

PUBLIC DRAFT
INITIAL STUDY and ENVIRONMENTAL CHECKLIST

FOR

JACK RAFTER
MINOR SUBDIVISION

February 15, 2022

Lead Agency:
County of Mendocino

Lead Agency Contact:
Mark Cliser, Planner II
Mendocino County Planning and Building Services
860 North Bush Street, Ukiah, CA 95482
(707) 234-6650

Section I	Description Of Project/Project Summary
	<p>DATE: February 15, 2022 PROJECT TITLE: MS_2020-0006 (JACK RAFTER, MINOR SUBDIVISION) DATE FILED: December 3, 2020 APPLICANT: Vance Ricks PROJECT COORDINATOR: Mark Cliser, Planner II; (707-234-6650) REQUEST: Minor Subdivision of one legal 6 acre parcel, comprised of APNs 167-190-08 and 167-230-03, creating two separate legal parcels of 2.1± acres and 3.9± acres. ENVIRONMENTAL DETERMINATION: Based on the attached Initial Study, the proposed minor subdivision would not have a substantial adverse impact on the environment, and a Negative Declaration is recommended. LOCATION: 4.5± north of Ukiah City center, lying on the east side of North State Street (CR 104), 0.3± north of its intersection with Pomo Lane (CR 228A), located at 4681 North State Street, Ukiah; APNs 167-190-08 and 167-230-03,</p>

Section II	Project Description
	<p>INTRODUCTION: The proposal is for a Minor Subdivision of one legal 6 acre parcel, comprised of APNs 167-190-08 and 167-230-03, creating two separate legal parcels of 2.1± acres and 3.9± acres. PROJECT OBJECTIVES: The Applicant is requesting a Minor Subdivision of one legal 6 acre parcel, comprised of APNs 167-190-08 and 167-230-03, creating two separate legal parcels of 2.1± acres and 3.9± acres for the purpose of developing single family homes on a newly created parcel zoned Suburban Residential, per Mendocino County Code Section 20.016 (Residential Use Types). The Suburban Residential classification is intended “to be applied to transitional lands adjacent to cities or towns, including in portions of Community Planning Areas where only residential activities are considered desirable, which lands are appropriate to accommodate future growth. Lands within the Suburban Residential classification should have moderate to light constraints for residential development, should be served by the publicly-maintained road network, and should be located within public service districts or the logical extensions thereof. Portions of lands within the Suburban Residential classification will be appropriate for development of residential subdivisions. Such areas should be developed as major subdivisions, not minor subdivisions; or retained in parcels of sufficient size to be economically developed as subdivisions at some future time.”¹ SETTING AND LOCATION: The proposed project site is located 4.5± miles north of Ukiah City center, lying on the east side of North State Street (CR 104), 0.3± miles north of its intersection with Pomo Lane (CR 228A), located at 4661 and 4681 North State Street, Ukiah and is approximately 6 acres. The northern 2.1 acres of existing parcel, (proposed as Parcel one) is unimproved. There is currently no access to the proposed parcel. The southern portion of the existing parcel (proposed as the remainder parcel) is improved with five (5) single family residences and 1 (one) duplex. This parcel is accessed from North State Street via two (2) paved driveways. BASELINE CONDITIONS: Pursuant to CEQA Guidelines Section 15125, the Project Description is required to identify the existing baseline set of physical characteristics. For this project, the baseline conditions include vacant land without access. The proposed parcel is relatively flat with elevations ranging from approximately 686 feet above mean sea level (AMSL) at the western edge to 656 feet AMSL at the eastern edge. It is bordered on the north by a 60 unit mobile home park (North Valley Mobile Home Park), to the east by abandoned railroad tracks, to the south by the remainder parcel which includes seven (7) residential units, and to the east by North State Street. The site features a mix of native and non-native grasses and hardwood trees. No rare or endangered species of flora or fauna are known to exist on site. The site does not feature serpentine soils, wetlands, or special interest soils. The Russian River lies approximately 440 feet east of the site. Historically, there has been no record of residential development on the subject parcel.</p>

Section III	Environmental Checklist.

¹ Mendocino County General Plan

“Significant effect on the environment” means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project, including land, air, water, minerals, flora, fauna, ambient noise, and aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. A social or economic change related to a physical change, may be considered in determining whether the physical change is significant (CEQA Guidelines, Section 15382).

Accompanying this form is a list of discussion statements for all questions, or categories of questions, on the Environmental Checklist (See Section III). This includes explanations of “no” responses.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED: The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

<input type="checkbox"/> Aesthetics	<input type="checkbox"/> Agriculture and Forestry Resources	<input type="checkbox"/> Air Quality
<input type="checkbox"/> Biological Resources	<input type="checkbox"/> Cultural Resources	<input type="checkbox"/> Energy
<input type="checkbox"/> Geology / Soils	<input type="checkbox"/> Greenhouse Gas Emissions	<input type="checkbox"/> Hazards & Hazardous Materials
<input type="checkbox"/> Hydrology / Water Quality	<input type="checkbox"/> Land Use / Planning	<input type="checkbox"/> Mineral Resources
<input type="checkbox"/> Noise	<input type="checkbox"/> Population / Housing	<input type="checkbox"/> Public Services
<input type="checkbox"/> Recreation	<input type="checkbox"/> Transportation	<input type="checkbox"/> Tribal Cultural Resources
<input type="checkbox"/> Utilities / Service Systems	<input type="checkbox"/> Wildfire	<input type="checkbox"/> Mandatory Findings of Significance

An explanation for all checklist responses is included, and all answers take into account the whole action involved, including off site as well as on-site; cumulative as well as project level; indirect as well as direct; and construction as well as operational impacts. The explanation of each issue identifies (a) the significance criteria or threshold, if any, used to evaluate each question; and (b) the mitigation measure identified, if any, to reduce the impact to less than significance. In the checklist the following definitions are used:

"Potentially Significant Impact" means there is substantial evidence that an effect may be significant.

"Potentially Significant Unless Mitigation Incorporated" means the incorporation of one or more mitigation measures can reduce the effect from potentially significant to a less than significant level.

"Less Than Significant Impact" means that the effect is less than significant and no mitigation is necessary to reduce the impact to a lesser level.

"No Impact" means that the effect does not apply to the Project, or clearly will not impact nor be impacted by the Project.

INITIAL STUDY/ENVIRONMENTAL REVIEW: This section assesses the potential environmental impacts which may result from the project. Questions in the Initial Study Checklist are stated and answers are provided based on analysis undertaken.

I. AESTHETICS. Except as provided in Public Resources Code Section 21099, would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on aesthetics if it would have a substantial adverse effect on a scenic vista; substantially damage scenic resources, including but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway; substantially degrade the existing visual character or quality of public views of the site and its surroundings (if the project is in a non-urbanized area) or conflict with applicable zoning and other regulations governing scenic quality (if the project is in an urbanized area); or create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area.

Discussion: A scenic vista is defined as a location that offers a high quality, harmonious, and visually interesting view. One roadway in Mendocino County, State Route (SR) 128, was officially added to the eligibility list of State Scenic Highways by California State Assembly Bill 998 on July 12, 2019. According to CalTrans, SR 1 and SR 20 are “eligible” for designation as scenic highways, but have not been officially designated as such.

State Route 1 is part of the California Freeway and Expressway System and, through the Los Angeles metro area, Monterey, Santa Cruz, San Francisco metro area, and Leggett, is part of the National Highway System, a network of highways that are considered essential to the country's economy, defense, and mobility by the Federal Highway Administration. State Route 1 is eligible to be included in the State Scenic Highway System; however, only a few stretches between Los Angeles and San Francisco have officially been designated as a “scenic highway”, meaning that there are substantial sections of highway passing through a “memorable landscape” with no “visual intrusions.”

