIDDLEFIELD WAY

- Check this box if tank gauging is used only for inventory control
- Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

\* In the Section H, below, describe how and when these deficiencies were or will be corrected.

**G. Line Leak Detectors (LLD):**

- Check this box if LLDs are not installed

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input checked="" type="checkbox"/> 3 g.p.h. <sup>1</sup> ; <input type="checkbox"/> 0.1 g.p.h. <sup>2</sup> ; <input type="checkbox"/> 0.2 g.p.h. <sup>2</sup> Notes: 1. Required for equipment start-up certification and annual certification. 2. Unless mandated by local agency, certification required only for electronic LLD start-up.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was the testing apparatus properly calibrated?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

\* In the Section H, below, describe how and when these deficiencies were or will be corrected.

**H. Comments:**

Site Address: 2110 OLD MIDDLEFIELD WAY

Date of Testing/Service: 2/24/04

D. Results of Testing/Service

Software Version Installed: 123 01

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the audible alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is the visual alarm operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? (Check all that apply) <input checked="" type="checkbox"/> Sump/Trench Sensors; <input checked="" type="checkbox"/> Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? <input checked="" type="checkbox"/> Yes; <input type="checkbox"/> No.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For tank systems that utilize the monitoring system as the primary tank overflow warning device (i.e. no mechanical overflow prevention valve is installed), is the overflow warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? ...% 90
<input checked="" type="checkbox"/> Yes*	<input type="checkbox"/> No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
<input checked="" type="checkbox"/> Yes*	<input type="checkbox"/> No	Was liquid found inside any secondary containment systems designed as dry systems? (Check all that apply) <input type="checkbox"/> Product; <input type="checkbox"/> Water. If yes, describe causes in Section E, below.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was monitoring system set-up reviewed to ensure proper settings?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Is all monitoring equipment operational per manufacturer's specifications?

\* In Section E below, describe how and when these deficiencies were or will be corrected.

E. Comments:

Blank area for handwritten comments.

## Secondary Containment Testing Report Form

*This form is intended for use by contractors performing periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.*

### Electronic Leak Detector Test Data Sheet

Station #: 2010 Date: 2/24/2004  
 Address: 2110 OLD MIDDLEFIELD  
WAY  
MOUNTAIN VIEW

#### Test Information

	1	2	3	4	5
Product	97	91			
Manufacturer	VR	VR			
Model	PLLD	PLLD			
Line Bleed Back (ml)	295	195			
Check Valve Holding Pressure (psi)	22	22.5			
Test Leak Rate (ml/min) (gph)	199	199			
PASS or FAIL	Pass	Pass			

Comments:

---

---

---

This letter certifies that the annual leak detector tests were performed at the above referenced facility according to the equipment manufacturers procedures and limitations and the results as listed are to my knowledge true and correct. The mechanical leak detector test pass/fail is determined using a low flow threshold trip rate of 3 gph at 10 PSI.

Samples Taken? No Photographs Taken? No  
Inspector(s):

***The Following Violations Have Been Observed During This Inspection:***

**FIRE CODE PROGRAM VIOLATIONS:**

FC-13.1•Remove extension cords as a substitute for permanent wiring. (CFC §8506.1). Location: Kiosk

**HAZARDOUS MATERIALS PROGRAM VIOLATIONS:**

HMO-1.3•A business shall submit amendments to the ECP whenever changes in the information occur. Update "Inventory" form, including hazardous waste. (MVCC Chapt. 24, §24.4.0.b). Location: Inside Buld.

HMO-1.4•Organize and maintain all hazardous waste manifests and hazardous waste bills of lading in order to verify hazardous waste throughput information on the ECP. (MVCC Chapt. 24, §24.4.0.b). Location: Used Batteries

HMO-34.1•Labels shall be made of durable material and replaced as needed due to normal aging and fading. Labels shall not be located where they might be obstructed. Labels shall be in English and other languages where appropriate. Provide/Repair labels for the following containers, materials, equipment or areas: (MVCC Chapt. 24, §24.3.8, 24.3.9.a): Properly complete all hazardous waste labels Location: 6

**UNDERGROUND STORAGE TANK PROGRAM VIOLATIONS:**

•No violations observed.

\*\*\*\*\*  
COMMENTS: Remove drained used oil filters immediately. Do not store longer than 1 year from the deposit of first oil filter.

**NOTICE TO COMPLY:** A reinspection shall be conducted on or after 4/5/2004. Additional inspections after the first reinspection are billed at \$88.00/hour. Failure to correct the above violations may result in administrative fines, civil or criminal penalties.

UST Leak Detection Inspection Worksheet (02/04)

Address: 2110 Old Middlefield Way

Date: 3/22/04

Business Name: ANCO

Contact: \_\_\_\_\_

Leak Detection Program:

- Tanks: Electronic Liquid Sensors
- Piping: Electronic Liquid Sensors

I. General

- 1) *Inspect overspill container of each tank.*
  - Any missing overspill containers? No
  - Record any overspill container with free product that cannot be drained into the tank: DAY
- 2) *Verify that overspill containment has been tested by a third party contractor within the last year.*
  - Last annual overspill test date: 5/4/03
  - Has this been completed within the last year? YES
- 3) *Inspect overfill prevention device of each tank (flapper valve or equivalent).*
  - Any missing overfill prevention devices? No - PCOATS
- 4) *Inspect manway sump of each tank.*
  - Any liquid in the sumps from rain or product? DAY
- 5) *Remove faceplate from each dispenser and inspect.:*
  - Any crimped or collapsed hoses? No
  - Any leaking pipes or joints? \_\_\_\_\_
  - Any loose or missing fittings or hose connectors? \_\_\_\_\_
  - Any exposed electrical wires? \_\_\_\_\_
  - Any open conduit? \_\_\_\_\_
  - Any missing shear valves? \_\_\_\_\_
  - Area under the dispensers dry? DAY
- 6) *Inspect Emergency Shut-Off switch:*
  - Is it located within 75" of any dispenser? YES
  - Is it labeled? YES
  - Is it working (test with one product)? NO TESTED

7) Inspect fire extinguishers:

- Are they located within 75 feet of all pumps/dispensers? YES
- Are they located in accessible areas? \_\_\_\_\_
- Have they been serviced within the last 12 months? \_\_\_\_\_
- Are they rated 2-A:20-B:C minimum? \_\_\_\_\_

8) Inspect signage. Are the following signs posted and within sight of each dispenser?

- "Smoking Prohibited": YES
- "Vehicles Must Stop During Fueling Operations": \_\_\_\_\_
- "Dispensing Into Unapproved Containers Is Prohibited": \_\_\_\_\_
- For unsupervised locations only, the emergency sign shown below: N/A

<b>IN CASE OF FIRE OR SPILL</b>
1. Use emergency pump shutoff!
2. Report the accident!
Fire Department: Call 911
Facility Address

9) Verify annual testing of mechanical or electronic line leak detector.

- Required
- Not required—sensor in sumps shut off turbine pumps.
- Not applicable—suction system

• Date of last test: \_\_\_\_\_

• If last test was conducted over a year ago, indicate how re-test will be performed:

\_\_\_\_\_ Tested on site with test equipment. Results: \_\_\_\_\_

\_\_\_\_\_ Tested by third-party. Date of test: \_\_\_\_\_ . Results: \_\_\_\_\_

10) Verify that the leak detection systems are functioning.

- Is there power to all leak detection systems? YES

11) Determine current alarm status.

• Describe current alarm conditions for each detection system: High WATER, DISBURG  
NG5050

12) Verify daily inspection log.

- Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? YES
- Is the log up to date? YES. If not, date of last entry was: \_\_\_\_\_

13) Verify that cathodic protection is working properly (if applicable):

- Complete the cathodic protection worksheet and record violations: N/A

14) Verify 3rd party alarm monitoring, (if applicable). N/A

- Alarm test date: \_\_\_\_\_ Alarm test time: \_\_\_\_\_
- Alarm verification date: \_\_\_\_\_ Alarm verification time: \_\_\_\_\_
- Alarm company: \_\_\_\_\_

15) Verify certification of all monitoring equipment has been completed within the last year..

- Last annual certification date: \_\_\_\_\_
- Has this been completed within the last year? \_\_\_\_\_

16) Verify secondary containment testing has been completed within the last 3 years.

- Last secondary containment test date: 5/16/03
- Has this been completed within the last 3 years? YES

**II. Liquid Sensors**

1) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.

Record observations: \_\_\_\_\_

2) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light.

Record results: \_\_\_\_\_

3) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.

Record results: \_\_\_\_\_

4) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record results: \_\_\_\_\_

5) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

6) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

7) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.

Are all appropriate LED lights activated? \_\_\_\_\_

8) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.

Record results: \_\_\_\_\_

9) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

10) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

11) API/ROGAN LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

12) API/ROGAN LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

13) API/ROGAN LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

14) API/ROGAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

15) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: Working Properly

16) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: N/A

17) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

Sensors Removed \_\_\_ Tested w/CGI. Record Results: ALL WORKING

18) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT Intact or NOT stamped with the "69" label:         N/A        

19) VEEDER-ROOT ILS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks* . Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection). To determine that each probe has alarmed, and to reset it, complete the following steps:

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.

Record results: \_\_\_\_\_

20) VEEDER-ROOT ILS-350 LIQUID SENSOR. Verify probe function in *manway of tanks* . Remove probes and submerge in water.

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.

Record results: \_\_\_\_\_

21) VEEDER-ROOT DISPENSER SENSOR. Verify probe function in *dispensers*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

22) BEAUDREAU DISPENSER SENSOR. Verify probe function in *dispenser pans*. Remove probe from holder. Place probe in black cup.

Record results: \_\_\_\_\_

### Beaudreau System 500 Alarm Reset Procedure:

1. The display will read:
  - Disp #XX Status
  - Fuel: ALARM
2. Press escape, display will read:
  - Main Menu
  - Monitoring Mode
3. Press the Right Arrow key until "Alarm Control" appears.
4. Press "ENTER".
5. Display shows "Clear Alarm".
6. Press "ENTER".
7. The display will show the current sensor in alarm.
8. Press "ENTER".
9. Display will show alarm cleared.
10. Press "ESC" twice to return to Monitoring Mode.

**RE: SECONDARY CONTAINMENT TESTING - 6 MONTH TEST**

ARCO Facility No.: 02010  
Facility Address: 2110 OLD MIDDLEFIELD WAY, MOUNTAIN VIEW, CA 94043

Per California Water Resources Control Board requirements, attached are results from secondary containment testing performed at the subject facility. Please note all secondary components have passed testing requirements.

**Test Date**

05/06/03

**Pages**

9

ARCO is committed to the compliance of all environmental laws that govern the safe operations of its facilities. Should you have any questions or concerns regarding testing activities at this facility, please do not hesitate to call John Schetter, BP Environmental Compliance Specialist for this facility at (800) 525-5857, or myself at (949) 450-1010.

Sincerely,

Jim Brown  
Project Manager  
Belshire Environmental Services, Inc.

# California Secondary Containment Testing Report Form

This form is for use by contractors performing periodic testing of UST secondary containment systems. The completed form, written test procedures, and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

UST Leak Detection Inspection Worksheet (10/02)

Address: 2110 Old Middlefield

Date: 4/10/03

Business Name: ARCO

Contact: \_\_\_\_\_

Leak Detection Program:

--Tanks: Electronic Liquid Sensors

--Piping: Electronic Liquid Sensors

I. General

1) *Inspect overspill container of each tank.*

- Any missing overspill containers? No
- Record any overspill container with free product that cannot be drained into the tank: None

2) *Inspect overfill prevention device of each tank (flapper valve or equivalent).*

- Any missing overfill prevention devices? No

3) *Inspect manway sump of each tank.*

- Any liquid in the sumps from rain or product? No

4) *Remove faceplate from each dispenser and inspect:*

- Any crimped or collapsed hoses? No
- Any leaking pipes or joints? \_\_\_\_\_
- Any loose or missing fittings or hose connectors? \_\_\_\_\_
- Any exposed electrical wires? \_\_\_\_\_
- Any open conduit? \_\_\_\_\_
- Any missing shear valves? \_\_\_\_\_
- Area under the dispensers dry? Y

5) *Inspect Emergency Shut-Off switch:*

- Is it located within 75" of any dispenser? Y
- Is it labeled? Y
- Is it working (test with one product)? No

6) *Inspect fire extinguishers:*

- Are they located within 75 feet of all pumps/dispensers? Y
- Are they located in accessible areas? \_\_\_\_\_
- Have they been serviced within the last 12 months? \_\_\_\_\_
- Are they rated 2-A:20-B:C minimum? \_\_\_\_\_

7) *Inspect signage. Are the following signs posted and within sight of each dispenser?*

- "Smoking Prohibited": Yes
- "Vehicles Must Stop During Fueling Operations": \_\_\_\_\_
- "Dispensing into Unapproved Containers is Prohibited": \_\_\_\_\_
- For unsupervised locations only, the emergency sign shown below: NA

<b>IN CASE OF FIRE OR SPILL</b>
1. Use emergency pump shutoff
2. Report the accident
Fire Department: Call 911
Facility Address

8) *Verify annual testing of mechanical or electronic line leak detector.*

- Required
- Not required—sensor in sumps shut off turbine pumps.
- Not applicable—suction system

- Date of last test: \_\_\_\_\_
- If last test was conducted over a year ago, indicate how re-test will be performed:

\_\_\_\_\_ Tested on site with test equipment. Results: \_\_\_\_\_

\_\_\_\_\_ Tested by third-party. Date of test: \_\_\_\_\_ . Results: \_\_\_\_\_

9) *Verify that the leak detection systems are functioning.*

- Is there power to all leak detection systems? Yes

10) *Determine current alarm status.*

- Describe current alarm conditions for each detection system: None

11) *Verify daily inspection log.*

- Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? Yes
- Is the log up to date? Yes. If not, date of last entry was: \_\_\_\_\_

12) *Verify that cathodic protection is working properly (if applicable):*

- Complete the cathodic protection worksheet and record violations: NA

13) *Verify 3rd party alarm monitoring, (if applicable).*

- Alarm test date: \_\_\_\_\_ Alarm test time: NA
- Alarm verification date: \_\_\_\_\_ Alarm verification time: \_\_\_\_\_
- Alarm company: \_\_\_\_\_

14) *Verify certification of all monitoring equipment has been completed within the last year..*

- Last annual certification date: 11/1/02
- Has this been completed within the last year? Yes

- 15) Verify secondary containment testing has been completed within the last 3 years.
- Last secondary containment test date: 11/15/02
  - Has this been completed within the last 3 years? Y

## II. Liquid Sensors

1) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.

Record observations: \_\_\_\_\_

2) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light.

Record results: \_\_\_\_\_

3) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.

Record results: \_\_\_\_\_

4) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record results: \_\_\_\_\_

5) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

6) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

7) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.

Are all appropriate LED lights activated? \_\_\_\_\_

8) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.

Record results: \_\_\_\_\_

9) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

10) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

11) API/RONAN LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

12) API/RONAN LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

13) API/RONAN LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

14) API/RONAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

15) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_ *OK*

16) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_ *N/A*

17) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed 7 Tested w/CGI. Record Results: All 0% LGL

18) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: N/A

19) VEEDER-ROOT ILS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection). To determine that each probe has alarmed, and to reset it, complete the following steps:

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.

Record results: \_\_\_\_\_

20) VEEDER-ROOT ILS-350 LIQUID SENSOR. Verify probe function in *manway of tanks*. Remove probes and submerge in water.

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.

Record results: \_\_\_\_\_

21) VEEDER-ROOT DISPENSER SENSOR. Verify probe function in *dispensers*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

22) ECCO 3000 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

23) ECCO 3000 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

24) ECCO 3000 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have thldr party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

25) ECCO 3000 LIQUID SENSOR. Verify probe function in *dispensers*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

26) BEAUDREAU DISPENSER SENSOR. Verify probe function in *dispenser pans*. Remove probe from holder. Place probe in black cup.

Record results: \_\_\_\_\_

Beaudreau System 500 Alarm Reset Procedure:

- 1. The display will read: Disp #XX Status  
Fuel; ALARM
- 2. Press escape, display will read: Main Menu  
Monitoring Mode
- 3. Press the Right Arrow key until "Alarm Control" appears.

4. Press "ENTER".
5. Display shows "Clear Alarm".
6. Press "ENTER".
7. The display will show the current sensor in alarm.
8. Press "ENTER".
9. Display will show alarm cleared.
10. Press "ESC" twice to return to Monitoring Mode.

ARCO Products Company

Mechanical Leak Detector Test Data Sheet

Station # 2010 Date 2-27 2002

Address 2110 Middlefield Mt. View

Test Information

	1	2	3	4	5
Product	UNL	MID	2LP		
Manufacturer	R.J.	R.J.	R.J.		
Model	XLP	XLP	XLP		
Full Operating Pressure (psi)	30	30	30		
Line Bleed Back (ml)	300ml	300ml	300ml		
Trip Time (sec)	3	3	3		
Metering Pressure (psi)	20	20	20		
F/E Holding Pressure (psi)	18	14	14		
Test Leak Rate (ml/min) (gph)	190ml/m	190ml/m	190ml/m		
PASS or FAIL	Pass	Pass	Pass		

Replaced All Failed Leak Detectors Yes \_\_\_\_\_ No \_\_\_\_\_ N/A \_\_\_\_\_

If No, Replacement To Be Completed By (Date) 1/1

This letter certifies that the annual leak detector tests were performed at the above referenced facility according to the equipment manufacturers procedures and limitations and the results as listed are to my knowledge true and correct. The mechanical leak detector test pass/fail is determined using a low flow threshold trip rate of 3 gph at 10 PSI.

# MONITORING SYSTEM CERTIFICATION

For Use By All Jurisdictions Within the State of California

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

### A. General Information

Facility Name: Arco #2010 Bldg. No.: \_\_\_\_\_

Site Address: 2110 Middlefield City: Menlo View Zip: \_\_\_\_\_

Facility Contact Person: \_\_\_\_\_ Contact Phone No.: (\_\_\_\_) \_\_\_\_\_

F. In-Tank Gauging / SIR Equipment:

- Check this box if tank gauging is used only for inventory control.
- Check this box if no tank gauging or SIR equipment is installed.

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all tank gauging probes visually inspected for damage and residue buildup?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system product level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Was accuracy of system water level readings tested?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all probes reinstalled properly?
<input type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

\* In the Section H, below, describe how and when these deficiencies were or will be corrected.

G. Line Leak Detectors (LLD):

- Check this box if LLDs are not installed.

Complete the following checklist:

<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? (Check all that apply) Simulated leak rate: <input checked="" type="checkbox"/> 5 g.p.h. ; <input type="checkbox"/> 0.1 g.p.h. ; <input type="checkbox"/> 0.2 g.p.h.
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Was the testing apparatus properly calibrated?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No* <input type="checkbox"/> N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
<input type="checkbox"/> Yes	<input type="checkbox"/> No* <input checked="" type="checkbox"/> N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No*	Were all items on the equipment manufacturer's maintenance checklist completed?

\* In the Section H, below, describe how and when these deficiencies were or will be corrected.

***The Following Violations Have Been Observed During This Inspection:***

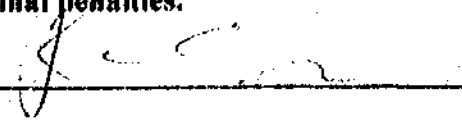

**UNDERGROUND STORAGE TANK PROGRAM VIOLATIONS:**

UST-1.1•A daily inspection log verifying that your leak detection: 1) has power, and 2) is/is not in alarm, must be maintained on the premises and available for review by the Mountain View Fire Department. Call (650) 903-6378 to obtain copies of a sample inspection log. Maintain and keep up to date a daily inspection log on the premises. (MVCC Chapt. 24, §24.4.2.g). Location: Attendant could not locate monitoring log. Train employees to where it is located.

UST-3.2•Overspill containers provide secondary containment for the fill tube and shall remain dry at all times. Remove liquid from the overspill containers in the following tanks: (MVCC Chapt. 24, §24.3.0.q.2(d)): Remove liquid from all overfills. Location: All overfills.

\*\*\*\*\*  
**COMMENTS:**

**NOTICE TO COMPLY:** A reinspection shall be conducted on or after 4/1/2002. Additional inspections after the first reinspection are billed at \$79,00/hour. Failure to correct the above violations may result in administrative fines, civil or criminal penalties.

**OCCUPANT'S SIGNATURE:**

UST Leak Detection Inspection Worksheet (3/99)

Address: 2110 (RD) HIGHLAND AVE

Date: 3/25/02

Business Name: TELL'S AUTO

Contact: \_\_\_\_\_

Leak Detection Program:

- Tanks: Electronic Liquid Sensors
- Piping: Electronic Liquid Sensors

I. General

1) Inspect overspill container of each tank. N/D

- Any missing overspill containers? \_\_\_\_\_
- Record any overspill container with free product that cannot be drained into the tank: ALL THREE PRODUCTS HAVE LIQUID

2) Inspect overfill prevention device of each tank (flapper valve or equivalent).

- Any missing overfill prevention devices? \_\_\_\_\_

3) Inspect manway sump of each tank.

- Any liquid in the sumps from rain or product? NO

4) Remove faceplate from each dispenser and inspect:

- Any crimped or collapsed hoses? NO
- Any leaking pipes or joints? \_\_\_\_\_
- Any loose or missing fittings or hose connectors? \_\_\_\_\_
- Any exposed electrical wires? \_\_\_\_\_
- Any open conduit? \_\_\_\_\_
- Any missing shear valves? \_\_\_\_\_
- Area under the dispensers dry? YES

5) Inspect Emergency Shut-Off switch:

- Is it located within 75" of any dispenser? YES
- Is it labeled? \_\_\_\_\_
- Is it working (test with one product)? NOT TESTED

6) Inspect fire extinguishers:

- Are they located within 75 feet of all pumps/dispensers? YES
- Are they located in accessible areas? \_\_\_\_\_
- Have they been serviced within the last 12 months? \_\_\_\_\_
- Are they rated 2-A:20-B:C minimum? \_\_\_\_\_

7) Inspect signage. Are the following signs posted and within sight of each dispenser?

- "Smoking Prohibited": YES
- "Vehicles Must Stop During Fueling Operations": YES
- "Dispensing into Unapproved Containers is Prohibited": YES
- For unsupervised locations only, the emergency sign shown below N/A

<b>IN CASE OF FIRE OR SPILL</b>
1. Use emergency pump shutoff
2. Report the accident
Fire Department: Call 911
Facility Address _____

8) Verify annual testing of mechanical or electronic line leak detector.

- Required  Not required—sensor in sumps shut off turbine pumps.
- Not applicable—suction system

• Date of last test: \_\_\_\_\_

• If last test was conducted over a year ago, indicate how re-test will be performed:

\_\_\_ Tested on site with test equipment. Results: \_\_\_\_\_

\_\_\_ Tested by third-party. Date of test: \_\_\_\_\_, Results: \_\_\_\_\_

9) Verify that the leak detection systems are functioning.

- Is there power to all leak detection systems? YES

10) Determine current alarm status.

- Describe current alarm conditions for each detection system: None

11) Verify daily inspection log.

- Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? ATTORNEY COULD NOT LOCATE THE LOG
- Is the log up to date? \_\_\_\_\_. If not, date of last entry was: \_\_\_\_\_

12) Verify that cathodic protection is working properly (if applicable): N/A

- Complete the cathodic protection worksheet and record violations: \_\_\_\_\_

13) Verify 3rd party alarm monitoring, (if applicable): N/A

- Alarm test date: \_\_\_\_\_ Alarm test time: \_\_\_\_\_
- Alarm verification date: \_\_\_\_\_ Alarm verification time: \_\_\_\_\_
- Alarm company: \_\_\_\_\_

## II. Liquid Sensors

1) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.

Record observations: \_\_\_\_\_

2) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light.

Record results: \_\_\_\_\_

3) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.

Record results: \_\_\_\_\_

4) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record results: \_\_\_\_\_

5) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

6) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

7) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.

Are all appropriate LED lights activated? \_\_\_\_\_

8) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.

Record results: \_\_\_\_\_

9) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

10) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

11) API/ROGAN LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.  
Record results: ALL WORKING PROPERLY

12) API/ROGAN LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.  
Record results: N/A

13) API/ROGAN LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
 Sensors Removed  Tested w/CGI. Record Results: ALL 4 ANNULARS GOOD 09/01/21

14) API/ROGAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.  
Record all lead-wire seals NOT intact or NOT stamped with the "69" label: N/A

15) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.  
Record results: \_\_\_\_\_

16) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.  
Record results: \_\_\_\_\_

17) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
 Sensors Removed  Tested w/CGI. Record Results: \_\_\_\_\_

18) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.  
Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

19) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection). To determine that each probe has alarmed, and to reset it, complete the following steps:

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.

20) VEEDER-ROOT ILS-350 LIQUID SENSOR. Verify probe function in *manway of tanks*. Remove probes and submerge in water.

- STEP 1: Press DEVICE: <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.

21) ECCO 3000 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

22) ECCO 3000 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

23) ECCO 3000 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

24) BEAUDREAU SENSOR. Verify probe function in *dispenser pans*. Remove probe from holder. Place probe in black cup.

Record results: \_\_\_\_\_

UST Leak Detection Inspection Worksheet (3/99)

Address: 2110 OLD MIDDLEFIELD WAY Date: 2/14/01

Business Name: ARCO Contact: \_\_\_\_\_

Leak Detection Program:

- Tanks: Electronic Liquid Sensors
- Piping: Electronic Liquid Sensors

I. General

1) Inspect overspill container of each tank.

- Any missing overspill containers? NO
- Record any overspill container with free product that cannot be drained into the tank: DRY

2) Inspect overfill prevention device of each tank (flapper valve or equivalent).

- Any missing overfill prevention devices? NO

3) Inspect manway sump of each tank.

- Any liquid in the sumps from rain or product? NO

4) Remove faceplate from each dispenser and inspect.:

- Any kinked or collapsed hoses? NO
- Any leaking pipes or joints? \_\_\_\_\_
- Any loose or missing fittings or hose connectors? \_\_\_\_\_
- Any exposed electrical wires? \_\_\_\_\_
- Any open conduit? \_\_\_\_\_
- Any missing shear valves? \_\_\_\_\_
- Area under the dispensers dry? DRY

5) Inspect Emergency Shut-Off switch:

- Is it located within 75" of any dispenser? YES
- Is it labeled? YES
- Is it working (test with one product)? NOT TESTED

6) Inspect fire extinguishers:

- Are they located within 75 feet of all pumps/dispensers? YES
- Are they located in accessible areas? \_\_\_\_\_
- Have they been serviced within the last 12 months? \_\_\_\_\_
- Are they rated 2-A:20-B:C minimum? \_\_\_\_\_

7) *Inspect signage. Are the following signs posted and within sight of each dispenser?*

- "Smoking Prohibited": \_\_\_\_\_ YES
- "Vehicles Must Stop During Fueling Operations": \_\_\_\_\_
- "Dispensing into Unapproved Containers is Prohibited": \_\_\_\_\_
- For unsupervised locations only, the emergency sign shown below N/A

<b>IN CASE OF FIRE OR SPILL</b>
1. Use emergency pump shutoff!
2. Report the accident!
Fire Department: Call 911
Facility Address _____

8) *Verify annual testing of mechanical or electronic line leak detector.*

- Required  Not required—sensor in sumps shut off turbine pumps.
- Not applicable—suction system

• Date of last test: \_\_\_\_\_

• If last test was conducted over a year ago, indicate how re-test will be performed:

\_\_\_ Tested on site with test equipment. Results: \_\_\_\_\_

\_\_\_ Tested by third-party. Date of test: \_\_\_\_\_ . Results: \_\_\_\_\_

9) *Verify that the leak detection systems are functioning.*

- Is there power to all leak detection systems? YES

10) *Determine current alarm status.*

- Describe current alarm conditions for each detection system: NONE

11) *Verify daily inspection log.*

- Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? YES
- Is the log up to date? YES. If not, date of last entry was: \_\_\_\_\_

12) *Verify that cathodic protection is working properly (if applicable):* N/A

- Complete the cathodic protection worksheet and record violations: \_\_\_\_\_

13) *Verify 3rd party alarm monitoring, (if applicable):* N/A

- Alarm test date: \_\_\_\_\_ Alarm test time: \_\_\_\_\_
- Alarm verification date: \_\_\_\_\_ Alarm verification time: \_\_\_\_\_
- Alarm company: \_\_\_\_\_

## II. Liquid Sensors

1) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.

Record observations: \_\_\_\_\_

2) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypad lights light.

Record results: \_\_\_\_\_

3) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.

Record results: \_\_\_\_\_

4) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record results: \_\_\_\_\_

5) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

6) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

7) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.

Are all appropriate LED lights activated? \_\_\_\_\_

8) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.

Record results: \_\_\_\_\_

9) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

10) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

11) API/ROGAN LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.  
Record results: Working

12) API/ROGAN LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.  
Record results: N/A

13) API/ROGAN LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
Sensors Removed  Tested w/CGI  Record Results: ALL LEAD WIRE

14) API/ROGAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.  
Record all lead-wire seals NOT intact or NOT stamped with the "69" label: N/A

15) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.  
Record results: \_\_\_\_\_

16) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.  
Record results: \_\_\_\_\_

17) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
Sensors Removed  Tested w/CGI  Record Results: \_\_\_\_\_

18) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.  
Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

19) VEEDER-ROOT ILS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection). To determine that each probe has alarmed, and to reset it, complete the following steps:

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.

20) VEEDER-ROOT ILS-350 LIQUID SENSOR. Verify probe function in *manway of tanks*. Remove probes and submerge in water.

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.

21) ECCO 3000 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

22) ECCO 3000 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

23) ECCO 3000 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

24) BEAUDREAU SENSOR. Verify probe function in *dispenser pans*. Remove probe from holder. Place probe in black cup.

Record results: \_\_\_\_\_

UST Leak Detection Inspection Worksheet (3/99)

Address: 2110 Old Middlefield

Date: 3/16/00

Business Name: ARIO

Contact: \_\_\_\_\_

Leak Detection Program:

- Tanks: Electronic Liquid Sensors
- Piping: Electronic Liquid Sensors

I. General

- 1) Inspect overspill container of each tank. NO
  - Any missing overspill containers? \_\_\_\_\_
  - Record any overspill container with free product that cannot be drained into the tank: None
- 2) Inspect overfill prevention device of each tank (flapper valve or equivalent).
  - Any missing overfill prevention devices? NO
- 3) Inspect manway sump of each tank.
  - Any liquid in the sumps from rain or product? NO
- 4) Remove faceplate from each dispenser and inspect:
  - Any crimped or collapsed hoses? NO
  - Any leaking pipes or joints? \_\_\_\_\_
  - Any loose or missing fittings or hose connectors? \_\_\_\_\_
  - Any exposed electrical wires? \_\_\_\_\_
  - Any open conduit? \_\_\_\_\_
  - Any missing shear valves? \_\_\_\_\_
  - Area under the dispensers dry? Yes
- 5) Inspect Emergency Shut-Off switch:
  - Is it located within 75" of any dispenser? Yes
  - Is it labeled? Yes
  - Is it working (test with one product)? Not tested
- 6) Inspect fire extinguishers:
  - Are they located within 75 feet of all pumps/dispensers? Yes
  - Are they located in accessible areas? \_\_\_\_\_
  - Have they been serviced within the last 12 months? \_\_\_\_\_
  - Are they rated 2-A:20-B:C minimum? Yes

7) *Inspect signage. Are the following signs posted and within sight of each dispenser?*

- "Smoking Prohibited": Yes
- "Vehicles Must Stop During Fueling Operations": Yes
- "Dispensing Into Unapproved Containers Is Prohibited": Yes
- For unsupervised locations only, the emergency sign shown below N/A

<b>IN CASE OF FIRE OR SPILL</b>
1. Use emergency pump shutoff
2. Report the accident!

- Alarm company: \_\_\_\_\_

## II. Liquid Sensors

1) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.

Record observations: \_\_\_\_\_

2) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypad light.

Record results: \_\_\_\_\_

3) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.

Record results: \_\_\_\_\_

4) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record results: \_\_\_\_\_

5) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

6) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

7) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.

Are all appropriate LED lights activated? \_\_\_\_\_

8) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.

Record results: \_\_\_\_\_

9) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

10) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

11) API/ROGAN LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down. OK

Record results: \_\_\_\_\_

12) API/ROGAN LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water. N/A

Record results: \_\_\_\_\_

13) API/ROGAN LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

Sensors Removed     Tested w/CGI.    Record Results: OK \_\_\_\_\_

14) API/ROGAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: N/A \_\_\_\_\_

15) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

16) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

17) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

Sensors Removed     Tested w/CGI.    Record Results: \_\_\_\_\_

18) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

19) VEEDER-ROOT ILS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection). To determine that each probe has alarmed, and to reset it, complete the following steps:

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.

20) VEEDER-ROOT ILS-350 LIQUID SENSOR. Verify probe function in *manway of tanks*. Remove probes and submerge in water.

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.

21) ECCO 3000 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

22) ECCO 3000 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

23) ECCO 3000 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

24) BEAUDREAU SENSOR. Verify probe function in *dispenser pans*. Remove probe from holder. Place probe in black cup.

Record results: \_\_\_\_\_

- Piping: Electronic Liquid Sensors

I. General

- 1) Inspect overspill container of each tank.
  - Any missing overspill containers? NO
  - Record any overspill container with free product that cannot be drained into the tank: None
- 2) Inspect overfill prevention device of each tank (flapper valve or equivalent).
  - Any missing overfill prevention devices? NO
- 3) Inspect manway sump of each tank.
  - Any liquid in the sumps from rain or product? NO
- 4) Remove faceplate from each dispenser and inspect:
  - Any crimped or collapsed hoses? NO
  - Any leaking pipes or joints? NO
  - Any loose or missing fittings or hose connectors? NO
  - Any exposed electrical wires? NO
  - Any open conduit? NO
  - Any missing shear valves? NO
  - Area under the dispensers dry? YES
- 5) Inspect Emergency Shut-Off switch:
  - Is it located within 75" of any dispenser? YES
  - Is it labeled? YES
  - Is it working (test with one product)? YES
- 6) Inspect fire extinguishers:
  - Are they located within 75 feet of all pumps/dispensers? YES
  - Are they located in accessible areas? YES
  - Have they been serviced within the last 12 months? YES
  - Are they rated 2-A:20-B:C minimum? YES

7) *Inspect signage. Are the following signs posted and within sight of each dispenser?*

- "Smoking Prohibited": Y17
- "Vehicles Must Stop During Fueling Operations": Y17
- "Dispensing into Unapproved Containers is Prohibited": Y17
- For unsupervised locations only, the emergency sign shown below N/A

<b>IN CASE OF FIRE OR SPILL</b>
1. Use emergency pump shutoff!
2. Report the accident!
Fire Department: Call 911
Facility Address _____

8) *Verify annual testing of mechanical or electronic line leak detector.*

- Required  Not required—sensor in sumps shut off turbine pumps.
- Not applicable—suction system

• Date of last test: \_\_\_\_\_

• If last test was conducted over a year ago, indicate how re-test will be performed:

\_\_\_ Tested on site with test equipment. Results: \_\_\_\_\_

\_\_\_ Tested by third-party. Date of test: \_\_\_\_\_ . Results: \_\_\_\_\_

9) *Verify that the leak detection systems are functioning.*

- Is there power to all leak detection systems? Y17

10) *Determine current alarm status.*

- Describe current alarm conditions for each detection system: None

11) *Verify daily inspection log.*

- Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? Y17
- Is the log up to date? Y17. If not, date of last entry was: \_\_\_\_\_

12) *Verify that cathodic protection is working properly (if applicable):*

- Complete the cathodic protection worksheet and record violations: N/A

13) *Verify 3rd party alarm monitoring, (if applicable).*

- Alarm test date: \_\_\_\_\_ Alarm test time: N/A
- Alarm verification date: \_\_\_\_\_ Alarm verification time: \_\_\_\_\_
- Alarm company: \_\_\_\_\_

## II. Liquid Sensors

1) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.

Record observations: \_\_\_\_\_

2) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypad light.

Record results: \_\_\_\_\_

3) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.

Record results: \_\_\_\_\_

4) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record results: \_\_\_\_\_

5) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

6) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

7) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel. Are all appropriate LED lights activated? \_\_\_\_\_

8) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.

Record results: \_\_\_\_\_

9) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

10) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

11) API/RODAN LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: OK

12) API/RODAN LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: N/A

13) API/RODAN LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

Sensors Removed  Tested w/CGI. Record Results: OK

14) API/RODAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: N/A

15) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

16) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

17) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

Sensors Removed  Tested w/CGI. Record Results: \_\_\_\_\_

18) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

19) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection). To determine that each probe has alarmed, and to reset it, complete the following steps:

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.

20) VEEDER-ROOT ILS-350 LIQUID SENSOR. Verify probe function in *manway of tanks*. Remove probes and submerge in water.

- STEP 1: Press DEVICE <SENSOR STATUS>
- STEP 2: Press STEP <SENSOR NUMBER>
- STEP 3: Press TEST <THIS WILL CLEAR ALARM>
- STEP 4: Press DEVICE <ALL FUNCTIONS NORMAL>

Note: All sensors may be tested at the same time.

21) ECCO 3000 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

22) ECCO 3000 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

23) ECCO 3000 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

24) BEAUDREAU SENSOR. Verify probe function in *dispenser pans*. Remove probe from holder. Place probe in black cup.

Record results: \_\_\_\_\_

UST Leak Detection Inspection Worksheet (3/98)

Address: 2110 Old Madison Hwy Date: 3/22/93

Business Name: TEP'S AUTO Contact: \_\_\_\_\_

Leak Detection Program:  
--Tanks: Electronic Liquid Sensors  
--Piping: Electronic Liquid Sensors

I. **General**

1) *Inspect overspill container of each tank.*  
• Any missing overspill containers? N/A  
• Record any overspill container with free product that cannot be drained into the tank: Dry

2) *Inspect overflow prevention device of each tank (flapper valve or equivalent).*  
• Any missing overflow prevention devices? N/A

3) *Inspect manway sump of each tank.*  
• Any liquid in the sumps from rain or product? Dry

4) *Remove faceplate from each dispenser and inspect:*  
• Any crimped or collapsed hoses? No  
• Any leaking pipes or joints? \_\_\_\_\_  
• Any loose or missing fittings or hose connectors? \_\_\_\_\_  
• Any exposed electrical wires? \_\_\_\_\_  
• Any open conduit? \_\_\_\_\_  
• Any missing shear valves? \_\_\_\_\_  
• Area under the dispensers dry? YES

5) *Inspect Emergency Shut-Off switch:*  
• Is it located within 75" of any dispenser? YES  
• Is it labeled? \_\_\_\_\_  
• Is it working (test with one product)? NOT TESTED

6) *Inspect fire extinguishers:*  
• Are they located within 75 feet of all pumps/dispensers? YES  
• Are they located in accessible areas? \_\_\_\_\_  
• Have they been serviced within the last 12 months? \_\_\_\_\_  
• Are they rated 2-A:20-B:C minimum? \_\_\_\_\_

7) *Inspect signage. Are the following signs posted and within sight of each dispenser?*

- "Smoking Prohibited"; \_\_\_\_\_ YES
- "Vehicles Must Stop During Fueling Operations"; \_\_\_\_\_
- "Dispensing into Unapproved Containers is Prohibited"; \_\_\_\_\_
- For unsupervised locations only, the emergency sign shown below N/A

<b>IN CASE OF FIRE OR SPILL</b>
1. Use emergency pump shutoff
2. Report the accident!
Fire Department: Call 911
Facility Address _____

8) *Verify annual testing of mechanical or electronic line leak detector.*

- Required  Not required-- annular space sensors shut off turbine pumps.
- Not applicable--suction system

- Is there power to all leak detection systems? YES

10) *Determine current alarm status.*

- Describe current alarm conditions for each detection system: None

11) *Verify daily inspection log.*

- Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? YES
- Is the log up to date? \_\_\_\_\_. If not, date of last entry was: \_\_\_\_\_

12) *Verify that cathodic protection is working properly (if applicable):*

- Complete the cathodic protection worksheet and record violations: N/A

13) *Verify 3rd party alarm monitoring, (if applicable).*

- Alarm test date: \_\_\_\_\_ Alarm test time: N/A
- Alarm verification date: \_\_\_\_\_ Alarm verification time: \_\_\_\_\_
- Alarm company: \_\_\_\_\_

## II. Liquid Sensors

1) POLLULERT FD 102. Verify that audible alarm has not been disabled. Is "Audible" alarm button on panel face in the "On" position? \_\_\_\_\_.

2) POLLULERT FD 102. Verify audible alarm. Push "Audible Alarm" button, and switch "Manual Trip" and "Latch" to the "On" positions. Is alarm working? \_\_\_\_\_  
Turn "Latch" switch to "Off" position. Alarm should silence. Are alarm switches working properly? \_\_\_\_\_

3) POLLULERT FD 102. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.  
Record results: \_\_\_\_\_

4) POLLULERT FD 102. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.  
Record results: \_\_\_\_\_

5) POLLULERT FD 102. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

6) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.  
Record observations: \_\_\_\_\_

7) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light.  
Record results: \_\_\_\_\_

8) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.  
Record results: \_\_\_\_\_

9) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.  
Record results: \_\_\_\_\_

10) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.  
Record results: \_\_\_\_\_

11) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

12) OWENS-CORNING HYDROSTATIC MONITOR. Verify sensor function in *annular spaces*. Drain liquid from tank reservoir and verify alarm.

Record results: \_\_\_\_\_

13) OWENS-CORNING HYDROSTATIC MONITOR. Verify that sensors have not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

14) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.

Are all appropriate LED lights activated? \_\_\_\_\_

15) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.

Record results: \_\_\_\_\_

16) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

17) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

18) LEAK SENSOR JR. Verify that the number of active sensors is correct.

Are the correct number of active sensors indicated by "Normal" lights? \_\_\_\_\_

19) LEAK SENSOR JR. Verify alarm function. Hit "Test" button. Active probes should alarm, then turn off.

Record results: \_\_\_\_\_

20) LEAK SENSOR JR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down. KEEP UNIT IN ALARM FOR NEXT TEST.

Record results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_

Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_

After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm.  
Record results: \_\_\_\_\_

21) LEAK SENSOR JR. Verify probe function along piping runs (if applicable). Remove probes and submerge in water.

Record results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_

Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_

After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm.

Record results: \_\_\_\_\_

22) LEAK SENSOR JR. Verify probe function in annular space of tanks. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_

Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_

After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm

Record results: \_\_\_\_\_

23) API/ROGAN LIQUID SENSOR. Verify probe function in sumps/manways. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: Working Properly

24) API/ROGAN LIQUID SENSOR. Verify probe function in along piping runs (if applicable). Remove probes and submerge in water.

Record results: N/A

25) API/ROGAN LIQUID SENSOR. Verify probe function in annular space of tanks. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed  Tested w/CGI. Record Results: ALL TANKS O.K.

26) API/ROGAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT Intact or NOT stamped with the "69" label: N/A

27) CEI LIQUID SENSOR. Verify probe function in sumps/manways. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

28) CEI LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

29) CEI LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

30) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

31) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

32) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

33) ECCO 3000 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

34) ECCO 3000 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

35) ECCO 3000 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

UST Leak Detection Inspection Worksheet (3/98)

Address: 2110 DMW

Date: 8/13/98

Business Name: Arco

Contact: Taji

Leak Detection Program:

- Tanks: Electronic Liquid Sensors
- Piping: Electronic Liquid Sensors

I. General

1) Inspect overspill container of each tank.

- Any missing overspill containers? NO
- Record any overspill container with free product that cannot be drained into the tank: None?

2) Inspect overflow prevention device of each tank (flapper valve or equivalent).

- Any missing overflow prevention devices? NO

3) Inspect manway sump of each tank.

- Any liquid in the sumps from rain or product? NO

4) Remove faceplate from each dispenser and inspect:

- Any crimped or collapsed hoses? NO
- Any leaking pipes or joints? NO
- Any loose or missing fittings or hose connectors? NO
- Any exposed electrical wires? NO
- Any open conduit? NO
- Any missing shear valves? NO
- Area under the dispensers dry? Yes

5) Inspect Emergency Shut-Off switch:

- Is it located within 75" of any dispenser? Yes
- Is it labeled? Yes
- Is it working (test with one product)? -

6) Inspect fire extinguishers:

- Are they located within 75 feet of all pumps/dispensers? Yes
- Are they located in accessible areas? Yes
- Have they been serviced within the last 12 months? Yes
- Are they rated 2-A:20-B:C minimum? Yes

7) *Inspect signage. Are the following signs posted and within sight of each dispenser?*

- "Smoking Prohibited": OK
- "Vehicles Must Stop During Fueling Operations": OK
- "Dispensing into Unapproved Containers is Prohibited": OK
- For unsupervised locations only, the emergency sign shown below \_\_\_\_\_

<b>IN CASE OF FIRE OR SPILL</b>
1. Use emergency pump shutoff
2. Report the accident
Fire Department: Call 911
Facility Address _____

8) *Verify annual testing of mechanical or electronic line leak detector.*

- Required  Not required-- annular space sensors shut off turbine pumps.
- Not applicable--suction system

• Date of last test: \_\_\_\_\_

• If last test was conducted over a year ago, indicate how re-test will be performed:

\_\_\_\_\_ Tested on site with test equipment. Results: \_\_\_\_\_

\_\_\_\_\_ Tested by third-party. Date of test: \_\_\_\_\_ . Results: \_\_\_\_\_

9) *Verify that the leak detection systems are functioning.*

- Is there power to all leak detection systems? Yes

10) *Determine current alarm status.*

- Describe current alarm conditions for each detection system: None

11) *Verify daily inspection log.*

- Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? Yes
- Is the log up to date? Yes. If not, date of last entry was: \_\_\_\_\_

12) *Verify that cathodic protection is working properly (if applicable):*

- Complete the cathodic protection worksheet and record violations: N/A

13) *Verify 3rd party alarm monitoring, (if applicable).*

- Alarm test date: \_\_\_\_\_ Alarm test time: N/A

- Alarm company: \_\_\_\_\_

## II. Liquid Sensors

- 1) POLLULERT FD 102. Verify that audible alarm has not been disabled. Is "Audible" alarm button on panel face in the "On" position? \_\_\_\_\_.
- 2) POLLULERT FD 102. Verify audible alarm. Push "Audible Alarm" button, and switch "Manual Trip" and "Latch" to the "On" positions.  
Is alarm working? \_\_\_\_\_  
Turn "Latch" switch to "Off" position. Alarm should silence.  
Are alarm switches working properly? \_\_\_\_\_
- 3) POLLULERT FD 102. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.  
Record results: \_\_\_\_\_
- 4) POLLULERT FD 102. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.  
Record results: \_\_\_\_\_
- 5) POLLULERT FD 102. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_
- 
- 6) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.  
Record observations: \_\_\_\_\_
- 7) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light.  
Record results: \_\_\_\_\_
- 8) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.  
Record results: \_\_\_\_\_
- 9) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.  
Record results: \_\_\_\_\_
- 10) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.  
Record results: \_\_\_\_\_

11) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

12) OWENS-CORNING HYDROSTATIC MONITOR. Verify sensor function in *annular spaces*. Drain liquid from tank reservoir and verify alarm.

Record results: \_\_\_\_\_

13) OWENS-CORNING HYDROSTATIC MONITOR. Verify that sensors have not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

14) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.

Are all appropriate LED lights activated? \_\_\_\_\_

15) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.

Record results: \_\_\_\_\_

16) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

17) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

18) LEAK SENSOR JR. Verify that the number of active sensors is correct.

Are the correct number of active sensors indicated by "Normal" lights? \_\_\_\_\_

19) LEAK SENSOR JR. Verify alarm function. Hit "Test" button. Active probes should alarm, then turn off.

Record results: \_\_\_\_\_

20) LEAK SENSOR JR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down. KEEP UNIT IN ALARM FOR NEXT TEST.

Record results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_

Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_

After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm.  
Record results: \_\_\_\_\_

21) LEAK SENSOR JR. Verify probe function *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_

Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_

After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm.

Record results: \_\_\_\_\_

22) LEAK SENSOR JR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

Sensors Removed  Tested w/CGI. Record Results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_

Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_

After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm

Record results: \_\_\_\_\_

23) API/ROXAN LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: OK \_\_\_\_\_

24) API/ROXAN LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: N/A \_\_\_\_\_

25) API/ROXAN LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

Sensors Removed  Tested w/CGI. Record Results: OK \_\_\_\_\_

26) API/ROXAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: N/A \_\_\_\_\_

27) CEI LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

28) CEI LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

29) CEI LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

30) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

31) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

32) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

33) ECCO 3000 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

34) ECCO 3000 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

35) ECCO 3000 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

UNDERGROUND TANK INSPECTION  
HAZARDOUS MATERIALS  
SAFETY NOTICE

Business Name Arco Business Phone \_\_\_\_\_  
Business Address 2110 Old Moorocke Blv Business Contact \_\_\_\_\_  
Date: 3/27/98 Start Time: 10:45 End Time: 11:00 Inspector DA-2195A Inspection #: 112 (S) 415

Mountain View City Code Requires Compliance with the Items Indicated Below:

- 1. PERMIT APPLICATIONS:** Code Reference
- a. An up to date Environmental Compliance Plan shall be maintained on site at all times. (MVCC 24.4.0)
  - b. A Closure Plan shall be filed 30 days prior to closing a hazardous materials (hazmat) facility. (MVCC 24.7.2)
- 2. STORAGE AND HANDLING:**
- a. Backflow Prevention Device/Check Valve shall be provided to prevent backflow of hazmats. (MVCC 24.3.0.d.4(b))
  - b. Gas cylinders not in use shall be Chained and Capped. Cylinders in use shall be adequately secured. (MVCC 24.3.0(a&b))
  - c. Construction Permits from the Building Division shall be obtained for new construction. (MVCC 24.3.0.d.1)
  - d. Defective containers, cylinders, tanks or equipment shall be repaired or removed from service. (MVCC 24.3.0(i))
  - e. Piping/tubing containing Health Hazard 3 or 4 Liquids shall be provided with:
    - Welded Connections or be secondarily contained; (MVCC 24.3.0.d.4(o))
    - Fail-Safe-To-Close Emergency Shut-Off Valves at the point of use and source; (MVCC 24.3.0.d.4(e))
    - Excess Flow Control for pressurized piping. (MVCC 24.3.0.d.4(d))
  - f. Flammable/oxidizing/pyrophoric gas shall be provided with Fail-Safe-to-Close Emergency Shut-Off Valves at the point of use and at the source. (MVCC 24.3.0.h(2))
  - g. Containers Compatible with the hazardous materials being stored shall be provided. (MVCC 24.3.0(o))
  - h. Approved Labeling shall be provided for the items specified below. (MVCC 24.3.0)
  - i. Guard Posts (Bollards) shall be installed to protect the areas specified below. (MVCC 24.3.0(o))
  - j. Grounding rods/bonding straps shall be provided for flammable liquid dispensing. (MVCC 24.3.0(j))
  - k. High-Temperature Shut-Offs shall be provided for temperature-controlled equipment. (MVCC 24.3.0(k))
  - l. Housekeeping of hazardous materials storage/use areas shall be neat, clean, and orderly. (MVCC 24.3.0(i))
  - m. Leak Detection (Monitoring) shall be installed for the materials listed below. (MVCC 24.3.0(m))
  - n. Liquid Level Controls shall be provided for open containers used in filling operations. (MVCC 24.3.0(n))
  - o. Placarding shall be provided at entrances to hazardous material storage/use locations. (MVCC 24.3.0)
  - p. Safety Storage Cabinets shall be provided/upgraded as specified below. (MVCC 24.3.0(p))
  - q. Secondary Containment shall be provided/upgraded for hazmat storage/use as described below. (MVCC 24.3.0(q))
  - r. Incompatible hazardous materials shall be Segregated from one another as described below. (MVCC 24.3.0(r))
  - s. Shelf-Bracling/Lip Guards shall be provided for shelves storing hazardous materials. (MVCC 24.3.0(e))
  - t. Spills/Leaks shall be cleaned up immediately and safely disposed of. (MVCC 24.5.0(a))
  - u. Backup Temperature Control shall be provided for temperature-sensitive materials. (MVCC 24.3.0(u))
  - v. Approved Trucks/Carts shall be used for transport of hazardous materials thru exit corridors. (MVCC 24.3.0(v))
  - w. Hazardous materials shall not be stored in or block any Travel Path. (MVCC 24.3.0(w))
  - x. Ventilation shall be provided/upgraded to meet the conditions specified below. (MVCC 24.3.0(x))
- 3. ADMINISTRATIVE**
- a. Emergency/Evacuation Procedures shall be posted in conspicuous locations. (MVCC 24.3.6)
  - b. Material Safety Data Sheets shall be kept up to date and readily available. (MVCC 24.3.6)
  - c. Adequate Spill Clean-Up Equipment shall be maintained at all times. (MVCC 24.3.4)
  - d. An Inspection Log for hazmat storage locations and safety equipment shall be maintained. (MVCC 24.4.2(g))

No Violations Observed During this Inspection.

Explanation/Comments UNDERGROUND SUB PUMP NOW SHUTS OFF WHEN NOT IN USE. PUMP (PAUC) REPLACED CIRCUIT PANEL BOARD.

A reinspection shall be conducted in Two Weeks. Additional inspections after the first reinspection are billed at \$75.00/hour and may be subject to civil and/or criminal penalties.

All violations have been corrected. Thank You.

**A REASONABLE DEGREE OF COMPLIANCE EXISTS AT THIS TIME.**

**CITY AND STATE CODE REQUIRES COMPLIANCE WITH THE ITEMS LISTED BELOW:**

**1. ADMINISTRATIVE:**

- a. **Daily Inspection Log (MVCC 24.4.2.g)**  
A daily inspection log verifying that your leak detection: (1) has power, and (2) is/is not in alarm, must be maintained on the premises and available for review by the Fire Department. Call (415) 903-6378 to obtain copies of a sample inspection log.
- b. **Notification of Alarms (MVCC 24.5.0.a.2.(a))**  
You must immediately report an alarm from any leak detection equipment to the Fire Department at (415) 903-6821. You have five (5) working days to determine the cause for the alarm. If no cause can be found, it is assumed that a tank/piping failure has taken place and the affected tank/piping shall be closed until the cause for the alarm can be determined.

**2. TANKS/PIPING SYSTEM:**

The following items were noted as requiring corrective action:

- a. **Dispenser Fittings/Hoses:** \_\_\_\_\_
- b. **Sub-Pumps/Manways:** REGULARLY CLEANED MANWAY SUBPUMP IS RUNNING CONTINUOUSLY
- c. **Overfill/Overpill Devices:** \_\_\_\_\_
- d. **Emergency Shut-Off:** \_\_\_\_\_

**3. LEAK DETECTION SYSTEM(S) FOR TANKS/PIPING:**

All leak detection systems must be maintained in proper working order. The following items were noted as requiring corrective action:

\_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

Additional Requirements and/or Comments: \_\_\_\_\_

**A REINSPECTION SHALL BE CONDUCTED IN FIVE DAYS. ADDITIONAL INSPECTIONS AFTER THE FIRST REINSPECTION ARE BILLED AT \$75.00/HOUR, ONE-HOUR MINIMUM.**

**ALL VIOLATIONS HAVE BEEN CORRECTED. THANK YOU!**

Date: 2/12/98

Business Name: Arco

Contact: \_\_\_\_\_

Leak Detection Program:  
--Tanks: Electronic Liquid Sensors  
--Piping: Electronic Liquid Sensors

I. General

1) *Inspect overflow container of each tank.*

- Any missing overflow containers? X/0
- Record any overflow container with free product that cannot be drained into the tank: dry

2) *Inspect overflow prevention device of each tank (flapper valve or equivalent).*

- Any missing overflow prevention devices? X/0

3) *Inspect manway sump of each tank.*

- Any liquid in the sumps from rain or product? WATER REMOVED FROM PREMIUM MANWAY DURING INSPECTION!

4) *Remove faceplate from each dispenser and inspect:*

- Any crimped or collapsed hoses? No
- Any leaking pipes or joints? \_\_\_\_\_
- Any loose or missing fittings or hose connectors? \_\_\_\_\_
- Any exposed electrical wires? \_\_\_\_\_
- Any open conduit? \_\_\_\_\_
- Any missing shear valves? \_\_\_\_\_
- Area under the dispensers dry? Y/0

5) *Inspect Emergency Shut-Off switch:*

- Is it located within 75" of any dispenser? Y/0
- Is it labeled? Y/0
- Is it working (test with one product)? NOT TESTED

6) *Inspect fire extinguishers:*

- Are they located within 75 feet of all pumps/dispensers? Y/0
- Are they located in accessible areas? \_\_\_\_\_
- Have they been serviced within the last 12 months? \_\_\_\_\_
- Are they rated 2-A:20-B:C minimum? \_\_\_\_\_

7) *Inspect signage. Are the following signs posted and within sight of each dispenser?*

- "Smoking Prohibited": \_\_\_\_\_ YES
- "Vehicles Must Stop During Fueling Operations": \_\_\_\_\_
- "Dispensing Into Unapproved Containers Is Prohibited": \_\_\_\_\_
- For unsupervised locations only, the emergency sign shown below N/A

<b>IN CASE OF FIRE OR SPILL</b>
1. Use emergency pump shutoff!
2. Report the accident!
Fire Department: Call 911
Facility Address _____

8) *Verify annual test of mechanical or electronic line leak detector.*

- Required     Not required because annular space sensors shut off turbine pumps.

