OUR COMMITMENT TO SUSTAINABILITY | ESA helps a variety of public and private sector clients plan and prepare for climate change and emerging regulations that limit GHG emissions. ESA is a registered assessor with the California Climate Action Registry, a Climate Leader, and founding reporter for the Climate Registry. ESA is also a corporate member of the U.S. Green Building Council and the Business Council on Climate Change (BC3). Internally, ESA has adopted a Sustainability Vision and Policy Statement and a plan to reduce waste and energy within our operations. This document was produced using recycled paper.

4112–4136 DEL REY AVENUE

Historic Resources Assessment

Introduction

Executive Summary

Environmental Science Associates (ESA) was retained by MDR Investments, LLC (Client), to prepare this Historic Resources Assessment Report (Report). The purpose of this Report is to identify and evaluate structures over 45 years in age within the property located at 4112–4136 Del Rey Avenue in the Marina Del Rey neighborhood of Los Angeles (City), California, on three assessor parcel numbers (APNs): 4230-005-048, 4230-005-047, and 4230-005-005 (Project site), to comply with the California Environmental Quality Act (CEQA).

The Project site is developed with six low-scale (one-story) industrial buildings on three assessor parcels as follows: APN 4230-005-048 contains two improvements at 4136 Del Rey Avenue, an industrial style building constructed in 1958 (Building A), and 4134 Del Rey Avenue, an industrial style building constructed in 1959 (Building B); APN 4230-005-047 contains two improvements at 4131 Del Rey Avenue, an industrial style building constructed in 1960 (Building C), and 4130 Del Rey Avenue, an industrial style building constructed in 1961 (Building D); and APN: 4230-005-005 contains two improvements at 4122 Del Rey Avenue, an industrial style building constructed in 1963 (Building E), and 4120 Del Rey Avenue, an industrial style building constructed in 1966 (Building F). All six industrial buildings are over 45 years in age and are therefore included in this study.

The structures on the Project site were evaluated as a potential historic district for listing in the National Register of Historic Places (National Register), California Register of Historical Resources (California Register), as well as for local designation as a City of Los Angeles Historic-Cultural Monument (LAHCM or HCM). The buildings are not distinctive enough to be evaluated individually, given their shared ownership, development histories, and architectural character. This Report includes a discussion of the survey methods used, a brief historic context of the Project site and surrounding area, and the identification and evaluation of the existing improvements on the Project site.

The property was not identified as eligible through the citywide historic resources survey, Survey LA. The property falls within the Palms-Mar Vista-Del Ray Community Plan Area (Palms-Mar Vista-Del Ray CPA) which was surveyed for SurveyLA between 2011 and 2012. ESA conducted research on the development history of the Project site, and reviewed the history of the Project site within the development of the Palms-Mar Vista-Del Ray CPA and the Wright's Addition to Ocean Park Tract. The property was evaluated by ESA under the SurveyLA industrial park

property type and the historical sub-theme, Post-World War II Industrial Design, 1945–1970 and for its association with developer, Park Brothers Company. However, the potential district does not appear significant under the National Register, California Register, or local HCM criteria and does not retain sufficient historical associations for listing as a potential district. Additionally, the property lacks historic integrity due to modifications to subject Buildings A, B, C, D, E, and F. Therefore, the district does not appear eligible as a historical resource pursuant to CEQA, and none of the buildings appear eligible as an individual historical resource. ESA finds the subject property not eligible as a historical resource pursuant to CEQA, and recommends the property be assigned a CHR Status Code of 6Z, “Found ineligible for NR, CR or local designation through survey evaluation.”

Project Location

The Project site, which is comprised of six subject improvements—Building A, Building B, Building C, Building D, Building E, and Building F—is shown in **Figure 1, Regional and Project site Location**. The Project site is improved with six one-story industrial buildings constructed between 1958 and 1966, as shown in **Figure 2, Aerial Photograph of Project site**. The six improvements are located on a developed block (subject block) bounded on the west by Del Rey Avenue, to the north by a multi-story apartment house, to the south by one-story commercial development, and to the east by several elongated one-story industrial structures (Figure 2). The subject property is located in the Palms-Mar Vista-Del Rey CPA of West Los Angeles, within the Glencoe-Maxella Specific Plan Area. The surrounding area is densely developed with contemporary multi-story multi-family residential buildings, and one- to three-story commercial/industrial buildings which appear to be from the mid-20th century. The extant buildings to the west of the Project site are generally one-story along SR-1/Lincoln Boulevard, and the adjacent commercial/industrial buildings along Del Rey Avenue are typically one-story in height. Adjacent multi-family residential buildings in the area are generally between five and six stories in height.

Research and Field Methodology

This Report was prepared by ESA’s architectural historians, including the following: Margarita Jerabek-Bray, PhD, Director of Historical Resources; and Alison Garcia Kellar, MS, Senior Architectural Historian. Both of these ESA staff meet and exceed the *Secretary of the Interior’s Professional Qualification Standards* in history and architectural history. Resumes of key staff outlining professional qualifications are provided in **Appendix A**.

The preparation of this Report involved a review of the National Register and its annual updates, the California Register, the Statewide Historical Resources Inventory (HRI) database maintained by the State Office of Historic Preservation (OHP), the California Built Environment Resource Directory (BERD), and the City of Los Angeles’s Historic Resources Survey, SurveyLA, to identify any previously recorded properties within or near the Project site. An intensive pedestrian survey also was undertaken to document the existing conditions of the property and vicinity. A set of California Department of Parks and Recreation (DPR) 523 forms for each improvement over 45 years in age situated within the Project site is included in **Appendix B**.

Aerial Photograph of Project Site

In addition, the following tasks were performed for the study:

- Conducted field inspection of the Project site and utilized the survey methodology of the OHP on August 8, 2022. The survey was conducted in accordance with the OHP’s *Instructions for Recording Historical Resources* (1995), and The National Park Service’s *National Register Bulletin 24: Guidelines for Local Surveys: A Basis for Preservation Planning*.
- Photographed the existing improvements on the Project site and examined other properties in the vicinity for potential architectural and/or historical associations.
- Conducted site-specific research on the Project site utilizing assessor records, building permits, Sanborn Fire Insurance Maps (Sanborn maps), city directories, historical photographs, the Los Angeles Public Library’s California Index, Online Archive of California, Calisphere, University of Southern California (USC) Digital Collections, historical *Los Angeles Times*, and other published sources.
- Conducted research at the City’s Building and Safety and City Planning Departments, and the County Assessor’s Office
- Reviewed and analyzed ordinances, statutes, regulations, bulletins, and technical materials relating to federal, state, and local historic preservation, designation assessment processes, and related programs.
- Evaluated potential historical resources based upon criteria used by the National Register, California Register, and City of Los Angeles Cultural Heritage Preservation Ordinance. The evaluation was conducted in accordance with the National Park Service’s *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation*, and *National Register Bulletin 16B: How to Complete the National Register Multiple Property Documentation Form*.

Regulatory Framework

Historical resources fall within the jurisdiction of the federal, state, and local designation programs. Federal laws provide the framework for the identification, and in certain instances, protection of historical resources. Additionally, state and local jurisdictions play active roles in the identification, documentation, and protection of such resources within their communities. The National Historic Preservation Act (NHPA) of 1966, as amended and the California Public Resources Code (PRC), Section 5024.1, are the primary federal and state laws and regulations governing the evaluation and significance of historical resources of national, state, regional, and local importance. Descriptions of these relevant laws and regulations are presented below.

Federal Eligibility Criteria and Integrity Aspects

National Register of Historic Places

The National Register was established by the NHPA as “an authoritative guide to be used by federal, state, and local governments, private groups and citizens to identify the Nation’s cultural resources and to indicate what properties should be considered for protection from destruction or

impairment.”¹ The National Register recognizes properties that are significant at the national, state, and/or local levels.

To be eligible for listing in the National Register, a resource must be significant in American history, architecture, archaeology, engineering, or culture. Four criteria for evaluation have been established to determine the significance of a resource:

- A. Associated with events that have made a significant contribution to the broad patterns of our history;
- B. Associated with the lives of persons significant in our past;
- C. Embodies the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction;
- D. Yields, or may be likely to yield, information important in prehistory or history.²

Districts, sites, buildings, structures, and objects that are 50 years in age must meet one or more of the above criteria *and* retain integrity (that is, convey their significance) to be eligible for listing.

Under the National Register, a property can be significant not only for the way it was originally constructed, but also for the way it was adapted at a later period, or for the way it illustrates changing tastes, attitudes, and uses over a period of time.³

Within the concept of integrity, the National Register recognizes seven aspects or qualities that, in various combinations, define integrity—Location, Design, Setting, Materials, Workmanship, Feeling, and Association—summarized as follows:

Location is the place where the historic property was constructed or the place where the historic event occurred. The relationship between the property and its location is often important to understanding why the property was created or why something happened. The actual location of a historic property, complemented by its setting, is particularly important in recapturing the sense of historic events and persons. Except in rare cases, the relationship between a property and its historic associations is destroyed if the property is moved.

Design is the combination of elements that create the form, plan, space, structure, and style of a property. It results from conscious decisions made during the original conception and planning of a property (or its significant alteration) and applies to activities as diverse as community planning, engineering, architecture, and landscape architecture. Design includes such elements as organization of space, proportion, scale, technology, ornamentation, and materials. A property’s design reflects historic functions and technologies as well as aesthetics. It includes such considerations as the structural system; massing; arrangement of spaces; pattern of fenestration;

¹ 36 CFR Section 60.2.

² U.S. Department of the Interior, National Park Services, Cultural Resources, *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation*, 1995, 2, accessed October 22, 2022, https://www.nps.gov/subjects/nationalregister/upload/NRB-15_web508.pdf.

³ *Ibid.*, 19.

textures and colors of surface materials; type, amount, and style of ornamental detailing; and arrangement and type of plantings in a designed landscape.

Setting is the physical environment of a historic property. Whereas location refers to the specific place where a property was built or an event occurred, setting refers to the *character* of the place in which the property played its historic role. It involves *how*, not just *where*, the property is situated and its relationship to surrounding features and open space.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. It is the evidence of artisans' labor and skill in constructing or altering a building, structure, object, or site. Workmanship can apply to the property as a whole or to its individual components.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.

The choice and combination of materials reveal the preferences of those who created the property and indicate the availability of particular types of materials and technologies. A property must retain key exterior materials dating from the period of its historic significance.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. It results from the presence of physical features that, taken together, convey the property's historic character.

Association is the direct link between an important historic event or person and a historic property. A property retains association if it *is* the place where the event or activity occurred and is sufficiently intact to convey that relationship to an observer.⁴

To retain historic integrity, a property will always possess most of the aspects and depending upon its significance, retention of specific aspects of integrity may be paramount for a property to convey its significance.⁵ Determining which of these aspects are most important to a particular property requires knowing why, where and when a property is significant.⁶ For properties that are considered significant under National Register Criteria A and B, *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation (National Register Bulletin 15)* explains, "a property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance

⁴ Ibid., 44-45.

⁵ The National Register defines a "property" as an "area of land containing a single historic resource or a group of resources, and constituting a single entry in the National Register of Historic Places." A "historic property" is defined as "any prehistoric or historic district, site, building, structure, or object at the time it attained historic significance." U.S. Department of the Interior, National Park Services, Cultural Resources, *National Register Bulletin 16A: How to Complete the National Register Registration Form*, 1997, IV: 3, accessed October 22, 2022, at <https://www.nps.gov/subjects/nationalregister/upload/NRB16A-Complete.pdf>. This bulletin contains technical information on comprehensive planning, survey of cultural resources and registration in the NRHP.

⁶ *National Register Bulletin 15*, 44.

during the period of its association with the important event, historical pattern, or person(s).”⁷ In assessing the integrity of properties that are considered significant under National Register Criterion C, *National Register Bulletin 15* states, “a property important for illustrating a particular architectural style or construction technique must retain most of the physical features that constitute that style or technique.”⁸

State Register and Eligibility Criteria

California Register of Historical Resources

The Office of Historic Preservation (OHP), as an office of the California Department of Parks and Recreation (DPR), implements the policies of the NHPA on a statewide level.

The OHP also carries out the duties as set forth in the PRC and maintains the HRI and the California Register. The State Historic Preservation Officer (SHPO) is an appointed official who implements historic preservation programs within the state’s jurisdictions.

Also implemented at the state level, CEQA requires projects to identify any substantial adverse impacts which may affect the significance of identified historical resources.

The California Register was created by Assembly Bill 2881 which was signed into law on September 27, 1992. The California Register is “an authoritative listing and guide to be used by state and local agencies, private groups, and citizens in identifying the existing historical resources of the state and to indicate which resources deserve to be protected, to the extent prudent and feasible, from substantial adverse change.”⁹ The criteria for eligibility for the California Register are based upon National Register criteria.¹⁰

The California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register automatically includes the following:

- California properties listed on the National Register and those formally determined eligible for the National Register;¹¹
- California Registered Historical Landmarks from No. 770 onward;

⁷ “A property retains association if it is the place where the event or activity occurred and is sufficiently intact to convey that relationship to an observer. Like feeling, association requires the presence of physical features that convey a property’s historic character. Because feeling and association depend on individual perceptions, their retention alone is never sufficient to support eligibility of a property for the National Register.” *Ibid.*, 46.

⁸ “A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.” *Ibid.*

⁹ PRC Section 5024.1(a).

¹⁰ PRC Section 5024.1(b).

¹¹ PRC Section 5024.1(d).

- Those California Points of Historical Interest (PHI) that have been evaluated by the OHP and have been recommended to the State Historical Commission for inclusion on the California Register.¹²

Other resources which may be nominated to the California Register include:

- Individual historical resources;
- Historical resources contributing to historic districts;
- Historical resources identified as significant in historical resources surveys with significance ratings of Category 1 through 5;
- Historical resources designated or listed as Historic-Cultural Monuments (HCMs), or designated under any local ordinance, such as an Historic Preservation Overlay Zone.¹³

To be eligible for the California Register, a historical resource must be significant at the local, state, or national level, under one or more of the following four criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. Has yielded, or may be likely to yield, information important in prehistory or history.

Additionally, a historical resource eligible for listing in the California Register must meet one or more of the criteria of significance described above and retain enough of its historic character or appearance to be recognizable as a historical resource and to convey the reasons for its significance. Historical resources that have been rehabilitated or restored may be evaluated for listing. Integrity is evaluated with regard to the retention of seven aspects of integrity similar to the National Register (location, design, setting, materials, workmanship, feeling, and association). Also like the National Register, it must also be judged with reference to the particular criteria under which a resource is proposed for eligibility. Alterations over time to a resource or historic changes in its use may themselves have historical, cultural, or architectural significance. It is possible that historical resources may not retain sufficient integrity to meet the criteria for listing in the National Register, but they may still be eligible for listing in the California Register. A resource that has lost its historic character or appearance may still have sufficient integrity for the California Register if it maintains the potential to yield significant scientific or historical information or specific data.¹⁴

¹² PRC Section 5024.1(d).

¹³ PRC Section 5024.1(e)

¹⁴ Codified in California Code of Regulations, Title 14, Chapter 11.5, Section 4852(c) which can be accessed on the internet at <http://ohp.parks.ca.gov>

City of Los Angeles

Cultural Heritage Ordinance and Eligibility Criteria

The Los Angeles City Council adopted the Cultural Heritage Ordinance in 1967 and amended it in 2018 (Los Angeles Administrative Code, Chapter 9, Division 22, Article 1, Section 22.171.7). According to the Cultural Heritage Ordinance, Historic-Cultural Monuments (HCM) are sites, buildings, or structures of particular historic or cultural significance to the City in which the broad cultural, political, or social history of the nation, state, or City is reflected or exemplified, including sites and buildings associated with important personages or which embody certain distinguishing architectural characteristics and are associated with a notable architect. The Cultural Heritage Ordinance establishes criteria for designating a local historical resource as an HCM. An HCM is any site (including significant trees or other plant life located on the site), building, or structure of particular historic or cultural significance to the City that meets at least one of the following criteria:

1. Is identified with important events of national, state, or local history, or exemplifies significant contributions to the broad cultural, economic, or social history of the nation, state, city, or community; or
2. Is associated with the lives of historic personages important to national, state, city, or local history; or
3. Embodies the distinctive characteristics of a style, type, period, or method of construction; or represents a notable work of a master designer, builder, or architect whose individual genius influenced his or her age.

Historic Preservation Overlay Zone Ordinance Eligibility Criteria

A Historic Preservation Overlay Zone, or HPOZ, is an area of the city which is designated as containing structures, landscaping, natural features or sites having historic, architectural, cultural or aesthetic significance. To receive such designation, an area must be adopted as an HPOZ by the City Planning Commission and the City Council through a zone change procedure that includes notification of all affected and nearby property owners and public hearings. Once designated, areas have an HPOZ overlay added to their zoning, and are subject to special regulations under Section 12.20.3 of the Los Angeles Municipal Code. City of Los Angeles Ordinance Number 184903 amending Section 12.20.3 of the Los Angeles Municipal Code, describes the procedures for creation of new HPOZs, the powers and duties of HPOZ Boards, and the review processes for Projects within HPOZs.

Before an HPOZ may move into the formal adoption process, an historic resources survey of the proposed district must be completed. The survey studies the historic and architectural significance of the neighborhood and identifies structures and features as either “contributing” or “non-contributing” to the district. A contributing structure is a building that was constructed during the predominant period of development in the neighborhood and that has retained most of its historic features. A non-contributing structure is one that was either constructed after the major period of

the neighborhood's development, or has been so significantly altered that it no longer conveys its historic character.¹⁵

According to Ordinance 183903 features designated as contributing shall meet one or more of the following criteria:

1. Adds to the Historic architectural qualities or Historic associations for which a property is significant because it was present during the period of significance, and possesses Historic integrity reflecting its character at that time; or
2. Owing to its unique location or singular physical characteristics, represents an established feature of the neighborhood, community or city; or
3. Retaining the building, structure, Landscaping, or Natural Feature, would contribute to the preservation and protection of an Historic place or area of Historic interest to the City.