Additionally, the County has two roadway segments designated as “heritage corridors” by California Public Resources Code Section 5077.5. The North Coast Heritage Corridor includes the entire segment of SR 1 in the county, as well as the segment of U.S. Highway 101 from the junction with SR 1 in Leggett, north to the Humboldt County line. The Tahoe-Pacific Heritage Corridor extends from Lake Tahoe to the Mendocino County coast. It includes the entire segment of SR 20 within the county and the segment of US 101 from the SR 20 junction north of Calpella to the SR 20 highway exit south of Willits. Mendocino County’s General Plan Resource Management Goal RM-14’s (Visual Character) objective is: *Protection of the visual quality of the county’s natural and rural landscapes, scenic resources, and areas of significant natural beauty.*

The main source of daytime glare in the unincorporated portions of the Mendocino County is from sunlight reflecting off of structures with reflective surfaces, such as windows. A nighttime sky in which stars are readily visible is often considered a valuable scenic/visual resource. In urban areas, views of the nighttime sky are being diminished by “light pollution.” Two elements of light pollution may affect county residents: sky glow (a result of light fixtures that emit a portion of their light directly upward in the sky), and light trespass (poorly shielded or poorly aimed fixtures which cast light into unwanted areas, such as neighboring properties and homes). Different lighting standards are set by classifying areas by lighting zones (LZ). The 2000 Census classified the majority of Mendocino County as LZ2 (rural), which requires stricter lighting standards in order to protect these areas from new sources of light pollution and light trespass. Mendocino County’s General Plan Resource Management Goal RM-15’s (Dark Sky) objective is: *Protection of the qualities of the county’s nighttime sky and reduced energy use.*

a) **Less Than Significant Impact:** The project is located approximately 4.5 miles north of Ukiah City center in an area with mixed residential and industrial uses. The project will allow for additional residential uses. However, as the adjacent parcels are currently developed with industrial or residential uses the project will have a less than significant impact on scenic vistas.

- b) **No Impact:** U.S. Highway 101, which is the nearest Highway to the project location, is not designated as a state scenic highway.
- c) **Less Than Significant Impact:** The project has the potential for new housing development. However, as adjacent parcels are currently developed with residential and/or industrial uses, the project will minimally degrade existing visual character or quality of the site and its surroundings.
- d) **Less Than Significant Impact:** Lighting associated with the project would primarily consist of the existing exterior lighting for the existing residential uses and the potential for additional lighting for new residential uses, if established in the future on either of the proposed parcels. Overall, nighttime lighting would be minimal and would only include that which is necessary for safety and security.

While the proposed project itself would not entail any additional sources of light, potential development in the future could create new sources of light that may have an impact on day and nighttime views. However, a standard condition is included to ensure impacts remain at less than significant levels by requiring external lights be shielded and downcast to prevent light pollution.

MITIGATION MEASURES

None

FINDINGS

The proposed project would have a **Less Than Significant Impact** on Aesthetics.

II. AGRICULTURE AND FORESTRY RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g), timberland (as defined by PRC section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forestland to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on agriculture and forestry resources if it would convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (hereafter "farmland"), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural uses; conflict with existing zoning for agricultural use or a Williamson Act contract; conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g), timberland (as defined by PRC section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)); Result in the loss of forest land or conversion of forest land to non-forest use; or involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forestland to non-forest use.

Discussion: The State of California Department of Conservation manages the Farmland Mapping and Monitoring Program (FMMP) which produces maps and statistical data used for analyzing impacts on California's agricultural resources. The FMMP mapping survey covers roughly 98% of privately owned land in the state and updates each map approximately every two years to provide an archive of land use change over time. Agricultural land is rated according to soil quality and irrigation status; the best quality land is called "Prime Farmland," with other critical designations including "Unique Farmland," or "Farmland of Statewide Importance."

The Williamson Act (officially the California Land Conservation Act of 1965) is a California law that provides relief of property tax to owners of farmland and open-space land in exchange for a ten year agreement that the land will not be developed or otherwise converted to another use. The intent of the Williamson Act is to preserve a maximum amount of a limited supply of prime agricultural land to discourage premature and unnecessary conversion of prime agricultural land to urban uses.

The Timberland Production Zone (TPZ) was established in 1976 in the California Government Code as a designation for lands for which the Assessor's records as of 1976 demonstrated that the "highest and best use" would be timber production and accessory uses. Public improvements and urban services are prohibited on TPZ lands except where necessary and compatible with ongoing timber production. The original purpose of TPZ Zoning District was to preserve and protect timberland from conversion to other more profitable uses and ensure that timber producing areas not be subject to use conflicts with neighboring lands.

- a-e) **No Impact:** The FMMP of the California Resources Agency classifies the majority of the project site as Grazing Land. As the site is not designated as Prime Farmland, Unique Farmland or Farmland of Statewide Importance ("Farmland"), as shown on the maps prepared pursuant to the FMMP, the proposed project would not convert these farmland designations to non-agricultural uses. The project site is not under Williamson Act. There are no forestland, timberland, or timberland production areas, as zoned by applicable state and local laws and regulations, located on the project site or surrounding area. As the project is not designated as farmland or forest land, the proposed project would not convert these lands to a non-agricultural or non-forest use. Furthermore, the proposed use for the project is consistent with the zoning designation, Suburban Residential (SR), and general plan designation, Suburban Residential, of the site. The project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to a non-agricultural use; would not conflict with a Williamson Act contract; would not conflict with or cause rezoning of forest land or timberland; would not result in the loss or conservation of forest land; and would not involve other changes in the existing environment which could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest land; there is no impact.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **No Impact** on Agricultural and Forestry Resources.

III. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on air quality if it would conflict with or obstruct implementation of applicable air quality plans; result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard; expose sensitive receptors to substantial pollutant concentrations; or result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

Discussion: Mendocino County is located within the North Coast Air Basin, consisting of Del Norte, Humboldt, Trinity, Mendocino, and northern Sonoma counties. Additionally, the Mendocino County Air Quality Management District (MCAQMD) is responsible for enforcing the state and federal Clean Air Acts, as well as local air quality protection regulations. Any new emission point source is subject to an air quality permit, consistent with the District’s air quality plan, prior to project construction. The MCAQMD also enforces standards requiring new construction, including houses, to use energy efficient, low-emission EPA certified wood stoves and similar combustion devices to help reduce area source emissions.

MCAQMD operates air monitoring stations in Fort Bragg, Ukiah, and Willits. Based on the results of monitoring, the entire County has been determined to be in attainment for all Federal criteria air pollutants and in attainment for all State standards except Particulate Matter less than 10 microns in size (PM10). In January of 2005, MCAQMD adopted a Particulate Matter Attainment Plan establishing a policy framework for the reduction of PM10 emissions, and has adopted Rule 1-430 which requires specific dust control measures during all construction operations, the grading of roads, or the clearing of land as follows:

- 1) All visibly-dry, disturbed soil road surfaces shall be watered to minimize fugitive dust emissions;
- 2) All unpaved surfaces, unless otherwise treated with suitable chemicals or oils, shall have a posted speed limit of 10 miles per hour;
- 3) Earth or other material that has been transported by trucking or earth moving equipment, erosion by water, or other means onto paved streets shall be promptly removed;
- 4) Asphalt, oil, water, or suitable chemicals shall be applied on materials stockpiles and other surfaces that can give rise to airborne dusts;
- 5) All earthmoving activities shall cease when sustained winds exceed 15 miles per hour;
- 6) The operator shall take reasonable precautions to prevent the entry of unauthorized vehicles onto the site during non-work hours; and
- 7) The operator shall keep a daily log of activities to control fugitive dust. In December 2006, MCAQMD adopted Regulation 4, Particulate Emissions Reduction Measures, which establishes emissions standards and use of wood burning appliances to reduce particulate emissions. These regulations applied to wood heating appliances, installed both indoors and outdoors for residential and commercial structures, including public facilities. Where applicable,

MCAQMD also recommends mitigation measures to encourage alternatives to woodstoves/fireplaces, to control dust on construction sites and unpaved access roads (generally excepting roads used for agricultural purposes), and to promote trip reduction measures where feasible. In 2007, the Air Resources Board (ARB) adopted a regulation to reduce diesel particulate matter (PM) and oxides of nitrogen (NOx) emissions from in-use (existing) off-road heavy-duty diesel vehicles in California. Such vehicles are used in construction, mining, and industrial operations. The regulation imposes limits on idling, requires a written idling policy, and requires disclosure when selling vehicles. Off-road diesel powered equipment used for grading or road development must be registered in the Air Resources Board DOORS program and be labeled accordingly. The regulation restricts the adding of older vehicles into fleets and requires fleets to reduce their emissions by retiring, replacing, or repowering older engines or installing Verified Diesel Emission Control Strategies. In 1998, the California Air Resources Board established diesel exhaust as an Air Toxic, leading to regulations for categories of diesel engines. Diesel engines emit a complex mixture of air pollutants, including both gaseous and solid material which contributes to PM2.5. All stationary and portable diesel engines over 50 horse power need a permit through the MCAQMD.

