1. Purpose

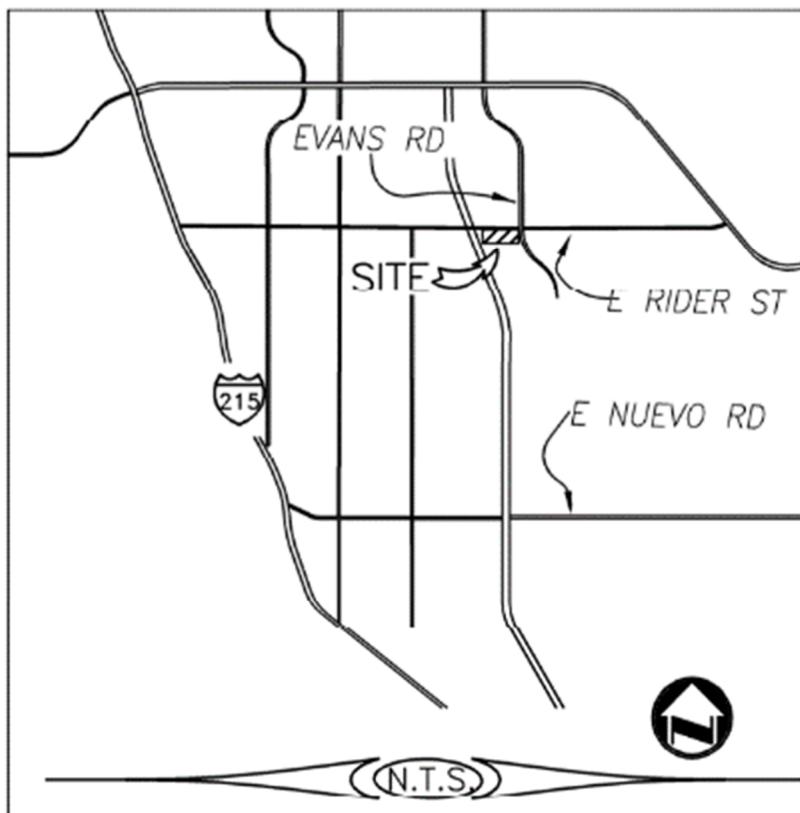

This Hydrology Report has been prepared to ensure that adequate size and proper operation of drainage facilities are incorporated into the Post-Development project site.

2. Project Description

The proposed development of the site will include construction of a 324-unit apartment complex. The Proposed Multi-Family Development will include (4) 8 Unit 2-Story Buildings, (6) 12 Units 2-Story Buildings, (5) 16 Units 3-Story Buildings, (3) 18 Units 3-Story Buildings, (4) 24 Unit 3-Story Buildings, 3,500 square-foot Clubhouse, 2,500 square-foot Recreation Room, Pool, and associated parking and landscaping. The proposed Multi-Family Development is to be located at the southwest corner of the intersection of Evans Road and Rider Street in the City of Perris, California,

A. Vicinity Map

VICINITY MAP

3. Pre-Development Hydrology

Site is vacant with no existing structures or roads on the site. All flows from the site flow towards the west to the Perris Valley Channel.

4. Post-Development Hydrology

The runoff from the site will keep the same drainage path as the existing condition. The site will have a proposed storm drain system to collect the onsite runoff from the proposed development. The site will use a Extended Detention basin at the south west corner to treat and mitigate the runoff prior to draining the runoff to the Perris Valley Channel. The existing storm drain line is limited to a Q100 of 21.3 cfs. The basin has been sized to outlet less than the existing condition and a max of the existing connection storm drain line.

Basin Storm Event Summary							
Storm Event	Existing		Proposed		Routed		
	Volume (ac.ft.)	cfs	Volume (ac.ft.)	cfs	Volume (ac.ft.)	cfs	Depth (ft)
100yr1hr	1.4000	37.744	1.3328	36.740	0.877	21.079	4.07
100yr3hr	2.0104	21.611	1.8907	21.492	0.789	17.246	3.75
100yr6hr	2.6826	19.109	2.5855	19.856	0.768	16.369	3.67
100yr24hr	3.5414	7.320	3.9950	6.685	0.645	6.647	3.19

5. Method of Analysis

The site hydrology was based upon Riverside County Flood Control and Water Conservation District Hydrology Manual, from which pertinent soil and rainfall information was obtained.

Storm flows were determined by the "RATIONAL METHOD HYDROLOGY COMPUTER PROGRAM", Riverside County Flood Control & Water Conservation District 1978 Hydrology Manual, produced by Bondamin Engineering.

The site was also analyzed by the "SYNTHETIC UNIT HYDROLOGY METHOD COMPUTER PROGRAM", Riverside County Flood Control & Water Conservation District 1978 Hydrology Manual, produced by Bondamin Engineering.

6. Conclusion

The hydrologic calculations provided herein substantiate the design of the Post-Development project and indicate the following:

- The Post-Development facilities demonstrate the ability to convey the 100 year storm event emanating from the project site to the Perris Valley Channel.
- The water quality basin will adequately treat the required water quality volume associated with the project site.

Based on the Hydrology and Hydraulic analysis conducted and results shown herein and part thereof, it is our conclusion this project does not negatively impact the local community or watershed goals.

Notes:

1. Land use should be based on ultimate development of the watershed. Long range master plans for the County and incorporated cities should be reviewed to insure reasonable land use assumptions.
2. Recommended values are based on average conditions which may not apply to a particular study area. The percentage impervious may vary greatly even on comparable sized lots due to differences in dwelling size, improvements, etc. Landscape practices should also be considered as it is common in some areas to use ornamental gravels underlain by impervious plastic materials in place of lawns and shrubs. A field investigation of a study area should always be made, and a review of aerial photos, where available may assist in estimating the percentage of impervious cover in developed areas.
3. For typical horse ranch subdivisions increase impervious area 5 percent over the values recommended in the table above.