- Date of last test: \_\_\_\_\_
- If last test was conducted over a year ago, indicate how re-test will be performed:  
    \_\_\_ Tested on site with test equipment. Results: \_\_\_\_\_  
    \_\_\_ Tested by third-party. Date of test: \_\_\_\_\_ . Results: \_\_\_\_\_

9) *Verify that the leak detection systems are functioning.*

- Is there power to all leak detection systems? YES

10) *Determine current alarm status.*

- Describe current alarm conditions for each detection system: NONE

11) *Verify daily inspection log.*

- Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? YES
- Is the log up to date? YES. If not, date of last entry was: \_\_\_\_\_

12) *Verify that cathodic protection is working properly (if applicable):*

- Complete the cathodic protection worksheet and record violations: N/A

13) *Verify 3rd party alarm monitoring, (if applicable).*

- Alarm test date: N/A      Alarm test time: \_\_\_\_\_
- Alarm verification date: \_\_\_\_\_      Alarm verification time: \_\_\_\_\_
- Alarm company: \_\_\_\_\_

## II. Liquid Sensors

- 1) PETROMETER. Check electronic diagnostics by hitting the "Test" key. Are electronics working properly? \_\_\_\_\_
- 2) PETROMETER. Check control unit by removing the copper tubing connection under the unit and inserting the test tubing and sensor assembly. Lower the air bell into a container of water and observe the point at which the alarm is activated.  
Is alarm working? \_\_\_\_\_  
Is alarm activated at the 1/4" submersion point? \_\_\_\_\_  
Hit the alarm silencer button while keeping the air bell in water.  
Does the red alarm light remain on in the alarm mode? \_\_\_\_\_  
Does alarm turn off when the sensor is removed from the water? \_\_\_\_\_
- 3) PETROMETER. Inspect *annular space* integrity. In annular spaces where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
Record results: \_\_\_\_\_
- 4) POLLULERT FD 102. Verify that audible alarm has not been disabled.  
Is "Audible" alarm button on panel face in the "On" position? \_\_\_\_\_
- 5) POLLULERT FD 102. Verify audible alarm. Push "Audible Alarm" button, and switch "Manual Trip" and "Latch" to the "On" positions.  
Is alarm working? \_\_\_\_\_  
Turn "Latch" switch to "Off" position. Alarm should silence.  
Are alarm switches working properly? \_\_\_\_\_
- 6) POLLULERT FD 102. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.  
Record results: \_\_\_\_\_
- 7) POLLULERT FD 102. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.  
Record results: \_\_\_\_\_
- 8) POLLULERT FD 102. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_
- 9) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.  
Record observations: \_\_\_\_\_
- 10) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should

sound, LCD display should light, and keypads light.

Record results: \_\_\_\_\_

11) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.

Record results: \_\_\_\_\_

12) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record results: \_\_\_\_\_

13) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

14) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

15) OWENS-CORNING HYDROSTATIC MONITOR. Verify sensor function in *annular space*. Drain liquid from tank reservoir and verify alarm.

Record results: \_\_\_\_\_

16) OWENS-CORNING HYDROSTATIC MONITOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

17) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.

Are all appropriate LED lights activated? \_\_\_\_\_

18) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.

Record results: \_\_\_\_\_

19) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

20) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

21) LEAK SENSOR JR. Verify that the number of active sensors is correct. Are the correct number of active sensors indicated by "Normal" lights? \_\_\_\_\_

22) LEAK SENSOR JR. Verify alarm function. Hit "Test" button. Active probes should alarm, then turn off.  
Record results: \_\_\_\_\_

23) LEAK SENSOR JR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down. KEEP UNIT IN ALARM FOR NEXT TEST.

Record results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_

Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_

After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm.

Record results: \_\_\_\_\_

24) LEAK SENSOR JR. Verify probe function *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_

Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_

After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm.

Record results: \_\_\_\_\_

25) LEAK SENSOR JR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: Record Results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_

Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_

After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm

Record results: \_\_\_\_\_

26) API/ROGAN LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: WORKING - UNLEADED SENSOR DOES NOT SHUT, DISPERSED

27) API/ROGAN LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: N/A

28) API/ROGAN LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces

with CGI (winter inspection) and have thrd party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed  Tested w/CGI. Record Results: ALL LEAD 0% LSL

---

29) API/ROGAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: KI/A

---

30) CEI LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

---

31) CEI LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

---

32) CEI LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have thrd party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

---

33) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

---

34) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

---

35) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

---

# UNDERGROUND TANK SAFETY NOTICE

Business Name: Arco Business Phone: \_\_\_\_\_  
Business Address: 2110 Old Middle Rd Business Contact: Josh  
Date: 9/2/97 Start Time: 12 End Time: 12:10 Inspector: Shank  
Inspection Number (circle one): 1 (2)/4/5

A REASONABLE DEGREE OF COMPLIANCE EXISTS AT THIS TIME.

CITY AND STATE CODE REQUIRES COMPLIANCE WITH THE ITEMS LISTED BELOW:

1. ADMINISTRATIVE:

- a. Daily Inspection Log (MVCC 24.4.2.g)  
A daily inspection log verifying that your leak detection: (1) has power, and (2) is/is not in alarm, must be maintained on the premises and available for review by the Fire Department. Call (415) 903-6378 to obtain copies of a sample inspection log.
- b. Notification of Alarms (MVCC 24.5.0.a.2.(a))  
You must immediately report an alarm from any leak detection equipment to the Fire Department at (415) 903-6821. You have five (5) working days to determine the cause for the alarm. If no cause can be found, it is assumed that a tank/piping failure has taken place and the affected tank/piping shall be closed until the cause for the alarm can be determined.

2. TANKS/PIPING SYSTEM:

The following items were noted as requiring corrective action:

- a. Dispenser Fittings/Hoses: \_\_\_\_\_
- b. Sub-Pumps/Manways: \_\_\_\_\_
- c. Overfill/Overspill Devices: Remove liquid from all overspill containers
- d. Emergency Shut-Off: \_\_\_\_\_ OK

3. LEAK DETECTION SYSTEM(S) FOR TANKS/PIPING:

All leak detection systems must be maintained in proper working order. The following items were noted as requiring corrective action:

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

Additional Requirements and/or Comments: \_\_\_\_\_

A REINSPECTION SHALL BE CONDUCTED IN FIVE DAYS. ADDITIONAL INSPECTIONS AFTER THE FIRST REINSPECTION ARE BILLED AT \$75.00/HOUR, ONE-HOUR MINIMUM.

ALL VIOLATIONS HAVE BEEN CORRECTED. THANK YOU!

UST Leak Detection Inspection Worksheet (9/96)

Address: 2110 Old Middlefield

Date: 8/25/97

Business Name: Arco

Contact: Tajbi

Leak Detection Program:

- Tanks: Electronic Liquid Sensors
- Piping: Electronic Liquid Sensors

I. General

1) Inspect overspill container of each tank.

- Any missing overspill containers? NO
- Record any overspill container with free product that cannot be drained into the tank: All  
Need to be drained

2) Inspect overfill prevention device of each tank (flapper valve or equivalent).

- Any missing overfill prevention devices? NO

3) Inspect manway sump of each tank.

- Any liquid in the sumps from rain or product? NO

4) Remove faceplate from each dispenser and inspect:

- Any crimped or collapsed hoses? NO
- Any leaking pipes or joints? NO
- Any loose or missing fittings or hose connectors? NO
- Any exposed electrical wires? NO
- Any open conduit? NO
- Any missing shear valves? NO
- Area under the dispensers dry? NO

5) Inspect Emergency Shut-Off switch:

- Is it located within 75" of any dispenser? Yes
- Is it labeled? Yes
- Is it working (test with one product)? NO 7/17/97

6) Inspect fire extinguishers:

- Are they located within 75 feet of all pumps/dispensers? Yes
- Are they located in accessible areas? Yes
- Have they been serviced within the last 12 months? Yes
- Are they rated 2-A:20-B:C minimum? Yes

7) *Inspect signage. Are the following signs posted and within sight of each dispenser?*

- "Smoking Prohibited": Y
- "Vehicles Must Stop During Fueling Operations": Y
- "Dispensing into Unapproved Containers is Prohibited": Y
- For unsupervised locations only, the emergency sign shown below N/A

<b>IN CASE OF FIRE OR SPILL</b>
1. Use emergency pump shutoff!
2. Report the accident!
Fire Department: Call 911
Facility Address _____

8) *Verify annual testing of mechanical line leak detector, if applicable.*

- Date of last test: N/A *sump pump shut down summer 9/11*
- If last test was conducted over a year ago, indicate how re-test will be performed:  
\_\_\_\_ Tested on site with test equipment. Results: \_\_\_\_\_  
\_\_\_\_ Tested by third-party. Date of test: \_\_\_\_\_ . Results: \_\_\_\_\_

9) *Verify that the leak detection systems are functioning.*

- Is there power to all leak detection systems? Y

10) *Determine current alarm status.*

- Describe current alarm conditions for each detection system: None

11) *Verify daily inspection log.*

- Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? couldn't locate
- Is the log up to date? \_\_\_\_\_. If not, date of last entry was: \_\_\_\_\_

12) *Verify that cathodic protection is working properly (if applicable):*

- Complete the cathodic protection worksheet and record violations: N/A

13) *Verify 3rd party alarm monitoring, (if applicable).*

- Alarm test date: \_\_\_\_\_ Alarm test time: \_\_\_\_\_
- Alarm verification date: \_\_\_\_\_ Alarm verification time: \_\_\_\_\_
- Alarm company: \_\_\_\_\_

## II. Liquid Sensors

1) **PETROMETER.** Check electronic diagnostics by hitting the "Test" key. Are electronics working properly? \_\_\_\_\_

2) PETROMETER. Check control unit by removing the copper tubing connection under the unit and inserting the test tubing and sensor assembly. Lower the air bell into a container of water and observe the point at which the alarm is activated.

Is alarm working? \_\_\_\_\_

Is alarm activated at the 1/4" submersion point? \_\_\_\_\_

Hit the alarm silencer button while keeping the air bell in water.

Does the red alarm light remain on in the alarm mode? \_\_\_\_\_

Does alarm turn off when the sensor is removed from the water? \_\_\_\_\_

3) PETROMETER. Inspect *annular space* integrity. In annular spaces where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

Record results: \_\_\_\_\_

4) POLLULERT FD 102. Verify that audible alarm has not been disabled.

Is "Audible" alarm button on panel face in the "On" position? \_\_\_\_\_

5) POLLULERT FD 102. Verify audible alarm. Push "Audible Alarm" button, and switch "Manual Trip" and "Latch" to the "On" positions.

Is alarm working? \_\_\_\_\_

Turn "Latch" switch to "Off" position. Alarm should silence.

Are alarm switches working properly? \_\_\_\_\_

6) POLLULERT FD 102. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record results: \_\_\_\_\_

7) POLLULERT FD 102. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

8) POLLULERT FD 102. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

9) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.

Record observations: \_\_\_\_\_

10) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light.

Record results: \_\_\_\_\_

11) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.

Record results: \_\_\_\_\_

12) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record results: \_\_\_\_\_

13) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

14) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

15) OWENS-CORNING HYDROSTATIC MONITOR. Verify sensor function in *annular space*. Drain liquid from tank reservoir and verify alarm.

Record results: \_\_\_\_\_

16) OWENS-CORNING HYDROSTATIC MONITOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "89" label: \_\_\_\_\_

17) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.

Are all appropriate LED lights activated? \_\_\_\_\_

18) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.

Record results: \_\_\_\_\_

19) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

20) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

21) LEAK SENSOR JR. Verify that the number of active sensors is correct.  
Are the correct number of active sensors indicated by "Normal" lights? \_\_\_\_\_

22) LEAK SENSOR JR. Verify alarm function. Hit "Test" button. Active probes should alarm, then turn off.  
Record results: \_\_\_\_\_

23) LEAK SENSOR JR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down. KEEP UNIT IN ALARM FOR NEXT TEST.  
Record results: \_\_\_\_\_  
Press "Silent" button. This should silence alarm while maintaining red alarm light.  
Record results: \_\_\_\_\_  
Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.  
Record results: \_\_\_\_\_  
After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm.  
Record results: \_\_\_\_\_

24) LEAK SENSOR JR. Verify probe function *along piping runs (if applicable)*. Remove probes and submerge in water.  
Record results: \_\_\_\_\_  
Press "Silent" button. This should silence alarm while maintaining red alarm light.  
Record results: \_\_\_\_\_  
Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.  
Record results: \_\_\_\_\_  
After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm.  
Record results: \_\_\_\_\_

25) LEAK SENSOR JR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: Record Results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.  
Record results: \_\_\_\_\_  
Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.  
Record results: \_\_\_\_\_  
After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm  
Record results: \_\_\_\_\_

26) API/ROGAN LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down. *OIC*  
Record results: \_\_\_\_\_

27) API/ROGAN LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water. *N/A*  
Record results: \_\_\_\_\_

28) API/ROGAN LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

Sensors Removed     Tested w/CGI. Record Results: REPAIR COMPANY DID NOT WORK. (They showed finally)

29) API/ROGAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: N/A

30) CEI LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

31) CEI LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

32) CEI LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

Sensors Removed     Tested w/CGI. Record Results: \_\_\_\_\_

33) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

34) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

35) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

Sensors Removed     Tested w/CGI. Record Results: \_\_\_\_\_

SAFETY NOTICE**

Business Name: Arco Business Phone: \_\_\_\_\_  
 Business Address: 2110 OLD MIDDLEFIELD WAY Business Contact: \_\_\_\_\_  
 Date: 3/28/97 Start Time: 8:00 End Time: 8:05 Inspector: DALLIGER  
 Inspection Number (circle one): 2/3/4/5

\_\_\_ A REASONABLE DEGREE OF COMPLIANCE EXISTS AT THIS TIME.  
 \_\_\_ CITY AND STATE CODE REQUIRES COMPLIANCE WITH THE ITEMS LISTED BELOW:

**1. ADMINISTRATIVE:**

- \_\_\_ a. **Daily Inspection Log (MVCC 24.4.2.g)**  
A daily inspection log verifying that your leak detection: (1) has power, and (2) is/is not in alarm, must be maintained on the premises and available for review by the Fire Department. Call (415) 903-6378 to obtain copies of a sample inspection log.
- \_\_\_ b. **Notification of Alarms (MVCC 24.5.0.a.2.(a))**  
You must immediately report an alarm from any leak detection equipment to the Fire Department at (415) 903-6821. You have five (5) working days to determine the cause for the alarm. If no cause can be found, it is assumed that a tank/piping failure has taken place and the affected tank/piping shall be closed until the cause for the alarm can be determined.

**2. TANKS/PIPING SYSTEM:**

The following items were noted as requiring corrective action:

- \_\_\_ a. **Dispenser Fittings/Hoses:** \_\_\_\_\_
- \_\_\_ b. **Sub-Pumps/Manways:** \_\_\_\_\_
- \_\_\_ c. **Overfill/Overspill Devices:** \_\_\_\_\_
- \_\_\_ d. **Emergency Shut-Off:** \_\_\_\_\_

**3. LEAK DETECTION SYSTEM(S) FOR TANKS/PIPING:**

All leak detection systems must be maintained in proper working order. The following items were noted as requiring corrective action:

SYSTEM WIRES WERE PULLED APART SIMULATING A BROKEN CONNECTION (CAN-LEAKED, REGULAR). SYSTEM ALARMED + SHOT DOWN SUB PUMP. SYSTEM WORKING PROPERLY.

Additional Requirements and/or Comments: \_\_\_\_\_

- \_\_\_ A REINSPECTION SHALL BE CONDUCTED IN FIVE DAYS. ADDITIONAL INSPECTIONS AFTER THE FIRST REINSPECTION ARE BILLED AT \$75.00/HOUR, ONE-HOUR MINIMUM.
- \_\_\_ ALL VIOLATIONS HAVE BEEN CORRECTED. THANK YOU!

UST Leak Detection Inspection Worksheet (9/96)

Address: 2110 OLD MIDDLEFIELD WAY Date: 3/11/97

Business Name: ARCO Contact: \_\_\_\_\_

\*\*\*\*\*  
**Leak Detection Program:**  
--Tanks: Electronic Liquid Sensors  
--Piping: Electronic Liquid Sensors  
\*\*\*\*\*

**I. General**

1) **Inspect overspill container of each tank.**  
• Any missing overspill containers? No  
• Record any overspill container with free product that cannot be drained into the tank: NO LIP

2) **Inspect overfill prevention device of each tank (flapper valve or equivalent).**  
• Any missing overfill prevention devices? PRESENT

3) **Inspect manway sump of each tank.**  
• Any liquid in the sumps from rain or product? Dry

4) **Remove faceplate from each dispenser and inspect:**  
• Any crimped or collapsed hoses? \_\_\_\_\_  
• Any leaking pipes or joints? \_\_\_\_\_  
• Any loose or missing fittings or hose connectors? \_\_\_\_\_  
• Any exposed electrical wires? \_\_\_\_\_  
• Any open conduit? \_\_\_\_\_  
• Any missing shear valves? \_\_\_\_\_  
• Area under the dispensers dry? YES

5) **Inspect Emergency Shut-Off switch:**  
• Is it located within 75" of any dispenser? YES  
• Is it labeled? YES  
• Is it working (test with one product)? NOT TESTED

6) **Inspect fire extinguishers:**  
• Are they located within 75 feet of all pumps/dispensers? YES  
• Are they located in accessible areas? \_\_\_\_\_  
• Have they been serviced within the last 12 months? \_\_\_\_\_  
• Are they rated 2-A:20-B:C minimum? \_\_\_\_\_

7) Inspect signage. Are the following signs posted and within sight of each dispenser?

- "Smoking Prohibited": \_\_\_\_\_
- "Vehicles Must Stop During Fueling Operations": \_\_\_\_\_
- "Dispensing into Unapproved Containers is Prohibited": \_\_\_\_\_
- For unsupervised locations only, the emergency sign shown below \_\_\_\_\_

YES  
↓

<b>IN CASE OF FIRE OR SPILL</b>
1. Use emergency pump shutoff
2. Report the accident
Fire Department: Call 911
Facility Address _____

8) Verify annual testing of mechanical line leak detector, if applicable.

- Date of last test: N/A - ROLEXI ~~MANUAL~~ SENSOR SAITS DOWN PUMP.
- If last test was conducted over a year ago, indicate how re-test will be performed:  
\_\_\_\_ Tested on site with test equipment. Results: \_\_\_\_\_  
\_\_\_\_ Tested by third-party. Date of test: \_\_\_\_\_ . Results: \_\_\_\_\_

9) Verify that the leak detection systems are functioning.

- Is there power to all leak detection systems? YES

10) Determine current alarm status.

- Describe current alarm conditions for each detection system: NONE

11) Verify daily inspection log.

- Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? YES
- Is the log up to date? YES. If not, date of last entry was: \_\_\_\_\_

12) Verify that cathodic protection is working properly (if applicable):

- Complete the cathodic protection worksheet and record violations: \_\_\_\_\_

13) Verify 3rd party alarm monitoring, (if applicable).

- Alarm test date: N/A Alarm test time: \_\_\_\_\_
- Alarm verification date: \_\_\_\_\_ Alarm verification time: \_\_\_\_\_
- Alarm company: \_\_\_\_\_

## II. Liquid Sensors

1) PETROMETER. Check electronic diagnostics by hitting the "Test" key. Are electronics working properly? \_\_\_\_\_

2) PETROMETER. Check control unit by removing the copper tubing connection under the unit and inserting the test tubing and sensor assembly. Lower the air bell into a container of water and observe the point at which the alarm is activated.

Is alarm working? \_\_\_\_\_.

Is alarm activated at the 1/4" submerison point? \_\_\_\_\_.

Hit the alarm silencer button while keeping the air bell in water.

Does the red alarm light remain on in the alarm mode? \_\_\_\_\_.

Does alarm turn off when the sensor is removed from the water? \_\_\_\_\_.

3) PETROMETER. Inspect *annular space* integrity. In annular spaces where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

Record results: \_\_\_\_\_

4) POLLULERT FD 102. Verify that audible alarm has not been disabled.

Is "Audible" alarm button on panel face in the "On" position? \_\_\_\_\_.

5) POLLULERT FD 102. Verify audible alarm. Push "Audible Alarm" button, and switch "Manual Trip" and "Latch" to the "On" positions.

Is alarm working? \_\_\_\_\_.

Turn "Latch" switch to "Off" position. Alarm should silence.

Are alarm switches working properly? \_\_\_\_\_.

6) POLLULERT FD 102. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record results: \_\_\_\_\_

7) POLLULERT FD 102. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

8) POLLULERT FD 102. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

9) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.

Record observations: \_\_\_\_\_

10) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light.

Record results: \_\_\_\_\_

11) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.

Record results: \_\_\_\_\_

12) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record results: \_\_\_\_\_

13) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

14) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

15) OWENS-CORNING HYDROSTATIC MONITOR. Verify sensor function in *annular space*. Drain liquid from tank reservoir and verify alarm.

Record results: \_\_\_\_\_

16) OWENS-CORNING HYDROSTATIC MONITOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

17) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.

Are all appropriate LED lights activated? \_\_\_\_\_

18) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.

Record results: \_\_\_\_\_

19) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

20) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

21) LEAK SENSOR JR. Verify that the number of active sensors is correct.  
Are the correct number of active sensors indicated by "Normal" lights? \_\_\_\_\_

22) LEAK SENSOR JR. Verify alarm function. Hit "Test" button. Active probes should alarm, then turn off.  
Record results: \_\_\_\_\_

23) LEAK SENSOR JR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down. **KEEP UNIT IN ALARM FOR NEXT TEST.**

Record results: \_\_\_\_\_  
Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_  
Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_  
After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm.

Record results: \_\_\_\_\_

24) LEAK SENSOR JR. Verify probe function *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_  
Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_  
Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_  
After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm.

Record results: \_\_\_\_\_

25) LEAK SENSOR JR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: Record Results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.  
Record results: \_\_\_\_\_

Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.  
Record results: \_\_\_\_\_

After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm  
Record results: \_\_\_\_\_

26) API/ROGAN LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_ *WORKING*

27) API/ROGAN LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_ *N/A*

28) API/RODAN LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: ALL LEVELS ARE 0

29) API/RODAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: N/A

30) CEI LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

31) CEI LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

32) CEI LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

33) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

34) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

35) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

ENVIRONMENTAL SAFETY DIVISION

1000 VILLA STREET, MOUNTAIN VIEW, CA 94041 • 415-903-6378

UNDERGROUND TANK  
SAFETY NOTICE

Business Name: Arco Business Phone: \_\_\_\_\_  
Business Address: 2110 Old Middlefield Way Business Contact: \_\_\_\_\_  
Date: 9/17/96 Start Time: 1:50 End Time: 2:55 Inspector: DAUZIGER  
Inspection Number (circle one): 1 3 / 4 / 5

A REASONABLE DEGREE OF COMPLIANCE EXISTS AT THIS TIME.

CITY AND STATE CODE REQUIRES COMPLIANCE WITH THE ITEMS LISTED BELOW:

1. ADMINISTRATIVE:

a. Daily Inspection Log (MVCC 24.4.2.g)

A daily inspection log verifying that your leak detection: (1) has power, and (2) is/is not in alarm, must be maintained on the premises and available for review by the Fire Department. Call (415) 903-6378 to obtain copies of a sample inspection log.

b. Notification of Alarms (MVCC 24.5.0.a.2.(a))

You must immediately report an alarm from any leak detection equipment to the Fire Department at (415) 903-6821. You have five (5) working days to determine the cause for the alarm. If no cause can be found, it is assumed that a tank/piping failure has taken place and the affected tank/piping shall be closed until the cause for the alarm can be determined.

2. TANKS/PIPING SYSTEM:

The following items were noted as requiring corrective action:

a. Dispenser Fittings/Hoses: \_\_\_\_\_

b. Sub-Pumps/Manways: \_\_\_\_\_

c. Overfill/Overspill Devices: \_\_\_\_\_

d. Emergency Shut-Off: \_\_\_\_\_

3. LEAK DETECTION SYSTEM(S) FOR TANKS/PIPING:

All leak detection systems must be maintained in proper working order. The following items were noted as requiring corrective action:

~~Inspection system for regular check of tank for leaks~~  
~~\_\_\_\_\_~~  
~~\_\_\_\_\_~~  
~~\_\_\_\_\_~~

Additional Requirements and/or Comments: \_\_\_\_\_

A REINSPECTION SHALL BE CONDUCTED IN FIVE DAYS. ADDITIONAL INSPECTIONS AFTER THE FIRST REINSPECTION ARE BILLED AT \$75.00/HOUR, ONE-HOUR MINIMUM.

ALL VIOLATIONS HAVE BEEN CORRECTED, THANK YOU!

UST Leak Detection Inspection Worksheet

Address: 2110

Date: 9/29/96

Business Name: ARCO

Contact: THAGF

Leak Detection Program:

- Tanks: Electronic Liquid Sensors
- Piping: Electronic Liquid Sensors

I. General

1) Inspect fill tube and overspill box of each tank.

Record any product fill tube/overspill box not labeled with the correct product name: OK

Record any overspill box containing free product that cannot be drained into the tank: OK

Record any soil stains or contamination surrounding the fill tube area: NONE

Record any fill tube missing an overfill (flapper valve) assembly: OK

2) Inspect turbine manway of each tank.

Record any soil contamination surrounding the fill tube area: NONE

3) Verify annual testing of Red Jacket line leak detector, if applicable (summer inspection).

Date of last test: N/A

4) Remove faceplate from each dispenser and inspect.

Record any dispensers that display leaks, weeping joints, or missing piping/hoses: OK

5) Verify that the leak detection systems are functioning.

Is there power to all leak detection systems? OK

6) Determine current alarm status.

Describe current alarm conditions for each detection system: NONE

7) Verify daily inspection log.

Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? COULDN'T FIND IT, TANKS WERE

Is the log up to date? NO. If not, date of last entry was: GROUND

8) Verify that cathodic protection is working properly (if applicable):  
Complete the cathodic protection worksheet and record violations: N/A

9) Verify 3rd party alarm monitoring, (if applicable). N/A  
Alarm test date: \_\_\_\_\_ Alarm test time: \_\_\_\_\_  
Alarm verification date: \_\_\_\_\_ Alarm verification time: \_\_\_\_\_  
Alarm company: \_\_\_\_\_

## II. Liquid Sensors

1) PETROMETER. Check electronic diagnostics by hitting the "Test" key. Are electronics working properly? \_\_\_\_\_

2) PETROMETER. Check control unit by removing the copper tubing connection under the unit and inserting the test tubing and sensor assembly. Lower the air bell into a container of water and observe the point at which the alarm is activated.

Is alarm working? \_\_\_\_\_

Is alarm activated at the 1/4" submersion point? \_\_\_\_\_

Hit the alarm silencer button while keeping the air bell in water.

Does the red alarm light remain on in the alarm mode? \_\_\_\_\_

Does alarm turn off when the sensor is removed from the water? \_\_\_\_\_

3) PETROMETER. Inspect *annular space* integrity. In annular spaces where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

Record results: \_\_\_\_\_

4) POLLULERT FD 102. Verify that audible alarm has not been disabled.

Is "Audible" alarm button on panel face in the "On" position? \_\_\_\_\_

5) POLLULERT FD 102. Verify audible alarm. Push "Audible Alarm" button, and switch "Manual Trip" and "Latch" to the "On" positions.

Is alarm working? \_\_\_\_\_

Turn "Latch" switch to "Off" position. Alarm should silence.

Are alarm switches working properly? \_\_\_\_\_

6) POLLULERT FD 102. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record results: \_\_\_\_\_

7) POLLULERT FD 102. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

8) POLLULERT FD 102. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

---

9) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.

Record observations: \_\_\_\_\_

10) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light.

Record results: \_\_\_\_\_

11) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.

Record results: \_\_\_\_\_

12) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record results: \_\_\_\_\_

13) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

14) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

---

15) OWENS-CORNING HYDROSTATIC MONITOR. Verify sensor function in *annular space*. Drain liquid from tank reservoir and verify alarm.

Record results: \_\_\_\_\_

16) OWENS-CORNING HYDROSTATIC MONITOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

---

17) SCULLY SYSTEM. Verify alarm function. Hit "Alarm Test" button on each control panel.

Record results: \_\_\_\_\_

18) SCULLY SYSTEM. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.  
Record results: \_\_\_\_\_

19) SCULLY SYSTEM. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.  
Record results: \_\_\_\_\_

20) SCULLY SYSTEM. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

21) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.  
Are all appropriate LED lights activated? \_\_\_\_\_

22) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.  
Record results: \_\_\_\_\_

23) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.  
Record results: \_\_\_\_\_

24) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

25) LEAK SENSOR JR. Verify that the number of active sensors is correct.  
Are the correct number of active sensors indicated by "Normal" lights? \_\_\_\_\_

26) LEAK SENSOR JR. Verify alarm function. Hit "Test" button. Active probes should alarm, then turn off.  
Record results: \_\_\_\_\_

27) LEAK SENSOR JR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down. KEEP UNIT IN ALARM FOR NEXT TEST.  
Record results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_

Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_

After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm.  
Record results: \_\_\_\_\_

28) LEAK SENSOR JR. Verify probe function along piping runs (if applicable). Remove probes and submerge in water.

Record results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_

Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_

After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm.

Record results: \_\_\_\_\_

29) LEAK SENSOR JR. Verify probe function in annular space of tanks. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: Record Results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_

Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_

After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm.

Record results: \_\_\_\_\_

30) API/ROGAN LIQUID SENSOR. Verify probe function in sumps/manways. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_ OK

31) API/ROGAN LIQUID SENSOR. Verify probe function in along piping runs (if applicable). Remove probes and submerge in water.

Record results: \_\_\_\_\_ N/A

32) API/ROGAN LIQUID SENSOR. Verify probe function in annular space of tanks. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

Annular shuts down summer inspection.

33) API/ROGAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_ N/A

34) CEI LIQUID SENSOR. Verify probe function in sumps/manways. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

35) CEI LIQUID SENSOR. Verify probe function in along piping runs (if applicable). Remove probes and submerge in water.

Record results: \_\_\_\_\_

36) CEI LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

Sensors Removed  Tested w/CGI. Record Results: \_\_\_\_\_

---

37) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

---

38) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

---

39) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

Sensors Removed  Tested w/CGI. Record Results: \_\_\_\_\_

## CITY OF MOUNTAIN VIEW

Fire Department • Environmental Safety Division • 1000 Villa Street • Mountain View, California 94041-1295  
415-903-6378 • FAX 415-903-6122

Mr. Taghl Lavassani  
ARCO  
2110 Old Middlefield Way  
Mountain View, CA 94041

March 5, 1996

Dear Mr. Lavassani:

On March 5, 1996, an underground storage tank inspection was conducted at 2110 Old Middlefield Way, Mountain View. The following violations were discovered:

### Violations:

1.1 The unleaded manway sump (secondary containment) contained rainwater. This is a violation of Mountain View City Code MVCC 24.23.0.q.2(d) which requires that secondary containment not provide for the accumulation of liquid.

1.2 The liquid sensor in the Unleaded sump had been pulled up out of the water. This is a violation of Mountain View City Code MVCC 24.3.0.m.4 which requires that monitoring devices be fully functional at all times.

Future violations of the same type at this site may result in the following enforcement actions:

- Infraction penalties;
- Prosecution in the form of civil or criminal penalties.

It appeared that the water intrusion was being caused by a poor installation of the manway sump. You indicated the possibility the sensor may have been raised by a service person during equipment maintenance. I would suggest you and/or Arco address both these concerns to eliminate the possibility of future problems.

If you have any questions about this matter please call me at (415) 903-6378.

Sincerely,

Chris Steck  
Hazardous Materials Specialist

cc:Linda Andrews, Arco Products

SAFETY NOTICE**

Business Name: ARCO Business Phone: \_\_\_\_\_  
 Business Address: 2110 Old Mountain View Hwy Business Contact: \_\_\_\_\_  
 Date: 3/5/96 Start Time: 9:52 End Time: 10:20 Inspector: STEVE DAUBER  
 Inspection Number (circle one): 2/3/4/5

A REASONABLE DEGREE OF COMPLIANCE EXISTS AT THIS TIME.  
 CITY AND STATE CODE REQUIRES COMPLIANCE WITH THE ITEMS LISTED BELOW:

1. ADMINISTRATIVE:
- a. Daily Inspection Log (MVCC 24.19.g)  
 A daily inspection log verifying that your leak detection: (1) has power, and (2) is/is not in alarm, must be maintained on the premises and available for review by the Fire Department. Call (415) 903-6378 to obtain copies of a sample inspection log.
  - b. Notification of Alarms (MVCC 24.25.a.2.(a))  
 You must immediately report an alarm from any leak detection equipment to the Fire Department at (415) 903-6821. You have five (5) working days to determine the cause for the alarm. If no cause can be found, it is assumed that a tank/piping failure has taken place and the affected tank/piping shall be closed until the cause for the alarm can be determined.

2. TANKS/PIPING SYSTEM:
- The following items were noted as requiring corrective action:
- a. Dispenser Fittings/Hoses: \_\_\_\_\_
  - b. Sub-Pumps/Manways: REMOVED WATER TANKS ON MAINWAY & LOW SPEED LIQUID SENSOR
  - c. Overfill/Overspill Devices: \_\_\_\_\_
  - d. Emergency Shut-Off: \_\_\_\_\_

3. LEAK DETECTION SYSTEM(S) FOR TANKS/PIPING:
- All leak detection systems must be maintained in proper working order. The following items were noted as requiring corrective action:
- \_\_\_\_\_
- \_\_\_\_\_
- \_\_\_\_\_

Additional Requirements and/or Comments: \_\_\_\_\_

A REINSPECTION SHALL BE CONDUCTED IN FIVE DAYS. ADDITIONAL INSPECTIONS AFTER THE FIRST REINSPECTION ARE BILLED AT \$40.00/HOUR/MAN, ONE-HOUR MINIMUM.

ALL VIOLATIONS HAVE BEEN CORRECTED. THANK YOU!

Dear Sir/Madam:

In accordance with the California Code of Regulations, Title 23, Chapter 16, Section 2715, Subsection (a) where: "The owner shall inform the local agency of any change of designated UST operator(s) no later than 30 days after the change", Belshire Environmental Services, Inc. is submitting the attached document as notification of a change in the Designated Operator (DO) for the identified facility. The attached notification of change supersedes any similar document previously submitted for this facility.

Should you have any questions regarding the program, please contact Glen VanderVeen with Belshire Environmental Services, Inc. at (949) 460-5200.

Sincerely,

Glen VanderVeen  
Project Manager  
Belshire Environmental Services, Inc.

Designated UST Operator Program  
Mountain View, City of  
500 Castro Street  
Mountain View, CA 94041

**SUBJECT: CHANGE OF DESIGNATED UST OPERATOR NOTIFICATION  
ARCO FACILITY # 02010  
2110 OLD MIDDLEFIELD WAY  
MOUNTAIN VIEW, CA 94043**

Dear Sir/Madam:

In accordance with the California Code of Regulations, Title 23, Chapter 16, Section 2715, Subsection (a) where: "The owner shall inform the local agency of any change of designated UST operator(s) no later than 30 days after the change", BP West Coast Products, L.L.C (BP) is submitting the attached document as notification of a change in the Designated Operator (DO) for the identified facility. The attached notification of change supersedes any similar document previously submitted by BP.

It is the intent of BP to minimize the number of changes in DO assignments in the future to ensure consistency in the site-specific inspections and training. BP appreciates the opportunity to make adjustments to this evolving program as we strive to meet the spirit of the regulations and local CUPA requests.

Please contact Ruth Ha with BP West Coast Products, L.L.C at (503) 524-6191, if you have any questions concerning the specific change notification submitted with this cover letter.

Sincerely,

Compliance Manager  
BP West Coast Products, L.L.C

# California UST System Operator

Promissor ID: XX4141033290  
 Name: BRIAN HERNANDEZ  
 Address: 708 34TH AVE  
 APT 2  
 SAN FRANCISCO CA 94121

Date: 04/08/2007  
 Birth Date: 11/30/1984  
 SSN: 655870819

## EXAMINATION RESULT: PASS

Congratulations! You have passed the California UST System Operator examination. Your wallet card and certificate will be forwarded to you by ICC within six weeks from the last day of the month in which you tested. This certificate is current for two years.

It is extremely important that you notify Promissor and ICC of any changes in name and/or address to avoid the possibility of your certificate not being received. Please contact Promissor at 800-270-9301 and ICC at 808-422-7238 ext. 33816 with changes to your name and address. There may be an additional fee if a certification is re-issued due to a misspelled name or incorrect address.

International Code Council  
Computer Exam Report

DATE: 04/17/2007

**EXAM TITLE:**

CA Underground Storage Tank System Operator - UC (CUO)

**NAME:** BALDEROSE, DANIEL

**LOCATOR:** BAK03424

**EXAMINATION RESULT:** PASS

Congratulations! You have passed the CA Underground Storage Tank System Operator - UC (CUO). Your ICC certificate and wallet card will be mailed to you within six weeks after the end of the month in which you passed the exam.

Your name as it appears above on this notice will be printed on your certificate and wallet card. It is very important that you notify LaserGrade and ICC of any changes in your name and/or address.

ICC requires a change of address in writing. Please fax your change of address to ICC at (562) 692-2845 or mail it to:

ICC Certification Services  
5360 Workman Mill Road  
Whittier, CA 90601-2298

Mountain View, Ca 94043

Chris,

This letter is our notification of completion for our EVR Phase I work at the above-mentioned site. As of 3/4/06, all equipment was installed and running as per CARB Executive Order VR-101-E. Included is a copy of the results for the unofficial test performed following the maintenance work.

Thank you for your help in this matter. Please feel free to call if you have any questions.

Sincerely,

Eduardo Martinez

**SUBJECT: Change of Designated UST Operator Notification  
Arco Facility 02010  
2110 OLD MIDDLEFIELD WAY  
MOUNTAIN VIEW, CA 94043**

Dear Sir/Madam:

In accordance with the California Code of Regulations, Title 23, Chapter 16, Section 2715, Subsection (a) where: "The owner shall inform the local agency of any change of designated UST operator(s) no later than 30 days after the change", BP West Coast Products, LLC (BP) is submitting the attached document as notification of a change in the Designated Operator (DO) for the identified facility. The attached notification of change supersedes any similar document previously submitted by BP.

It is the intent of BP to minimize the number of changes in DO assignments in the future to ensure consistency in the site-specific inspections and training. BP appreciates the opportunity to make adjustments to this evolving program as we strive to meet the spirit of the regulations and local CUPA requests.

Please contact Scott Hartwell with BP West Coast Products, LLC at 714-670-5248, if you have any questions concerning the specific change notification submitted with this cover letter.

Sincerely,

A handwritten signature in black ink, appearing to read "Chris Moul".

Chris Moul  
Compliance Manager  
BP West Coast Products, LLC

## Owner Statements of Designated Underground Storage Tank (UST) Operator and Understanding of Compliance with UST Requirements

**SUBJECT: Change of Designated UST Operator Notification  
Arco Facility 02010  
2110 OLD MIDDLEFIELD WAY  
MOUNTAIN VIEW, CA 94043**

Dear Sir/Madam:

In accordance with the California Code of Regulations, Title 23, Chapter 16, Section 2715, Subsection (a) where: "The owner shall inform the local agency of any change of designated UST operator(s) no later than 30 days after the change", BP West Coast Products, LLC (BP) is submitting the attached document as notification of a change in the Designated Operator (DO) for the identified facility. The attached notification of change supersedes any similar document previously submitted by BP.

It is the intent of BP to minimize the number of changes in DO assignments in the future to ensure consistency in the site-specific inspections and training. BP appreciates the opportunity to make adjustments to this evolving program as we strive to meet the spirit of the regulations and local CUPA requests.

Please contact Scott Hartwell with BP West Coast Products, LLC at 714-670-5248, if you have any questions concerning the specific change notification submitted with this cover letter.

Sincerely,

A handwritten signature in black ink, appearing to read "Chris Moul".

Chris Moul  
Compliance Manager  
BP West Coast Products, LLC

## Owner Statements of Designated Underground Storage Tank (UST) Operator and Understanding of Compliance with UST Requirements

Facility Name: <b>ARCO - 02010</b>	Facility ID #:

January 27, 2005

VIA UPS Next Day

Designated UST Operator Program  
City of Mountain View Fire Department  
1000 Villa St.  
Mountain View, CA 94041

**SUBJECT: Change of Designated UST Operator Notification  
ARCO Facility Number 02010  
2110 Old Middlefield Way  
Mountain View, CA 94043**

Dear CUPA Representative/Inspector:

In accordance with the California Code of Regulations, Title 23, Chapter 16, Section 2715, Subsection (a) where: "The owner shall inform the local agency of any change of designated UST operator(s) no later than 30 days after the change", BP West Coast Products, LLC (BP) is submitting the attached document as notification of a change in the Designated Operator (DO) for the identified facility. The attached notification of change supersedes any similar document previously submitted by BP.

It is the intent of BP to minimize the number of changes in DO assignments in the future to ensure consistency in the site-specific inspections and training. BP appreciates the opportunity to make adjustments to this evolving program as we strive to meet the spirit of the regulations and local CUPA requests.

Please contact Don Pinkerton with Delta Environmental Consultants, Inc. at 916.772.5444 if you have any questions concerning the specific change notification submitted with this cover letter.

Sincerely,

A handwritten signature in black ink, appearing to read "Chris Moul".

Chris Moul  
Environmental Compliance Team Lead  
BP West Coast Products, LLC

## Owner Statements of Designated Underground Storage Tank (UST) Operator and Understanding of Compliance with UST Requirements

Facility Name: ARCO - 2010 Facility Address: 2110 OLD MIDDLEFIELD WAY MOUNTAIN VIEW, CA 94013 Facility Phone #: 650-968-9375	Facility ID #: Reason for Submitting this Form (Check One) <input checked="" type="checkbox"/> Change of Designated Operator <input type="checkbox"/> Update Certificate Expiration Date
---	---

## EXAMINATION RESULT: PASS

Congratulations! You have passed the California UST System Operator examination. Your wallet card and certificate will be forwarded to you by ICC within six weeks from the last day of the month in which you tested. This certificate is current for two years.

It is extremely important that you notify Promissor and ICC of any changes in name and/or address to avoid the possibility of your certificate not being received. Please contact Promissor at 001-276-9301 and ICC at 877-783-3926 with changes to your name and address. There may be an additional fee if a certification is re-issued due to a misspelled name or incorrect address.

**SUBJECT: DESIGNATED OPERATOR CERTIFICATION**

Dear Underground Storage Tank Owner:

As you probably are aware, the State Water Resources Control Board has passed legislation requiring that every underground tank site have a "designated operator" to oversee the site and reduce the likelihood of catastrophic leaks. To be a designated operator, you must do the following:

- 1) Pass the designated operator test administered by ICC by January 1, 2005;
- 2) Complete and return the attached "Owner Statements of Designated Underground Storage Tank Operator" form to us no later than January 1, 2005; and
- 3) Once certified, you must conduct monthly visual inspections of the tank site. A form for logging in the results of these inspections is included with this letter. We suggest you make copies and set up a folder at the site to store these forms when completed.

If the underground tank site does not have a designated operator as of January 1, 2005, administrative penalties and/or station closure could result.

If you have any questions regarding this new requirement, feel free to contact us at the above number. The State Water Resources Control Board also has information about the designated operator requirements and testing at its website (listed under "Hot Topics"): <http://www.swrcb.ca.gov/cwphome/ust/>.

Sincerely,

Gary Leinweber, CHMM, REA  
Fire Marshal

## SUBJECT: UNDERGROUND STORAGE TANK UPGRADE REQUIREMENTS

Dear Underground Tank Owner/Operator:

As you are probably aware, the State Water Resources Control Board adopted amendments to the underground storage tank regulations in May of this year as required by Senate Bill 989 (SB989) which became effective January 1, 2000. The regulations specify deadline dates for various upgrade requirements. In an effort to assist you in meeting these deadlines in a timely manner, we are sending you this letter to outline the specific dates and requirements for your underground tank facilities in Mountain View.

For Facility: Ted's Arco #2010      Location: 2110 Old Middlefield Way, Mtn. View

Due Date	Requirement
1/1/03	<p><i>Secondary containment testing for tanks, piping and dispensers.</i></p> <ul style="list-style-type: none"> <li>• Tester must submit a testing proposal (including contractor name and license number) to the Mountain View Fire Department and obtain approval prior the test*;</li> <li>• Tester must contact Mountain View Fire Department at 650-903-6378 at least 48 hours prior to actual test;</li> <li>• A complete test report, including test logs and results must be submitted to Mountain View Fire Department within 30 days of the test date;</li> <li>• If test fails, business owner/operator is responsible to determine the cause and repair the problem;</li> </ul>
• 12/31/02 7/1/02 12/31/02 7/1/05	<p>If secondary containment cannot be tested, either:</p> <ol style="list-style-type: none"> <li>1) Replace the secondary containment with a new system that can pass the test**; OR</li> <li>2) Submit plans* for enhanced leak detection test; and</li> </ol> <p>Complete enhanced leak detection test; and</p> <p>Replace the secondary containment with a new system that can pass the test**</p>

Due Date	Requirement
12/31/03	<p data-bbox="406 227 1385 259"><i>Installation of under-dispenser containment system</i></p> <ul data-bbox="406 259 1385 422" style="list-style-type: none"> <li data-bbox="406 259 1385 290">• Containment must be on State's "approved" list;</li> <li data-bbox="406 290 1385 362">• Containment must include monitoring by either an audible/visual alarm or by stopping flow of product when a leak is detected;</li> <li data-bbox="406 362 1385 422">• Plans for installation and monitoring must be submitted to the Mountain View Fire Department and approved prior to installation*.</li> </ul>

\*All plans shall be submitted to the Mountain View Fire at 1000 Villa Street, Mountain View. No testing or installations shall be performed until these plans have been approved.

\*\*Replacement of secondary containment requires plans to be submitted and approved by the Mountain View Fire Department prior to installation.

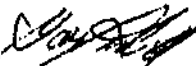

Enclosed is additional information regarding the testing of secondary containment for your tanks/piping. Please review this information thoroughly. You will also be receiving additional information regarding these requirements from the State Water Resources Control Board over the coming months.

For both of these requirements, a proposal and/or plans should be submitted to us for approval prior to conducting the test or installation. We will not accept test results or installations that have not been submitted and approved ahead of time.

If you have any questions or want to discuss further, feel free to contact us at the above number.

Thank you for your cooperation and prompt attention to these matters.

Sincerely,

Gary Leinweber, CHMM, REA  
Fire Marshal

**Subject: BP Products North America Inc. - Financial Responsibility  
Documentation Petroleum Containing Underground Storage Tanks - 40  
CFR Part 280**

Dear Sir or Madam:

The enclosed document comprises the financial assurance mechanism by which BP America Inc. demonstrates financial responsibility pursuant to 40 CFR 280 Subpart H for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks.

This document is believed to be complete and accurate. However, considering the number and geographic dispersion of USTs covered by BP America Inc.'s financial responsibility, it is possible that errors of omission have occurred and the tank listings will not always be current as of the date of the review. In any case, it is the intent of BP America Inc. to provide the mandated financial responsibility requirements for all USTs subject to 40 CFR 280 Subpart H.

If you have any questions regarding the information submitted, please contact (714) 690-2349.

Sincerely,

Chris Moul  
Manager Compliance & Assurance  
BP U.S. Convenience Retail

Enclosures

***Certificate of Insurance***

**Name:** BP America Inc.  
**Address:** Per schedule on file with company  
**Policy Number:** Claims Made PLI G23717311  
**Period of Coverage:** 01/01/2008 – 01/01/2009  
**Name of Insurer:** ACE American Insurance Company  
**Address of Insurer:** 436 Walnut St.  
Philadelphia, PA 19106  
**Name of Insured:** BP America Inc.  
**Address of Insured:** 4101 Winfield Road, Warrenville, IL 60555

**1. Certification:**

**ACE American Insurance Company hereby certifies that it has issued liability insurance covering the following underground storage tanks(s):**

**Per List Attached**

for "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; in accordance with and subject to the limits of liability, exclusions, conditions, and other terms of the policy; if coverage is different for different tanks or locations, arising from operating the underground storage tank(s) identified above.

**The limits of liability are \$1,000,000 per occurrence and annual aggregate of \$2,000,000 exclusive of legal defense costs, which are subject to a separate limit under the policy. This coverage is provided under PLIG 23717311. The effective date of said policy is January 1, 2008.**

**2. The Insurer further certifies the following with respect to the insurance described in Paragraph 1:**

**a. Bankruptcy or insolvency of the insured shall not relieve the Insurer of its obligations under the policy to which this certificate applies.**

b. The Insurer is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged third-party, with a right of reimbursement by the insured for any such payment made by the Insurer. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95-280.102.

c. Whenever requested by a Director of an implementing agency, the Insurer agrees to furnish to the Director a signed duplicate original of the policy and all endorsements.

d. Cancellation or any other termination of the insurance by the Insurer, except for non-payment of premium or misrepresentation by the insured, will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured. Cancellation for non-payment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of 10 days after a copy of such written notice is received by the insured.

e. The insurance covers claims otherwise covered by the policy that are reported to the Insurer within six months of the effective date of cancellation or non-renewal of the policy except where the new or renewed policy has the same retroactive date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the policy retroactive date, if applicable, and prior to such policy renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability, and exclusions of the policy.

I hereby certify that the wording of this instrument is identical to the wording in 40 CFR 280.97(b)(2) and that the Insurer is licensed to transact the business of insurance, or eligible to provide insurance as an excess or surplus lines insurer, in one or more states.

Kevin Truhlar  
Assistant Vice President  
Authorized Representative of ACE American Insurance Company

Endorsement Number 4

Name: Per list attached  
Address: Per list attached  
Policy Number: Claims Made PLIG23717311  
Period of Coverage: 01/01/2008 - 01/01/2009  
Insurer: ACE American Insurance Company  
Address: 436 Walnut St.  
Philadelphia, PA 19106  
Name of Insured: BP America Inc.  
Address of Insured: 4101 Winfield Rd. #3  
Warrenville, IL 60555

1. This endorsement certifies that the policy to which the endorsement is attached provides liability insurance covering the following underground storage tanks:

Per List Attached

for taking corrective action and/or compensating third parties for bodily injury and property damage caused by either sudden accidental releases or nonsudden accidental releases or accidental releases; in accordance with and subject to the limits of liability, exclusions, conditions, and other terms of the policy arising from operating the underground storage tank(s) identified above.

The limits of liability are

\$1,000,000 each occurrence  
\$2,000,000 annual aggregate

exclusive of legal defense costs, which are subject to a separate limit under the policy. This coverage is provided under Claims Made PLIG 23717311. The effective date of said policy is January 1, 2008

2. The insurance afforded with respect to such occurrences is subject to all of the terms and conditions of the policy; provided, however, that any provisions inconsistent with subsections (a) through (e) of this Paragraph 2 are hereby amended to conform with subsections (a) through (e);

- a. Bankruptcy or insolvency of the insured shall not relieve ACE American Insurance Company of its obligations under the policy to which this endorsement is attached.
- b. ACE American Insurance Company is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged third-party, with a right of reimbursement by the insured for any such payment made by ACE American Insurance Company. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95-280.102.
- c. Whenever requested by a Director of an implementing agency, ACE American Insurance Company agrees to furnish to the Director a signed duplicate original of the policy and all endorsements.
- d. Cancellation or any other termination of the insurance by ACE American Insurance Company except for non-payment of premium or misrepresentation by the insured, will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured. Cancellation for non-payment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of 10 days after a copy of such written notice is received by the insured.
- e. The insurance covers claims otherwise covered by the policy that are reported to ACE American Insurance Company within six months of the effective date of cancellation or non-renewal of the policy except where the new or renewed policy has the same retroactive date or a retroactive date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the policy retroactive date, if applicable, and prior to such policy renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability, and exclusions of the policy.

I hereby certify that the wording of this instrument is identical to the wording in 40 CFR 280.97(b)(1) and that ACE American Insurance Company is licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in one or more state.

## CERTIFICATION OF FINANCIAL RESPONSIBILITY FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in Section 2807, Chapter 18, Div. 3, Title 23, CCR:

- |  |     |  |
|--|-----|--|
| <input type="checkbox"/> 500,000 dollars per occurrence<br>or<br><input type="checkbox"/> 1 million dollars per occurrence | AND | <input type="checkbox"/> 1 million dollars annual aggregate<br>or<br><input type="checkbox"/> 2 million dollars annual aggregate |
|--|-----|--|

B. OP America, Inc. hereby certifies that I is in compliance with the requirements of  
(Name of Tank Owner or Operator)  
 California Code of Regulations, Title 23, Division 3, Chapter 18, Article 3, Section 2807.  
 The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Comp
Insurance	ACE American Insurance Company 438 Walnut Street Philadelphia, PA 19106	PLI G23717311	\$1,000,000 per Occurrence \$2,000,000 Annual Aggregate	01/01/2008 - 01/01/2009	Yes	Yes

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance and shall maintain compliance with all conditions for participation in the Fund. See instructions.

*Certificate of Insurance*

**Name:** BP America Inc.  
**Address:** Per schedule on file with company  
**Policy Number:** Claims Made PLIG 2371954A  
**Period of Coverage:** 01/01/2007 - 01/01/2008  
**Name of Insurer:** Westchester Surplus Lines Insurance Company  
**Address of Insurer:** 436 Walnut St.  
Philadelphia, PA 19106  
**Name of Insured:** BP America Inc.  
**Address of Insured:** 4101 Winfield Road, Warrenville, IL 60555

1. Certification:

Westchester Surplus Lines Insurance Company hereby certifies that it has issued liability insurance covering the following underground storage tanks(s):

**Per List Attached**

for "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; in accordance with and subject to the limits of liability, exclusions, conditions, and other terms of the policy; if coverage is different for different tanks or locations, arising from operating the underground storage tank(s) identified above.

The limits of liability are \$1,000,000 per occurrence and annual aggregate of \$2,000,000 exclusive of legal defense costs, which are subject to a separate limit under the policy. This coverage is provided under PLIG 2371954A. The effective date of said policy is January 1, 2007

2. The Insurer further certifies the following with respect to the insurance described in Paragraph 1:

a. Bankruptcy or insolvency of the insured shall not relieve the Insurer of its obligations under the policy to which this certificate applies.

U.S. E.P.A. Regional Offices/State Implementing Agencies

**Subject: BP Products North America Inc. - Financial Responsibility  
Documentation Petroleum Containing Underground Storage Tanks - 40  
CFR Part 280**

Dear Sir or Madam:

The enclosed document comprises the financial assurance mechanism by which BP America Inc. demonstrates financial responsibility pursuant to 40 CFR 280 Subpart H for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks.

This document is believed to be complete and accurate. However, considering the number and geographic dispersion of USTs covered by BP America Inc.'s financial responsibility, it is possible that errors of omission have occurred and the tank listings will not always be current as of the date of the review. In any case, it is the intent of BP America Inc. to provide the mandated financial responsibility requirements for all USTs subject to 40 CFR 280 Subpart H.

If you have any questions regarding the information submitted, please contact (714) 690-2349.

Sincerely,

A handwritten signature in black ink, appearing to read "Chris Moul".

## CERTIFICATE OF INSURANCE

Name & Address: See Attachment 6 for names and addresses of each covered UST location

Policy Number: Contact facility representative or Jeff Hall or Mike Robbins at MARSII (312-627-0006) for copies of all UST waste facility liability endorsement policy numbers

Period of Coverage: January 1, 2006 through January 1, 2007

Name of Insurer: Westchester Surplus Lines Insurance Company

Address of Insurer: 1601 Chestnut Street, Philadelphia, PA 19101

Name of Insured: BP America Inc.

Address of Insured: 4101 Winfield Road, Warrenville, IL 60555

If this image appears cut-off or is not as legible as this overlay, it's due to the poor quality of the original document

Certification

1. Westchester Surplus Lines Insurance Company, the Insurer, as identified above, hereby Certifies that it has issued liability insurance covering the following underground storage tank(s); (see Attachment 6) for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from operating the underground storage tank(s) identified above

The limits of liability are \$1,000,000 per occurrence and annual aggregate of \$2,000,000, exclusive of legal costs, which are subject to a separate limit under the policy. This coverage is provided under P.L.I G21723927. The effective date of said policy is January 1, 2006.

2. The Insurer further certifies the following with respect to the insurance described in Paragraph 1:
  - a. Bankruptcy or insolvency of the insured shall not relieve the Westchester Surplus Lines Insurance Company of its obligations under the policy to which this certificate applies.
  - b. The Insurer is liable for the payment of amounts within any deductible applicable to the Policy to the provider of corrective action or a damaged third party, with a right of reimbursement by the Insured for any such payment made by the Insurer. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95280.102.
  - c. Whenever requested by (6 Director of an Implementing agency), the Insurer agrees to furnish to (the Director) a signed duplicate original of the policy and all endorsements.
  - d. Cancellation or any other termination of the insurance by the Insurer except for nonpayment of premium or misrepresentation by the insured, will be effective only upon written notice and only after the expiration of 60 days after a copy of such written

notice is received by the insured. Cancellation for nonpayment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of 10 days after a copy of such written notice is received by the insured.