Receptors include sensitive receptors and worker receptors. Sensitive receptors refer to those segments of the population most susceptible to poor air quality (i.e., children, the elderly, and those with pre-existing serious health problems affected by air quality). Land uses where sensitive individuals are most likely to spend time include schools and schoolyards, parks and playgrounds, daycare centers, nursing homes, hospitals, and residential communities (these sensitive land uses may also be referred to as sensitive receptors). Worker receptors refer to employees and locations where people work.

- a) **No Impact:** The project will not conflict with the District’s air quality plans because the proposed use is well below the emission thresholds for ozone precursors.
- b) **Less Than Significant Impact:** The project will have a less than significant impact on pollutant because it will not generate substantial traffic which would result in substantial emissions. Future development will require all surfaces to be paved, gravel, landscaped or otherwise treated to stabilize bare soils, and to control dust generation. Dust control measure would be required during development. The project will generate some pollutants from new vehicle trips for residential use but will be less than significant given the project’s close proximity to services (ie: shopping and work). Future construction shall implement BMPs for dust control.
- c) **Less Than Significant Impact:** The project site is zoned for residential uses and is surrounded by residentially zoned parcels as well as industrial. Future development would not create an incompatible situation as it would be limited to residential development. Although there may be a short term increase in emissions during any future construction, BMPs which include dust emissions, will be required for development.
- d) **Less Than Significant Impact:** The project will allow for future development of the subject parcel. Future construction and operation will not generate any permanent source of new odors or subject sensitive receptors to new significant permanent odors. During construction, odors will be generated by construction equipment; these odors will be present only temporarily during construction. Therefore, the project will result in less than significant impacts under criterion.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **Less Than Significant Impact** on Air Quality.

<p>IV. BIOLOGICAL RESOURCES. Would the project:</p>	<p>Potentially Significant Impact</p>	<p>Less Than Significant with Mitigation Incorporated</p>	<p>Less Than Significant Impact</p>	<p>No Impact</p>
--	---------------------------------------	---	-------------------------------------	------------------

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on biological resources if it would have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service; have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service; have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means; interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites; conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; or conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

Discussion: Mendocino County’s Biology and Ecology Resources Policy RM-28 states: *all discretionary public and private projects that identify special-status species in a biological resources evaluation (where natural conditions of the site suggest the potential presence of special-status species) shall avoid impacts to special-status species and their habitat to the maximum extent feasible. Where impacts cannot be avoided, projects shall include the implementation of site-specific or project-specific effective mitigation strategies developed by a qualified professional in consultation with state or federal resource agencies with jurisdiction.*

The California Natural Diversity Database (CNDDB) provides location and natural history information on special status plants, animals, and natural communities to the public, other agencies, and conservation organizations. The data helps drive conservation decisions, aid in the environmental review of projects and land use changes, and provide baseline data helpful in recovering endangered species and for research projects. Currently, the CNDDB has 32 species listed for Mendocino County that range in listing status from Candidate Threatened to Threatened to Endangered.

Many species of plants and animals within the State of California have low populations, limited distributions, or both. Such species may be considered “rare” and are vulnerable to extirpation as the state’s human population grows and the habitats these species occupy are converted to agricultural and urban uses. A sizable number of native species and animals have been formally designated as threatened or endangered under State and Federal endangered species legislation. Others have been designated as “Candidates” for such listing and the California Department of Fish and Wildlife (CDFW) have designated others as “Species of Special Concern”. The California Native Plant Society (CNPS) has developed its own lists of native plants considered rare, threatened or endangered. Collectively, these plants and animals are referred to as “special status species.”

Section 404 of the Clean Water Act defines wetlands as *“those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstance do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bog and similar areas.”*

Mendocino County currently has one active Habitat Conservation Plan (HCP) with the California Department of Fish and Wildlife which provides protections for the Point Arena Mountain Beaver. The Fisher Family HCP (Permit #TE170629-0) covers 24 acres of coastal scrub and was adopted December 3, 2007 for a period of 50 years. The Fisher Family HCP applies to parcel APN 027-211-02 located at 43400 Hathaway Crossing, Point Arena. Additionally, since 2003, the Mendocino Redwood Company (MRC) has managed the County’s only Natural Community Conservation Plan which covers all lands owned by the MRC to preserve regionally important habitat

- a) **No Impact:** There are no sensitive species identified by the California Natural Diversity Database on the project site. The project was referred to the California Department of Fish and Wildlife (CDFW) and comments were received on January 8, 2021 noting potential sensitive biological resources and wetlands within the vicinity. Staff has not identified either wetlands or sensitive species on the subject parcel. California Department of Fish and Wildlife (CDFW), in their response dated August 31, 2018, requested any future development be reviewed by them to ensure protection of the sensitive species. Maps generated using relevant data did not indicate the presence of sensitive species (CNDDDB) or wetlands on-site. Additional research was conducted using CDFW’s Biogeographic Information and Observation System and the National Wetlands Wetland Mapper, and Staff was unable to confirm the presence of sensitive species or wetlands on-site. Documents provided by the applicant show that there may have been a spring located in this area in the past. Photos taken at the January 2021 site visit appear to show a level of channel topography which may be an indicator of this spring; however, there was no water within it during the winter site visit and present day mapping does not indicate the presence of any such resource. Due to the circumstances described above, Staff did not require a biological or wetland assessment for the project. The Remainder Parcel is already developed with a non-conforming number of residential structures and the proposed subdivision will not result in additional development capacity on the Remainder Parcel beyond what exists today. Parcel one is unimproved and may be developed in the future. Future development will need to comply with appropriate County zoning regulations and regulations of any other state, local, or federal agency with jurisdiction over the project.
- b-f) **No Impact:** There are no identified species within the project area, thus the project will not have an impact on any such resources. The proposed project is not located near any sensitive habitats, thus there is no potential for any substantial adverse impacts on a sensitive habitat such as a riparian zone, wetland, wildlife corridor, or any form of conservation land. Additionally, there are no conservation plans, policies, or ordinances with which the project conflicts, thus there will be no impacts to such protections. The California Department of Fish and Wildlife fee of \$2,814.00 will be required within five (5) days of the end of any appeal period.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **Less Than Significant Impact** on Biological Resources.

V. CULTURAL RESOURCES. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Disturb any human remains, including those interred outside of formal cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on cultural resources if it would cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5; cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5; or disturb any human remains, including those interred outside of formal cemeteries.

Discussion: Archeological resources are governed by MCC Sec. 22.12.090, which echoes state law regarding discovery of artifacts and states, in part, *“It shall be unlawful, prohibited, and a misdemeanor for any person knowingly to disturb, or cause to be disturbed, in any fashion whatsoever, or to excavate, or cause to be excavated, to any extent whatsoever, an archaeological site without complying with the provisions of this section”*. MCC Section 22.12.090 governs discovery and treatment of archeological resources, while Section 22.12.100 speaks directly to the discovery of human remains and codifies the procedures by which said discovery shall be handled. Pursuant to California Code of Regulations, Title 14, Chapter 3, Sub Section 15064.5(c)(4), *“If an archeological resource is neither a unique archeological nor an historic resource, the effects of the project on those resources shall not be considered a significant effect on the environment.”*

a-c) **No Impact:** The proposed project was referred to Sonoma State University, who responded with comments on January 14, 2021 recommending a survey. The project was reviewed by the Mendocino County Archaeological Commission at their March 10, 2021 hearing, where the Commission requested an Archaeological Survey. The decision was appealed by the Applicant, and on June 22, 2021 the Mendocino County Board of Supervisors upheld the Archaeological Commission’s decision for a survey. The survey was submitted to and reviewed by the Mendocino County Archaeological Commission at the December 8, 2021 meeting. Survey recommendations were accepted as conditions to the project.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **No Impact** on Cultural Resources.

VI. ENERGY. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy, or wasteful use of energy resources, during project construction or operation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on energy if it would result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy, or wasteful use of energy resources, during project construction or operation.

