**RE: FINAL FOCUSED TRAFFIC IMPACT ANALYSIS FOR THE PROPOSED CORDOVA COMPLEX DEVELOPMENT (PRE-APPLICATION NO. 2022-005) LOCATED AT THE SWC OF CORDOVA ROAD AND NAVAJO ROAD IN THE TOWN OF APPLE VALLEY, CA (APN: 0463-213-05)**

Dear Ms. Haughton,

**David Evans and Associates, Inc.** is pleased to submit this Final Traffic Impact Analysis report for your proposed warehouse development in Apple Valley. The proposed project consists of a 1,559,952 square foot warehouse located on 78.8-acres in the Town of Apple Valley, California.

This report was prepared in accordance with San Bernardino County's Traffic Impact Study Guidelines for level of service (LOS) assessment published in July 2019, and the Town's adopted Resolution No. 2021-08 (May 2021) establishing thresholds of significance for a development's project-generated vehicle miles traveled (VMT) and the development's overall effect of VMT on the town's circulation system.

A VMT analysis was prepared to identify potentially significant transportation impacts for environmental clearance under the California Environmental Quality Act (CEQA). The VMT analysis findings and conclusions are summarized in the Executive Summary of this report and the full VMT analysis report is included in the appendix.

We are pleased to have been of assistance to you in processing and obtaining approval for the project. If you have any questions or comments, please feel free to contact me at 909-912-7304.

Respectfully submitted,

**DAVID EVANS AND ASSOCIATES, INC.**

James M. Daisa, P.E.  
Senior Project Manager / Associate

Appendix D: Intersection Capacity Analysis Worksheets

Appendix E: VMT Analysis

## 1 EXECUTIVE SUMMARY

This executive summary presents the findings and recommendations of this study.

### 1.1 Project Description

The proposed project consists of a 1,559,952 square foot speculative warehouse facility located on approximately 79-acres in the north part of the town and within the North Apple Valley Industrial Specific Plan area. The project site is located at the southwest corner of Cordova Road and Navajo Road.

Access to the site is from driveways on Cordova Road, Dachshund Avenue, and Navajo Road. The proposed circulation and access plan includes constructing Cordova Road from Dale Evans Parkway to Navajo Road (with full improvements of the street segment fronting the project) and constructing and improving Navajo Road from Cordova Road to the project's southern property line and potentially extending Navajo Road to Johnson Road for employee/truck and emergency vehicle access. Dachshund Avenue would be constructed and improved from Cordova Road to the south property line for providing driveway access.

### 1.2 Town of Apple Valley and Caltrans Intersection Level of Service Policies

The Town of Apple Valley's General Plan policy (Policy 1.A, Program 1.A.4) on level of service is to maintain a level of service (LOS) D in the AM and PM peak hours on all its roadways. This level of service policy applies to local Apple Valley roadways, roads of regional importance as part of the county's Congestion Management Program (CMP) network, and state highways.

The Caltrans' Guide for the Preparation of Traffic Impact Studies (December 2002) states "Caltrans endeavors to maintain a target level of service at the transition between LOS "C" and LOS "D" on State highway facilities. However, Caltrans acknowledges that this may not always be feasible, so their practice is to allow level of service thresholds equal to the threshold of the jurisdiction where the facility is located but preferably no greater than a 45 second average delay per vehicle in the peak hour (mid LOS D). For this study, the town's LOS D is assumed to be the minimum level of service criteria for the study intersections.

### 1.3 Analysis Scenarios

The scenarios analyzed in this study are consistent with the requirements of the county's Transportation Impact Study Guidelines (July 2019). Additional analysis scenarios are included in this study to reflect conditions with and without the Cordova Complex's (project) sister warehouse development—Quarry Complex—located at the northeast corner of extensions of Cordova Road and Pawnee Road.