Secretary of the Interior's Standards

The Secretary of the Interior's Standards (36 Code of Federal Regulations [CFR] Part 68) were originally designed for use by the National Park Service and intended for application in a federal context. The stated intent of the Standards is to "set forth standards for the treatment of historic properties containing standards for preservation, rehabilitation, restoration, and reconstruction" (36 CFR 68.1). One set of standards—preservation, rehabilitation, restoration or reconstruction—will apply to a property undergoing treatment, depending upon the property's significance, existing physical condition, the extent of documentation available and interpretive goals, when applicable, and are to be applied in a reasonable manner, taking into consideration economic and technical feasibility (36 CFR 68.3). The Standards for Rehabilitation (as defined under 36 CFR 68.3(b)) are most applicable to projects where compatibility with historic building alterations or alterations to a building's environment is being evaluated and can pertain to historic buildings of all materials, construction types, sizes, and occupancy and encompass the exterior and the interior, related landscape features and the building's site and environment as well as attached, adjacent, or related new construction.

The Standards were subsequently incorporated into the California PRC Section 15164.5(b) as a gauge against which lead agencies complying with CEQA could measure project impacts to historical resources. As stated under the prior CEQA subsection, generally a project that complies with the Standards is considered to have mitigated its impacts to historical resources to a less-than-significant level (State CEQA Guidelines Section 15064.5(b)(3); see also *League for Protection of Oakland's Architectural and Historic Resources v. City of Oakland*, (1997), 52 Cal.App.4th 896). Although not prescriptive and as suggested by the term "generally" as used in the PRC, the appropriate application of the Standards, or a subset thereof, requires careful consideration by a lead agency of the specific significance, characteristics, and condition of the historical resource for which impacts are being evaluated.

Environmental Setting

Identification of Potential Historical Resources within the Project site and Surrounding Area

Archival Research Methods

Archival research included a review of the National Register and its annual updates, the California Register, the Statewide Historical Resources Inventory (HRI) database maintained by the State Office of Historic Preservation (OHP), BERD, and the City of Los Angeles's Historic Resources Survey, SurveyLA, to identify any previously recorded properties within or near the Project site. The surrounding area is densely developed with multi-story multi-family residential buildings and one- to three-story industrial buildings. The extant buildings to the west of the Project site are generally one-story along SR-1/Lincoln Boulevard, and the adjacent commercial/industrial buildings along Del Rey Avenue are typically one-story in height. Adjacent multi-family residential buildings in the area are generally between five and six stories in height. Due to the density of the existing development in the area, a search for previously identified historical resources was limited to a one-quarter mile radius of the Project site. This study area is where the Project has the greatest potential for indirect impacts to affect the eligibility of nearby historical resources.

A records search for the proposed Project was conducted by ESA staff on September 20, 2022, at the California Historical Resources Information System's South Central Coastal Information Center (SCCIC) housed at California State University, Fullerton. The records search included a review of all previously documented historic architectural resources and studies within a one-quarter mile radius of the Project site and archaeological resources within or immediately adjacent to the Project site. The records search also included a review of listings for the National Register, California Register, California Points of Historical Interest, California Historical Landmarks, California State Historic Resources Inventory, and Los Angeles Historic-Cultural Monuments. ESA also reviewed the results of the BERD and SurveyLA to locate information on any previously recorded historical resources on the Project site or in the vicinity.

Results

Previously Recorded Cultural Resources

The records search results indicate that 28 cultural resources studies have been conducted within one-half mile radius of the Project site. Of the 28 previous studies, none have included the Project site.

According to the SCCIC files, three historic architectural resources have been previously recorded within a one-half mile radius of the Project site (**Table 1**), one of which has been demolished; however, none have been recorded within the Project site boundaries. Two archaeological resources have been previously recorded within a one-quarter mile radius of the Project site which include shell midden, concrete footing, and glass, household pottery, metal, wood, plaster and concrete fragments. No archeological resources have been recorded within the Project site boundaries. As a result of the research effort, the following three properties were

established as previously identified historical resources located within one-half mile of the Project site: a bank, a two-story commercial building (demolished), and a three-story commercial building, none of which are listed on the HRI or in the BERD.

TABLE 1
PREVIOUSLY RECORDED HISTORIC ARCHITECTURAL RESOURCES ON FILE AT SCCIC

Nearby Resources

Listed below in **Table 2** are the two historical resources identified by SurveyLA within one-quarter mile of the Project site, including an archaeological site and a built environment resource. The one identified built environment historical resource in the area would have a partial or indirect view of the Project site is located at 4144 S. Lincoln Boulevard, and is assigned the CHR Status Codes of 3CS, 3S, and 5S3; this resource is a rare example of an A-frame commercial building in Venice.¹⁶

TABLE 2
NEARBY HISTORICAL RESOURCES RECORDED IN SURVEYLA

Address/Name	Date	Resource Description	CHR Status Code	Approx. Distance from Project site	View
4144 S. Lincoln Boulevard/ Schwartzkopf Exclusive Customs	1963	HP06: one to three story commercial building. Mid-Century Modern retail store, which is an excellent as a rare example of A-frame commercial architecture in Venice	3CS, 3S, 5S3	213 ft. S	Indirect
4231 S. Lincoln Boulevard/ SA Angna / Sacred Burial Site of Gabrielino Indians	c. 1542	Institutional-Religious/Spiritual. Los Angeles Historic Cultural Monument No. 490. Neighborhood Development

The Project site is located within the Palms-Mar Vista-Del Rey Community Plan Area (CPA). A history of the CPA can be found in the currently adopted *Palms-Mar Vista-Del Rey Community Plan*.¹⁷

History of Wright's Addition to Ocean Park Tract

ESA reviewed historic tract maps, Sanborn maps, aerial photographs, and newspaper articles to understand the development of the Project site and associated neighborhood. Rancho La Ballona was a 13,920-acre Mexican land grant that was confirmed by Governor Juan Alvarado in 1839 to Ygnacio and Augustin Machado, and Felipe and Tomas Talamantes in 1839.¹⁸ The Wright's Addition to Ocean Park Tract was surveyed in 1904 by N. D. Darlington as a subdivision of the Andres and Rafael Machado allotments, and as part of the Benia Talamantes allotment of the larger Rancho La Ballona (**Appendix C**). N. D. Darlington was the chief engineer of the Hueneme, Malibu and Port Los Angeles Railway.¹⁹ The Wright's Addition to Ocean Park Tract was originally bound to the northwest by Compton and Santa Monica Road (presently Washington Street); to the southeast by Maxella Avenue; to the west by Lincoln Boulevard (presently State Road 1), and to the east by Santa Monica Avenue. The tract included 104 lots, which each generally measured between 400 to 413 feet long by 100 to 145 feet wide. The original tract map noted that the tract was "partly in the City of Los Angeles," as the City's boundaries abutted unincorporated Los Angeles County boundaries in an irregular fashion in this area. The Palms-Mar Vista-Del Rey community was largely devoted to bean fields and truck gardening until the late 1920s when the area was incorporated - Del Rey was incorporated into the City of Los Angeles in 1927, and much of the surrounding area was subdivided the following year as part of the largest subdivision in City history.²⁰

Prior to the construction of the extant development, the Project site operated as the J. R. Borges Dairy ranch according to 1933 to 1936 telephone directory entries and a 1938 aerial photograph (**Figure 3**).²¹ The aerial photograph indicates the layout of Del Rey Avenue, with much of the surrounding area dedicated to agrarian use with farmed fields, and several structures located at the subject property. A Sanborn map published in 1950 illustrates the City of Los Angeles' boundaries encroaching on the subject property, during which time was still considered unincorporated Los Angeles County (**Figure 4**). The surrounding neighborhood experienced a single-family residential building boom, which encroached along the Project site as shown by a 1952 aerial photograph (**Figure 5**). By the mid-1950s the single-family homes started to convert to higher density multi-family dwellings in larger community, and commercial structures to

²¹ Los Angeles Directory Company, 1933, 1936; and USGS aerial photograph, 1938.

accommodate post-World War II population growth near the Project site.²² City directories indicate that neighboring buildings in the 1950s and 1960s contained manufacturing businesses, including businesses that made light fixtures, heating units, furniture, cosmetics, plastic products, and other equipment, and were housed in monolithic and often times elongated structures. In the 1960s, the surrounding area was considered to be Venice, and the immediate area was later renamed Marina del Rey by 1965 when the namesake marina was dedicated.²³

The Project site was originally developed by the Park Brothers Company, a family-owned company, as a series of 6 factory and industrial buildings. Construction spanned between 1958 and 1966, with two buildings constructed on each of three parcels. Building A was constructed in 1958, with Building B constructed the following year in 1959. Building C was constructed in 1960, and a photograph taken the same year illustrates this development (**Figure 6**). By this time, the surrounding neighborhood was increasingly redeveloped with industrial and commercial development, both along S. Lincoln Boulevard and Del Rey Avenue. Construction continued with a new building constructed roughly every year, with Building D constructed in 1961 (**Figure 7**), Building E constructed in 1963 (**Figure 8**), and Building F in 1966 (**Figure 9**). With the construction of Building E, the subject property was fully developed, and appeared as an industrial park all developed by the Park Brothers with centralized parking lots in between buildings with similar architectural characters, by the same engineers and contractors (**Figure 10**). In its early years, property tenants included various electronics, injection molding, and engineering services, yet it does not appear that there was ever a single tenant occupying the entire park at once.

By the 1970s, the surrounding Marina Del Rey area became known as a bedroom community for aerospace industry workers, as many of the surrounding elongated buildings were dedicated to the various aerospace industry enterprises.²⁴ A review of aerial photographs indicates that large-scale multi-family and mixed-use buildings have replaced earlier Mid-20th Century manufacturing structures in the immediate area beginning in the early 2000s and continuing through today (**Figures 11 and 12**). A current parcel map is included as **Appendix G**.

Property History

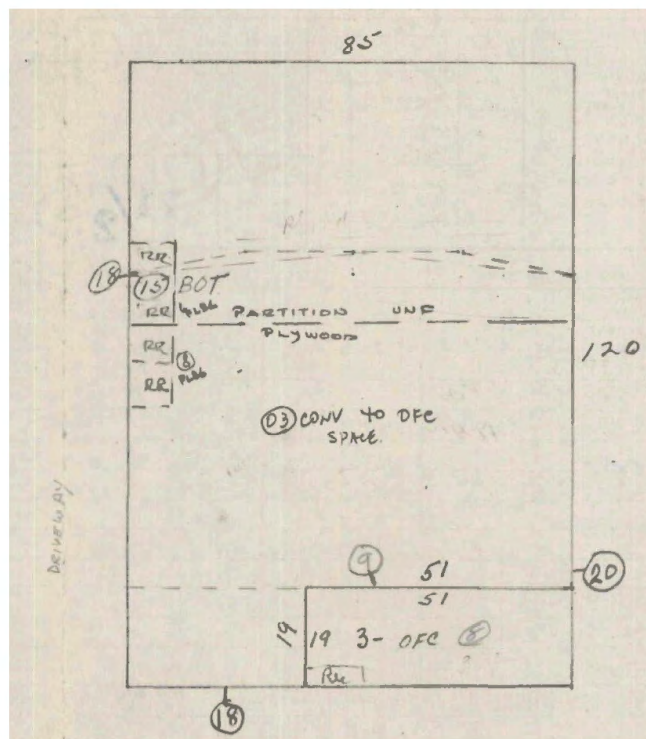

Recorded Construction History

The construction history of the Project site as recorded in City of Los Angeles building permits and Los Angeles County Assessor records is developed below for each existing improvement.

Building A (4136 Del Rey Avenue)

Assessor's records indicate that Building A was constructed in 1958 as a warehouse with office space (**Figure 13**). The original building permit issued in 1958 indicates that the 85' x 120' brick building was to be used as a factory. Constructed for \$35,000 for the Park Brothers Company,

Harold E. Bird served as the engineer and Philip Montgomery served as the building contractor. The building includes a concrete foundation and originally included asphalt tile flooring. As noted in the assessor’s records, the roof was arched with composition shingles, with wood decking and wood trusses. The walls included reinforced brick with concrete brick at the front facade along Del Rey Avenue. Original windows were metal sash, and door types included wood doors and roll up metal doors. The interior walls were painted drywall which was unfinished in some locations and the ceiling included acoustical plasterwork. Further, the building included a plywood partition bisecting the main warehouse space into two. A building permit was issued in 1961 for interior alterations to the ‘light ensemble manufacturing building.’ The next permit was issued in 1999 for tenant improvements to change the building from manufacturing use to office and warehouse use. The building was reroofed and new roof framing was installed the following year in 2000, during which time new log poles were installed and select masonry walls were infilled. Undocumented modifications to the building include the contemporary storefront awning, replacement front entrance doors and windows, and concrete steps, in addition to an articulated rear entrance with contemporary storefront awning from the parking lot. The recorded construction chronology is summarized below in **Table 3**, and building permits are included in **Appendix D**. Building permits are included in Appendix D and Assessor Records are included in Appendix F.

Building B (4134 Del Rey Avenue)

Assessor's records indicate that Building B was constructed in 1960 as a factory building with office and lab space (**Figure 14**). The original building permit issued in 1959 indicates that the 100' x 100' concrete building was to be used as an industrial building. Constructed for \$53,000 for the Park Brothers Company, Harold E. Bird served as the engineer and Philip Montgomery served as the building contractor. The building includes a concrete foundation and originally included asphalt tile flooring. As noted in the assessor's records, the roof was arched with composition shingles, with wood decking and wood trusses. The exterior walls included concrete block and the interior walls were painted drywall, which was unfinished in some locations, the ceiling included acoustical plaster. Original windows were metal sash, and the building included wood doors and roll up metal doors. The interior walls were painted drywall which was unfinished in some locations and the ceiling included acoustical plasterwork. Three building permits issued in 1960 called for interior partitions. In 1966, a building permit for a panel wall sign was issued, followed by a 1971 permit to reinforce the concrete vault and to add two bathrooms. In 1997, clarifier pits were capped and filled with concrete, and tenant improvements to the office portion were subsequently undertaken. Drywall was replaced in 2015. The recorded construction chronology is summarized below in **Table 4**. Building permits are included in Appendix D and Assessor Records are included in Appendix F.

²⁵ Documentation exists for all permits and certificates of occupancy listed in this table.

Building C (4132 Del Rey Avenue)

A building permit issued in 1937 indicated that a single-family residence was constructed at 4132 Del Rey Avenue for the Oliver Park. This house was demolished in 1960 according to a demolition permit.

Assessor's records indicate that Building C was constructed in 1960 as a factory with office space (**Figure 15**). The original building permit issued in 1960 also confers that the 85' by 120' building was to be used as a factory. Constructed for \$58,500 for the Park Brothers Company, Harold E. Bird served as the engineer and Philip Montgomery served as the building contractor.. The building includes a concrete foundation and originally included asphalt tile flooring. As noted in the assessor's records, the roof was arched with composition shingles, with wood decking and wood trusses. The exterior walls included reinforced brick, and windows were metal sash while doors were wood. The interior walls were painted drywall which was unfinished in some locations and the ceiling included suspended acoustical tile. In 1979, a building permit was

²⁶ Documentation exists for all permits and certificates of occupancy listed in this table.

issued to add 21' x 25' x 15' high walls with sheet rock and metal studs, likely referring to interior partitions. In 1995, clarifying pits were infilled, followed by unspecified tenant improvements. In 1996 the building use changed from factory to warehouse, while a subsequent permit issued the same year indicated a change in use from an enamel shop to video packaging/distribution and office use. In 1999, the building use changed from warehouse use to office use in a portion of the building, which then required tenant improvements. In 2002, an inspection application was issued to replace downlights with LED fixtures. Undocumented modifications to the building include the contemporary storefront awning, replacement front entrance doors and windows, and concrete steps in addition to replacement doors at the rear entrance from the parking lot. The recorded construction chronology is summarized below in **Table 5**. Building permits are included in Appendix D and Assessor Records are included in Appendix F.

Building D (4130 Del Rey Avenue)

Assessor's records indicate that the building was constructed in 1961 as a light industrial manufacturing building for use as a factory with office space (**Figure 16**). The original building permit indicates that the 100' x 122' building was constructed for use as a machine shop for spray paint activities. Constructed for \$63,000 for the Park Brothers Company, Harold E. Bird served as the engineer and Philip Montgomery served as the building contractor. The building includes a

²⁷ Documentation exists for all permits and certificates of occupancy listed in this table.

concrete foundation with concrete walls, and stucco at the facade. As noted in the assessor’s records, the roof was arched with wood trusses with composition roofing. The doors included wood, metal, steel rollup and manual doors. The windows were aluminum sashes, and there were skylights present. At the interior, the wood frame building included asphalt tile and concrete flooring with some unfinished walls and some clad in plaster, with acoustic plaster at the ceilings. The building included a clarifier pit. Originally, the building included a plywood partition bisecting the main warehouse space into two. A building permit was issued in 1969 to change an existing window into a door of the same size. An interior partition and ceiling were installed for silk screen activities in 1976. In 2012 and 2017, a second floor interior office addition was permitted, yet it is unclear when the work was constructed. The recorded construction chronology is summarized below in **Table 6**. Building permits are included in Appendix D and Assessor Records are included in Appendix F.

Building E (4112 Del Rey Avenue)

Assessor's records indicate that Building E was constructed in 1963 as a light industrial manufacturing building for use as a factory with office space (**Figure 17**). The original building permit issued in 1963 indicates that the 82' by 134' building was to be used as a manufacturing building. Constructed for \$69,000 for the Park Brothers Company, Harold E. Bird served as the engineer and Philip Montgomery served as the building contractor. As noted in the assessor's records, the building includes a concrete foundation with reinforced brick at the walls. The flat roof was clad in composition roofing. At the interior, the floor was finished in asphalt tile and concrete with drywall and hardwood veneer at the walls, and acoustic plaster at the ceilings. The doors included steel roll up doors. The windows were aluminum sashes, and there were skylights present. It appears that there was a series of small office spaces, and two work rooms surrounded by factory space as part of the original configuration. A wall sign was constructed in 1997. Undocumented modifications to the building include the contemporary storefront awning, replacement front entrance doors and windows, and concrete steps. The recorded construction

²⁸ Documentation exists for all permits and certificates of occupancy listed in this table.

chronology is summarized below in **Table 7**. Building permits are included in Appendix D and Assessor Records are included in Appendix F.