Discussion: On October 7, 2015, Governor Edmund G. Brown, Jr. signed into law Senate Bill (SB) 350, known as the Clean Energy and Pollution Reduction Act of 2015 (De León, Chapter 547, Statutes of 2015), which sets ambitious annual targets for energy efficiency and renewable electricity aimed at reducing greenhouse gas (GHG) emissions. SB 350 requires the California Energy Commission to establish annual energy efficiency targets that will achieve a cumulative doubling of statewide energy efficiency savings and demand reductions in electricity and natural gas final end uses by January 1, 2030. This mandate is one of the primary measures to help the state achieve its long-term climate goal of reducing GHG emissions to 40 percent below 1990 levels by 2030. The proposed SB 350 doubling target for electricity increases from 7,286 gigawatt hours (GWh) in 2015 up to 82,870 GWh in 2029. For natural gas, the proposed SB 350 doubling target increases from 42 million of therms (MM) in 2015 up to 1,174 MM in 2029 (CEC, 2017).

Permanent structures constructed on-site would be subject to Part 6 (California Energy Code) of Title 24 of the California Code of Regulations, which contains energy conservation standards applicable to residential and non-residential buildings throughout California. The 2019 Building Energy Efficiency Standards are designed to reduce wasteful, uneconomic, inefficient or unnecessary consumption of energy, and enhance outdoor and indoor environmental quality. It is estimated that single-family homes built with the 2019 standards will use about 7 percent less energy due to energy efficiency measures versus those built under the 2016 standards (CEC, 2018).

- a, b) **Less Than Significant Impact:** The proposed project would not result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy, or wasteful use of energy resources, during future development or operation, nor would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency. As noted above, permanent structures constructed on-site would be subject to Part 6 (California Energy Code) of Title 24 of the California Code of Regulations, which contains energy conservation standards applicable to residential and non-residential buildings throughout California. It is not anticipated the proposed subdivision or future development would use or waste significant amounts of energy or conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **Less Than Significant Impact** on Energy.

VII. GEOLOGY AND SOILS. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ii) Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iii) Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iv) Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of waste water?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on geology and soils if it would directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault, strong seismic ground shaking, seismic-related ground failure, including liquefaction, or landslides; result in substantial soil erosion or the loss of topsoil; be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse; be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property; have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater; or directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.

Discussion: Of the five known faults, the Maacama Fault is the closest active fault to the subject parcel, located approximately 900 feet east.

The San Andreas Fault traverses the southwestern corner of the County and continues offshore north of Manchester. It is capable of generating very strong earthquakes, the last major event occurring in 1906 with a magnitude of 7.9 near San Francisco. This event caused severe shaking in Mendocino County and extensive structural damage along the southern coastline of the County. Very little seismic activity has been recorded on the San Andreas Fault north of San Francisco since the 1906 event; however, the Fault is still considered active.

The vast majority of Mendocino County is underlain by bedrock of the Franciscan Formation. Thick soil development and landslides very commonly cover the underlying bedrock throughout the county. Due to the weak and deformed nature of the Franciscan rocks, they are prone to deep weathering and development of thick overlying soils. Soil deposits in swales and on the flanks of slopes commonly contain substantial amounts of clay and weathered rock fragments up to boulder size. These soils can be unstable when wet and are prone to slides. Landsliding of such soils is widespread in Mendocino County, particularly in the eastern belt of the Franciscan Formation beneath the eastern portion of the county. Human activities that affect vegetation, slope gradients, and drainage processes can also contribute to landslides and erosion.

Areas susceptible to erosion occur throughout Mendocino County where surface soils possess low-density and/or low-strength properties. Slopes are another factor in soil erosion – the greater the slope, the greater the erosion hazard, especially if the soil is bare. Soils on 9 percent slopes and greater have a moderate erosion hazard, and soils on slopes greater than 15 percent have a high erosion hazard. Elevations at the subject parcel range from 528 feet above mean sea level (amsl) at the eastern boundary to this 517 amsl at the western boundary, with an average slope of approximately 3 percent.

The specific soil type underlying the Site includes naturally occurring asbestos. A condition has been included requiring any future development on the parcel will require dust control measures be implemented (see Section III, Air Quality).

- a - e) **No Impact** The proposed project is not located near any terrain that would expose any people or structures to any substantial adverse geological effect, or that would allow for soil erosion or loss of topsoil. While the proposed project is located approximately 900 feet east of the Maacama Fault, it is not located in an area prone to landslide or liquefaction, thus there is no impact in this regard. Furthermore, the soil on which the proposed project is located is not identified as expansive or incapable of supporting a septic system, thus these issues are considered to have no impact.
- f) **Less Than Significant Impact:** As noted above, the proposed project was heard by the Archeological Commission on December 8, 2021. The Commission accepted the Applicant’s archaeological survey and recommended no further studies. However, the potential exists for unique paleontological resources or site or unique geological features to be encountered within the project area, as ground-disturbing construction activities, including grading and excavation, may be required for future development. In the event that any archaeological or paleontological resources are discovered during site preparation, grading or construction activities, notification would be required, pursuant to County Code Chapter 22.12 – Archaeological Resources.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **Less Than Significant Impact** on Geology and Soils.

VIII. GREENHOUSE GAS EMISSIONS. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Generate greenhouse gas emissions (GHG), either directly or indirectly, that may have a significant impact on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on greenhouse gas emissions if it would generate greenhouse gas emissions (GHG), either directly or indirectly, that may have a significant impact on the environment; or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

Discussion: Assembly Bill 32 (AB32), the California Global Warming Solutions Act, 2006 recognized that California is a source of substantial amounts of greenhouse gas (GHG) emission which poses a serious threat to the economic well-being, public health, natural resources, and the environment of California. AB32 established a state goal of reducing GHG emission to 1990 levels by the year 2020 with further reductions to follow. In order to address global climate change associated with air quality impacts, CEQA statutes were amended to require evaluation of GHG emission, which includes criteria air pollutants (regional) and toxic air contaminants (local). As a result, Mendocino County Air Quality Management District (AQMD) adopted CEQA thresholds of significance for criteria air pollutants and GHGs, and issued updated CEQA guidelines to assist lead agencies in evaluating air quality impacts to determine if a project’s individual emissions would be cumulatively considerable. According to the AQMD, these CEQA thresholds of significance are the same as those, which have been adopted by the Bay Area Air Quality Management District (BAAQMD). Pursuant to the BAAQMD CEQA Guidelines, the threshold for project significance of GHG emissions is 1,100 metric tons CO₂e (CO₂ equivalent) of operation emission on an annual basis. Additionally, Mendocino County’s building code requires new construction to include energy efficient materials and fixtures.

- a) **No Impact:** The proposed subdivision will not generate any greenhouse gas emissions that will have a significant impact on the environment, nor does the proposed subdivision conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

- b) **Less Than Significant Impact:** Future development may potentially generate a negligible amount of greenhouse gases via additional Vehicle Miles Traveled (VMT) for residents. However, given the proximity to essential services the impact would be less than significant.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **Less Than Significant Impact** on Greenhouse Gas Emissions.

IX. HAZARDS AND HAZARDOUS MATERIALS. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Impair implementation of, or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on hazards and hazardous materials if it were to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment; emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school; be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment; result in a safety hazard or excessive noise for people residing or working in the project area if located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport; or impair the implementation of, or physically interfere with an adopted emergency response plan or emergency evacuation plan; or expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires.

Discussion: California Health and Safety Code states: "Hazardous material" means any material that, because of its quantity, concentration, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment. "Hazardous materials" include, but are not limited to, hazardous substances, hazardous waste, and any material that a handler or the unified program agency has a reasonable basis for believing that it would be injurious to the health and safety of persons or harmful to the environment if released into the workplace or the environment (Health and Safety Code section (Health & Saf. Code sec) 25501 (m)).