The project's sister site, the Quarry Complex, is expected to develop generally in the same timeframe as the Cordova Complex project. The proposed project is analyzed, however, in scenarios without the Quarry Complex warehouse to represent a potential situation in which the Quarry Complex project is significantly delayed, or the application is abandoned or withdrawn, and the sister project is never built. In either case, the Cordova Complex could be responsible for a larger share of off-site improvements that would normally be shared between the two developments. The additional scenario without the Quarry Complex assumed as background development will produce more realistic off-site improvements and more reasonable and accurate fair-share estimates of the cost of the off-site improvements in the event the Quarry Complex project does not develop. The same set of analysis scenarios (with and without the Cordova Complex Project) is included in the traffic analysis for the Quarry Complex project. The expanded list of analysis scenarios includes:

#### Scenarios Without Development of the Quarry Complex

- Existing conditions
- Background conditions (year 2024) without Quarry Complex
- Background + project conditions (year 2024) without Quarry Complex
- Future year 2040 conditions without Quarry Complex
- Future year 2040 + project conditions without Quarry Complex

Scenarios With Development of the Quarry Complex

- Background conditions (year 2024) with Quarry Complex
- Background + project conditions (year 2024) with Quarry Complex
- Future year 2040 conditions with Quarry Complex
- Future year 2040 + project conditions with Quarry Complex

A. *Level of Service Comparison with and without the Proposed Project (Without Quarry Complex)*

**Table 1-1** compares the weekday AM and PM peak hour background and background plus project LOS at the study intersections. Background conditions represent the project’s opening year of 2024 and includes growth in ambient traffic from regional and local development equaling 3.5 percent annually but excludes the Quarry Complex in the cumulative traffic forecasts. In this scenario, the addition of project traffic causes intersection LOS deficiencies (from LOS D or better to LOS E or F) at Dale Evans Parkway / Johnson Road, Stoddard Wells Road / Johnson Road, and Stoddard Wells Road / I-15 Northbound Ramps.

Table 1-1: Comparison of Background (Without Quarry Complex) and Background Plus Project LOS

Intersection	Control Type	Background Conditions				Background + Project Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	10.7	B	9.4	A	11.2	B	9.5	A
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	10.2	B	8.9	A	10.6	B	9.0	A
3. Dale Evans Parkway / Quarry Road	TWSC	11.1	B	13.8	B	11.6	B	14.6	B
4. Dale Evans Parkway / Johnson Road	AWSC	8.9	A	13.3	B	15.2	C	53.4	F
5. Stoddard Wells Road / Johnson Road	TWSC	10.5	B	15.7	C	14.0	B	68.8	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	22.0	C	25.5	D	362.7 <sup>†</sup>	F	249.7	F
7. Stoddard Wells Road / Quarry Road	TWSC	18.1	C	13.5	B	20.2	C	13.7	B
8. I-15 Southbound Ramps / Quarry Road	TWSC	10.9	B	11.7	B	11.4	B	14.0	B
9. Johnson Road / Navajo Road	TWSC	10.4	B	9.9	A	10.4	B	9.9	A
10. Dale Evans Parkway / Cordova Road	TWSC	9.5	A	10.1	B	12.5	B	16.3	C

Notes:  
<sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6<sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle.  
 Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
Abbreviations:  
 TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

**Table 1-2** on the following page compares the weekday AM and PM peak hour future year 2040 and future year 2040 plus project LOS at the study intersections. Future year 2040 conditions represent a long-range forecast for addressing the cumulative impacts of regional growth in traffic as determined through traffic forecasts from the San Bernardino Countywide Traffic Analysis Model (SBTAM). The Quarry Complex is not included in these scenarios.

In this scenario, the growth in background traffic through the year 2040 causes intersection LOS deficiencies in the 2040 background without project scenario (from LOS D or better to LOS E or F) at the Stoddard Wells Road / I-15 Northbound Ramps intersection.

The addition of project traffic in this scenario exacerbates the intersection LOS deficiencies at the same intersections impacted by the addition of project traffic to year 2024 conditions: Dale Evans Parkway / Johnson Road, Stoddard Wells Road / Johnson Road, and Stoddard Wells Road / I-15 Northbound Ramps, but with substantially higher delays.