- c. The insurance covers claims otherwise covered by the policy that are reported to the insurer within six months of the effective date of cancellation or nonrenewal of the policy except where the new or renewed policy has the same retroactive date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the policy retroactive date, if applicable, and prior to such policy renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability and exclusions of the policy.

I hereby certify that the wording of this instrument is identical to the wording in 40 CFR 280.97 (b) (2) and that the insurer is licensed to transact the business of insurance in one or more states.

*John K. Aron*

Authorized Representative of Insurer  
November 14, 2005

## Endorsement Number 4

Name: Underground Tank Endorsement

Address: Per list attached

Policy Number: Claims Made PLIG 21723927

Period of Coverage: 01/01/2006 - 01/01/2007

Insurer: Westchester Surplus Lines Insurance Company

Address: 1601 Chestnut Street  
Philadelphia, PA 19101-1484

Name of Insured: BP America Inc.

Address of Insured: 4101 Winfield Road #3rd  
Warrenville, Illinois 60555

1. This endorsement certifies that the policy to which the endorsement is attached provides liability insurance coverage for the following underground storage tanks:

Per list attached

for taking corrective action and/or compensating third parties for bodily injury and property damage caused by either sudden accidental releases or non-sudden accidental releases or accidental releases.

The limits of liability are

\$1,000,000 each occurrence  
\$2,000,000 annual aggregate

exclusive of legal defense costs

This coverage is provided under policy number Claims Made PLIG 21723927

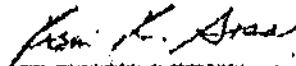

The effective date of said policy is January 1, 2006

2. The insurance afforded with respect to such occurrences is subject to all of the terms and conditions of the policy, provided however, that any provisions inconsistent with subsections (a) through (e) of this Paragraph 2 are hereby

amended to conform with subsections (a) through (e).

- a. Bankruptcy or insolvency of the insured shall not relieve Westchester Surplus Lines Insurance Company of its obligations under the policy to which this endorsement is attached.
- b. Westchester Surplus Lines Insurance Company is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged third-party with a right of reimbursement by the insured for any such payment made by Westchester Surplus Lines Insurance Company. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95-280-102.
- c. Whenever requested by a director of an implementing agency Westchester Surplus Lines Insurance Company agrees to furnish to the Director a signed duplicate original of the policy and all endorsements.
- d. Cancellation or any other termination of the insurance by Westchester Surplus Lines Insurance Company will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured.
- e. The insurance covers claims for any occurrence that commenced during the term of the policy that is discovered and reported to Westchester Surplus Lines Insurance Company within six months of the effective date of the cancellation or termination of the policy.

I hereby certify that the wording of this instrument is identical to the wording in 40 CFR 280.97 (b) (1) and that Westchester Surplus Lines Insurance Company is licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in one or more states

BP West Coast Products LLC  
4 Condemno Drive  
La Brea, CA 90023

August 30, 2005

CUPA Representative/Inspector  
Mountain View Fire Dept.  
1000 Villa ST  
Mountain View, CA 94041

**SUBJECT: Change of Designated UST Operator Notification  
Facility #02010  
2110 OLD MIDDLEFIELD WAY  
MOUNTAIN VIEW, CA 94043**

Dear CUPA Representative/Inspector:

In accordance with the California Code of Regulations, Title 23, Chapter 16, Section 2715, Subsection (a) where: "The owner shall inform the local agency of any change of designated UST operator(s) no later than 30 days after the change", BP West Coast Products, LLC (BP) is submitting the attached document as notification of a change in the Designated Operator (DO) for the identified facility. The attached notification of change supercedes any previously submitted document by BP.

It is the intent of BP to minimize the number of changes in DO assignments in the future to ensure consistency in the site-specific inspections and training. As our representative has discussed with many of the CUPA representatives, BP appreciates the opportunity to make adjustments to this new program as we strive to meet the spirit of the regulations and local CUPA requests.

Please contact Steve Boyd at Delta Environmental Consultants, Inc. at 949-860-0216 if you have any questions concerning the specific change notification submitted with this cover letter.

Sincerely,

A handwritten signature in black ink, appearing to read "Chris Moul".

Chris Moul  
Compliance Manager  
BP West Coast Products, LLC

International Code Council  
Computer Exam Report

DATE: 08/03/2005

EXAM TITLE:

CA Underground Storage Tank System Operator - UC (CUO)

NAME: FONSECA, THOMAS DACOSTA

LOCATOR: FOK00171

EXAMINATION RESULT: PASS

Congratulations! You have passed the  
CA Underground Storage Tank System Operator - UC (CUO)  
Your ICC certificate and wallet card will be mailed to you  
within six weeks after the end of the month in which you passed  
the exam.

Your name as it appears above on this notice will be printed on your  
certificate and wallet card. It is very important that you notify  
LaserGrade and ICC of any changes in your name and/or address.

ICC requires a change of address in writing. Please fax your change  
of address to ICC at (562) 692-2845 or mail it to:

ICC Certification Services  
5360 Norwalk Mill Road  
Norwalk, CA 90651

U.S. E.P.A. Regional Offices/State Implementing Agencies

Dear Sir or Madam:

BP West Coast Products, LLC. - Financial Responsibility Documentation  
Petroleum Containing USTs - 40 CFR Part 280

The enclosed document comprises the financial assurance mechanism by which BP America Inc. demonstrates financial responsibility pursuant to 40 CFR 280 Subpart H for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks.

This document is believed to be complete and accurate. However, considering the number and geographic dispersion of USTs covered by BP America Inc.'s financial responsibility, it is possible that errors of omission have occurred and the tank listings will not always be current as of the date of the review. In any case, it is the intent of BP America Inc. to provide the mandated financial responsibility requirements for all USTs subject to 40 CFR 280 Subpart H.

If you have any questions regarding the information submitted, please contact John Schetter @ 800-525-5857 x6233.

Sincerely,

## CERTIFICATE OF INSURANCE

Name & Address: See Attachment for names and addresses of each covered UST location.

Policy Number: Contact facility representative or Jeff Hall or Nathan Kelly at MARSH (312-627-6000) for copies of all UST waste facility liability endorsement policy numbers.

Period of Coverage: January 2005 through January 1, 2006

Name of Insurer: ACE American Insurance Company

Address of Insurer: 1601 Chestnut Street, Philadelphia, PA 19101

Name of Insured: BP America Inc.

Address of Insured: 4101 Winfield Road, Warrenville, IL 60555

### Certification:

1. ACE American Insurance Company, the Insurer, as identified above, hereby certifies that it has issued liability insurance covering the following underground storage tank(s): (see Attachment 6) for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from operating the underground storage tank(s) identified above.

The limits of liability are \$ 1,000,000 per occurrence and annual aggregate \$ 2,000,000, exclusive of legal costs, which are subject to a separate limit under the policy. This coverage is provided under PLIG 20308242. The effective date of said policy is January 1, 2005.

2. The Insurer further certifies the following with respect to the insurance described in Paragraph 1:
  - a. Bankruptcy or insolvency of the insured shall not relieve the ACE American Insurance Company of its obligations under the policy to which this certificate applies.
  - b. The Insurer is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged thirdparty, with a right of reimbursement by the insured for any such payment made by the Insurer. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95280.102.
  - c. Whenever requested by (a Director of an implementing agency), the Insurer agrees to furnish to (the Director) a signed duplicate original of the policy and all endorsements.

- d. Cancellation or any other termination of the insurance by the insurer, except for nonpayment of premium or misrepresentation by the insured, will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured. Cancellation for nonpayment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of 10 days after a copy of such written notice is received by the insured.
- e. The insurance covers claims otherwise covered by the policy that are reported to the insurer within six months of the effective date of cancellation or nonrenewal of the policy except where the new or renewed policy has the same retroactive date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the policy retroactive date, if applicable, and prior to such policy renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability, and exclusions of the policy.

I hereby certify that the wording of this instrument is identical to the wording in 40 CFR 280.97(b)(2) and that the insurer is licensed to transact the business of insurance in one or more states.

U.S. E.P.A. Regional Offices/State Implementing Agencies

Dear Sir or Madam:

BP West Coast Products, LLC - Financial Responsibility Documentation  
 Subsystem Containing USTs - 40 CFR Part 280

The enclosed document comprises the financial assurance mechanism by which BP America Inc. demonstrates financial responsibility pursuant to 40 CFR 280 Subpart H for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks.

This document is believed to be complete and accurate. However, considering the number and geographic dispersion of USTs covered by BP America Inc.'s financial responsibility, it is possible that errors or omissions have occurred and the tank listings will not always be current as of the date of the review. In any case, it is the intent of BP America Inc. to provide the mandated financial responsibility requirements for all USTs subject to 40 CFR 280 Subpart H.

If you have any questions regarding the information submitted, please contact Michelle Bieh Curtin at (630) 848-3444.

Sincerely,

*Jerome P. Houren*

## CERTIFICATE OF INSURANCE

Name & Address: See Attachment #1 for names and addresses of each covered UST location.

Policy Number: Contact facility representative or Jeff Hall or Nathan Kelly at MARSH (312-627-8000) for copies of all UST waste facility liability endorsement policy numbers.

Period of Coverage: January 2001 through January 1, 2006

Name of Insurer: Westchester Surplus Lines Insurance Company

Address of Insurer: 1401 Chestnut Street, Philadelphia, PA 19101

Name of Insured: BP America Inc.

Address of Insured: 4101 Winfield Road, Warrenville, IL 60555

Certification:

1. Westchester Surplus Lines Insurance Company, the Insurer, as identified above, hereby certifies that it has issued liability insurance covering the following underground storage tank(s): (see Attachment #1) for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from operating the underground storage tank(s) identified above.

The limits of liability are \$ 1,000,000 per occurrence and annual aggregate \$ 2,000,000, exclusive of legal costs, which are subject to a separate limit under the policy. This coverage is provided under PLIG 21705281. The effective date of said policy is January 1, 2004.

2. The Insurer further certifies the following with respect to the insurance described in paragraph 1:
  - a. Bankruptcy or insolvency of the insured shall not relieve the Westchester Surplus Lines Insurance Company of its obligations under the policy to which this certificate applies.
  - b. The Insurer is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a derated third party, with a right of reimbursement by the Insurer for any such payment made by the Insurer. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95280.102.
  - c. Whenever requested by (a Director of an implementing agency), the Insurer agrees to furnish to (the Director) a signed duplicate original of the policy and all endorsements.

- d. Cancellation or any other termination of the insurance by the insurer, except for nonpayment of premium or misrepresentation by the insured, will be effective only upon written notice and only after the expiration of 30 days after a copy of such written notice is received by the insured. Cancellation for nonpayment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of 10 days after a copy of such written notice is received by the insured.
- e. The insurance covers claims otherwise covered by the policy that are reported to the insurer within six months of the effective date of cancellation or nonrenewal of the policy except where the new or renewed policy has the same retroactive date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the policy retroactive date, if applicable, and prior to such policy renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability, and exclusions of the policy.

I hereby certify that the wording of this instrument is identical to the wording in 40 CFR 400.97(b)(2) and that the insurer is licensed to transact the business of insurance in one or more states.

## Endorsement Number 4

Name: Underground Tank Endorsement

Address: Per list attached

Policy Number: Claims Made PLIG 21705251

Period of Coverage: 01/01/2004 - 01/01/2005

Insurer: Wearhelter Surplus Lines Insurance Company

Address: 1601 Chestnut Street  
Philadelphia, PA 19102-1484

Name of Insured: BP America Inc.

Address of Insured: 4101 Winfield Road #200  
Warrenville, Illinois 60555

1. This endorsement certifies that the policy to which the endorsement is attached provides liability insurance coverage for the following underground storage tanks:

Per list attached

for taking corrective action and/or compensating third parties for bodily injury and property damage caused by either sudden accidental releases or non-sudden accidental releases or accidental releases.

The limits of liability are

\$1,000,000 each occurrence

\$2,000,000 annual aggregate

exclusive of legal defense costs

This coverage is provided under policy number Claims Made PLIG 21705251

The effective date of said policy is January 1, 2004

2. The insurance afforded with respect to such occurrences is subject to all of the terms and conditions of the policy, provided however, that any provisions inconsistent with subsections (a) through (e) of this Paragraph 2 are hereby

amended to conform with subsections (a) through (e).

- a. Bankruptcy or insolvency of the insured shall not relieve Westchester Surplus Lines Insurance Company of its obligations under the policy to which this endorsement is attached.
- b. Westchester Surplus Lines Insurance Company is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged third-party with a right of reimbursement by the insured for any such payment made by Westchester Surplus Lines Insurance Company. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95-280-102.
- c. Whenever requested by a director of an implementing agency Westchester Surplus Lines Insurance Company agrees to furnish to the Director a signed duplicate original of the policy and all endorsements.
- d. Cancellation or any other termination of the insurance by Westchester Surplus Lines Insurance Company will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured.
- e. The insurance covers claims for any occurrence that commenced during the term of the policy that is discovered and reported to Westchester Surplus Lines Insurance Company within six months of the effective date of the cancellation or termination of the policy.

I hereby certify that the wording of this instrument is identical to the wording in 40 CFR 280.97 (b) (1) and that Westchester Surplus Lines Insurance Company is licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in one or more states.

U.S. E.P.A. Regional Offices/State Implementing Agencies

Dear Sir or Madam:

BP West Coast Products, LLC. - Financial Responsibility Documentation  
Petroleum Containing USTs - 40 CFR Part 280

The enclosed document comprises the financial assurance mechanism by which BP America Inc. demonstrates financial responsibility pursuant to 40 CFR 280 Subpart H for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks.

This document is believed to be complete and accurate. However, considering the number and geographic dispersion of USTs covered by BP America Inc.'s financial responsibility, it is possible that errors of omission have occurred and the tank listings will not always be current as of the date of the review. In any case, it is the intent of BP America Inc. to provide the mandated financial responsibility requirements for all USTs subject to 40 CFR 280 Subpart H.

(see attached list of facilities. All tanks maintained at each of these facilities are assured by this mechanism)

If you have any questions regarding the information submitted, please contact Michelle Bier Curtin at (630) 434-6101.

Sincerely,

*Jerome P. Houren*

## CERTIFICATE OF INSURANCE

Name & Address: See Attachment 6 and 7 for names and addresses of each covered UST location.

Policy Number: Contact facility representative or Jeff Hall at MARSH (312-627-6180) for copies of all UST waste facility liability endorsement policy numbers.

Period of Coverage: January 1, 2003 through January 1, 2004

Name of Insurer: ACE American Insurance Company

Address of Insurer: 1601 Chestnut Street, Philadelphia, PA 19101

Name of Insured: BP America Inc.

Address of Insured: 200 E. Randolph Drive, Chicago, IL 60601

Certification:

1. ACE American Insurance Company, the Insurer, as identified above, hereby certifies that it has issued liability insurance covering the following underground storage tank(s): (see Attachments 7.A and 8.A) for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from operating the underground storage tank(s) identified above.

The limits of liability are \$ 1,000,000 per occurrence and annual aggregate \$ 2,000,000, exclusive of legal costs, which are subject to a separate limit under the policy. This coverage is provided under (policy number). The effective date of said policy is January 1, 2003.

2. The Insurer further certifies the following with respect to the insurance described in Paragraph 1:
  - a. Bankruptcy or insolvency of the insured shall not relieve the Ace American Insurance Company of its obligations under the policy to which this certificate applies.
  - b. The Insurer is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged thirdparty, with a right of reimbursement by the insured for any such payment made by the Insurer. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95280.102.
  - c. Whenever requested by (a Director of an implementing agency), the Insurer agrees to furnish to (the Director) a signed duplicate original of the policy and all endorsements.

- d. Cancellation or any other termination of the insurance by the Insurer, except for nonpayment of premium or misrepresentation by the insured, will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured. Cancellation for nonpayment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of 10 days after a copy of such written notice is received by the insured.
- e. The insurance covers claims otherwise covered by the policy that are reported to the Insurer within six months of the effective date of cancellation or nonrenewal of the policy except where the new or renewed policy has the same retroactive date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the policy retroactive date, if applicable, and prior to such policy renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability, and exclusions of the policy.

I hereby certify that the wording of this instrument is identical to the wording in 40 CFR 280.97(b)(2) and that the Insurer is licensed to transact the business of insurance in one or more states.

amended to conform with subsections (a) through (e).

- a. Bankruptcy or insolvency of the insured shall not relieve Illinois Union Insurance Company of its obligations under the policy to which this endorsement is attached.
- b. Illinois Union Insurance Company is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged third-party with a right of reimbursement by the insured for any such payment made by Illinois Union Insurance Company. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95-280-102.
- c. Whenever requested by a director of an implementing agency Illinois Union Insurance Company agrees to furnish to the Director a signed duplicate original of the policy and all endorsements.
- d. Cancellation or any other termination of the insurance by Illinois Union Insurance Company will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured.
- e. The insurance covers claims for any occurrence that commenced during the term of the policy that is discovered and reported to Illinois Union Insurance Company within six months of the effective date of the cancellation or termination of the policy.

I hereby certify that the wording of this instrument is identical to the wording in 40 CFR 280.97 (b) (1) and that Illinois Union Insurance Company is licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in one or more states.

	<i>1/1/02</i>
AUTHORIZED REPRESENTATIVE	DATE

Endorsement Number 4

Name: Underground Tank Endorsement

Address: Per list attached

Policy Number: Claims Made PLIG 20308175

Period of Coverage: 1/1/2002 - 1/1/2003

Insurer: INA Surplus Insurance Company

Address: 1601 Chestnut Street  
Philadelphia, PA 19101-1484

Name of Insured: BP America Inc.

Address of Insured: Mail Code 2304  
200 East Randolph Drive  
Chicago, Illinois 60601-7125

1. This endorsement certifies that the policy to which the endorsement is attached provides liability insurance coverage for the following underground storage tanks in:

Per list attached

for taking corrective action and/or compensating third parties for bodily injury and property damage caused by either sudden accidental releases or non-sudden accidental releases or accidental releases.

The limits of liability are

\$1,000,000 each occurrence  
\$2,000,000 annual aggregate

exclusive of legal defense costs

This coverage is provided under policy number Claims Made PLIG 20308175

The effective date of said policy is January 1, 2002

2. The insurance afforded with respect to such occurrences is subject to all of the terms and conditions of the policy, provided however, that any provisions inconsistent with subsections (a) through (e) of this Paragraph 2 are hereby amended to conform with subsections (a) through (e).

- a. Bankruptcy or insolvency of the Insured shall not relieve INA Surplus Insurance Company of its obligations under the policy to which this Endorsement is attached.
- b. INA Surplus Insurance Company is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged third-party with a right of reimbursement by the Insured for any such payment made by INA Surplus Insurance Company. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95-280-102.
- c. Whenever requested by a director of an implementing agency, INA Surplus Insurance Company agrees to furnish to the Director a signed duplicate original of the policy and all endorsements.
- d. Cancellation or any other termination of the insurance by INA Surplus Insurance Company will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the Insured.
- e. The insurance covers claims for any occurrence that commenced during the term of the policy that is discovered and reported to INA Surplus Insurance Company within six months of the effective date of the cancellation or termination of the policy.

I hereby certify that the wording of this instrument is identical to the wording in 40CFR 280.97(b) (1) and that INA Surplus Insurance Company is licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in one or more states.

Dear Sir or Madam:

ARCO Financial Responsibility Documentation  
Petroleum Containing USTs - 40 CFR Part 280

The enclosed documents comprise the financial assurance mechanisms by which BP Amoco Corporation demonstrates financial responsibility pursuant to 40 CFR 280 Subpart H for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum underground storage tanks.

These documents are believed to be complete and accurate. However, considering the number and geographic dispersion of USTs covered by BP Amoco Corporation's financial responsibility, it is possible that errors of omission have occurred and the tank listings will not always be current as of the date of the review. In any case, it is the intent of BP Amoco Corporation to provide the mandated financial responsibility requirements for all USTs subject to 40 CFR 280 Subpart H.

(see attached list of facilities. All tanks maintained at each of these facilities are assured by this financial test)

If you have any questions regarding the information submitted, please contact Michelle Bien at (630) 434-6181.

Sincerely,

*Jerome P. Houren*

LETTER FROM CHIEF FINANCIAL OFFICER

I am the Vice President and Chief Financial Officer of BP Amoco Corporation located at 200 East Randolph Drive, Chicago, Illinois 60601. This letter is in support of the use of the financial test of self-insurance and guarantee to demonstrate financial responsibility for taking corrective action and compensating third parties for bodily injury and property damage caused by sudden accidental releases and non-sudden accidental releases in the amount of at least \$1 million per occurrence and \$2 million annual aggregate arising from operating underground storage tanks.

Underground storage tanks at the following facilities are assured by this financial test or a financial test under an authorized State program by this owner, operator or guarantor.

The schedule attached, lists the petroleum underground storage tanks owned, operated or guaranteed by BP Amoco Corporation.

A financial test and guarantee is also used by this owner, operator or guarantor to demonstrate evidence of financial responsibility in the following amounts under other EPA regulations or state programs authorized by EPA under 40 CFR Parts 271 and 145:

EPA Regulations	Amount
Closure (§§ 264.143 and 265.143)	\$ -0-
Post Closure Care (§§ 264.145 and 265.145)	\$ -0-
Liability Coverage (§§ 264.147 and 265.147)	\$ 8,000,000
Corrective Action (§§ 264.101(b))	\$ 5,465,903
Plugging and Abandonment (\$ 144.63)	\$ -0-
<b>State Programs</b>	
Closure	\$ 39,789,338
Post-Closure Care	\$ 89,745,857
Liability Coverage	(See above)
Corrective Action	\$ 57,487,039
Plugging and Abandonment	\$ 97,421,672
<b>TOTAL</b>	<b>\$ 2,970,909,809</b>

This owner or operator has not received an adverse opinion, a disclaimer of opinion, or a "going concern" qualification from an independent auditor on his financial statements for the latest completed fiscal year.

ALTERNATIVE I

- |   |                  |
|---|------------------|
| 1. Amount of annual UST aggregate coverage being assured by a test, and/or guarantee.   | \$ 2,000,000     |
| 2. Amount of corrective action, closure and post-closure care costs, liability coverage, and plugging and abandonment costs covered by a financial test and/or guarantee. | \$ 2,970,909,809 |
| 3. Sum of lines 1 and 2   | \$ 2,972,909,809 |

* 4. Total Tangible Assets	\$ 44,266,000,000
* 5. Total Liabilities	\$ 24,222,000,000

**CERTIFICATION OF FINANCIAL RESPONSIBILITY**

BP Amoco Corporation hereby certifies that it is in compliance with the requirements of Subpart H of 40 CFR Part 280.

The financial assurance mechanism used to demonstrate financial responsibility under Subpart H of 40 CFR Part 280 is as follows:

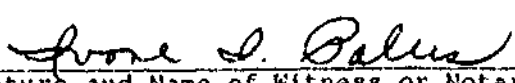

Financial test of self-insurance (Alternative I) and guarantee to demonstrate financial responsibility for taking corrective action and compensating third parties for bodily injury and property damage caused by sudden accidental releases and non-sudden accidental releases in the amount of \$1 million per occurrence and \$2 million annual aggregate arising from operating underground storage tanks.

CERTIFICATE OF INSURANCE

Name & Address: See Attachment 7.A and 8.A for names and addresses of each covered UST location.

Policy Number: Contact facility representative or Jeff Hall at MARSH (312-627-6000) for copies of all UST waste facility liability endorsement policy numbers.

Period of Coverage: January 1, 2002 through January 1, 2003

Name of Insurer: INA Surplus Insurance Company

Address of Insurer: 1601 Chestnut Street Philadelphia, PA 19101-1404

Name of Insured: BP America Inc.

Address of Insured: 200 E. Randolph Drive, Chicago, IL 60601

Certification:

1. INA Surplus Insurance Company, the Insurer, as identified above, hereby certifies that it has issued liability insurance covering the following underground storage tank(s): (see Attachments 7.A and 8.A) for taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from operating the underground storage tank(s) identified above.

The limits of liability are \$ 1,000,000 per occurrence and annual aggregate \$ 2,000,000, exclusive of legal costs, which are subject to a separate limit under the policy. This coverage is provided under (policy number). The effective date of said policy is January 1, 2002.

2. The Insurer further certifies the following with respect to the insurance described in Paragraph 1:
  - a. Bankruptcy or insolvency of the insured shall not relieve the INA Surplus Insurance Company of its obligations under the policy to which this certificate applies.
  - b. The Insurer is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged thirdparty, with a right of reimbursement by the insured for any such payment made by the Insurer. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 260.95260.102.
  - c. Whenever requested by (a Director of an implementing agency), the Insurer agrees to furnish to (the Director) a signed duplicate original of the policy and all endorsements.

- d. Cancellation or any other termination of the insurance by the insurer, except for nonpayment of premium or misrepresentation by the insured, will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured. Cancellation for nonpayment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of 10 days after a copy of such written notice is received by the insured.
- e. The insurance covers claims otherwise covered by the policy that are reported to the insurer within six months of the effective date of cancellation or nonrenewal of the policy except where the new or renewed policy has the same retroactive date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the policy retroactive date, if applicable, and prior to such policy renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability, and exclusions of the policy.

I hereby certify that the wording of this instrument is identical to the wording in 40 CFR 260.97(b)(2) and that the Insurer is licensed to transact the business of insurance in one or more states.

Endorsement Number 4

Name: Underground Tank Endorsement

Address: Per list attached

Policy Number: Claims Made PLIG 20308175

Period of Coverage: 1/1/2002 - 1/1/2003

Insurer: INA Surplus Insurance Company

Address: 1601 Chestnut Street  
Philadelphia, PA 19101-1484

Name of Insured: BP America Inc.

Address of Insured: Mail Code 2304  
200 East Randolph Drive  
Chicago, Illinois 60601-7125

1. This endorsement certifies that the policy to which the endorsement is attached provides liability insurance coverage for the following underground storage tanks in:

Per list attached

for taking corrective action and/or compensating third parties for bodily injury and property damage caused by either sudden accidental releases or non-sudden accidental releases or accidental releases.

The limits of liability are

\$1,000,000 each occurrence  
\$2,000,000 annual aggregate

exclusive of legal defense costs

This coverage is provided under policy number Claims Made PLIG 20308175

The effective date of said policy is January 1, 2002

2. The insurance afforded with respect to such occurrences is subject to all of the terms and conditions of the policy, provided however, that any provisions inconsistent with subsections (a) through (e) of this Paragraph 2 are hereby amended to conform with subsections (a) through (e).

- a. Bankruptcy or insolvency of the Insured shall not relieve INA Surplus Insurance Company of its obligations under the policy to which this Endorsement is attached.
- b. INA Surplus Insurance Company is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged third-party with a right of reimbursement by the Insured for any such payment made by INA Surplus Insurance Company. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 40 CFR 280.95-280-102.
- c. Whenever requested by a director of an implementing agency, INA Surplus Insurance Company agrees to furnish to the Director a signed duplicate original of the policy and all endorsements.
- d. Cancellation or any other termination of the insurance by INA Surplus Insurance Company will be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the Insured.
- e. The insurance covers claims for any occurrence that commenced during the term of the policy that is discovered and reported to INA Surplus Insurance Company within six months of the effective date of the cancellation or termination of the policy.

I hereby certify that the wording of this instrument is identical to the wording in 40CFR 280.97(b) (1) and that INA Surplus Insurance Company is licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in one or more states.

## CERTIFICATION OF FINANCIAL RESPONSIBILITY

The Atlantic Richfield Company (ARCO) hereby certifies that it is in compliance with the requirements of Subpart H of 40 CFR Part 280.

The financial assurance mechanism used to demonstrate financial responsibility under Subpart H of 40 CFR Part 280 is as follows:

**Mechanism:** Financial test of self-insurance, *Alternative I*

**Coverage:**

- Effective date: March 1, 2000
- Amount: At least \$1,000,000 per occurrence and \$2,000,000 annual aggregate
- Covers the costs of taking corrective action and compensating third parties for bodily injury and property damage caused by sudden accidental releases and nonsudden accidental releases

40 CFR Part 280**

1998

Dear Sir or Madam:

I am the chief financial officer of the Atlantic Richfield Company (ARCO), 515 S. Flower Street, Los Angeles, California 90071. This letter is in support of the use of the financial test of self-insurance to demonstrate financial responsibility for taking corrective action and compensating third parties for bodily injury and property damage caused by sudden accidental releases and nonsudden accidental releases in the amount of at least \$1,000,000 per occurrence and \$2,000,000 annual aggregate arising from operating underground storage tanks.

Underground storage tanks at the following facilities are assured by this financial test or a financial test under an authorized State program by this owner or operator<sup>1</sup>:

*(see attached list of facilities)*  
[all tanks maintained at each of these facilities are  
assured by this financial test]

A financial test is also used by this owner or operator to demonstrate evidence of financial responsibility in the following amounts under other EPA regulations or state programs authorized by EPA under 40 CFR Parts 271 and 145:

<i>EPA Regulations</i>	<i>Amount</i>
Closure (Sections 264.143 and 265.143).....	<u>\$ 2,200,000</u>
Post-Closure Care (Sections 264.145 and 265.145).....	<u>\$ 177,900</u>
Liability Coverage (Sections 264.147 and 265.147).....	<u>\$ 10,000,000</u>
Corrective Action (Sections 264.101(b)).....	<u>\$ 0</u>
Plugging and Abandonment (Section 144.63).....	<u>\$ 374,000</u>
Closure.....	<u>\$ 0</u>
Post-Closure Care.....	<u>\$ 0</u>
Liability Coverage.....	<u>\$ 0</u>
Corrective Action.....	<u>\$ 0</u>
Plugging and Abandonment.....	<u>\$ 0</u>
Total.....	<u>\$ 12,751,900</u>

This owner or operator has not received an adverse opinion, a disclaimer of opinion, or a "going concern" qualification from an independent auditor on his financial statements for the latest completed fiscal year.

#### *Alternative I*

1. Amount of annual UST aggregate coverage being assured by a financial test, and/or guarantee.....	<u>\$ 2,000,000</u>
2. Amount of corrective action, closure and post-closure care costs, liability coverage, and plugging and abandonment costs covered by a financial test, and/or guarantee....	<u>\$ 12,751,900</u>

# CERTIFICATION OF FINANCIAL RESPONSIBILITY

## FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in Section 2507, Chapter 18, Div. 3, Title 23, CCR:

500,000 dollars per occurrence  
 or  
 1 million dollars per occurrence

AND

1 million dollars annual aggregate  
 or  
 2 million dollars annual aggregate

B. ATLANTIC RICHFIELD CO. hereby certifies that it is in compliance with the requirements of Section 2507, (Name of Tank Owner or Operator)  
 Article 3, Chapter 18, Division 3, Title 23, California Code of Regulations.  
 The mechanisms used to demonstrate financial responsibility as required by Section 2507 are as follows:

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Comp.
SELF-INSURANCE	ATLANTIC RICHFIELD CO. 515 S. FLOWER ST. LOS ANGELES, CA 90071	SEE ATTACHED				

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance with all conditions for participation in the Fund.

D. Facility Name	Facility Address
ARCO FAC. #2010	3110 OLD MIDDLEFIELD
ARCO FAC. #6050	790 N. SHORELINE BLVD.

E. Signature of Tank Owner or Operator <i>Judy Mason</i> Signature of Witness or Librarian <i>William M. Zapka</i>	Date 9/10/93 Date 9/10/93	Name and Title of Tank Owner or Operator JUDY MASON, ENV. COMPL. ADMINISTRATOR Name of Witness or Librarian WILLIAM M. ZAPKA, ENV. COMPL. ADMIN.

## **SUBJECT: FINANCIAL RESPONSIBILITY FOR UNDERGROUND TANKS**

Recently, the State Water Resources Control Board sent you notification regarding the financial responsibility requirement for underground tank owners/operators. This is both a Federal and State requirement. Enclosed is a description of the various ways you can demonstrate proof of financial responsibility. You must demonstrate coverage for:

- \$1 million per occurrence; and
- \$1 million annual aggregate for 1-100 tanks or  
\$2 million annual aggregate for 101 or more tanks

A State fund has also been established which will cover \$990,000 of the \$1 million per occurrence requirement.

**No later than September 30, 1993, please submit the following to us:**

- 1) Proof of financial responsibility (i.e. insurance policy, letter of credit, etc.)
- 2) A completed "Certification of Financial Responsibility" form (enclosed)

If you fail to meet the above deadline or to demonstrate the required coverage, the affected tanks will be closed until such time as coverage can be demonstrated or the tanks are removed.

If you have specific questions, you can call the State Water Resources Board at 916-227-4307 or our office at 415-903-6378.

Sincerely,

Gary Leinweber  
Environmental Safety Mgr.

Business Address: 2110 Old Middlefield Business Contact: \_\_\_\_\_  
Date: 9/21/95 Start Time: 9 End Time: 8:15 Inspector: Steve / Donziger  
Inspection Number (circle one): 2/3/4/5

**A REASONABLE DEGREE OF COMPLIANCE EXISTS AT THIS TIME.**

**CITY AND STATE CODE REQUIRES COMPLIANCE WITH THE ITEMS LISTED BELOW:**

**1. ADMINISTRATIVE:**

**a. Daily Inspection Log (MVCC 24.19.g)**

A daily inspection log verifying that your leak detection: (1) has power, and (2) is/is not in alarm, must be maintained on the premises and available for review by the Fire Department. Call (415) 903-6378 to obtain copies of a sample inspection log.

**b. Notification of Alarms (MVCC 24.25.a.2.(a))**

You must immediately report an alarm from any leak detection equipment to the Fire Department at (415) 903-6821. You have five (5) working days to determine the cause for the alarm. If no cause can be found, it is assumed that a tank/piping failure has taken place and the affected tank/piping shall be closed until the cause for the alarm can be determined.

**2. TANKS/PIPING SYSTEM:**

The following items were noted as requiring corrective action:

- a. Dispenser Fittings/Hoses: \_\_\_\_\_
- b. Sub-Pumps/Manways: \_\_\_\_\_
- c. Overfill/Overspill Devices: \_\_\_\_\_
- d. Emergency Shut-Off: \_\_\_\_\_

**3. LEAK DETECTION SYSTEM(S) FOR TANKS/PIPING:**

All leak detection systems must be maintained in proper working order. The following items were noted as requiring corrective action:

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

Additional Requirements and/or Comments: \_\_\_\_\_

**A REINSPECTION SHALL BE CONDUCTED IN FIVE DAYS. ADDITIONAL INSPECTIONS AFTER THE FIRST REINSPECTION ARE BILLED AT \$40.00/HOUR/MAN, ONE-HOUR MINIMUM.**

**ALL VIOLATIONS HAVE BEEN CORRECTED. THANK YOU!**

Address: 2110 DMW

Date: 2/21/95

Business Name: Arro

Contact: \_\_\_\_\_

Leak Detection Program:

--Tanks: Electronic Liquid Sensors

--Piping: Electronic Liquid Sensors

I. General

1) Inspect fill tube and overspill box of each tank.

Record any product fill tube/overspill box not labeled with the correct product name: OK

Record any overspill box containing free product that cannot be drained into the tank: None

Record any soil stains or contamination surrounding the fill tube area: None

Record any fill tube missing an overfill (flapper valve) assembly: OK

2) Inspect turbine manway of each tank.

Record any soil contamination surrounding the fill tube area: None

3) Verify annual testing of Red Jacket line leak detector, if applicable (summer inspection).

Date of last test: NA - liquid sensors not down pipes.

4) Remove faceplate from each dispenser and inspect.

Record any dispensers that display leaks, weeping joints, or missing piping/hoses: OK

5) Verify that the leak detection systems are functioning.

Is there power to all leak detection systems? Yes

6) Determine current alarm status.

Describe current alarm conditions for each detection system: None

7) Verify daily inspection log.

Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? Yes

Is the log up to date? Yes. If not, date of last entry was: \_\_\_\_\_

Call Tagl for logs / OK 2/31

8) *Verify that cathodic protection is working properly (if applicable):* N/A  
Complete the cathodic protection worksheet and record violations: \_\_\_\_\_

9) *Verify 3rd party alarm monitoring, (if applicable).* N/A  
Alarm test date: \_\_\_\_\_ Alarm test time: \_\_\_\_\_  
Alarm verification date: \_\_\_\_\_ Alarm verification time: \_\_\_\_\_  
Alarm company: \_\_\_\_\_

**II. Liquid Sensors**

1) PETROMETER. Check electronic diagnostics by hitting the "Test" key. Are electronics working properly? \_\_\_\_\_

2) PETROMETER. Check control unit by removing the copper tubing connection under the unit and inserting the test tubing and sensor assembly. Lower the air bell into a container of water and observe the point at which the alarm is activated.  
Is alarm working? \_\_\_\_\_  
Is alarm activated at the 1/4" submersion point? \_\_\_\_\_  
Hit the alarm silencer button while keeping the air bell in water.  
Does the red alarm light remain on in the alarm mode? \_\_\_\_\_  
Does alarm turn off when the sensor is removed from the water? \_\_\_\_\_

3) PETROMETER. Inspect *annular space* integrity. In annular spaces where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
Record results: \_\_\_\_\_

4) POLLULERT FD 102. Verify that audible alarm has not been disabled.  
Is "Audible" alarm button on panel face in the "On" position? \_\_\_\_\_

5) POLLULERT FD 102. Verify audible alarm. Push "Audible Alarm" button, and switch "Manual Trip" and "Latch" to the "On" positions.  
Is alarm working? \_\_\_\_\_  
Turn "Latch" switch to "Off" position. Alarm should silence.  
Are alarm switches working properly? \_\_\_\_\_

6) POLLULERT FD 102. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.  
Record results: \_\_\_\_\_

7) POLLULERT FD 102. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.  
Record results: \_\_\_\_\_

8) POLLULERT FD 102. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

---

9) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.

Record observations: \_\_\_\_\_

---

10) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light.

Record results: \_\_\_\_\_

---

11) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.

Record results: \_\_\_\_\_

---

12) POLLULERT FD 103. Verify probe function in *sumps/manways*. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record results: \_\_\_\_\_

---

13) POLLULERT FD 103. Verify probe function in *along piping runs (if applicable)*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm.

Record results: \_\_\_\_\_

---

14) POLLULERT FD 103. Verify probe function in *annular space of tanks*. Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. Where the sensor cannot be removed, monitor annular space with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

---

15) OWENS-CORNING HYDROSTATIC MONITOR. Verify sensor function in *annular space*. Drain liquid from tank reservoir and verify alarm.

Record results: \_\_\_\_\_

---

16) OWENS-CORNING HYDROSTATIC MONITOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

---

17) SCULLY SYSTEM. Verify alarm function. Hit "Alarm Test" button on each control panel.

Record results: \_\_\_\_\_

---

18) SCULLY SYSTEM. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.

Record results: \_\_\_\_\_

19) SCULLY SYSTEM. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

20) SCULLY SYSTEM. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

21) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.

Are all appropriate LED lights activated? \_\_\_\_\_

22) LEAK ALERT. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water.

Record results: \_\_\_\_\_

23) LEAK ALERT. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

24) LEAK ALERT. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

\_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Record Results: \_\_\_\_\_

25) LEAK SENSOR JR. Verify that the number of active sensors is correct.

Are the correct number of active sensors indicated by "Normal" lights? \_\_\_\_\_

26) LEAK SENSOR JR. Verify alarm function. Hit "Test" button. Active probes should alarm, then turn off.

Record results: \_\_\_\_\_

27) LEAK SENSOR JR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down. KEEP UNIT IN ALARM FOR NEXT TEST.

Record results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_

Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_

After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm.

Record results: \_\_\_\_\_

28) LEAK SENSOR JR. Verify probe function *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_

Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_

After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm.

Record results: \_\_\_\_\_

29) LEAK SENSOR JR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

     Sensors Removed      Tested w/CGI. Record Results: Record Results: \_\_\_\_\_

Press "Silent" button. This should silence alarm while maintaining red alarm light.

Record results: \_\_\_\_\_

Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily.

Record results: \_\_\_\_\_

After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm.

Record results: \_\_\_\_\_

30) API/IRONAN LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_ *OK - shut down dispensers also*

31) API/IRONAN LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*.

Remove probes and submerge in water.

Record results: \_\_\_\_\_ *N/A*

32) API/IRONAN LIQUID SENSOR. Verify probe function in *annular space of tanks*. Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

Y Sensors Removed      Tested w/CGI. Record Results: \_\_\_\_\_ *OK*

33) API/IRONAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_ *N/A*

34) CEI LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.

Record results: \_\_\_\_\_

35) CEI LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.

Record results: \_\_\_\_\_

36) CEI LIQUID SENSOR. Verify probe function in *annular space of tanks* . Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).  
\_\_\_Sensors Removed \_\_\_Tested w/CGI. Record Results: \_\_\_\_\_

---

37) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *sumps/manways*. Remove probe from holder. Submerge probe in water or turn upside down.  
Record results: \_\_\_\_\_

38) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *along piping runs (if applicable)*. Remove probes and submerge in water.  
Record results: \_\_\_\_\_

39) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in *annular space of tanks* . Remove probes and submerge in water. Where the sensors cannot be removed, monitor annular spaces with CGI (winter inspection) and have third party remove and test sensors (summer inspection).

A REASONABLE DEGREE OF COMPLIANCE EXISTS AT THIS TIME.  
 CITY AND STATE CODE REQUIRES COMPLIANCE WITH THE ITEMS LISTED BELOW:

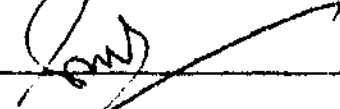

1. ADMINISTRATIVE:
- a. Daily Inspection Log (MVCC 24.19.g)  
A daily inspection log verifying that your leak detection: (1) has power, and (2) is/is not in alarm, must be maintained on the premises and available for review by the Fire Department. Call (415) 903-6378 to obtain copies of a sample inspection log.
  - b. Notification of Alarms (MVCC 24.25.a.2.(a))  
You must immediately report an alarm from any leak detection equipment to the Fire Department at (415) 903-6821. You have five (5) working days to determine the cause for the alarm. If no cause can be found, it is assumed that a tank/piping failure has taken place and the affected tank/piping shall be closed until the cause for the alarm can be determined.

2. TANKS/PIPING SYSTEM:
- The following items were noted as requiring corrective action:
- a. Dispenser Fittings/Hoses: \_\_\_\_\_
  - b. Sub-Pumps/Manways: \_\_\_\_\_
  - c. Overfill/Overspill Devices: \_\_\_\_\_
  - d. Emergency Shut-Off: \_\_\_\_\_

3. LEAK DETECTION SYSTEM(S) FOR TANKS/PIPING:
- All leak detection systems must be maintained in proper working order. The following items were noted as requiring corrective action:
- \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

Additional Requirements and/or Comments: \_\_\_\_\_

A REINSPECTION SHALL BE CONDUCTED IN FIVE DAYS. ADDITIONAL INSPECTIONS AFTER THE FIRST REINSPECTION ARE BILLED AT \$40.00/HOUR/MAN, ONE-HOUR MINIMUM.  
 ALL VIOLATIONS HAVE BEEN CORRECTED. THANK YOU!

Leak Detection Program:

- Tanks: Electronic Liquid Sensors
- Piping: Electronic Liquid Sensors

I. General

1) Inspect fill tube and overspill box of each tank.

Record any product fill tube/overspill box not labeled with the correct product name: \_\_\_\_\_

Record any overspill box containing free product that cannot be drained into the tank: LABELLED

Record any soil stains or contamination surrounding the fill tube area: ALL DRY

Record any fill tube missing an overfill (flapper valve) assembly: N/A  
ALL PRESENT

2) Inspect turbine manway of each tank.

Record any soil contamination surrounding the fill tube area: ALL DRY

3) Verify annual testing of Red Jacket line leak detector, if applicable.

Date of last test: N/A

4) Remove faceplate from each dispenser and inspect.

Record any dispensers that display leaks, weeping joints, or missing piping/hoses: ALL DRY

5) Verify that the leak detection systems are functioning.

Is there power to both leak detection systems? YES

6) Determine current alarm status.

Describe current alarm conditions for each detection system: None

7) Verify daily inspection log.

Is a daily inspection log indicating: 1) the leak detection system is functioning and 2) the current alarm status is being maintained, kept on site at all times? YES

Is the log up to date? YES. If not, date of last entry was: \_\_\_\_\_

8) Verify that cathodic protection is working properly (if applicable):

Complete the cathodic protection worksheet and record violations: N/A

9) Verify 3rd party alarm monitoring, (if applicable).

Alarm test date: N/A Alarm test time: \_\_\_\_\_

Alarm verification date: \_\_\_\_\_ Alarm verification time: \_\_\_\_\_

Alarm company: \_\_\_\_\_

## II. Liquid Sensors

1) PETROMETER. Check electronic diagnostics by hitting the "Test" key. Are electronics working properly? \_\_\_\_\_

2) PETROMETER. Check control unit by removing the copper tubing connection under the unit and inserting the test tubing and sensor assembly. Lower the air bell into a container of water and observe the point at which the alarm is activated.

Is alarm working? \_\_\_\_\_

Is alarm activated at the 1/4" submersion point? \_\_\_\_\_

Hit the alarm silencer button while keeping the air bell in water.

Does the red alarm light remain on in the alarm mode? \_\_\_\_\_

Does alarm turn off when the sensor is removed from the water? \_\_\_\_\_

3) PETROMETER. Inspect annular space integrity. Remove sensor and test or monitor annular space with CGI if sensor cannot be removed.

Record tanks tested and results: \_\_\_\_\_

4) POLLULERT FD 102. Verify that audible alarm has not been disabled.

Is "Audible" alarm button on panel face in the "On" position? \_\_\_\_\_

5) POLLULERT FD 102. Verify audible alarm. Push "Audible Alarm" button, and switch "Manual Trip" and "Latch" to the "On" positions.

Is alarm working? \_\_\_\_\_

Turn "Latch" switch to "Off" position. Alarm should silence.

Are alarm switches working properly? \_\_\_\_\_

6) POLLULERT FD 102. Verify probe function in sumps/manways. Remove probe from holder.

Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record probes tested and results: \_\_\_\_\_

7) POLLULERT FD 102. Verify probe function in annular space of tanks and along piping runs.

Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. In annular spaces where the sensor cannot be removed, monitor annular space with CGI.

Record tanks and piping tested and results.

Tank Annular Space: \_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Results: \_\_\_\_\_

Piping Annular Space. Results: \_\_\_\_\_

8) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.

Record observations: \_\_\_\_\_

9) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light.

Record results: \_\_\_\_\_

10) POLLULERT FD 103. Verify that internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.

Record results: \_\_\_\_\_

11) POLLULERT FD 103. Verify probe function in sumps/manways. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record probes tested and results: \_\_\_\_\_

12) POLLULERT FD 103. Verify probe function in annular space of tanks and along piping runs. Remove probe and submerge into water to test the "Water" alarm, and gasoline to test the "Hydrocarbon" alarm. In annular spaces where the sensor cannot be removed, monitor annular space with CGI.

Record tanks and piping tested and results.

Tank Annular Space: \_\_\_ Sensors Removed \_\_\_ Tested w/CGI. Results: \_\_\_\_\_

Piping Annular Space. Results: \_\_\_\_\_

13) OWENS-CORNING HYDROSTATIC MONITOR. Verify sensor function in annular space. Drain liquid from tank reservoir and verify alarm.

Record results: \_\_\_\_\_

14) OWENS-CORNING HYDROSTATIC MONITOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_

15) SCULLY SYSTEM. Verify alarm function. Hit "Alarm Test" button on each control panel.

Record results: \_\_\_\_\_

16) SCULLY SYSTEM. Verify probe function in sumps/manways. Remove probe from holder. Submerge probe in water.

Record probes tested and results: \_\_\_\_\_

17) SCULLY SYSTEM. Verify probe function in annular space of tanks and along piping runs. Remove probe and submerge in water. In annular spaces where the sensor cannot be removed, monitor annular space with CGI.

Record tanks and piping tested and results.

Record probes tested and results: ALL WORKING, PROPERLY

26) API/RONAN LIQUID SENSOR. Verify probe function in annular space of tanks and along piping runs. Remove probe and submerge in water or turn upside down. In annular spaces where the sensor cannot be removed, monitor annular space with CGI.

Record tanks and piping tested and results.

Tank Annular Space:  Sensors Removed  Tested w/CGI. Results: ALL OK/CEL

Piping Annular Space. Results: N/A

27) API/RONAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: N/A

28) CEI LIQUID SENSOR. Verify probe function in sumps/manways. Remove probe from holder. Submerge probe in water or turn upside down.

Record probes tested and results: \_\_\_\_\_

29) CEI LIQUID SENSOR. Verify probe function in annular space of tanks and along piping runs. Remove probe and submerge in water or turn upside down. In annular spaces where the sensor cannot be removed, monitor annular space with CGI.

Record tanks and piping tested and results.

Tank Annular Space:  Sensors Removed  Tested w/CGI. Results: \_\_\_\_\_

Piping Annular Space. Results: \_\_\_\_\_

30) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in sumps/manways. Remove probe from holder. Submerge probe in water or turn upside down.

Record probes tested and results: \_\_\_\_\_

31) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in annular space of tanks and along piping runs. Remove probe and submerge in water or turn upside down. In annular spaces where the sensor cannot be removed, monitor annular space with CGI.

Record tanks and piping tested and results.

Alarm verification date: \_\_\_\_\_ Alarm verification time: \_\_\_\_\_  
Alarm company: \_\_\_\_\_

## II. Liquid Sensors

1) PETROMETER. Check electronic diagnostics by hitting the "Test" key. Are electronics working properly? \_\_\_\_\_

2) PETROMETER. Check control unit by removing the copper tubing connection under the unit and inserting the test tubing and sensor assembly. Lower the air bell into a container of water and observe the point at which the alarm is activated.

Is alarm working? \_\_\_\_\_

Is alarm activated at the 1/4" submersion point? \_\_\_\_\_

Hit the alarm silencer button while keeping the air bell in water.

Does the red alarm light remain on in the alarm mode? \_\_\_\_\_

Does alarm turn off when the sensor is removed from the water? \_\_\_\_\_

3) PETROMETER. Inspect annular space integrity. Remove sensor and test or monitor annular space with CGI if sensor cannot be removed.

Record tanks tested and results: \_\_\_\_\_

4) POLLULERT FD 102. Verify that audible alarm has not been disabled.

Is "Audible" alarm button on panel face in the "On" position? \_\_\_\_\_

5) POLLULERT FD 102. Verify audible alarm. Push "Audible Alarm" button, and switch "Manual Trip" and "Latch" to the "On" positions.

Is alarm working? \_\_\_\_\_

Turn "Latch" switch to "Off" position. Alarm should silence.

Are alarm switches working properly? \_\_\_\_\_

6) POLLULERT FD 102. Verify probe function in sumps/manways. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record probes tested and results: \_\_\_\_\_

7) POLLULERT FD 102. Verify probe function in annular space of tanks and along piping runs.

Remove probe and submerge into water to test "Water" alarm and gasoline to test "Hydrocarbon" alarm. In annular spaces where the sensor cannot be removed, monitor annular space with CGI.

Record tanks and piping tested and results: \_\_\_\_\_

8) POLLULERT FD 103. Verify that audible alarm has not been disabled. The "Audible Alarm" button should NOT be lit.

Record observations: \_\_\_\_\_

9) POLLULERT FD 103. Verify alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light.

Record results: \_\_\_\_\_

10) POLLULERT FD 103. Verify that Internal diagnostics are working properly. After access code, hit the "Program" followed by the "Test" key. Refer to pages 27-29 of the Pollulert manual to perform diagnostic test.

Record results: \_\_\_\_\_

11) POLLULERT FD 103. Verify probe function in sumps/manways. Remove probe from holder. Raise the bottom float to simulate a "Hydrocarbon" alarm. Contact the two metal pins with a jumper cable to simulate a "Water" alarm.

Record probes tested and results: \_\_\_\_\_

12) POLLULERT FD 103. Verify probe function in annular space of tanks and along piping runs. Remove probe and submerge into water to test the "Water" alarm, and gasoline to test the "Hydrocarbon" alarm. In annular spaces where the sensor cannot be removed, monitor annular space with CGI.

Record tanks and piping tested and results: \_\_\_\_\_

13) OWENS-CORNING HYDROSTATIC MONITOR. Verify sensor function in annular space. Drain liquid from tank reservoir and verify alarm.

Record results: \_\_\_\_\_

14) OWENS-CORNING HYDROSTATIC MONITOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT Intact or NOT stamped with the "69" label: \_\_\_\_\_

15) SCULLY SYSTEM. Verify alarm function. Hit "Alarm Test" button on each control panel.

Record results: \_\_\_\_\_

16) SCULLY SYSTEM. Verify probe function in sumps/manways. Remove probe from holder. Submerge probe in water.

Record probes tested and results: \_\_\_\_\_

17) SCULLY SYSTEM. Verify probe function in annular space of tanks and along piping runs. Remove probe and submerge in water. In annular spaces where the sensor cannot be removed, monitor annular space with CGI.

Record tanks and piping tested and results: \_\_\_\_\_

18) LEAK ALERT. Verify alarm function. Hit "Test" button on control panel.

Are all appropriate LED lights activated? \_\_\_\_\_

19) LEAK ALERT. Verify probe function in sumps/manways. Remove probe from holder. Submerge probe in water. Record probes tested and results: \_\_\_\_\_

20) LEAK ALERT. Verify probe function in annular space of tanks and along piping runs. Remove probe and submerge in water. In annular spaces where the sensor cannot be removed, monitor annular space with CGI. Record tanks and piping tested and results: \_\_\_\_\_

21) LEAK SENSOR JR. Verify that the number of active sensors is correct. Are the correct number of active sensors indicated by "Normal" lights? \_\_\_\_\_

22) LEAK SENSOR JR. Verify alarm function. Hit "Test" button. Active probes should alarm, then turn off. Record results: \_\_\_\_\_

23) LEAK SENSOR JR. Verify probe function in sumps/manways. Remove probe from holder. Submerge probe in water or turn upside down. KEEP UNIT IN ALARM FOR NEXT TEST. Record probes tested and results: \_\_\_\_\_  
Press "Silent" button. This should silence alarm while maintaining red alarm light. Record results: \_\_\_\_\_  
Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily. Record results: \_\_\_\_\_  
After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm. Record results: \_\_\_\_\_

24) LEAK SENSOR JR. Verify probe function in annular space of tanks and along piping runs. Remove probe and submerge in water or turn upside down. In annular spaces where the sensor cannot be removed, monitor annular space with CGI. Record tanks and piping tested and results: \_\_\_\_\_  
Press "Silent" button. This should silence alarm while maintaining red alarm light. Record results: \_\_\_\_\_  
Turn "Reset" key while unit is in alarm. Alarm should stop only momentarily. Record results: \_\_\_\_\_  
After probe is removed from alarm condition, turning "Reset" key should permanently silence alarm. Record results: \_\_\_\_\_

25) API/IRONAN LIQUID SENSOR. Verify probe function in sumps/manways. Remove probe from holder. Submerge probe in water or turn upside down. Record probes tested and results: All functioning properly

26) API/IRONAN LIQUID SENSOR. Verify probe function in annular space of tanks and along piping runs. Remove probe and submerge in water or turn upside down. In annular spaces where the sensor cannot be removed, monitor annular space with CGI. Record tanks and piping tested and results: All functioning properly  
But maintenance removed + tested annular space alarms

27) API/ROGAN LIQUID SENSOR. Verify that sensor has not been tampered with since last inspection.

Record all lead-wire seals NOT intact or NOT stamped with the "69" label: N/A

---

28) CEI LIQUID SENSOR. Verify probe function in sumps/manways. Remove probe from holder. Submerge probe in water or turn upside down.

Record probes tested and results: \_\_\_\_\_

29) CEI LIQUID SENSOR. Verify probe function in annular space of tanks and along piping runs. Remove probe and submerge in water or turn upside down. In annular spaces where the sensor cannot be removed, monitor annular space with CGI.

Record tanks and piping tested and results: \_\_\_\_\_

30) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in sumps/manways. Remove probe from holder. Submerge probe in water or turn upside down.

Record probes tested and results: \_\_\_\_\_

31) VEEDER-ROOT TLS-350 LIQUID SENSOR. Verify probe function in annular space of tanks and along piping runs. Remove probe and submerge in water or turn upside down. In annular spaces where the sensor cannot be removed, monitor annular space with CGI.