Mendocino County has adopted a Hazardous Waste Management Plan to guide future decisions by the County and the incorporated cities about hazardous waste management. Policies in this General Plan emphasize source reduction and recycling of hazardous wastes, and express a preference for onsite hazardous waste treatment over offsite treatment. The Hazardous Waste Management Plan proposed a number of hazardous waste programs and set forth criteria to guide the siting of new offsite hazardous waste facilities. However, to date, no facilities have been cited in the county. In 1997, the County Division of Environmental Health assumed responsibility for administering hazardous waste generation and treatment regulations. Solid Waste and Hazardous Waste and Materials Management Policy DE-203 states: *All development projects shall include plans and facilities to store and manage solid waste and hazardous materials and wastes in a safe and environmentally sound manner.*

The California Air Resources Board classifies asbestos as a known human carcinogen. Asbestos of any type is considered hazardous and may cause asbestosis and lung cancer if inhaled, becoming permanently lodged in body tissues. Exposure to asbestos has also been shown to cause stomach and other cancers. Asbestos is the general name for a group of rock-forming minerals that consist of extremely strong and durable fibers. When asbestos fibers are disturbed, such as by grading and construction activities, they are released into the air where they remain for a long period of time. Naturally occurring asbestos is an issue of concern in Mendocino County, which contains areas where asbestos-containing rocks are found. The presence of ultramafic rocks indicates the possible existence of asbestos mineral groups. Ultramafic rocks contain 90 percent or more of dark-colored, iron-magnesium-silicate minerals. Ultramafic rocks may be partially or completely altered to a rock known as serpentinite, more commonly called serpentine.

The Mendocino County Air Quality Management District enforces state regulations to reduce the effects of development projects involving construction sites and unpaved roads in areas tested and determined by a state-registered geologist to contain naturally occurring asbestos. Serpentine and ultramafic rocks are common in the eastern belt of the Franciscan Formation in Mendocino County. Small localized areas of serpentine do occur in the coastal belt of the Franciscan Formation, but they are significantly less abundant.

Mendocino County's aviation system is composed of airports, privately owned aircraft of various types, privately operated aircraft service facilities, and publicly and privately operated airport service facilities. Most aircraft are privately owned, small single or twin-engine planes flown primarily for personal business. Six public use airports in Mendocino County provide for regional and interregional needs of commercial and general aviation. Actions involving areas around airports will continue to be evaluated for consistency with the County's Airport Comprehensive Land Use Plan and applicable federal regulations. Mendocino County's Airport Policy DE-167 states: *"Land use decisions and development should be carried out in a manner that will reduce aviation-related hazards (including hazards to aircraft, and hazards posed by aircraft)".*

The California Department of Forestry and Fire Protection (CALFIRE) designates areas of the County into fire severity zones. These maps are used to develop recommendations for local land use agencies and for general planning purposes.

In the future, the project may require the transport, use, storage, and disposal of small quantities of hazardous materials common for construction of residential structures. However, all hazardous materials would be utilized and disposed of in accordance with all applicable federal and state regulations.

- a - b) **Less Than Significant Impact:** The proposed project would not transport, use, emit, or dispose of significant amounts of hazardous materials, or create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Future development may require small amounts of hazardous materials be transported during construction, and future residential uses may require

transports of household materials, but it is unlikely they will appear in significant amounts that will pose a hazard to the public.

- c) **No Impact:** No existing or proposed schools are located within one-quarter mile of the Site. The Site is located within the Ukiah Unified School District, with the nearest school, Capella Elementary School, located approximately 1.7 miles north of the Site. It is not anticipated that hazardous materials to be utilized on-site in the future would be used or stored in any quantity or application that could impact any schools in the area.
- d) **Less Than Significant Impact:** Review of the State Water Resources Control Board’s GeoTracker (2015) and Department of Toxic Substances Control’s EnviroStor (2019) databases indicates the Site is not included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. As discussed above, any hazardous materials to be used on-site would be utilized, stored, transported, and disposed of in accordance with federal, state, and local regulations.
- e) **No Impact:** The Site is not located within an airport land use plan or within two miles of a public or public use airport. The nearest airport, Ukiah Municipal Airport, is located approximately seven (7) miles south of the Site in Ukiah. Therefore, the proposed project would not result in a safety hazard or excessive noise for people residing or working in the proposed project area and no impact would occur.
- f) **No Impact:** The proposed project will not interfere with an emergency response or evacuation plan. Future development will gain access from North State Street and provide on-site parking.
- g) **No Impact:** The project site is currently undeveloped. The surrounding area contains existing development with residences located north and south of the project site. The site, though mapped as Urban Unzoned, is located between a High Fire Hazard zone to the west, and a Moderate Fire Hazard zone to the east, and is within a State Responsibility Area and within the Ukiah Valley Fire Protection District. Future development may include, but would not be limited to, residential dwellings and will not cause the exposure of people or structures to a greater risk of loss, injury or death involving wildland fires than currently exists at the site today.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **Less Than Significant Impact** on Hazards or Hazardous Materials.

X. HYDROLOGY AND WATER QUALITY. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
i) Result in substantial erosion or siltation on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv) Impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on hydrology and water quality if it would violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality; substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin; substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner, which would result in substantial erosion or siltation on- or off-site, substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site, create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff, or impede or redirect flows; in flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation; or conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.

Discussion: Regulatory agencies include the state and regional water quality control boards; State Water Resources Control Board (SWRCB) and the North Coast Regional Quality Control Board (NCRWQCB). The State Water Resources Control Board is responsible for implementing water quality standards in California. Water Code Section 13050(d) states: *Waste includes sewage and any and all other waste substances, liquid, solid, gaseous, or radioactive, associated with human habitation, or of human or animal origin, or from any producing, manufacturing, or processing operation, including waste placed within containers of whatever nature prior to, and for purposes of, disposal.* Typical activities and uses that affect water quality include, but are not limited to, discharge of process wastewater from factories, confined animal facilities, construction sites, sewage treatment facilities, and material handling areas which drain into storm drains.

Water Code Section 1005.1 defines groundwater as *water beneath the surface of the ground, whether or not flowing through known and definite channels.* Both surface water and groundwater define a watershed, as they move from higher to lower elevations. In Mendocino County, groundwater is the main source for municipal and individual domestic water systems, outside of the Ukiah Valley, and contributes significantly to irrigation. Wells throughout Mendocino County support a variety of uses, including domestic, commercial, industrial, agricultural needs, and fire protection. The County’s groundwater is found in two distinct geologic settings: the inland valleys and the mountainous areas. Mountainous areas are underlain by consolidated rocks of the Franciscan Complex, which are commonly dry and generally supply less than 5 gallons per minute of water to wells. Interior valleys are underlain by relatively thick deposits of valley fill, in which yields vary from less than 50 gallons per minute to 1,000 gallons per minute. There are six identified major groundwater basins in Mendocino County. Groundwater recharge is the replacement of water in the groundwater aquifer. Recharge occurs in the form of precipitation, surface runoff that later enters the ground, irrigation, and in some parts of California (but not in Mendocino County) by imported water. Specific information regarding recharge areas for Mendocino County’s groundwater basins is not generally available, but recharge for inland groundwater basins comes primarily from infiltration of precipitation and intercepted runoff in stream channels, and from permeable soils along the margins of valleys. Recharge for coastal groundwater basins takes place in fractured and weathered bedrock and coastal terraces, and along recent alluvial deposits and bedrock formations. If recharge areas are protected from major modification -

such as paving, building and gravel removal - it is anticipated that continued recharge will re-supply groundwater reservoirs.

The basic source of all water in Mendocino County is precipitation in the form of rain or snow. Average annual rainfall in Mendocino County ranges from slightly less than 35 inches in the Ukiah area to more than 80 inches near Branscomb. Most of the precipitation falls during the winter, and substantial snowfall is limited to higher elevations. Rainfall is often from storms which move in from the northwest. Virtually no rainfall occurs during the summer months.