Table 1-2: Comparison of Future 2040 (Without Quarry Complex) and Future 2040 Plus Project LOS

Intersection	Control Type	Future Year 2040 Conditions				Future Year 2040 + Project Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	12.9	B	10.9	B	13.8	B	11.1	B
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	11.4	B	9.7	A	11.8	B	9.8	A
3. Dale Evans Parkway / Quarry Road	TWSC	12.7	B	17.5	C	13.4	B	18.7	C
4. Dale Evans Parkway / Johnson Road	AWSC	13.1	B	58.6	F	42.5	E	208.8	F
5. Stoddard Wells Road / Johnson Road	TWSC	20.9	C	307.9 <sup>†</sup>	F	73.8	F	989.8 <sup>†</sup>	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	144.1	F	680.9 <sup>†</sup>	F	804.2 <sup>†</sup>	F	1,993.4 <sup>†</sup>	F
7. Stoddard Wells Road / Quarry Road	TWSC	20.8	C	15.6	C	23.6	C	16.0	C
8. I-15 Southbound Ramps / Quarry Road	TWSC	11.5	B	14.8	B	12.1	B	19.1	C
9. Johnson Road / Navajo Road	TWSC	10.5	B	10.0	B	10.5	B	10.0	B
10. Dale Evans Parkway / Cordova Road	TWSC	12.6	B	12.6	B	18.7	C	29.4	D

**Notes:**  
<sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6<sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle.  
 Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
**Abbreviations:**  
 TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

**Table 1-3** compares the weekday AM and PM peak hour background and background plus project LOS at the study intersections with the inclusion of traffic generated by the Quarry Complex. In addition, background conditions represent the project’s opening year of 2024 with growth in ambient traffic from other regional and local development equaling 3.5 percent annually.

Table 1-3: Comparison of Background (With Quarry Complex) and Background Plus Project LOS

Intersection	Control Type	Background Conditions				Background + Project Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	11.2	B	9.5	A	11.7	B	9.6	A
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	10.6	B	9.0	A	11.0	B	9.1	A
3. Dale Evans Parkway / Quarry Road	TWSC	11.5	B	14.6	B	12.1	B	15.4	C
4. Dale Evans Parkway / Johnson Road	AWSC	14.9	B	58.0	F	89.5	F	204.2	F
5. Stoddard Wells Road / Johnson Road	TWSC	13.9	B	66.7	F	24.6	C	300.5	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	601.2	F	683.1	F	1888.0	F	2710.5	F
7. Stoddard Wells Road / Quarry Road	TWSC	18.1	C	13.5	B	20.2	C	13.7	B
8. I-15 Southbound Ramps / Quarry Road	TWSC	11.4	B	14.0	B	11.9	B	17.6	C
9. Johnson Road / Navajo Road	TWSC	10.4	B	9.9	A	10.4	B	9.9	A
10. Dale Evans Parkway / Cordova Road	TWSC	11.7	B	14.3	B	17.1	C	39.0	E

**Notes:**  
<sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6<sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle.  
 Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
**Abbreviations:**  
 TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

In this scenario, the addition of traffic from the Quarry Complex traffic further exacerbates the intersection LOS deficiencies at Dale Evans Parkway / Johnson Road, Stoddard Wells Road / Johnson Road, and Stoddard Wells Road / I-15 Northbound Ramps, with exponential increases in the delay for the stop-controlled movements.

**Table 1-4** on the following page compares the weekday AM and PM peak hour future year 2040 and future year 2040 plus project LOS at the study intersections, with traffic generated by the Quarry Complex included.

The Quarry Complex, as cumulative development, adds over 500 peak hour trips to the circulation system. This additional traffic, added to stop controlled movements, causes unstable operations whereas the delay experienced by the stop-controlled approaches increases exponentially. This is caused by a combination of the traffic added to the stop-controlled approaches and an increase in the uncontrolled movements on the major street resulting in fewer acceptable gaps in the flow of traffic in both directions.

Table 1-4: Comparison of Future 2040 (With Quarry Complex) and Future 2040 Plus Project LOS