Record tanks and piping tested and results: \_\_\_\_\_

# UNDERGROUND TANK SAFETY NOTICE

Business Name: ARCO Business Phone: \_\_\_\_\_  
Business Address: 2110 N. Mountain View Hwy Business Contact: \_\_\_\_\_  
Date: 8/31/93 Start Time: 1:00 End Time: 1:30 Inspector: STEVE DAVEN

A A REASONABLE DEGREE OF COMPLIANCE EXISTS AT THIS TIME.  
CITY AND STATE CODE REQUIRES COMPLIANCE WITH THE ITEMS LISTED BELOW:

1. ADMINISTRATIVE:
- a. Daily Inspection Log (MVCC 24.19.g)  
A daily inspection log verifying that your leak detection: (1) has power, and (2) is/is not in alarm, must be maintained on the premises and available for review by the Fire Department. Call (415) 903-6378 to obtain copies of a sample inspection log.
  - b. Notification of Alarms (MVCC 24.25.a.2.(a))  
You must immediately report an alarm from any leak detection equipment to the Fire Department at (415) 903-6821. You have five (5) working days to determine the cause for the alarm. If no cause can be found, it is assumed that a tank/piping failure has taken place and the affected tank/piping shall be closed until the cause for the alarm can be determined.

2. TANKS/PIPING SYSTEM:
- The following items were noted as requiring corrective action:
- a. Dispenser Fittings/Hoses: \_\_\_\_\_
  - b. Sub-Pumps/Manways: \_\_\_\_\_
  - c. Overfill/Overspill Devices: \_\_\_\_\_
  - d. Emergency Shut-Off: \_\_\_\_\_

3. LEAK DETECTION SYSTEM(S) FOR TANKS/PIPING:
- All leak detection systems must be maintained in proper working order. The following items were noted as requiring corrective action:
- \_\_\_\_\_
- \_\_\_\_\_
- \_\_\_\_\_

Additional Requirements and/or Comments: BIANNUAL UST INSPECTION FULL ANNUAL SENSORS IN UNDERGROUND TANK NEXT INSPECTION

— A REINSPECTION SHALL BE CONDUCTED IN FIVE DAYS. ADDITIONAL INSPECTIONS AFTER THE FIRST REINSPECTION ARE BILLED AT \$40.00/HOUR/MAN, ONE-HOUR MINIMUM.

— ALL VIOLATIONS HAVE BEEN CORRECTED. THANK YOU!

Contact: \_\_\_\_\_

\*\*\*\*\*

DOUBLE-WALL TANKS

1. Check fill pipe of each tank. Record any soil contamination or full overspill protectors: ALL OK
2. Check turbine manways of each tank. Record any soil contamination or leakage: ALL OK
- 3) Remove faceplate from each dispenser. Engage dispenser and inspect for leaks/weeping joints. Record results: ALL OK

A. Liquid Sensors

- 1) Is system functioning? YES
- 2) Record current alarm conditions: None
- 3) Is alarm status checked daily and a log kept of the results? YES
- 4) Do inspection records indicate any alarms since last inspection? No
- 5) PETROMETER. Check electronic diagnostics by hitting "Test" button. Are electronics working properly? \_\_\_\_\_.
- 6) PETROMETER. Check air pressure sensor by removing the copper tubing connection underneath the unit and inserting the test tubing and sensor assembly. Lower the air bell into a container of water and observe the point at which the alarm is activated. Is alarm working? \_\_\_\_\_ Is alarm activated at the 1/4" submersion point? \_\_\_\_\_ Hit the alarm silencer button while keeping the air bell in water. Does red light remain on in the alarm mode? \_\_\_\_\_ Does alarm turn off when the sensor is removed from the water? \_\_\_\_\_
- 7) PETROMETER. Inspect annular space integrity. On tanks where liquid sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 8) POLLULERT FD 102. Is "Audible" alarm button on panel face in the "On" position? \_\_\_\_\_
- 9) POLLULERT FD 102. Check audible alarm. Push "Audible Alarm" button, and switching "Manual Trip" and "Latch" to "On" position. Is alarm working? \_\_\_\_\_. Turn "Manual Trip" switch off--alarm should continue working. Turn "Latch" switch off--alarm should silence. Are alarm switches working properly? \_\_\_\_\_.

- 10) POLLULERT FD 102. Check probe function. Press the "Push To Test" button on each probe well cap. The green LED (dry) should light. Where appropriate (manways, sumps) raise bottom float (hydrocarbon alarm) and contact metal leads (water alarm). Record probes tested and results: \_\_\_\_\_
- 11) POLLULERT FD 102. Inspect annular space integrity. On tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 12) POLLULERT FD 103. Check alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypad light. \_\_\_\_\_
- 13) POLLULERT FD 103. Check audible alarm setting. The "Audible Alarm" button should NOT be lit. If it is, the alarm has been disabled. Is alarm setting correct? \_\_\_\_\_
- 14) POLLULERT FD 103. Check for alarms. Press "Error Check" button. Any alarm probes or failed probes will be displayed. Record results: \_\_\_\_\_
- 15) POLLULERT FD 103. Check internal diagnostics. After access code, hit "Program" and "Test" key. Continue to hit "Program" button and refer to pages 27-29 of manual for appropriate responses. Note any discrepancies: \_\_\_\_\_
- 16) POLLULERT FD 103. Check probe functionality in sumps & piping by removing sensors and exposing to water. Record probes tested and response: \_\_\_\_\_
- 17) POLLULERT FD 103. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 18) OWENS-CORNING HYDROSTATIC MONITOR. Check alarm function. Drain liquid from reservoir and note alarm and time required for alarm: \_\_\_\_\_
- 19) OWENS-CORNING HYDROSTATIC MONITOR. Check for tampering. Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_
- 20) SCULLY SYSTEM. Are "Dynacheck" lights operating on front panel? \_\_\_\_\_
- 21) SCULLY SYSTEM. Test alarms. Hit "Alarm Test" button on each control panel. Note any function discrepancies: \_\_\_\_\_
- 22) SCULLY SYSTEM. Test sensor functionality in manways & piping by removing probes and exposing to water. Record probes tested and response: \_\_\_\_\_
- 23) SCULLY SYSTEM. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 24) LEAK ALERT. Test control panel. Hit "Test" button on control panel. Are all appropriate LED lights activated? \_\_\_\_\_ List: \_\_\_\_\_

- 25) LEAK ALERT. Test sensor functionality in sumps & piping by removing sensors and exposing to water. Record results: \_\_\_\_\_
- 26) LEAK ALERT. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record results: \_\_\_\_\_
- 27) LEAK SENSOR JR. Are the correct number of active sensors indicated? (by "Normal" lights): \_\_\_\_\_ How many? \_\_\_\_\_
- 28) LEAK SENSOR JR. Perform diagnostics test. Hit "Test" button. Active probes should alarm, then turn off. Note any discrepancies: \_\_\_\_\_
- 29) LEAK SENSOR JR. Perform sensor functionality test. Dip each probe into water and gasoline.  
 a) Alarm should activate.  
 b) Pressing "Silent" button should silence alarm while maintaining red alarm light.  
 c) Turning "Reset" key should only kill alarm momentarily.  
 d) After probe is removed, turning "Reset" key should silence alarm.  
 Note any discrepancies in any probes: \_\_\_\_\_
- 30) API/ROMAN LIQUID SENSOR. Test sensor functionality in manways & piping by turning float upside down or inserting in water. Record results: ALL Working Properly
- 31) API/ROMAN LIQUID SENSOR. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: Sup UNL = C10 % LEL; Reg UNL = C10 % LEL; W/O = \* Not checked; % LEL: A/G = C10 % LEL
- 32) API/ROMAN LIQUID SENSOR. Check for tampering. If applicable, record all lead-wire seals NOT intact or NOT stamped "69": N/A
- 33) CEI LIQUID SENSORS. Test sensor functionality in sumps & piping by removing sensors and exposing to water. Record sensors tested and results: \_\_\_\_\_
- 34) CEI LIQUID SENSORS. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record results: \_\_\_\_\_
- 35) VEEDER-ROOT TLS-350 LIQUID SENSOR. Test sensor functionality in manway sumps & piping by removing sensors and exposing to water. Record results: \_\_\_\_\_
- 36) VEEDER-ROOT TLS-350 LIQUID SENSOR. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record results: \_\_\_\_\_

UNDERGROUND TANK MONITORING INSPECTION WORKSHEET

Address: 2110 Old Middlefield

Date: 7/15/92

Business Name: ARCO

Contact: TAGHI

\*\*\*\*\*

DOUBLE-WALL TANKS

- 1. Check fill pipe of each tank. Record any soil contamination or full overspill protectors: OK
- 2. Check turbine manways of each tank. Record any soil contamination or leakage: OK
- 3) Remove faceplate from each dispenser. Engage dispenser and inspect for leaks/weeping joints. Record results: OK

A. Liquid Sensors

- 1) Is system functioning? Y<sup>1</sup>
- 2) Record current alarm conditions: NOISE
- 3) Is alarm status checked daily and a log kept of the results? Y<sup>2</sup>
- 4) Do inspection records indicate any alarms since last inspection? NO
- 5) PETROMETER. Check electronic diagnostics by hitting "Test" button. Are electronics working properly? \_\_\_\_\_.
- 6) PETROMETER. Check air pressure sensor by removing the copper tubing connection underneath the unit and inserting the test tubing and sensor assembly. Lower the air bell into a container of water and observe the point at which the alarm is activated. Is alarm working? \_\_\_\_\_ Is alarm activated at the 1/4" submersion point? \_\_\_\_\_ Hit the alarm silencer button while keeping the air bell in water. Does red light remain on in the alarm mode? \_\_\_\_\_ Does alarm turn off when the sensor is removed from the water? \_\_\_\_\_
- 7) PETROMETER. Inspect annular space integrity. On tanks where liquid sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 8) POLLULERT FD 102. Is "Audible" alarm button on panel face in the "On" position? \_\_\_\_\_
- 9) POLLULERT FD 102. Check audible alarm. Push "Audible Alarm" button, and switching "Manual Trip" and "Latch" to "On" position. Is alarm working? \_\_\_\_\_. Turn "Manual Trip" switch off--alarm should continue working. Turn "Latch" switch off--alarm should silence. Are alarm switches working properly? \_\_\_\_\_.

- 10) POLLULERT FD 102. Check probe function. Press "Push To Test" button on each probe well cap. The green LED (dry) should light. Where appropriate (manways, sumps) raise bottom float (hydrocarbon alarm) and contact metal leads (water alarm). Record probes tested and results: \_\_\_\_\_
- 11) POLLULERT FD 102. Inspect annular space integrity. On tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 12) POLLULERT FD 103. Check alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light. \_\_\_\_\_
- 13) POLLULERT FD 103. Check audible alarm setting. The "Audible Alarm" button should NOT be lit. If it is, the alarm has been disabled. Is alarm setting correct? \_\_\_\_\_
- 14) POLLULERT FD 103. Check for alarms. Press "Error Check" button. Any alarm probes or failed probes will be displayed. Record results: \_\_\_\_\_
- 15) POLLULERT FD 103. Check internal diagnostics. After access code, hit "Program" and "Test" key. Continue to hit "Program" button and refer to pages 27-29 of manual for appropriate responses. Note any discrepancies: \_\_\_\_\_
- 16) POLLULERT FD 103. Check probe functionality in sumps & piping by removing sensors and exposing to water. Record probes tested and response: \_\_\_\_\_
- 17) POLLULERT FD 103. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 18) OWENS-CORNING HYDROSTATIC MONITOR. Check alarm function. Drain liquid from reservoir and note alarm and time required for alarm: \_\_\_\_\_
- 19) OWENS-CORNING HYDROSTATIC MONITOR. Check for tampering. Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_
- 20) SCULLY SYSTEM. Are "Dynacheck" lights operating on front panel? \_\_\_\_\_
- 21) SCULLY SYSTEM. Test alarms. Hit "Alarm Test" button on each control panel. Note any function discrepancies: \_\_\_\_\_
- 22) SCULLY SYSTEM. Test sensor functionality in manways & piping by removing probes and exposing to water. Record probes tested and response: \_\_\_\_\_
- 23) SCULLY SYSTEM. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 24) LEAK ALERT. Test control panel. Hit "Test" button on control panel. Are all appropriate LED lights activated? \_\_\_\_\_ List: \_\_\_\_\_

- 25) LEAK ALERT. Test sensor functionality in sumps & piping by removing sensors and exposing to water. Record results: \_\_\_\_\_
- 26) LEAK ALERT. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record results: \_\_\_\_\_
- 27) LEAK SENSOR JR. Are the correct number of active sensors indicated? (by "Normal" lights): \_\_\_\_\_ How many? \_\_\_\_\_
- 28) LEAK SENSOR JR. Perform diagnostics test. Hit "Test" button. Active probes should alarm, then turn off. Note any discrepancies: \_\_\_\_\_
- 29) LEAK SENSOR JR. Perform sensor functionality test. Dip each probe into water and gasoline.  
 a) Alarm should activate.  
 b) Pressing "Silent" button should silence alarm while maintaining red alarm light.  
 c) Turning "Reset" key should only kill alarm momentarily.  
 d) After probe is removed, turning "Reset" key should silence alarm.  
 Note any discrepancies in any probes: \_\_\_\_\_
- 30) API/ROGAN LIQUID SENSOR. Test sensor functionality in manways & piping by turning float upside down or inserting in water. Record results: NO OIL; All sensors did shut down corresponding pumps
- 31) API/ROGAN LIQUID SENSOR. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested, and results: W/O tank must be tested by contractor (can't use CGI) 9 fuel & 100% LEL
- 32) CEI LIQUID SENSORS. Test sensor functionality in sumps & piping by removing sensors and exposing to water. Record sensors tested and results: \_\_\_\_\_
- 33) CEI LIQUID SENSORS. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record results: \_\_\_\_\_
- 34) VEEDER-ROOT TLS-350 LIQUID SENSOR. Test sensor functionality in manway sumps & piping by removing sensors and exposing to water. Record results: \_\_\_\_\_
- 35) VEEDER-ROOT TLS-350 LIQUID SENSOR. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record results: \_\_\_\_\_

FACILITY NO. 2010

AMENDMENT TO LESSEE PMPA FRANCHISE AGREEMENT/DEALER/PREMISES LEASE  
OPERATION OF UNDERGROUND STORAGE TANKS

CALIFORNIA

This Amendment, dated FEBRUARY 4, 1992, is attached to, incorporated in and made a part of the Lessee PMPA Franchise Agreement/Dealer/Premises Lease ("PMPA Agreement"), in effect as of the date of this Amendment or, if applicable, to become effective concurrently with this Amendment, between Atlantic Richfield Company, a Delaware Corporation, through its division ARCO Products Company, ("Franchisor") and TRP LAVASANI ("Franchisee"), covering premises located at 2110 OLD MIDDLEFIELD RD. MILPITAS, CA.

In return for good and valuable consideration, each party's receipt of which is hereby acknowledged, the parties agree as follows:

1. The parties have entered into this Amendment in accordance with legal requirements imposed on Franchisor and Franchisee concerning operation of the underground storage tanks at the above-referenced location.

2. Franchisor has provided Franchisee a copy of:

(a) California Health and Safety Code Section 25299 or an approved summary concerning civil and criminal penalties for violating terms of any permit to operate these underground storage tanks and relevant statutory and regulatory requirements.

(b) the following listed documents, a copy of which is attached and initialed by Franchisee:

Monitor & Response Plan-XA w/Attachments  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

3. Where Franchisor has provided Franchisee with a copy of the permit to operate the underground storage tanks, Franchisee has read and understood its responsibilities as operator under the permit and agrees to comply with each of the provisions of the permit. Irrespective of whether Franchisee has received and reviewed a copy of the underground storage tank operating permit, Franchisee hereby expressly agrees to do the following:

(a) monitor the underground tanks as required by law;

(b) maintain all required records and make such records available to the federal, state and local government agencies and to Franchisor at all reasonable times;

(c) follow all reporting procedures as required by law;

(d) mail, when submitted, to Franchisor, at the address specified in paragraph 1 of the PMPA Franchise Agreement/Dealer/Premises Lease, a copy of all reports submitted to government agencies;

(e) follow all operating procedures specified by Franchisor;

(f) immediately report to Franchisor all suspected or confirmed releases from the tanks and connected piping system, unusual operating conditions, release detection signals and environmental conditions suggesting a release may have occurred, and any spills and overfills that are not contained and cleaned up;

(g) properly close the underground tanks as required by law; and,

(h) comply with all federal, state and local legal requirements relevant to the operations of the underground tanks and all amendments to any permit to operate.

4. With respect to the operation of the underground storage tank system and monitoring equipment, Franchisee hereby acknowledges and agrees:

- that ARCO has provided Franchisee with training on each of the items described in the attached Monitoring and Response Plan,
- that Franchisee understood the content of the training, and asked any questions necessary to facilitate his understanding,
- that Franchisee indicated to ARCO at the time of training any subjects addressed by the training which Franchisee did not fully understand, and
- that Franchisee received complete training and information necessary for Franchisee to fully understand the subject of operating underground storage tanks.

5. Franchisor has provided Franchisee a copy of and Franchisee agrees to maintain on the Premises the Certificate of Financial Responsibility (as required by the United States Environmental Protection Agency in Subpart H, 40 CFR, Part 280 and California Health and Safety Code, Chapter 6.7, Section 25292.2).

6. Except to the extent they conflict with, or are less rigorous than the terms of this Amendment, all of the terms and conditions of the PMPA Agreement, as previously or hereafter amended or supplemented, remain in full force.

IN WITNESS WHEREOF, Franchisor and Franchisee have executed this Amendment.

## MONITORING AND RESPONSE PLAN - XA

### ARCO PRODUCTS COMPANY FACILITY WITH SECONDARY CONTAINMENT OF UNDERGROUND PRODUCT AND USED OIL STORAGE TANKS & PRODUCT LINES

ARCO Facility 2010

Address 2110 OLD MIDDLEFIELD RD  
MT. VIEW CA

This plan is designed to meet the monitoring and response requirements of Section 2634, Article 3, Title 23, CCR.

#### 1. MONITORING EQUIPMENT

Secondarily contained storage tanks and lines at this facility are monitored by a continuous electronic leak detection system which consists of an alarm panel, sensors and associated electronics. Liquid sensors are installed in the annular space of each double wall tank and product line piping sump. Whenever a sensor detects the presence of a liquid there is both a visual and audible alarm at the control panel. In addition, the continuous monitor on the product piping system will shut down the pump and activate the alarm system when a release is detected or if the continuous product piping monitoring system fails or is disconnected, the pumping system will shut down.

Automatic line leak detectors are installed on the secondarily contained pressurized product piping. The line leak detector will detect a loss of pressure in the product lines and restrict the flow of product.

#### 2. MAINTENANCE SCHEDULE OF MONITORING EQUIPMENT

The continuous electronic leak detection system including line leak detectors will be inspected according to the manufacturer's instructions by an outside contractor once during each calendar year.

#### 3. ROUTINE MONITORING PROCEDURE

On a daily basis the facility operator shall:

- A. Inspect the control panel for visual and audible alarm signals to confirm that the unit is operating.
- B. Inspect island and tank fill areas for signs of spillage or petroleum sheen.
- C. Record the inspection observations on the Daily Visual Monitoring Log (Form APPC-766: attached.)

- Inspect equipment
- Recognize warning signs: dispenser hesitations, meter spins and odors
- Manually close dispenser impact valve
- Replace dispenser filters

**TRAINING CONTINUED**

- Shut down the system with and location of: ARCOmatic switch, electrical panel breakers, and emergency shut off switch
- Test the electronic monitor

**6. RECORDS RETENTION**

Written records of all monitoring, testing, and maintenance performed shall be maintained on-site for a period of at least 3 years. These records must be made available, upon request, to the local agency or the Board.

**7. PARTY RESPONSIBLE FOR PERFORMING THE MONITORING**

TED LAUASANI  
Name

OWNER  
Title

**8. PARTY RESPONSIBLE FOR MAINTAINING EQUIPMENT**

ARCO MAINT.  
Name

800/ARCO-FIX  
Title

4. **RESPONSE PLAN**

**OPERATOR RESPONSIBILITIES**

A. **LEAK RECORDING AND REPORTING PROCEDURE**

Whenever an alarm is activated, station personnel are to immediately:

- a. Contact ARCO Maintenance or its designated agent by using the telephone number previously provided.
- b. If any visible indications of petroleum products or vapors are noticed call 911.
- c. Make an entry in the Recordable Discharge Log (Form APPC-765-1: attached) indicating the action taken.
- d. Complete the Recordable Discharge Log when and as the source of the alarm is known.

**THE CITY OF MOUNTAIN VIEW MUNICIPAL CIVIL CODE, HAZARDOUS MATERIALS STORAGE ORDINANCE, CHAPTER 24, SECTION 24.25, A.2 REQUIRES THAT IF POWER IS SHUT OFF OR AN ALARM CONDITION EXISTS, OPERATOR MUST IMMEDIATELY NOTIFY THE HAZARDOUS MATERIALS CODE ENFORCEMENT DIVISION OF THE FIRE DEPARTMENT.**

**ARCO RESPONSIBILITIES**

B. **METHOD OF REMOVING AN UNAUTHORIZED RELEASE FROM THE SECONDARY CONTAINMENT**

- a. Any unauthorized release into the secondary containment system of a product tank will be removed by pumping. Uncontaminated product may be returned to the tank. Contaminated product may be returned to the refinery to be recycled or may be disposed of following procedures in accordance with California Health and Safety Code requirements. In the event of an emergency, a pumping contractor or truck will be available immediately. In all other cases, equipment availability will be within 12 hours.
- b. Any unauthorized release in the secondary containment system of a used oil tank will be pumped and disposed of following procedures in accordance with California Health and Safety Code requirements for used oil disposal.
- c. ARCO Maintenance will be responsible for authorizing and selecting contractors for the work to be performed.

5. **TRAINING**

In addition to the training covering subjects mentioned in Sections 3 and 4 above, training needed for the operation of the tank system and monitoring equipment includes:

How to:

- Take tank level measurements
- Read dispenser meters

CHAPTER 6.7**

---

**SECTION 25299**

- (a) Any operator of an underground tank system shall be liable for a civil penalty of not less than five hundred dollars (\$500) or more than five thousand dollars (\$5,000) for each underground storage tank for each day of violation for any of the following violations:
- (1) Operating an underground tank system which has not been issued a permit, in violation of this chapter.
  - (2) Violation of any of the applicable requirements of the permit issued for the operation of the underground tank system.
  - (3) Failure to maintain records, as required by this chapter.
  - (4) Failure to report an unauthorized release, as required by Sections 25294 and 25295.
  - (5) Failure to properly close an underground tank system, as required by Section 25298.
  - (6) Violation of any applicable requirement of this chapter or any requirement of this chapter or any regulation adopted by the board pursuant to Section 25299.3
  - (7) Failure to permit inspection or to perform any monitoring, testing, or reporting required pursuant to Section 25285 or 25289.
  - (8) Making any false statement, representation, or certification in any application, record, report, or other document submitted or required to be maintained pursuant to this chapter.
- (b) Any owner of an underground tank system shall be liable for a civil penalty of not less than five hundred dollars (\$500) or more than five thousand dollars (\$5,000) per day for each underground storage tank, for each day of violation, for any of the following violations:
- (1) Failure to obtain a permit as specified by this chapter.
  - (2) Failure to repair or upgrade an underground tank system in accordance with this chapter.
  - (3) Abandonment or improper closure of any underground tank system subject to this chapter.
  - (4) Knowing failure to take reasonable and necessary steps to assure compliance with this chapter by the operator of an underground tank system.
  - (5) Violation of any applicable requirement of the permit issued for operation of the underground tank system.
  - (6) Violation of any applicable requirement of this chapter or any regulation adopted by the board pursuant to Section 25299.3.

- (7) Failure to permit inspection or to perform any monitoring, testing, or reporting required pursuant to Section 25288 or 25289.
- (8) Making any false statement, representation, or certification in any application, record, report, or other document submitted or required to be maintained pursuant to this chapter.
- (c) Any person who intentionally fails to notify the board or the local agency when required to do so by this chapter or who submits false information in a permit application, amendment, or renewal, pursuant to Section 25286, is liable for a civil penalty of not more than five thousand dollars (\$5,000) for each underground storage tank for which notification is not given or false information is submitted.
- (d) Any person who falsifies any monitoring records required by this chapter, or knowingly fails to report an unauthorized release, shall, upon conviction, be punished by a fine of not less than five thousand dollars (\$5,000) or more than ten thousand dollars (\$10,000), by imprisonment in the county jail for not to exceed one year, or by both that fine and imprisonment.
- (e) In determining both the civil and criminal penalties imposed pursuant to this section, the court shall consider all relevant circumstances, including, but not limited to, the extent of harm or potential harm caused by the violation, the nature of the violation and the period of time over which it occurred, the frequency of past violations, and the corrective action, if any, taken by the person who holds the permit.
- (f) Each civil penalty or criminal fine imposed pursuant to this section for any separate violation shall be separate, and in addition to, any other civil penalty or criminal fine imposed pursuant to this section or any other provision of law, and shall be paid to the treasury of the local agency or state, whichever is represented by the office of the city attorney, district attorney, or Attorney General bringing the action. All penalties or fines collected on behalf of the board or a regional board by the Attorney General shall be deposited in the State Water Pollution Cleanup and Abatement Account in the State Water Quality Control Fund, and are available for expenditure by the board, upon appropriation, pursuant to Section 13441 of the Water Code.
- (g) This section shall become operative on January 1, 1991. (Added by Stats. 1988, c. 296 Section 3, operative Jan. 1, 1991. Amended by Stats. 1989, c. 11397, Section 12, operative Jan. 1, 1991.)

UNDERGROUND TANK MONITORING INSPECTION WORKSHEET

Address: 211 W. Washington Way

Date: 2/13/91

Business Name: Acme

Contact: \_\_\_\_\_

\*\*\*\*\*

DOUBLE-WALL TANKS

- 1. Check fill pipe of each tank. Record any soil contamination or full overspill protectors: ALL OK
- 2. Check turbine manways of each tank. Record any soil contamination or leakage: ALL OK
- 3) Remove faceplate from each dispenser. Engage dispenser and inspect for leaks/weeping joints. Record results: ALL OK

A. Liquid Sensors

- 1) Is system functioning? YES
- 2) Record current alarm conditions: NONE
- 3) Is alarm status checked daily and a log kept of the results? YES
- 4) Do inspection records indicate any alarms since last inspection? No
- 5) PETROMETER. Check electronic diagnostics by hitting "Test" button. Are electronics working properly? \_\_\_\_\_.
- 6) PETROMETER. Check air pressure sensor by removing the copper tubing connection underneath the unit and inserting the test tubing and sensor assembly. Lower the air bell into a container of water and observe the point at which the alarm is activated. Is alarm working? \_\_\_\_\_ Is alarm activated at the 1/4" submersion point? \_\_\_\_\_ Hit the alarm silencer button while keeping the air bell in water. Does red light remain on in the alarm mode? \_\_\_\_\_ Does alarm turn off when the sensor is removed from the water? \_\_\_\_\_
- 7) PETROMETER. Inspect annular space integrity. On tanks where liquid sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 8) POLLULERT FD 102. Is "Audible" alarm button on panel face in the "On" position? \_\_\_\_\_
- 9) POLLULERT FD 102. Check audible alarm. Push "Audible Alarm" button, and switching "Manual Trip" and "Latch" to "On" position. Is alarm working? \_\_\_\_\_. Turn "Manual Trip" switch off--alarm should continue working. Turn "Latch" switch off--alarm should silence. Are alarm switches working properly? \_\_\_\_\_.

- 10) POLLULERT FD 102. Check probe function. Press the "Push To Test" button on each probe well cap. The green LED (dry) should light. Where appropriate (manways, sumps) raise bottom float (hydrocarbon alarm) and contact metal leads (water alarm). Record probes tested and results: \_\_\_\_\_
- 11) POLLULERT FD 102. Inspect annular space integrity. On tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 12) POLLULERT FD 103. Check alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light. \_\_\_\_\_
- 13) POLLULERT FD 103. Check audible alarm setting. The "Audible Alarm" button should NOT be lit. If it is, the alarm has been disabled. Is alarm setting correct? \_\_\_\_\_
- 14) POLLULERT FD 103. Check for alarms. Press "Error Check" button. Any alarm probes or failed probes will be displayed. Record results: \_\_\_\_\_
- 15) POLLULERT FD 103. Check internal diagnostics. After access code, hit "Program" and "Test" key. Continue to hit "Program" button and refer to pages 27-29 of manual for appropriate responses. Note any discrepancies: \_\_\_\_\_
- 16) POLLULERT FD 103. Check probe functionality in sumps & piping by removing sensors and exposing to water. Record probes tested and response: \_\_\_\_\_
- 17) POLLULERT FD 103. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 18) OWENS-CORNING HYDROSTATIC MONITOR. Check alarm function. Drain liquid from reservoir and note alarm and time required for alarm: \_\_\_\_\_
- 19) OWENS-CORNING HYDROSTATIC MONITOR. Check for tampering. Record all lead-wire seals NOT intact or NOT stamped with the "69" label: \_\_\_\_\_
- 20) SCULLY SYSTEM. Are "Dynacheck" lights operating on front panel? \_\_\_\_\_
- 21) SCULLY SYSTEM. Test alarms. Hit "Alarm Test" button on each control panel. Note any function discrepancies: \_\_\_\_\_
- 22) SCULLY SYSTEM. Test sensor functionality in manways & piping by removing probes and exposing to water. Record probes tested and response: \_\_\_\_\_
- 23) SCULLY SYSTEM. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 24) LEAK ALERT. Test control panel. Hit "Test" button on control panel. Are all appropriate LED lights activated? \_\_\_\_\_ List: \_\_\_\_\_

- 25) LEAK ALERT. Test sensor functionality in sumps & piping by removing sensors and exposing to water. Record results: \_\_\_\_\_
- 26) LEAK ALERT. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record results: \_\_\_\_\_
- 27) LEAK SENSOR JR. Are the correct number of active sensors indicated? (by "Normal" lights): \_\_\_\_\_ How many? \_\_\_\_\_
- 28) LEAK SENSOR JR. Perform diagnostics test. Hit "Test" button. Active probes should alarm, then turn off. Note any discrepancies: \_\_\_\_\_
- 29) LEAK SENSOR JR. Perform sensor functionality test. Dip each probe into water and gasoline.  
 a) Alarm should activate.  
 b) Pressing "Silent" button should silence alarm while maintaining red alarm light.  
 c) Turning "Reset" key should only kill alarm momentarily.  
 d) After probe is removed, turning "Reset" key should silence alarm.  
 Note any discrepancies in any probes: \_\_\_\_\_
- 30) API/ROGAN LIQUID SENSOR. Test sensor functionality in manways & piping by turning float upside down or inserting in water. Record results: ALL WORK PROPER
- 31) API/ROGAN LIQUID SENSOR. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: ALL PRODUCT ANALYSIS AND OPERATED WITH CHECK
- 32) CEI LIQUID SENSORS. Test sensor functionality in sumps & piping by removing sensors and exposing to water. Record sensors tested and results: \_\_\_\_\_
- 33) CEI LIQUID SENSORS. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record results: \_\_\_\_\_
- 34) VEEDER-ROOT TLS-350 LIQUID SENSOR. Test sensor functionality in manway sumps & piping by removing sensors and exposing to water. Record results: \_\_\_\_\_
- 35) VEEDER-ROOT TLS-350 LIQUID SENSOR. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record results: \_\_\_\_\_

UNDERGROUND TANK MONITORING INSPECTION WORKSHEET

Address: 2110 Westwood Blvd

Date: 4/2/80

Business Name: Paco

Contact: \_\_\_\_\_

\*\*\*\*\*

DOUBLE-WALL TANKS

- 1. Check fill pipe of each tank. Record any soil contamination or full overspill protectors: ALL OK
- 2. Check turbine manways of each tank. Record any soil contamination or leakage: ALL OK - No soil, no water
- 3) Remove faceplate from each dispenser. Engage dispenser and inspect for leaks/weeping joints. Record results: ALL OK - No leaks

A. Liquid Sensors

- 1) Is system functioning? Yes
- 2) Record current alarm conditions: None
- 3) Is alarm status checked daily and a log kept of the results? Yes
- 4) Do inspection records indicate any alarms since last inspection? No. But, replaced sensor because of water injection in alarm?  
*\* All 3 sensors had been topped up & missed. We turned them back.*
- 5) PETROMETER. Check electronic diagnostics by hitting "Test" button. Are electronics working properly? \_\_\_\_\_
- 6) PETROMETER. Check air pressure sensor by removing the copper tubing connection underneath the unit and inserting the test tubing and sensor assembly. Lower the air bell into a container of water and observe the point at which the alarm is activated. Is alarm working? \_\_\_\_\_  
Is alarm activated at the 1/4" submersion point? \_\_\_\_\_  
Hit the alarm silencer button while keeping the air bell in water. Does red light remain on in the alarm mode? \_\_\_\_\_ Does alarm turn off when the sensor is removed from the water? \_\_\_\_\_
- 7) PETROMETER. Inspect annular space integrity. On tanks where liquid sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 8) POLLULERT FD 102. Is "Audible" alarm button on panel face in the "On" position? \_\_\_\_\_
- 9) POLLULERT FD 102. Check audible alarm. Push "Audible Alarm" button, and switching "Manual Trip" and "Latch" to "On" position. Is alarm working? \_\_\_\_\_. Turn "Manual Trip" switch off--alarm should continue working. Turn "Latch" switch off--alarm should silence. Are alarm switches working properly? \_\_\_\_\_

- 10) POLLULERT FD 102. Check probe function. Press the "Push To Test" button on each probe well cap. The green LED (dry) should light. Where appropriate (manways, sumps) raise bottom float (hydrocarbon alarm) and contact metal leads (water alarm). Record probes tested and results: \_\_\_\_\_
- 11) POLLULERT FD 102. Inspect annular space integrity. On tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 12) POLLULERT FD 103. Check alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light. \_\_\_\_\_
- 13) POLLULERT FD 103. Check audible alarm setting. The "Audible Alarm" button should NOT be lit. If it is, the alarm has been disabled. Is alarm setting correct? \_\_\_\_\_
- 14) POLLULERT FD 103. Check for alarms. Press "Error Check" button. Any alarm probes or failed probes will be displayed. Record results: \_\_\_\_\_
- 15) POLLULERT FD 103. Check internal diagnostics. After access code, hit "Program" and "Test" key. Continue to hit "Program" button and refer to pages 27-29 of manual for appropriate responses. Note any discrepancies: \_\_\_\_\_
- 16) POLLULERT FD 103. Check probe functionality. Where possible, expose probe to water/gasoline. Record probes tested and response: \_\_\_\_\_
- 17) POLLULERT FD 103. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 18) OWENS-CORNING HYDROSTATIC MONITOR. Check alarm function. Drain liquid from reservoir and note alarm and time required for alarm: \_\_\_\_\_
- 19) SCULLY SYSTEM. Are "Dynacheck" lights operating on front panel? \_\_\_\_\_
- 20) SCULLY SYSTEM. Test alarms. Hit "Alarm Test" button on each control panel. Note any function discrepancies: \_\_\_\_\_
- 21) SCULLY SYSTEM. Test sensor integrity. Open control box(es). Do the # of live inputs correspond with the # of liquid probes? \_\_\_\_\_ Are all unused ports connected to "dummy" probes? \_\_\_\_\_ Remove each probe connection. Does alarm sound AND Dynacheck light turn off? \_\_\_\_\_
- 22) SCULLY SYSTEM. Test sensor functionality. Where appropriate, expose probe to water. Record probes tested and response: \_\_\_\_\_
- 23) SCULLY SYSTEM. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks

tested and results:

---

- 24) LEAK ALERT. Test control panel. Hit "Test" button on control panel. Are all LEDs lights activated? \_\_\_\_\_
- 25) LEAK ALERT. Test sensor functionality. Where possible, remove liquid sensors and expose to water/gas. Record results: \_\_\_\_\_
- 26) LEAK SENSOR JR. Are the correct number of active sensors indicated? (by "Normal" lights): \_\_\_\_\_
- 27) LEAK SENSOR JR. Perform diagnostics test. Hit "Test" button. Active probes should alarm; then turn off. Note any discrepancies: \_\_\_\_\_
- 28) LEAK SENSOR JR. Perform sensor functionality test. Dip each probe into water and gasoline.  
a) Alarm should activate.  
b) Pressing "Silent" button should silence alarm while maintaining red alarm light.  
c) Turning "Reset" key should only kill alarm momentarily.  
d) After probe is removed, turning "Reset" key should silence alarm. Note any discrepancies in any probes: \_\_\_\_\_
- 29) API/ROMAN LIQUID SENSOR. Test sensor functionality in manways and sumps by turning float upside down. Record results: \_\_\_\_\_
- 30) API/ROMAN LIQUID SENSOR. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 31) PMS-800 LIQUID SENSOR. Test sensor functionality. Where possible, remove sensor and expose to water. Record sensors tested and results: \_\_\_\_\_
32. PMS-800 LIQUID SENSOR. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_

B) Vapor Systems

Use supplemental worksheet for the appropriate Vapor Sensing system.

C) Manual Systems

- 1) Is system inspected daily and a log kept of the results? \_\_\_\_\_
- 2) Does log indicate any liquid in annular space? If so, when? \_\_\_\_\_
- 3) Do inspection records indicate possible leakage? \_\_\_\_\_

UNDERGROUND TANK MONITORING INSPECTION WORKSHEET

Address: 2110 OLD MIDDLBROOK WAY

Date: 3/1/98

Business Name: ARCO

Contact: \_\_\_\_\_

\*\*\*\*\*

DOUBLE-WALL TANKS

- 1. Check fill pipe of each tank. Record any soil contamination or full overflow protectors: ALL DRY
- 2. Check turbine manways of each tank. Record any soil contamination or leakage: ALL DRY - ALL LIDS DON'T FIT PROPERLY SINCE RED TACKET REPLACEMENT
- 3) Remove faceplate from each dispenser. Engage dispenser and inspect for leaks/weeping joints. Record results: ALL DRY

A. Liquid Sensors

- 1) Is system functioning? YES
- 2) Record current alarm conditions: NONE
- 3) Is alarm status checked daily and a log kept of the results? YES
- 4) Do inspection records indicate any alarms since last inspection?  
NO
- 5) PETROMETER. Check electronic diagnostics by hitting "Test" button. Are electronics working properly? \_\_\_\_\_.
- 6) PETROMETER. Check air pressure sensor by removing the copper tubing connection underneath the unit and inserting the test tubing and sensor assembly. Lower the air bell into a container of water and observe the point at which the alarm is activated. Is alarm working?  
\_\_\_\_\_ Is alarm activated at the 1/4" submersion point? \_\_\_\_\_  
Hit the alarm silencer button while keeping the air bell in water. Does red light remain on in the alarm mode? \_\_\_\_\_ Does alarm turn off when the sensor is removed from the water? \_\_\_\_\_
- 7) PETROMETER. Inspect annular space integrity. On tanks where liquid sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 8) POLLULERT FD 102. Is "Audible" alarm button on panel face in the "On" position? \_\_\_\_\_
- 9) POLLULERT FD 102. Check audible alarm. Push "Audible Alarm" button, and switching "Manual Trip" and "Latch" to "On" position. Is alarm working? \_\_\_\_\_. Turn "Manual Trip" switch off--alarm should continue working. Turn "Latch" switch off--alarm should silence. Are alarm switches working properly? \_\_\_\_\_.

- 10) POLLULERT FD 102. Check probe function. Press "Push To Test" button on each probe well cap. The green LED (dry) should light. Where appropriate (manways, sumps) raise bottom float (hydrocarbon alarm) and contact metal leads (water alarm). Record probes tested and results: \_\_\_\_\_
- 11) POLLULERT FD 102. Inspect annular space integrity. On tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 12) POLLULERT FD 103. Check alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light. \_\_\_\_\_
- 13) POLLULERT FD 103. Check audible alarm setting. The "Audible Alarm" button should NOT be lit. If it is, the alarm has been disabled. Is alarm setting correct? \_\_\_\_\_
- 14) POLLULERT FD 103. Check for alarms. Press "Error Check" button. Any alarm probes or failed probes will be displayed. Record results: \_\_\_\_\_
- 15) POLLULERT FD 103. Check internal diagnostics. After access code, hit "Program" and "Test" key. Continue to hit "Program" button and refer to pages 27-29 of manual for appropriate responses. Note any discrepancies: \_\_\_\_\_
- 16) POLLULERT FD 103. Check probe functionality. Where possible, expose probe to water/gasoline. Record probes tested and response: \_\_\_\_\_
- 17) POLLULERT FD 103. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 18) OWENS-CORNING HYDROSTATIC MONITOR. Check alarm function. Drain liquid from reservoir and note alarm and time required for alarm: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_
- 19) SCULLY SYSTEM. Are "Dynacheck" lights operating on front panel? \_\_\_\_\_
- 20) SCULLY SYSTEM. Test alarms. Hit "Alarm Test" button on each control panel. Note any function discrepancies: \_\_\_\_\_
- 21) SCULLY SYSTEM. Test sensor integrity. Open control box(es). Do the # of live inputs correspond with the # of liquid probes? \_\_\_\_\_  
Are all unused ports connected to "dummy" probes? \_\_\_\_\_  
Remove each probe connection. Does alarm sound AND Dynacheck light turn off? \_\_\_\_\_
- 22) SCULLY SYSTEM. Test sensor functionality. Where appropriate, expose probe to water. Record probes tested and response: \_\_\_\_\_
- 23) SCULLY SYSTEM. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks

tested and results:

- 24) LEAK ALERT. Test control panel. Hit "Test" button on control panel. Are all LEDs lights activated? \_\_\_\_\_
- 25) LEAK ALERT. Test sensor functionality. Where possible, remove liquid sensors and expose to water/gas. Record results: \_\_\_\_\_
- 26) LEAK SENSOR JR. Are the correct number of active sensors indicated? (by "Normal" lights): \_\_\_\_\_
- 27) LEAK SENSOR JR. Perform diagnostics test. Hit "Test" button. Active probes should alarm, then turn off. Note any discrepancies: \_\_\_\_\_
- 28) LEAK SENSOR JR. Perform sensor functionality test. Dip each probe into water and gasoline.
- a) Alarm should activate.
  - b) Pressing "Silent" button should silence alarm while maintaining red alarm light.
  - c) Turning "Reset" key should only kill alarm momentarily.
  - d) After probe is removed, turning "Reset" key should silence alarm.
- Note any discrepancies in any probes: \_\_\_\_\_
- 29) API/ROMAN LIQUID SENSOR. Test sensor functionality in manways and sumps by turning float upside down. Record results: \_\_\_\_\_  
*ALL FUNCTIONING PROPERLY*
- 30) API/ROMAN LIQUID SENSOR. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results:  
*REG: 200 ppm; UNL 125 ppm; Sup UNL 375 ppm; W/O 100 ppm*
- 31) PMS-800 LIQUID SENSOR. Test sensor functionality. Where possible, remove sensor and expose to water. Record sensors tested and results: \_\_\_\_\_
- 32) PMS-800 LIQUID SENSOR. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_

B) Vapor Systems

Use supplemental worksheet for the appropriate Vapor Sensing system.

C) Manual Systems

- 1) Is system inspected daily and a log kept of the results? \_\_\_\_\_
- 2) Does log indicate any liquid in annular space? If so, when? \_\_\_\_\_
- 3) Do inspection records indicate possible leakage? \_\_\_\_\_

DOUBLE-WALL TANKS

1. Check fill pipe of each tank. Record any soil contamination or full overspill protectors: NO LEAKS
2. Check turbine manways of each tank. Record any soil contamination or leakage: NO LEAKS
- 3) Remove faceplate from each dispenser. Engage dispenser and inspect for leaks/weeping joints. Record results: ALL OK

A. Liquid Sensors

- 1) Is system functioning? YES
- 2) Record current alarm conditions: NONE
- 3) Is alarm status checked daily and a log kept of the results? LOG ISSUED TODAY
- 4) Do inspection records indicate any alarms? N/A
- 5) PETROMETER. Check electronic diagnostics by hitting "Test" button. Are electronics working properly? \_\_\_\_\_
- 6) PETROMETER. Check air pressure sensor by removing the copper tubing connection underneath the unit and inserting the test tubing and sensor assembly. Lower the air bell into a container of water and observe the point at which the alarm is activated. Is alarm working? \_\_\_\_\_  
Is alarm activated at the 1/4" submersion point? \_\_\_\_\_  
Hit the alarm silencer button while keeping the air bell in water. Does red light remain on in the alarm mode? \_\_\_\_\_ Does alarm turn off when the sensor is removed from the water? \_\_\_\_\_
- 7) PETROMETER. Inspect annular space integrity. On tanks where liquid sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 8) POLLULERT FD 102. Is "Audible" alarm button on panel face in the "On" position? \_\_\_\_\_
- 9) POLLULERT FD 102. Check audible alarm. Push "Audible Alarm" button, and switching "Manual Trip" and "Latch" to "On" position. Is alarm working? \_\_\_\_\_. Turn "Manual Trip" switch off--alarm should

continue working. Turn "Latch" switch off--alarm should silence. Are alarm switches working properly? \_\_\_\_\_.

- 10) POLLULERT FD 102. Check probe function. Press the "Push To Test" button on each probe well cap. The green LED (dry) should light. Where appropriate (manways, sumps) raise bottom float (hydrocarbon alarm) and contact metal leads (water alarm). Record probes tested and results: \_\_\_\_\_
- 11) POLLULERT FD 102. Inspect annular space integrity. On tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 12) POLLULERT FD 103. Check alarm function. Press "Alarm Check" button. Audible alarm should sound, LCD display should light, and keypads light. \_\_\_\_\_
- 13) POLLULERT FD 103. Check audible alarm setting. The "Audible Alarm" button should NOT be lit. If it is, the alarm has been disabled. Is alarm setting correct? \_\_\_\_\_
- 14) POLLULERT FD 103. Check for alarms. Press "Error Check" button. Any alarm probes or failed probes will be displayed. Record results: \_\_\_\_\_
- 15) POLLULERT FD 103. Check internal diagnostics. After access code, hit "Program" and "Test" key. Continue to hit "Program" button and refer to pages 27-29 of manual for appropriate responses. Note any discrepancies: \_\_\_\_\_
- 16) POLLULERT FD 103. Check probe functionality. Where possible, expose probe to water/gasoline. Record probes tested and response: \_\_\_\_\_
- 17) POLLULERT FD 103. Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 18) OWENS-CORNING HYDROSTATIC MONITOR. Check alarm function. Drain liquid from reservoir and note alarm and time required for alarm: \_\_\_\_\_
- 19) SIERRA MONITORING SENSOR. Calibration can be performed by applying calibration gas directly over sensor face. Alarm should signal within one minute and stop within one minute of removal of the gas. If monitor fails to alarm within one minute, adjust pot counterclockwise to increase the sensitivity. If monitor fails to stop alarming after one minute, adjust pot clockwise to decrease sensitivity. Does unit alarm at \_\_\_\_\_ ppm? \_\_\_\_\_ Date of last calibration: \_\_\_\_\_
- 20) SCULLY SYSTEM. Are "Dynacheck" lights operating on front panel? \_\_\_\_\_
- 21) SCULLY SYSTEM. Test alarms. Hit "Alarm Test" button on each control panel. Note any function discrepancies: \_\_\_\_\_

- 22) **SCULLY SYSTEM.** Test sensor integrity. Open control box(es). Do the # of live inputs correspond with the # of liquid probes? \_\_\_\_\_  
Are all unused ports connected to "dummy" probes? \_\_\_\_\_  
Remove each probe connection. Does alarm sound AND Dynacheck light turn off? \_\_\_\_\_
- 23) **SCULLY SYSTEM.** Test sensor functionality. Where appropriate, expose probe to water. Record probes tested and response: \_\_\_\_\_
- 24) **SCULLY SYSTEM.** Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 25) **TRACETEK TT-GS.** Test alarm functionality. Push "Alarm" button on front panel face. Is this working properly? \_\_\_\_\_
- 26) **TRACETEK TT-GS.** Is status switch (SW3) in the "on" (down) position for all the sensors? \_\_\_\_\_
- 27) **TRACETEK TT-GS.** Is the sensitivity switch (SW2) set for each sensor as follows: R/L/L/R (reading down)? \_\_\_\_\_
- 28) **TRACETEK TT-GS.** Test each module. Push the test button (SW1) on the left hand side. The alarm light, buzzer, and relay contacts should all light. Note any discrepancies: \_\_\_\_\_
- 29) **TRACETEK TT-GS.** Test functionality. Where appropriate, remove cable and squeeze it to set off alarm. Record cables tested and response: \_\_\_\_\_
- 30) **TRACETEK TT-GS.** Inspect annular space integrity. In tanks where the cable cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_
- 31) **LEAK SENSOR JR.** Are the correct number of active sensors indicated? (by "Normal" lights): \_\_\_\_\_
- 32) **LEAK SENSOR JR.** Perform diagnostics test. Hit "Test" button. Active probes should alarm, then turn off. Note any discrepancies: \_\_\_\_\_
- 33) **LEAK SENSOR JR.** Perform sensor functionality test. Dip each probe into water and gasoline.  
a) Alarm should activate.  
b) Pressing "Silent" button should silence alarm while maintaining red alarm light.  
c) Turning "Reset" key should only kill alarm momentarily.  
d) After probe is removed, turning "Reset" key should silence alarm.  
Note any discrepancies in any probes: \_\_\_\_\_
- 34) **API/ROMAN LIQUID SENSOR.** Test sensor functionality. Where possible, expose sensor to liquid. Record results:  
*SUMS SPARES TESTED OK*

- 35) **API/ROMAN LIQUID SENSOR.** Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results:  
*Could not access annular space due to pea gravel completely covering ports.*
- 36) **IN-SITU RSE LIQUID SENSOR.** Test control box. Activate "Test" button. All visual alarms should activate. Record results: \_\_\_\_\_
- 37) **IN-SITU RSE LIQUID SENSOR.** Is unit "chirping" (low battery)? Date of last battery replacement: \_\_\_\_\_ (replace annually).
- 38) **IN-SITU RSE LIQUID SENSOR.** Test individual sensors. Push the brass pushrod down into the riser. Once alarm sounds, hit "Test" button. This should cut the alarm down to every 15 seconds. Record results: \_\_\_\_\_
- 39) **PMS-80C LIQUID SENSOR.** Test sensor functionality. Where possible, remove sensor and expose to water. Record sensors tested and results: \_\_\_\_\_
40. **PMS-800 LIQUID SENSOR.** Inspect annular space integrity. In tanks where the sensor cannot be removed to test, monitor annular space with CGI. Record tanks tested and results: \_\_\_\_\_

B) Vapor Systems

Use supplemental worksheet for the appropriate Vapor Sensing system.

C) Manual Systems

- 1) Is system inspected daily and a log kept of the results? \_\_\_\_\_
- 2) Does log indicate any liquid in annular space? If so, when? \_\_\_\_\_
- 3) Do inspection records indicate possible leakage? \_\_\_\_\_

## 1. INTRODUCTION

At the request of ARCO Products Company (ARCO), EA Engineering, Science, and Technology (EA) oversaw routine closure of the oil-water separator/clarifiers at ARCO Facility No. 2010, located at 2110 Old Middlefield Road, Mountain View, California (Figure 1). This report summarizes the field investigation and the analytical results for concrete and soil samples collected from beneath the sump of the oil-water separator/clarifier.

Oil-water separator/clarifiers are used to separate and clarify industrial waste collected during the operation of the station's automobile repair bays. The industrial wastes may include petroleum hydrocarbons, degreasing compounds, solvents, and engine coolants. On 13 May 1992, Gettler-Ryan Inc. of Hayward, California, under contract to ARCO, closed the oil-water separator/clarifier. EA observed the closure and collected a concrete sample from the bottom of the sump and soil samples from native soils beneath the sump. The work was performed in accordance with ARCO's guidelines and local and state regulations.

## 2. FIELD INVESTIGATION

Gettler-Ryan Inc., a general and environmental contracting company, closed the oil-water separator/clarifier located inside the building in the vicinity of the service bays (Figure 2). Prior to initiating the work, Gettler-Ryan obtained all necessary permits. The contents of the sump were pumped into 55-gallon drums, and the sludge that could not be removed by pumping was removed by field personnel using shovels and placed in a 55-gallon drum. The oil-water separator/clarifier sump outlet pipe was capped after the liquid and sludge were removed. The sump was cleaned using a high-pressure steam cleaner to remove residual materials. The water from the steam-cleaning that collected in the sump was pumped into drums.

The drums were properly labeled and subsequently transported off the site by H&H Ship Service of San Francisco, a licensed waste hauler. The liquids in the drums were sampled by H&H Ship Service and were disposed of at the H&H Ship Service treatment, storage, and/or disposal (TSD) facility.

After the sump was cleaned, a jackhammer was used to create a hole in the bottom of the sump. A sample of the fractured concrete was collected in brass tubes for laboratory analysis. The remaining concrete debris was removed and placed in drums. Samples of the soil beneath the sump were collected at various depths for possible chemical analysis: using a drive sampler, a soil sample was collected from native soil immediately beneath the concrete; a soil boring was advanced with a hand auger to five feet below the sump, and soil samples were collected.

After the samples were collected, the borehole and the sump were backfilled with fill and soil to several inches below the surface. A concrete cap was placed on top of the backfill to complete the closure of the separator/clarifier.

### 3. SAMPLING AND ANALYSIS

On 13 May 1992 soil samples were collected using an impact-driven core sampler and 2-inch by 6-inch brass tubes. A hand auger was used to advance a soil boring to five feet below the sump. Soil sample SBI-0 was collected from soil at the concrete/soil interface, at the bottom of the concrete and the top of the native soil underlying the sump. Samples were then collected from the soil boring at two feet (SBI-2) and five feet (SBI-5) below the sump. A sample of the concrete (CONC) was also collected in a brass liner. Prior to use, the brass tubes were cleaned with Alconox detergent and water and rinsed with deionized water. The core sampler was cleared between sample intervals in the same manner as the brass tubes.

The ends of each brass tube were covered with aluminum foil, and plastic caps were placed over the ends of the tube. Each sample was labeled with the site location, depth of the sample, date and time sampled, and the initials of the sampler. The labeled and sealed samples were placed in a ziplock plastic bag and placed in a cooler filled with ice. The samples were stored and transported in the cooler under chain of custody. Chain-of-custody documentation is provided in Appendix A. The samples were delivered to Sequoia Analytical laboratory of Redwood City, California, a state-certified laboratory.

The concrete sample (CONC) and soil sample SBI-0 were analyzed for Total Recoverable Petroleum Hydrocarbons (TRPH) by EPA Method 418.1 and for volatile organic compounds (VOCs) by EPA Method 8240. In accordance with ARCO protocols, if petroleum hydrocarbons or volatile organic compounds were detected in either the concrete sample or soil sample SBI-0, then that sample was to be reanalyzed for:

- California Assessment Metals (CAM Metals)
- Fish Bioassay (96 hour)
- EPA Method 1010 (Ignitability)
- EPA Method 8080 (PCBs)
- Toxicity Characteristic Leaching Procedures (TCLP) (volatiles, metals, semivolatiles)

At the request of the Mountain View Fire Department, soil sample SBI-0 was also analyzed for Total Petroleum Hydrocarbons as gasoline (TPH-g) and TPH as diesel (TPH-d) by the California Department of Health Services' modified EPA Method 8015, in accordance with the October 1989 revised guideline of the "Leaking Underground Fuel Tank (LUFT) Field Manual." Soil samples SBI-2 and SBI-5 were submitted to the laboratory but placed on hold, pending the analytical results for soil sample SBI-0. If TRPH, VOCs, TPH-g, or TPH-d was detected in SBI-0, then SBI-2 was to be analyzed for TRPH, VOCs, TPH-g, and TPH-d. If any of these parameters were detected in soil sample SBI-2, then soil sample SBI-5 was to be analyzed for the same set of parameters. The purpose of this procedure was to determine the vertical extent of compounds in the soil beneath the sump.

#### 4. SUMMARY OF RESULTS

Soil sample SB1-0 and the concrete sample were analyzed for TRPH and VOCs. In addition SB1-0 was analyzed for TPH-g and TPH-d. The concrete sample contained TRPH at a concentration of 260 mg/kg and xylenes at 0.35 mg/kg. TRPH, TPH-g, and TPH-d were detected in soil sample SB1-0 at concentrations of 1,300 mg/kg, 330 mg/kg, and 370 mg/kg, respectively. Soil sample SB1-0 also contained benzene, ethylbenzene, toluene, and xylenes at the following concentrations: 0.83 mg/kg, 0.47 mg/kg, 0.32 mg/kg, and 2.7 mg/kg, respectively.

The concrete sample and soil sample SB1-0 were reanalyzed for CAM metals, 96-hour fish bioassay, ignitability, PCBs, and TCLP (VOCs, semivolatiles, and metals) to determine if the samples were hazardous as defined by the Resource Conservation and Recovery Act (RCRA). The concrete sample contained 0.16 mg/kg of the PCB Aroclor-1242; no other constituents were found in either the concrete sample or soil sample SB1-0 at concentrations greater than the regulatory action limits.

Because soil sample SB1-0 contained TRPH and VOCs, soil sample SB1-2 was taken off hold and analyzed for TRPH and VOCs. Soil sample SB1-2 contained TRPH, ethylbenzene, and xylenes at concentrations of 5,600 mg/kg, 1.3 mg/kg, and 4.1 mg/kg, respectively. Table 1 summarizes the analytical results for the soil and concrete samples. The laboratory report for the samples is included in Appendix A.