Chapter 4.13 of the Mendocino County Coastal Element, Sustainability Policy Action number S-5.1, states new projects that *create or replace 2,500 square feet or more of impervious area shall implement site design measure to reduce stormwater runoff and increase groundwater recharge.*

- a) **No Impact:** The proposed project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality. The project application was referred to pertinent agencies for comment and no response was received expressing concerns with violation of water quality or waste discharge requirements. A “will-serve” letter was provided by Millview Water District for the project. The Applicant provided revised septic plans at the request of Mendocino County Division of Environmental Health.
- b) **No Impact:** The proposed Project will connect to public water supply and will not decrease groundwater supplies within the project site. As such, the Project will not substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level. No concern was expressed by the Mendocino County Division of Environmental Health as to potential for interference or depletion of groundwater supplies.
- c.i) **Less Than Significant Impact:** No streams or rivers are located on-site. The proposed project would not substantially alter the existing drainage pattern of the site or area in a manner which would result in substantial erosion or siltation on- or off-site. The introduction of limited impervious surfaces and the slight modification to existing topography resulting from the development would not result in substantial erosion or siltation.
- c.ii-iii) **Less Than Significant Impact:** The project would not substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site, create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems, or provide substantial additional sources of polluted runoff. There is limited storm drainage infrastructure within the vicinity of the Site. Although future development may be proposed on-site, due to the proposed development footprint, Site drainage would continue to follow a natural flow pattern and infiltrate into the ground.
- c.iv) **No Impact:** The project is not located in either a FEMA flood zone or floodway. The project would not impede or redirect flood flows.
- d) **No Impact:** The project is not located in either a FEMA flood zone or floodway, tsunami, or seiche zone. As such, there is no risk of pollutants being released due to these types of events.
- e) **Less Than Significant Impact:** For any future development, the project would be required to utilize Best Management Practices (BMPs) to minimize the amount of sediments and other pollutants from being discharged in stormwater runoff. Mendocino County Ordinance No. 4313, Stormwater Runoff Pollution Prevent Procedure (Mendocino County Code Chapter 16.30 et.seq.), requires any person performing construction and grading work anywhere in the County to implement appropriate BMPs to prevent the discharge of construction waste, debris or contaminants from construction materials, tools and equipment from entering the storm drainage system (off-site). Compliance with these regulations would facilitate the implementation of water quality control efforts at the local and state levels. Therefore, the proposed project is not anticipated to conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **Less Than Significant Impact** on Hydrology and Water Quality.

XI. LAND USE AND PLANNING. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on land use and planning if it would physically divide an established community or cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

All lands within the unincorporated portions of Mendocino County are regulated by the General Plan and zoning ordinance, with regards to land use, as well as a number of more locally derived specific plans, such as the Gualala Town Plan, or Ukiah Valley Area Plan. The proposed Project does not fall within a specific plan. The project was also referred to a number of agencies with jurisdiction over the project.

a-b) **No Impact:** The proposed project is not located within any established community, thus the project would not physically divide any such community. The parcel would be accessed from North State Street via a private driveway, potentially accessing internal roads. As such, the design of the project would not divide an established community as part of the proposed subdivision. The General Plan Land Use Designation currently assigned to the Project site is Suburban Residential, which allows for 1 single family dwelling per 12,000 square feet of lot area if the project is within a water district. Higher residential densities (up to one dwelling unit per 2,000 square feet) may be allowed where alternative sewage disposal is provided to the satisfaction of the County. Future development shall adhere to these dwelling unit allowances. The Project would not conflict with any applicable land use plan, policy, or regulation with jurisdiction over the Project adopted for the purpose of avoiding or mitigating adverse environmental effects.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **No Impact** on Land Use and Planning.

XII. MINERAL RESOURCES. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on mineral resources if it would result in the loss of availability of a known mineral resource that would be of value to the region and the

residents of the state or result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan.

Discussion: The Surface Mining and Reclamation Act (SMARA) of 1975 provides a comprehensive surface mining and reclamation policy with the regulation of surface mining operations to assure that adverse environmental impacts are minimized and mined lands are reclaimed to a usable condition. SMARA also encourages the production, conservation, and protection of the state’s mineral resources. SMARA requires the State Mining and Geology Board to adopt State policy for the reclamation of mined lands and the conservation of mineral resources.

The most predominant minerals found in Mendocino County are aggregate resources, primarily sand and gravel. Three sources of aggregate materials are present in Mendocino County: quarries, instream gravel, and terrace gravel deposits. The demand for aggregate is typically related to the size of the population, and construction activities, with demand fluctuating from year to year in response to major construction projects, large development activity, and overall economic conditions. After the completion of U.S. 101 in the late 1960s, the bulk of aggregate production and use shifted primarily to residential and related construction. However, since 1990, use has begun to shift back toward highway construction.

a-b) **No Impact:** The County is the administrator of the California Surface Mining and Reclamation Act (SMARA). Therefore, all activities undertaken regarding essentially non-renewable resources are subject to review and approval from the local jurisdiction. Mendocino County has many aggregate mineral resources, the demand for which varies. However, any negative impacts to either active mining activities or mining reclamation efforts would be required to be reviewed and approved by the County. There are no know mineral resources with the project area, nor are there delineated locally-important mineral resources within the project boundaries. Therefore, there will be no loss of availability of a known mineral resource or loss in locally-important mineral resource recovery sites.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have **No Impact** on Mineral Resources.

XIII. NOISE. Would the project result in:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) For a project located within the vicinity of private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on noise if it would result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies; or generation of excessive groundborne vibration or groundborne noise levels; or expose people residing or working in the project area to excessive noise levels (for a project located

within the vicinity of a private airstrip or an airport or an airport land use plan, or where such as plan has not been adopted, within two miles of a public airport or public use airport).

Discussion: Acceptable levels of noise vary depending on the land use. In any one location, the noise level will vary over time, from the lowest background or ambient noise level to temporary increases caused by traffic or other sources. State and federal standards have been established as guidelines for determining the compatibility of a particular use with its noise environment. Mendocino County relies principally on standards in its Noise Element, its Zoning Ordinance, and other County ordinances, and the Mendocino County Airport Comprehensive Land Use Plan to evaluate noise-related impacts of development. Land uses considered noise-sensitive are those in which noise can adversely affect what people are doing on the land. For example, a residential land use where people live, sleep, and study is generally considered sensitive to noise because noise can disrupt these activities. Churches, schools, and certain kinds of outdoor recreation are also usually considered noise-sensitive.

- a-b) **Less Than Significant Impact:** Per the County General Plan, “noise policies are intended to protect County communities from excessive noise generation from stationary and non-stationary sources. Land uses would be controlled to reduce potential for incompatible uses relative to noise. Residential and urban uses will be restricted near agriculture lands to prevent incompatible uses being placed near inherently noisy agricultural operations. Noise-sensitive environments, including schools, hospitals, and passive recreational use areas, would be protected from noise-generating uses. Structural development would be required to include noise insulation and other methods of construction to reduce the extent of excessive noise.”² Vehicular traffic, grading, and construction may be proposed in the future for development, and may expose people to noise. Any noise or ground-borne vibration resulting from the project would not violate a local general plan or noise ordinance as all development within the Mendocino County Coastal Zone is subject to Exterior Noise Limit Standards specified in Table 3-J, Exterior Noise Level Standards, of the Mendocino County General Plan. Therefore, potential impacts will be less than significant.
- c) **No Impact:** The site is not located within an airport zone. The proposed project is approximately seven (7) miles north of Ukiah Municipal Airport and would not subject people in the area to excessive noise levels.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **Less Than Significant Impact** on Noise.

XIV. POPULATION AND HOUSING. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Induce substantial unplanned population growth in an area, either directly (e.g., by proposing new homes and/or businesses) or indirectly (e.g., through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on population and housing if it would induce substantial unplanned population growth in an area, either directly (e.g., by proposing new homes and/or businesses) or indirectly (e.g., through extension of roads or other infrastructure); or displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere.

² Mendocino County General Plan, Page 3-10

Discussion: The most recent census for Mendocino County was in 2020, with an estimated population of 87,497. The county has undergone cycles of population boom followed by periods of slower growth. For example, the county population increased by approximately 25 percent between 1950 and 1960, but barely grew from 1960 to 1970. Between 1990 and 2000, the population of Mendocino County increased 7.4 percent, a much slower rate of growth than the 20 percent increase from 1980 to 1990. Population growth slowed further from 2000 to 2007, increasing only 4.6 percent.

Mendocino County’s Housing Element is designed to facilitate the development of housing adequate to meet the needs of all County residents. The Mendocino Council of Government’s (MCOG) Regional Housing Needs Plan assigned the County a production goal of 2,552 housing unit for the unincorporated area between 2009 and 2014. Goals and policies were set forth in order to facilitate the development of these housing units at a range of sizes and types to address this need.

a-b) **No Impact:** The proposed project would not induce substantial unplanned population growth. Mendocino County’s General Plan Housing Element Goal 2 is to “preserve and improve existing housing stock.” Any increase in housing number and accompanying infrastructure to serve future development, were anticipated and analyzed in the General Plan. Parcel one is undeveloped and the remainder parcel is currently developed with seven residences. The construction of replacement housing will not be necessary.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **No Impact** on Population and Housing.