Building F (4120 Del Rey Avenue)

Assessor’s records indicate that Building F was constructed in 1966 as a factory building with office space. (Figure 18). The original building permit issued in 1966 also indicates a factory usage for the building measuring 100’ by 116’ which included a concrete foundation and concrete flooring. Constructed for \$104,000 for the Park Brothers Company, Harold E. Bird served as the engineer and Philip Montgomery served as the building contractor. As noted in the assessor’s records, the building includes a concrete foundation with reinforced brick at the walls. The doors were comprised of metal single doors and steel roll up doors. The windows were aluminum sashes, and there were skylights present. The roof was noted as arched with plywood sheathing and composition roofing. At the interior, the floor was finished in asphalt tile, with plastered interior partitions and painted brick, with acoustic plaster lining the ceilings. It appears that there was a workroom located in the general center of the building with offices along the facade as part of the original configuration. A mechanical permit was issued in 1988 for unspecified work. The recorded construction chronology is summarized below in Table 8. Building permits are included in Appendix D and Assessor Records are included in Appendix F.

Recorded Ownership, Occupancy, and Use History

City directories and building permits on file with the City’s Department of Building and Safety, as well as Los Angeles County Assessor, U.S. Federal Census, and other records, were reviewed to determine if the Project site has any significant associations with the productive lives of historic personages, or was associated with a historically significant use. The Project site was initially developed for factory, warehouse, and office purposes, and never seemed to house a single tenant while being owned and operated by the Park Brothers Company. Early business tenants at the Project site included engineering/manufacturing companies, and later tenants have included entertainment and media companies. **Appendix E** includes the City directories used to develop this section.

Park Brothers Company, developer, and original owner

Oliver D. Park Senior

Oliver David Park Sr. was born in 1902 to Irish immigrants in California and married Evanda Park in 1923. The couple had three children, Oliver Jr. born in 1925, Donald born in 1929, and David born in 1933 or 1936.³¹ Oliver Sr.’s obituary noted that he grew up on a dairy ranch, which may have been the J. G. Borges Dairy ranch, which was formerly located at the subject property.³² In 1925, Oliver Sr. went into the fertilizer business eventually establishing an office at the Project site at 4136 Del Rey Avenue.³³ By 1930, Oliver Sr. and his family lived in a dwelling they owned at the Project site at 4136 Del Rey Avenue.³⁴ This corresponds with the general date that the J. G. Borges Dairy operated at the site, so it is possible that the family was living at the Borges Dairy in the 1930s period.³⁵ The 1930 U.S. Federal Census indicated that Oliver Sr. was a “dealer” in the fertilizer industry, and newspaper advertisements from the early 1930s indicated that he specialized in “Pulverized pure cow fertilizer,” that was best for “lawns and gardens” with his business located at the Project site at 4136 Del Rey Avenue.³⁶

Seven years later, in 1937, a building permit was issued to Oliver Sr. for the construction of a 90’ x 35’ residence at the Project site at 4130 Del Rey Avenue. By 1940, Oliver Sr. was the owner of his own fertilizer plant and the family continued to reside at the Project site at 4134 Del Rey Avenue.³⁷ By the 1950 census, wife Evanda had passed away making Oliver Sr. was listed as a widower, and a house keeper and lodger were included as a part of the household at 4136 Del Rey Avenue.³⁸ In 1952, an “Oliver Park Fertilizer Co.” advertisement read: “For Your Fertilizer Needs, The Best Fertilizer Delivered Anywhere,” with the property’s address at the Project site at 4136 Del Rey Avenue, Venice CA.³⁹ Oliver Sr. and his adult sons were then living in their family

home in Del Rey, presumably still at the residence at the Project site.⁴⁰ Dubbed a “Venice Pioneer” he passed away in 1953 as an active member of the Venice Chamber of Commerce and the Venice Rotary Club.⁴¹ Two years later, a 1955 newspaper referenced the “Oliver Park Estate” as being adjacent to the newly developing Marina del Rey harbor site, which included a new boat yard constructed on 150 feet of Lincoln Boulevard frontage owned by his estate.⁴² This suggests that Park Sr. owned more land in the general area of the Project site when he passed away, which may have been overseen by his sons upon his passing. Limited additional information about his business interests, his fertilizer company, or his other real estate holdings was located.

Park Brothers Company

Five years after the passing of Park Sr., who was involved in the fertilizer business, the Project site underwent an extensive redevelopment process, likely undertaken by sons Oliver Jr., Donald, and David, under the name “Park Bros. Co.” The Park brothers took the agricultural developments with their former dairy use and fertilizer business and transformed the land, capitalizing on the surrounding industrial development boom. The first industrial brick building of the redevelopment was constructed at 4134 Del Rey Avenue (Building A) according to a 1958 building permit. Five industrial buildings were subsequently constructed at the subject property up through 1966, all by the Park Brothers Company. When construction was complete, a late industrial park resulted that was leased to a variety of tenants which may have been an investment property to generate income. The Park Brothers Company appeared to have only developed the Project site, and no additional information about subsequent joint ventures was located.

According to building permits which profiled modifications to the Project site, the Park family, including the Park Brothers Company, Donald Park, and the Sylvia and David K. Park Trust appeared to be involved in owning and or/managing all of the buildings at the subject property up through 2000.

Oliver C. Park Jr.

Of the three Park brothers, the most information was located for Oliver Christie Park Jr., the eldest of the Park brothers who resided at the Project site prior to its redevelopment in the 1950s. Born in 1924, Oliver Jr. was listed at residing in his family home at the Project site in the 1930 and 1940 census records.⁴³ By his 1942 World War II draft card, Oliver Jr. was a student at University of Southern California, yet was still residing at his family’s property at 4136 Del Rey Avenue. Oliver Jr. served as Merchant Marine aboard oil tankers during World War II, and was in business with his father at his fertilizer business.⁴⁴ Upon Oliver Sr.’s passing, Oliver Jr. took his father’s place in the Venice Rotary Club in 1954, and was nominated to club director the same year, yet he resigned from the organization later that year.⁴⁵ It is possible that Oliver Jr. was involved in managing the “Oliver Park Estate” which was referenced in a 1955 Venice Evening

⁴⁰ “Oliver D. Park, Venice Pioneer, Claimed by Death,” *Evening Vanguard*, March 24, 1953.

⁴¹ Ibid.

Vanguard newspaper, two years after Oliver Sr.'s death.⁴⁶ Given that Oliver Jr. was the oldest brother, involved in the business aspects of Oliver Sr.'s on-site fertilizer company, and college-educated by the mid-1950s, it is reasonable to assume that Oliver Jr. may have been responsible for the formation of the Park Brothers Company – who was listed on original building permits as the owner of the Project site during its redevelopment between 1958 and 1966.

According to his obituary, Oliver Jr. appeared to have amassed a large real estate portfolio by 2007.⁴⁷ Oliver Jr. owned properties that included a Balboa Island home and businesses with extensive real estate holdings which included numerous properties in California and Hawaii, details of which could not be located.⁴⁸ Oliver Jr. died in 2007 at age 82, followed by son Kevin Park and daughter-in-law Joni Park the same year. Kevin and Joni owned a small real estate investment firm, yet no other information about them was located.⁴⁹

Donald A. Park

Donald was born in 1929, and was listed as residing in his family home at the Project site in the 1930, 1940, and 1950 census records.⁵⁰ Donald and his wife and their children resided at 3436 Beethoven Street, Venice by 1959.⁵¹ The 1950 census indicated that by the age 20, he was listed as a helper in his father's owned fertilizer plant, two years prior to his father's passing. He continued living at the family property at 4136 Del Rey Avenue in 1955, when he married Ona C. Alsbrook.⁵² It appears that Donald was living close to the Project site when it was redeveloped in the 1950s and 1960s. In 1961, he served as the St. John's Presbyterian Church's building committee chairman and was involved in the expansion of his local church.⁵³ Beginning in 1960, Donald's name regularly appeared on building permits for the Project site. Donald passed away in 1994, and his namesake appeared on Project site building permits through 2000, perhaps through a trust. No further information on his profession or life was located.

David K. Park

Born in the 1930s, David grew up at the Project site and was listed as living there in the 1940 and 1950 census records.⁵⁴ He graduated from Venice High School in 1951, prior to his father's passing in 1953.⁵⁵ The following year, while stationed in Korea while serving in the U.S. Army, David was promoted to private first class, and was acting regimental supply sergeant of the 14th Regiment, 25th Division, 8th Army.⁵⁶ It is unclear when David returned from service in Korea. David died in 2001, and his namesake appeared on Project site building permits as "Sylvia and

Building A (4136 Del Rey Avenue)

Prior to the construction of Building A, a single-family residence in addition to other agrarian structures sat at the property. According to newspaper advertisements, Oliver Park Fertilizer Co., owned and operated by Oliver Park Sr., operated at this location.

Extant Building A was constructed in 1958 as a factory/warehouse with office according to assessor records and the original building permit. Building A first served Milman Co. Engineering Services in the early 1960s, followed by Acutech Division, Elpac Inc., Coast Enamel Co., and Circuit Design & Manufacturing Inc. in the mid- to late-1960s. These companies are no longer in operation today. It appears that multiple businesses have operated at this location concurrently. The building included a linotype print shop for the Circuit Design & Manufacturing Inc. business. By the 1970s through the late 1980s, it appears as though Western Circuit Inc. and Amphenol Corp. operated at Building A according to telephone directories. Later tenants included Archipelago Botanicals and Telesign Corporation (which also operated at Building B) in the 1990s and 2010s. The building is presently used as a co-working space.

Building B (4134 Del Rey Avenue)

Building B was constructed in 1959 as an industrial/factory building according to assessor records and the original building permit. Building B served MicroMega Corporation in the early 1960s, according to telephone directories. Buildings permits indicate that the building had clarifier pits during this time, which would have been used to remove solid particulates or suspend solids from liquid for clarification or thickening.⁵⁷ By the 1990s, The Porsche Factory, and International Racing Services operated at the building during which extensive tenant improvements were undertaken. By the late 1990s, Schroffel & Associates and Guidance Solutions operated at Building B, followed by Telesign Corporation (which also operated at Building A), a jeweler, and Big Mass Media Inc., according to telephone directories.

Building C (4132 Del Rey Avenue)

Building C was constructed in 1960 as a factory with office space according to assessor records and the original building permit. Building C served Coast Enameling Co. (which also operated at Building A) from the late 1960s through to the 1990s according to telephone directories. Uses in the 1990s included a pager repair shop/distributor, International Racing Services, an art, furniture and collectables shop, and an entertainment company among other media companies according to telephone directories. Additional tenants included LEI partners, Brooks Fruman Incorporated, Tacone Corporation and New Frontier Media. By 2014, the Wexco International Corporation operated at building C.

⁵⁷ “Clarifiers,” Ecologics Environmental Systems website, 2022, accessed on October 12, 2022, <https://www.ecologixsystems.com/library-clarifiers/>.

Building D (4130 Del Rey Avenue)

Building D was constructed in 1962 as a light industrial manufacturing building and as a machine shop for spray paint activities according to assessor records and the original building permit. Telephone directories indicate that the building served Micromega Corporation (which also operated at Building B) in the early 1960s, followed by Spatz Laboratories and Q. E. D. Plastics in the mid- to late-1960s, both of which were injection molding companies. By 2014, Just Cause Entertainment was operating at Building D.

Building E (4112 Del Rey Avenue)

Building E was constructed in 1963 as a light industrial manufacturing building/factory according to assessor records and the original building permit. A 1965 job posting newspaper advertisement indicated that fabricators were needed for work in Building E, and by 1968 Northrup Skill Center/Northrup Job Center which offered aircraft structural assemble instruction occupied the building. By 1970, several various businesses operated at Building E, including Stampx Rubber Stamps, Graftech (also spelled Graftech) Corporation, and Federated Business Materials according to telephone directories. Anes Electronic Burgler Alarm System, which produced steering wheel locking devices, operated at the building from 1975 to at least 1991. Telephone directories indicate that later Building E tenants spanning from the late 1990s through to the 2000s included Executive U Mail Printing & Mailing, Harrison Inner View, an additional computer services business, and Park brother Donald Oliver Jr.'s offices.

Building F (4120 Del Rey Avenue)

Building F was constructed in 1966 as a factory according to assessor records and the original building permit. According to telephone directories, the building was used as a silk screen processing facility in 1996, and by 2014 it was used as Eleventh House and Thirteen Inc., both production companies. Limited additional information on building use was located.

Architectural Descriptions

The Project site is comprised of three parcels located along Del Rey Avenue between Maxella Avenue and Beach Avenue, which are each improved with two one-story industrial buildings, for a total of six one-story industrial buildings on the Project site (see Figures 1 and 2).

Parcel 4230-005-048 is located in the southern portion of the Project site and is improved with two industrial buildings separated by a surface parking lot as follows: Building A, constructed in 1958 sits in the southwest, and Building B, constructed in 1959 sits in the northeast. The parcel is accessed from Del Rey Avenue.

Parcel 4230-005-047 is located in the central portion of the Project site and is improved with two industrial buildings separated by a surface parking lot as follows: Building C, constructed in 1960 sits in the west, and Building D, constructed in 1961 sits in the east. The parcel is accessed from Del Rey Avenue.

Parcel 4230-005-005 is located in the northern portion of the Project site and is improved with two industrial buildings separated by a surface parking lot as follows: Building E, constructed in

1963 sits in the northwest, and Building, constructed in 1966 sits in the northeast. The parcel is accessed from Del Rey Avenue.

The facades of Buildings A, C, and E are oriented southwest along Del Rey Avenue. Limited parking spaces face Buildings A, C, and E, while the bulk of parking sits in three parking lots between buildings to the rear of the site. Mature hedges surround the street-facing buildings.

A concrete sidewalk abuts the property along Del Rey Avenue. The Project site is surrounded by low-scale mid-century industrial and development with contemporary mixed-use development. Highway SR-1/Lincoln Boulevard sits to the west of the Project site and serves as a main traffic artery through the Marina Del Rey area. Dense single-family residential development sits further west beyond Highway SR-1, and further east beyond Redwood Avenue. Architectural descriptions of each of the six buildings that comprise the Project site are as follows:

Building A (4136 Del Rey Avenue)

Building A is a one-story brick industrial building that largely reflects Buildings C, E, and F in its construction and orientation. Rectangular in plan, the building is slightly setback from the street and includes several parking spaces oriented perpendicularly from Del Rey Avenue (**Figures 19–22**). As noted in the assessor’s records the building includes a concrete foundation, an arched roof with wood trusses. Symmetrically organized, the building’s southwest-facing facade includes a centrally located entrance with a metal storefront assembly comprised of double doors with transom lites. Two pairs of replacement tripartite vinyl windows flank the entrance assembly. A contemporary metal bulkhead surmounts the entrance and includes contemporary signage. The northern portion of the facade is covered in an ivy plant. The rear, northeastern elevation includes asymmetrically organized fenestration, with full-height windows, 3-3/3 steel frame windows, and a secondary recessed entrance. At the interior, the wood frame trusses are exposed and the floorplan is largely an open volume, with enclosed office spaces along the perimeter.

Figure 22
Building A, interior view of co-working space

Building B (4134 Del Rey Avenue)

Building B is a one-story concrete masonry unit industrial building. Trapezoidal in plan, the building is setback behind Building A and a surface parking lot, and is situated to the rear of the parcel (**Figures 23–25**). Building B is attached to Building D (constructed in 1961) to its north. As noted in the assessor’s records the building includes a concrete foundation, an arched roof with wood trusses. The southwestern-oriented facade is organized asymmetrically with replacement aluminum frame sliding doors, surmounted by a single transom, and a single glazed door at the northern extent. A partial height cement masonry unit wall with metal gate partially encloses a smaller area at the southeastern extent of the building. Original 3/3 steel frame windows sit at the southeastern elevation. Parking spaces abut the facade. The other sides of the building were not visible as part of the site visit. The interior includes painted concrete masonry units and drywall in select areas.

Figure 25

Building B interior with original steel frame windows

Building C (4132 Del Rey Avenue)

Building C is a one-story brick industrial building that somewhat reflects Buildings A, E, and F in its construction and orientation. Rectangular in plan, the building is slightly setback from the street and includes several parking spaces oriented perpendicularly from Del Rey Avenue (Figures 26–30). As noted in the assessor’s records the building includes a concrete foundation, an arched roof with wood trusses. Asymmetrically organized, the building’s southwest-facing facade includes a metal storefront entrance assembly that includes a single door flanked by sidelites with surmounting transom windows. The entrance is accessed by a series of concrete steps and a concrete ramp with metal handrails. A pair of original 4/3 steel frame windows sit to the south of the entrance, with another 4/3 steel frame window sitting to the north. A contemporary metal bulkhead surmounts the entrance which is supported by rounded columns. A pair of flush metal doors accessible by a series of concrete steps sits to the north. The southern portion of the facade is covered in an ivy plant. The rear, northeastern elevation is asymmetrically organized with original steel frame windows and an aluminum with plate glass storefront window system. A recessed entrance similarly includes aluminum glazing and is surmounted by a contemporary metal bulkhead supported by rounded columns. The northeast elevation includes a brick enclosure that extends from the northwest elevation, which does not include any fenestration. Original steel frame windows and a concrete ramp are located along the southeastern elevation. Building C’s interior was not accessed during the site visit.

Figure 30
Building C, southeast elevation (left) and northeast elevation (right), view northwest

Building D (4130 Del Rey Avenue)

Building D is a one-story concrete masonry unit industrial building. Roughly L-shaped in plan, the building is setback behind Building C and a surface parking lot, and is situated to the rear of the parcel (**Figures 31–34**). Building D is attached to Building B (constructed in 1959) to its south, and Building F to its north (constructed in 1966). As noted in the assessor’s records the building includes a concrete foundation, an arched roof with wood trusses. The southwestern-oriented facade is organized asymmetrically with an aluminum frame glazed door, with aluminum frame plate windows and vinyl double hung window assemblies. A flat concrete awning projects from the facade and onto the southeastern elevation. The northwestern elevation is largely connected to Building F to the north, and includes a large metal rollup door and an aluminum glazed single door. At the interior, the wood frame trusses are exposed and the floorplan is largely an open volume, with enclosed office spaces along the perimeter. The interior includes painted concrete masonry units and drywall in select areas.

