

# Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: Three-Million-Gallon Regulating Station Tank Project

Lead Agency: Bella Vista Water District

Contact Name: David Coxey, General Manager

Email: dcoxey@bvwd.org

Phone Number: 530.241.1085

Project Location: Bella Vista (unincorporated)  
*City*

Shasta  
*County*

Project Description (Proposed actions, location, and/or consequences).

The proposed project includes improvements to the BVWD's water system. Improvements at the Regulating Station (Water Tank) site on Hidden Acres Road include constructing a new three-million-gallon (MG) above-ground water tank and appurtenances; installing a new pump station and electrical controls room; modifying piping in the Regulating Station vault; installing compacted Class II aggregate base throughout the Water Tank site; installing new waterlines and piping; completing drainage improvements; relocating existing Pacific Gas and Electric (PG&E) power poles and overhead powerlines, installing a new electrical transformer, and extending electrical service to the new water tank; installing new fencing around the perimeter of the site; repairing/restoring Hidden Acres Road to pre-existing conditions or better following completion of the improvements; and installing supervisory control and data acquisition (SCADA) systems at the new tank site and three existing BVWD groundwater well sites (Wells 3, 4, and 6). The purpose of the proposed project is to increase water storage and improve operational efficiency in the water supply and distribution system.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

As documented in the Initial Study, project implementation could result in temporarily increased air emissions, potential effects to special-status wildlife species and their habitats, disturbance of nesting migratory birds or bats (if present), impacts resulting from tree removal, the introduction and spread of noxious weeds during construction, possible impacts on wetlands and/or other waters of the U.S./State, impacts to cultural resources and tribal cultural resources (if present), impacts on paleontological resources, and temporarily increased noise and vibration levels.

Design features incorporated into the project would avoid or reduce certain potential environmental impacts, as would compliance with existing regulations and permit conditions. Remaining impacts can be reduced to levels that are less than significant through implementation of the mitigation measures identified in Section 1.10 of the Initial Study. Because the BVWD will adopt mitigation measures as conditions of project approval and will be responsible for ensuring their implementation, it has been determined that the project will not have a significant adverse impact on the environment.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

The Lead Agency is not aware of any issues that would be considered controversial, either to the public or to any regulatory agency.

Provide a list of the responsible or trustee agencies for the project.

State Water Resources Control Board/Central Valley Regional Water Quality Control Board, California Division of Drinking Water, California Department of Fish and Wildlife.