Intersection	Control Type	Future Year 2040 Conditions				Future Year 2040 + Project Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	13.7	B	11.1	B	14.9	B	11.3	B
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	11.8	B	9.8	A	12.3	B	9.9	A
3. Dale Evans Parkway / Quarry Road	TWSC	13.3	B	18.7	C	14.0	B	20.1	C
4. Dale Evans Parkway / Johnson Road	AWSC	38.2	E	192.3	F	174.4	F	370.8 <sup>†</sup>	F
5. Stoddard Wells Road / Johnson Road	TWSC	71.6	F	982.9 <sup>†</sup>	F	289.5	F	1,818.4 <sup>†</sup>	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	1,048.1 <sup>†</sup>	F	3,911.3 <sup>†</sup>	F	2,241.0 <sup>†</sup>	F	11,415.4 <sup>†</sup>	F
7. Stoddard Wells Road / Quarry Road	TWSC	20.8	C	15.6	C	23.6	C	16.0	C
8. I-15 Southbound Ramps / Quarry Road	TWSC	12.1	B	19.0	C	12.7	B	26.4	D
9. Johnson Road / Navajo Road	TWSC	10.5	B	10.0	B	10.5	B	10.0	B
10. Dale Evans Parkway / Cordova Road	TWSC	16.8	C	22.3	C	35.4	E	152.4	F

**Notes:**  
<sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6<sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle.  
 Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
**Abbreviations:**  
 TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

When the proposed project’s traffic is added to year 2040 background conditions (with Quarry Complex) there is a complete breakdown in the operation of the stop-controlled approaches with spikes in the calculated delay that are not achievable in real life conditions. These unrealistically high delays are indications of complete over-saturation of the stop-controlled approaches and the need for a traffic control strategy with significantly greater capacity such as a traffic signal.

The addition of traffic from the proposed project in the future year 2040 (with Quarry Complex) conditions causes a LOS deficiency at the previously unimpacted intersection of Dale Evans Parkway / Cordova Road. Project traffic causes the PM peak hour LOS at the stop-controlled approach (Cordova Road) to change from a LOS C in the future year 2040 background conditions to a LOS F in future year 2040 background + project conditions.

#### 1.4 Recommended Measures to Improve Level of Service at Deficient Intersections

**Table 1-5** summarizes the recommended near-term project-specific and long-range cumulative intersection improvements required to improve deficient intersection levels of service to conform with the town’s general plan policy of maintaining a minimum LOS D during peak hours. The near-term project-specific improvements are based on background + project scenario without traffic from the Quarry Complex project. The long-range cumulative measures are based on the future 2040 + project conditions with traffic from the Quarry Complex project.

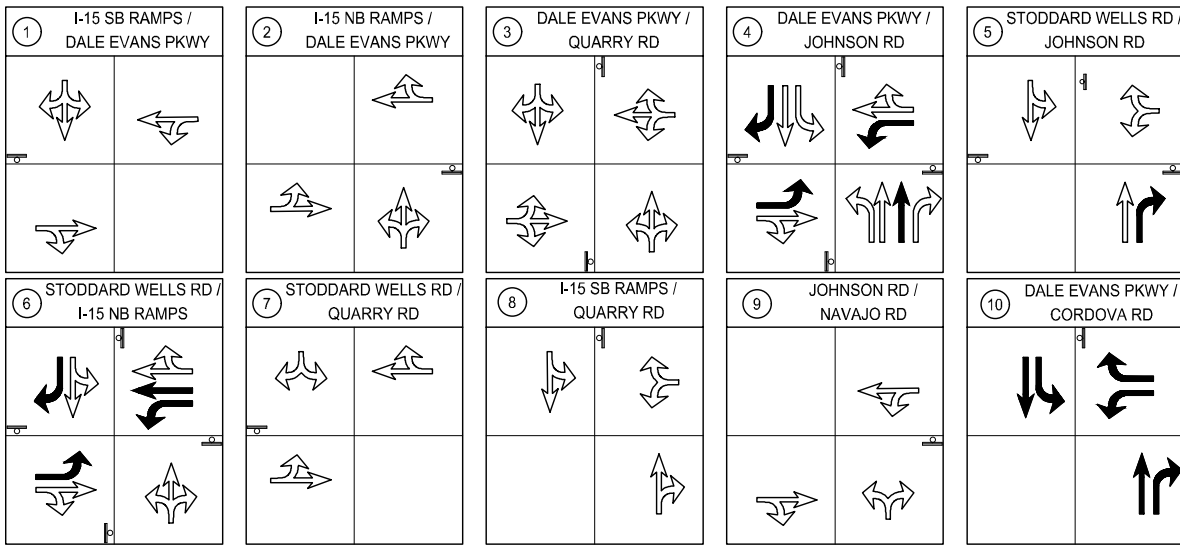

**Figure ES- 1** illustrates the near-term project-specific intersection improvements required to improve deficient intersection levels of service in the background (year 2024) plus project scenario. **Figure ES- 2** illustrates the long-range cumulative intersection improvements required to improve deficiencies in the future 2040 plus project scenario.