Building E (4112 Del Rey Avenue)

Building E is a one-story brick industrial building that largely reflects Building A, C, and F in its construction and orientation. Rectangular in plan, the building is slightly setback from the street and includes several parking spaces oriented perpendicularly from Del Rey Avenue (**Figures 35-38**). As noted in the assessor's records the building includes a concrete foundation

and an arched roof with wood trusses. Symmetrically organized, the building's southwest-facing facade includes a centrally located entrance with a metal storefront assembly comprised of a single metal flush door with a series of large plate glass sidelites. The entrance is accessed via a set of concrete steps with metal handrails. A pair of 2/4 steel frame windows, followed by two pairs of 3/4 steel frame windows flank either side of the entrance. A contemporary metal bulkhead supported by cylindrical columns surmounts the entrance and includes contemporary signage. The southeastern elevation includes 4-3/4 steel frame windows and 1-2/2 steel frame window. The rear, northeastern elevation includes a pair of 4/2 steel frame windows with a single flush door and a metal rollup door. The interior includes drywall partitions and a visible wood truss system. Two double-height volumes are largely open with office spaces along perimeter walls.

Building F (4120 Del Rey Avenue)

Building F is a one-story brick industrial building that generally reflects Buildings A, C, and E in its construction and orientation. Building F was the last building constructed at the subject property. Trapezoidal in plan, the building is setback behind Building E and a surface parking lot, and is situated to the rear of the parcel (**Figures 39–42**). As noted in the assessor’s records the building includes a concrete foundation and an arched roof with wood trusses. Building F is attached to Building D (constructed in 1961) to its south. Asymmetrically organized, the building’s southwest-facing facade includes replacement vinyl windows, with a single flush metal door, and two flanking metal rollup doors. The other sides of the building were not visible as part of the site visit. The interior includes drywall partitions, wood windows and doors, and a visible wood truss system. A double-height volume is largely open with office spaces along perimeter walls.

Historic Context (SurveyLA Themes)

Historic contexts have been developed for the Los Angeles City-wide survey, SurveyLA, to provide the background and guidelines necessary to evaluate the historic and architectural significance of potential historic properties. The applicable Survey LA historic context was utilized for evaluation of the subject properties as a group, in addition to the history of their construction and occupancy and description of existing conditions provided in Property History section above. The period of significance associated with each individual building is its construction date.

The following historical and architectural sub-themes developed for SurveyLA are most relevant to the Project site. ESA evaluated the Project site as a grouping under the following SurveyLA contexts and themes:

- Context: Industrial Development, 1850–1980
 - Theme: Industrial Design and Engineering, 1876–1965
 - Sub-theme: Post-World War II Industrial Design, 1945–1970

SurveyLA Registration Requirements and Eligibility Standards

The Project site at 4112 to 4136 Del Rey Avenue includes six one-story commercial structures that were constructed between 1958 and 1966. The buildings were developed by the same owner, Park Brothers Company, and constructed by the same engineer and contractor. The buildings were used for a combination of office space, laboratory and production space, and include internal circulation and an overall unified style for the property. As such, the grouping is considered an industrial park which has a period of significance of 1945 to 1970, inclusive of the construction dates of the six subject buildings. Research by ESA investigated whether the grouping has association with industrial development and developer Park Brothers Company. Based upon the historical and architectural themes developed in the *Los Angeles Citywide Historic Context Statement*, there is one significant SurveyLA sub-theme associated with each of the six buildings on the subject properties under the Industrial Development, 1850–1980 context, as follows: Industrial Design and Engineering, 1876–1965, sub-theme: Post-World War II Industrial Design, 1945–1970.

The following is the Context Summary Table developed by the Los Angeles Office of Historic Resources (OHR) that defines the eligibility standards, character-defining features, and integrity aspects a historical resource needs to have in order to be considered eligible in association with the aforementioned theme. These standards were utilized in the evaluation of the improvements that exist on the Project site, and they are presented below in **Table 9**.

Significance Evaluation

According to the National Park Service, “Ubiquitous resources may be better evaluated as historic districts, rather than as individual properties,” and further, that “Properties with large acreages or a number of resources are usually considered districts.”⁵⁸ As each of the six buildings located at 4112–4136 Del Rey Avenue were built within a span of eight years, owned and developed by the same entity, and engineered/constructed by the same entities, the grouping of Buildings A, B, C, D, E, and F were evaluated together for eligibility as a potential historic district as an industrial park property type under the following SurveyLA historical context and sub-theme: Context: Industrial Development, 1850–1980, theme: Industrial Design and Engineering, 1876–1965, sub-theme: Post-World War II Industrial Design, 1945–1970.. As described below, the buildings are not distinctive enough to be evaluated individually.

⁵⁸ https://www.nps.gov/subjects/nationalregister/upload/Evaluating-Common-Resources_NR-White-Paper_Wyatt-and-Reed_3-27-20.pdf, p. 6; and *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation*, 4.

TABLE 9
CONTEXT SUMMARY INDUSTRIAL DISTRICT – INDUSTRIAL PARK, 1945–1970

Context	Industrial Development, 1850–1980
Sub Context	No sub-context
Theme	Industrial Design and Engineering, 1876–1965
Sub Theme	Post-World War II Industrial Design, 1945–1970
Property Type	Some of the hallmarks of the industrial park include deep setbacks from the street, internal circulation among interrelated buildings, landscaped common areas, and a unified style for the property. There may be a mix of commercial office space, laboratories, production space, and storage. The best examples are campus-like in appearance and may also have good to excellent examples of Mid-Century Modern and Postmodern architectural styles.
Property Sub Type	None
Geographic Location	San Fernando Valley; specifically, Canoga Park, Chatsworth, Northridge, Reseda, Winnetka, Sun Valley, Pacoima, and Sylmar. Possible examples are also in Westchester and Playa Del Rey.
Area of Significance	Industry; Engineering; Architecture
Criteria	A/1/1 and C/3/3
Period of Significance	1945–1970
Eligibility Standards	<ul style="list-style-type: none"> • Constructed between 1945 and 1970 • Exemplifies the Industrial Park property type
Character Defining/ Associative Features	<ul style="list-style-type: none"> • Retains most of the essential physical features from the period of significance • One or more buildings, unified in style and oriented toward each other • Buildings may be different heights, sizes, or uses (commercial, industrial) • Landscaped setbacks from the main street • Landscaped common areas • May have expansive parking lots between buildings and street • Buildings may be oriented around a central plaza • Often designed in prevalent architectural styles of period • May also be a significant example of an architectural style from the period of significance and/or the work of a noted architect
Integrity Considerations	<ul style="list-style-type: none"> • Should retain integrity of Location, Design, Materials, Workmanship, Feeling, and Association • Original use may have changed • Additional buildings may have been added, provided they do not detract from the unified character of the industrial park • Some material changes may have been made to individual buildings, provided they do not alter the overall style relative to the rest of the park

SOURCE: SurveyLA

Broad Patterns of History

With regard to broad patterns of history, the following are the relevant criteria:

National Register Criterion A: Is associated with events that have made a significant contribution to the broad patterns of our history.

California Register Criterion 1: Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.

Los Angeles Historic-Cultural Monument Criterion 1: Is identified with important events of national, state, or local history, or exemplifies significant contributions to the broad cultural, economic, or social history of the nation, state, city, or community.

All six of the buildings on the Project site, Buildings A, B, C, D, E, and F, were owned, developed, and operated by the Park Brothers Company. Developed over a period of eight years, the Project site is a simplified example of an industrial park, developed by one-time property developers, the Park Brothers Company, who are discussed in greater detail under the Significant Persons criterion, below. Prior to the present-day development, the land was formerly agrarian and included a dairy farm and a fertilizer business owned by Oliver Park Sr. prior to the area's incorporation into the City of Los Angeles, which occurred in 1927. It appears that the Oliver Sr. and his family lived at the property prior to the its redevelopment as an industrial park at mid-century. Park Sr., the Park family patriarch, passed away in 1952, and within six years, his adult sons Oliver Jr., Donald, and David formed together the Park Brothers Company and began to redevelop the family land for commercial-industrial purposes. During a period of intense post-World War II growth, the surrounding area underwent two transformations at mid-century: the first from a single-family to multi-family residential development, and the second from agrarian into commercial-industrial development. The residential development appeared to occur beyond the Project site, while the Project site was located in the midst of the commercial-industrial development. City directories indicate that neighboring building in the 1950s and 1960s contained manufacturing businesses, including businesses that made light fixtures, heating units, furniture, cosmetics, plastic products, and other equipment, and were housed in monolithic and often times elongated structures.

While the Project site appears to include limited features of an industrial park from the period, the property does not appear to be a significant example of an industrial park. The property was not developed by a single commercial tenant and instead it has been rented out to various companies in a wide variety of industries over the years as profiled in the Recorded Ownership, Occupancy, and Use History section above. The property did not have an individually prominent high-tech tenant in the aerospace industry, as was commonplace for the Del Rey area by the 1970s. Instead, the individual buildings at the subject property were leased out to tenants including smaller early stage electronic, manufacturing, enamel companies. Due to the range of early tenants, it appears as though the property was speculatively constructed. As noted in SurveyLA, the industrial park property type buildings were commonly oriented during the burgeoning aerospace industry, significant examples of which occupied larger campuses with associated landscaping and internal circulation. As such, the subject property was not found to be significant in the history of industrial parks or for patterns of industrial development. Further, the grouping was not identified

as a potential historic district, planning district, or multi-property resource as a part of SurveyLA's inventory of the *Palms-Mar Vista-Del Rey Community Plan* area as part of the Citywide Survey.

While the six identified buildings appear to share a pattern of development, the potential district retains low integrity, as discussed below. Changes to the buildings over time have included modifications to suit new tenant uses, to reconfigure the buildings for different purposes, replacement of original fenestration and replacement storefronts. Buildings A-F may share a common pattern of development, but do not collectively retain sufficient historic integrity to be eligible as a contiguous historic district at the national, state, or local level.

Therefore, the Project site is recommended ineligible for listing under National Register Criterion A, California Register Criterion 1, and LAHCM Criterion 1.

Significant Persons

With regard to associations with important persons, the following are the relevant criteria:

National Register Criterion B: Is associated with the lives of persons significant in our past.

California Register Criterion 2: Is associated with the lives of persons important in our past.

Los Angeles Historic-Cultural Monument Criterion 2: Is associated with the lives of historic personages important to national, state, city or local history.

The Parks Brothers Company owned, developed, and operated the Project site between 1958 and 1966. Comprised of brothers Oliver Jr, Donald Park, and David Park, Park Brothers Company redeveloped the Project site at 4112–4136 Del Rey Avenue after their father, Oliver Park Sr., passed away in 1953. Oliver Sr. grew up on a dairy ranch, which may have been located at the Project site – as aerials and city directories indicated that the Project site was the location for J. G. Borges Dairy in the 1930s period. Park Sr., his wife, and sons lived at the Project site by 1930 during which time he worked in the fertilizer industry. Oliver Sr. later developed a residence at the Project site, and owned his own fertilizer plant and company at the Project site as indicated by newspaper advertisements in the 1930s through the 1950s. Oliver Sr. passed away in 1953 and was considered to have been a Venice Pioneer, yet limited information about his business interests, fertilizer company, or legacy was located. Oliver Sr. was not involved in the development of the Project site, as it was developed after his death.

Oliver Sr.'s sons appeared to have inherited their father's land and began to develop the Project site as the Park Brothers Company roughly five years after Oliver Sr.'s passing with the construction of Building A, 4134 Del Rey Avenue in 1958. Construction and development of the Project site continued by the Park Brothers Company through 1966, when the last building on site, Building F, 4120 Del Rey Avenue was constructed. It appears that the Project site was developed as an income generating property. The brothers and subsequently their namesake trusts appeared to have been involved with the ownership and management of the property through 2000. No information was located to suggest that the Park Brothers Company developed other buildings in the Del Rey or Los Angeles area. While brother Oliver Jr. appeared to have amassed

a substantial real estate portfolio according to his obituary, no additional information about his business endeavors or life was located. As such, the Park Brothers Company and the individual Park brothers do not appear to have been notable to national, state, or local history.

Therefore, the Project site is recommended ineligible for listing under National Register Criterion B, California Register Criterion 2, and LAHCM Criterion 2.

Architecture

With regard to architecture, design, or construction, the following are the relevant criteria:

National Register Criterion C: Embodies the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

California Register Criterion 3: Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.

Los Angeles Historic-Cultural Monument Criterion 3: Embodies the distinctive characteristics of a style, type, period, or method of construction; or represents a notable work of a master designer, builder, or architect whose individual genius influenced his or her age.

The Project site was developed over a period of eight years over three adjacent parcels. Each parcel includes two one-story industrial buildings one located along Del Rey Avenue and another located at the rear of the parcel, for a total of six buildings that comprise a simplified example of an industrial park. According to building permits and assessor's records Building A, 4136 Del Rey Avenue, is a brick building that was constructed as a warehouse with office space and was used as a factory; Building B, 4134 Del Rey Avenue, is a concrete block building that was constructed as a factory with office and lab space; Building C, 4132 Del Rey Avenue, is a brick building that was constructed as a factory with office space; Building D, 4130 Del Rey Avenue is a concrete block building that was constructed as a factory with office space; Building E, 4120 Del Rey Avenue is a brick building that was constructed as a factory; and Building F, is a brick building that was constructed as a factory with office space.

No architect has been identified with the property, and limited information on building engineer Harold E. Bird and contractor Philip Montgomery was located. Research does not suggest that Bird or Montgomery were notable in their respective fields. The buildings do not appear to have been part of a larger master plan as they were developed by a group of brothers who formed a company for the sole purpose of developing the Project site to generate income. Research did not indicate that the Park Brothers Company was further involved in the construction or real estate development industries.

Characteristic of industrial parks as noted in the SurveyLA context, 4112–4136 Del Rey Avenue does include a unified utilitarian style for the property that is one-story, articulated in either brick or concrete block, lacking in ornamentation, and generally rectangular in plan. The subject property includes parking areas at the front and toward the center of the property, and the

buildings were constructed as a mix of uses, including office, factory, and warehouse space – characteristics of the industrial park type. As noted in SurveyLA, hallmarks of industrial park property types include deep setbacks from the street, landscaped common areas, parkway landscaping, a distinctive central plaza, loading docks, and internal circulation among interrelated buildings – none of which are present at the Project site. While better examples of industrial parks include a connection between individual buildings, the Project site includes the one-story brick industrial building type repeated four times, at Buildings A, C, E, and F, without distinction between the façade and the rear elevation or orientation toward one another. Later modifications to include replacement doors at rear entrances at Buildings A and C which did not originally include distinctive secondary entrances. Further, there are no designed landscaped elements that remain from the original design today to suggest that there was an internal circulation or landscaped common areas previously. It appears that minimal landscaping, including plantings and property gates, was added in 1999.

While constructed in the post-World War II era, the buildings are not architecturally reflective of the Mid-Century Modern style as was common for industrial parks. As noted in SurveyLA, the best examples of industrial parks are campus-like in appearance and may also have good to excellent examples of Mid-Century Modern and Postmodern architectural styles, of which the property does not possess. Instead, stylistically the buildings are reflective of the industrial style as they are simplistic and utilitarian structures. Industrial buildings often incorporated popular architectural styles of the day, with styling typically expressed in applied details, such as cornices, pilasters, cartouches and friezes, none of which are present at the Project site. The property has integrity for its location as the property has not been relocated. The property's surrounding setting has changed over time as it was originally developed with commercial-industrial buildings during the mid-century period, and has recently undergone a transformation between 2000 to today that includes large mixed use, multi-story buildings, altering the former light industrial setting of the surrounding area. Further, the property's setting underwent changes in 1999 with the addition of trees and plantings, and automated gates located toward Del Rey Avenue. The buildings include limited original steel frame windows, while many openings include vinyl or aluminum replacement assembly windows, most original single flush doors and metal rollup doors have been replaced. Interior spaces have been reconfigured over the years to suit new tenants, which have removed original interior configurations and functions as originally designed, which has involved the removal of original mechanical equipment and walls that once defined laboratory, office and warehouse spaces, and the construction of new partition walls and smaller rooms. Articulated rear entrances along Buildings A and C have further altered the design of the grouping which solely included front entrances along Del Rey Avenue. As such, the property lacks historic integrity for its original design and materials. The three buildings along Del Rey Avenue, Buildings A, C, and E, have all undergone contemporary facade modifications which include a metal entrance awning, and contemporary doors. The property retains integrity for its workmanship, which is reflective of simple vernacular construction from this period. The property does not retain integrity of feeling, as the surrounding setting has been altered over time with the construction of multi-story residential development to the north and to the south. The property lacks integrity of association as the buildings have been modified over time to suit different tenants, and now many contain tenants who operate in the entertainment industry and as co-working spaces, which no longer reflect the original industrial uses for which the property was

developed. Despite the lack of historical associations, the cumulative changes to the property over time taken together detract from the potential district in terms of design, materials, feeling, and association. The Project site was developed and constructed at the end of the period of significance (which spans from 1945 to 1970), at a time by which the property type had become widespread and standard. The Project site is not considered an excellent example of an industrial park articulated in the industrial style. As noted in SurveyLA, early and well-articulated examples of industrial parks are significant for their embodiment of the distinctive features of a transformative era in industrial design, which are not present at the Project site as described above. A stronger identified example of an industrial park in the Palms-Mar Vista-Del Rey area is the Panama Street Industrial Historic District, and another identified example is the former Atomic International (now Pratt & Whitney Rocketdyne facility) headquarters complex at 8900 De Soto Avenue.

While the Project site is reflective of a simplified industrial park a grouping of six properties constructed between 1958 and 1966, it is not a strong example of the property type, nor is it a significant example of the industrial style. The property was not associated with an identified architect nor with a notable engineer or contractor. Further, due to the lack of significant association combined with the overall lack of integrity as present at Buildings A, B, C, D, E, and F, the potential district is not eligible for listing at the national, state, or local levels as a historic district.

Therefore, the Project site is recommended ineligible for listing under National Register Criterion C, California Register Criterion 3, and LAHCM Criterion 3.