XV. PUBLIC SERVICES. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on public services if it would result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or result in the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for fire protection, police protection, schools, parks, or other public facilities.

Discussion: The Mendocino County Office of Emergency Services (OES) is the primary local coordination agency for emergencies and disasters affecting residents, public infrastructure, and government operations in the Mendocino County Operational Area. The subject parcel is serviced by the Ukiah Valley Unified School District, Adventist Health Ukiah Valley, and the Ukiah Valley Fire Protection District. The parcel is within the Millview Water District, but is not within a sewer district.

a-e) **Less Than Significant Impact:** The proposed project will not result in adverse impacts associated with provision of governmental facilities or need for new or physically altered governmental facilities that may result in environmental impacts in order to maintain acceptable service ratios and response times for public services.

Fire Protection: Fire protection services for wildland areas are provided by the California Department of Forestry and Fire Protection (CalFire), located approximately 2 miles south, and Ukiah Valley Fire Authority Station 643 is located approximately 3 miles south. The project application was referred to the CalFire for input. CalFire responded stating that the project, as described, is not required to meet State Fire Safe Regulations (PRC 4290) and therefore does not require any Conditions of Approval. If, however, there are any new buildings over 200 square feet, additions to buildings, changes to driveway or roadway access, a State Fire Safe Regulations Application will need to be completed and all conditions of approval met. Ukiah Valley Fire Protection District did not have any comments of concern regarding the project.

Police Protection: Mendocino County Sheriff Offices are located approximately 4 miles south.

Schools: The project is located in the Ukiah Unified School District. Future development has the potential to generate new students throughout the K-12 school system. Pursuant to SB 50, future development would be required to pay school impact fees at the time of building permit application submittal.

Parks and Other Public Facilities: Any future development on the newly created parcel would not generate a substantial increase in demands that warrant the expansion or construction of new public park facilities as there are numerous existing parks and trails that provide recreational opportunities. Though future development may create a slight increase in the use of surrounding parks, the existing facility will be sufficient to meet active and passive recreational demands of any new residents.

Any future development would not trigger the need for an expansion of service, staffing, or otherwise affect required service ratios.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **Less Than Significant Impact** on Public Services.

XVI.RECREATION. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on recreation if it would increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated or include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

Discussion: The County of Mendocino manages a variety of public recreation areas including the Low Gap Park in Ukiah, Bower Park in Gualala, Mill Creek Park in Talmage, Faulkner Park in Boonville, Indian Creek Park and Campground in Philo, and the Lion’s Club Park in Redwood Valley, all of which are operated by the Mendocino County Cultural Services Agency. Additionally, the County is host to ma variety of state

parks, reserves, other state protected areas used for the purpose of recreation, with 13 located along the coast and 8 located throughout inland Mendocino County.

- a -b) **Less Than Significant Impact:** Any future residential development on Parcel one would minimally impact the use of existing neighborhood and regional parks and other recreational facilities. Accelerated physical deterioration of the facilities is not anticipated.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **Less Than Significant Impact** on Recreation.

XVII. TRANSPORTATION. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on transportation if it would conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities; conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b); substantially increase hazards due to a geometric design features (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment); or result in inadequate emergency access.

Discussion: Mendocino County has not yet developed a threshold for Vehicle Miles Traveled (VMT). Mendocino Council of Governments has implemented a screening tool for a project’s impact on VMT within a Traffic Analysis Zone (TAZ). The screening tool demonstrates the proposed project is within a low VMT generating TAZ and will not create a significant impact (Attachment Q). Any potential future development proposed on-site is not expected to significantly impact the capacity of the street system, level of service standards established by the County, or the overall effectiveness of the circulation system, nor substantially impact alternative transportation facilities, such as transit, bicycle, or pedestrian facilities, as a substantial increase in traffic trips or use of alternative transportation facilities is not anticipated.

- a) **Less Than Significant Impact:** Future development of Parcel one would not conflict with a program, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.
- b) **Less Than Significant Impact:** Future development on Parcel one would not conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b), which states:

“(1) Land Use Projects. Vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact. Generally, projects within one-half mile of either an existing major transit stop or a stop along an existing high quality transit corridor should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should be considered to have a less than significant transportation impact.”

(2) Transportation Projects. Transportation projects that reduce, or have no impact on, vehicle miles traveled should be presumed to cause a less than significant transportation impact. For roadway capacity projects, agencies have discretion to determine the appropriate measure of transportation impact consistent with CEQA and other applicable requirements. To the extent that such impacts have already been adequately addressed at a programmatic level, a lead agency may tier from that analysis as provided in Section 15152."

The County of Mendocino has not established a threshold with regard to VMT impact significance consistent with CEQA Guidelines Section 15064.3, subdivision (b). Though an increase in traffic trips to the newly created parcel would be anticipated should development be proposed in the future, they are not expected to substantially increase VMT as the project is located approximately 4 miles north of essential services.

- c) **No Impact:** The proposed project is not anticipated to substantially increase hazards due to design features or incompatible uses. An encroachment permit would also be required for any future improvements within the County right-of-way. The Site improvements would be required to be designed and constructed in accordance with established standards. Additionally, the project will be referred to various agencies, such as the Mendocino County Department of Transportation (MCDOT) and CalFire, who have reviewed the project design for compliance with all standards and requirements, to ensure the project, as designed, would not increase hazards due to a geometric design feature. As of the writing of this Initial Study, no comments of concern were received from responsible agencies.
- d) **No Impact:** The proposed project will not result in inadequate emergency access. The primary concern for emergency access in remote areas is for wildland fires. Fire protection services for wildland areas are provided by the California Department of Forestry and Fire Protection (CalFire) and the Ukiah Valley Protection Fire District for structural protection. Neither agency provided any comments of concern on the project.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **Less Than Significant Impact** on Transportation.

XVIII. TRIBAL CULTURAL RESOURCES. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code §21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code §5020.1(k)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code §5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code §5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
---	--------------------------	--------------------------	--------------------------	-------------------------------------

Thresholds of Significance: The project would have a significant effect on Tribal Cultural Resources if it would cause a substantial adverse change in the significance of a cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code §21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is listed or eligible for listing in the California Register of Historical Places or in a local register of historical resources as defined in Public Resources Code §5020.1(k), or is a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code §5024.1.

Discussion: Public Resources Code Section 21074 defines Tribal cultural resources as sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either included or determined to be eligible for inclusion in the California Register of Historical Resources (California Register) or included in a local register of historical resources, or a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant. A cultural landscape that meets these criteria is a tribal cultural resource to the extent that the landscape is geographically defined in terms of the size and scope of the landscape. Historical resources, unique archaeological resources, or non-unique archaeological resources may also be tribal cultural resources if they meet these criteria.

According to Chapter 3 (Development Element) of the Mendocino County General Plan (2009), the prehistory of Mendocino County is not well known. Native American tribes known to inhabit the County concentrated mainly along the coast and along major rivers and streams. Mountainous areas and the County’s redwood groves were occupied seasonally by some tribes. Ten Native American tribes had territory in what is now Mendocino County. The entire southern third of Mendocino County was the home of groups of Central Pomo. To the north of the Central Pomo groups were the Northern Pomo, who controlled a strip of land extending from the coast to Clear Lake. The Coast Yuki claimed a portion of the coast from Fort Bragg north to an area slightly north of Rockport. They were linguistically related to a small group, called the Huchnom, living along the South Eel River north of Potter Valley. Both of these smaller groups were related to the Yuki, who were centered in Round Valley. At the far northern end of the county, several groups extended south from Humboldt County. The territory of the Cahto was bounded by Branscomb, Laytonville, and Cummings. The North Fork Wailaki was almost entirely in Mendocino County, along the North Fork of the Eel River. Other groups in this area included the Shelter Cove Sinkyone, the Eel River, and the Pitch Wailaki.

a.i-ii) **No Impact:** The Mendocino County Archaeological Commission accepted the submitted Cultural Assessment Findings prepared by Jay M. Flaherty, dated September 28, 2021 at its December 8, 2021 meeting and recommended that only the standard Discovery Clause condition be applied to the proposed project as no sites were identified in the Investigation. A Standard Condition advises the property owner of the Discovery Clause, which prescribes the procedures subsequent to the discovery of any cultural resources during construction of the project.