Table 1-5: Recommended Project-Specific and Cumulative Improvements to Mitigate LOS Deficiencies

Intersection	Cordova Complex Project-Specific Improvements (See <b>Figure ES- 1</b> )	Cumulative Long-Term Improvements (See <b>Figure ES- 2</b> )
Dale Evans Parkway and Johnson Road	<p><b>Retain existing all-way stop control</b> Reconfigure intersection:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Westbound approach: remove free right and convert the lane to a through-right lane, and convert the existing shared through-left lane to an exclusive left turn lane (250 feet long + a 120-foot transition)</li> <li><input type="checkbox"/> Eastbound approach: provide an exclusive left turn lane (250 feet long + 120-foot transition) and shared through-right lane</li> <li><input type="checkbox"/> Northbound approach: remove the northbound offset right turn lane and add a second through lane and an exclusive right turn lane</li> <li><input type="checkbox"/> Southbound approach: provide an exclusive right turn lane</li> </ul> <p>If the Quarry Complex is constructed concurrently with the Cordova Complex, then the following additional improvements are required:</p> <ul style="list-style-type: none"> <li>■ Westbound approach: provide an additional through lane prior to occupancy of the Quarry Complex <b>[a]</b></li> <li>■ Westbound departure: widen Johnson Road’s east leg departure approach to accommodate two receiving lanes and merge to single westbound lane after 750 feet <b>[a]</b></li> </ul>	<p><b>Install a traffic signal at Dale Evans Parkway and Johnson Road</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Retain the project-specific improvements implemented with construction of the Cordova Complex Project and the Quarry Complex</li> </ul>

### 1.5 Project Fair-Share Contribution to Level of Service Deficiency Improvements

Table 1-6 shows the proposed project's percent contribution to the total growth in entering traffic volumes, otherwise known as the fair-share calculation. The formula for calculating the percentages in the table is:

$$\text{Percent of Total} = \frac{(\text{Total Project Trips})}{((\text{Total Non-Project Forecasted Trips} + \text{Total Project Trips}) - \text{Existing Trips})} \times 100\%$$

Table 1-6: Project's Percent Contribution (Fair Share) to Deficient Intersections by Year and Peak Hour

Intersection	Near-Term Conditions*		Long-Range Cumulative Conditions**	
	AM Peak Hour	PM Peak Hour	AM Peak Hour	PM Peak Hour
4.Dale Evans Parkway / Johnson Road	93.1%	89.5%	33.0%	31.3%
5.Stoddard Wells Road / Johnson Road	94.3%	90.9%	28.6%	25.7%
6.Stoddard Wells Road / I-15 Northbound Ramps	87.7%	85.0%	27.2%	25.0%

Notes:  
\* Scenario excluding traffic from the Quarry Complex. \*\* Scenario including traffic from the Quarry Complex.  
Project traffic used in calculating the fair-share percentage is based on Passenger Car Equivalents (PCEs).

### 1.6 Project Fair-Share Fee Contribution to Level of Service Deficiency Improvements

The fair share percentages calculated in Chapter 1.5 are used to determine the Fair Share Fee for each intersection and by forecast year.

The Fair Share Fee provided in Table 1-7 represent the estimated cost associated with the near-term project-specific improvements described in Table 1-5 and are based on background + project scenario without traffic from the Quarry Complex project. The near-term Project-Specific Improvements are improvements for which the Cordova Complex Project is solely responsible. Therefore, these improvements do not include the Quarry Complex as background development to isolate only the Cordova Complex Project's required improvements. The traffic impact study for the Quarry Complex project is analyzed in the same manner so that it's project-specific improvements can be isolated.

Table 1-7: Project's Fair Share Fee for Near-Term Project-Specific Improvements

Intersection	Cost (\$)	Fair Share %	Fair Share Fee
4. Dale Evans Parkway / Johnson Road	\$200,000	93.1%	\$186,300
5. Stoddard Wells Road / Johnson Road	\$300,000	94.3%	\$282,800
6. Stoddard Wells Road / I-15 Northbound Ramps	\$450,000	87.7%	\$394,800

Notes:  
Project traffic used in calculating the fair-share percentage is based on Passenger Car Equivalents (PCEs).  
The project specific improvements excluding traffic from the Quarry Complex.