Information Potential

National Register Criterion D: It yields, or may be likely to yield, information important in prehistory or history.

California Register Criterion 4: Has yielded, or may be likely to yield, information important in prehistory or history.

While most often applied to archaeological districts and sites, Criterion D/4 can also apply to buildings, structures, and objects that contain important information. In order for these types of properties to be eligible under Criterion D/4, they themselves must be, or must have been, the principal source of the important information. The Project site located at 4112–4136 Del Rey Avenue does not appear to yield significant information that would expand our current knowledge or theories of design, methods of construction, operation, or other information that is not already known.

Therefore, the Project site is recommended ineligible for listing under National Register Criterion D and California Register Criterion 4.

Conclusions

As a result of our research and survey investigations and through the application of the applicable federal, state and local eligibility evaluation criteria, ESA finds the following:

The grouping of Buildings A, B, C, D, E, and F located at 4112–4136 Del Rey Avenue were evaluated together for eligibility as a potential historic district as an industrial park property type under the following SurveyLA historical context and sub-theme: Context: Industrial Development, 1850–1980, theme: Industrial Design and Engineering, 1876–1965, sub-theme: Post-World War II Industrial Design, 1945–1970. As each of the six buildings located at the subject property were built within a span of eight years, owned and developed by the same entity, and engineered/constructed by the same entities, the property was evaluated for historic significance under federal, state, and local criteria as a historic district grouping. As described in this Report, the buildings are not distinctive enough to be evaluated individually.

The potential district boundary extends along the Project site’s three parcels, and includes the following APNs: 4230-005-048, 4230-005-047, and 4230-005-005, bounded by Del Rey Avenue to the southwest, and to neighboring mixed-use properties to the north, east, and west. The potential district was evaluated for its associations with industrial park development in the area as a property type, and with the industrial style architectural style. The property was determined to not have strong associations as industrial park property type as it does not include several of the important character-defining features of the type and was developed at the end of the period of significance for the property type at a time when the industrial park was already common. Further the property does is not a distinctive example of a mid-century era industrial park as its design is simplistic and relatively small for an industrial park. Additionally, there are several identified examples of the property type that display higher levels of historic association and integrity. The property did not have an associated architect, and its engineer and contractor were not determined to be masters. The property was not determined to be significant for its association with the Park Brothers Company, the owners and developers. Accordingly, ESA determined that the property located at 4112 to 4136 Del Rey Avenue does not retain sufficient integrity to be eligible for listing as a historic district.

Therefore, the Project site does not appear eligible as a historical resource pursuant to CEQA. ESA recommends a status code of 6Z for the property, “Found ineligible for NR, CR or local designation through survey evaluation.”

CEQA Analysis

The thresholds for determining the significance of environmental effects on historical resources identified below are derived from the CEQA Guidelines as defined in Section 15064.5. Pursuant to this guidance, a project that would physically detract, either directly or indirectly, from the integrity and significance of the historical resource such that its eligibility for listing in the National Register of Historic Places (“National Register”), California Register or as a City of Burbank historic landmark would no longer be maintained, is considered a project that would result in a significant impact on the historical resource. Adverse impacts, that may or may not rise to a level of significance, result when one or more of the following occurs to a historical resource:

demolition, relocation, conversion, rehabilitation, or alteration, or new construction on the site or in the vicinity.⁵⁹

CEQA Guidelines

According to the State *CEQA Guidelines*, Section 15064.5(b) a project involves a “substantial adverse change” in the significance of the resource when one or more of the following occurs:

- Substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired.
- The significance of a historical resource is materially impaired when a project:
 - A. Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for inclusion in, the California Register of Historical Resources; or
 - B. Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to Section 5020.1(k) of the PRC or its identification in a historical resources survey meeting the requirements of Section 5024.1(g) of the PRC, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or
 - C. Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register of Historical Resources as determined by a lead agency for purposes of CEQA.

Under CEQA, a proposed development must be evaluated to determine how it may impact the potential eligibility of a structure(s) or a site for designation as a historic resource. The Standards were developed as a means to evaluate and approve work for federal grants for historic buildings and then for the federal rehabilitation tax credit (see 36 Code of Federal Regulations (“CFR”) Section 67.7). The Standards may be appropriate for screening criteria but do not set the threshold of significance under CEQA. Therefore, the Standards are used for regulatory approvals for designated resources but not for resource evaluations.⁶⁰ Similarly, CEQA recognizes the value of the Standards by using them to demonstrate that a project may be approved without an EIR. In effect, CEQA has a “safe harbor” by providing either a categorical exemption or a negative declaration for a project which meets the Standards (see State *CEQA Guidelines* Section 15331 and 15064.5(b)(3)). Therefore, what follows in the next several sections are a project description

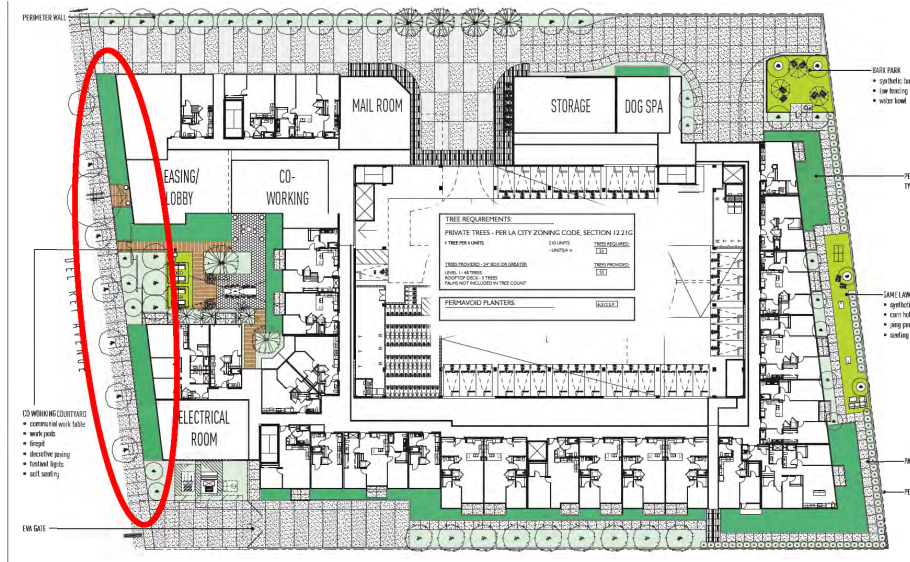

⁵⁹ L.A. CEQA Thresholds Guide, Section D.3. Historical Resources, City of Los Angeles, 2006, p. D.3-1 (<http://environmentla.org/programs/Thresholds/D-Cultural%20Resources.pdf>, accessed 6/04/2013)

⁶⁰ Century Plaza Hotel EIR, Appendix IV.D-3, Historic Thresholds Letter, from Michael J. Logrande, Director of Planning and Ken Bernstein, Manager, Office of Historic Resources, City of Los Angeles, to Bruce Lackow, President, Matrix Environmental, Los Angeles, California, December 15, 2010.

as well as a plan review that includes an impacts analysis under CEQA and an evaluation of conformance with the Standards.

Project Description

The Project would construct a single six-story residential development containing 210 dwelling units, amenity and open space areas, and associated structured parking spaces (Figures 43 and 44). The building would include landscape areas and a standalone parking garage located toward the center, within the building. The structure would be irregular in footprint and would be massed horizontally, with four-story tall projecting volumes, forming a U-shape along Del Rey Avenue offering some variation in massing and volume along the facade. The building materials would be constructed in a neutral palate of blues, browns, and greys. Construction of the Project would require excavation to a maximum depth of 7 feet below grade for the footings and foundations and a net export of 30,695 cubic yards (cy) of soil.

Analysis of Project Impacts

Direct Impacts

Under CEQA, the changes to a historical resource and its setting would only cause a substantial adverse change if the changes would materially impair the historical resource's ability to convey its significance to the degree that it would no longer be eligible for inclusion in the California Register. The six one-story industrial buildings on the Project site were evaluated as a potential historic district and were determined to be ineligible for designation under National, State and local criteria as an industrial park. Further, even if there were significant historic associations, the grouping lacks sufficient integrity due to alterations over the years. Therefore, there are no historical resources identified on the Project site, and as such, there are no direct impacts to a historical resource from the Project. Therefore, pursuant to CEQA, the Project would have a less than significant impact on historical resources.

Indirect Impacts

Indirect impacts were analyzed to determine if the proposed Project would result in a substantial material change to the integrity of historical resources in the immediate surrounding of the Project site that would detract from their ability to convey their significance. One historical resource was identified within a 0.25-mile radius of the subject property and Project site: 4144 S. Lincoln Boulevard/ Schwartzkopf Exclusive Customs (**Figure 45**). The Project's potential indirect impacts to 4144 S. Lincoln Boulevard/ Schwartzkopf Exclusive Customs are discussed below.

4144 S. Lincoln Boulevard/ Schwartzkopf Exclusive Customs is a one-story commercial structure built in 1963. The building includes two volumes, an A-frame volume at 4140 S. Lincoln Boulevard, and a rectilinear volume at 4144 S. Lincoln Boulevard (**Figures 46 and 47**). The Los Angeles County Assessor's website and historic aerial photographs indicate that these two volumes occupy a single parcel, and appear to comprise a single building with two distinct storefronts. 4144 S. Lincoln Boulevard includes two commercial retail establishments; Schwartzkop Exclusive Customs at 4140 S. Lincoln Boulevard, and Dogromat at 4144 S. Lincoln Boulevard. 4140 S. Lincoln's A-frame entrance includes a steeply sloped roof clad in

composition shingles, with rusticated contemporary signage and large plate glass windows, and 4144 S. Lincoln Boulevard is reflective of a vernacular commercial building comprised of concrete block with no ornamentation and two bays of large aluminum storefront window assemblies. The commercial storefront at 4140 S. Lincoln was assigned the California Historic Resource Codes 3CS, 3S, and 5S3, and is notable as an “Excellent and rare example of A-frame commercial architecture in Venice,” yet it is unclear if 4144 S. Lincoln (the address listed for the A-frame resource) is also considered as part of the resource.⁶¹ While this may have been a clerical error, ESA will consider both storefronts at the parcel APN 4230-001-016 as part of the adjacent historic resource for the purposes of this Report’s indirect impacts analysis.

4140 and 4144 S. Lincoln Boulevards’ facades are oriented to the southwest, along S. Lincoln Boulevard (SR-1), not toward but away from the Project site. Much of the commercial development along S. Lincoln Boulevard was developed in the mid-century period, and as such, are considered contributing elements to the setting.

Figure 47

View from the subject property to 4144 S. Lincoln Boulevard, with rear portion of building visible, view facing southwest

Due to the low-scale height of 4140 and 4144 S. Lincoln Boulevard and setback of the Project site along Del Rey Avenue, which is located further away from the resource, the new construction for the Project would not be fully visible. The primary view of 4140 and 4144 S. Lincoln Boulevard is from S. Lincoln Boulevard. The view would not be blocked or impacted by the new construction as part of the proposed Project, and the new construction would not have any adverse physical impact on 4140 and 4144 S. Lincoln Boulevard through demolition or alteration of the surrounding non-contributing setting.

The south facade of the Project's proposed residential building would be indirectly visible from the back of 4140 and 4144 S. Lincoln Boulevard. The proposed residential building would have an irregular footprint, with a U-shaped portion located along Del Rey Avenue, which would allow for a portion of the facade to be recessed with flanking one-story volumes which would help to visually compartmentalize the volume of the building along Del Rey Avenue. Further, the proposed new construction would be six stories in height and would be taller than 4140 and 4144 S. Lincoln Boulevard, but due to the approximately 0.04-mile or 213-foot distance between the primary façade of 4140 and 4144 S. Lincoln Boulevard and the front setback of the proposed Project, the separation created by Del Rey Avenue measuring from facade-to-facade, and setback, the proposed construction would not appear to overbear 4140 and 4144 S. Lincoln Boulevard, which would remain visually prominent as it currently sits along S. Lincoln Avenue.

Furthermore, due to the distance from the Project site of 213 feet, construction activities as part of the proposed Project would not result in any potential adverse effects from vibrational damages or impacts to occur at 4140 and 4144 S. Lincoln Boulevard. The Noise and Vibration Technical Report (**Appendix J**) prepared for the Project contains detailed analysis of potential construction vibration impacts. Construction of the Project would generate groundborne construction vibration during site clearing, grading and shoring activities. Based on the vibration data provided in Table 15 of the Noise and Vibration Technical Report, vibration velocities from operation of construction equipment would range from approximately 0.001 to 0.031 in/sec PPV at 50 feet from the source of activity. Off-site sensitive receivers or buildings located at least 25 feet from the project construction area would be exposed to vibration levels below 0.089 in/sec PPV (highest vibration level measured at 25 feet from the equipment listed in Table 5-26 of the noise analysis in Chapter 5) from onsite construction activity. Because construction vibration levels would be below 0.089 in/sec PPV at off-site buildings, construction of the Project would not result in vibration levels that would exceed the thresholds of either 0.2 in/sec PPV for the adjacent residential buildings or 0.12 in/sec PPV for the nearby historic building. Therefore, impacts from construction activities would be less than significant.

The proposed new construction would not introduce a new scale to the environment as several new multi-story residential buildings have been constructed adjacent to the Project site, including Tribeca Urban Apartments located at 4108 Del Rey Avenue, which is five stories in height and located immediately north of the Project site, and C1 by CLG apartment building located at 4120 Del Rey Avenue, which is six stories in height and separated from the Project site by a one-story industrial development located immediately south. Both contemporary residential buildings include projecting volumes and have been designed in contemporary and neo-Mediterranean styles.

As such, the redevelopment of the Project site with a new residential structure would have a less than significant indirect impact on the historical resource located at 4140 and 4144 S. Lincoln Boulevard.

Conclusion

The proposed Project would construct one new six-story residential building on the Project site and involve the demolition of the existing six industrial buildings originally constructed for use

by a variety of commercial tenants. The six buildings were evaluated as a grouping and were evaluated to not be significant and are lacking in integrity. The Project would not have a direct adverse physical impact on a historical resource located on the Project site and would not result in any significant indirect impacts on other historic resources in the vicinity of the Project site. Therefore, pursuant to CEQA, the Project would have a less than significant impact on historical resources.

PennDesign Departmental Grant, 2011-2013

Alison is a senior architectural historian with 9 years of professional and academic experience with a background in historic preservation, design, and museum collections. Her work with historic resources and cultural heritage in California has included managing and authoring historic resource assessments, National Register Nominations, historic structure reports, feasibility studies, Federal Historic Preservation Tax Credit applications, in addition to extensive archival research and resource documentation. Alison applies her understanding of preservation design and historic interiors to inform impacts analyses of proposed development and recommendations for adaptive reuse.

Relevant Experience

Earl Carroll Theatre Historic Structure Report, Los Angeles, CA. *Senior Architectural Historian.* Alison was the lead author of the Historic Structure Report created for the rehabilitation of the historic Earl Carroll Theatre in Hollywood. Constructed in 1938, the property is significant for its association with owner-operator Earl Carroll, Hollywood nightlife, and architect Gordon B. Kaufmann. The theatre is a listed LA Historic-Cultural Monument and has been identified as eligible for the National Register. In recent years, the theatre has been rented by television network studios as sound stages, and as a result some public areas have been modified over time. Alison conducted supplemental in-depth research, participated with the creation of a detailed interior and exterior character-defining features analysis, and assisted with the analysis of the theatre's current condition. She developed recommendations in compliance with the SOI standards that sensitively guide stakeholders with ongoing preservation efforts.

Celes King III Swimming Pool Historic American Building Survey, Los Angeles, CA. *Senior Architectural Historian, Deputy Project Manager.* ESA was hired to conduct HABS documentation for the City of Los Angeles Park and Recreation Department. Constructed in the early 1960s, the Celes King III Swimming Pool was designed by architect Albert Criz in the Mid-Century Modern-Expressionist style. Alison conducted in-depth research related to the history of the surrounding recreational complex, construction of the swimming pool, architect, and neighboring communities.

Alpine Village Preservation Consulting Services, Unincorporated Los Angeles County, CA. *Senior Architectural Historian.* Alison was the lead author of the preliminary historical significance evaluation determination for the Alpine Village complex, a European-style shopping center located near Torrance, California. Comprised of seven buildings constructed between 1969 and 1974, the complex is an example of an increasingly rare type of roadside architecture, and retains high historic integrity. Alison participated in conducting in-depth construction chronology research, determining the complex's period of significance, and

identified both interior and exterior character-defining features for the property to help guide ongoing planning efforts.

Whittier Public Library, Whittier CA. *Senior Architectural Historian.* Alison was the lead author of the Historic Resources Assessment which determined that the library is significant as an individual resource under National Register Criteria A and C. Constructed in 1958, the property is significant for its association with Mid-Century Modernism, postwar period institutional properties, and architect William Henry Harrison. Alison assembled the construction history for the library and the Whittier Civic Center. She created a detailed character-defining features analysis identifying significant and contributing features at the property's interior, exterior, and site. Alison coordinated with the project architect to ensure that the project met the Secretary of the Interior's Standards (SOI) in order to meet community's contemporary needs while respecting the building's historic character. Alison authored and oversaw the production of a HABS report to document the library building prior to selective demolition and project construction.

Benjamin Franklin Elementary School Historic Resource Evaluation and Mitigated Negative Declaration, San Diego, CA. *Senior Architectural Historian.* Alison conducted an HRA for the 1930s, 40s, and 50s-designed elementary school campus. The property was found to be a historic district eligible for its association with the post-war development of the Kensington neighborhood, and for its association with two master San Diego architects. The proposed project was reviewed for compliance with the Secretary of the Interior's Standards, and a CEQA analysis was performed, resulting in the Mitigation Measures and design considerations for future construction within the district. Alison authored and oversaw the production of a HABS report to document the campus and its buildings prior to project construction.

1202 3rd Street Promenade Preservation Consulting, Santa Monica, CA. *Senior Architectural Historian.* Constructed in 1949 as a JC Penny department store, the commercial building was designed in the Late Moderne style. ESA previously worked to produce a Landmark Assessment Report, and today, the property is recognized as a City of Santa Monica Landmark. Alison conducted a SOI Standards conformance review of a proposed tenant improvement project for a Certificate of Appropriateness.