Additionally, the project application was referred to various tribes that requested consultation on planning projects under Assembly Bill (AB) 52 and no additional comments or concerns were expressed by the tribes receiving the referral.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **No Impact** on Tribal Cultural Resources.

XVIX. UTILITIES AND SERVICE SYSTEMS. Would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on utilities and service systems if it would require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects; not have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years; result in a determination by the wastewater treatment provider, which serves or may serve the project that it does not have adequate capacity to serve the project's projected demand in addition to the provider's existing commitments; generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals; or not comply with federal, state, and local management and reduction statutes and regulations related to solid waste.

Discussion: Public sewer systems in Mendocino County are provided by cities, special districts, and some private water purveyors. There are 13 major wastewater systems in the county, four of which primarily serve the incorporated cities, but also serve some unincorporated areas. Sewage collected by the Brooktrails Township Community Services District and Meadowbrook Manor Sanitation District is treated at the City of Willits Wastewater Treatment Plant. The City of Ukiah's Wastewater Treatment Plant also processes wastewater collected by the Ukiah Valley Sanitation District. Sewage disposal in the remainder of the county is generally handled by private onsite facilities, primarily septic tank and leach field systems, although alternative engineered wastewater systems may be used.

Solid waste management in Mendocino County has undergone a significant transformation from waste disposal in landfills supplemented by transfer stations to a focus on transfer stations and waste stream diversion. These changes have responded to rigorous water quality and environmental laws, particularly the California Integrated Waste Management Act of 1989 (AB 939). The Act required each city and county

to divert 50 percent of its waste stream from landfill disposal by the year 2000 through source reduction, recycling, composting, and other programs. Chapter 3 (Development Element) of the Mendocino County General Plan (2009) notes there are no remaining operating landfills in Mendocino County, and as a result, solid waste generated within the County is exported for disposal to the Potrero Hills Landfill in Solano County. The Potrero Hills Landfill has a maximum permitted throughput of 4,330 tons per day and a remaining capacity of 13.872 million cubic yards, and is estimated to remain in operation until February 2048.

Mendocino County’s Development Goal DE-21 (Solid Waste) states: *Reduce solid waste sent to landfills by reducing waste, reusing materials, and recycling waste.* Solid Waste and Hazardous Waste and Material Management Policy DE-201 states the County’s waste management plan *shall include programs to increase recycling and reuse of materials to reduce landfilled waste.* Mendocino County’s Environmental Health Division regulates and inspects more than 50 solid waste facilities in Mendocino County, including: 5 closed/inactive municipal landfills, 3 wood-waste disposal sites, 2 composting facilities, and 11 transfer stations.

- a) **Less Than Significant Impact:** Future development would not exceed the capacity of any treatment facility as the proposed project is not located within a wastewater sanitation district. Existing water supplies, facilities and infrastructure are sufficient to meet the demands of any future development. A will-serve letter from Millview Water District was provided to the Applicant.
- b) **Less Than Significant Impact:** Any future development will utilize water obtained from the Millview Water District, per a submitted will-serve letter, and will meet onsite water demands.
- c) **No Impact:** The project site is not served by a wastewater treatment provider and there is no district nearby that would feasibly be extending service to the parcel in the future.
- d-e) **No Impact:** Waste Management, located approximately 3 miles south of the project site, can accommodate the solid waste disposal needs of future development and residences. The project will comply with all federal, state, and local management and reduction statutes and regulation related to solid waste.

MITIGATION MEASURES

No mitigation required.

FINDINGS

The proposed project would have a **Less Than Significant Impact** on Utilities and Service Systems.

XX. WILDFIRE. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Impair an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage challenges?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on wildfire if it would impair an adopted emergency response plan or emergency evacuation plan; due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire; require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment; or expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage challenges.

Discussion: The County of Mendocino County adopted a *Mendocino County Operational Area Emergency Operations Plan* (County EOP) on September 13, 2016, under Resolution Number 16-119. As noted on the County’s website, the County EOP, which complies with local ordinances, state law, and stated and federal emergency planning guidance, serves as the primary guide for coordinating and responding to all emergencies and disasters within the County. The purpose of the County EOP is to “*facilitate multi-agency and multi-jurisdictional coordination during emergency operations, particularly between Mendocino County, local and tribal governments, special districts as well as state and Federal agencies*” (County of Mendocino – Plans and Publications, 2019).

- a) **Less Than Significant Impact:** There are no components of the project that would impair an adopted emergency response plan or emergency evaluation plan, including the adopted County EOP. The Site is located within an “Urban Unzoned” severity zone. All future development project components would be required to be designed in accordance with state and local standards, including safety and emergency access requirements and CalFire’s Fire Safe Regulations. No comments of concern were received.
- b) **Less Than Significant Impact:** Under the proposed project, it is not anticipated that wildfire risks would be exacerbated due to slope, prevailing winds, and other factors. Parcel one is currently undeveloped and is relatively flat, and primarily clear of vegetation. The remainder parcel is developed with seven residences. Although proper precautions and measures would be taken during future development, the potential exists for wildland fire to inadvertently be ignited when during and/or after development. The project would require compliance with any CalFire’s Fire Safe Regulations to ensure adequate fire protection measures and access.
- c) **Less Than Significant Impact:** Parcel one is currently undeveloped while the remainder parcel is developed with seven residences. Future development on Parcel 1 may require the installation and maintenance of internal access roads and underground utility line (electricity) installation and connections. The remainder parcel has reached maximum density regarding development. All future development will require compliance with the California Building Code.
- d) **No Impact:** Future development would not expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage challenges, as the Site is located in a relatively flat area. There are no mapped landslides at the project site.

MITIGATION MEASURES

None

FINDINGS

The proposed project would have a **Less Than Significant Impact** on Wildfire.

XXI.MANDATORY FINDINGS OF SIGNIFICANCE.	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--	--------------------------------	--	------------------------------	-----------

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects).	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Thresholds of Significance: The project would have a significant effect on mandatory findings of significance if it would have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory; have impacts that are individually limited, but cumulatively considerable (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.); or have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly.

Discussion: Certain mandatory findings of significance must be made to comply with CEQA Guidelines §15065. The proposed project has been analyzed and it has been determined that it would not:

- Substantially degrade environmental quality;
- Substantially reduce fish or wildlife habitat;
- Cause a fish or wildlife population to fall below self-sustaining levels;
- Threaten to eliminate a plant or animal community;
- Reduce the numbers or range of a rare, threatened, or endangered species;
- Eliminate important examples of the major periods of California history or pre-history;
- Achieve short term goals to the disadvantage of long term goals;
- Have environmental effects that will directly or indirectly cause substantial adverse effects on human beings; or
- Have possible environmental effects that are individually limited but cumulatively considerable when viewed in connection with past, current, and reasonably anticipated future projects.

Potential environmental impacts from the approval have been analyzed in this document and mitigation measures have been included in the document to ensure impacts would be held to a less than significant level.

- a) **Less Than Significant Impact:** The project is not located in an area of identified species of concern, nor is it located near any sensitive habitats. As such, there is no potential for any substantial adverse impacts on a sensitive habitat such as a riparian zone, wetland, wildlife corridor, or any form of conservation land. Archaeological surveys submitted were accepted by the Mendocino County Archaeological Commission at their December 8, 2021 meeting, and the County’s Discovery Clause ensures development will cease should any archaeological artifacts be discovered.

- b) **Less Than Significant Impact:** The proposed project will not create any cumulative impacts on the surrounding area and any impact that would occur is considered to be less than significant. Future development would require separate requirements such as BMPs and adherences to the California Building Code.
- c) **Less Than Significant Impact:** Future development will not cause substantial adverse effect on human beings. All future projects will be required to adhere to Local and State codes regarding development.

MITIGATION MEASURES

None

FINDINGS

The proposed project would have a **Less Than Significant Impact** on Mandatory Findings of Significance.
DETERMINATION: On the basis of this initial evaluation:

- I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A NEGATIVE DECLARATION will be prepared.
- I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.