The Fair Share Fee provided in Table 1-8 represent the estimated cost associated with the long-range cumulative measures described in Table 1-5 and are based on the future 2040 + project conditions with traffic from the Cordova Complex project.

Table 1-8: Project's Fair Share Fee for Long-Range Cumulative Measures

Intersection	Cost	Fair Share %	Fair Share Fee
4. Dale Evans Parkway / Johnson Road	\$700,000	33.0%	\$230,700
5. Stoddard Wells Road / Johnson Road*	\$900,000	28.6%	\$257,000
6. Stoddard Wells Road / I-15 Northbound Ramps	\$1,100,000	27.2%	\$299,300

Notes:  
\* - Based on Option 1: Convert intersection to all-way stop-control – Preferred Alternative  
Project traffic used in calculating the fair-share percentage is based on Passenger Car Equivalents (PCEs).  
The ultimate cumulative improvements include traffic from the Quarry Complex

### 1.7 Level of Service with Recommended Improvements

This section presents the level of service at deficient intersections before and after implementation of the recommended mitigation measures summarized in **Table 1.5**. The near-term background + project scenarios in the following tables present the mitigated levels of service for project-specific improvements—improvements for which the Cordova Complex Project is solely responsible. Therefore, the mitigated levels of service for the near-term scenarios do not include the Quarry Complex as background development to isolate only the Cordova Complex Project’s required improvements. The traffic impact study for the Quarry Complex project is analyzed in the same manner so that it’s project-specific improvements can be isolated.

If the Quarry Complex and Cordova Complex are developed concurrently then **Table 1-5** also presents the improvements needed if both projects are developed simultaneously. Regardless of which complex develops first, both projects will likely share in the cost of improving Cordova Road and its intersection with Dale Evans Parkway.

The improved level of service under the long-term future 2040 + project scenarios include traffic from the Quarry Complex project because the long-term scenarios reflect cumulative conditions for which all development is responsible for its fair-share of the cost of the improvements. The last columns in the series of tables in this section present the change in delay (the measurement used to establish LOS). The top row shows the increase in delay caused by the proposed project’s traffic added to the without project scenario. The bottom row shows the reduction in delay after implementation of the mitigation measure.

Because most of the study intersections are side-street stop-controlled intersections, for which level of service is defined as the LOS of the worst stop-controlled movement, the method of calculating average delay at saturated intersections produces exponentially high delays. Calculated delays in the thousands of seconds are not at all realistic but, suffice it say, the method is making a clear statement that side-street stop as a form of traffic control at high volume intersections will fail.

#### A. Dale Evans Parkway and Johnson Road

**Table 1-9** shows the intersection level of service under background plus project conditions with the near-term project-specific improvements of adding northbound through lane, southbound right turn lane, eastbound left turn lane, and westbound left turn lane. The intersection of Dale Evans Parkway / Johnson Road, with its current all-way stop-control, will begin to fail as development occurs in north Apple Valley. The near-term project-specific improvements mitigations will improve the intersection to a LOS D or better in this scenario for both peak hours.

Table 1-9: Improved Level of Service for the Near-Term Project-Specific Improvements

Intersection	Background Conditions (Without Quarry Complex)				Background + Project Conditions (Without Quarry Complex)				Change in Delay (Seconds)	
	AM Peak		PM Peak		AM Peak		PM Peak		AM	PM
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS		
Dale Evans Parkway / Johnson Road	8.9	A	13.3	B	15.2	C	53.4	F		40.1
w/Improvements: Reconfigure intersection add NBTH, SBR, EBL, and WBL	Not Applicable				11.9	B	26.8	D	N/A	13.5
Notes: *Positive numbers represent increases in delay, or impacts, while negative numbers (shown in parenthesis) represent reductions, or improvements, in delay.										

**Table 1-10** on the following page shows the intersection level of service under future year 2040 plus project conditions with the long-range cumulative measures of installing a traffic signal intersection. In the long-term further lane capacity added to Dale Evans Parkway consistent with the general plan will keep up with traffic growth.