1221 Hermosa Avenue Preservation Consulting, Hermosa Beach, CA. *Senior Architectural Historian.* ESA serves as a historic preservation consultant to the City of Hermosa Beach, and has a longstanding relationship with the building at 1221 Hermosa Boulevard, known as the Bijou Building. The building is a former historic theatre and bank designed in the NeoClassical Revival style, constructed in 1923. Alison evaluated proposed tenant improvement modifications including the removal of non-original features and the retention of original features related to original theatre and bank uses. Alison has conducted design reviews which included an understanding of all modifications to the space over time, character-defining features analyses, and reviews of proposed plans against CEQA thresholds and the SOI Standards for compliance. Alison is currently participating with overseeing the construction monitoring efforts for the theatre space as part of this ongoing project.

Universal Hilton Historic Resources Technical Report and Environmental Impacts Report for 555 W Universal Terrace Parkway, Los Angeles, CA. *Senior Architectural Historian.* The Universal Hilton Hotel was designed by master architect, William L. Pereira in 1983 in the Postmodern style. As one of Pereira's final commissions, the hotel building was originally part of a master plan and was designed to accommodate visitors to the expanding Universal Theme Parks. Alison conducted in-depth architect and postmodern style research, and evaluated the property for historic significance as part of the Historic Resources Technical Report.

Los Cerritos Wetlands Restoration Plan Program, Cultural Resource Assessment, Seal Beach, CA. *Senior Architectural Historian.* The Los Cerritos Wetlands Restoration EIR project will reinstate historic wetlands to a previously developed oil rig/production site that has been in operation since the early 20th century. As part of the larger restoration plan program, ESA was hired to conduct a cultural resources study to observe, document, and prepare preliminary mitigation measures related to identified built environment resources. Alison collaborated with the archeology team during a field visit to identify potential sites for later investigative studies. She reviewed historic aerial photographs, and conducted research to determine the companies and general ages of oil-industry related infrastructure including oil rigs, operations sheds, and decommissioned tank farms. Mitigation recommendations presented for the structures included Historic Resource Assessment reports to be conducted in the future.

3325 Monterey Road CEQA Impacts Analysis and Design Review, San Marino, California. *Senior Architectural Historian.* A two-story Art Deco style single-family residence, constructed in 1927 in San Marino, California was determined to be a historic resource. Proposed modifications to the residence included a two-story rear addition and building rehabilitation. Alison assisted with preservation design consultation and conducted a plan review for conformance with the SOI Standards for the proposed project. She coordinated with the project architect to better convey preservation components of the proposed work into the drawing set for city review. The review required a character-defining features analysis to determine the level of significance of the remaining features.

Golden Gate Village Historic Resource Evaluation, Marin City, CA. *Architectural Historian.* The highly-intact Golden Gate Village low-income housing complex was constructed in 1958 to house many of the former Marinship workers and their families. Designed by prominent mid-century designers including Aaron G. Green, John Carl Warnecke, and Lawrence Halprin, the property serves as an example of a well-designed housing complex, significant as a product of post-war urban development and for its prominent mid-century designers. Alison performed the site visit and conducted research through local and private archival repositories, plan analysis, and interviews, to produce the report narrative and historic evaluation for the property. Today, the property is listed on the National Register of Historic Places.

McDonnell Hall/Our Lady of Guadalupe Chapel Historic Structure Report, San Jose, CA. *Architectural Historian.* Constructed as a parish church in 1914, the building moved to its current location in 1953. Here, the building served as a

newly formed Catholic Mission, the Center of Our Lady of Guadalupe. The property is associated with civil rights activist and labor rights leader Cesar Chavez, and the mid-20th century Mexican American civil rights movement. Alison assisted with the research, production, and design recommendations, including bringing the building back to its appearance during its period of significance, which required a meticulous analysis of the building's historic integrity. The property today is listed as a National Historic Landmark.

Historic YMCA Hotel Preservation Consulting in the Embarcadero, San Francisco, CA. *Senior Architectural Historian, Project Manager.* Built in the early 20th century, the building was formerly a YMCA hotel used by young navy men and is currently a hotel along the waterfront with an adjacent YMCA recreational center. The hotel was proposing modifications which included rehabilitation work and reconfiguring the interior lobby space. Alison researched and documented the interior evolution by reviewing old plans, movies filmed on-location, post cards, and existing fabric. She established the building's construction chronology with a focus on the building's public spaces at the interior, overseeing the entire production of the report and created recommendations to update the client's proposed plans which included acceptable sensitive modifications to historic features and recommendations for potential future demolition.

Palo Alto History Museum Historic Preservation Consulting, Palo Alto, CA. *Architectural Historian.* The Spanish Revival style Roth Building was the original location of the Palo Alto Medical Foundation. The former medical building is undergoing a conversion into a local history museum with gallery space, interpretive areas, and archival and study rooms. Alison assisted with secondary research efforts of both the medical foundation and the building, upon modifications to the museum's scope of work. She conducted a Part 2 Federal historic rehabilitation tax credit application review which included recommendation to best comply with the Secretary of the Interior's Standards for Historic Preservation.

Half Moon Bay Barn and Jail Museum Historic Resource Evaluation and Preservation Consulting, Half Moon Bay, CA. *Senior Architectural Historian.* The City of Half Moon Bay was working with a local historical society to implement a history museum at the site of its early 20th century jail and adjacent barn. Alison conducted an in-depth historic resource assessment then reviewed proposed plans for buildings and site modifications to accommodate gallery space, offices, and archival storage. Coordinating with project architects, she assisted with the creation of recommendations for project compliance with the Secretary of the Interior's Standards for Rehabilitation.

Toscana Hotel Preservation Consulting, Sonoma State Historic Park, Sonoma, CA. *Senior Architectural Historian.* The two-story wood framed Toscano Hotel was constructed in the 1850s and is a contributing resource to the Sonoma Plaza National Historic Landmark District and the Sonoma Plaza National Register Historic District. Alison conducted a Secretary of the Interior's Standards reviews of proposed changes to the interior of the building. Proposed changes included the conversion of a portion of the building from a hotel saloon museum display area into a retail concession area for the California State Parks. Project recommendations included sensitive design solutions to maintain original features.

Margarita Jerabek-Bray, Ph.D., has 32 years of professional practice in the United States with an extensive background in historic preservation, architectural history, and historical archaeology. She specializes in American Architecture, Modern and Contemporary Architecture, Urban History and Design, and Cultural Landscape, and is a regional expert on Southern California architecture. Her qualifications and experience meet and exceed the Secretary of the Interior's Professional Qualification Standards in History, Architectural History, and Archaeology. Margarita assists clients with strategic advice and historic preservation consultation services to support project success. Highly experienced and solution oriented, she provides historic resources management and preservation consultation services for all stages of project development, from due diligence through planning and design, to preparation of required documentation for environmental review and permitting. She provides expert historic preservation services for environmental review and, when necessary, implements mitigation requirements and preservation treatment measures.

Margarita is a highly experienced and respected authority in the evaluation, management and treatment of historic properties, and is expert in the preparation of legally defensible documentation for compliance with Sections 106 and 110 of the National Historic Preservation Act (NHPA), National Environmental Policy Act (NEPA), Section 4(f) of the Department of Transportation Act, California Environmental Quality Act (CEQA), and local ordinances and planning requirements. She has managed and conducted hundreds of projects for public and private clients throughout California and the United States, and as primary investigator she has authored numerous historic resources technical reports, plan reviews, HABS/HAER/HALS reports, salvage inventories, rehabilitation plans, relocation plans, construction monitoring reports, interpretive programs, as well as curated exhibits, provided input for interpretive websites and assisted in the development of content for documentary films.

Margarita Directs ESA's Southern California Historic Resources Practice, leading a team of historians, architectural historians, and preservation specialists who are a part of ESA's more than 30-member Cultural Resources Group. She has conducted a broad range of planning and technical studies for development projects throughout Southern California. Her relevant on-call contracts with various agencies, policy documents, environmental compliance work, and historic preservation projects are summarized below.

**PROFESSIONAL
AFFILIATIONS**

California Preservation

Neutra Institute, Fellow

Relevant Experience

Agency On-Call Preservation Contracts. Margarita currently manages ESA's on-call preservation consulting contracts with the City of Santa Monica, City of Hermosa Beach, and serves as principal investigator for historic resources for our on-call contracts with the City of Los Angeles's Department of Public Works Bureau of Engineering, and Los Angeles Unified School District.

Policy Documents. Margarita has contributed her preservation planning expertise to several projects including **Lincoln Specific Plan** (Whittier), and **CPA-7** (Culver Studios). Her knowledge of preservation policy and law is also demonstrated in the **Citywide Survey and General Plan Update** completed by ESA for the City of Hermosa Beach, and the **Culver City General Plan Update**.

City of Santa Monica On-Call Historic Preservation Services, Santa Monica, CA. Project Manager/Principal Architectural Historian. Dr. Jerabek is the primary point of contact and contract administrator for ESA's on-call contract for historic preservation services with the City of Santa Monica. Under her 12-year tenure, ESA's historic division has prepared hundreds of studies including **preliminary assessments, landmark assessments, structure of merit assessments, Secretary of the Interior's Standards plan reviews** and preservation recommendations, **landscape assessments, character-defining features reports** and **CEQA impacts analyses**.

Historic Resources and Preservation Consultation Service for Santa Monica City Hall, City of Santa Monica, CA. Project Manager/Principal Architectural Historian. Prepared a **Section 106 Effects Evaluation** report and provided mitigation services pursuant to a **Memorandum of Agreement for Structural Seismic Upgrades, ADA Improvements, Relocation of Wood Paneling, and Adaptive Re-use of the Historic Jail** under a grant from the Federal Emergency Management Administration (FEMA). Dr. Jerabek was the primary point of contact, provided project management and agency coordination, and served as principal architectural historian for the project. ESA prepared a **HABS report** for the historic jail located in the northeast wing of City Hall; conducted **Plan Reviews** and provided preservation recommendations for the seismic upgrades; reviewed proposed ADA improvements and provided recommendations to avoid impacts; reviewed the wood paneling relocation plans and worked with the City to select a qualified master craftsman and conducted construction monitoring for the project; reviewed the jail rehabilitation project for conversion of the two-story jail into an IT Center and offices and provided design consultation for conformance with the Standards, including in-kind replacement of the historic windows; curated, designed and oversaw installation of an interpretive exhibit in the IT Center lobby. Follow-on services for the City included **Preservation Consultation and Monitoring** for restoration of the entrance to City Hall, and **Paint Analysis** and color recommendations for repainting City Hall. Dr. Jerabek also conducted a **Landscape Analysis** and provided **Plan Reviews** for the City's **Ken Genser Square** and **Tongva Park** projects that received a 2014 *Design Award* from the Westside Urban Forum.

City of Hermosa Beach On-Call Historic Preservation Services. Project Director. ESA has performed a number of surveys, Certificate of Appropriateness, and CEQA compliance reviews for historic structures while serving as a historic preservation consultant for the City of Hermosa Beach. Projects include historic resources surveys on three of the oldest commercial buildings in the downtown area of Hermosa Beach for the City of Hermosa Beach: **Bank of America Building** at 90 Pier Avenue, the **Hermosa Hotel** at 26 Pier Avenue, Art Deco-style **Community Center**, and the Neoclassical Revival-style **Bijou Theatre** located at

1221-1227 Hermosa Avenue. ESA prepared a comprehensive assessment of each building, and reviewed all plans for compliance under the local preservation ordinance and CEQA, which stipulate the use of the Secretary of the Interior's Standards for Rehabilitation as mitigation. Upon implementation of rehabilitation work on the Bijou, ESA also monitored all construction work until final completion. ESA was later commissioned to undertake a Certificate of Appropriateness and CEQA compliance review of interior tenant improvements to the Bijou Theater for conformance with the Secretary of the Interior's Standards. ESA has carried out site reviews of the work to examine the scope and nature of selective demolition and new construction, provided guidance on technical preservation matters, and undertook a substantial completion review of the works. Most recently, ESA provided project review for tenant improvements, and conducting construction monitoring and oversight for restoration of ornamental plasterwork in the Bijou Building. Additionally, ESA provided paint analysis and restoration treatment recommendations for the Art Deco-style Hermosa Beach Community Center.

Hermosa Beach General Plan Update and EIR, City of Hermosa Beach, CA. Project Manager for Cultural Resources/Principal Architectural Historian. Managed ESA's Cultural Resources scope of work and collaborated with Raimi & Associates and PMC to provide consulting services to the City of Hermosa Beach for preparation of a **Comprehensive Integrated General Plan and Coastal Land Use Plan Update and EIR Focused on Sustainability and Low Carbon Future**. Directed city-wide reconnaissance survey to identify potentially eligible historical resources. Developed historic contexts and themes for the City's historical resources. Reviewed and provided recommendations for revisions to the preservation ordinance. Provided input for preparation of historic preservation goals and policies for the General Plan update. Managed preparation of the cultural resources technical report, and oversaw preparation of the historic resources, archaeological and paleontological discussions and analyses for the EIR.

City of Long Beach, Environmental Consultation and HABS Documentation. Margarita has assisted the City of Long Beach by preparing documentation for the **City Hall and Library Complex HABS** and associated landscape plaza; she provided historic resources support for the City's EIR, and prepared documentation for the **Atlantic Theater HABS** and an **Interpretive Exhibit** for installation in the new North Long Beach Public Library.

City of Whittier, Preservation Consultation Services for the Public Library Rehabilitation Project. Margarita lead a **Historical Resources Assessment and Impacts Analysis** and provided design consultation for rehabilitation of the Modern-style Whittier Library. Constructed in 1958, the property is significant for its association with Mid-Century Modernism, postwar period institutional properties, and architect William Henry Harrison. ESA found that the library possesses sufficient historical significance and architectural merit to convey its significant as an individual resource under National Register Criteria A and C. Margarita's role on the project was to direct and manage the ESA project team, coordinate with the architect and City, provide review and internal quality assurance/quality control to the ESA team in the preparation of both the Historic Resources Assessment to evaluate the significance and integrity of the building, as well as for the plan review that was conducted to evaluate the proposed project's conformance with the Secretary of the Interior's Standards for the Treatment of Historic Properties, and hearing attendance. ESA is

currently completing a **HABS report** as baseline documentation for the rehabilitation project.

City of Burbank, Historic Preservation Consultation Services. Margarita directed preparation of ESA's historic resources technical report and CEQA impacts analysis, and prepared the historic section of the **IS/MND for the Burbank Reservoir No. 1 Replacement Project**, which evaluated the eligibility of the Burbank Reservoir facility and analyzed the potential impacts of the Project for compliance with the CEQA. Margarita directed preparation of ESA's historic resources technical report and historic resources EIR section for the **Burbank Bob Hope Airport Replacement Terminal Project EIR**, which evaluated the eligibility of the buildings and structures for eligibility as a potential historic district and as individual resources, and analyzed the potential impacts of the Project for compliance with the CEQA. While the Airport did not appear eligible as a historic district, ESA evaluated 11 hangars and buildings over 45 years in age as potential individual resources. The majority of the buildings and structures were found ineligible, however, Hangars 1 and 2, which are the earliest intact hangars, were recommended eligible for the National Register, California Register, and for local listing. Under contract with the City of Burbank, Margarita managed and conducted a historic resources impacts analysis and plan review for **Rehabilitation of the Casting Building** as a Fitness Center, by Marmol Radziner and Associates, AIA, located in the Disney Studio's Historic District. The Project repurposed and expanded the existing 4,000 square feet Casting Building on the Studio Lot by about 8,700 square feet for an Employee Fitness Center adjacent to the historic Commissary. Margarita provided design consultation for conformance with the Secretary of the Interior's Standards to rehabilitate the Casting Building as a fitness center. To reduce potential impacts, Margarita prepared a HABS report to record the Casting Building in professional large format HABS photographs and a narrative history and description of the building.

SoCal Historic Resource Surveys. Margarita has managed and conducted several large historic resources survey projects including three surveys for the **Adelante-Eastside** (Boyle Heights), **Wilshire Center/Koreatown**, and **Normandie 5** redevelopment areas that were among the earliest to utilize *SurveyLA* tools and methods and to employ the Multiple Property Documentation Approach, working in close collaboration with the Los Angeles Office of Historic Resources. These surveys have been incorporated into the **Los Angeles Citywide Survey**. Other notable accomplishments include **Hermosa Beach Citywide Survey**, and **Santa Monica North of Wilshire Survey** for which she served as Project Director.

Mills Act Applications and Architectural Conservation. Margarita has assisted applicants in Los Angeles, Beverly Hills and West Hollywood with the preparation of Mills Act Applications. Her expertise in the preservation of Modern architecture is represented by the Landmark nomination and Mills Act Application for Victor Gruen's **Rosenstiel Residence**, 1210 Coldwater Canyon Drive in Beverly Hills. Her forward-looking landmark nomination for a Mills Act application for the Post-Modern **Sun Tech Townhomes** in Santa Monica, illustrates her broad ranging knowledge in resources of the recent past. Her conservation and interpretation skills are represented by the award-winning **Montebello Home Savings and Loan** project that involved cleaning and restoration of the historic bank building and art works designed by Millard Sheets Studio, and design and installation of a 5-panel interpretive exhibit and rediscovery of a lost tapestry originally designed for the building, for which she received a *California Preservation Design Award, 2016*. Her in-depth and award-winning preservation work includes the **RMS Queen Mary Survey of Fine**

and Decorative Art, the RMS Queen Mary Historic Structure Report, and the Queen Mary Conservation Management Plan (*California Preservation Foundation Preservation Design Award, 2012*).