The drums were transported by H&H Ship Service for disposal at their TSD facility. The sludge and liquids were screened for petroleum hydrocarbons and treated as sludge at the facility.

## TOTAL PETROLEUM FUEL HYDROCARBONS with BTEX DISTINCTION (EPA 8015/8020)

Sample Number	Sample Description	Low/Medium B.P. Hydrocarbons mg/kg (ppm)	Benzene mg/kg (ppm)	Toluene mg/kg (ppm)	Ethyl Benzene mg/kg (ppm)	Xylenes mg/kg (ppm)
205-2067	Soil, 881-0	330	1.0	0.47	0.78	3.4

Detection Limits:	1.0	0.0050	0.0050	0.0050	0.0050
-------------------	-----	--------	--------	--------	--------

Low to Medium Boiling Point Hydrocarbons are quantitated against a gasoline standard.  
Analytes reported as N.D. were not present above the stated limit of detection.

RECEIVED

UNDERGROUND TANKS  
OUT OF SERVICE AND REMOVAL PERMIT FEB 28 1992  
(Revised January, 1992)

GeoStrategies Inc.

Complete this application and submit all 9 pages, along with applicable fees to: Mountain View Fire Department, Hazardous Materials Division, 1000 Villa Street, Mountain View, CA 94041. Upon approval, a Demolition Permit will be issued to the responsible contractor. Any questions regarding this form and/or fees should be directed to the Hazardous Materials Division at (415) 903-6378.

Tank Location Address: 2110 Old Middlefield @ Ravistof

Tank Location Business Name: Arco Service Station #02010

Generator EPA ID Number: CAL 000 013 213  
(If Generator does not have, call (916) 324-1781 to obtain one).

Generator Hazardous Waste Tax Account Number: HVHQ 36 015660  
(If Generator does not have, call (916) 739-2582 to obtain one).

Property Owner Name: James A. and Virginia B. Gardner

Address: 17810 J.W. Bowen Dr. Bend, OR 97701 Phone No.: \_\_\_\_\_

## PERMIT CONDITIONS/PROCEDURES

### I. TANK PREPARATION PROCEDURES

1. An inspection must be completed by the Fire Department before the tank(s) may be removed from the excavation. Appointments must be made 48 hours in advance. Call (415) 903-6378 to arrange for an inspection appointment. The Demolition Permit must be displayed at the job site.
2. Arrange for the soil sampler and tank hauler to be on site on the day the tank/piping is to be removed.
3. Tank(s) must be emptied of all liquid product.
4. Render tank(s) inert with a minimum 15 pounds of dry ice per each 1,000 gallons of tank volume. Tank oxygen level must be reduced to less than 10 percent. Keep the dry ice sales receipts available at the tank site for the Inspector to review.
5. Cap all tank(s) opening(s) except for vent pipe(s) and allow a minimum 2 hours for oxygen displacement. Excavation and pipe removal may proceed during this period, but the tank(s) CANNOT be removed from the excavation.
6. Begin excavation to expose tank and pipelines for removal.
7. Remove all pipelines at the tank and cap or plug each tank opening immediately after the pipeline is disconnected. Leave a 1/8" to 3/8" pressure relief hole at the top of the tank for carbon dioxide venting.
8. After the 2-hour period for oxygen displacement has passed, call (415) 903-6378 for an inspection by the Fire Department.

### II. REMOVAL PROCEDURES

1. Tank removal may commence only after the Fire Department Inspector has given his approval.
2. Remove the tank(s) from the excavation and load on a vehicle(s). Position the tank(s) so the pressure relief hole is close to the top of the tank.
3. Check tank(s) for leaks or holes, and if present, seal immediately.
4. Properly transport the tank(s) outside of the City limits to the approved location as follows:
  - a. If tanks ARE NOT cleaned on-site, only a licensed Hazardous Waste hauler can transport them away from the site. Make sure the tank transporter has a Transporter

EPA ID Number. The tank must be taken to a licensed Treatment, Storage, and Disposal (TSD) Facility.

- b. If tanks ARE cleaned on-site, the cleaning effluent can only be transported by a licensed Hazardous Waste Hauler. Make sure the effluent transporter has a Transporter EPA ID Number. The effluent must be taken to a licensed Treatment, Storage, and Disposal (TSD) Facility. In this case, the tank transporter need not be a Hazardous Waste hauler.
  - c. In either case, the shipper (i.e. tank owner) must complete a Hazardous Waste Manifest to transport the tank or effluent. The manifest must be used instead of the standard Bill of Lading document.
5. Have the soil sample(s) taken and analyzed as explained below.
  6. Secure the area around the tank excavation site until soil analyses are complete. At that time, the FIRE DEPARTMENT will notify you as to whether the excavation may be back-filled or further soil removal will be required.
  7. Have the monitoring well(s) destroyed as required. When an abandoned well is destroyed, a permit from SCVWD is required.
  8. An additional \$40 per hour will be charged for inspection time exceeding the allowable time specified in the Demolition Permit (job card).

### III. SOIL SAMPLING PROCEDURES

1. A minimum of   /   representative soil samples shall be taken from the area beneath the tank(s). (       per tank).  
Additional samples: \_\_\_\_\_  
\_\_\_\_\_  
(To be completed by the Fire Department).
2. All sampling shall be completed by a qualified independent third party to include delivery of the samples to a State Certified laboratory. A MOUNTAIN VIEW CHAIN OF CUSTODY FORM MUST be maintained throughout the sample transfer process. (This form is attached).
3. Soil samples MAY NOT be composited by the laboratory and analyzed together.
4. Sampling protocol shall employ methods acceptable to the RWQCB, SCVWD, and MV Fire Dept. These shall include: soil sample collection in brass or stainless steel tubes, taping, capping, and labeling of tubes, sample storage in ice, and elimination of head space in all water sample containers.
5. Sample analysis shall employ the EPA STANDARD PROCEDURES AND QUANTITATION/REPORTING LIMITS SPECIFIED IN THE ATTACHMENT TO THIS APPLICATION.

6. Laboratory analysis shall test for:

- GC scan for Total Petroleum Hydrocarbons (Gasoline),  
and BTX (analyzed individually)
- GC scan for Total Petroleum Hydrocarbons (Diesel),  
and BTX (analyzed individually)
- GC scan for Total Oil and Grease, Total Petroleum  
Hydrocarbons (High Boiling Hydrocarbons), Volatile  
Organic Compounds (EPA 8240 or 8010 and 8020 with  
ten largest peaks identified).
- GC scan for Solvents: \_\_\_\_\_
- pH, Heavy Metals: \_\_\_\_\_
- \_\_\_\_\_

(To be completed by Fire Department)

7. A site drawing showing tank locations, sampling locations,  
and sampling depths must be included in all submitted laboratory  
analysis.
8. The applicant shall have a copy of ALL LABORATORY TEST RESULTS,  
MOUNTAIN VIEW CHAIN OF CUSTODY RECORD, AND SITE DRAWING mailed  
DIRECTLY to:

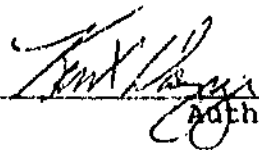

Mountain View Fire Department  
Hazardous Materials Division  
1000 Villa Street  
Mountain View, CA 94041

Underground tank removals are not considered complete unless  
we receive a hard copy of all items listed above.

RE: Architect/Permit coordination

Mr. Studeney:

This letter will serve to authorize you to act as agent of ARCO for the purpose of coordinating any/all permit activities as may be required at any ARCO owned/leased facility. You may sign submittal forms and applications as necessary on our behalf for plan checks and building permits as required.

You may present this letter to any authority requiring proof of agency.

If you have any questions, I can be reached at 415-846-4177, or 1-800-825-4444 #64177.

Sincerely,  
ARCO Products Company

SUBJ: ARCO Service Stations  
2110 Old Middlefield Rd.  
790 Stierlin Rd.

Dear Mr. Leinweber:

Confirming our telephone conversation of June 30th, enclosed please find copies of the last tank tests at the subject two ARCO locations in your city.

As I indicated to you, our Consulting Engineers, Brown & Caldwell, has already started a preliminary investigation to determine the extent, if any, of the contamination. As soon as they have sufficient information we will be in contact with you. At the same time I am trying to determine if the dealers inventory records indicate any recent product losses.

If you have need to contact me, please call 600 523 5368 ID#484 1304

Thank you

Very truly yours,

HAZARDOUS MATERIALS SECTION  
(415) 966-6378

1000 VILLA STREET  
MOUNTAIN VIEW, CA 94041

June 15, 1987

Mr. Carl Seward  
ARCO PETROLEUM PRODUCTS  
P.O. Box 5811  
San Mateo, CA 94403

Dear Mr. Seward:

We continue to receive vapor readings at both Mountain View Arco Stations far exceeding the acceptable limits (1000 ppm maximum). This indicates either leaks in tanks or lines, or excessive spillage due to improper handling or overfilling.

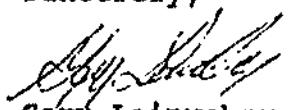

The following is our required procedure when vapor levels exceed 1000 ppm:

- 1) A full system precision test must be performed (on tanks and lines) to determine if there is immediate leakage;
- 2) If the system tests tight, contaminated soil must be removed and replaced with clean fill to lower vapor levels to below 1000 ppm;
- 3) If the system tests tight, overfill protectors must be installed to prevent contamination of the clean fill.

Since this situation has persisted since August of 1986, we feel immediate action is necessary.

Please have precision testing performed at both 790 Stierlin (Station #6050) and 2110 Old Middlefield Way (Station #2010) NO LATER THAN JULY 15, 1987. Be advised that failure to comply constitutes a violation of the Hazardous Materials Storage Ordinance (Chapter 24, MVMC), and may result in civil penalties of up to \$500 per day per violation. If you should have any questions, feel free to call me at (415) 966-6378. Thank you for helping us maintain the cleanliness of our soil and groundwater.

Sincerely,

Gary Leinweber  
Hazardous Materials Specialist

**CERTIFICATE OF ANALYSIS**

Pacific Environmental Group, Inc.  
1601 Civic Center Dr., Suite 202  
Santa Clara, CA 95050  
ATTN: John Adams

Date: June 15, 1989

Work Order Number: 59-05-224

P.O. Number: 11090

This is the Certificate of Analysis for the following samples:

Client Project ID: 330-54.03, Rengstorff and  
Middlefield, Mountain View  
Date Received by Lab: 5/18/89  
Number of Samples: 6  
Sample Type: Soil

The method of analysis for low boiling hydrocarbons is taken from EPA Methods 8015, 8020 and 8030. The sample is examined using the purge and trap technique. Final detection is by gas chromatography using a flame ionization detector as well as a photoionization detector. The result for total low boiling hydrocarbons is calculated as gasoline and includes benzene, toluene, ethyl benzene and xylenes.

# ANALYTICAL SERVICES

## CERTIFICATE OF ANALYSIS

Pacific Environmental Group, Inc.  
1601 Civic Center Dr., Suite 202  
Santa Clara, CA 95050  
ATTN: John Adams

Date: May 30, 1989

Work Order Number: 89-05-269

P.O. Number: 11105

This is the Certificate of Analysis for the following samples:

Client Project ID: 330-54.03, Middlefield/Rengstorff  
Date Received by Lab: 5/23/89  
Number of Samples: 15; 3 composites of 5 each  
Sample Type: Soil

The method of analysis for low boiling hydrocarbons is taken from EPA Methods 8015, 8020 and 5030. The sample is examined using the purge and trap technique. Final detection is by gas chromatography using a flame ionization detector as well as a photoionization detector. The result for total low boiling hydrocarbons is calculated as gasoline and includes benzene, toluene, ethyl benzene and xylenes.

Reviewed and Approved

David A. Pichette  
Project Manager

## PERMIT CONDITIONS/PROCEDURES

### I. TANK PREPARATION PROCEDURES

1. An inspection must be completed by the Fire Department before the tank(s) may be removed from the excavation. Appointments must be made 48 hours in advance. Call (415) 966-6378 to arrange for an inspection appointment. The Demolition Permit must be displayed at the job site.
2. Arrange for a State Certified laboratory to analyze the required soil sample(s) and for sampling by a qualified independent third party.
3. Tank(s) shall be emptied of all liquid product.
4. Render tank(s) inert with a minimum 15 pounds of dry ice per each 1,000 gallons of tank volume. Tank oxygen level must be reduced to less than 10 percent. Keep the dry ice sales receipts available at the tank site for the Inspector to review.
5. Cap all tank(s) opening(s) except for vent pipe(s) and allow a minimum 2 hours for oxygen displacement. Excavation and pipe removal may proceed during this period, but the tank(s) CANNOT be removed from the excavation.
6. Begin excavation to expose tank and pipelines for removal.
7. Remove all pipelines at the tank and cap or plug each tank opening immediately after the pipeline is disconnected. Leave a 1/8" to 3/8" pressure relief hole at the top of the tank for carbon dioxide venting.
8. After the 2-hour period for oxygen displacement has passed, call (415) 966-6378 for an inspection by the Fire Department.

### II. REMOVAL PROCEDURES

1. Tank removal may commence only after the Fire Department Inspector has given his approval.
2. Remove the tank(s) from the excavation and load on a vehicle(s). Position the tank(s) so the pressure relief hole is close to the top of the tank.
3. Check tank(s) for leaks or holes, and if present, seal immediately.

4. Properly transport the tank(s) outside of the City limits to the approved location:
  - a. If tanks ARE NOT cleaned on-site, only a licensed Hazardous Waste hauler can transport them away from the site. Make sure the tank transporter has a Transporter EPA ID Number. The tank must be taken to a licensed Treatment, Storage, and Disposal (TSD) Facility.
  - b. If tanks ARE cleaned on-site, the cleaning effluent can only be transported by a licensed Hazardous Waste Hauler. Make sure the effluent transporter has a Transporter EPA ID Number. The effluent must be taken to a licensed Treatment, Storage, and Disposal (TSD) Facility. In this case, the tank transporter need not be a Hazardous Waste hauler.
  - c. In either case, the shipper (i.e. tank owner) must complete a Hazardous Waste Manifest to transport the tank or effluent. The manifest must be used instead of the standard Bill of Lading document.
5. Have the soil sample(s) taken and analyzed as explained below.
6. Secure the area around the tank excavation site until soil analyses are complete. At that time, the FIRE DEPARTMENT will notify you as to whether the excavation may be back-filled or further soil removal will be required.
7. Have the monitoring well(s) destroyed as required. When an abandoned well is destroyed, a permit from SCVWD is required.
8. An additional \$40 per hour will be charged for inspection time exceeding the allowable time specified in the Demolition Permit (job card).

(The following sections are to be completed by the Fire Department)

### III. SOIL SAMPLING PROCEDURES

1. A minimum of 9 representative soil samples shall be taken from the area beneath the tank(s). (2 per tank).  
Additional samples: 1 per 70 feet of piping.
2. All soil sampling shall be completed by a qualified independent third party to include delivery of the samples to a State Certified laboratory. A MOUNTAIN VIEW CHAIN OF CUSTODY RECORD MUST be maintained throughout the sample transfer process.
3. Soil samples MAY NOT be composited by the laboratory and analyzed together.
4. Testing of samples shall employ EPA standard procedures in all appropriate cases.

5. Laboratory test analysis shall test for:

- GC scan for Total Petroleum Hydrocarbons (Gasoline), and BTX (analyzed individually)
- GC scan for Total Petroleum Hydrocarbons (Diesel), and BTX (analyzed individually)
- GC scan for Total Oil and Grease, Total Petroleum Hydrocarbons (High Boiling Hydrocarbons), Volatile Organic Compounds (EPA 8240 or 8010 and 8020 with ten largest peaks identified).
- GC scan for Solvents: \_\_\_\_\_
- pH, Heavy Metals: \_\_\_\_\_
- \_\_\_\_\_

6. A site drawing showing tank and sampling locations must be included in all submitted laboratory analysis so that sampling results can be traced directly to a specific sampling location.
7. The applicant shall have a copy of ALL LABORATORY TEST RESULTS, MOUNTAIN VIEW CHAIN OF CUSTODY RECORD, AND SITE MAP OF SAMPLING LOCATIONS mailed DIRECTLY to:

Mountain View Fire Department  
Hazardous Materials Division  
1000 Villa Street  
Mountain View, CA 94041

Underground tank removals are not considered complete unless we receive a hard copy of all items listed above.

IF CONTAMINATION IS FOUND, A CLEAN-UP PROPOSAL MUST BE SUBMITTED TO OUR OFFICE WITHIN 10 DAYS OF RECEIPT OF ANALYSIS.

8. Samples shall be taken only by the modified California sampler technique.

---

## REQUEST TO RELEASE HAZARDOUS MATERIALS PUBLIC RECORD INFORMATION

I am hereby requesting hazardous materials information for the following location(s):

Address(es): 2110 OLD MIDDLEFIELD WAY, MOUNTAIN VIEW, CA 94043

Person, business, or agency I represent:

Name: FRANK TRINIDAD - ODIC ENVIRONMENTAL E-mail: frankt@odicenv.com

Street Address: 407 W IMPERIAL HWY SUITE #H303

City: BREA State: CA Zip: 92821 Phone: 818 / 321-3126

Purpose for this request: WE ARE DOING AN ENVIRONMENTAL SITE ASSESSMENT ON THE PROPERTY

Request to Review (check all that apply):

- HMMP (inventory)/Business Plan (Those portions of the business plan specifying the precise location where hazardous materials are stored and handled on-site, including any maps of the site, are not available for review. H&SC 25506(a))
- Underground tank leak detection inspection reports
- Underground tank removal reports
- Industrial wastewater discharge to sanitary sewer inspection reports
- Inspection reports

<u>FRANK TRINIDAD</u>		<u>[Signature]</u>	<u>12/20/21</u>
Name (Print)	Title	Signature	Date

Information requested may be obtained 10 days after this form has been received by the Fire and Environmental Protection Division. To schedule an appointment, call 650-903-6378. A copying charge of 25 cents per page is payable at the time of review.

*Pursuant to Section 24.4.1 M.V.C.C., this form shall be completed in its entirety by the requester and submitted to the Fire and Environmental Safety Division of the Fire Department. The Fire Department shall have ten (10) days prior to allowing review of the requested materials or providing copies to: verify the applicant's identity; determine whether any of the materials requested are exempt from disclosure; and inform the business whose information has been requested. A copy of this application for release of information will be entered in the file and will become public record.*

## EXECUTIVE SUMMARY

ODIC Environmental (ODIC) performed a *Transaction Screen Assessment* (hereinafter referred to as TSA or Report) of the subject property (hereinafter referred to as the Property) in conformance with the scope and limitations of ASTM Standard Practice E1528-14. Any exceptions to or deletions from this practice are described in the individual sections of this Report. A summary of findings is provided below:

REPORT COMPONENT	SUMMARY OF FINDINGS
<b>Property Address(es)</b>	The Property address is 2110 Old Middlefield Way, Mountain View, Santa Clara County, California 94043.
<b>Property Description</b>	The Property consists of a 0.35-acre rectangular-shaped unpaved vacant lot. There are no Property occupants. The Property was formerly occupied by a gas station and an automotive repair shop until 2008 when the improvements including the fueling system features were removed / demolished.
<b>Summary of Property Reconnaissance</b>	The Property consists of an unpaved vacant lot. There are no Property occupants. Site reconnaissance revealed no evidence of underground storage tanks, clarifiers, sumps, hazardous materials, or other environmental concerns.

REPORT COMPONENT	SUMMARY OF FINDINGS
<p><b>Historical Use of the Property</b></p>	<p><u>Property History Summary:</u></p> <p>Per historical aerial photographs, the Property was developed with a gas station by 1948. A canopy was visible on the southeastern portion, a building was on the western portion, and a smaller building may have also been on the northern portion at that time. These improvements remained until at least 1960. By 1968 the Property had been redeveloped; the aforementioned canopy was no longer visible and at least one building and possible canopies were on the western and northern portions. By 1980 additions were made to the building and a concrete patch was visible on the southeastern portion, indicative of the location of underground storage tanks (USTs). The facility operated as an ARCO-branded gas station and included an automotive repair shop on the central / northwestern portion. In August and September 2008, all improvements and fueling system features were removed / demolished. The Property has remained as an unpaved vacant lot since that time.</p> <p><u>Closed Leaking Underground Storage Tank (LUST) Case:</u></p> <p>On May 12, 1986, a Leaking Underground Storage Tank (LUST) case was opened due to a release of fuel from the gas station. Extensive soil and groundwater investigations and remediation activities were conducted at the Property from 1986 until 2016. In May 1989, three gasoline USTs (two 10,000-gallon tanks and one 8,000-gallon tank) were removed from the southeastern portion of the Property and were replaced with three 12,000-gallon gasoline USTs. A 280-gallon waste oil UST was also discovered and removed at that time. Approximately 700 cubic yards of soil, 150 cubic yards of pea gravel, and 14,400 gallons of groundwater were disposed of during the UST replacement activities. In 1992, an oil-water separator was removed from within the former automotive repair shop building; elevated levels of petroleum hydrocarbons were detected in soil samples collected at that time.</p> <p>From August 1989 to August 2004, site investigation and remediation were conducted at the Property which included soil vapor extraction (SVE), dual phase extraction (DPE), and in-situ Submerged Oxygen Curtain (iSOC). In January 2002, approximately 20,595 gallons of hydrocarbon-impacted groundwater were extracted and disposed of. In October 2002, dispensers and related piping were removed and replaced during upgrade activities. From June 2003 to August 2004, the iSOC system was implemented. In August and September 2008, fuel dispensing operations ceased and the improvements and fueling system features were removed / demolished, including the removal of the three 12,000-gallon USTs, one 550-gallon waste oil UST, four dispensers, two hydraulic lifts, product piping, two overhead canopies, and an automotive repair shop building. In 2016, groundwater samples were collected down-gradient (to the northwest) to further delineate the methyl tertiary-butyl ether (MTBE), tertiary-butyl alcohol (TBA), and 1,2-dichloroethane (1,2-DCA) groundwater contaminant plumes. The analytical results were non-detectable to low (the detected concentrations were below the established ESLs [Environmental Screening Levels]). Since the contaminant plume was adequately delineated and stable to decreasing, the County of Santa Clara Department of Environmental Health (SCEH) issued a "No Further Action" closure letter for the LUST case on September 7, 2017 under Site Management Requirements for remaining residual soil and groundwater contamination.</p>

REPORT COMPONENT	SUMMARY OF FINDINGS
<p><b>Historical Use of the Property (continued)</b></p>	<p>The Santa Clara County Department of Environmental Health Local Oversight Program (SCEH – LOP) provided the following Site Management Requirements in a Case Closure Summary dated February 3, 2017:</p> <p><i>The site is currently an undeveloped vacant lot. Residual contamination both in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as, but not limited to, site grading, excavation, or the installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of water well(s) in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures. DEH (Department of Environmental Health) and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time.</i></p> <p>The following additional Site Management Requirements were provided in a September 7, 2017 “No Further Action” letter from the County of Santa Clara Department of Environmental Health (SCEH):</p> <p><i>Residual contamination in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. The County and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time. It should be noted that any additional or previously unidentified contamination at this site may require further investigation or cleanup.</i></p>

REPORT COMPONENT	SUMMARY OF FINDINGS
<p><b>Federal and State Environmental Database Search Summary</b></p>	<p>The Property is identified on the HAZNET, RGA LUST, LUST, HIST LUST, HIST CORTESE, CA CUPA Listings, CERS, FINDS, CA UST, ERNS, SWEEPS UST, CA FID UST, and HIST UST databases and on the EDR Historical Auto Stations proprietary database. The Property is also identified on the Department of Toxic Substances Control Hazardous Waste Tracking System (HWTS) online database in association with the generation of wastes categorized as “empty containers less than 30 gallons,” “aqueous solution with organic residues less than 10%,” “other organic solids,” “waste oil and mixed oil,” “off-specification, aged, or surplus organics,” and “unspecified organic liquid mixture.”</p> <p>These database listings pertain to the operation of the Property as a gas station and an automotive repair shop, as well as a closed LUST case. Records were available on the California State Water Resources Control Board (SWRCB) online GeoTracker database in association with the LUST case. The subsurface of the Property and vicinity (primarily to the north) has been extensively investigated and characterized. The LUST case was opened on May 21, 1986 and closed on September 7, 2017. Refer to Section 4.1 for further details regarding investigations associated with the LUST case.</p> <p>Numerous records were available from the City of Mountain View Fire Department (MVFD) that are associated with the historical operation of the Property as a gas station and the aforementioned closed LUST case. Records from the County of Santa Clara Department of Environmental Health (SCEH) pertain to the operation of the Property as a gas station and an automotive repair shop. The records consisted of inspection reports, hazardous waste generator permit applications, a waste inventory, and a hazardous waste manifest. A 500-gallon waste oil UST, used motor oil (500 gallons generated annually), used anti-freeze (50 gallons generated annually), and used “solvent” (15 gallons generated annually) were reported.</p> <p>Records from the Bay Area Air Quality Management District (BAAQMD) pertained to permitting for the operation of the Property as a gas station. It was reported that the gas station was demolished in September 2008. No environmental concerns were identified in the BAAQMD records.</p> <p>No properties within the specified search distances were identified that are assessed to pose a significant environmental risk to the Property.</p>
<p><b>Conclusions</b></p>	<p>PEC identified: <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No</p> <p>For detailed discussion of Potential Environmental Concerns (PECs), if any, see Section 6.0 of this Report.</p>
<p><b>Recommendations and Opinions</b></p>	<p>Refer to Section 6.0 for ODIC's professional opinions and recommendations.</p>

## 1.0 INTRODUCTION

ODIC Environmental (ODIC) performed a *Transaction Screen Assessment* (hereinafter referred to as TSA or Report) of the subject property (hereinafter referred to as “the Property”) in conformance with the scope and limitations of the *ASTM International*, formerly known as the *American Society for Testing and Materials (ASTM)*, *Standard Practice for Environmental Site Assessments: Transaction Screen Assessment Process, ASTM Designation E1528-14* (ASTM Standard Practice E1528-14).

The purpose of this practice is to define good commercial and customary practices in the United States of America for conducting a TSA for a parcel of *commercial real estate* where the *user* (Client) wishes to conduct limited environmental *due diligence* (less than a *Phase I Environmental Site Assessment*). If the driving force behind the environmental *due diligence* is a desire to qualify for one of the *Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) Landowner Liability Protections (LLPs)*, this practice should not be applied. Instead, the ASTM Standard Practice E1527-13 for Environmental Site Assessments - Phase I Environmental Site Assessment Process - shall be used.

This Report is prepared by ODIC for the Client under the professional supervision of the principal and/or senior environmental staff whose seal(s) and signature(s) appear hereon. Neither ODIC, nor any staff member assigned to this investigation has any interest or contemplated interest, financial or otherwise, in the Property or surrounding properties, or in any entity which owns, leases, or occupies the Property or surrounding properties or which may be responsible for environmental issues identified during the course of this investigation, and has no personal bias with respect to the parties involved.

### PURPOSE AND OBJECTIVE

The primary purpose of this TSA is to assist Client with identifying *Potential Environmental Concerns (PECs)* in connection with the Property described in this Report. The Report has been prepared in accordance with ASTM Standard Practice E1528-14 guidelines for the use and benefit of the Client. It is based, in part, upon documents, writings, and information owned, possessed, or secured by the Client. Neither this Report, nor any information contained herein, shall be used or relied upon for any purpose by any other person or entity without the express written permission of the Client.

Another purpose of this TSA is to assist the Client in its underwriting of a proposed mortgage loan on the Property, if this Report is prepared as a part of a pre-financing environmental due diligence, and to identify PECs in connection with the Property described in this Report.

ASTM Standard Practice E1528-14 defines a PEC as the possible presence of any *hazardous substances* or *petroleum products* on a *property* under conditions that indicate the possibility of an existing release, a past release, or a threat of a release of any *hazardous substances* or *petroleum products* into structures on the *property* or into the ground, ground water, or surface water of the *property*. The term includes *hazardous substances* or *petroleum products* even under conditions in compliance with laws. (Note that “threat of release” is generally understood to be present when *hazardous substances* or *petroleum products* are poorly managed (for example in corroded tanks or damaged containers) but the release of the contaminants has not yet occurred, and there is an opportunity to take response action to prevent a release of the contaminants.)

### SCOPE OF WORK

This Report was prepared for the exclusive use of the Client or User of this Report. The information reported was obtained through sources deemed reasonably ascertainable, as defined in ASTM Standard Practice E1528-14; a visual site survey of areas readily observable, easily accessible, or made accessible by the Property contact; interviews with owners, agents, occupants, or other appropriate persons involved with the Property; and a review of a regulatory database report provided by a third-party company such as Environmental Data Resources (EDR).

Findings, conclusions, and recommendations included in this Report are based on our visual observations in the field, information provided by the Client, and/or a review of readily available and supplied documents.

#### LIMITATIONS AND EXCEPTIONS

ODIC renders no opinion as to the Property condition at un-surveyed and/or inaccessible portions of the Property. ODIC relies completely on the information, whether written, graphic or verbal, provided by the Property contact or as shown on any documents reviewed or received from the Property contact, owner or agent, or municipal source, and assumes that information to be true and correct. The observations in this Report are valid on the date of the survey. Where access to portions of the Property or to structures on the Property was unavailable or limited, ODIC renders no opinion as to the presence of petroleum products or hazardous substances in that portion of the Property or structure. In addition, ODIC renders no opinion as to the presence of, or indirect evidence relating to, petroleum products or hazardous substances where direct observation of the interior walls, floor, or ceiling of a structure was obstructed by objects or coverings on or over these surfaces.

The conclusions provided by ODIC are based on the information obtained by visual survey of the Property, and information provided by agents representing the Property, or agents of the owner. In addition, ODIC has relied on certain information provided by state and other referenced parties, and on information provided by the Client or *user* available to ODIC at the time of the assessment. Although there may have been some degree of overlap in the information provided by these various sources, ODIC did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of these Environmental Services.

ODIC has performed this TSA in conformance with the scope and limitations of ASTM Standard Practice E1528-14. This TSA is intended for use on a voluntary basis by parties who wish to assess the environmental condition of *commercial real estate* where a *Phase I Environmental Site Assessment* is deemed to be unnecessary by the *user* and the parties do not seek CERCLA LLPs. It is intended primarily as a commercially prudent or reasonable approach to conducting an inquiry designed to identify *Potential Environmental Concerns* in connection with a *property*. It is not intended to permit a *user* to satisfy CERCLA LLPs; that is, the practices that constitutes "*all appropriate inquiries*" into the previous ownership and uses of the *property* consistent with good commercial or customary practice as defined in 42 U.S.C. §9601(35)(B). No TSA can wholly eliminate uncertainty regarding the potential for environmental concern in connection with a *property*.

TSAs can be performed by, but do not require, the judgment of an *Environmental Professional (EP)*. If an EP is contracted to prepare a TSA, nothing in this practice requires the EP to develop opinions and conclusions.

The TSA process consists of asking questions, contained within the *transaction screen questionnaire*, of *owners* and *occupants* of the *property*; observing site conditions at the *property* with direction provided by the *transaction screen questionnaire*; and, to the extent *reasonably ascertainable*, conducting limited research regarding certain government records and certain standard historical sources. The questions asked of *owners* are the same questions as those asked of *occupants*.

It is acknowledged that ODIC's judgments shall not be based on scientific or technical tests or procedures beyond the Scope of Services or beyond the time and budgetary constraints imposed by the Client. It is acknowledged further that ODIC's conclusions shall not rest on pure science but on such considerations as economic feasibility and available alternatives. The Client also acknowledges that, because geologic and soil formations are inherently random, variable, and indeterminate in nature, the conclusions and opinion of this Report are not guaranteed to be a representation of actual conditions on the Property, which are also subject to change with time as a result of natural or man-made processes, including water permeation.

#### SIGNIFICANT ASSUMPTIONS AND LIMITING CONDITIONS

This TSA was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession, and in accordance with generally accepted practices of other consultants currently practicing in the same locality under similar conditions. No other representation, expressed or implied, and no warranty or guarantee is included or intended. The Report speaks only as of its date, in the absence of a specific written update of the Report, signed and delivered by ODIC.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this Report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this Report was based may adversely affect the findings, conclusions, and recommendations expressed in this Report. Additional information that becomes available after our survey and Report submission concerning the Property should be provided to ODIC so that our conclusions may be revised and modified if necessary, at additional cost.

Some of the information provided in this Report is based upon personal interviews, and research of available documents, records, and maps supplied by government agencies and private parties. This Report is subject to the limitations of historical documentation, availability, and accuracy of the pertinent records, and the personal recollections of those persons contacted. This practice does not address requirements of any local, state, or federal laws. Furthermore, this Report does not intend to address health and safety concerns, if any, associated with the Property.

Adjoining sites, neighboring sites, or surrounding properties mentioned in this Report are defined only up to one parcel immediately next to the Property, and ODIC will only check immediately adjoining properties to identify historical use of the surrounding areas via historical sources or data on such adjoining properties, and/or walk-through along the Property's perimeters to find obvious signs of environmental concerns.

It is often not possible (under the "*reasonably ascertainable*" clause of ASTM Standard Practice E1528-14) to identify every single historical business tenant or occupant of the Property. ODIC cannot be liable for not identifying all such past tenants or occupants of the Property.

There may be environmental issues or conditions at a Property that parties may wish to assess in connection with *commercial real estate* that are outside the scope of this practice (the non-scope considerations). Some substances may be present on a Property in quantities and under conditions that may lead to contamination of the property or of nearby properties but are not included in CERCLA's definition of *hazardous substances* (42 U.S.C. §9601(14)) or do not otherwise present potential CERCLA liability. In any case, they are beyond the scope of ASTM Standard Practice E1528-14.

Whether or not a *user* elects to inquire into non-scope considerations in connection with this practice, no assessment of such non-scope considerations is required for appropriate inquiry as defined by ASTM Standard Practice E1528-14. There may be standards or protocols for assessment of potential hazards and conditions associated with non-scope conditions developed by governmental entities, professional organizations, or other private entities. No implication is intended as the relative importance of inquiry into such non-scope considerations, and this list of non-scope considerations is not intended to be all-inclusive: asbestos-containing materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, high voltage power lines, and mold.

It should be noted that certain conditions may not have been reasonably identifiable or ascertainable from the available information during the course of this Report. ODIC assumes that information obtained from the record review and the interviews concerning the Property is reliable. However, ODIC cannot and does not warrant or guarantee that the information provided by these other sources is accurate or correct.

#### USER RELIANCE

This investigation was conducted in accordance with the Client's TSA scope of work for the use and benefit of the Client and assignees. It is based, in part, upon documents, writings, and information owned, possessed, or secured by the Client. Neither this Report, nor any information contained herein, shall be used or relied upon for any purpose by any other person or entity without the express written permission of the Client.

All Reports, both verbal and written, are for the sole use and benefit of the Client. Either verbally or in writing, third parties may come into possession of this Report or all or part of the information generated as a result of this work. In the absence of a written agreement with ODIC granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against ODIC, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold ODIC, the Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such use. Unauthorized use of this Report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

#### INDEPENDENT CONTRACTOR STATUS / PROFESSIONAL RESPONSIBILITY

In conducting this TSA, ODIC operates as, and has the status of, an independent contractor. Subject to any limitations established by the Client as to the degree of care and amount of time and expenses to be incurred and any other limitations contained in the mutually agreed contractual agreement and verbal engagement, ODIC performs the environmental services consistent with the level of care and skill ordinarily exercised by other professional consultants under similar circumstances at the time the environmental services are performed. Client hereby acknowledges that whenever a project involves hazardous or toxic materials there are certain inherent risk factors involved (such as limitations on laboratory analytical methods, variations in subsurface conditions, economic loss to Client or Property owner, a potential obligation for disclosure to regulatory agencies, a potential for a decrease in market value of real property, and the like) that may adversely affect the results of the Project, even though the Services are performed with such skill and care. No other representation, warranty, or guarantee, express or implied, is included or intended by the mutually agreed contractual agreement and verbal engagement.

Note: Italicized words or terms in this Report generally refer to words or terms that are defined in ASTM Standard Practice E1528-14.

## 2.0 PROPERTY DESCRIPTION

### 2.1 PROJECT INFORMATION

Project Information	
ITEM	
Project Number	6369280-TSA
Property Address(es)	2110 Old Middlefield Way, Mountain View, Santa Clara County, California 94043
Historical/Alternate Property Address(es)	None identified. Source: Not applicable.
Tax Assessor's Parcel Number	147-07-048
Property Inspection Date	November 2, 2019
Weather Condition	Sunny, approximately 70 degrees Fahrenheit
Site Visit Conducted by	Richard Kim, Senior Environmental Consultant
Report Author	Haley Shivers, Environmental Consultant
QA/QC Environmental Professional	Michael A. Miller, M.S., Senior Environmental Consultant
Property Location	The Property is located at the northwest corner of Old Middlefield Way and North Rengstorff Avenue.
General Setting	The general setting is mixed-use: commercial and residential.
Property Type	Vacant lot.

### 2.2 PROPERTY IMPROVEMENTS

Property Improvements & Building / Land Description	
ITEM	
Property Description	The Property consists of a 0.35-acre rectangular-shaped unpaved vacant lot. There are no Property occupants. The Property was formerly occupied by a gas station and an automotive repair shop until 2008 when the improvements including the fueling system features were removed / demolished.
	Data Source(s) for Parcel Size: Orange Coast Title Company Property Profile
	Data Source(s) for Building Size(s): Not applicable; there are no improvements on the Property.
Estimated Year of Construction	Not applicable; there are no improvements on the Property.
	Data Source(s): Not applicable.
Improvement Description	Not applicable; there are no improvements on the Property.
Other Improvements & Features (including description of unimproved areas)	Fencing is along the Property perimeters. Otherwise, the Property consists of an unimproved vacant lot.

### 2.3 PROPERTY OCCUPANTS & USE

Property Occupants & Use
--------------------------

ITEM	
Present Occupant(s) and Detailed Description of Business Operation(s)	The Property consists of an unpaved vacant lot. There are no Property occupants. The Property was formerly occupied by a gas station and an automotive repair shop until 2008 when the improvements including the fueling system features were removed / demolished.

### 3.0 PROPERTY RECONNAISSANCE

#### 3.1 LIMITING CONDITIONS

The information reported herein was obtained through sources deemed reliable, a visual site survey of areas readily observable, easily accessible or made accessible by the Property contact and interviews with owners, agents, occupants, or other appropriate persons involved with the Property.

No disassembly of systems or building components or physical or invasive testing was performed. ODIC renders no opinion as to the Property condition at un-surveyed and/or inaccessible portions of the Property. ODIC relies completely on the information, whether written, graphic or verbal, provided by the Property contact or as shown on any documents reviewed or received from the Property contact, owner or agent, or municipal source, and assumes that information to be true and correct. The observations in this Report are valid on the date of the survey. Note: Typically lenders have environmental policies whereby due diligence reports are valid for one year from the report date. However, such policies and standards can vary from each lender or user.

#### 3.2 PROPERTY RECONNAISSANCE

ENVIRONMENTAL QUESTIONNAIRE		
ITEM	ENVIRONMENTAL QUESTIONS (PER ASTM E1528-14)	IF YES, PROVIDE DETAILS
1	Is the Property or any adjoining property used for an industrial use?	No
2	Did you observe evidence or do you have any prior knowledge that the Property or any adjoining property has been used for any industrial use in the past?	No
3	Is the Property or any adjoining property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?	The north-adjacent site is occupied by an automotive repair shop at 826 North Rengstorff Avenue. This site is associated with a closed Leaking Underground Storage Tank (LUST) case. Refer to Section 5.3 for details.
4	Did you observe evidence or do you have any prior knowledge that the Property or any adjoining property has been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, and disposal, processing, or recycling facility?	The Property was formerly occupied by a gas station. It is associated with a closed LUST case. Refer to Sections 4.1 and 5.2 for details.  As stated above, the north-adjacent automotive repair shop is also associated with a closed LUST case. Refer to Section 5.3 for details.  The south-adjacent site at 2105 Old Middlefield Way was formerly occupied by a

ENVIRONMENTAL QUESTIONNAIRE		
ITEM	ENVIRONMENTAL QUESTIONS (PER ASTM E1528-14)	IF YES, PROVIDE DETAILS
		<p>gas station and is associated with a closed LUST case. This site was also identified on the EDR Historical Cleaners proprietary database. Refer to Section 5.4 for details.</p> <p>A site at 799 North Rengstorff Avenue was identified on the EDR Historical Auto Stations proprietary database as a gas station. However, the specific location of this site is unknown (the address of 799 North Rengstorff Avenue plots on North Rengstorff Avenue, approximately 200 feet southeast of the Property). Refer to Section 5.4 for details.</p> <p>Additionally, a site at 2065 Old Middlefield Way was identified on the EDR Historical Cleaner proprietary database as a dry-cleaning business. The specific location of this site is unknown (the address of 2065 Old Middlefield Way plots on Old Middlefield Way, approximately 240 feet southeast of the Property. Refer to Section 5.4 for details.</p>
5	Are there currently, or did you observe evidence or do you have any prior knowledge that, any damaged or discarded automotive or industrial batteries, or pesticides, paints or other chemicals in individual containers of greater than 5 gal (19 L) in volume or 50 gal (190 L) in the aggregate, have been stored on or used at the Property or at the facility?	See above regarding the former gas station at the Property and closed LUST case. No hazardous materials are currently used/stored at the Property.
6	Are there currently, or did you observe evidence or do you have any prior knowledge that, any industrial drums (typically 55 gal (208 L) or sacks of chemicals have been located on the Property or at the facility?	See above regarding the former gas station at the Property and closed LUST case. No hazardous materials are currently used/stored at the Property.

ENVIRONMENTAL QUESTIONNAIRE		
ITEM	ENVIRONMENTAL QUESTIONS (PER ASTM E1528-14)	IF YES, PROVIDE DETAILS
7	Did you observe evidence or do you have any prior knowledge that fill dirt has been brought onto the Property that originated from a contaminated site or that is of an unknown origin?	No
8	Are there currently, or did you observe evidence or do you have any prior knowledge that, any pits, ponds or lagoons have been located on the Property in connection with waste treatment or waste disposal?	No
9	Are there currently, or did you observe evidence or do you have any prior knowledge that, there have been previously, any stained soils on the Property?	See above regarding the former gas station at the Property and closed LUST case. Otherwise, no stained soils were observed.
10	Are there currently, or did you observe evidence or do you have any prior knowledge that, there have been previously, any registered or unregistered storage tanks (above or underground) located on the Property?	The former gas station at the Property included USTs, dispensers, and associated piping. Otherwise, no USTs or other fueling system features remain at the Property.
11	Are there currently, or did you observe evidence or do you have any prior knowledge that, there have been previously, any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the Property or adjacent to any structure located on the Property?	See above.
12	Is there currently evidence of, or did you observe evidence or do you have any prior knowledge that there have been previously leaks, spills or staining by substances other than water, or foul odors, associated with any flooring, drains, walls, ceilings, or exposed grounds on the Property?	The Property was formerly occupied by a gas station and is associated with a closed LUST case.
13	If the Property is served by a private well or nonpublic water system, is there evidence or do you have prior knowledge that contaminants have been identified in the well or system that exceed guidelines applicable to the water system or the well has been designated as contaminated by any government environmental/health agency?	Groundwater monitoring wells were installed at the Property and vicinity in association with a former closed LUST case at the Property. Refer to Section 4.1 for details.
14	Does the Property discharge wastewater (not including sanitary waste or storm water) onto or adjacent to the Property and/or into a sanitary sewer system or storm water system?	No
15	Did you observe evidence or do you have any prior knowledge that any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials have been dumped above grade, buried and/or burned on the Property?	See above. The Property is associated with a closed LUST case.
16	Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCBs?	Two hydraulic lifts were formerly at the Property in association with the historical operation of the Property as an automotive

ENVIRONMENTAL QUESTIONNAIRE		
ITEM	ENVIRONMENTAL QUESTIONS (PER ASTM E1528-14)	IF YES, PROVIDE DETAILS
		repair shop.
17	Does the owner or occupant of the Property have any knowledge of environmental lien or governmental notification relating to past or current violations of environmental laws with respect to the Property or any facility located on the Property?	See above. The Property is associated with a closed LUST case.
18	Has the owner or occupant of the Property been informed of the past or current existence of hazardous substances or petroleum products or environmental violations with respect to the Property or any facility located on the Property?	See above. The Property is associated with a closed LUST case.
19	Does the owner or occupant of the Property have any knowledge of environmental site assessment of the Property or facility that indicated the presence of hazardous substances or petroleum products on, or contamination of, the Property or recommended further assessment of the Property?	See above. The Property is associated with a closed LUST case.
20	Does the owner or occupant of the Property know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release of threatened release of any hazardous substance or petroleum products involving the Property by any owner or occupant of the Property?	See above. The Property is associated with a closed LUST case.
This Questionnaire was completed by:		
Name	Haley Shivers	
Title	Environmental Consultant	
Date	November 12, 2019	
Relationship to User	Consultant	

**Brief Summary of Site Reconnaissance and Detailed Discussion of Potential Environmental Concerns (if any):**

The Property consists of an unpaved vacant lot. There are no Property occupants. Site reconnaissance revealed no evidence of underground storage tanks, clarifiers, sumps, hazardous materials, or other environmental concerns.

3.3 INTERVIEWS

Interview with the Occupant at the North-Adjacent Site	
	INTERVIEW DETAILS
Name	Mr. Paul Jancis
Title / Role	Owner
Name of Business	Driven Auto Care
Address of Business	826 North Rengstorff Avenue, Mountain View, CA 94043
Contact Information	650-967-3569
Summary	Mr. Jancis stated that he has operated the north-adjacent Driven Auto Care automotive repair shop since 2007. He indicated that the Property was formerly occupied by an ARCO-branded gas station and has consisted of a vacant lot since 2008. The Property is associated with a closed Leaking Underground Storage Tank (LUST) case. He stated that groundwater monitoring wells were on the north-adjacent site until the Property received LUST case closure.

### 3.4 CURRENT USES OF ADJACENT PROPERTIES

For the scope of this assessment, properties are defined and categorized based upon their physical proximity to the Property. An adjoining property is defined as any real property or properties in which the border is contiguous or partially contiguous with that of the Property, or that would be contiguous or partially contiguous with that of the Property but for a street, road, or other public thoroughfare separating them.

<b>Adjacent Properties</b>	
<b>ITEM</b>	
Northwest	Public Storage is to the northwest at 830 North Rengstorff Avenue.
North	Driven Auto Care automotive repair shop is to the north at 826 North Rengstorff Avenue.
Northeast	North Rengstorff Avenue is northeast, followed by Studio 819, a mixed-use commercial and residential building at 819 North Rengstorff Avenue. TacoMania restaurant is within this building to the east at 2070 Old Middlefield Way.
Southwest	Old Middlefield Way is southwest, followed by O'Malley's Sports Pub at 2135 Old Middlefield Way.
South	Old Middlefield Way is south, followed by a retail strip mall at 2105 Old Middlefield Way. It is occupied by Dosa Paratha Indian Cusiine, Los Altos Taqueria, Donut Basket, and Subway.
Southeast	The intersection of Old Middlefield Way and North Rengstorff Avenue is southeast, followed by Dennis Kobza & Associates architecture at 2083 Old Middlefield Way.
West	Public Storage at 830 North Rengstorff Avenue is also to the west.
East	North Rengstorff Avenue is to the east, followed by Studio 819 Avenue and TacoMania at 819 North Rengstorff and 2070 Old Middlefield Way.

#### 4.0 STANDARD HISTORICAL RECORDS SEARCH

The objective of consulting historical sources is to develop a history of the previous uses of the Property and surrounding area, in order to help identify the likelihood of past uses having led to PECs in connection with the Property. ODIC exercises professional judgment and considers the possible *releases* that might have occurred at a Property in light of the historical uses and, in concert with other relevant information gathered as part of the limited TSA process.

Historical Records Search was conducted for the Property in conformance with the scope and limitations of ASTM Standard Practice E1528-14. In the event that there is no Sanborn Map Company fire insurance map coverage for the Property and adjacent sites, ODIC substituted the absence of Sanborn Map Company fire insurance map coverage with historical aerial photographs.

##### 4.1 PREVIOUS ENVIRONMENTAL REPORTS

The Property is associated with a closed Leaking Underground Storage Tank (LUST) case under the name ARCO #2010 (Global ID# T0608500170). The LUST case was opened on May 21, 1986 due to impacted “other groundwater (uses other than drinking water)” as the result of a gasoline release. Case closure was granted on September 7, 2017.

The above information, as well as numerous previous environmental reports and associated records, are available for review on the State Water Resources Control Board (SWRCB) onlinen GeoTracker database accessible via the following link:

[https://geotracker.waterboards.ca.gov/profile\\_report.asp?global\\_id=T0608500170](https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0608500170)

Numerous records were also available from the City of Mountain View Fire Department (MVFD). The most recent and pertinent environmental reports and associated records are summarized below. Additional associated records are summarized in Section 5.2.

August 1992, Report of Oil-Water Separator / Clarifier Investigation, ARCO Facility No. 2010, 2110 Old Middlefield Way, by EA Engineering, Science, and Technology (EA)

EA stated that a clarifier was removed from the former building on the Property, in the vicinity of service bays. Soil samples were collected at that time. The following table depicts the soil analytical results:

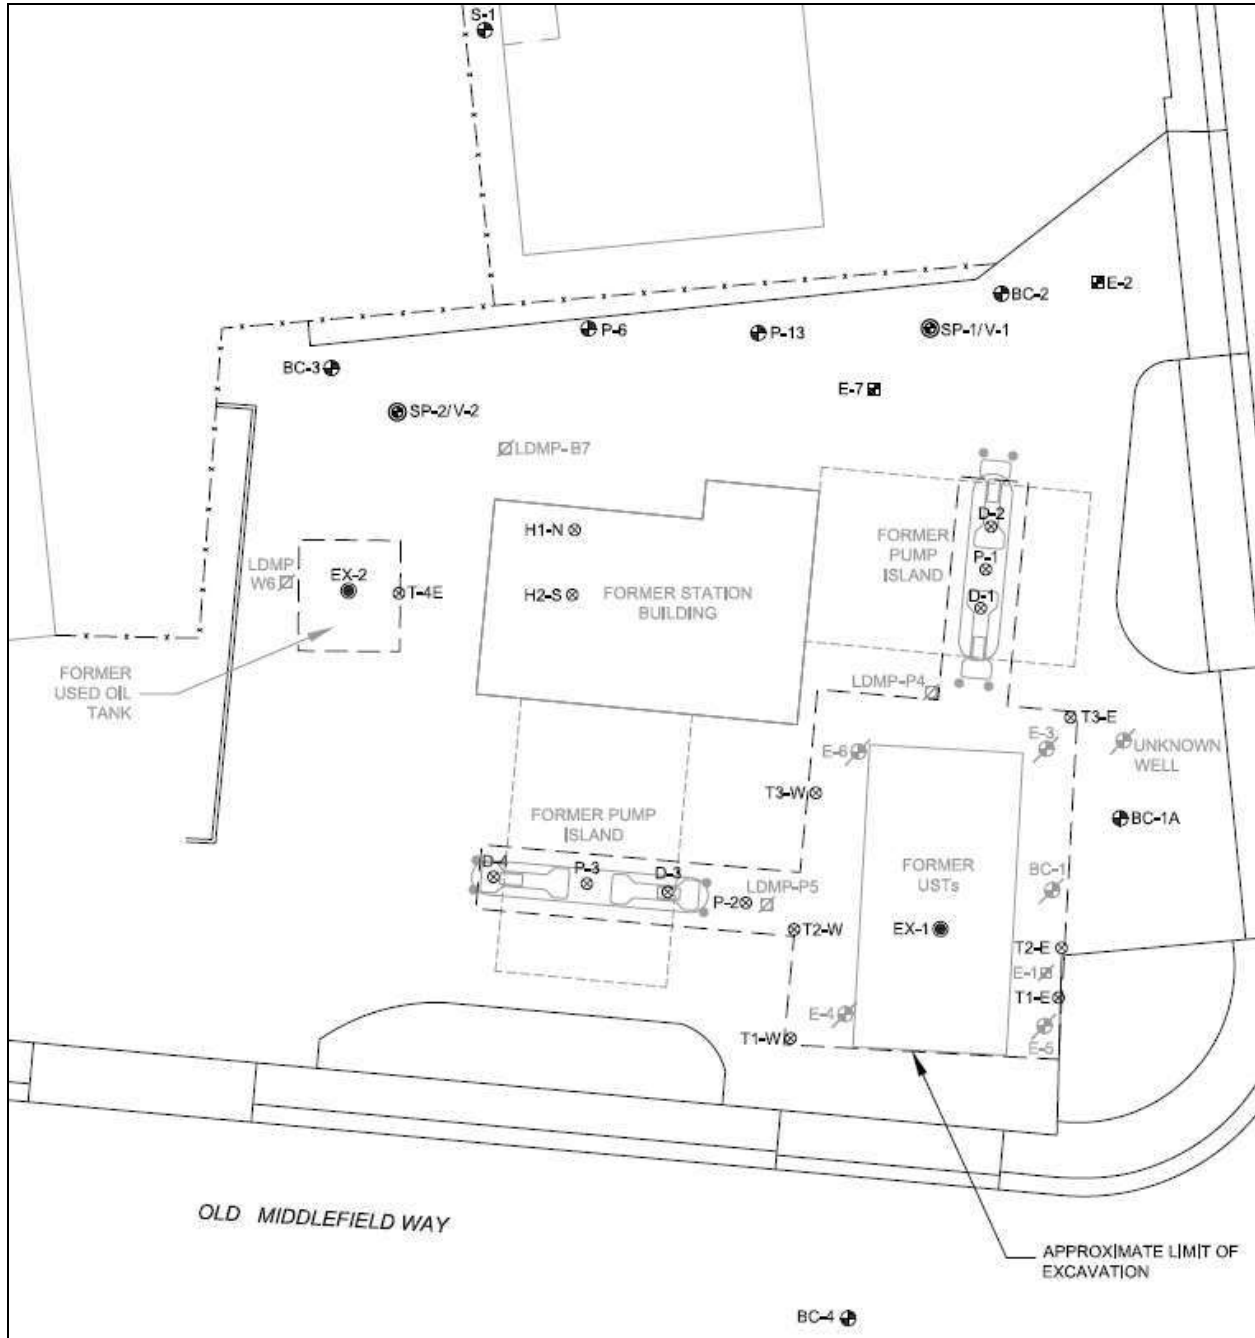

TABLE 1 CONCENTRATIONS (ppm) OF ANALYTES IN CONCRETE AND SOIL SAMPLES, ARCO FACILITY NO. 2010, MOUNTAIN VIEW, CALIFORNIA, 13 MAY 1992			
Analyte	Concrete Sample	Soil Sample SBI-0	Soil Sample SBI-2
Total Recoverable Petroleum Hydrocarbons	260	1,300	5,600
VOCs:			
Benzene	<0.10	0.83	<0.5
Ethylbenzene	<0.10	0.47	1.3
Toluene	<0.10	0.32	<0.5
Xylenes	0.35	2.7	4.1
Total Petroleum Hydrocarbons as gasoline	NA	330	NA
Total Petroleum Hydrocarbons as diesel	NA	370	NA
TCLP Metals	ND (Non-toxic)	ND (Non-toxic)	NA
TCLP Volatiles	ND (Non-toxic)	ND (Non-toxic)	NA
TCLP Semivolatiles	ND (Non-toxic)	ND (Non-toxic)	NA
PCBs	0.16 PCB-1242	ND	NA
CAM17 (Metals)	ND (Non-hazardous)	ND (Non-hazardous)	NA
96-hour Waste Bioassay	Non-hazardous	Non-hazardous	NA
Ignitability	> 100°C	> 100°C	NA

NA Not analyzed.  
 ND Not detected at concentrations greater than laboratory detection limits.

October 13, 2008, Well Destruction and Site Demolition Report, Former ARCO Service Station No. 2010, 2110 Old Middlefield Way, by Stantec Consulting Services, Inc. (Stantec)

Stantec observed and documented the removal / demolition of the former gas station at the Property. Activities included the removal of three 12,000-gallon fuel USTs, one 550-gallon waste oil UST, associated product piping, four fuel dispensers, and two hydraulic lifts; well destruction associated with the LUST case was also conducted. Soil and groundwater samples were collected at that time.