Environmental Documentation and Compliance with CEQA. Margarita has prepared a full range of CEQA documentation for historic preservation projects throughout greater Los Angeles including Categorical Exemption Letters, assessments and plan reviews for Certificates of Appropriateness, Initial Studies/MNDs, Focused EIRs, and EIRs. A partial list of important environmental documents for projects in Los Angeles involving substantial historical analysis completed by Dr. Jerabek-Bray includes the **LAX Specific Plan Amendment Study EIR, Academy of Motion Pictures Project EIR, The New Century Plan EIR for Westfield, Washington Square EIR, Sunset Doheny Mixed-Use EIR, One Santa Fe Mixed-Use MND, Lindbrook & Gayley Mixed-Use MND, 6230 Sunset Mixed-Use Project EIR, Hollywood Center EIR, Palladium EIR, Sunset and Crescent Heights EIR, and Yucca and Argyle EIR.** In Santa Monica she contributed to the **Fairmont Miramar Hotel & Bungalows Revitalization Plan EIR, St. John's Health Center Development Agreement Addendum EIR, Santa Monica Pier Gangway Project and Phase 4 Structural Upgrade,** and CEQA support for the **Santa Monica-Malibu Unified School District-Wide Facilities Plan.** In Pasadena her experience includes the **Glenarm Power Plant Repowering Project EIR.** In Long Beach she provided expertise and support for the **Art Exchange Redevelopment Project EIR** support, and the **Golden Shore Master Plan EIR.**

Educational Facilities and University Campuses, CA. Principal Investigator/Project Manager. Dr. Jerabek-Bray has conducted numerous evaluations of school and university campuses throughout Southern California. Under ESA's on-call contract with the Los Angeles Unified School District, she has managed and completed over 30 task orders involving historic resources, including campus assessments, character-defining features analysis, and project reviews for compliance with CEQA. For example, Margarita managed and conducted preparation of a historic resources technical report for Jefferson High School and provided preservation design consultation for this site-specific school upgrade and modernization project under the District's School Upgrade Program (SUP). The proposed project included the rehabilitation of existing character-defining buildings and landscapes, demolition and removal of non-contributing buildings, and construction of new facilities. Rehabilitation work included modernization and seismic upgrade to existing buildings. Because the school site is considered a historical resource under CEQA, Margarita provided design consultation for conformance with the Secretary of the Interior's Standards to reduce potential project impacts to less than significant. Once project plans were developed, Margarita oversaw review of the proposed project by ESA historic staff and completed impacts analysis findings regarding potential project impacts to identified historical resources that would be affected by the project. Margarita also provided project management, oversight and contributed to the preparation of CEQA and NEPA procedural guidelines to help the Los Angeles Unified School District (LAUSD) to comply with the historical resources requirements of CEQA and NEPA, and to implement practical approaches to preserving culturally significant resources whenever possible. The LAUSD's Office of Environmental Health and Safety requested the preparation of CEQA and NEPA guidelines, in addition to design guidelines and treatment approaches, specifically in support of the School Upgrade Program, and generally to guide ongoing repair and maintenance work on these sites. The guidelines build upon the District's ongoing efforts to identify historical

resources, including the recently updated Historic Context Statement, survey of 55 campuses, creation of an ArcGIS-compatible database with current and previous survey results, and a Historic Resources Inventory. Dr. Jerabek-Bray worked with LAUSD and facilities staff to determine the scope, class, and type of projects that would impact historical resources and need to be addressed in the procedural guidelines. As a final work product, Dr. Jerabek-Bray authored a CEQA and NEPA procedural guidelines document that included the following sections: introduction, regulatory setting, environmental setting, project description, management and planning guidelines, procedural flow charts for CEQA and NEPA/Section 106, and standard mitigation measures.

Margarita served as the project manager and principal investigator for the district-wide cultural resources survey for Long Beach Unified School District (LBUSD) which included the evaluation of 70 potentially eligible District school facilities for listing in the National Register and California Register, and included preservation guidelines for the district-wide facilities modernization program. She conducted CEQA Compliance reviews for select projects including rehabilitation of Long Beach Polytechnic Auditorium and Woodrow Wilson Auditorium. Margarita completed a district-wide historic resources survey for the Santa Monica Unified School District, and provided preservation consultation for modernization and additions to selected school sites.

As part of the larger USC Master Plan Project Margarita prepared a historic resources analysis for the USC Student Union Project IS/MND evaluating the Formalist Modern Norman Topping Center and impacts to the adjacent Commons Building and surrounding historic district. She also prepared a HABS report for the Schoenburg Institute at USC. Other HABS reports for educational facilities include the Gymnasium at the University of La Verne, and the Administration Building at Harvard-Westlake Academy.

Harkham Hillel Hebrew Academy Renovation and Expansion Project, Historic Resources Assessment and Impacts Analysis, Beverly Hills, CA. *Principal Investigator/Project Manager.* Margarita directed the historic significance analysis of two school buildings—the original Oakhurst Building designed by master architect Sydney Eisenshtat in 1963 in the Modern Style and the Doheny Building constructed in 1989 and designed by Harshad Patel. She oversaw preparation of an intensive-level Historic Resource Assessment Report for the two buildings in accordance with the California Office of Historic Preservation’s requirements for preparing historic resource evaluation reports. ESA found that the Oakhurst Building is eligible for listing on the National Register of Historic Places and the California Register of Historical Resources under criteria A/1 and C/3, but it did not meet the requirements for local eligibility under the City of Beverly Hills criteria. The client plans to rehabilitate the existing buildings, which would be updated for current use and continue to function as school buildings. The proposed project would add two additions to the rear of the property in order to accommodate additional classroom and gymnasium space. Margarita oversaw preparation of a character-defining features analysis and provided design consultation for conformance with the Secretary of the Interior’s Standards to reduce potential project impacts to less than significant. She also conducted an impacts analysis of the proposed project and prepared a preservation plan that was incorporated into the project as a project design feature to ensure the project would meet the Secretary’s Standards for Rehabilitation. The project has been reviewed and approved by the City of Beverly Hills as an Initial Study/Mitigated Negative Declaration.

Rehabilitation of the Dunbar Hotel, 4255 S. Central Avenue, Los Angeles, CA.

Project Manager/Principal Architectural Historian. As a Project Manager, Dr. Jerabek-Bray directed a careful space-by-space inventory of character-defining features (including all windows) associated with the Dunbar Hotel's period of significance (1928-1970). This included photo documentation of each feature along with a written description, condition, and treatment options. ESA recorded 425 character-defining features and spaces into an electronic database. Dr. Jerabek was principal author for the rehabilitation report that included a project description, methods, historical background and construction history, accompanied by historic photographs, an architectural description of existing conditions, a maintenance plan for high-integrity features, a restoration plan for low-integrity features, and a replication plan. The written report also provided a list of any issues and concerns that should be taken into account during the building rehabilitation and for the long-term preservation of the Dunbar Hotel. The hotel reopened in June 2013 as a senior living facility amidst local fanfare, "An encore for the historic Dunbar Hotel," Los Angeles Times, June 11, 2013. The project was the recipient of the 2014 *Westside Prize* from the Westside Urban Forum and recipient of a 2014 *Preservation Award* from the L.A. Conservancy.

Historical Resources and Preservation Consulting Services for The Culver Studios, Culver City, CA.

Project Manager/Principal Architectural Historian. Since late 2014, Dr. Jerabek-Bray and ESA's Historic Resources Practice has provided a suite of services including historical resources evaluation, environmental review and documentation, and historic preservation consultation services for the CPA-6 Specific Plan, and the CPA-7 Specific Plan known as "The Innovation Plan," a blueprint for the future of The Culver Studios. Dr. Jerabek is the point of contact for historic services, attends client and city meetings, attends public hearings, provides technical direction and advice, directs and conducts the preparation of report deliverables, directs and conducts construction monitoring, and acts as the City's preservation officer for the Innovation Plan. The Plan will transform the 14.3-acre Studio into a new media production hub, keeping the Studio on the vanguard of changing production practices in the entertainment industry. The Culver Studios is a motion picture studio in downtown Culver City established in 1919 by Thomas Ince, and eventually became the home of RCA, one of the "Big Eight" major motion picture companies in the Los Angeles metropolitan area. The Studio was the production site of historically significant motion pictures like King Kong, Gone with the Wind, and Citizen Kane. The Innovation Plan will restore and re-group historic structures adjacent to the Mansion, build new support buildings near existing historic sound-stages, and establish a creative campus in the core of the 14.3-acre studio lot. The Studio's 100-year history will be showcased, historic bungalows will be preserved, and original landscaping in front of the Mansion will be restored. The Innovation Plan balances the need to provide state-of-the-art studio facilities, while retaining the Studio's unique ambiance and prominent place in the community. ESA surveyed and evaluated the Studio's historical resources, provided input to the development of The Plan to reduce impacts to historical resources, completed HABS report for Bungalows S, T, U and V, prepared a Relocation and Rehabilitation Plan for the bungalows, conducted construction monitoring for relocation of the bungalows, conducted plan reviews for tenant improvements to the Mansion and associated historic buildings in the historic core, conducted a landscape analysis, and provided documentation and input for the landscape restoration. ESA also prepared the environmental documentation for The Innovation Plan EIR, and is

implementing the mitigation program for historical resources including HABS documentation of Stages 2/3/4 and a salvage program, preparation of a preservation plan for the Studio, and development of an interpretive program for the Studio.

Historic Resources and Preservation Consultation Services for the Redevelopment of the Fred C. Nelles State Reform School, Whittier, CA. *Project Manager/Principal Architectural Historian.* The Fred C. Nelles Correctional Facility is a listed California State Landmark, and is significant as the state's first reform school for boys. The 1920s-1930s Tudor Revival-style campus is currently vacant and will soon be redeveloped as a multi-use residential and commercial project, "The Groves", entitled under the certified Lincoln Specific Plan EIR. For over a decade, Dr. Jerabek-Bray has been providing Historic Resources and Preservation Consultation services to the developer, Brookfield Homes. Work began with preparation of a historic resources assessment report to clarify the regulatory status and assessed the potential eligibility of a historic district. No district was found to be present, but eight individual resources were identified. Margarita conducted an opportunities and constraints analysis and provided input to the developer on managing impacts to historic resources and the feasibility of adaptive reuse of the individual buildings for the project. She directed preparation of feasibility studies for the EIR, that were peer reviewed by the City's consultants. She provided peer review of the Lincoln Plan EIR on behalf of the developer, and attended city meetings and hearings for the EIR. Once the EIR was certified, she worked with the developer's architect to prepare rehabilitation plans for the individual resources to be retained and adaptively reused. The rehabilitation plans were peer reviewed by the City and the City's preservation consultant. She directed ESA's historic team in the completion of a HABS/HALS for the campus, with photography by Positive Image. She also worked with Eye-Glass Productions on a documentary film, and oral histories. Dr. Jerabek-Bray assisted the client to implement a full suite of mitigation measures including a heritage trail, a signage program, oral histories, salvage program, and construction monitoring for rehabilitation historic buildings. She recently completed consultation services and construction monitoring for adaptive reuse of the school's Commissary as a community center (The Commons), which is the first historic building to be restored. The Commons project received a Gold Nugget merit award (2020) for best rehabilitation project from Pacific Coast Builders Conference (PCBC).

Home Savings and Loan Art and Architecture Conservation Services, Interpretive Exhibit, Montebello, CA. *Project Manager/Principal Investigator.* Margarita provided project management and oversight for the conservation work of the art and architecture and an interpretive exhibit for the Montebello branch of Home Savings and Loan Association. Constructed in 1973, the Montebello branch was designed by Millard Sheets (1907-1989), an accomplished, nationally prominent artist and designer, with integrated art works by the Millard Sheets Design Company. The building and art works were preserved in preparation for the building's new use as a medical office by PIH Health. ESA provided oversight for the conservation work undertaken by Preservation Arts. Additionally, Margarita assisted with the development of a project schedule, conducted conservation monitoring and documentation, and provided project oversight during the implementation of the conservation project to ensure that the cleaning and repair of the art works and exterior architectural materials was conducted in accordance with accepted standards for art and architectural conservation work, that the work completed is of acceptable quality, and that the project stayed on schedule and within budget. After the conservation work was completed, she oversaw the development of an interpretive exhibit to

beautify the interior and protect the building's important art, architecture, and history. The exhibit contains professionally mounted permanent narrative panels and photographic enlargements with captions illustrating the key information about the Montebello Branch and its historic use. One of the highlights of the interpretive exhibit is a reproduction of the original tapestry hung its original location for which ESA coordinated with the Mingei International Museum. The project was the recipient of a prestigious 2016 *Preservation Design Award* from the California Preservation Foundation.

Rancho Los Amigos South Campus EIR, County of Los Angeles, Department of Public Works, Downey, CA. *Project Manager/Principal Architectural Historian.* The County of Los Angeles (County) proposes redevelopment of a portion of the Rancho Los Amigos (RLA) South Campus which is located in the City of Downey. The 74-acre RLA South Campus was the home of the "Los Angeles County Poor Farm" that was established in 1880s to provide room and board to indigent citizens in exchange for agricultural labor, then served as an infirmary and later evolved into a hospital facility in 1932. The RLA South Campus functioned as a major hospital complex from 1956 to the 1990s, when it was abandoned. The RLA South Campus is currently unoccupied and has been designated as the RLA Historic District in the National Register of Historic Places. The County is proposing redevelopment of a 21-acre portion of the RLA South Campus with County uses, including a Sheriff's Station Crime Laboratory, Internal Services Department Headquarters, and Probation Department Headquarters. The project will include supporting parking and installation of utilities and other features on a site that has been abandoned for nearly 30 years. Building demolition and/or repurposing or relocation of existing buildings will be required. ESA lead the CEQA process on behalf of the County, including preparation of all technical studies in support of a full-scope EIR for the RLA South Campus Project. This included a Historic District Evaluation, archaeological surveys, traffic, water supply, arborist services, and all other CEQA-required topics. ESA is also served in an Executive Consultant role to the County, to advise on other potential future projects at the RLA Campus.

 The construction history of the Project site as recorded in City of Los Angeles building permits and Los Angeles County Assessor records is developed for each existing improvement.

Building A (4136 Del Rey Avenue)

Assessor's records indicate that Building A was constructed in 1958 as a warehouse with office space. The original building permit issued in 1958 indicates that the 85' x 120' brick building was to be used as a factory. Constructed for \$35,000 for the Park Brothers Company, Harold E. Bird served as the engineer and Philip Montgomery served as the building contractor. The building includes a concrete foundation and originally included asphalt tile flooring. As noted in the assessor's records, the roof was arched with composition shingles, with wood decking and wood trusses. The walls included reinforced brick with concrete brick at the front facade along Del Rey Avenue. Original windows were metal sash, and door types included wood doors and roll up metal doors.' Period of Significance N/A Property Type Industrial park Applicable Criteria N/A

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The property was evaluated by ESA under the SurveyLA industrial park property type and the historical sub-theme, Post-World War II Industrial Design, 1945-1970 and for its association with developer, Park Brothers Company. However, the potential district does not appear significant under the National Register, California Register, or local HCM criteria and does not retain sufficient historical associations for listing as a potential district. Additionally, the property lacks historic integrity due to modifications to subject Buildings A, B, C, D, E, and F. Therefore, the district does not appear eligible as a historical resource pursuant to CEQA, and none of the buildings appear eligible as an individual historical resource. ESA finds the subject property not eligible as a historical resource pursuant to CEQA, and recommends the property be assigned a CHR Status Code of 6Z, "Found ineligible for NR, CR or local designation through survey evaluation." CONTINUATION SHEET

Property Name: 4112-4136 Del Rey Avenue

Page 3 of 24

*P3a. Description (continued):

The facades of Buildings A, C, and E are oriented southwest along Del Rey Avenue. Limited parking spaces face Buildings A, C, and E, while the bulk of parking sits in three parking lots between buildings to the rear of the site. Mature hedges surround the street-facing buildings.

A concrete sidewalk abuts the property along Del Rey Avenue. The Project site is surrounded by low-scale mid-century industrial and development with contemporary mixed-use development. Highway SR-1/Lincoln Boulevard sits to the west of the Project site and serves as a main traffic artery through the Marina Del Rey area. Dense single-family residential development sits further west beyond Highway SR-1, and further east beyond Redwood Avenue. Architectural descriptions of each of the six buildings that comprise the Project site are as follows:

Building A (4136 Del Rey Avenue)

Building A is a one-story brick industrial building that largely reflects Buildings C, E, and F in its construction and orientation. Rectangular in plan, the building is slightly setback from the street and includes several parking spaces oriented perpendicularly from Del Rey Avenue. As noted in the assessor's records the building includes a concrete foundation, an arched roof with wood trusses. Symmetrically organized, the building's southwest-facing facade includes a centrally located entrance with a metal storefront assembly comprised of double doors with transom lites. Two pairs of replacement tripartite vinyl windows flank the entrance assembly. A contemporary metal bulkhead surmounts the entrance and includes contemporary signage. The northern portion of the facade is covered in an ivy plant. The rear, northeastern elevation includes asymmetrically organized fenestration, with full-height windows, 3-3/3 steel frame windows, and a secondary recessed entrance. At the interior, the wood frame trusses are exposed and the floorplan is largely an open volume, with enclosed office spaces along the perimeter.

Building B (4134 Del Rey Avenue)

Building B is a one-story concrete masonry unit industrial building. Trapezoidal in plan, the building is setback behind Building A and a surface parking lot, and is situated to the rear of the parcel. Building B is attached to Building D (constructed in 1961) to its north. As noted in the assessor's records the building includes a concrete foundation, an arched roof with wood trusses. The southwestern-oriented facade is organized asymmetrically with replacement aluminum frame sliding doors, surmounted by a single transom, and a single glazed door at the northern extent. A partial height cement masonry unit wall with metal gate partially encloses a smaller area at the southeastern extent of the building. Original 3/3 steel frame windows sit at the southeastern elevation. Parking spaces abut the facade. The other sides of the building were not visible as part of the site visit. The interior includes painted concrete masonry units and drywall in select areas.