The following diagram illustrates the sampling locations and former gas station layout:

LEGEND:	
⊕	GROUNDWATER MONITORING WELL LOCATION
⊖	GROUNDWATER EXTRACTION WELL LOCATION
⊗	DUAL COMPLETION AIR SPARGE AND VAPOR EXTRACTION WELL
⊙	GRAB GROUNDWATER SAMPLE LOCATION
⊛	SOIL SAMPLE LOCATION
⊠	DESTROYED LEAK DETECTION MONITOR NO PROBE
⊡	DESTROYED MONITORING WELL
---	AREA OF SOIL EXCAVATION

The following tables depict the analytical results:

Stantec provided the following discussion of analytical results:

*Low concentrations of lead were reported in all soil samples collected. Concentrations of lead, cadmium, chromium, nickel, and zinc were also reported in the hydraulic lift soil samples and waste oil UST groundwater sample. The concentrations of metals are within the range of background soil concentrations presented in the Kearney Foundation March 1996, Background Concentrations of Trace and Major Elements in California Soils and, therefore, do not appear to be associated with the former automotive service station and retail fueling operations at the site. The concentration of GRO reported in grab groundwater sample EX-2 appears higher than recent and historical groundwater concentrations reported in groundwater samples collected from groundwater monitoring wells at the site. The higher GRO concentration in the grab groundwater sample collected may be expected considering the soil disturbance activities conducted during the waste oil UST excavation and removal. The action of disturbing residual petroleum hydrocarbons present within the waste oil UST excavation and collecting a grab sample from the groundwater surface would likely result in higher hydrocarbon concentrations. Hydrocarbon concentrations reported in groundwater samples from the existing monitoring wells appear more indicative of actual groundwater quality at the site.*

Stantec provided the following summary of findings:

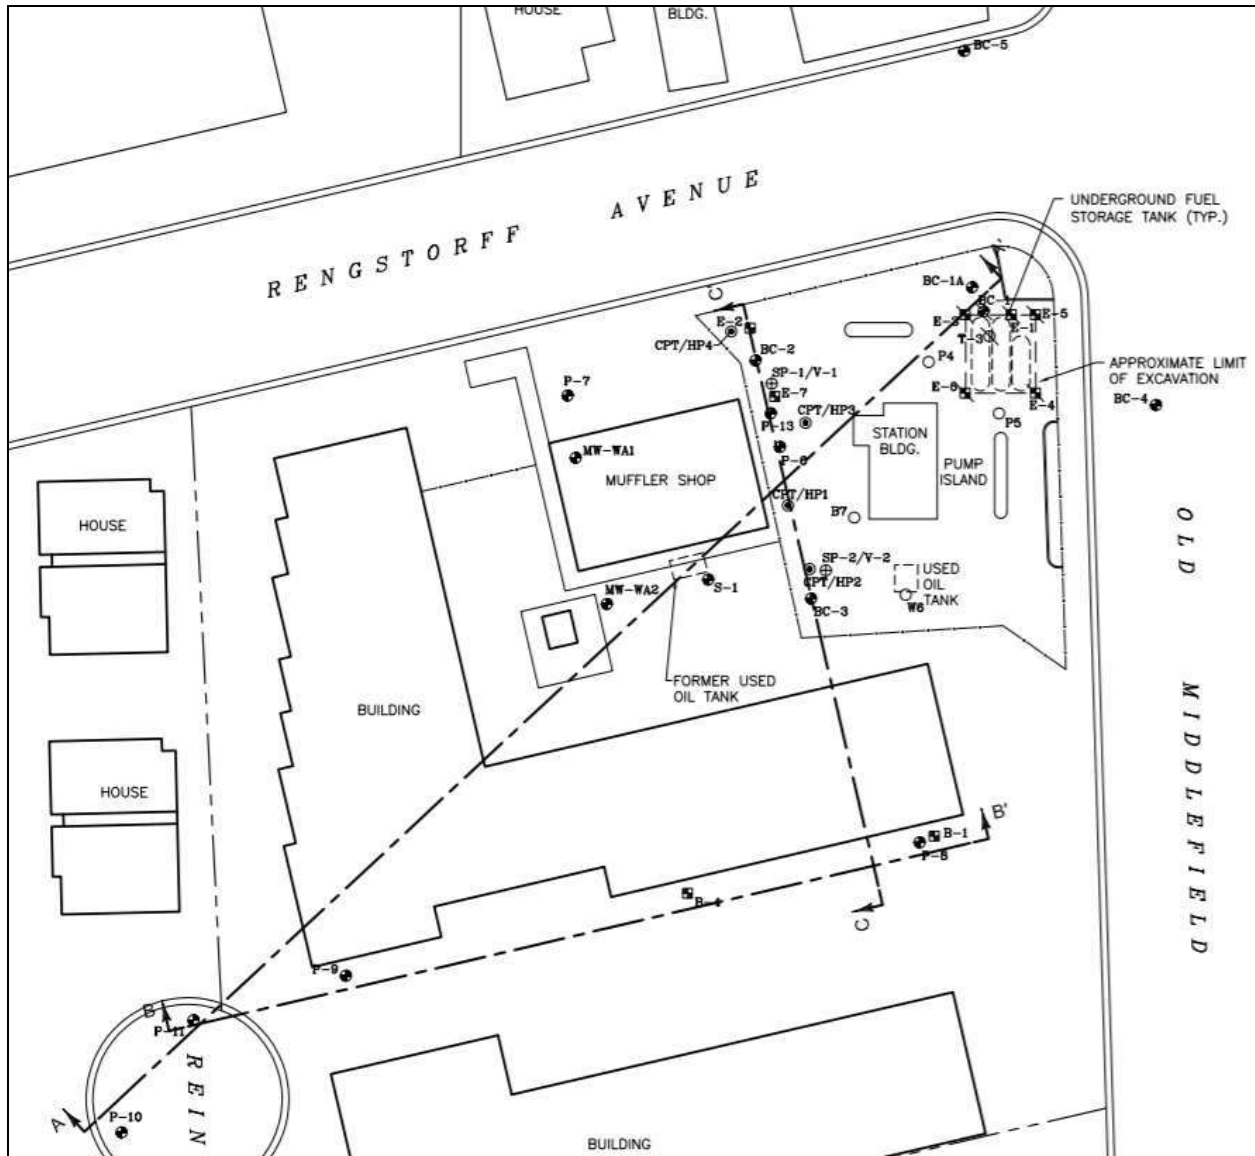

*Prior to UST and facility removal operations, six monitoring/observation wells and four LDMPs were properly destroyed under SCVWD inspection. Musco successfully removed and disposed of three 12,000-gallon double walled fiberglass USTs, one 550-gallon single walled fiberglass waste oil UST, two hydraulic lifts, four fuel dispensers, and associated product piping from the site. The UST removal and collection of compliance soil and groundwater samples was completed under the direction of Mr. Chris Steck of the CMVFD. Soil compaction test results indicate that the former gasoline and waste oil UST excavations were backfilled and compacted to at least 90%. Laboratory analysis of soil and groundwater samples collected during facility removal operations indicated the presence of impacts to the subsurface. Since the site is the subject of ongoing environmental monitoring and remediation work, no further investigation is recommended at this time.*

July 5, 2012, Conceptual Site Model, Former ARCO Service Station No. 2010, 2110 Old Middlefield Way, by Closure Solutions, Inc. (Closure Solutions)

Closure Solutions prepared the Conceptual Site Model to address requirements by the SCEH for an evaluation of methyl tertiary butyl ether (MTBE) plume stability, updated site maps, geologic cross-sections, and an evaluation of the potential need for additional assessment.

At the time of Closure Solutions site inspection, the Property was a vacant lot. In 2008, gas station and automotive repair shop improvements were removed / demolished. The following diagram illustrates the former sampling locations and former gas station layout:

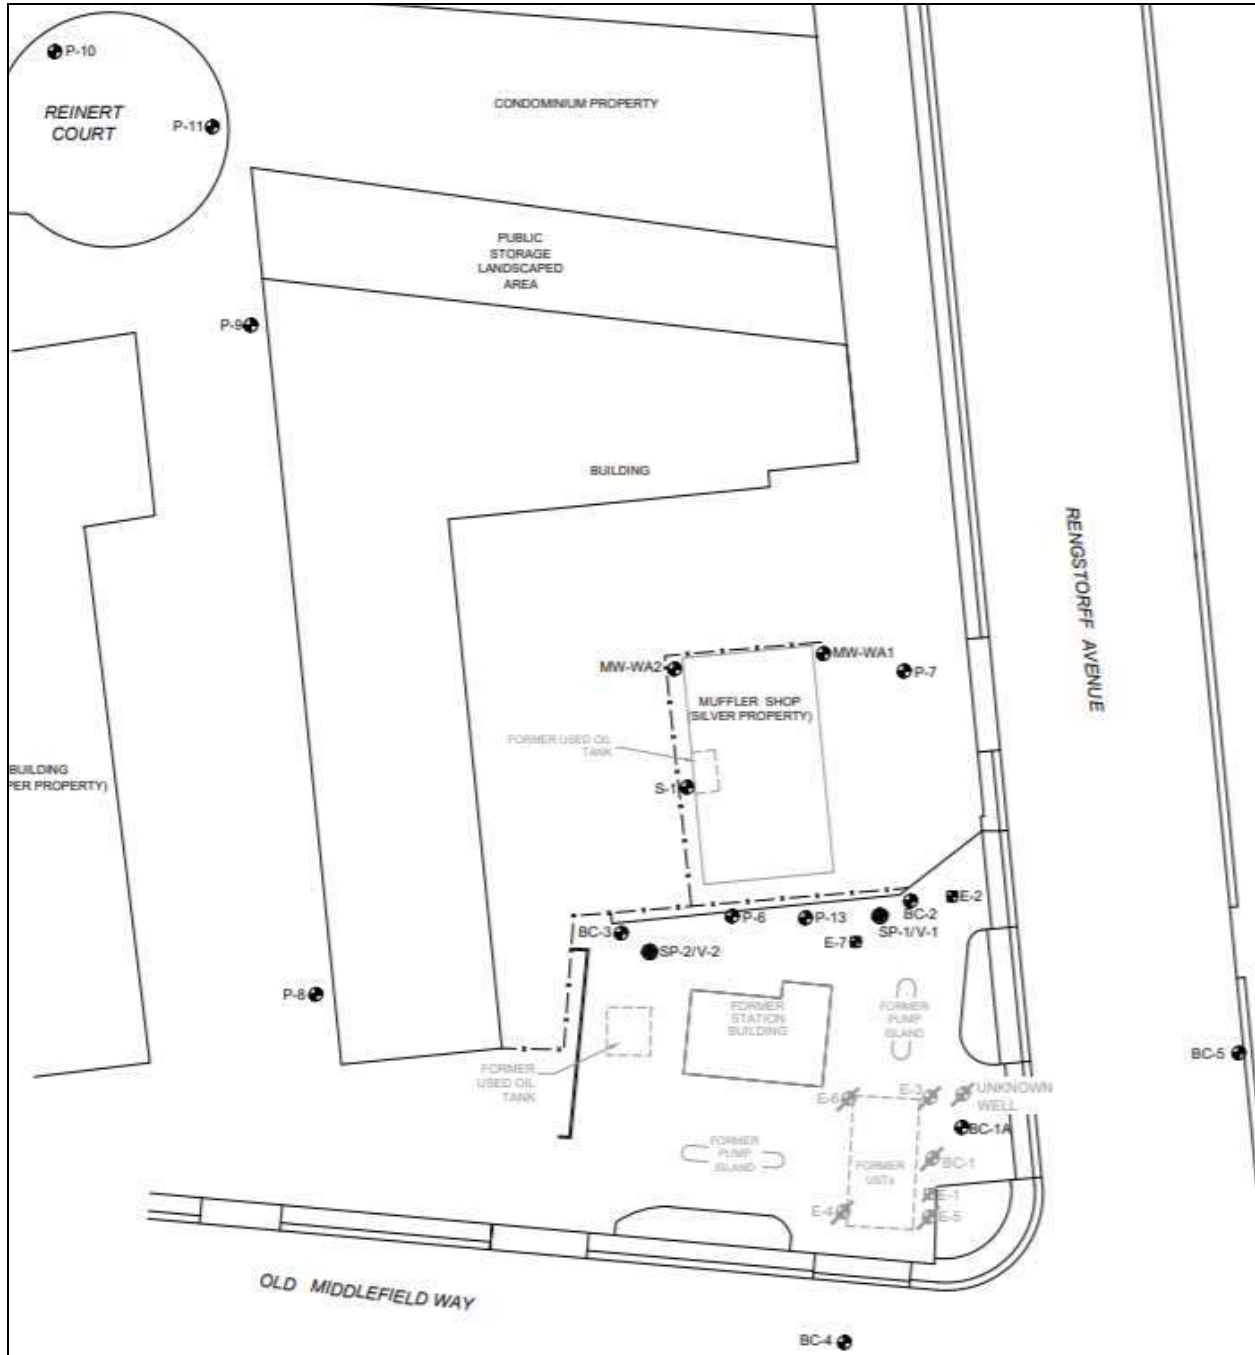

Closure Solutions provided the following conclusions and recommendations:

*An evaluation of MTBE plume stability indicates that while it is clear that MTBE impacted groundwater has migrated off-Site, the concentrations are likely to have reached Water Quality Objectives. Given that the Santa Clara Valley Water District has confirmed that there are no water supply wells in the down-gradient direction (northeast) and that the closest water supply well is approximately 350 feet up-gradient from the Site, it is unlikely that these wells are threatened by the concentrations remaining at the Site. Closure Solutions recommends and ARC formally requests that No Further Action status be granted for the environmental case at 2110 Old Middlefield Way at this time.*

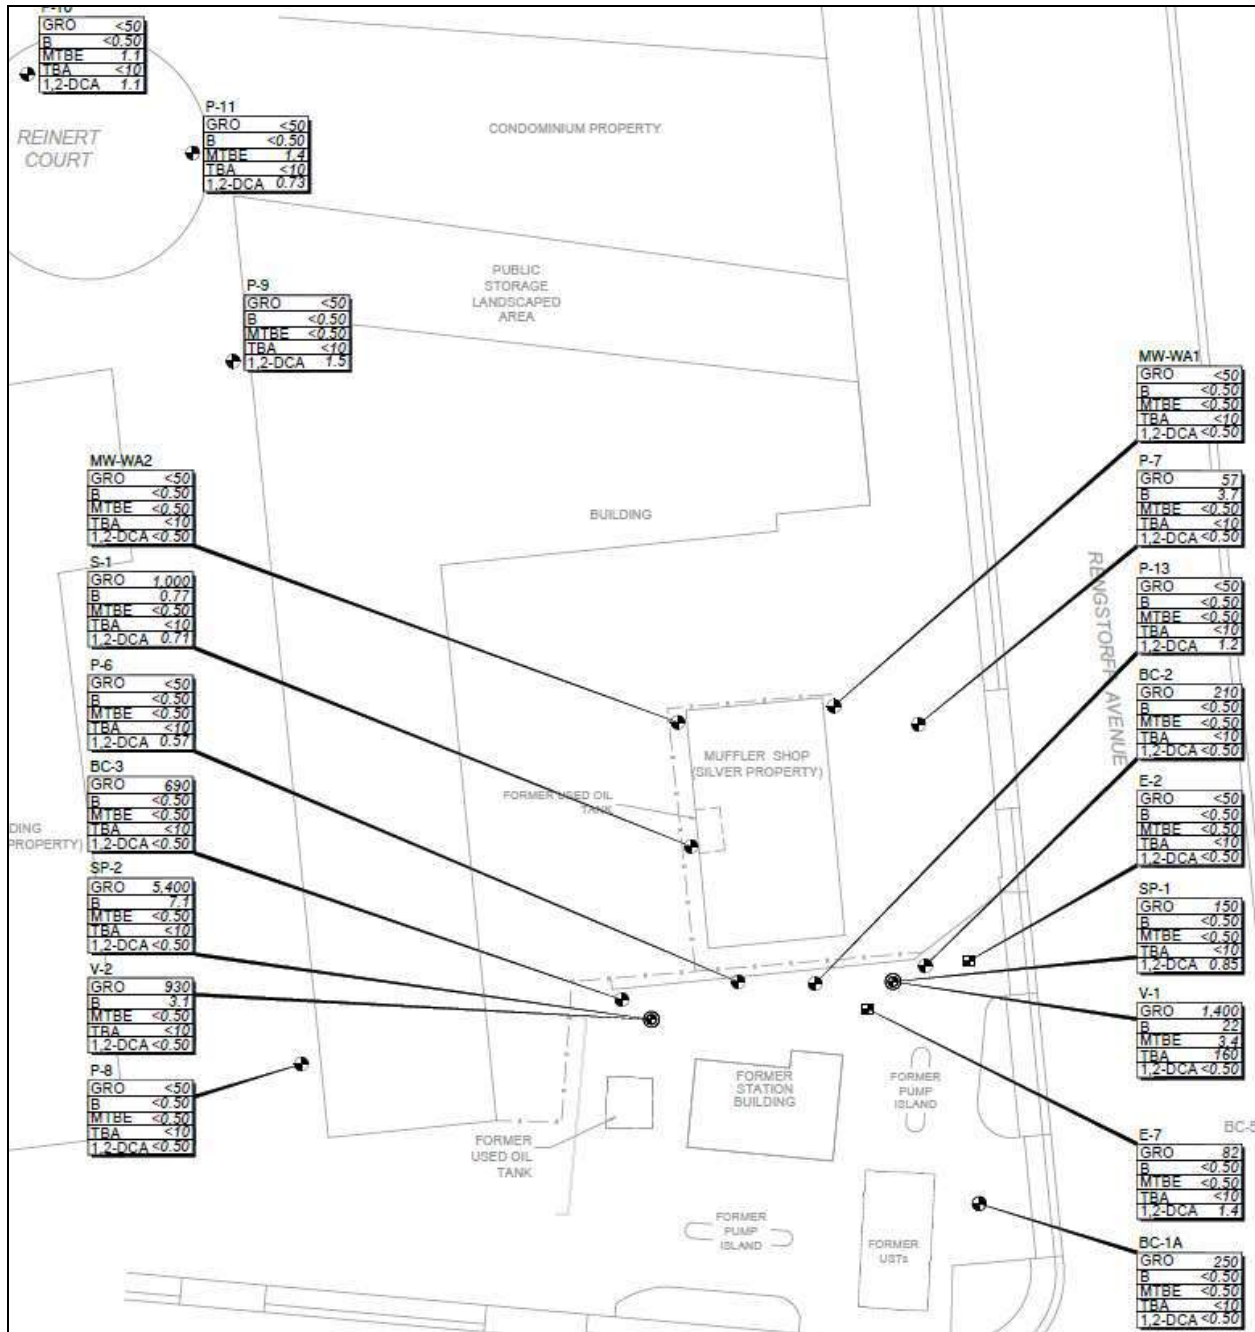

January 28, 2016, Groundwater Monitoring Report, 2110 Old Middlefield Way, by Stantec Consulting Services, Inc. (Stantec)

At the time of Stantec's site inspection, the Property consisted of a vacant lot. The Property was formerly occupied by a gas station; the fueling system consisted of three 12,000-gallon USTs containing gasoline, one 550-gallon UST containing waste oil, and associated product lines and dispensers. The following diagram illustrates the sampling locations at the Property and locations of former improvements on the Property:

LEGEND:

 SUB = Screen submerged

Additional historical analytical results can be reviewed via the following link (beginning on page 26 of the report):

[https://geotracker.waterboards.ca.gov/esi/uploads/geo\\_report/1256135940/T0608500170.PDF](https://geotracker.waterboards.ca.gov/esi/uploads/geo_report/1256135940/T0608500170.PDF)

Stantec provided the following conclusions and recommendations:

*Current groundwater concentrations continue to meet closure criteria of the State Water Resources Control Board Low-Threat Underground Storage Tank Case Closure Policy (LTCP). Stantec recommends terminating groundwater monitoring and sampling at the Site as it is no longer warranted.*

May 26, 2016, Additional Site Assessment Report, ARCO Service Station No. 2010, 2110 Old Middlefield Way, by Stantec Consulting Services, Inc. (Stantec)

Stantec stated that soil and groundwater investigations, source removal, and remedial activities had been conducted at the Property since hydrocarbon impacts were initially detected at the Property in 1986. Investigations have included the installation of groundwater monitoring wells, soil vapor extraction (SVE) wells, and soil borings. The groundwater monitoring program was implemented in 1987.

In May 1989, three gasoline USTs were removed from the southeastern portion of the Property and replaced with three 12,000-gallon gasoline USTs. Soil was removed from the Property and groundwater extraction was conducted at that time. In August 1989, approximately 14,400 gallons of groundwater was extracted and properly disposed of. Stantec further reported that a remedial feasibility study via dual-phase extraction (DPE) and groundwater extraction (GWE) was conducted at the Property (via well E-7). Approximately 20,595.6 gallons of hydrocarbon-impacted groundwater was extracted from well E-7. In October 2002, dispensers and related piping were removed and replaced during upgrade activities. From June 2003 to August 2004, an in-situ Submerged Oxygen Curtain (iSOC) system was operated at the Property. In August and September 2008, gasoline operations ceased and the improvements and fueling system features were removed / demolished. Soil and groundwater samples were collected at that time.

In 2016, Stantec conducted an investigation to further delineate a dissolved MTBE groundwater plume that migrated down-gradient (to the northwest). As part of the investigation, two soil borings (HP-1 and HP-2) were advanced further north and northwest.

The following diagram illustrates the sampling locations:

LEGEND:	
	HYDRO PUNCH LOCATION
	MTBE ISOCONCENTRATION CONTOUR
	MTBE CONCENTRATION (µg/L)
	MICROGRAMS PER LITER

The following table depicts the groundwater analytical results:

Summary of Groundwater Analytical Results

Sample ID	Date Collected	MTBE (µg/L)	TBA (µg/L)	1,2-DCA (µg/L)
HP-1	3/3/2016	0.57	<10	3.7
HP-2	5/12/16	< 0.50	<10	< 0.50
SFBRWQCB ESL	N/A	5.0	12	5.0

**Notes:**

MTBE – methyl tertiary-butyl ether.

N/A – Not applicable.

SFBRWQCB ESL – San Francisco Bay Regional Water Quality Control Board Environmental Screening Level.

TBA – tertiary-butyl alcohol.

1,2-DCA – 1,2-dichloroethane.

'<' – Less than; indicates that analyte was not detected above the listed laboratory reporting limit.

µg/L – micrograms per liter.

Stantec provided the following conclusions and recommendations:

*Two soil borings (HP-1 and HP-2) were advanced in order to obtain depth-discrete groundwater samples for plume delineation of MTBE, TBA, and 1,2-DCA.*

- *Only one groundwater sample (HP-1) contained detectable levels of MTBE (0.57 µg/L) and 1,2-DCA (3.7 µg/L). Groundwater collected from HP-2 did not contain detectable levels of MTBE, TBA, or 1,2-DCA, and HP-1 did not contain detectable levels of TBA.*

- *Detected concentrations of MTBE and 1,2-DCA in HP-1 are both lower than the SFBRWQCB established ESLs.*

- *Further delineation of the detached MTBE, TBA and 1,2-DCA plumes was the only remaining impediment to Site closure under the LTCP. Results presented herein demonstrate that the MTBE, TBA and 1,2-DCA plumes are defined and therefore Stantec respectfully recommends closure of the Site under the LTCP.*

February 3, 2017, Case Closure Summary Report, Former Arco Service Station No. 2010, 2110 Old Middlefield way, Santa Clara County Department of Environmental Health Local Oversight Program (SCEH – LOP)

The SCEH – LOP stated that six leak detection and monitoring probes were installed at the Property in March 1986. In May 1989, three steel gasoline USTs (two 10,000-gallon tanks and one 8,000-gallon tank) were removed and replaced with three 12,000-gallon gasoline fiberglass double-walled USTs. The SCEH – LOP stated that one 280-gallon waste oil UST was also discovered and removed.

From August 1989 to August 2004, site investigation and remediation were conducted at the Property which included soil vapor extraction testing, dual phase extraction, and in-situ Submerged Oxygen Curtain (iSOC). In August 2008, all improvements and fueling system features were removed / demolished.

The following USTs were reported:

Tank #	Size in Gallons	Contents	Closed in Place/Removed	Date
1	10,000	Gasoline	Removed	05/1989
2	10,000	Gasoline	Removed	05/1989
3	8,000	Gasoline	Removed	05/1989
4	280	Waste Oil	Removed	05/1989
5	12,000	Gasoline	Removed	09/2008
6	12,000	Gasoline	Removed	09/2008
7	12,000	Gasoline	Removed	09/2008
8	550	Waste Oil	Removed	09/2008

The following treatment and disposal actions were reported:

Material	Amount (Include Units)	Action (Treatment or Disposal Method)	Date
Tank	2-10,000 gallon gasoline, 1-8,000 gallon gasoline, 1-280 gallon waste oil	Disposed (location not listed)	05/1989
Piping	-	Disposed (location not listed)	05/1989
Pea gravel	150 cubic yards	Disposed (location not listed)	05/1989
Soil	700 cubic yards	Disposed (location not listed)	05/1989
Groundwater	14,400 gallons	Disposed (location not listed)	08/1989
Groundwater	16,000 gallons	Disposed (location not listed)	06/2001
Groundwater	20,595 gallons	Disposed (location not listed)	01/2002
Soil	130 tons	Disposed (location not listed)	10/2002
Tank	3-12,000 gallon gasoline, 1-550 waste oil	Disposed (Potrero Hills Landfill, Suisun City)	09/11/2008
Piping	-	Disposed (Clean Harbors Inc., Buttonwillow)	09/11/2008
Groundwater	150 gallons	Disposed (location not listed)	09/2008

Historical soil and groundwater analytical results can be reviewed via the following link (beginning on page 18 of the report):

[https://geotracker.waterboards.ca.gov/regulators/deliverable\\_documents/8861374378/06S2W16D01f.pdf](https://geotracker.waterboards.ca.gov/regulators/deliverable_documents/8861374378/06S2W16D01f.pdf)

The SCEH – LOP provided the following Site Management Requirements:

*The site is currently an undeveloped vacant lot. Residual contamination both in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as, but not limited to, site grading, excavation, or the installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of water well(s) in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures. DEH and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time.*

September 7, 2017, "No Further Action" Letter, Fuel Leak Investigation, Arco Service Station No. 2010, 2110 Old Middlefield Way, County of Santa Clara Department of Environmental Health (SCEH)

The SCEH confirmed completion of site investigation and corrective action for the USTs formerly at the Property. The SCEH stated that "no further action" related to the petroleum release(s) was required.

The SCEH provided the following Site Management Requirements:

*Residual contamination in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. The County and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time. It should be noted that any additional or previously unidentified contamination at this site may require further investigation or cleanup.*

#### 4.2 SANBORN MAP COMPANY FIRE INSURANCE MAPS

Sanborn Map Company maps were created for fire insurance underwriters dating back to 1866, and often contain information regarding the uses of individual structures, and the locations of fuel and/or chemical storage tanks that may have been on a particular property. In 1996, the entire Sanborn Map Company collection was acquired by Environmental Data Resources, Inc. (EDR). ODIC subcontracted with EDR to provide copies of Sanborn Map Company maps, if available, for the Property and vicinity.

EDR responded that Sanborn Map Company fire insurance maps were not drawn for the Property or surrounding area.

#### 4.3 HISTORICAL AERIAL PHOTOGRAPHS

ODIC reviewed aerial photographs via Nationwide Environmental Title Research, LLC's database ([www.historicaerials.com](http://www.historicaerials.com)). Photographs were available for the following years: 1948, 1956, 1960, 1968, 1980, 1982, 1987, 1991, 1993, 1998, 2002, 2004, 2005, 2009, 2010, 2012, 2014, and 2016.

##### Property:

In the photographs dated 1948 to 2005, the Property was developed with a gas station. In the 1948 through 1960 photographs, a canopy was visible on the southeastern portion and a building was visible on the western portion. It appears that a smaller building may have also been on the northern portion at that time. By 1968, it appears that the Property may have been redeveloped; the aforementioned canopy was no longer visible and at least one building and possible canopies were on the western and northern portions. By 1980, additions were made to the building and a concrete patch was visible on the southeastern portion, indicative of the location of USTs. The Property remained generally unchanged until at least 2005. By 2009, the Property consisted of a vacant lot. In all subsequent photographs, the Property remained as a vacant lot.

##### Adjacent Sites:

In the 1948 photograph, the vicinity appeared to primarily consist of vacant land and residential development with possible sparse commercial development. It appears that the vicinity primarily remained as vacant land and residential development until commercial development began sometime between 1960 and 1968 at which time the current north-adjacent automotive repair shop building was constructed. The current adjacent roads were widened at that time as well. A gas station was visible at the south- and

southeast-adjacent sites in the 1968 through 1982 photographs. The current southeast-adjacent commercial building was constructed by 1987. The current west- and south-adjacent commercial buildings were constructed sometime between 1987 and 1991. Development for the current east-adjacent commercial buildings began in 2014.

#### 4.4 LOCAL STREET DIRECTORIES / HISTORICAL CITY DIRECTORIES

ODIC reviewed Historical City Directories provided by EDR for the years 1922-2014. A summary of listings for the Property is provided below:

Historical City Directories Property Address: 2110 Old Middlefield Way	
YEAR	LISTING
1975	Harris ARCO Service Station
1982	Teds ARCO
1986	Teds ARCO
1991	Teds ARCO
2001	Gardner James Tedsarc

For discussion of nearby properties of environmental concern, if any, see Sections 5.3 and 5.4.

#### 4.5 PROPERTY PROFILE

##### Property Profile:

ODIC obtained the following Property information from a title company property profile:

- Current Property Owner(s): Grand Salkhi Properties
- Lot Size: 14,000 square feet
- Building Size: 0 square feet
- Construction Date: Information not provided. There are no improvements.
- Site Use / Use Code: Vacant Land (General)

#### 4.6 OTHER HISTORICAL RECORDS

This category includes, but is not limited to: miscellaneous maps, newspaper archives, internet sites, community organizations, local libraries, historical societies, current *owners* or *occupants* of neighboring properties, or records in the files and/or personal knowledge of the *Property owner* and/or *occupants*.

An internet search of the Property address(es) was conducted to identify additional former Property occupants and/or uses that may not have been identified via other sources. No such occupants and/or uses were identified.

#### 4.7 ENVIRONMENTAL QUESTIONNAIRE (EQ):

Per ASTM Standard Practice E1528-14, the environmental questions listed in Section 3.2 should also be asked of the current owner of the property or other relevant parties.

ODIC was unable to obtain a completed EQ after making a reasonable attempt. The absence of a completed EQ is not considered significant, as information regarding historical and current use of the Property obtained from other sources is deemed sufficient to adequately assess the Property.

## 5.0 REGULATORY RECORDS SEARCH

### 5.1 PROCEDURE

The most current databases sources maintained by state and federal offices were provided by governmental record search database suppliers, such as EDR (Environmental Data Resources). For definitions of database acronyms, review the database report in Appendix C and/or refer to ASTM Standard Practice E1528-14.

Databases were searched for properties with reported environmental issues within distances specified by ASTM Standard Practice E1528-14, either by using geocoding information that identified the coordinates of the properties in the databases or by checking the street addresses of practically reviewable non-geocoded "orphan" properties within the same zip code. The database report is included as an appendix to this Report. The database report may identify certain "orphan sites" which are those facilities that could not be mapped or geocoded due to inadequate address information.

Orphan sites are unmappable sites which appear in a list form in the Radius Map Report rather than on the standard Radius Map. These sites are usually not identified in the Radius Map Report. ODIC cannot be held liable for not correctly locating these orphan sites to determine their impact to the Property.

ASTM Standard Practice E1528-14 uses terminology such as *Leaking Storage Tank* and *Registered Storage Tank* to refer to both Leaking Underground/Aboveground Storage Tanks and Underground/Aboveground Storage Tanks, respectively. For the purposes of this assessment, ODIC has used state-specific terminology to refer to Leaking Storage Tanks and/or other Registered Storage Tanks as generally defined by the state in which the Property is located.

### 5.2 PROPERTY LISTING(S)

FEDERAL AGENCY LISTINGS		STATE AGENCY LISTINGS

### California State Water Resources Control Board (SWRCB)

The Property is identified on the SWRCB online GeoTracker database in association with a closed Leaking Underground Storage Tank (LUST) case under the name ARCO #2010 (Global ID# T0608500170). The LUST case was opened on May 21, 1986 due to impacted "other groundwater (uses other than drinking water)" as the result of a gasoline release. Case closure was granted on September 7, 2017. Refer to Section 4.1 for further details.

Ted's ARCO: No hazardous waste generation was reported.

Source: [https://hwts.dtsc.ca.gov/hwts\\_Reports/ReportPages/Report03.aspx?epaid=CAL000298593](https://hwts.dtsc.ca.gov/hwts_Reports/ReportPages/Report03.aspx?epaid=CAL000298593)

The HWTS database listings pertain to the operation of the Property as a gas station.

**HAZNET (Hazardous Waste Information System)**

The Property is identified on the HAZNET database under the following names:

BP West Coast Products LLC 2010: Wastes categorized under “aqueous solution with total organic residues less than 10 percent,” “off-specification, aged, or surplus organics,” and “other empty containers 30 gallons or more” were reported.

**ARCO Service Station #2010:** In 1999, 0.0034 tons of waste categorized under “unspecified organic liquid mixture” was generated and disposed of under a hazardous waste manifest.

**BP West Coast Products LLC:** Wastes categorized under “aqueous solution with total organic residues less than 10 percent,” “waste oil and mixed oil,” “other organic solids,” “contaminated soil from site clean-up,” and “other empty containers 30 gallons or more” were reported.

### **RGA LUST (Recovered Government Archive Leaking Underground Storage Tank)**

The Property is identified on the RGA LUST database under the names ARCO, ARCO #02010, and ARCO #2010. These listings pertain to the operation of the Property as a gas station. The Property is associated with a closed LUST case. Refer to Section 4.1 for further details.

### **LUST (Leaking Underground Storage Tank)**

The Property is associated with a closed LUST case under the name ARCO #2010 (Global ID# T0608500170). The LUST case was opened on May 21, 1986 due to impacted “other groundwater (uses other than drinking water)” as the result of a gasoline release. Case closure was granted on September 7, 2017. Refer to Section 4.1 for further details.

### **HIST LUST (Historical Leaking Underground Storage Tank)**

The Property is identified on the HIST LUST database under the name ARCO. The date listed is January 1, 1987. This listing pertains to the former operation of the Property as a gas station. Refer to Section 4.1 for further details.

### **HIST CORTESE**

The Property is identified on the HIST CORTESE database under the name ARCO. This listing is associated with a closed LUST case at the Property. Refer to Section 4.1 for further details.

### **CA CUPA Listings**

The Property is identified on the CA CUPA Listings database under the names ARCO Facility #2010 and Ted’s ARCO. The program description is “generates 100 kg per year to less than 5 tons per year.”

### **CERS (California Environmental Reporting System)**

The Property is identified on the CERS database under the name ARCO Service Station #2010 as a LUST cleanup site. Refer to Section 4.1 for further details.

### **FINDS (Facility Index System)**

The Property is identified on the FINDS database under the name ARCO #2010. The FINDS database is a “pointer” database which identifies other database listings. The FINDS database listings pertain to the former operation of the Property as a gas station.

### **CA UST (California Underground Storage Tank)**

The Property is identified on the CA UST database under the name ARCO Smog Pros Store #02010.

### **ERNS (Emergency Response Notification System)**

The Property is identified on the ERNS database under the name 2110 Old Middlefield Way. It was reported that the piping line between two USTs leaked during testing. The Property is associated with a closed LUST case. Refer to Section 4.1 for further details.

**SWEEPS UST (Statewide Environmental Evaluation and Planning System – Underground Storage Tank)**

The Property is identified on the SWEEPS UST database under the name ARCO. Three 12,000-gallon USTs and one 550-gallon waste oil UST were reported. This listing is associated with the former operation of the Property as a gas station. The Property is associated with a closed LUST case. Refer to Section 4.1 for further details.

**CA FID UST (California Facility Inventory Database Underground Storage Tank)**

The Property is identified on the CA FID UST database under the name ARCO with an active status. This listing is associated with the former operation of the Property as a gas station.

**HIST UST (Historical Underground Storage Tank)**

The Property is identified on the HIST UST database under the name Taghi Lavassani in association with the former operation of the Property as a gas station. Two 10,000-gallon USTs, one 8,000-gallon UST, and one 250-gallon UST were installed in 1979. This listing pertains to the former operation of the Property as a gas station. The Property is associated with a closed LUST case. Refer to Section 4.1 for further details.

**Other Non-ASTM List - EDR Historical Auto Stations**

The Property is identified on the EDR Historical Auto Stations proprietary database under the name Teds ARCO from 1986 to 2008 as a gas station.

**City of Mountain View Fire Department (MVFD)**

Numerous records were available from the MVFD that are associated with the historical operation of the Property as a gas station and an associated Leaking Underground Storage Tank (LUST) case. Refer to Section 4.1 for details.

**County of Santa Clara Department of Environmental Health (SCEH)**

Records from the SCEH pertain to the operation of the Property as a gas station and an automotive repair shop. The records consisted of inspection reports, hazardous waste generator permit applications, a waste inventory, and a hazardous waste manifest. A 500-gallon waste oil UST, used motor oil (500 gallons generated annually), used anti-freeze (50 gallons generated annually), and used “solvent” (15 gallons generated annually) were reported.

**Bay Area Air Quality Management District (BAAQMD)**

Records from the BAAQMD pertained to permitting for the operation of the Property as a gas station. It was reported that the gas station was demolished in September 2008. The following additional information was reported:

Application No.	Legacy Plant/GDF No.	Application Submission Date	Application Name	Current Status	Current Status Date	Application Engineer
<a href="#">6003</a>	3680	7/29/2002	GDF - Modification (3x12K, 8 tph, bal, EVR)	Approved	8/16/2002	Madhav Patil
<a href="#">22247</a>	3680	6/4/1990	GDF - Modification	Approved	6/12/1990	Pleasant McNeel
<a href="#">21979</a>	3680	11/13/1989	GDF-Cancel per RHL	Canceled	12/7/1989	Luna Salaver
<a href="#">21663</a>	3680	4/13/1989	GDF - tank replace	Approved	4/28/1989	Luna Salaver

No environmental concerns were identified in the BAAQMD records.

5.3 SURROUNDING SITES: FEDERAL AGENCY LISTINGS

FEDERAL AGENCY LISTING(S)

NPL	1.0	4
De-listed NPL	0.5	0
SEMS/CERCLIS	0.5	3
SEMS-ARCHIVE/ CERCLIS-NFRAP	0.5	0
RCRA-CORRACTS	1.0	2
RCRA-TSDF	0.5	0
RCRA-Generator	Adjoining Sites	1

**NPL (National Priority List):**

LISTING	ADDRESS	DISTANCE
PRINTEX CORPORATION	PLYMOUTH & COLONY STREETS	NE 1/8 - 1/4
TELEDYNE SEMICONDUCTOR	1300 TERRA BELLA AVENUE	E 1/4 - 1/2
SPECTRA-PHYSICS INC.	1250 WEST MIDDLEFIELD WAY	SE 1/2 - 1
JASCO CHEM CORP.	1710 VILLA STREET	SSE 1/2 - 1

**PRINTEX CORPORATION:** This NPL site is located approximately 1,200 feet northeast of the Property. It is identified on the online EPA cumulis database under the name CTS Printex, Inc. The site is also identified on the online ENVIROSTOR and GeoTracker databases in association with a RESPONSE case and an open CPS (Cleanup Program Sites) case, respectively. The CPS case is associated with the address of 1911 Plymouth Street.

The following was reported on the online EPA cumulis database:

*The CTS Printex, Inc. site (site) is located in Mountain View, California. CTS Printex operated a printed circuit board manufacturing facility within a 5.5-acre portion of the area bounded by Plymouth, Colony, and Sierra Vista Streets from 1966 to 1985. Metals and volatile organic compounds (VOCs), including trichloroethene (TCE), were discharged to site soils and groundwater as a result of waste management practices during CTS Printex's manufacturing operations. EPA added the site to the Superfund National Priorities List (NPL) in 1990. The site includes the former facility property and an area of impacted groundwater extending beyond the facility boundary.*

*Environmental cleanup activities began in 1985, when CTS Printex initiated site closure activities in cooperation with the Regional Water Board. This work included the removal of contaminated soil, and the construction, operation, and maintenance of a groundwater extraction system.*

*Active groundwater extraction occurred from 1987 to 1996, resulting in successful removal of approximately 100 pounds of TCE and more than 106 million gallons of contaminated groundwater. In 1996, it was determined that the groundwater extraction system was no longer an efficient way to remove contaminants, and the Regional Water Board disconnected the system. However, VOC concentrations in groundwater remained above cleanup goals.*

*In 2011, EPA became the lead agency for the site and issued a Record of Decision Amendment with updated remedies for both groundwater and vapor intrusion. The vapor intrusion remedy relies on institutional controls, monitoring, and installation of mitigation measures at specific properties and/or during site redevelopment. The new groundwater remedy includes enhanced anaerobic bioremediation (EAB) to speed up cleanup of remaining VOC contamination, monitored natural attenuation, and institutional controls restricting groundwater use. EAB is a treatment technology that uses naturally occurring microorganisms below the surface to clean up the groundwater contamination.*

*EPA has conducted four Five-Year Reviews (FYR) to evaluate if the remedy is working as intended and protective of human health and the environment. The 2015 FYR concluded that the remedy continues to be protective of human health and the environment.*

*Soil cleanup is complete and groundwater cleanup is ongoing. Vapor intrusion mitigation measures have been successfully implemented at new developments to address potential vapor intrusion concerns. Vapor intrusion mitigation measures will be implemented as needed for future construction and redevelopment on or near the Site.*

*CTS Printex completed the Remedial Design investigation for the new groundwater remedy selected in the 2011 Record of Decision Amendment. The new groundwater remedy is anticipated to begin in 2019.*

The following was reported in a 2017 Annual Groundwater Monitoring Report for the CTS Printex Superfund Site:

A-Zone (approximately 10 and 20 feet bgs [below ground surface])

A-Zone (approximately 10 and 20 feet bgs)

LEGEND		NOTES	
	MONITORING WELL WITH ANALYTE CONCENTRATION SHOWN IN µg/L		5 µg/L TCE ISO-CONCENTRATION CONTOUR
	FORMER BUILDING		5 µg/L cDCE ISO-CONCENTRATION CONTOUR
	FORMER PROPERTY BOUNDARY		50 µg/L cDCE ISO-CONCENTRATION CONTOUR

1. ALL LOCATIONS AND DIMENSIONS ARE APPROXIMATE.  
 2. ISOCONCENTRATION CONTOURS ARE BASED PRIMARILY ON THE RESULTS OF THE 2017 ANNUAL GROUNDWATER MONITORING EVENT; HOWEVER, THEY ALSO CONSIDER THE RESULTS PRESENTED IN THE REVISED FINAL RDI REPORT (HALEY & ALDRICH, 2017c) AND THE SUPPLEMENTAL RDI REPORT (ITSA, 2011a).  
 3. CONTOURS ARE PROVIDED FOR CLARITY AND ARE NOT MEANT TO IMPLY CERTAINTY.  
 4. UNDERLINE INDICATES DETECTED CONCENTRATIONS EXCEEDED THE CLEANUP LEVEL OF 5 µg/L FOR TCE AND 5 µg/L for cDCE.  
 5. FOR 17WR, DATA FOR 17WR-18.8 IS SHOWN.  
 6. ABBREVIATIONS:  
 cDCE = CIS-1,2-DICHLOROETHENE  
 TCE = TRICHLOROETHENE  
 J = ESTIMATED CONCENTRATION  
 µg/L = MICROGRAMS PER LITER  
 7. AERIAL IMAGE SOURCE: ESRI

*B-Zone (approximately 30 and 40 feet bgs)*

B-Zone (approximately 30 and 40 feet bgs)

LEGEND		NOTES
	MONITORING WELL, WITH ANALYTE CONCENTRATION SHOWN IN µg/L	1. ALL LOCATIONS AND DIMENSIONS ARE APPROXIMATE.

	5 µg/L cDCE ISO-CONCENTRATION CONTOUR	6. ABBREVIATIONS: cDCE = CIS-1,2-DICHLORoETHENE TCE = TRICHLOROETHENE
	50 µg/L cDCE ISO-CONCENTRATION CONTOUR	µ = ESTIMATED CONCENTRATION, MAY BE BIASED LOW UU = NOT DETECTED; REPORTING LIMIT IS APPROXIMATE µg/L = MICROGRAMS PER LITER T: AERIAL IMAGE SOURCE: ESRI

The following conclusions and recommendations were provided in the 2017 Groundwater Monitoring Report for the CTS Printex Superfund Site:

*The results of the 2017 annual groundwater monitoring indicate that the plume is relatively stable, and concentrations are consistent with a general decreasing trend over time. The remedy defined in the ROD Amendment remains protective of human health and the environment.*

Based on the above, it appears that contamination at the CTS Printex site has not impacted the Property. Further, the CTS Printex site is not assessed to be indicative of environmental concern to the Property based on its horizontal distance from the Property and its down / cross-gradient location with respect to the groundwater flow direction.

**TELEDYNE SEMICONDUCTOR:** The westernmost boundary of the Teledyne Semiconductor NPL site is located approximately 2,000 feet east of the Property. It is also identified on the ENVIROSTOR and GeoTracker databases in association with a RESPONSE case and an open CPS case, respectively. The CPS case is associated with the address of 1300 Terra Bella Avenue. The Teledyne Semiconductor NPL site is also associated with the Spectra-Physics, Inc. NPL site. Investigations pertain to both cases.

The following was reported on the online EPA cumulis database:

*Teledyne Semiconductor has operated as a semiconductor manufacturer at this 1-acre site since 1962. In 1982, Teledyne reported to the California Regional Water Quality Control Board (CRWQCB) that soil and groundwater were contaminated with solvents from an underground solvent storage tank. The State inspected the site and found that contaminants had migrated north of the site and affected approximately 50 private domestic wells. Furthermore, contaminated groundwater that migrated north from another NPL site, Spectra-Physics, Inc., merged with the contaminated plume of the Teledyne site. The two firms are cleaning up the sites jointly. These sites are among the 28 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which have contaminated a common groundwater basin. Although the sites are listed separately on the NPL, the EPA intends to combine cleanup activities at some of the sites as part of an area-wide approach to the contamination. The site is located in a densely populated, urban area. Approximately 189,000 people live within a 3-mile radius of the site. The distance from the site to the nearest residence is 200 feet.*

*The parties responsible for the environmental cleanup (Potentially Responsible Parties) have been conducting soil and groundwater cleanup activities for over 30 years. Groundwater extraction and soil vapor extraction have removed thousands of pounds of VOCs from both groundwater and soil. Over the last several years, a new cleanup method was tested and evaluated to speed up the groundwater cleanup. This evaluation is known as a Revised Focused Feasibility Study (Revised FFS), and is a major milestone for the Site. EPA and the Regional Water Board are close to completing their approval of the FFS, pending public comments. Approving the Revised FFS will pave the way to officially changing the cleanup plan for the Site from groundwater extraction to the bioremediation remedy. The new method uses bioremediation - a process whereby microorganisms found naturally underground are stimulated with nutrients to clean up the contamination groundwater. This new cleanup method has greatly improved groundwater quality across the former Teledyne property and has the potential to greatly reduce the time it will take to reach the cleanup goals in the impacted areas. We will issue a public comment fact sheet to invite your comments within the next few months.*

*EPA has conducted several five-year reviews of the site's remedy. These reviews ensure that the remedies put in place protect public health and the environment, and function as intended by site decision documents. The most recent review concluded that EPA could not determine the protectiveness of the remedy until it conducts a vapor intrusion assessment.*

*Additionally, the most recent five-year review (reviews that ensure that the remedies put in place protect public health and the environment) concluded that EPA could not determine human health protectiveness of the remedy until it conducts a vapor intrusion*

assessment. There is some limited potential for VOCs in groundwater to move as vapors through soil under a building, pass through cracks and other openings in the foundation or flooring, and then enter the indoor air. This process is known as vapor intrusion. To determine if vapor intrusion is occurring at levels unacceptable to the EPA, the EPA and Regional Water Board have been working with the Potentially Responsible Parties to conduct indoor air testing in homes and businesses over the TCE plume from the Site that might be affected. The process for testing TCE in indoor air is not disruptive and involves placing a small sampling device inside a home (such as on a shelf) and underneath the building in the crawlspace and left untouched for one to two weeks. There is no cost to owners or tenants for the sampling.

The Fourth Five-Year Review was completed in Sept. 2014, concluding that the vapor intrusion indoor air investigation needs to be completed before a "protectiveness determination" can be made. The following issues and recommendations were identified in the report:

- The performance of the selected remedy in the Record of Decision, groundwater extraction and treatment, has declined and new remedial actions are being investigated.

*Recommendation – Complete a Record of Decision Amendment or prepare an Explanation of Significant Differences selecting new remedial actions and including updated institutional controls.*

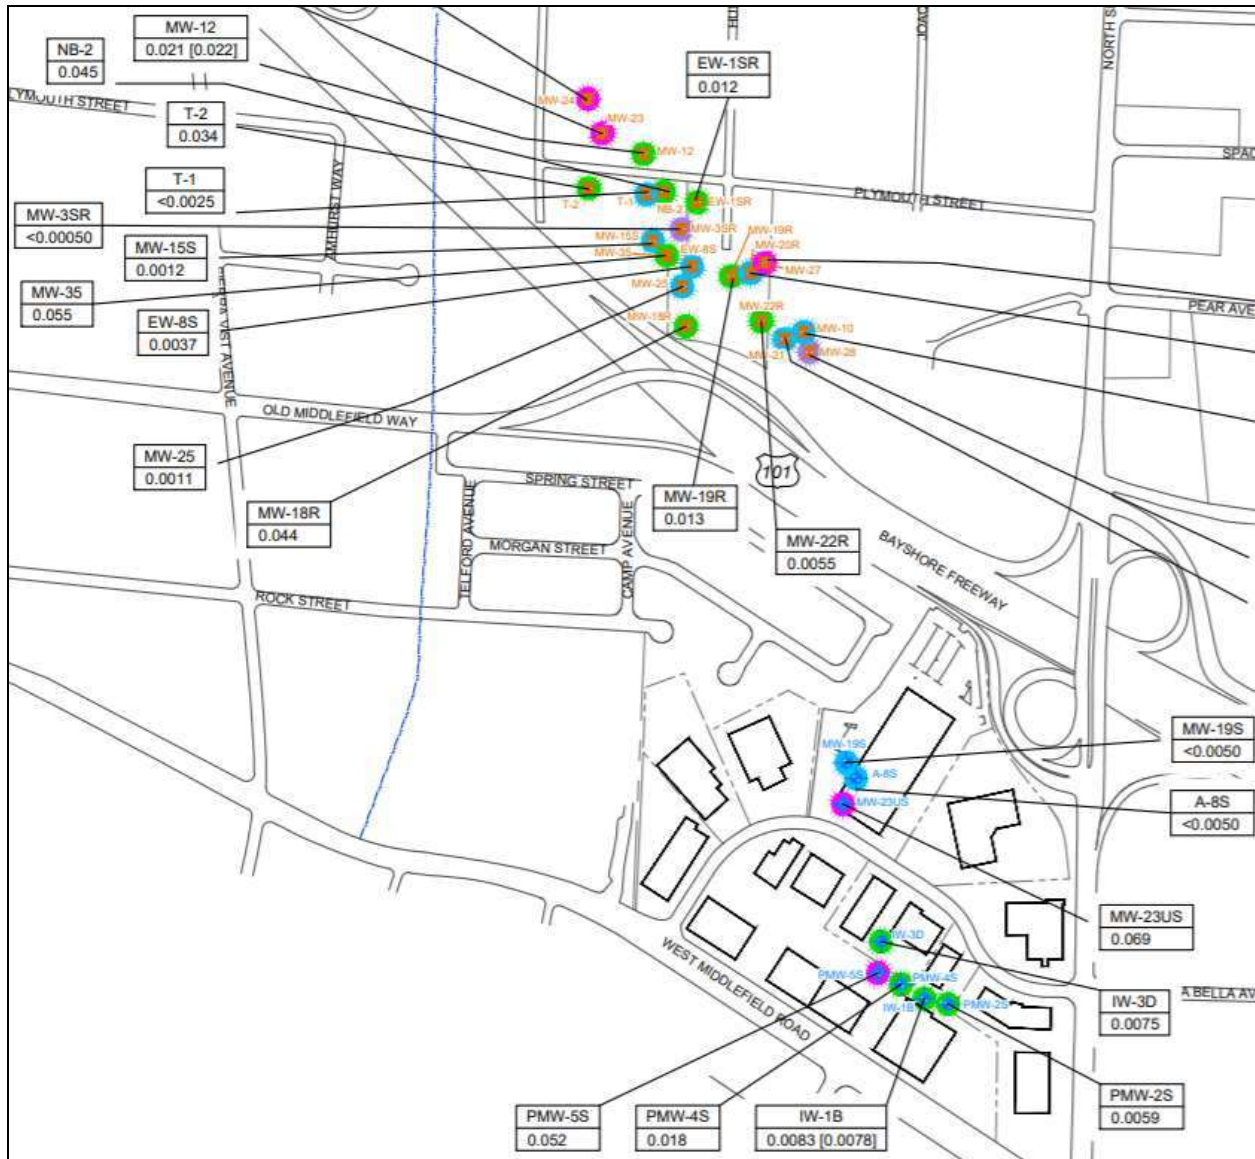

- The Five-Year Review vapor intrusion evaluation indicated that the subsurface-to-indoor air pathway is a concern at the site.

*Recommendation – Continue to monitor and provide mitigation for vapor intrusion, including step-outs to lower concentration areas of the shallow TCE groundwater plume.*

The Five-Year Review further stated the following:

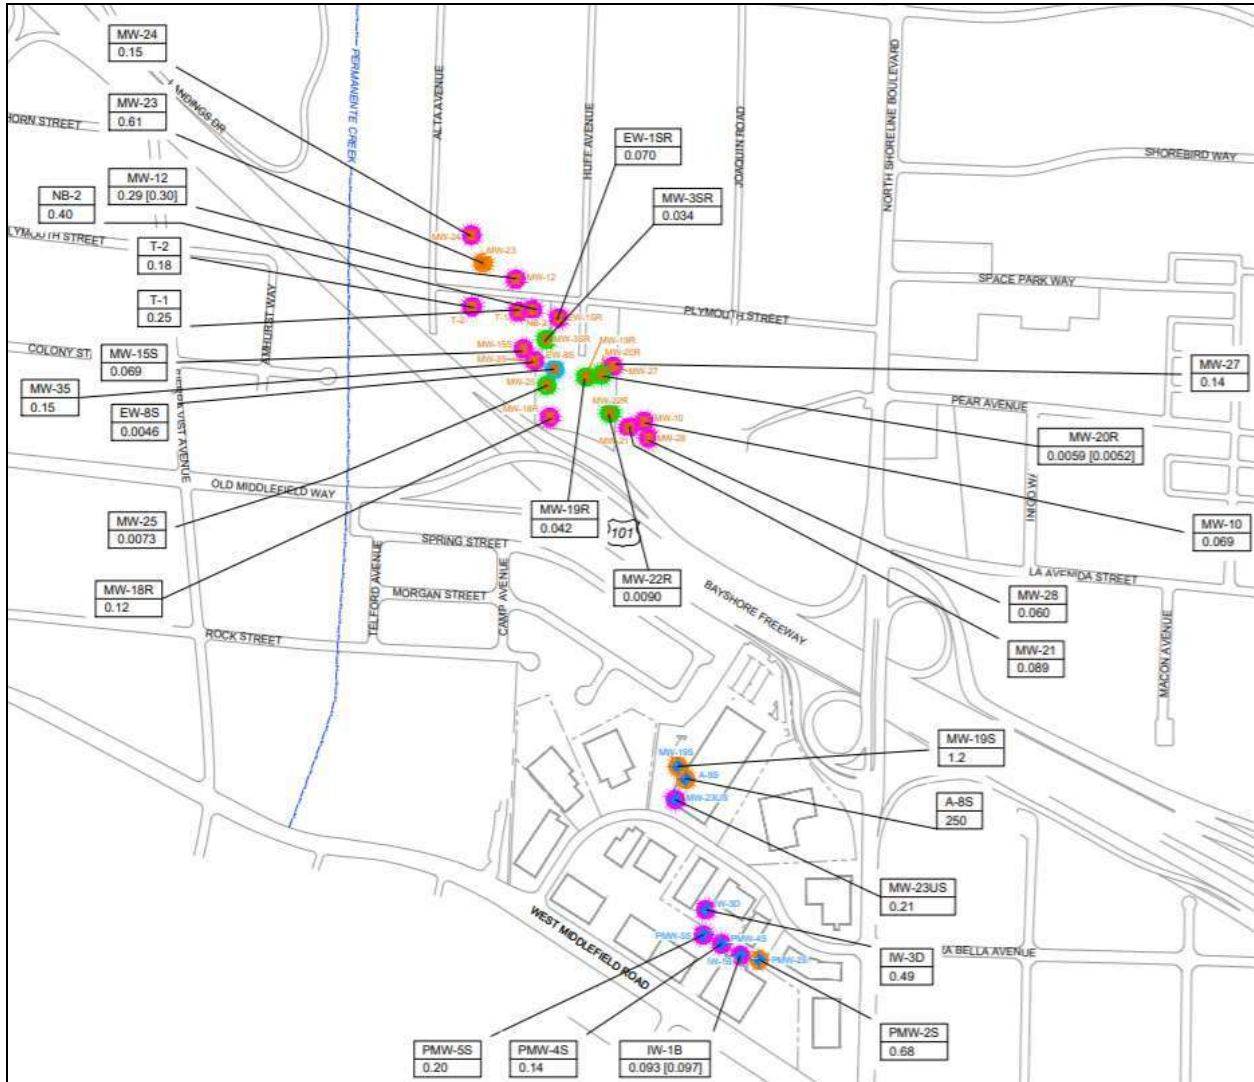

*A protectiveness determination of the remedy at the Teledyne Semiconductor and Spectra-Physics, Inc. Joint Superfund Sites cannot be made at this time until further information is obtained. Additional vapor intrusion assessments must be conducted to determine if indoor air pathways are complete. When unacceptable levels are encountered in a particular building, mitigation plans are developed and implemented to ensure that levels of volatile organic compounds (VOCs) in indoor air are protective. It is expected that these actions will take approximately two years to complete, at which time a protectiveness determination can be made. To be protective in the long-run, a new remedy should be selected due to the declining effectiveness of the existing remedy.*

The following was reported in a 2019 Groundwater Monitoring Report for the Teledyne Semiconductor site:

Shallow-Zone TCE Concentrations

Shallow-Zone Total VOC Concentrations

Additional analytical results can be reviewed via the following link:

[https://geotracker.waterboards.ca.gov/esi/uploads/geo\\_report/4573040902/SL721281224.PDF](https://geotracker.waterboards.ca.gov/esi/uploads/geo_report/4573040902/SL721281224.PDF)

Based on the above, it appears that contamination at the Teledyne Semiconductor site has not impacted the Property. Further, the Teledyne Semiconductor site is not assessed to be indicative of environmental concern to the Property based on its horizontal distance from the Property.

SPECTRA-PHYSICS INC.: This NPL site is associated with the Teledyne Semiconductor site above.

The following site history was reported on the GeoTracker database for the Spectra-Physics, Inc. site:

*The former Spectraphysics property is part of a 2-property Federal Superfund site along with the adjacent Teledyne property.*

*Within the last ten years, Responsible Parties (RPs) for the Teledyne/Spectra-Physics site completed a Monitored Natural Attenuation (MNA) study in the off-property area north of and down-gradient of the site. The MNA study concluded that natural breakdown of the chlorinated volatile organic compounds of concern is occurring naturally and at the same rate as groundwater extraction. As a result, only a few of the off-property down-gradient extraction wells are operating mainly to maintain hydraulic control of the plume. The RPs completed an extended pilot study to test the feasibility of enhanced reductive de-chlorination (ERD) and concluded that ERD is feasible with bioaugmentation of the Shallow Zone.*

*Within the last several years, the RPs detected on-property groundwater-CVOCs and higher than expected levels but under 1,000 parts per billion and are about to impelment an on-property ERD treatability study with the same recirculation technology as the the neighboring Teledyne property. When sub-slab depressurization (SSD) systems have been installed under the potentially impacted buildings, the RPs will move forward on the ERD treatability study.*

*Within the last seven years however, IA VI was evaluated in several of the on-property commercial buildings to find that IA-CVOCs were over ESLs. The RPs installed SSD systems at several of the buildings. The RPs also assertively evaluated potential IA VI in the off-property commercial North Bayshore and residential Spring Street areas to conclude that IA VI is occurring in one of the off-property commercial area buildings and in several homes in the residential area. The RPs were in the process of installing a sub-slab depressurization system in the commercial building and offered the affected residents crawl space fans to address the issue.*

Based on its horizontal distance from the Property and a review of previous environmental reports (as discussed in the Teledyne Semiconductor section above), the Spectra-Physics, Inc. site is not assessed to be indicative of environmental concern to the Property.

**JASCO CHEM CORP:** Although the EDR Radius Map Report identified this site as 0.899 miles south-southeast of the Property, it is located approximately 1.06 miles south-southeast of the Property which is outside of the minimum search radius for NPL sites. The Jasco Chem Corp site is not assessed to be indicative of environmental concern to the Property based on its horizontal distance from the Property.

**SEMS (Superfund Enterprise Management System):**

LISTING	ADDRESS	DISTANCE
PRINTEX CORPORATION	PLYMOUTH & COLONY STREETS	NE 1/8 - 1/4
TELEDYNE SEMICONDUCTOR	1300 TERRA BELLA AVENUE	E 1/4 - 1/2
SIERRA VISTA PROPERTIES	465 SIERRA VISTA WAY	SSE 1/4 - 1/2

**PRINTEX CORPORATION:** This site is discussed in the NPL section above.

**TELEDYNE SEMICONDUCTOR:** This site is discussed in the NPL section above.

**SIERRA VISTA PROPERTIES:** This site is located approximately 2,500 feet south-southeast of the Property.

The following site history was reported on the ENVIROSTOR database:

*From 1963 to 1985, property owner operated pest control company out of a residence on this site. Improper storage and handling of pesticides resulted in soil contamination. Contaminated soil was consolidated and capped beneath driveway areas of the property. The site has been redeveloped into townhomes.*

The Sierra Vista Properties site is not assessed to be indicative of environmental concern to the Property based on its horizontal distance from the Property and the lack of reported groundwater impact.

[https://www.envirostor.dtsc.ca.gov/public/deliverable\\_documents/7353498697/final%20calwest%205%20year%20review.pdf](https://www.envirostor.dtsc.ca.gov/public/deliverable_documents/7353498697/final%20calwest%205%20year%20review.pdf)

**RCRA-CORRACTS (Corrective Action Tracking System):**

LISTING	ADDRESS	DISTANCE
TELEDYNE SEMICONDUCTOR	1300 TERRA BELLA AVENUE	E 1/4 - 1/2

SPECTRA-PHYSICS INC.	1250 WEST MIDDLEFIELD WAY	SE 1/2 - 1
----------------------	---------------------------	------------

These sites are discussed in the NPL section above.

**RCRA NonGen / NLR (Resource Conservation and Recovery Act – Non-Generator):**

LISTING	ADDRESS	DISTANCE/DIRECTION
DRIVEN AUTO CARE, INC.	826 NORTH RENGSTORFF AVENUE	NNE 0 - 1/8

DRIVEN AUTO CARE, INC.: This site adjoins the Property to the north. It is identified on the GeoTracker database in association with a closed Leaking Underground Storage Tank (LUST) case under the name Alvin Silver Prop. The LUST case was opened in 1987 due to impacted “other groundwater (uses other than drinking water)” as the result of a waste oil (motor oil, hydraulic oil, and/or lubricating oil) release. Case closure was granted on March 23, 2009.

In 1987, a 550-gallon waste oil tank was removed from the Driven Auto Care, Inc. site. At the time of case closure, soil and groundwater contamination remained at the site. However, it was reported that the release from the waste oil tank did not appear to impact shallow groundwater. The groundwater contamination at the site was determined to be a result of the former fuel release at the Property. Previous groundwater monitoring wells at the Driven Auto care, Inc. site were incorporated into the groundwater monitoring program for the LUST case at the Property. In January 1997, a settlement agreement was completed between the Property (ARCO) and the north-adjacent site (Alvin Silver Prop); it was determined that ARCO would assume all corrective action and remediation at the Property and north-adjacent site. The investigations associated with the Property LUST case included areas within the Property boundaries and vicinity (primarily to the north-northwest). Refer to Section 4.1 for details regarding the LUST case at the Property which included investigations at the north-adjacent vicinity.

Based on the above, it appears that the release from the former waste oil tank at the north-adjacent site did not contribute to the contaminant plume that was associated with the fuel release at the Property. Further, groundwater flows toward the northwest, away from the Property and case closure was granted for the Driven Auto Care, Inc. site in 2009. As such, the Driven Auto Care, Inc. / Alvin Silver Prop site is not assessed to be indicative of environmental concern to the Property.

5.4 SURROUNDING SITES: STATE AGENCY LISTINGS

STATE ENVIRONMENTAL AGENCY LISTING(S)		
DATABASE	MINIMUM SEARCH DISTANCE (MILES)	PROPERTIES IDENTIFIED WITHIN SEARCH DISTANCE
State/Tribal Equivalent NPL	1.0	6
State/Tribal Equivalent CERCLIS	0.5	4
State/Tribal SWLF	0.5	0
State/Tribal Leaking Storage Tank	0.5	32 (may include duplicate listings)
State/Tribal Registered Storage Tank	Adjoining Sites	1
State/Tribal IC/EC Registries	Adjoining Sites	0
State/Tribal Voluntary Cleanup Sites	0.5	1
State/Tribal Brownfield Sites	0.5	1
State/Tribal CPS/SLIC (CA only)	0.5	11
Other State List	Adjoining Sites	2
Other Non-ASTM Listings	Adjoining Sites	3

**State/Tribal Equivalent NPL - RESPONSE:**

Listed below are the five nearest RESPONSE sites to the Property. For a complete listing, refer to the EDR Radius Map Report appended to this report.

LISTING	ADDRESS	DISTANCE
TRW/VIDAR	77 ORTEGA AVENUE	SW 1/2 - 1
PLESSEY #3	2256 MORA DRIVE	SSW 1/2 - 1
PLESSEY MICRO SCIENCE	2274 MORA DRIVE	SSW 1/2 - 1
PLESSEY #2	2251, 2257, 2283 and 2287 MORA DRIVE	SSW 1/2 - 1
SYMTRON CORP MOUNTAIN VIEW DIV	2235 MORA DRIVE	SSW 1/2 - 1

TRW/VIDAR: This RESPONSE site is located approximately 4,800 feet southwest of the Property. It is not assessed to be indicative of environmental concern to the Property based on its horizontal distance from the Property.

The remaining RESPONSE sites are not assessed to be indicative of environmental concern to the Property based on their horizontal distances from the Property. Further, with the exception of the Plessey Micro Science site, the remaining RESPONSE sites have "No Further Action" cleanup statuses.

**State/Tribal Equivalent CERCLIS - ENVIROSTOR:**

LISTING	ADDRESS	DISTANCE/DIRECTION
PRINTEX CORPORATION	PLYMOUTH & COLONY STREETS	NE 1/8 - 1/4

RAMLOR SILKSCREENING	918 INDEPENDENCE AVENUE	NW 1/4 - 1/2
MT. VIEW JONES HALL USAR	1776 OLD MIDDLE FIELD WAY	E 1/4 - 1/2
CALWEST PROPERTIES (SIERRA VISTA)	465 SIERRA VISTA AVENUE	SSE 1/4 - 1/2

PRINTEX CORPORATION: This site is discussed in the NPL section above.

CALWEST PROPERTIES (SIERRA VISTA): This site is discussed in the SEMS section above.

The remaining ENVIROSTOR sites are not assessed to be indicative of environmental concern to the Property based on their horizontal distances from the Property. Further, the Ramlor Silkscreening site has a “No Further Action” cleanup status and it is at a down / cross-gradient location with respect to the groundwater flow direction.

**State/Tribal LST (Leaking Storage Tank) – LUST (Leaking Underground Storage Tank):**

Listed below are the five nearest LUST sites to the Property. For a complete listing, refer to the EDR Radius Map Report appended to this report.

LISTING	ADDRESS	DISTANCE/DIRECTION
DRIVEN AUTO CARE, INC.	826 NORTH RENGSTORFF AVENUE	NNE 0 - 1/8
SHELL	2105 OLD MIDDLEFIELD WAY	S 0 - 1/8
AWARD SERVICES/CV MOUNTAIN VIEW	827 NORTH RENGSTORFF AVENUE	NNE 0 - 1/8
MADLEM MECHANICAL, INC.	1990 OLD MIDDLEFIELD WAY	E 0 - 1/8
RICH'S TIRE SERVICE	1950 OLD MIDDLEFIELD WAY	E 1/8 - 1/4

DRIVEN AUTO CARE, INC.: This site is discussed in the RCRA-NonGen / NLR section above.

SHELL: This site adjoins the Property to the south (approximately 80 feet south). The LUST case was opened on March 2, 1987 due to impacted “other groundwater (uses other than drinking water)” as the result of a gasoline release. Case closure was granted on June 24, 1996. Based on a review of previous environmental reports available on the GeoTracker database, contamination from this site has not impacted the Property. Further, case closure was granted in 1996, indicating that identified contamination was mitigated to a degree that the applicable governing agency no longer believed this site posed an apparent threat to the subsurface environment of the surrounding vicinity. As such, this site is not assessed to be indicative of environmental concern to the Property.

**Note:** This site is also identified on the EDR Historical Cleaner database as a dry-cleaning business from 1992 to 1997. No hazardous waste generation was reported on the HWTS database. This site is not assessed to be indicative of environmental concern to the Property in connection with the potential operation as a dry-cleaning business based on the lack of a reported release of hazardous substances to the environment at the site with regards to chlorinated solvents. Further, this site does not immediately adjoin the Property (it is separated by Old Middlefield Way).

Sources:

[https://geotracker.waterboards.ca.gov/profile\\_report.asp?global\\_id=T0608501274](https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0608501274)

[https://geotracker.waterboards.ca.gov/regulators/deliverable\\_documents/8628132700/CLOS\\_L\\_1996-06-24.pdf](https://geotracker.waterboards.ca.gov/regulators/deliverable_documents/8628132700/CLOS_L_1996-06-24.pdf)

AWARD SERVICES/CV MOUNTAIN VIEW: This case-closed LUST site is located approximately 140 feet northeast of the Property. The LUST case was opened in 1987 due to impacted “other groundwater (uses other than drinking water)” as the result of a gasoline release. Case closure was granted on November 2, 2012.

The following site history was reported on the GeoTracker database:

*Leak detection monitoring wells installed in 1986 indicated groundwater contamination. The USTs were coated with fiberglass in 1988 and subsequently tested tight. 3 months later, the USTs were removed. During removal, some product sheen was observed in the tank pit. However dissolved concentrations declined in the wells after the tanks were recoated and removed, indicating that the source of contamination had been removed. The fuel leak case was closed on 5/25/95.*

*In February 2012, a subsurface investigation was conducted for a possible real estate transaction. Soil and grab groundwater samples reported the presence of petroleum hydrocarbons. The responsible party choose to conduct additional soil removal at the site to reduce the residual contamination onsite. The case was re-opened in April 2012.*

*Soil was excavated and groundwater was extracted from the pits onsite. Excavations were backfilled with imported fill.*

Based on a review of a 2012 Groundwater Verification Sampling Report for the Award Services / CV Mountain View site, contamination from this site has not impacted the Property. Further, case closure was granted in 2012, indicating that identified contamination was mitigated to a degree that the applicable governing agency no longer believed this site posed an apparent threat to the subsurface environment of the surrounding vicinity. As such, this site is not assessed to be indicative of environmental concern to the Property.

MADLEM MECHANICAL, INC.: This case-closed LUST site is located approximately 500 feet east of the Property. The LUST case was opened in 1987 due to impacted “other groundwater (uses other than drinking water)” as the result of a gasoline release. Based on a review of previous environmental reports available on the GeoTracker database for the Madlem Mechanical, Inc. site, contamination from this site has not impacted the Property. Further, case closure was granted in 2000, indicating that identified contamination was mitigated to a degree that the applicable governing agency no longer believed this site posed an apparent threat to the subsurface environment of the surrounding vicinity. As such, this site is not assessed to be indicative of environmental concern to the Property.

Sources:

[https://geotracker.waterboards.ca.gov/profile\\_report.asp?global\\_id=T0608500860](https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0608500860)

**RICH'S TIRE SERVICE:** This site is located approximately 900 feet east of the Property. It is not assessed to be indicative of environmental concern to the Property based on its horizontal distance from the Property and its case closed regulatory status.

Source: [https://geotracker.waterboards.ca.gov/profile\\_report.asp?global\\_id=T0608501103](https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0608501103)

The remaining LUST sites are not assessed to be indicative of environmental concern to the Property based on their horizontal distances from the Property and their case closed regulatory statuses. Further, several of the sites are at a down / cross-gradient location with respect to the groundwater flow direction.

**State/Tribal List – CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites)**

Listed below are the five nearest CPS sites to the Property. For a complete listing, refer to the EDR Radius Map Report appended to this report.

LISTING	ADDRESS	DISTANCE/DIRECTION
1957 OLD MIDDLEFIELD WAY	1957 OLD MIDDLEFIELD WAY	ESE 1/8 - 1/4
PRINTEX CONCRETE	827 INDEPENDENCE AVENUE	WNW 1/8 - 1/4
CTS PRINTEX, MOUNTAIN VIEW	1911 PLYMOUTH STREET	NE 1/8 - 1/4
MIDDLEFIELD PLAZA	2454 OLD MIDDLEFIELD WAY	SW 1/4 - 1/2
TEXACO	1036 RENGSTORFF AVENUE	N 1/4 - 1/2

**1957 OLD MIDDLEFIELD WAY:** This case-closed CPS site is located approximately 850 feet southeast of the Property. It is not assessed to be indicative of environmental concern to the Property based on its horizontal distance from the Property and its case closed regulatory status.

**CTS PRINTEX, MOUNTAIN VIEW:** This site is discussed in the NPL section above.

The remaining CPS sites are not assessed to be indicative of environmental concern to the Property based on their horizontal distances from the Property. Further, the following CPS sites have case closed regulatory statuses: Printex Concrete, Middlefield Plaza, Rancar, and 2171 Landings Drive. Further, several of the sites are at a down / cross-gradient location with respect to the groundwater flow direction.

**VCP (Voluntary Cleanup Program):**

LISTING	ADDRESS	DISTANCE
CALWEST PROPERTIES (SIERRA VISTA)	465 SIERRA VISTA WAY	SSE 1/4 - 1/2

**CALWEST PROPERTIES (SIERRA VISTA):** This site is discussed in the SEMS section above.

**State/Tribal Brownfields:**

LISTING	ADDRESS	DISTANCE
MIDDLEFIELD PLAZA	2454 MIDDLEFIELD WAY	SW 1/4 - 1/2

**MIDDLEFIELD PLAZA:** This site is discussed in the CPS section above.

**State/Tribal RST (Registered Storage Tank) – HIST UST (Historical Underground Storage Tank) / SWEEPS UST (Statewide Environmental Evaluation and Planning System – Underground Storage Tank) / CA FID UST (California Facility Inventory Database Underground Storage Tank):**

LISTING	ADDRESS	DISTANCE
SAMUEL SHELL SERVICE	2105 OLD MIDDLEFIELD WAY	S 0 - 1/8

This site is discussed in the LUST section above.

**Other State Listings:**

LISTING	ADDRESS	DISTANCE/DIRECTION
DRIVEN AUTO CARE, INC. PRECISION TUNE AUTO CARE ALVIN SILVER PROPERTIES	826 NORTH RENGSTORFF AVENUE	NNE 0 - 1/8
SHELL	2105 OLD MIDDLEFIELD WAY	S 0 - 1/8

DRIVEN AUTO CARE, INC. / PRECISION TUNE AUTO CARE / ALVIN SILVER PROPERTIES: This site is discussed in the RCRA-NonGen / NLR section above.

SHELL: This site is discussed in the LUST section above.

**Other Non-ASTM List - EDR Historical Auto Stations:**

LISTING	ADDRESS	DISTANCE
LEMONS AMERICAN OIL SERVICE	799 NORTH RENGSTORFF AVENUE	SE 0 - 1/8
SALMONS SHELL SERVICE	2105 OLD MIDDLEFIELD WAY	S 0 - 1/8

LEMONS AMERICAN OIL SERVICE: The former specific location of this site is unknown since it plots on North Rengstorff Avenue (approximately 200 feet southeast of the Property). This listing may pertain to the south- or southeast-adjacent site. This site is identified on the EDR Historical Auto Stations proprietary database from 1969 to 1983 as a gas station under the names Lemon's American Oil Service and Francines Service Center. It is not identified on the HWTS database. This site is not assessed to be indicative of environmental concern to the Property based on the lack of a reported release of hazardous substances to the environment at the site. Further, this site may not adjoin the Property and based on previous environmental reports available on the GeoTracker database for the south-adjacent case-closed LUST site, contamination from this site has not impacted the Property. Based on the foregoing, the Lemons American Oil Service site is not assessed to be indicative of environmental concern to the Property.

SALMONS SHELL SERVICE: This site is discussed in the LUST section above.

**Other Non-ASTM List - EDR Historical Cleaner:**

LISTING	ADDRESS	DISTANCE
SWAN CLEANERS	2105 OLD MIDDLEFIELD WAY	S 0 - 1/8
SPARKLE CLEAN CLEANERS	2065 OLD MIDDLEFIELD WAY	ESE 0 - 1/8

SWAN CLEANERS: This site is discussed in the LUST section above.

SPARKLE CLEAN CLEANERS: This site plots to approximately 250 feet southeast of the Property. The specific location of this site is unknown; the site may adjoin the Property to the east or southeast. It is identified on the EDR Historical Cleaner database under as a dry-cleaning business in 1976. It is not identified on the HWTS database. This site is not assessed to be indicative of environmental concern to the Property based on the lack of a reported release of hazardous substances to the environment at the site. Further, this site does not immediately adjoin the Property.

**Note:** Although this business was identified at 2065 Old Middlefield Road on the EDR Radius Map Report, the correct address is 2065 Old Middlefield Way.

## 6.0 RECOMMENDATIONS AND OPINIONS

ODIC performed a search into historical usage of the Property according to the scope of work included within ASTM Standard Practice E1528-14 for *Transaction Screen Assessments (TSAs)*. As defined by ASTM Standard Practice E1528-14, the term *Potential Environmental Concern (PEC)* means the possible presence of any *hazardous substances* or *petroleum products* on a *property* under conditions that indicate the possibility of an existing release, a past release, or a threat of a release of any *hazardous substances* or *petroleum products* into structures on the *property* or into the ground, groundwater, or surface water of the *property*. The term includes *hazardous substances* or *petroleum products* even under conditions in compliance with laws. (Note that “threat of release” is generally understood to be present when *hazardous substances* or *petroleum products* are poorly managed (for example in corroded tanks or damaged containers) but the release of the contaminants has not yet occurred, and there is an opportunity to take response action to prevent a release of the contaminants.).

### **Property History Summary:**

#### Property History Summary:

Per historical aerial photographs, the Property was developed with a gas station by 1948. A canopy was visible on the southeastern portion, a building was on the western portion, and a smaller building may have also been on the northern portion at that time. These improvements remained until at least 1960. By 1968 the Property had been redeveloped; the aforementioned canopy was no longer visible and at least one building and possible canopies were on the western and northern portions. By 1980 additions were made to the building and a concrete patch was visible on the southeastern portion, indicative of the location of underground storage tanks (USTs). The facility operated as an ARCO-branded gas station and included an automotive repair shop on the central / northwestern portion. In August and September 2008, all improvements and fueling system features were removed / demolished. The Property has remained as an unpaved vacant lot since that time.

#### Closed Leaking Underground Storage Tank (LUST) Case:

On May 12, 1986, a Leaking Underground Storage Tank (LUST) case was opened due to a release of fuel from the gas station. Extensive soil and groundwater investigations and remediation activities were conducted at the Property from 1986 until 2016. In May 1989, three gasoline USTs (two 10,000-gallon tanks and one 8,000-gallon tank) were removed from the southeastern portion of the Property and were replaced with three 12,000-gallon gasoline USTs. A 280-gallon waste oil UST was also discovered and removed at that time. Approximately 700 cubic yards of soil, 150 cubic yards of pea gravel, and 14,400 gallons of groundwater were disposed of during the UST replacement activities. In 1992, an oil-water separator was removed from within the former automotive repair shop building; elevated levels of petroleum hydrocarbons were detected in soil samples collected at that time.

From August 1989 to August 2004, site investigation and remediation were conducted at the Property which included soil vapor extraction (SVE), dual phase extraction (DPE), and in-situ Submerged Oxygen Curtain (iSOC). In January 2002, approximately 20,595 gallons of hydrocarbon-impacted groundwater were extracted and disposed of. In October 2002, dispensers and related piping were removed and replaced during upgrade activities. From June 2003 to August 2004, the iSOC system was implemented. In August and September 2008, fuel dispensing operations ceased and the improvements and fueling system features were removed / demolished, including the removal of the three 12,000-gallon USTs, one 550-gallon waste oil UST, four dispensers, two hydraulic lifts, product piping, two overhead canopies, and an automotive repair shop building. In 2016, groundwater samples were collected down-gradient (to the northwest) to further delineate the methyl tertiary-butyl ether (MTBE), tertiary-butyl alcohol (TBA), and 1,2-dichloroethane (1,2-DCA) groundwater contaminant plumes. The analytical results were non-detectable to low (the detected concentrations were below the established ESLs [Environmental

Screening Levels]). Since the contaminant plume was adequately delineated and stable to decreasing, the County of Santa Clara Department of Environmental Health (SCEH) issued a "No Further Action" closure letter for the LUST case on September 7, 2017 under Site Management Requirements for remaining residual soil and groundwater contamination.

The Santa Clara County Department of Environmental Health Local Oversight Program (SCEH – LOP) provided the following Site Management Requirements in a Case Closure Summary dated February 3, 2017:

*The site is currently an undeveloped vacant lot. Residual contamination both in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as, but not limited to, site grading, excavation, or the installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of water well(s) in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures. DEH and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time.*

The following additional Site Management Requirements were provided in a September 7, 2017 "No Further Action" letter from the County of Santa Clara Department of Environmental Health (SCEH):

*Residual contamination in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. The County and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time. It should be noted that any additional or previously unidentified contamination at this site may require further investigation or cleanup.*

**Potential Environmental Concern (PEC):**

As indicated above, soil and groundwater contamination remained at the Property at the time of regulatory LUST case closure. This is a PEC pursuant to ASTM Standard Practice E1528-14.

**Recommendations:**

ODIC recommends that the Property Owner / Operator abide by the above Site Management Requirements, as well as any additional requirements as may be imposed by oversight agencies. Otherwise, ODIC recommends No Further Investigation at this time.

## 7.0 REFERENCES

During the preparation of this Report, a number of sources were contacted, individuals were interviewed, and various state, county or local municipal agencies may have been consulted. Individuals listed without phone numbers were contacted in person or by e-mail. Reference sources for site-specific information, hydrogeologic setting, technical data, historical research data, environmental reports and other records used are identified throughout this Report in corresponding sections. Any additional reference sources not cited in the preceding sections in this Report are disclosed in this section.

<b>AREAS OF EXPERTISE</b>		
<ul style="list-style-type: none"> <li>Project management</li> <li>Environmental Site Assessment and Consulting (Phase I ESA and Transaction Screen Assessment)</li> <li>Regulatory Agency Compliance and Permitting</li> <li>Phase II Subsurface Investigation</li> </ul>	<ul style="list-style-type: none"> <li>Environmental Loss Consulting</li> <li>Environmental Risk Evaluation</li> <li>Liability Risk Management and Risk Reduction</li> <li>Mold/Water Intrusion Management Consulting Services</li> </ul>	
<b>SUMMARY OF EXPERIENCE</b>		
Possessing over 28 years of industry experience, Mr. Miller has prepared and reviewed thousands of Transaction Screen Assessments, Phase I Environmental Site Assessments, and Phase II Subsurface Investigation Assessments. With an extensive background in environmental risk assessment, chemistry, biology, physics, and statistical analysis, Mr. Miller has, in the past, provided diverse environmental consulting and risk assessment services to American International Group (AIG), one of the ten largest companies in the U.S. Other relevant experience includes evaluating environmental liability, general liability, product liability, and fleet liability loss exposures. He also oversaw account portfolios comprised of a broad spectrum of manufacturing facilities, HUDMAP, land developers, pharmaceutical firms, property management firms, and contractors. In his current role as a Senior Environmental Professional, Mr. Miller conducts and reviews environmental site assessment reports, conducts QA/QC, generates recommendations regarding liability risk management and risk reduction, provides mold/water intrusion management consulting services, and develops and implements presentations and training programs.		

## SUMMARY OF QUALIFICATIONS

**MARY OSBORNE, EP**  
**SENIOR ENVIRONMENTAL CONSULTANT / PROJECT MANAGER**

EDUCATION	YEARS EXPERIENCE	
	TOTAL	WITH CURRENT FIRM
B.S., Biological Oceanography	25+	11
CURRENT PROFESSIONAL DESIGNATION/REGISTRATION		
Environmental Professional §312.10, 40CFR312		
OTHER PROFESSIONAL QUALIFICATIONS (Publications, Organizations, Training, Awards, Affiliations, etc.)		
Nevada Certified Environmental Manager #2185 OSHA 40-Hour Health and Safety Training		
AREAS OF EXPERTISE		
<ul style="list-style-type: none"> <li>• Environmental Site Assessment and Consulting (Phase I ESA and Transaction Screen Assessment)</li> <li>• Regulatory Agency Compliance and Permitting</li> <li>• Phase II Subsurface Investigation</li> </ul>	<ul style="list-style-type: none"> <li>• RCRA and non-RCRA Treatment, Storage, and Disposal Facility (TSDF) auditing</li> <li>• Multi-media (hazardous waste, hazardous materials, wastewater, stormwater, etc.) compliance audits and regulatory compliance assessments</li> <li>• Portfolio Management</li> </ul>	
SUMMARY OF EXPERIENCE		
<p>Possessing over 25+ years of industry experience, Ms. Osborne has prepared and collectively reviewed thousands of Transaction Screen Assessments, Phase I Environmental Site Assessments, and Phase II Subsurface Investigation Assessments. With an extensive background in regulatory compliance, permitting, site assessment, and auditing, Ms. Osborne has completed hundreds of environmental compliance audits for RCRA and non-RCRA generator and TSDF facilities; and assisted with environmental permitting and regulatory requirements for industry, including air quality permits, wastewater discharge permits, and hazardous materials handling and storage. Other relevant project experience pertains to the management and performance of Property Condition Assessments (PCAs), merger and acquisition audits for industrial and commercial facilities, and environmental due diligence portfolio management.</p>

Attached please find our PHASE II ENVIRONMENTAL SITE ASSESSMENT, ("the Report") for the above-mentioned Subject Property. This report has been prepared by Odic for the Client under the professional supervision of the principal and/or senior staff whose seal(s) and signatures appear hereon. Neither Odic, nor any staff member assigned to this investigation has any interest or contemplated interest, financial or otherwise, in the subject or surrounding properties, or in any entity which owns, leases, or occupies the subject or surrounding properties, and has no personal bias with respect to the parties involved.

The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession, and in accordance with generally accepted practices of other consultants currently practicing in the same locality under similar conditions. No other representation, expressed or implied, and no warranty or guarantee is included or intended. The Report speaks only as of its date, in the absence of a specific written update of the Report, signed and delivered by Odic.

There are no intended or unintended third party beneficiaries to this Report, unless specifically named. Odic is an independent contractor, not an employee of either the issuer or the borrower, and its compensation was not based on the findings or recommendations made in the Report or on the closing of any business transaction. Thank you for the opportunity to prepare this Report, and assist you with this project. Please call us if you have any questions or if we may be of further assistance.

By signing below, Odic declares that, to the best of our professional knowledge and belief, the undersigned meet the definition of an Environmental Professional as defined in §312.10 of 40 CFR 312 and have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property.

Respectfully Submitted,

Gabriele Baader, P.G.

Senior Environmental Geologist

# CERTIFICATE OF LIABILITY INSURANCE

## 1.0 LIMITATIONS

The opinion expressed herein is based on the information collected during our study, our present understanding of the site conditions and our professional judgment in light of such information at the time of preparation of this report. No warranty is either expressed, implied or made as to the conclusions, advice and recommendations offered in this report.

Our investigation was performed using the degree of care and skill ordinarily exercised, under similar circumstances, by reputable Engineers and Geologists practicing in this or similar localities. The samples taken and used for testing and the observations made are believed representative of the study area; however, soil and/or groundwater samples can vary significantly between borings, test pits and/or test sample locations.

The interpretations and conclusions contained in this report are based on the results of laboratory tests and analysis intended to detect the presence and concentration of certain chemical constituents in samples taken from the subject property (hereinafter referred to as the Property). Such testing and analysis have been conducted by an independent laboratory which is certified by the State to conduct such test analyses and which used methodologies mandated by the Environmental Protection Agency or the State Department of Health Services in the performance of such test and analyses. The consultant has no involvement in, or control over, such testing and analysis, and has no non-laboratory means of confirming the accuracy of such laboratory results. The consultant, therefore, disclaims any responsibility for any inaccuracy in such laboratory results.

The findings, conclusions and recommendations in this report are considered valid as of the present date. However, changes in the conditions of the property can occur with the passage of time, due to natural process or the works of man on this or adjacent properties. In addition, changes in applicable or appropriate standards may occur. Accordingly, portions of this report may be invalidated wholly or partially by the changes beyond our control.

### INDEPENDENT CONTRACTOR STATUS

In performing Services under the scope of work contained in this Report and agreed Contract/Agreement, ODIC shall operate as, and have the status of, an independent contractor.

### PROFESSIONAL RESPONSIBILITY

ODIC shall perform the Services consistent with that level of care and skill ordinarily exercised by other professional consultants under similar circumstances at the time the Services are performed. Client hereby acknowledges that whenever a Project involves hazardous or toxic materials there are certain inherent risk factors involved (such as limitations on laboratory analytical methods, variations in subsurface conditions, economic loss to Client or property owner, a potential obligation for disclosure to regulatory agencies, a potential for a decrease in market value of real property, and the like) that may adversely affect the results of the Project, even though the Services are performed with such skill and care. No other representation, warranty, or guarantee, express or implied, is included or intended by the scope of work contained in this Report and agreed Contract/Agreement.

### LIMITATION OF LIABILITY

Client agrees that the liability of ODIC and all officers, employees, agents and subcontractors of ODIC (the "ODIC Parties") to Client for all claims, suits, arbitration, or other proceedings arising from the performance of the Services under the scope of work contained in this Report and agreed Contract/Agreement, including, but not limited to, ODIC's professional negligence, errors and omissions, or other professional acts, shall be limited to the professional and general liability coverage amount. ODIC Parties are not liable for any indirect, incidental or consequential damages, lost profits, lost revenue, or loss of property value based on the Services provided as part of the scope of work contained in this Report and agreed Contract/Agreement.

## HAZARDOUS OR UNSAFE CONDITIONS

Client has fully informed ODIC of the type, quantity and location of any hazardous, toxic, or dangerous materials or unsafe or unhealthy conditions that may affect the Project which Client knows to exist. If Client hereafter becomes aware of any such information, Client shall immediately inform ODIC. The discovery of unanticipated hazardous, toxic, or dangerous materials or unsafe or unhealthy conditions constitutes a Changed Condition that may justify a revision to Services and/or Fees. If ODIC takes emergency measures to protect the health and safety of ODIC Parties and/or the public or to prevent undue harm to the environment, the Fee shall be appropriately adjusted to compensate ODIC for the cost of such emergency measures.

## RIGHT OF ENTRY

Client agrees to grant or arrange permission for right of entry from time to time by ODIC Parties upon all real property included in the Project Site(s) where the Services are to be performed, whether or not the Project Site(s) is owned by Client. Client recognizes that the use of investigative equipment and practice may unavoidably alter conditions or affect the environment at the existing Project Site(s). ODIC will operate with reasonable care to minimize damage to the Project Site(s). The cost of repairing such damage will be borne by Client, and is not included in the Fee unless otherwise stated.

## UNDERGROUND UTILITIES

Client shall correctly designate on plans to be furnished to ODIC, the location of all subsurface structures, such as pipes, tanks, cables and utilities within the property lines of the Project Site(s) and shall be responsible for any damage inadvertently caused by ODIC to any such structure or utility not so designated.

## REPORTING AND DISPOSAL REQUIREMENTS

Nothing contained in this Report shall be construed or interpreted as requiring ODIC to assume the status of an owner, operator, generator, person who arranges for disposal, transportation, storage, treatment, or a disposal facility as those terms appear within any federal or state statute governing the treatment, storage and disposal of hazardous substances or wastes. Client shall be solely responsible for notifying all appropriate federal, state, municipal, or other governmental agencies of the existence of any hazardous, toxic, or dangerous materials located on or in the Project Site(s) or discovered during the performance of the scope of work contained in this Report and agreed Contract/Agreement. Client agrees that ODIC is not responsible for disclosures, notifications, or reports that may be required to be made to third parties. Client shall be responsible for making and paying for all necessary arrangements to lawfully store, treat, recycle, dispose of, or otherwise handle hazardous or toxic substances or wastes, including but not limited to, samples and cuttings, to be handled in connection with the Project.

## SAMPLES AND CUTTINGS

ODIC shall not be obligated to preserve samples such as oil, rock, water, building materials, fluids and other samples obtained from the Project Site(s) for a longer period of time than a laboratory will store the samples for no additional fee. If sample storage is requested by Client beyond standard laboratory time, Client will be responsible for any storage fee for those samples.

## HEALTH AND SAFETY

ODIC shall not be responsible for the health and safety of any persons other than ODIC Parties, nor shall it have any responsibility for the operations, procedures, or practices of persons or entities other than ODIC Parties.

## 2.0 INTRODUCTION

### 2.1 PROJECT INFORMATION

Project Information	
Item	
ODIC Project Number	6377064-ESAI
Property Address	2110 Old Middlefield Road, Mountain View, Santa Clara County, CA 94043
Property Name	Not applicable
Pre-Drilling Activity	October 13, 2022
Drilling & Sampling Date	October 28, 2022
ODIC's Field Technician	Lita Freeman, Environmental Consultant California Licensed Professional Geologist
Report Author	Lita Freeman, Environmental Consultant California Licensed Professional Geologist
QA/QC Reviewer and Responsible Professional	Gabriele Baader, California Licensed Professional Geologist
Property Location	The Property is on the northwest corner of the intersection of Old Middlefield Road and Rengstorff Avenue.
General Setting	The general setting is a mixed-use area of commercial and residential properties.
Property Type	The Property is a 0.32-acre rectangular-shaped unpaved vacant lot. The Property was formerly occupied by a gas station and an automotive repair shop until 2008 when all improvements including the fueling system features were removed.

### 2.2 OBJECTIVE

The objective of this limited subsurface investigation was to evaluate current subsurface conditions in select on-site areas by performing a soil vapor, soil, and groundwater investigation at the Property to determine if the subsurface of the Property is impacted with contaminants of concern (COCs), including total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs) including fuel oxygenates, California Code of Regulations Title 22 Metals, and organochlorine pesticides (OCPs) from the historical occupancy of the Property by a gas station and an automotive repair shop.

This limited Phase II Environmental Site Assessment is a confirmation investigation to assess soil vapor, soils, and groundwater conditions beneath the Property and is intended for screening purposes only. This report presents the results of the limited soil vapor, soil, and groundwater investigation. VTS Drilling (VTS) of Hayward, California was hired as ODIC's drilling contractor to perform the field activities under ODIC's supervision and oversight for this investigation.

### 2.3 SCOPE OF WORK

ODIC performed the following summary scope of work to accomplish the previously described objective. Refer to *Section 4.0 Field Investigation* for a detailed discussion of investigation activities.

Pre-Field Activities:

- Visited the Property to verify existing conditions and pre-mark boring locations and notified Underground Service Alert (USA) of the intent to excavate or drill so that subsurface utilities would be marked to avoid potential damage.
- Prepared a site-specific Health and Safety Plan (Level D Health & Safety according to OSHA CFR 1910.120), Boring Plan and Work Schedule, and notified the property owner of the proposed work schedule.
- A soil boring permit was not required for the proposed scope of work.

Field Activities:

- Conducted a private utility locator survey and geophysical survey to identify subsurface structures and clear proposed boring locations of potential subsurface utilities and piping and attempt to locate anomalies indicative of former USTs.
- Advanced four soil borings (SB1 through SB4) using a limited-access direct-push drilling rig to a maximum depth of 15 feet below ground surface (bgs). Soil samples were collected at depths of 5 feet, 10 feet, and 15 feet from soil borings SB1 through SB4 for soil classification purposes.
- Recorded pertinent information such as soil lithology, physical condition of the collected soil samples, moisture content, visual and olfactory description of the collected soil samples, and the time when each sample was collected.
- Submitted selected soil samples collected at a depth of 5 feet bgs from soil borings SB1 through SB4 for analysis of TPH as gasoline-range organics (GRO), as diesel-range organics (DRO) and as motor oil-range organics (MORO) by U.S. Environmental Protection Agency (EPA) Method 8015B, VOCs including fuel oxygenates by EPA Method 8260B/5035, Title 22 Metals by EPA Method 6010B/7470A, and OCPs by EPA Method 8081A. Soil samples were submitted to SunStar Laboratories, Inc. (SunStar) of Lake Forest, California, a State-certified laboratory, using chain-of-custody protocols.
- Installed two temporary soil vapor wells (SV1 and SV2) at a depth of 5 feet using a limited-access direct-push drilling rig.
- A total of two soil vapor samples were collected from the soil vapor probe locations SV1 and SV2 at a depth of 5 feet bgs. During sampling, leak testing using a tracer gas was conducted to test the integrity of the sampling train. A plastic shroud was placed over the temporary soil vapor wells and the sampling train during the collection of the soil vapor samples. To help ensure that the tracer gas was present around each sampling connection, the shroud had a port for inserting the tip of a meter used to measure the tracer gas concentration and ensure that the tracer gas atmosphere was maintained at a somewhat constant rate during sample collection. Helium was used as the tracer gas during this project. After the atmosphere inside the shroud stabilized, the helium concentration inside the shroud was maintained at approximately 20 percent throughout the sampling event. The sampling canisters for soil vapor samples SV1-5' and SV2-5' were shut off after reaching an internal vacuum of approximately -20 inches mercury (Hg) and -24 inches Hg, respectively (rather than the typical final internal vacuum of approximately -5 inches Hg from an initial internal vacuum of approximately -30 inches Hg), because downhole backpressure prevented collection of additional soil vapor. A duplicate soil vapor sample was to be collected during the sampling event; however, a duplicate soil vapor sample was not collected because downhole backpressure prevented collection of additional soil vapor.
- A total of two soil vapor samples were submitted for analysis of VOCs by EPA Method TO-15, GRO by EPA Methods TO-3/TO14, and the fixed gases oxygen, carbon dioxide, methane, and helium by gas chromatography (GC) by SunStar..

- Submitted a groundwater sample collected from soil borings SB1 through SB4 to Sunstar for analysis of TPH as GRO, as DRO, and as MORO by EPA Method 8015B, and VOCs including fuel oxygenates by EPA Method 8260B. Groundwater was encountered at depths of approximately 7.5 feet to 8.5 feet bgs in the soil borings.

Refer to *Figure 2 – Site Boring Location Map*. Site photographs are presented in *Appendix A*.

Data Evaluation and Reporting:

- Evaluated data, prepared summary tables, maps, figures and other pertinent data evaluations, documented the methods used, and combined the findings into this limited subsurface investigation report.
- Analytical results are presented in *Tables 1 through 6*. The general location of the Property is depicted on *Figure 1 – Site Location Map*; boring locations are shown on *Figure 2 – Site Boring Location Map*. Appendices include: *Appendix A – Site Photographs*, *Appendix B – GPR/Utility Locator Report*, *Appendix C – Boring Logs*, and *Appendix D – Laboratory Analytical Reports*.

### 3.0 SUBJECT PROPERTY CHARACTERISTICS

#### 3.1 SITE DESCRIPTION

The Property is a 0.32-acre rectangular-shaped unpaved, vacant lot. The Property was formerly occupied by a gas station and an automotive repair shop until 2008 when all improvements including the fueling system features were removed.

Refer to *Figure 1 – Site Location Map* and *Figure 2 – Site Boring Location Map* for details on the Property location, configuration, and features.

#### 3.2 BACKGROUND HISTORY

Transaction Screen Assessment, by ODIC, August 2022:

ODIC conducted a Phase I Environmental Site Assessment (ESA) for the Property located at 2110 Old Middlefield Road, Mountain View, CA 94043 dated January 3, 2022. The following is a summary of the findings of the referenced assessment.

##### *Property History Summary*

According to historical aerial photographs it appears that the Property was developed with a gas station by 1939. An apparent canopy was visible on the southeastern portion of the site, a building was on the western portion, and a smaller building may have also been on the northern portion at that time. These improvements remained until at least 1960. By 1963 the Property had been redeveloped; the aforementioned canopy was no longer visible and at least one building and possible canopies were on the western and northern portions. By 1980 additions were made to the building and a concrete patch was visible on the southeastern portion of the site, indicative of the location of underground storage tanks (USTs). The facility operated as an ARCO-branded gas station and included an automotive repair shop on the central / northwestern portion. In August and September 2008, all improvements and fueling system features were removed. The Property has remained as an unpaved vacant lot since that time.

##### Closed Leaking Underground Storage Tank Case:

On May 12, 1986, a Leaking Underground Storage Tank (LUST) case was opened due to a release of fuel from the gas station. Extensive soil and groundwater investigations and remediation activities were conducted at the Property from 1986 until 2016. In May 1989, three gasoline USTs (two 10,000-gallon tanks and one 8,000-gallon tank) were removed from the southeastern portion of the Property and were replaced with three 12,000-gallon gasoline USTs. A 280-gallon waste oil UST was also discovered and removed at that time. Approximately 700 cubic yards of soil, 150 cubic yards of pea gravel, and 14,400 gallons of groundwater were removed and disposed of during the UST replacement activities. In 1992, an oil-water separator was removed from within the former automotive repair shop building; elevated levels of petroleum hydrocarbons were detected in soil samples collected at that time.

From August 1989 to August 2004, site investigation and remediation were conducted at the Property which included soil vapor extraction (SVE), dual phase extraction (DPE), and in-situ Submerged Oxygen Curtain (iSOC). A total of 20,595 gallons of hydrocarbon-impacted groundwater were extracted in January 2002. In October 2002 dispensers and fuel piping were removed and replaced during upgrade activities. From June 2003 to August 2004, the iSOC system was implemented. In August and September 2008 fuel dispensing operations ceased and the improvements and fueling system features were removed, including the removal of the three 12,000-gallon USTs, one 550-gallon waste oil UST, four dispensers, two hydraulic lifts, product piping, two overhead canopies, and an automotive repair shop building. In a 2014 Low-Threat Underground Storage Tank Case Closure Report, the rationale was detailed for Low-

Threat UST Case Closure qualifications including the Low-Threat Closure Policy (LTCP) for Vapor Intrusion to Indoor Air. Per a letter issued by the County of Santa Clara Department of Environmental Health (SCEH) on August 26, 2015, no additional work to assess potential vapor intrusion was required. In 2016 groundwater samples were collected down-gradient (to the northwest) to further delineate the methyl tertiary-butyl ether (MTBE), tertiary-butyl alcohol (TBA), and 1,2-dichloroethane (1,2-DCA) groundwater contaminant plumes. The analytical results were not detectable to low levels of these contaminants (the detected concentrations were below the established Environmental Screening Levels (ESLs) by the San Francisco Bay Regional Water Quality Control Board (January 2019). Since the contaminant plume was adequately delineated and contaminant concentrations were found to be stable to decreasing, the SCEH issued a “No Further Action” closure letter for the LUST case on September 7, 2017, under site management requirements for remaining residual soil and groundwater contamination.

The SCEH Local Oversight Program (LOP) provided the following site management requirements in a Case Closure Summary dated February 3, 2017:

*The site is currently an undeveloped vacant lot. Residual contamination both in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as, but not limited to, site grading, excavation, or the installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of water well(s) in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures. DEH (Department of Environmental Health) and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time.*

The following additional site management requirements were stated in a September 7, 2017 “No Further Action” letter from the SCEH:

*Residual contamination in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. The County and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time. It should be noted that any additional or previously unidentified contamination at this site may require further investigation or cleanup.*

#### Recognized Environmental Concerns

ODIC did not identify any Recognized Environmental Conditions (RECs) in connection with the Property.

This scope of work has been developed at the request of Mr. Salkhi for the City of Mountain View, California.

#### Recommendations

Based on the foregoing, ODIC recommended a limited subsurface investigation to determine the absence or presence of contamination with TPH, VOCs (including fuel oxygenates), Title 22 Metals, and OCPs including soil, soil vapor, and groundwater sampling from the areas of potential environmental concern where the presence of contamination may exist.

### 3.3 PHYSICAL SETTING

The Property's physical location was researched employing a United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle (Quad) Map relevant to the Property. The USGS 7.5 Minute Quad Map has an approximate scale of 1 inch to 2,000 feet and may show physical features with environmental significance such as wetlands, water bodies, roadways, mines, and buildings. The elevation of the Property is approximately 20 feet above mean sea level. There is a regional downslope to the north.

#### GEOLOGY

Geologic and hydrogeologic information was obtained from site assessment documents prepared for the Property:

*Based on previous investigations, lithology beneath the Site is predominantly composed of alluvial deposits with alternating fine- and coarse-grained soil types. Silt, silty clay, and clay are the primary soils ranging from roughly near surface to beneath 8 and 14 feet below ground surface (bgs), however some boring logs identify fine grained soils extending to 17 feet bgs. These sediments are underlain by a coarse-grained unit consisting of clayey sands through silty gravels that varies in thickness extending from between 8 and 20 feet bgs. Fine grained soils are again the predominant soil type from approximately 20 to 44 feet bgs, the depth to which the majority of soil borings have been advanced. A small lens of silty to well graded sand was reported between approximately 34 and 36 feet bgs, but appears to be discontinuous. Lithologic information provided by an off-site boring, indicates that large lenses of coarse and fine-grained soils alternate at this location in the following order: silty sand, gravelly sand, and sandy gravel from approximately 27 to 45 feet bgs, clay from approximately 45 to 54 feet bgs, gravelly sand from approximately 54 to 95 feet bgs, silty to sandy clay from approximately 95 to 123 feet bgs, and a dense clay unit from 125 to 172 feet bgs. Gravelly sand zones approximately two feet thick were identified at 123 and 152 feet bgs and a sandy gravel horizon was identified at approximately 172 feet bgs to the total depth explored of 177 feet bgs.*

*The Site is located in the Santa Clara Subbasin of the Santa Clara Valley Groundwater Basin. The Santa Clara Subbasin occupies a structural trough parallel to the northwest trending Coast Ranges and is bounded on the east by the Diablo Range and on the west by the Santa Cruz Mountains. The water bearing formation include Pliocene to Holocene age deposits of unconsolidated to semi-consolidated gravel, sand, silt, and clay. Historically, groundwater levels decreased in the subbasin due to local pumping, which caused degradation of the aquifer adjacent to the San Francisco Bay from salt-water intrusion. Artificial recharge is currently conducted within the subbasin.*

*Two water-bearing zones were encountered in an off-site deep boring, from approximately 10 to 45 feet bgs and from 54 to 95 feet bgs, with a moderately dense clay unit separating the two zones. Beneath the second permeable zone, two thick dense, fine-grained (predominantly clay) units were encountered at approximately 95 and 127 feet bgs. A deeper water bearing zone was reported at approximately 172 feet bgs and artesian conditions were encountered at 173 feet bgs.*

According to information obtained from a 2015 groundwater monitoring report on the State's GeoTracker website, the depth to water was between 6.6 to 8.78 feet below top of casing. The groundwater flow direction was toward the northwest at a gradient of 0.004 feet per foot.

[https://documents.geotracker.waterboards.ca.gov/regulators/deliverable\\_documents/6098269402/SCM\\_R\\_2012-07-05.pdf](https://documents.geotracker.waterboards.ca.gov/regulators/deliverable_documents/6098269402/SCM_R_2012-07-05.pdf)

[https://documents.geotracker.waterboards.ca.gov/esi/uploads/geo\\_report/1256135940/T0608500170.PDF](https://documents.geotracker.waterboards.ca.gov/esi/uploads/geo_report/1256135940/T0608500170.PDF)

Lithologic units observed in on-site borings during this investigation are relatively consistent across the Property and are composed of fill material (clayey gravel and gravelly clay) from the surface to a depth of approximately 8.5 feet bgs in boring SB1 with gravel below the fill to the maximum depth of 15 feet bgs explored in this boring and clayey gravel and gravelly clay, gravel, silty clay with and without trace gravel and sand, and silty sand with trace gravel from the surface to the maximum depth of 15 feet bgs explored in borings SB2 through SB4.

During this investigation, groundwater was encountered at approximately 7.5 feet to 8.5 feet bgs in the soil borings, and subsequently stabilized at approximately 8.30 feet to 13.6 feet bgs.

While groundwater flow direction at the Property cannot be confirmed without survey measurement of static groundwater level at triangulated points, it is expected to flow in the direction of surface topographical contour, or toward the wetland or nearest water body or discharge basin (percolation channel).

It is important to note that groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

## 4.0 FIELD INVESTIGATION

### 4.1 FIELD INVESTIGATION

Prior to field investigation activities, the site representative and the property owner were notified of the work schedule and locations where drilling would be performed. ODIC performed a site visit to verify the existing conditions and pre-mark boring locations and notified USA of the intent to excavate or drill so that subsurface utilities would be marked to avoid potential damage. A site-specific Health and Safety Plan was prepared, and a field safety meeting was held among field personnel and drilling crew prior to the start of drilling on October 13 and 28, 2022. Health and Safety Plan and USA notification documents are available upon request.

A drilling permit was not required for the proposed scope of work.

### 4.2 GEOPHYSICAL SURVEY/PRIVATE UTILITY LOCATOR

On October 13, 2022, a geophysical survey and a private utility locator survey was performed at the Property by On Target Precision Locating (OTP Locating) of Union City, California.

Under the supervision and direction of ODIC, OTP Locating's technician used the MALA Ground Penetrating Radar (GPR) system, RDSPX7000 Electro-Magnetic Transmitter and Receiver, and Schonstedt GA-52Cx Magnetometer to clear and mark-out any conductive and non-conductive underground utilities for the proposed soil/soil vapor boring locations on-site. All findings were delineated with color coded marking paint.

The MALA GPR unit with 400MHz antenna sends a dielectric signal into the earth, which registers with the density of the soil that it is penetrating. Any other material of varied density will either speed up the signal, creating an inverted hyperbola, or slow it down, leaving a hyperbola trail. This is similar to a rock in a creek. The water bends around the rock leaving a tail wake. The GPR signal is not bending, however; it is sending back a continuous signal of the curvature of the anomaly it encounters.

The RDSPX7000 Electro-Magnetic Transmitter and Receiver has inductive and conductive capability to locate buried conductive underground utilities, such as copper, steel and galvanized metal water pipes, electrical lines, power lines, tele-communication lines, metal and steel gas lines, and metal and steel pipelines. The RDSPX7000 features include multiple active frequencies to delineate actively the depth and location of the target utility or pipe. The RDSPX7000 receiver has a peak and null gain feature that pinpoints the target utility or pipe in congested areas. The audible signal to noise feature makes it easy for the locating technician to determine accurately the location of a directly connected utility or pipe by sound.

The Schonstedt GA-52Cx Magnetic Locator detects iron and steel objects underground, such as USTs, buried oil wells and buried metal monitoring well lids. The Schonstedt GA-52Cx Magnetometer provides audio detection signals with frequencies that vary with gradient field intensity. The signals peak in frequency when the locator's tip is held directly over the target.

No subsurface anomalies indicating USTs or other buried structures or obstructions were identified by OTP Locating in the areas investigated. OTP Locating did not identify any conflicts near the proposed boring locations.

OTP Locating's report with the results of the geophysical survey/utility locating survey is included in *Appendix B*.

#### 4.3 SOIL BORING PERMIT

A soil boring permit was not required for the proposed scope of work.

#### 4.4 SOIL VAPOR SAMPLING

On October 28, 2022, under the oversight and supervision of ODIC, VTS installed two temporary soil vapor wells (SV1 and SV2) using a limited-access direct-push rig.

At each soil vapor sampling location SV1 and SV2 (*Figure 2 – Site Boring Location Map*), a stainless-steel probe was advanced to a depth of 5.5 feet bgs using a direct-push drilling unit. Flexible tubing was connected to a steel vapor tip coupled in an airtight seal to the end of the drive probe and the steel vapor tip was set at the target depth of 5 feet bgs at each soil vapor sampling location. The annular space around the tubing was filled with sand (approximately 1 foot of sand and 0.5 feet of dry bentonite) and sealed with hydrated bentonite to the surface to prevent leakage of ambient air into the soil vapor sample. The time of seal placement at each location was documented in the field notes. The soil vapor wells were left in place for at least 2 hours before collecting the soil vapor samples.

Soil vapor probe installation and sampling were conducted in general accordance with the ASTM E1903-11 *Standard Practice for Environmental Site Assessments: Phase II Environmental Site Assessment Process*, and the Department of Toxic Substances Control Board (DTSC)'s *Advisory for Active Soil Gas Investigations* dated July 2015 and DTSC's *Final Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air* (Vapor Intrusion Guidance) dated October 2011.

Shut-in test, leak test, purging, sampling, and analysis methods were performed as described below and in general compliance with DTSC's *Advisory for Active Soil Gas Investigations* dated July 2015.

Prior to sampling, the tubing was purged of approximately three well volumes using a pump and manifold supplied by Sunstar. After purging was complete, the Summa canister was connected to the manifold and the valve to the Summa canister was opened, thereby placing a vacuum in the tubing and drawing the soil vapor sample into the Summa canister.

A leak test was performed using a leak detection compound (tracer gas) to evaluate possible ambient air intrusion into the Summa canister during the soil gas sampling. The leak detection compound that was used during this project was helium. The leak test consisted of placing a plastic shroud over the temporary soil vapor well and the sampling train during the collection of the soil vapor sample. To help ensure that the tracer gas was present around each sampling connection, the shroud had a port for inserting the tip of a meter used to measure the tracer gas concentration and ensure that the tracer gas atmosphere was maintained at a somewhat constant rate during sample collection. After the atmosphere inside the shroud stabilized, the helium concentration inside the shroud was maintained at above 20 percent throughout the sampling event.