CONTINUATION SHEET

Property Name: 4112-4136 Del Rey Avenue

Page 4 of 24

Building C (4132 Del Rey Avenue)

Building C is a one-story brick industrial building that somewhat reflects Buildings A, E, and F in its construction and orientation. Rectangular in plan, the building is slightly setback from the street and includes several parking spaces oriented perpendicularly from Del Rey Avenue. As noted in the assessor's records the building includes a concrete foundation, an arched roof with wood trusses. Asymmetrically organized, the building's southwest-facing facade includes a metal storefront entrance assembly that includes a single door flanked by sidelites with surmounting transom windows. The entrance is accessed by a series of concrete steps and a concrete ramp with metal handrails. A pair of original 4/3 steel frame windows sit to the south of the entrance, with another 4/3 steel frame window sitting to the north. A contemporary metal bulkhead surmounts the entrance which is supported by rounded columns. A pair of flush metal doors accessible by a series of concrete steps sits to the north. The southern portion of the facade is covered in an ivy plant. The rear, northeastern elevation is asymmetrically organized with original steel frame windows and an aluminum with plate glass storefront window system. A recessed entrance similarly includes aluminum glazing and is surmounted by a contemporary metal bulkhead supported by rounded columns. The northeast elevation includes a brick enclosure that extends from the northwest elevation, which does not include any fenestration. Original steel frame windows and a concrete ramp are located along the southeastern elevation. Building C's interior was not accessed during the site visit.

Building D (4130 Del Rey Avenue)

Building D is a one-story concrete masonry unit industrial building. Roughly L-shaped in plan, the building is setback behind Building C and a surface parking lot, and is situated to the rear of the parcel. Building D is attached to Building B (constructed in 1959) to its south, and Building F to its north (constructed in 1966). As noted in the assessor's records the building includes a concrete foundation, an arched roof with wood trusses. The southwestern-oriented facade is organized asymmetrically with an aluminum frame glazed door, with aluminum frame plate windows and vinyl double hung window assemblies. A flat concrete awning projects from the facade and onto the southeastern elevation. The northwestern elevation is largely connected to Building F to the north, and includes a large metal rollup door and an aluminum glazed single door. At the interior, the wood frame trusses are exposed and the floorplan is largely an open volume, with enclosed office spaces along the perimeter. The interior includes painted concrete masonry units and drywall in select areas.

Building E (4112 Del Rey Avenue)

Building E is a one-story brick industrial building that largely reflects Building A, C, and F in its construction and orientation. Rectangular in plan, the building is slightly setback from the street and includes several parking spaces oriented perpendicularly from Del Rey Avenue. As noted in the assessor's records the building includes a concrete foundation and an arched roof with wood trusses. Symmetrically organized, the building's southwest-facing facade includes a centrally located entrance

with a metal storefront assembly comprised of a single metal flush door with a series of large plate glass sidelites. The entrance is accessed via a set of concrete steps with metal handrails. A pair of 2/4 steel frame windows, followed by two pairs of 3/4 steel frame windows flank either side of the entrance. A contemporary metal bulkhead supported by cylindrical columns surmounts the entrance and includes contemporary signage. The southeastern elevation includes 4-3/4 steel frame windows and 1-2/2 steel frame window. The rear, northeastern elevation includes a pair of 4/2 steel frame windows with a single flush door and a metal rollup door. The interior includes drywall partitions and a visible wood truss system. Two double-height volumes are largely open with office spaces along perimeter walls.

Building F (4120 Del Rey Avenue)

Building F is a one-story brick industrial building that generally reflects Buildings A, C, and E in its construction and orientation. Building F was the last building constructed at the subject property. Trapezoidal in plan, the building is setback behind Building E and a surface parking lot, and is situated to the rear of the parcel. As noted in the assessor's records the building includes a concrete foundation and an arched roof with wood trusses. Building F is attached to Building D (constructed in 1961) to its south. Asymmetrically organized, the building's southwest-facing facade includes replacement vinyl windows, with a single flush metal door, and two flanking metal rollup doors. The other sides of the building were not visible as part of the site visit. The interior includes drywall partitions, wood windows and doors, and a visible wood truss system. A double-height volume is largely open with office spaces along perimeter walls.

***B6. Construction History (continued):**

Building B (4134 Del Rey Avenue, continued)

The interior walls were painted drywall which was unfinished in some locations and the ceiling included acoustical plasterwork. Further, the building included a plywood partition bisecting the main warehouse space into two. A building permit was issued in 1961 for interior alterations to the 'light ensemble manufacturing building. The next permit was issued in 1999 for tenant improvements to change the building from manufacturing use to office and warehouse use. The building was reroofed and new roof framing was installed the following year in 2000, during which time new log poles were installed and select masonry walls were infilled. Undocumented modifications to the building include the contemporary storefront awning, replacement front entrance doors and windows, and concrete steps, in addition to an articulated rear entrance with contemporary storefront awning from the parking lot.

Building B (4134 Del Rey Avenue)

Assessor's records indicate that Building B was constructed in 1960 as a factory building with office and lab space. The original building permit issued in 1959 indicates that the 100' x 100' concrete building was to be used as an industrial building. Constructed for \$53,000 for the Park Brothers Company, Harold E. Bird served as the engineer and Philip Montgomery served as the building contractor. The building includes a concrete foundation and originally included asphalt tile flooring. As noted in the assessor's records, the roof was arched with composition shingles, with wood decking and wood trusses. The exterior walls included concrete block and the interior walls were painted drywall, which was unfinished in some locations, the ceiling included acoustical plaster. Original windows were metal sash, and the building included wood doors and roll up metal doors. The interior walls were painted drywall which was unfinished in some locations and the ceiling included acoustical plasterwork. Three building permits issued in 1960 called for interior partitions. In 1966, a building permit for a panel wall sign was issued, followed by a 1971 permit to reinforce the concrete vault and to add two bathrooms. In 1997, clarifier pits were capped and filled with concrete, and tenant improvements to the office portion were subsequently undertaken. Drywall was replaced in 2015.

Building C (4132 Del Rey Avenue)

A building permit issued in 1937 indicated that a single-family residence was constructed at 4132 Del Rey Avenue for the Oliver Park. This house was demolished in 1960 according to a demolition permit.

Assessor's records indicate that Building C was constructed in 1960 as a factory with office. The original building permit issued in 1960 also confers that the 85' by 120' building was to be used as a factory. Constructed for \$58,500 for the Park Brothers Company, Harold E. Bird served as the engineer and Philip Montgomery served as the building contractor. The building includes a concrete foundation and originally included asphalt tile flooring. As noted in the assessor's records, the roof was arched with composition shingles, with wood decking and wood trusses. The exterior walls included reinforced brick, and windows

CONTINUATION SHEET

Property Name: 4112-4136 Del Rey Avenue

Page 18 of 24

were metal sash while doors were wood. The interior walls were painted drywall which was unfinished in some locations and the ceiling included suspended acoustical tile. In 1979, a building permit was issued to add 21' x 25' x 15' high walls with sheet rock and metal studs, likely referring to interior partitions. In 1995, clarifying pits were infilled, followed by unspecified tenant improvements. In 1996 the building use changed from factory to warehouse, while a subsequent permit issued the same year indicated a change in use from an enamel shop to video packaging/distribution and office use. In 1999, the building use changed from warehouse use to office use in a portion of the building, which then required tenant improvements. In 2002, an inspection application was issued to replace downlights with LED fixtures. Undocumented modifications to the building include the contemporary storefront awning, replacement front entrance doors and windows, and concrete steps in addition to replacement doors at the rear entrance from the parking lot.

Building D (4130 Del Rey Avenue)

Assessor's records indicate that the building was constructed in 1961 as a light industrial manufacturing building for use as a factory with office space. The original building permit indicates that the 100' x 122' building was constructed for use as a machine shop for spray paint activities. Constructed for \$63,000 for the Park Brothers Company, Harold E. Bird served as the engineer and Philip Montgomery served as the building contractor. The building includes a concrete foundation with concrete walls, and stucco at the facade. As noted in the assessor's records, the roof was arched with wood trusses with composition roofing. The doors included wood, metal, steel rollup and manual doors. The windows were aluminum sashes, and there were skylights present. At the interior, the wood frame building included asphalt tile and concrete flooring with some unfinished walls and some clad in plaster, with acoustic plaster at the ceilings. The building included a clarifier pit. Originally, the building included a plywood partition bisecting the main warehouse space into two. A building permit was issued in 1969 to change an existing window into a door of the same size. An interior partition and ceiling were installed for silk screen activities in 1976. In 2012 and 2017, a second floor interior office addition was permitted, yet it is unclear when the work was constructed.

Building E (4112 Del Rey Avenue)

Assessor's records indicate that Building E was constructed in 1963 as a light industrial manufacturing building for use as a factory with office space. The original building permit issued in 1963 indicates that the 82' by 134' building was to be used as a manufacturing building. Constructed for \$69,000 for the Park Brothers Company, Harold E. Bird served as the engineer and Philip Montgomery served as the building contractor. As noted in the assessor's records, the building includes a concrete foundation with reinforced brick at the walls. The flat roof was clad in composition roofing. At the interior, the floor was finished in asphalt tile and concrete with drywall and hardwood veneer at the walls, and acoustic plaster at the ceilings. The doors included steel roll up doors. The windows were aluminum sashes, and there were skylights present. It appears that there was a series of small office spaces, and two work rooms surrounded by factory space as part of the original configuration. A wall sign was constructed in 1997.

CONTINUATION SHEET

Property Name: 4112-4136 Del Rey Avenue

Page 19 of 24

Undocumented modifications to the building include the contemporary storefront awning, replacement front entrance doors and windows, and concrete steps.

Building F (4120 Del Rey Avenue)

Assessor's records indicate that Building F was constructed in 1966 as a factory building with office space. The original building permit issued in 1966 also indicates a factory usage for the building measuring 100' by 116' which included a concrete foundation and concrete flooring. Constructed for \$104,000 for the Park Brothers Company, Harold E. Bird served as the engineer and Philip Montgomery served as the building contractor. As noted in the assessor's records, the building includes a concrete foundation with reinforced brick at the walls. The doors were comprised of metal single doors and steel roll up doors. The windows were aluminum sashes, and there were skylights present. The roof was noted as arched with plywood sheathing and composition roofing. At the interior, the floor was finished in asphalt tile, with plastered interior partitions and painted brick, with acoustic plaster lining the ceilings. It appears that there was a workroom located in the general center of the building with offices along the facade as part of the original configuration. A mechanical permit was issued in 1988 for unspecified work.

***B10. Significance (continued):**

Park Brothers Company, developer, and original owner

Oliver D. Park Senior

Oliver David Park Sr. was born in 1902 to Irish immigrants in California and married Evanda Park in 1923. The couple had three children, Oliver Jr. born in 1925, Donald born in 1929, and David born in 1933 or 1936.¹ Oliver Sr.'s obituary noted that he grew up on a dairy ranch, which may have been the J. G. Borges Dairy ranch, which was formerly located at the subject property.² In 1925, Oliver Sr. went into the fertilizer business eventually establishing an office at the Project site at 4136 Del Rey Avenue.³ By 1930, Oliver Sr. and his family lived in a dwelling they owned at the Project site at 4136 Del Rey Avenue.⁴ This corresponds with the general date that the J. G. Borges Dairy operated at the site, so it is possible that the family was living at the Borges Dairy in the 1930s period.⁵ The 1930 U.S. Federal Census indicated that Oliver Sr. was a "dealer" in the fertilizer industry, and newspaper advertisements from the early 1930s indicated that he specialized in "Pulverized pure cow fertilizer," that was best for "lawns and gardens" with his business located at the Project site at 4136 Del Rey Avenue.⁶

Seven years later, in 1937, a building permit was issued to Oliver Sr. for the construction of a 90' x 35' residence at the Project site at 4130 Del Rey Avenue. By 1940, Oliver Sr. was the owner of his own

Property Name: 4112-4136 Del Rey Avenue

Page 20 of 24

fertilizer plant and the family continued to reside at the Project site at 4134 Del Rey Avenue.⁷ By the 1950 census, wife Evanda had passed away making Oliver Sr. was listed as a widower, and a house keeper and lodger were included as a part of the household at 4136 Del Rey Avenue.⁸ In 1952, an “Oliver Park Fertilizer Co.” advertisement read: “For Your Fertilizer Needs, The Best Fertilizer Delivered Anywhere,” with the property’s address at the Project site at 4136 Del Rey Avenue, Venice CA.⁹ Oliver Sr. and his adult sons were then living in their family home in Del Rey, presumably still at the residence at the Project site.¹⁰ Dubbed a “Venice Pioneer” he passed away in 1953 as an active member of the Venice Chamber of Commerce and the Venice Rotary Club.¹¹ Two years later, a 1955 newspaper referenced the “Oliver Park Estate” as being adjacent to the newly developing Marina del Rey harbor site, which included a new boat yard constructed on 150 feet of Lincoln Boulevard frontage owned by his estate.¹² This suggests that Park Sr. owned more land in the general area of the Project site when he passed away, which may have been overseen by his sons upon his passing. Limited additional information about his business interests, his fertilizer company, or his other real estate holdings was located.

Park Brothers Company

Five years after the passing of Park Sr., who was involved in the fertilizer business, the Project site underwent an extensive redevelopment process, likely undertaken by sons Oliver Jr., Donald, and David, under the name “Park Bros. Co.” The Park brothers took the agricultural developments with their former dairy use and fertilizer business and transformed the land, capitalizing on the surrounding industrial development boom. The first industrial brick building of the redevelopment was constructed at 4134 Del Rey Avenue (Building A) according to a 1958 building permit. Five industrial buildings were subsequently constructed at the subject property up through 1966, all by the Park Brothers Company. When construction was complete, a late industrial park resulted that was leased to a variety of tenants which may have been an investment property to generate income. The Park Brothers Company appeared to have only developed the Project site, and no additional information about subsequent joint ventures was located. According to building permits which profiled modifications to the Project site, the Park family, including the Park Brothers Company, Donald Park, and the Sylvia and David K. Park Trust appeared to be involved in owning and or/managing all of the buildings at the subject property up through 2000.

Oliver C. Park Jr.

Of the three Park brothers, the most information was located for Oliver Christie Park Jr., the eldest of the Park brothers who resided at the Project site prior to its redevelopment in the 1950s. Born in 1924, Oliver Jr. was listed at residing in his family home at the Project site in the 1930 and 1940 census records.¹³ By his 1942 World War II draft card, Oliver Jr. was a student at University of Southern California, yet was still

Property Name: 4112-4136 Del Rey Avenue

Page 21 of 24

residing at his family's property at 4136 Del Rey Avenue. Oliver Jr. served as Merchant Marine aboard oil tankers during World War II, and was in business with his father at his fertilizer business.¹⁴ Upon Oliver Sr.'s passing, Oliver Jr. took his father's place in the Venice Rotary Club in 1954, and was nominated to club director the same year, yet he resigned from the organization later that year.¹⁵ It is possible that Oliver Jr. was involved in managing the "Oliver Park Estate" which was referenced in a 1955 Venice Evening Vanguard newspaper, two years after Oliver Sr.'s death.¹⁶ Given that Oliver Jr. was the oldest brother, involved in the business aspects of Oliver Sr.'s on-site fertilizer company, and college-educated by the mid-1950s, it is reasonable to assume that Oliver Jr. may have been responsible for the formation of the Park Brothers Company – who was listed on original building permits as the owner of the Project site during its redevelopment between 1958 and 1966.

According to his obituary, Oliver Jr. appeared to have amassed a large real estate portfolio by 2007.¹⁷ Oliver Jr. owned properties that included a Balboa Island home and businesses with extensive real estate holdings which included numerous properties in California and Hawaii, details of which could not be located.¹⁸ Oliver Jr. died in 2007 at age 82, followed by son Kevin Park and daughter-in-law Joni Park the same year. Kevin and Joni owned a small real estate investment firm, yet no other information about them was located.¹⁹

Donald A. Park

Donald was born in 1929, and was listed at residing in his family home at the Project site in the 1930, 1940, and 1950 census records.²⁰ Donald and his wife and their children resided at 3436 Beethoven Street, Venice by 1959.²¹ The 1950 census indicated that by the age 20, he was listed as a helper in his father's owned fertilizer plant, two years prior to his father's passing. He continued living at the family property at 4136 Del Rey Avenue in 1955, when he married Ona C. Alsobrook.²² It appears that Donald was living close to the Project site when it was redeveloped in the 1950s and 1960s. In 1961, he served as the St. John's Presbyterian Church's building committee chairman and was involved in the expansion of his local church.²³ Beginning in 1960, Donald's name regularly appeared on building permits for the Project site. Donald passed away in 1994, and his namesake appeared on Project site building permits through 2000, perhaps through a trust. No further information on his profession or life was located.

Page 22 of 24

David K. Park

Born in the 1930s, David grew up at the Project site and was listed as living there in the 1940 and 1950 census records.²⁴ He graduated from Venice High School in 1951, prior to his father's passing in 1953.²⁵ The following year, while stationed in Korea while serving in the U.S. Army, David was promoted to private first class, and was acting regimental supply sergeant of the 14th Regiment, 25th Division, 8th Army.²⁶ It is unclear when David returned from service in Korea. David died in 2001, and his namesake appeared on Project site building permits as "Sylvia and David K. Park Trust," through at least 2012. No further information on his profession or life was located.

Unless a shorter period of time has been established by an official action, plan check approval expires one and a half years after the plan check fee has been paid. This permit expires two years after the building permit fee has been paid or 180 days after the fee has been paid and construction has not commenced or if work is suspended, discontinued or abandoned for a continuous period of 180 days (Sec. 98 0602 LAMC).

17. LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. The following applies to B contractors only. I understand the limitations of Section 7057 related to my ability to take prime contracts or subcontracts involving specialty trades. (For 1 or 2 family dwellings, use the declaration attachment if separate general, electrical, plumbing, and/or HVAC contractor's & workers' comp declarations are desired.)

License Class B Lic No 751130 Firm KPRS Joel H. Stensby President

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.
I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are Carrier ST FUND Policy Number 04489 UNIT0019209

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Signature Date 12/16/99 Contractor Authorized Agent Owner

WARNING FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS (\$100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES

19. CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code)

Lender's name: Lender's address:

20. ASBESTOS REMOVAL

Notification of asbestos removal: Not applicable Letter was sent to the AQMD or EPA Sign Date 12/16/99

21. OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors License Law for the following reason (Section 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9 commencing with Sec. 7000 of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500).)

- I, as the owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec 7044, Business & Professions Code. The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year from completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale)
I, as the owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business & Professions Code. The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.)
I am exempt under Sec. Bus & Prof. Code for the following reason:

Print Sign Date Owner Authorized Agent

22. FINAL DECLARATION

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein. Also that it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, that neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec 91 0106.4.3.4 LAMC).

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.