The sampling canisters for soil vapor samples SV1-5' and SV2-5' were shut off after reaching an internal vacuum of approximately -20 inches mercury (Hg) and -24 inches Hg, respectively (rather than the typical final internal vacuum of approximately -5 inches Hg from an initial internal vacuum of approximately -30 inches Hg), because downhole backpressure prevented collection of additional soil vapor. A duplicate soil vapor sample was to be collected during the sampling event; however, a duplicate soil vapor sample was not collected because downhole backpressure prevented collection of additional soil vapor.

The canisters were packed securely for shipment to SunStar under chain-of-custody documentation.

#### 4.5 SOIL SAMPLING

On October 28, 2002, VTS collected soil samples from soil borings SB1 through SB4 at depths of 5 feet, 10 feet, and 15 feet bgs.

Soil samples were collected in acetate liners with the direct push drilling unit sampler that measures 5 feet long by 1.5 inches in diameter and is capable of recovering discrete samples from specified locations. The liner for the direct-push drilling unit sampler is a thin-walled tube that fits inside the bore sample stainless steel probe and facilitates retrieval of the sample and may be used for storage when applicable. Each direct push drilling unit sampler liner was cut using a hack saw. The ends of each liner were capped with Teflon® tape and plastic caps. No headspace was present in the tube once the sample was collected and the tube capped at each end.

Soil samples to be analyzed for VOCs by EPA Method 8260B were collected by EPA Method 5035.

Prior to selecting the sample interval to be used for preservation, the soil in the acetate liner was visually inspected for discoloration, monitored for odors, classified according to the Unified Soil Classification System, placed in a sealable plastic bag, and field-screened with a photoionization detector (PID). ODIC's field technician monitored soil samples for evidence of odor and discoloration and recorded PID readings to evaluate the presence of elevated volatile organics concentrations. The field data were recorded on the field log. Soil boring logs are included in *Appendix C*.

The collected samples were labeled with the boring/sample number. The sample number designation was the boring number followed by the depth the sample was collected in feet bgs. Soil samples were then packed on ice to minimize potential volatilization prior to delivery to the laboratory. Collected samples were placed into Ziploc bags, and stored in an ice-chilled cooler at approximately 4 degrees Celsius and shipped within 24 hours of sample collection to SunStar, an off-site, California State-certified laboratory for analysis. EPA-approved chain-of-custody records were maintained to track the possession of samples from the time they were collected in the field until the time they were analyzed. Care was taken throughout to avoid contamination of both the inside and the outside of the sample container and its contents.

#### 4.6 GROUNDWATER SAMPLING

A grab groundwater sample was collected on October 28, 2002, from soil borings SB1 through SB4 by installing a temporary 1-inch diameter PVC well screen into the completed soil boring and allowing groundwater to flow into the casing and stabilize. Once stabilized, the grab groundwater sample was collected using a disposable bailer. Laboratory-supplied containers were filled, labeled, and placed in an ice-cooled chest.

The groundwater sample containers were labeled with the groundwater number associated with the boring. Care was taken throughout to avoid contamination of both the inside and the outside of the sample container and its contents.

The collected groundwater samples were preserved in an ice-cooled chest to maintain a sample preservation temperature of approximately 4 degrees Celsius and shipped for analysis to Sunstar. EPA-approved chain-of-custody records were maintained with the samples to track the possession of the samples from the time they were collected in the field until the time they were analyzed by the laboratory.

#### 4.7 LABORATORY ANALYSIS

Soil vapor samples SV1 and SV2 collected at a depth of 5 feet bgs were analyzed for VOCs including fuel oxygenates by EPA Method TO-15, GRO by EPA Methods TO-3/TO-14, and the fixed gases oxygen, carbon dioxide, methane, and helium by GC by SunStar.

One selected soil sample collected from each soil boring SB1 through SB4 at a depth of 5 feet was submitted to SunStar for analysis of TPH as GRO, as DRO and as MORO by EPA Method 8015B; VOCs including fuel oxygenates by EPA Method 8260B/5035, Title 22 Metals by EPA Method 6010B/7470A, and OCPs by EPA Method 8081A.

A groundwater sample was collected from each soil boring SB1 through SB4 and submitted to SunStar for analysis of TPH as GRO, as DRO and as MORO by EPA Method 8015B and VOCs including fuel oxygenates by EPA Method 8260B.

Laboratory analytical results are presented in Sections 5.4 through 5.6. The soil vapor, soil, and groundwater laboratory analytical reports are presented in *Appendix D*.

#### 4.8 BACKFILL

Upon completion of soil vapor, soil, and groundwater sampling activities, the vapor sample tubing and PVC casing were extracted from the boreholes, where installed. Each borehole was then backfilled with a bentonite mixture and restored to pre-drilling condition via applying patching materials.

One 55-gallon drum of investigation-derived waste (IDW) containing soil cuttings was labeled and left on the Property.

## 5.0 FINDINGS AND RESULTS

### 5.1 SUBSURFACE CONDITIONS

- Groundwater was encountered at depths of approximately 7.5 feet to 8.5 feet bgs in the soil borings. At the time of groundwater sampling, stabilized groundwater was measured at depths of 8.30 feet bgs in soil boring SB1 to 13.6 feet bgs in soil boring SB4.
- Field indications (staining, odor, and elevated PID readings) of impact from VOCs and/or petroleum hydrocarbons were not noted in the soil borings. PID readings were below 5 parts per million volume (ppmv) except in the soil samples from the 9.5- to 10-foot depth interval in soil borings SB2 through SB4 which had PID readings of 60.9 ppmv (SB3-10') to 94.2 ppmv (SB4-10'). PID readings are noted on the boring logs (*Appendix C*).
- Collected soil samples from soil borings consisted primarily of fill material (clayey gravel and gravelly clay) from the surface to a depth of approximately 8.5 feet bgs in boring SB1 with gravel below the fill to the maximum depth of 15 feet bgs explored in this boring. Clayey gravel and gravelly clay, gravel, silty clay with and without trace gravel and sand, and silty sand with trace gravel from the surface to the maximum depth of 15 feet bgs explored was encountered in borings SB2 through SB4. Refer to soil boring logs in *Appendix C* for further details.

### 5.2 EVALUATION CRITERIA

Soil vapor, soil, and groundwater testing analytical data was compared to the potentially applicable criteria listed below:

Soil vapor analytical results were compared to the potentially applicable criteria listed below.

- SFB RWQCB (2019). San Francisco Bay Regional Water Quality Control Board (SFB RWQCB) *2019 Tier 1 Environmental Screening Levels Summary* January 2019 Revision 2.

Soil analytical results were compared to the potentially applicable criteria listed below.

- SFB RWQCB (2019). San Francisco Bay Regional Water Quality Control Board (SFB RWQCB) *2019 Tier 1 Environmental Screening Levels Summary* January 2019 Revision 2.

Groundwater analytical results were compared to the potentially applicable criteria listed below.

- SFB RWQCB (2019). San Francisco Bay Regional Water Quality Control Board (SFB RWQCB) *2019 Tier 1 Environmental Screening Levels Summary* January 2019 Revision 2.
- CEPA SWRCB (2018). California Environmental Protection Agency State Water Resources Control Board (CEPA SWRCB) Maximum Contaminant Levels (MCLs). January 10, 2018.

Supplemental comparison criteria are identified as applicable.

### 5.3 SAMPLING ANALYTICAL RESULTS

Analytical testing results are summarized below and presented in:

- *Table 1 – Soil Vapor Analytical Results for TPH-GRO and VOCs;*
- *Table 2 – Soil Vapor Analytical Results for Fixed Gases;*
- *Table 3 – Soil Analytical Results for TPH and VOCs;*
- *Table 4 – Soil Analytical Results for Metals;*
- *Table 5 – Soil Analytical Results for Pesticides; and*
- *Table 6 – Groundwater Analytical Results for TPH and VOCs.*

The laboratory analytical reports of the samples are included in *Appendix D*.

### 5.4 ANALYTICAL RESULTS OF SOIL VAPOR SAMPLES

Two soil vapor samples (SV1 and SV2) were collected from a depth of 5 feet bgs.

The soil vapor samples were analyzed by Sunstar for VOCs by EPA Method TO-15, TPH as GRO (C6-C12) by EPA Methods TO-3/TO-14, and the fixed gases oxygen, carbon dioxide, methane, and helium by GC. Refer to *Tables 1 and 2* for a summary of the results.

#### VOCs and GRO

Refer to *Table 1* for a summary of the results. The following is a summary of the detections of select analytes (select analytes include TPH as GRO, benzene, toluene, ethylbenzene and xylenes (BTEX), tetrachloroethene (PCE) and breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), and vinyl chloride] and any additional analytes with a detection or method detection limit above commercial/industrial criteria:

- TPH as GRO was detected in each sample at concentrations of 15,300 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ; SV1-5') and 23,000  $\mu\text{g}/\text{m}^3$  (SV2-5').
- Benzene was detected in each sample at concentrations of 26  $\mu\text{g}/\text{m}^3$  (estimated concentration in SV1-5') and 150  $\mu\text{g}/\text{m}^3$  (SV2-5').
- Toluene was detected in each sample at concentrations of 50  $\mu\text{g}/\text{m}^3$  (estimated concentration in SV1-5') and 100  $\mu\text{g}/\text{m}^3$  (SV2-5').
- m,p-Xylenes was detected in one sample at an estimated concentration of 36  $\mu\text{g}/\text{m}^3$  (SV1-5').
- Methylene chloride was detected in each sample at concentrations of 56  $\mu\text{g}/\text{m}^3$  (estimated concentration in SV1-5') and 160  $\mu\text{g}/\text{m}^3$  (SV2-5').
- Ethylbenzene, o-Xylenes, PCE, TCE, cis-1,2-DCE, trans-1,2-DCE, and other VOCs were not detected in the soil vapor samples above their respective laboratory reporting limit (RL), which are below their respective commercial/industrial ESL criteria.
- Vinyl chloride was not detected in the soil vapor samples above its' laboratory RL, which is above both its' Tier 1 ESL criteria and commercial/industrial ESL criteria.

Samples shown with estimated concentrations have detections between the laboratory method detection limit (MDL) and the laboratory RL, which are defined as j-flagged values and which cannot be accurately quantified.

#### Fixed Gases

Refer to *Table 2* for a summary of the results. The following is a summary of the results for fixed gases methane, carbon dioxide, and oxygen. Methane, carbon dioxide, and oxygen are used as indicator parameters for monitored natural attenuation (MNA).

- Methane was not detected in the soil vapor samples at concentrations at or above the RLs of 0.38  $\mu\text{g}/\text{m}^3$  (SV1-5') and 0.50  $\mu\text{g}/\text{m}^3$  (SV2-5').
- Carbon dioxide was detected in each sample at estimated concentrations of 0.49  $\mu\text{g}/\text{m}^3$  (SV1-5') and 0.55  $\mu\text{g}/\text{m}^3$  (SV2-5').
- Oxygen was detected in each sample at concentrations of 18.5  $\mu\text{g}/\text{m}^3$  (SV1-5') and 17.4  $\mu\text{g}/\text{m}^3$  (SV2-5').

#### Leak Check Compound

The leak check compound helium was not detected in the soil vapor samples at concentrations at or above its laboratory RLs of 0.53  $\mu\text{g}/\text{m}^3$  (SV1-5') and 0.70  $\mu\text{g}/\text{m}^3$  (SV2-5').

### 5.5 ANALYTICAL RESULTS OF SOIL SAMPLES

A total of four soil samples collected at a depth of 5 feet bgs from each soil boring SB1 through SB4 were analyzed for TPH as GRO, as DRO, and as MORO by EPA Method 8015B, VOCs including fuel oxygenates by EPA Method 8260B/5035, Title 22 Metals by EPA Method 6010B/7470A, and OCPs by EPA Method 8081A by SunStar. Refer to *Tables 3, 4, and 5* for a summary of the results.

#### Petroleum Hydrocarbons

Refer to *Table 3* for a summary of the results. The following is a summary of the detections for TPH:

- TPH-DRO was detected in one sample at a concentration of 24 milligrams per kilogram (mg/kg; SB3-5').
- TPH-MORO was detected in two samples at concentrations ranging from 23 mg/kg (SB1-5') to 48 mg/kg (SB3-5').
- TPH-GRO was not detected above its' laboratory RL for any of the samples analyzed.

#### VOCs

Refer to *Table 3* for a summary of the results. The following is a summary of the detections for select VOCs (select analytes include BTEX, PCE and breakdown products [TCE, cis-1,2-DCE, trans-1,2-DCE, and vinyl chloride] and additional analytes with a detection or laboratory reporting limit above commercial/industrial criteria):

- Benzene was detected in two samples at concentrations ranging from 0.0032 mg/kg (SB1-5') to 0.0059 mg/kg (SB2-5').
- Toluene was detected in one sample at a concentration of 0.0025 mg/kg (SB2-5').

- PCE and breakdown products and other select VOC analytes were not detected above their respective laboratory RL for any of the samples analyzed.

#### Title 22 Metals

Refer to *Table 4* for a summary of the results. Concentrations of metals detected above their respective laboratory RLs in the soil samples analyzed were limited to the following:

- Arsenic was detected in one soil sample tested at a concentration of 5.7 mg/kg (SB2-5').
- Barium was detected in each soil sample tested at concentrations ranging from 54 mg/kg in sample SB4-5' to 210 mg/kg in sample SB3-5'.
- Chromium (reported as total chromium) was detected in each soil sample tested at concentrations ranging from 8.6 mg/kg in sample SB1-5' to 13 mg/kg in sample SB2-5'.
- Cobalt was detected in each soil sample tested at concentrations ranging from 3.2 mg/kg in sample SB4-5' to 8.1 mg/kg in sample SB3-5'.
- Copper was detected in each soil sample tested at concentrations ranging from 4.1 mg/kg in sample SB4-5' to 58 mg/kg in sample SB1-5'.
- Lead was detected in one soil sample tested at a concentration of 4.2 mg/kg in sample SB2-5'.
- Nickel was detected in each soil sample tested at concentrations ranging from 3.0 mg/kg in sample SB1-5' to 9.2 mg/kg in sample SB2-5'.
- Vanadium was detected in each soil sample tested at concentrations ranging from 15 mg/kg in sample SB4-5' to 43 mg/kg in sample SB3-5'.
- Zinc was detected in each soil sample tested at concentrations ranging from 15 mg/kg in sample SB4-5' to 120 mg/kg in sample SB1-5'.

Concentrations of metals not detected above their respective laboratory RLs in the soil samples analyzed were limited to antimony, beryllium, cadmium, mercury, molybdenum, selenium, silver, and thallium.

#### Pesticides

Refer to *Table 5* for a summary of the results.

OCPs were detected above their laboratory RLs for any of the samples analyzed.

### 5.6 ANALYTICAL RESULTS OF GROUNDWATER SAMPLES

Groundwater samples were collected from soil borings SB1 through SB4 and were analyzed for TPH as GRO, as DRO, and as MORO by EPA Method 8015B, and VOCs including fuel oxygenates by EPA Method 8260B/5-35 by SunStar.

Refer to *Table 6* for a summary of the results. The following is a summary of the detections for select analytes (select analytes include TPH, BTEX, PCE and breakdown products [TCE, cis-1,2-DCE, trans-1,2-DCE, and vinyl chloride] and additional analytes with a laboratory RL above commercial/industrial criteria):

- TPH-GRO was detected in two samples at concentrations ranging from 240 micrograms per liter ( $\mu\text{g/L}$ ; SB1-GW) to 460  $\mu\text{g/L}$  (SB2-GW).
- TPH-DRO was detected in two samples at concentrations ranging from 100  $\mu\text{g/L}$  (SB1-GW) to 110  $\mu\text{g/L}$  (SB4-GW).

- TPH-MORO and VOCs were not detected above their respective laboratory RL for any of the samples analyzed.

## 5.7 DISCUSSION OF SOIL VAPOR SCREENING LEVELS

### VOCs

Concentrations of VOCs detected above their respective laboratory RL in the soil vapor samples are presented in *Table 1 – Soil Vapor Analytical Results for TPH-GRO and VOCs*. Results and/or laboratory RLs above Tier 1 ESLs, flagged with orange highlighting in *Table 1*, and results above Subslab/Soil Gas Vapor Intrusion: Carcinogenic Human Health Risk Levels commercial/industrial land use ESL (commercial/industrial land use ESL), flagged with blue highlighting in *Table 1*, are discussed below. The Tier 1 ESLs and commercial/industrial land use ESLs are presented in *Table 1* (green highlighted area).

Use of the commercial/industrial land use ESL is appropriate based on the planned commercial use of the Property. The Tier 1 ESLs are typically based upon residential land use. The ESLs are used to evaluate if detected soil vapor compounds represent the potential for infiltration into building structures at unacceptable concentrations. The ESLs are determined by applying a very conservative default attenuation factor of 0.03 for sub-slab soil gas and “near-source” exterior soil gas (EPA OSWER, 2015). The ESLs were calculated by dividing indoor air screening levels by the default attenuation factor for specific target chemicals of concern.

As shown in *Table 1*, various select VOCs were detected in the soil vapor samples. The reported concentrations are below their respective Tier 1 ESL and/or commercial/industrial land use ESL (refer to *Table 1*) except as discussed below.

- Benzene was detected in each sample at concentrations of 26  $\mu\text{g}/\text{m}^3$  (estimated concentration in SV1-5') and 150  $\mu\text{g}/\text{m}^3$  (SV2-5'). Each sample result was above the Tier 1 ESL of 3.2  $\mu\text{g}/\text{m}^3$  and the commercial/industrial land use ESL of 14  $\mu\text{g}/\text{m}^3$ .
- Methylene chloride was detected in each sample at concentrations of 56  $\mu\text{g}/\text{m}^3$  (estimated concentration in SV1-5') and 160  $\mu\text{g}/\text{m}^3$  (SV2-5'). Each sample result was above the Tier 1 ESL of 34  $\mu\text{g}/\text{m}^3$  but below the commercial/industrial land use ESL of 410  $\mu\text{g}/\text{m}^3$ .

As shown in *Table 1*, PCE and the PCE-related VOCs and degradation products TCE, cis-1,2-DCE, trans-1,2- DCE, and vinyl chloride, were not detected in the soil vapor samples at concentrations at or above their respective laboratory RL. The laboratory RL for these VOCs is below their respective Tier 1 ESL and/or commercial/industrial land use ESL (refer to *Table 1*) except PCE and vinyl chloride. The laboratory RL of 19  $\mu\text{g}/\text{m}^3$  for PCE is above its' Tier 1 ESL but below its' commercial/industrial land use ESL. The laboratory RL of 9.6  $\mu\text{g}/\text{m}^3$  for vinyl chloride is above its' Tier 1 ESL and commercial/industrial land use ESL.

### Fixed Gases

Analytical results for fixed gases are presented in *Table 2 – Soil Vapor Analytical Results for Fixed Gases*. As shown in *Table 2*, fixed gases were reported as follows:

- Methane was not detected in the soil vapor samples at concentrations at or above the lab RLs of 0.38  $\mu\text{g}/\text{m}^3$  (SV1-5') and 0.50  $\mu\text{g}/\text{m}^3$  (SV2-5').
- Carbon dioxide was detected in each sample at estimated concentrations of 0.49  $\mu\text{g}/\text{m}^3$  (SV1-5') and 0.55  $\mu\text{g}/\text{m}^3$  (SV2-5').
- Oxygen was detected in each sample at concentrations of 18.5  $\mu\text{g}/\text{m}^3$  (SV1-5') and 17.4  $\mu\text{g}/\text{m}^3$  (SV2-5').

Low levels of methane and carbon dioxide indicate that biodegradation is likely not occurring and low oxygen levels indicate that conditions are appropriate for anaerobic activity. An enriched oxygen level is an indication that soil conditions are appropriate for aerobic biodegradation.

#### Leak Check Compound

The leak check compound helium was not detected in the soil vapor samples at concentrations at or above the laboratory RL of 0.53 µg/m<sup>3</sup> to 0.70 µg/m<sup>3</sup>.

### 5.8 DISCUSSION OF SOIL SCREENING LEVELS

#### Petroleum Hydrocarbons

Concentrations of petroleum hydrocarbons detected above their respective laboratory RL in the soil samples are presented in *Table 3 – Soil Analytical Results for TPH and VOCs*. Results and/or laboratory RLs above Tier 1 ESL values (if any), flagged with orange highlighting in *Table 3*, and results and/or laboratory RLs above commercial/industrial land use ESL values (if any), flagged with blue highlighting in *Table 3*, are discussed below. Use of the commercial/industrial land use ESL is appropriate based on the current commercial use of the Property. The Tier 1 ESLs and commercial/industrial land use ESLs are presented in *Table 3* (green highlighted area).

As shown in *Table 3*, concentrations of TPH as DRO and as MORO reported in the soil samples are below their respective Tier 1 ESL and commercial/industrial land use ESL.

TPH as GRO was not detected in the soil samples with the laboratory RLs of 0.16 mg/kg to 0.21 mg/kg below the Tier 1 ESL of 100 mg/kg and commercial/industrial land use ESL of 2,000 mg/kg (refer to *Table 3*).

#### VOCs

Concentrations of VOCs detected above their respective laboratory RL in the soil samples are presented in *Table 3 – Soil Analytical Results for TPH and VOCs*. Results and/or laboratory RLs above Tier 1 ESL values (if any), flagged with orange highlighting in *Table 3*, and results and/or laboratory RLs above commercial/industrial land use ESL values (if any), flagged with blue highlighting in *Table 3*, are discussed below. Use of the commercial/industrial land use ESL is appropriate based on the current commercial use of the Property. The Tier 1 ESLs and commercial/industrial land use ESLs are presented in *Table 3* (green highlighted area).

As shown in *Table 3*, concentrations of detected VOCs in the soil samples are below their respective Tier 1 ESL and commercial/industrial land use ESL.

Vinyl chloride was not detected in the soil samples with the laboratory RLs of 0.0019 mg/kg and 0.0025 mg/kg above the Tier 1 ESL of 0.0015 mg/kg but below the commercial/industrial land use ESL of 0.15 mg/kg (refer to *Table 3*).

#### Title 22 Metals in Soil

As shown in *Table 4*, various metals were detected in the soil samples. The reported concentrations and/or the laboratory RL for the detected metals are below their respective Tier 1 ESL and/or commercial/industrial land use ESL (refer to *Table 3*) except as discussed below.

- Arsenic was reported in one sample at a concentration of 5.7 mg/kg. This concentration is above the Tier 1 ESL value of 0.067 mg/kg, ESL for direct exposure human health risk in commercial/industrial land use of 0.31 mg/kg, and ESL for direct exposure human health risk for construction worker of 0.98 mg/kg. The reported concentration is within the naturally occurring

background level of up to 12 mg/kg for arsenic. Arsenic's laboratory RL of 5.0 mg/kg for three samples is above the Tier 1 ESL of 0.067 mg/kg, ESL for direct exposure human health risk in commercial/industrial land use of 0.31 mg/kg, and ESL for direct exposure human health risk for construction worker of 0.98 mg/kg. The laboratory RLs are within the naturally occurring background levels of up to 12 mg/kg for arsenic.

- Vanadium was detected in each soil sample at concentrations of 15 mg/kg to 43 mg/kg. Three of these concentrations are above vanadium's Tier 1 ESL of 18 mg/kg (ESL for terrestrial habitat levels) but below the ESL for direct exposure human health risk in commercial/industrial land use of 5,800 mg/kg and the ESL for direct exposure human health risk for construction worker of 470 mg/kg.

Concentrations of metals not detected above their respective laboratory RLs in the soil samples analyzed were limited to antimony, beryllium, cadmium, mercury, molybdenum, selenium, silver, and thallium (refer to Table 4). The following metals had RLs above their screening levels:

- Cadmium's laboratory RL of 2.0 mg/kg for each sample is above the Tier 1 ESL of 1.9 mg/kg but below the ESL for direct exposure human health risk in commercial/industrial land use of 1,100 mg/kg and ESL for direct exposure human health risk for construction worker of 51 mg/kg.
- Selenium's laboratory RL of 5.0 mg/kg for each sample is above the Tier 1 ESL of 2.4 mg/kg but below the ESL for direct exposure human health risk in commercial/industrial land use of 5,800 mg/kg and ESL for direct exposure human health risk for construction worker of 1,700 mg/kg.
- Thallium's laboratory RL of 5.0 mg/kg for each sample is above the Tier 1 ESL of 0.78 mg/kg but below the ESL for commercial/industrial land use of 12 mg/kg and ESL for direct exposure human health risk for construction worker of 3.5 mg/kg. Naturally occurring levels for thallium are up to 1.1 mg/kg but thallium is not typically detected in California soils.

### OCPs

As shown in Table 5, OCPs were not detected in the soil samples. The laboratory RLs are below their respective Tier 1 ESL and/or commercial/industrial land use ESL (refer to Table 5).

### 5.9 DISCUSSION OF GROUNDWATER SCREENING LEVELS

The results of TPH as GRO, as DRO and as MORO and VOC analyses of the groundwater samples are presented in Table 6 – *Groundwater Analytical Results for TPH and VOCs*. Results and/or laboratory RLs above Tier 1 ESL values (if any), flagged with orange highlighting in Table 6, and results and/or laboratory RLs above commercial/industrial land use ESL values (if any), flagged with blue highlighting in Table 6, are discussed below. Use of the commercial/industrial land use ESL is appropriate based on the current commercial use of the Property. The Tier 1 ESLs for the petroleum hydrocarbons in groundwater are based on the Odor Nuisance Levels in Drinking Water for residential land use. The Tier 1 ESLs and commercial/industrial land use ESLs are presented in Table 6 (green highlighted area).

As shown in Table 6, TPH as GRO and as DRO were detected in groundwater samples. The reported concentrations are below their respective Tier 1 ESL and/or commercial/industrial land use ESL (refer to Table 6).

TPH as MORO was not detected in the groundwater samples. ESLs have not been established for TPH as MORO (refer to Table 6).

No VOCs were detected in the groundwater samples. As shown in Table 6, benzene, PCE, and the PCE-related VOCs and degradation products TCE, cis-1,2-DCE, trans-1,2-DCE, and vinyl chloride, were not detected in the groundwater samples at concentrations at or above their respective laboratory RL. The

laboratory RL for these VOCs is below their respective Tier 1 ESL and/or commercial/industrial land use ESL (refer to *Table 6*) except as discussed below.

- Benzene was not detected in the groundwater samples at concentrations at or above the laboratory RL of 0.50 µg/l. The laboratory RL is above its Tier 1 ESL of 0.42 µg/l but below its groundwater vapor intrusion human health for commercial/industrial land use ESL of 1.8 µg/l and its California MCL of 1.0 µg/l.
- Vinyl chloride was not detected in the groundwater sample at a concentration at or above the laboratory RL of 0.50 µg/l. The laboratory RL is above its Tier 1 ESL of 0.0086 µg/l and its groundwater vapor intrusion human health for commercial/industrial land use ESL of 0.14 µg/l, but is equal to its California MCL of 0.50 µg/l.

## 6.0 CONCLUSIONS

### 6.1 SOIL VAPOR CONDITIONS

VOCs were detected above their respective laboratory RL in the soil vapor samples analyzed (samples SV1-5' and SV2-5'). The fuel constituent benzene was detected at concentrations above the commercial/industrial land use screening levels in each sample, as detailed below. In addition, vinyl chloride's laboratory RL ( $9.6 \mu\text{g}/\text{m}^3$ ) for the soil vapor samples analyzed (samples SV1-5' and SV2-5') is above the commercial/industrial land use ESL.

Benzene was detected in each sample at concentrations of  $26 \mu\text{g}/\text{m}^3$  (estimated concentration in SV1-5') and  $150 \mu\text{g}/\text{m}^3$  (SV2-5'). Each sample result was above the commercial/industrial land use ESL value of  $14 \mu\text{g}/\text{m}^3$ .

Vinyl chloride was not detected in the soil vapor samples at concentrations at or above the laboratory RL which is above the commercial/industrial land use ESL.

In summary, the highest concentration ( $150 \mu\text{g}/\text{m}^3$ ) of benzene in soil vapor was reported in sample SV2-5', and was the only VOC detection that exceeded the commercial/industrial land use ESL. The benzene concentration ( $26 \mu\text{g}/\text{m}^3$ ) reported in sample SV1-5' is also above the commercial/industrial land use scenario ESL. The laboratory RL ( $9.6 \mu\text{g}/\text{m}^3$ ) for vinyl chloride is above the commercial/industrial land use ESL.

ODIC conducted a cursory risk assessment using the maximum detections of those VOCs that exceeded their respective commercial/industrial land use ESL in soil vapor collected at 5 feet as well as those VOCs with laboratory RLs above their respective commercial/industrial land use ESL and applying the conservative attenuation factor of 0.03 to calculate the theoretical concentrations of the applicable VOCs in the indoor air and then applied the commercial use exposure parameters. The results of the risk assessment are summarized below.

Using the maximum detection of benzene ( $150 \mu\text{g}/\text{m}^3$  reported in soil vapor collected at a depth of 5 feet) and vinyl chloride's laboratory RL ( $9.6 \mu\text{g}/\text{m}^3$  for soil vapor collected at a depth of 5 feet) and applying the conservative attenuation factor of 0.03 to calculate the theoretical concentrations of benzene and vinyl chloride's in the indoor air and then applying the commercial use exposure parameters provided the results of this assessment which indicated that the calculated cumulative incremental lifetime cancer risk (ILCR) from exposure to the highest detected concentration of these VOCs in soil vapor at 5 feet bgs is at  $1.25\text{E}-5$  which is slightly above the cancer risk threshold of  $1\text{E}-5$  for the commercial/industrial land use scenario and the calculated cumulative non-cancer hazard index is 0.343 which is below the non-cancer hazard threshold of 1.0 for the commercial/industrial land use scenario. It should be noted that if only the maximum detection of benzene is used to calculate the cancer risk, the cancer risk is calculated to  $1.06\text{E}-5$ . The concentration of vinyl chloride could be significantly lower than the laboratory RL.

The benzene detections in soil vapor samples SV1-5' and SV2-5' located in the north-central portion of the Property (in the reported area of the proposed food mart building) are above the applicable commercial/industrial land use ESL. The cancer risk is slightly above the commercial/industrial threshold but the non-cancer hazard risk from exposure is below the commercial/industrial thresholds which suggests that there is a minimal potential risk of vapor intrusion into the indoor air space of the proposed on-site building that could adversely impact the health of commercial workers.

ODIC noted that TCE was not detected in the soil vapor samples at concentrations at or above the laboratory RL of  $8.7 \mu\text{g}/\text{m}^3$  which is below the Short-Term Action Levels for TCE Subslab/Soil Gas Trigger Level of  $270 \mu\text{g}/\text{m}^3$  indicating that expedited indoor air sampling would not be necessary if a structure was present on the Property.

ODIC noted that low levels of methane and carbon dioxide were reported in soil vapor samples indicating that biodegradation is likely not occurring and low oxygen levels indicate that conditions are appropriate for anaerobic activity. An enriched oxygen level is an indication that soil conditions are appropriate for aerobic biodegradation.

## 6.2 SOIL CONDITIONS

TPH as GRO was not detected in the soil samples analyzed at concentrations above their respective laboratory RL. Of the four samples analyzed for petroleum hydrocarbons, TPH as DRO and as MORO were reported in one sample and two samples, respectively, but at concentrations below their respective commercial/industrial land use ESL; these detections may be the result of a release from former USTs at the former on-site gas station.

VOCs were not detected in the soil samples analyzed at concentrations above their respective laboratory RL with the exception of benzene and toluene. The reported concentrations of these fuel constituents VOCs are below their respective commercial/industrial land use ESL.

Metals in the soil samples analyzed were not detected at concentrations above their respective commercial/industrial land use screening levels and/or naturally occurring background levels.

OCPs were not detected at concentrations at or above their respective laboratory RL; the laboratory RLs for OCPs were below their respective commercial/industrial land use screening levels.

Based on the concentrations in soil of TPH as DRO, TPH as MORO, benzene, and toluene below their respective commercial/industrial screening levels, reported concentrations of various metals being below commercial/industrial land use screening levels and/or naturally occurring background levels, and lack of detections of OCPs, these compounds do not appear to represent a significant environmental risk or hazard in the areas investigated by ODIC.

## 6.3 GROUNDWATER CONDITIONS

TPH as MORO was not detected in the groundwater samples analyzed at concentrations above the laboratory RL. Of the four samples analyzed for petroleum hydrocarbons, TPH as GRO and as DRO were reported in two groundwater samples each at concentrations below their respective commercial/industrial screening levels.

VOCs were not detected at concentrations at or above their respective laboratory RL. The laboratory RLs for VOCs were below their respective commercial/industrial land use screening levels with the exception of vinyl chloride. The laboratory RL for vinyl chloride is above the commercial/industrial land use screening levels but equal to its California MCL.

Based on the concentrations in groundwater of TPH as GRO and as DRO below their respective commercial/industrial screening levels, lack of detection of TPH as MORO, and lack of detections of VOCs, these compounds do not appear to represent a significant environmental risk or hazard in the areas investigated by ODIC.

## 7.0 RECOMMENDATIONS

During this investigation, TPH as GRO and VOC impacts were noted in soil vapor in the areas investigated.

The fuel constituent VOC benzene was detected in each of the soil vapor samples. Benzene was reported at concentrations above its commercial/industrial land use ESL in each sample.

The chlorinated VOC vinyl chloride was not detected in the soil vapor samples at concentrations at or above the laboratory RL but the laboratory RL is above the commercial/industrial land use ESL.

In summary, the highest concentration ( $150 \mu\text{g}/\text{m}^3$ ) of benzene in soil vapor was reported in sample SV2-5', and was the only VOC detection that exceeded the commercial/industrial land use ESL. The benzene concentration ( $26 \mu\text{g}/\text{m}^3$ ) reported in sample SV1-5' is also above the commercial/industrial land use scenario ESL. The laboratory RL ( $9.6 \mu\text{g}/\text{m}^3$ ) for vinyl chloride is above the commercial/industrial land use ESL.

A cursory risk assessment indicated that the maximum detection of benzene and the laboratory RL for vinyl chloride for the soil vapor samples collected at a depth of 5 feet bgs yielded a calculated cumulative cancer risk slightly above the cancer risk threshold of  $1\text{E}-05$  for the commercial/industrial land use scenario and yielded a calculated cumulative non-cancer hazard risk below the threshold of 1.0 for the commercial/industrial land use scenario.

As such, based on the cursory risk assessment using the maximum detection of benzene and the laboratory RL for vinyl chloride, ODIC concludes that there is a minimal potential risk of vapor intrusion into the indoor air space of the proposed building on the Property.

TPH as GRO was not detected in the subsurface soil beneath the Property at concentrations above the laboratory RL. TPH as DRO and as MORO as well as the VOCs benzene and toluene were reported in one or more sample(s) but at concentrations below their respective commercial/industrial land use ESL, various metals were reported at concentrations below commercial/industrial land use screening levels and/or naturally occurring background levels, and OCPs were not detected at concentrations at or above their respective laboratory RL. Therefore, these compounds in soil do not appear to represent a significant environmental risk or hazard in the areas investigated by ODIC.

TPH as MORO and VOCs were not detected in the groundwater beneath the Property at concentrations at or above their respective laboratory RL. The laboratory RLs for VOCs were below their respective commercial/industrial land use screening levels with the exception of vinyl chloride which has a laboratory RL equal to its California MCL. Therefore, TPH and VOCs in groundwater do not appear to represent a significant environmental risk or hazard in the areas investigated by ODIC.

The source of the benzene and methylene chloride identified in the soil vapor during this investigation is unknown but may be the result of former on-site gas station operations. The minimal impacts to subsurface soil and groundwater in the areas investigated by ODIC indicates the contamination is likely residual and significant releases have not likely occurred on the Property since operations ceased at the former on-site gas station.

Based upon the foregoing, the planned future use of the Property for commercial purposes, and the benzene detections in soil vapor samples SV1-5' and SV2-5' located in the north-central portion of the Property (in the reported area of the proposed food mart building) at concentrations above the applicable commercial/industrial land use ESLs and vinyl chloride laboratory RLs above the applicable commercial/industrial land use ESLs, consideration should be given to collecting additional soil vapor samples from the Property to help evaluate if mitigation measures such as sub-slab vapor barrier or a sub-slab venting system for the proposed building would be warranted. If warranted, another mitigation option would be to conduct an excavation within the footprint of the proposed building to remove all soil to a depth

of approximately 7 feet, or the depth of groundwater, which would comprise approximately 200 cubic yards of soil. The excavation should be lined with a vapor barrier prior to placing and compacting (certified by an appropriate professional) clean backfill. Such an action would effectively remove the soil beneath the proposed building that may contain soil vapor contaminated with VOCs and would effectively eliminate a vapor intrusion risk. This option would also likely eliminate the need for any other mitigation measures relating to the construction of the proposed building.

The Client should be aware that any construction activities resulting in creating complete exposure pathways for VOCs in soil vapor beneath the Property shall be adequately managed in accordance with all applicable provisions and regulations of the local, state and federal environmental authorities. In the event of such construction activities, proper management plan and health and safety plan should be prepared and implemented by a qualified environmental professional, due to VOC contaminants identified beneath the subsurface of the Property.

**Notes:**

Samples analyzed by SunStar Laboratories, Inc. of Lake Forest, California.

Samples (for VOC analysis) were collected using method 5035.

ft bgs = Sample depth is presented in feet below ground surface

VOCs = Volatile organic compounds (only target analytes - benzene, toluene, ethylbenzene, and xylenes (collectively BTEX), MTBE, PCE and breakdown products and any analytes above the commercial/industrial ESL listed above; see analytical laboratory report for complete list of analytes).

MTBE = Methyl tert-butyl ether

cis-1,2-DCE = cis-1,2-dichloroethene

trans-1,2-DCE = trans-1,2-dichloroethene

PCE = Tetrachloroethene

TCE = Trichloroethene

mg/kg = Milligram per kilogram

**BOLD** = Detected at stated concentration

<0.17 = Analyte not detected above specified laboratory reporting limit

Orange highlight = Analytical result above Tier 1 ESL but below Secondary (Commercial) ESL.

<RL = Analyte not detected above respective lab RL but RL was above Tier 1 ESL but below Secondary (Commercial) ESL

Blue highlight = Analytical result OR lab RL above Tier 1 ESL and Secondary (Commercial) ESL

Tier 1 ESLs - Environmental Screening Levels, San Francisco Bay Regional Water Quality Control Board, January 2019 Rev. 2.

**Notes:**

Samples analyzed by SunStar Laboratories, Inc. of Lake Forest, California.

Units: mg/k = Milligram per kilogram

1. LAM I/ Metals (except Mercury) were analyzed using U.S. EPA Method 60106. Mercury analyzed by EPA Method /4/1/4/1 Chromium VI analyzed by APHA/EPA/AS/IM Method 8

2. Tier I ESLs - Environmental Screening Levels, San Francisco Bay Regional Water Quality Control Board, January 2019 Rev. 2.

3. Secondary ESLs = Direct Exposure Human Health Risk Levels, Commercial/Industrial Properties: Shallow Soil Exposure or Construction Worker; Any Land Use/Any Depth Soil Exposure, whichever is lower (shown in bold above). SFRWQCB, January 2019 (Rev. 2).

4. Secondary ESL Chromium, Chromium III Tier I ESL = 120,000 mg/kg, Chromium VI Tier I ESL = 0.3 mg/kg, Total Chromium Tier I = 160 mg/kg, Chromium III Secondary ESL is: 1,800,000 mg/kg (commercial/industrial) and 530,000 mg/kg (construction worker scenario), Chromium VI secondary ESL = 6.2 mg/kg (commercial/industrial) and 2.8 mg/kg (construction worker).

Source: [http://www.waterboards.ca.gov/sanfranciscobay/water\\_issues/programs/ESL/Tier%20I%20and%20Summary%20ESLs](http://www.waterboards.ca.gov/sanfranciscobay/water_issues/programs/ESL/Tier%20I%20and%20Summary%20ESLs)

<4.0 = Analyte not detected at or above the laboratory reporting limit (RL)

**BOLD** = Detected at stated concentration

Orange highlight = Analytical result above Tier I ESL

<4.0 = Analyte not detected above respective laboratory RL but laboratory RL was above Tier I ESL but below Secondary ESL

Blue highlight = Analytical result above Secondary ESL. [It is noted that Arsenic, however, is naturally occurring above these levels. As such, arsenic is more appropriately evaluated based on a comparison to background concentrations (generally up to 12 mg/kg)]

Blue highlight =laboratory RL above Secondary ESL

VOCs = Volatile organic compounds (only target analytes - benzene, toluene, ethylbenzene, and xylenes (collectively BTEX), MTBE, PCE and breakdown products and any analytes above the commercial/industrial ESL listed above; see analytical laboratory report for complete list of analytes).

µg/l = Microgram per liter

TPH-GRO, TPH-DRO, TPH-MORO = Total petroleum hydrocarbons (TPH) quantified as gasoline (TPH-GRO), diesel (TPH-DRO), and motor oil (TPH-MORO)

MTBE = Methyl tert-butyl ether

cis-1,2-DCE = cis-1,2-Dichloroethene

trans-1,2-DCE = trans-1,2-Dichloroethene

PCE = Tetrachloroethene

TCE = Trichloroethene

NE = Not established

**BOLD** = Detected above stated laboratory reporting limit (RL)

<RL = Analyte not detected above specified laboratory RL

Orange highlight = Analytical result above Tier 1 ESL but below Secondary (Commercial) ESL.

<RL = Analyte not detected above respective laboratory RL but RL was above Tier 1 ESL but below Secondary (Commercial) ESL.

Blue highlight = Analytical result above Tier 1 ESL and Secondary (Commercial) ESL.

<BDL = Analyte not detected above respective lab RL but RL was above Tier 1 ESL and Secondary (Commercial) ESL.

Tier 1 ESLs - Environmental Screening Levels, San Francisco Bay Regional Water Quality Control Board, January 2019 Rev. 2.

## **Detailed Investigation Report**

**Project:**

**2110 Old Middlefield Way, Mountain View, CA 94043, USA**

**Prepared For:**

**ODIC Environmental**

**Prepared By:**

**On Target Precision Locating  
EM & GPR Technicians  
33415 3<sup>rd</sup> St Union City CA, 94587  
Ph: 805-342-9881**

## **INTRODUCTION**

On Target Precision Locating performed a Subsurface Investigation to attempt to locate 6 boring locations as well as to conduct a full GPR on the entire property to attempt to locate former UST/s on site. Work was performed on Thursday, October 13th, 2022.

## **METHODOLOGY AND EQUIPMENT**

The MALA Ground Penetrating Radar unit with 400MHz antenna sends a dielectric signal into the earth, which registers with the density of the soil that it is penetrating. Any other material of varied density will either speed up the signal creating an inverted hyperbola or slow it down leaving a hyperbola trail. This is similar to a rock in a creek. The water bends around the rock leaving a tail wake. The GPR signal is not bending, however; it is sending back a continuous signal of the curvature of the anomaly or buried feature it encounters. GPR findings are not always accurate due to certain site conditions such as soil lithology, moisture and soil make-up. These can limit the depth to which the GPR antenna can penetrate to locate buried features.

The RDSPX7000 Electro-Magnetic Transmitter & Receiver has Inductive & Conductive capability to locate buried conductive underground utilities, such as copper, steel and galvanized metal water pipes, electrical lines, power lines, tele-communication lines, metal and steel gas lines, and metal and steel pipelines. The RDSPX7000 features include multiple active frequencies to delineate actively the depth and location of the target utility or pipe. The RDSPX7000 receiver has a peak and null gain feature that pinpoints the target utility or pipe in congested areas. The audible signal to noise feature makes it easy for the locating technician to determine accurately the location of a directly connected utility or pipe by sound.

According to Radio Detection, the specifications of the RDSPX7000 include

Sensitivity:  $6E-15$  Tesla  $5\mu A$  at 1 meter (33kHz)

Dynamic range: 140dB rms/ $\sqrt{Hz}$

Selectivity: 120dB/Hz

Depth measurement precision:  $\pm 3\%$

Locate accuracy:  $\pm 5\%$  of depth

The Schonstedt GA-52Cx Magnetic Locator detects iron and steel objects underground, such as USTs, buried oil wells and buried metal monitoring well lids. The Schonstedt GA-52Cx Magnetometer provides audio detection signals with frequencies that vary with gradient field intensity. The signals peak in frequency when the locator's tip is held directly over the target.

**SITE AREA**

The project site is located within the vicinity of 2110 Old Middlefield Way, Mountain View, CA 94043. Below is an aerial view of the general area and a preliminary pothole plan.

**Below are photos of work performed and a description of findings there in:**

**Findings:** Our technician attempted to scan area of concern where there was believed to be a UST. Upon using GPR no detection of a UST was discovered. Findings were discussed with site contact Lita Freeman.

**Findings:** Boring locations were located, as well as marked out. Please see pictures below.

**Field work performed by Hector Rivera,  
EM & GPR Technician,  
On Target Precision Locating**

**LIMITATIONS:** Please be advised that there are limitations to any Subsurface Investigation. The equipment may not achieve maximum effectiveness due to soil conditions, above ground obstructions, reinforced concrete, and a variety of other factors. No Subsurface Investigation or equipment can provide a complete image of buried features. Our results should always be used in conjunction with as many methods as possible including: Consultation of existing plans and drawings, exploratory excavation or potholing, visual inspection of above ground features and utilization of services such as Dig Alert/Underground Service.

### Notes and Definitions

S-GC Surrogate recovery outside of established control limits. The data was accepted based on valid recovery of the remaining surrogate(s).

S-03 The surrogate recovery was below acceptance criteria in the sample because of a possible matrix effect. The surrogate recovery was within acceptance criteria in the method blank and LCS.

R-07 Reporting limit for this compound(s) has been raised to account for dilution necessary due to high levels of interfering compound(s) and/or matrix affect.

QM-13 Spike recovery for this analyte was bias high in the LCS and/or MS/MSD. Instrument blank, method blank and all samples were ND. No negative impact on data is expected.

QM-05 The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.

D-06 The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

B-03 Analyte present in blank due to being a common laboratory contaminant.

DET Analyte DETECTED

### Notes and Definitions

TO-15 High TO-15 analysis of sample was analyzed using an elevated calibration range due to high analyte and/or background concentrations. The reporting limit has been adjusted accordingly.

J Detected but below the Standard Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).

DET Analyte DETECTED

ND Analyte NOT DETECTED at or above the Method Detection Limit (MDL)

NR Not Reported

dry Sample results reported on a dry weight basis

RPD Relative Percent Difference

Re: Environmental Document Review  
2110 Old Middlefield Way  
Mountain View, California

Dear Mr. Rogers:

Per your request, Cornerstone Earth Group, Inc. (Cornerstone) is pleased to present this letter summarizing our review of the provided environmental reports for 2110 Old Middlefield Way in Mountain View, California (Site). This letter was prepared for David J. Powers & Associates in accordance with our November 3, 2022, agreement.

---

### **Project Background**

We understand that David J. Powers is providing the City of Mountain View with California Environmental Quality Act (CEQA) services for the proposed redevelopment of the approximately 0.32-acre Site (APN 147-07-148). The proposed development will consist of a gas station with a convenience store and a drive-thru car wash. Currently, the Site consists of an unpaved vacant lot.

---

### **Documents Reviewed**

This letter briefly summarizes selected information obtained from the following reports:

- Odic Environmental (Odic). January 3, 2022. *Phase I Environmental Site Assessment, 2110 Old Middlefield Road, Mountain View, CA 94043.*
- Odic Environmental (Odic). November 30, 2022 (Revised December 20, 2022). *Phase II Environmental Site Assessment, 2110 Old Middlefield Road, Mountain View, CA 94043.*

For complete details, please refer directly to the original reports.

### **Site History and Prior Studies**

Based on the information reviewed, the Site was developed with a gas station since 1939 and underwent redevelopment in the 1960s. The Site operated as a gas station with an automotive repair shop until 2008 when the Site reportedly was cleared of improvements, including the fuel systems, and has remained vacant since that time.

The surrounding land consisted of agricultural land through the mid-1940s when the area was developed with apparent residences.

A Leaking Underground Storage Tank (LUST) case was opened in 1986 at the Site. Soil and groundwater investigations and remedial activities were conducted on the Site between 1986 and 2016. A Low Threat UST Case Closure Report was prepared in 2014. Santa Clara County Department of Environmental (DEH) issued a letter in 2015 indicating no additional work to assess potential vapor intrusion was required for the Site. DEH issued a No Further Action closure letter for the LUST case in 2017 under Site Management Requirements for remaining residual soil and groundwater contamination. DEH noted:

*"the impact of the disturbance of any residual contamination or installation of water wells in the vicinity of the residual contamination shall be assessed and appropriate actions taken so that there is no significant impact to human health, safety, or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures."*

Odic did not identify any Recognized Environmental Conditions (RECs) at the Site during their Phase I Environmental Site Assessment (2022); however, Odic recommended a subsurface investigation to further evaluate soil, soil vapor, and groundwater in areas of potential environmental concern where contamination may exist. Odic identified the following possible contaminants of concern (COC) due to the history of the Site: total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs) including fuel oxygenates, California Code of Regulations Title 22 Metals, and organochlorine pesticides (OCPs).

## Phase II Investigation

In 2022 Odic conducted a limited subsurface investigation to evaluate current subsurface conditions in select on-Site areas. A geophysical survey of planned boring locations at the Site was performed prior to drilling. Based on the findings of the survey, no subsurface anomalies indicating USTs or other buried structures, or obstructions were identified in these areas.

To evaluate the soil and groundwater quality at the Site, four borings were advanced to an approximate depth of 15 feet in proximity of former gas station features: UST area, waste oil UST, and dispenser islands. Soil samples were collected at approximate depths of 5 feet, 10 feet, and 15 feet. Select soil samples collected from the depth of 5 feet were analyzed for the COC. The four groundwater samples were analyzed for TPH as gasoline, diesel, and motor oil-range organic, and VOCs including fuel oxygenates.

Two temporary soil vapor wells were installed at an approximate depth of 5 feet within the planned footprint of the convenience store. The soil vapor samples were analyzed for TPH as gasoline, VOCs, and fixed gases (oxygen, carbon dioxide, and methane).

### Soil Quality

Low level concentrations of TPH as diesel and motor oil, benzene, and toluene were detected in the select soil samples; however, the concentrations did not exceed the Water Board's Tier I Environmental Screening Levels (ESLs<sup>1</sup>). Other VOCs, TPH as gasoline, and OCPs were

---

<sup>1</sup> Environmental Screening Levels (ESLs) established by the Water Board (January 2019) are used to screen sites for potential human health concerns where releases of chemicals have occurred. These screening levels are risk-based concentrations derived from standardized equations combining exposure information assumptions with toxicity data. Under most circumstances, the presence of a chemical at concentrations below the corresponding screening level can be assumed not to pose a significant health risk.

detected in the soil samples. Detected concentrations of metals were below their respective Tier I ESL and/or natural background concentrations.

#### *Groundwater Quality*

TPH as gasoline and diesel were detected in groundwater samples at concentrations at or above Tier 1 ESLs, 100 µg/L for both contaminants, which is based on odor nuisance for drinking water. TPH as gasoline was detected at concentrations between 240 micrograms per liter (µg/L) and 460 µg/L and TPH as diesel was detected at concentration between 100 µg/L and 110 µg/L. No VOCs were detected in groundwater samples above the laboratory reporting limits.

#### *Soil Vapor Quality*

Benzene was detected in soil vapor samples at concentration up to 150 micrograms per cubic meter (µg/m<sup>3</sup>), exceeding the commercial ESL of 14 µg/m<sup>3</sup>. TPH as gasoline was detected in the soil vapor samples collected within the footprint of the planned convenience store at concentrations of 15,300 µg/m<sup>3</sup> and 23,000 µg/m<sup>3</sup>, exceeding the Tier I ESL (odor nuisance) of 3,300 µg/m<sup>3</sup> but below the commercial ESL of 83,000 µg/m<sup>3</sup>. Methylene chloride was detected at concentrations up to 160 µg/m<sup>3</sup>, above the Tier I ESL of 34 µg/m<sup>3</sup> but below the commercial ESL of 410 µg/m<sup>3</sup>. Vinyl Chloride was not detected above laboratory reporting limits in soil vapor samples collected; however, the reporting levels exceed commercial ESLs. Other low-level detections of VOCs were reported at concentrations below their respective Tier I ESL. Tetrachloroethene (PCE – a common dry-cleaning chemical) was not detected above the laboratory reporting limits; however, its reporting limit exceeded its Tier I ESL but was less than its commercial ESL<sup>2</sup>.

Oxygen was detected between 17.4 and 18.5 percent in the soil vapor samples collected from the Site. Low levels of carbon dioxide were detected, up to 0.55 percent, and methane was not detected above the laboratory reporting limits. Based on these results, Odic concluded biodegradation is likely not occurring and the oxygen levels indicate that conditions are appropriate for anaerobic activity.

---

### **Conclusions and Recommendations**

Based on the information obtained during this study, Cornerstone concludes and recommends the following:

- As required by ASTM, the Phase I ESA does not appear to document the Site's first developed use. As the Site vicinity historically was used for agricultural purposes, the Site likely was originally developed as agricultural land. Pesticides may have been applied to crops in the normal course of farming operations. Residual pesticide concentrations may remain in on-Site soil.

To evaluate soil quality, Odic collected soil samples from an approximately depth of 5 feet deep and analyzed these samples for organochlorine pesticides; however, concentrations of residual pesticides, if present, likely would be encountered in the upper 3 feet of native soil and likely would not be detected at an approximate depth of 5 feet or

---

<sup>2</sup> An historic dry-cleaning business was reported approximately 80 feet south of the Site (up-gradient in terms of groundwater flow). It operated from 1992 to 1997 but records of hazardous waste (which typically includes PCE for dry cleaners) were not reported.

deeper. Based on the proposed development plans, the risk of concentrations of residual pesticides presenting a threat to the health of future occupants/visitors appears low. In our opinion, additional sampling does not appear to be required at this time.

- If significant soil disturbance, grading or soil off-haul will be performed, we recommend performing soil sampling for chemicals of concern at appropriate depths prior to construction activities to evaluate if agricultural chemicals, metals, petroleum hydrocarbons and other compounds of concern are present - as required by the facility accepting soils planned for off-haul.
- In November 2022, analyses of soil vapor samples collected from the Site detected benzene at concentrations exceeding current commercial ESLs. Based on these findings, Cornerstone recommends preparing a Vapor Mitigation Plan that describes the measures to be implemented to help prevent exposure of Site occupants to volatile organic compounds (VOCs) in indoor air as a result of vapor intrusion. The Vapor Mitigation Plan should present the appropriate structural and engineering design features for the proposed occupied spaces to reduce risk of vapor intrusion into buildings.

This plan shall be submitted to an appropriate regulatory agency for their written review and approval; a copy of the approval shall be provided to the City of Mountain View.

Mitigation measures for vapor intrusion for new buildings typically include: 1) passive sub-slab ventilation with a vapor barrier (and with the ability to convert the system from passive to active ventilation), 2) monitoring to ensure the long-term effectiveness of the remedy, and 3) the implementation of Institutional controls. Other design requirements or mitigation alternatives, such as source removal, would need to be reviewed and approved in writing by the oversight agency, and this approval letter provided to the City of Mountain View.

- The DEH's letter dated September 7, 2017 stated:

*Residual contamination in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. The County and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time. It should be noted that any additional or previously unidentified contamination at this site may require further investigation or cleanup.*

We recommend that future investigations and/or mitigation measures be completed under oversight from an appropriate regulatory agency, such as DEH.

- Based on Site history, we recommend preparing a Site Management Plan (SMP) and Health and Safety Plan (HSP) for the proposed development activities. The purpose of these documents will be to establish appropriate management practices for handling impacted soil, soil vapor and groundwater that may be encountered during construction activities. The SMP should identify potential contaminants of concern, such as residual

pesticides. The SMP shall be reviewed and approved in writing by the selected oversight agency, and the approval letter provided to the City of Mountain View.

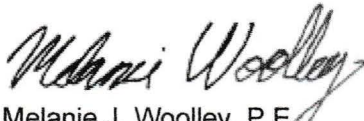

**Limitations**

Cornerstone performed this investigation to support David J. Powers & Associates in the evaluation of the referenced Site. The conclusions presented in this letter are based on limited, readily available information. This letter, an instrument of professional service, was prepared for the sole use of David J. Powers & Associates and may not be reproduced or distributed without written authorization from Cornerstone. It is valid for 180 days. Cornerstone makes no warranty, expressed or implied, except that our services have been performed in accordance with the environmental principles generally accepted at this time and location.

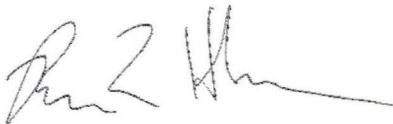

We thank you for this opportunity to work with you on this important project. Should you have any questions, please contact us at your convenience.

Sincerely,

**Cornerstone Earth Group, Inc.**