The long-range cumulative measures will improve the intersection to a LOS D or better in this scenario for both peak hours.

Table 1-10: Improved Level of Service for the Long-Range Cumulative Measures

Intersection	Future Year 2040 Conditions (With Quarry Complex)				Future Year 2040 + Project Conditions (With Quarry Complex)				Change in Delay (Seconds)	
	AM Peak		PM Peak		AM Peak		PM Peak		AM	PM
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS		
Dale Evans Parkway / Johnson Road	38.2	E	192.3	F	174.4	F	370.8 <sup>†</sup>	F	136.2	178.5
w/cumulative improvements: Retain the project-specific improvements implemented and install traffic signal and install traffic signal	Not Applicable				20.3	C	39.9	D	(17.9)	(152.4)
Notes: <sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6 <sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle. *Positive numbers represent increases in delay while negative numbers (shown in parenthesis) represent reductions, or improvements, in delay.										

*B. Stoddard Wells Road and Johnson Road*

**Table 1-11** shows the level of service under background plus project conditions with the near-term project-specific improvements of conversion to all-way stop control and the addition of northbound right turn lane.

The growth in traffic at this skewed intersection with stop-control on Johnson Road primarily affects movements traveling to and from I-15 via the on and off-ramps at Stoddard Wells Road. The northbound right turn from Stoddard Wells Road to Johnson Road and the stop-controlled westbound left turn from Johnson Road to Stoddard Wells Road experience the intersection's highest growth in traffic and the largest increase in associated delay for these movements. The near-term project-specific improvements mitigations will improve the intersection to a LOS D or better in this scenario.

Table 1-11: Improved Level of Service for the Near-Term Project-Specific Improvements

Intersection	Background Conditions (Without Quarry Complex)				Background + Project Conditions (Without Quarry Complex)				Change in Delay (Seconds)	
	AM Peak		PM Peak		AM Peak		PM Peak		AM	PM
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS		
Stoddard Wells Road / Johnson Road	10.5	B	15.7	C	14.0	B	68.8	F	N/A	53.1
w/Improvements: convert to AWSC and provide NBR	Not Applicable				10.8	B	34.4	D	N/A	18.7
Notes: *Positive numbers represent increases in delay, or impacts, while negative numbers (shown in parenthesis) represent reductions, or improvements, in delay.										

While the addition of a northbound right turn lane and converting the intersection to all way stop control mitigates the LOS deficiency in the near-term, as development continues in north Apple Valley, the stop-controlled east leg of Johnson Road will eventually fail.

**Table 1-12** on the following page shows the intersection level of service under future year 2040 plus project conditions with the long-range cumulative measures.

Preferred Option 1 is to convert the intersection to all-way stop-control, add a southbound left turn, a southbound through lane, a westbound left turn, a westbound right turn, and converting the northbound right turn to a free right turn.

Option 2 install a traffic signal and add a southbound left turn and a westbound right turn. With the Preferred Option 1 mitigations of adding turn lanes will improve the intersection to a LOS D or better in this scenario.

Table 1-12: Improved Level of Service for the Long-Range Cumulative Measures

Intersection	Future Year 2040 Conditions (With Quarry Complex)				Future Year 2040 + Project Conditions (With Quarry Complex)				Change in Delay (Seconds)	
	AM Peak		PM Peak		AM Peak		PM Peak		AM	PM
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS		
Stoddard Wells Road / Johnson Road	71.6	F	982.9 <sup>†</sup>	F	289.5	F	1,818.4 <sup>†</sup>	F	217.9	835.5
w/cumulative improvements Preferred Option 1: convert to AWSC, add SBL, SBTH, WBL, WBR, and free NBR	Not Applicable				12.0	B	35.0	D	(59.6)	(947.9)
w/cumulative improvements Option 2: install traffic signal, add SBL and WBR	Not Applicable				16.3	B	19.4	B	(55.3)	(963.5)
Notes: <sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6 <sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle. *Positive numbers represent increases in delay while negative numbers (shown in parenthesis) represent reductions, or improvements, in delay.										

C. Stoddard Wells Road / I-15 Northbound Ramps

The existing side-street stop-controlled approach (I-15 southbound on and off ramps) of this intersection will experience failure in background plus project conditions.

**Table 1-13** shows the level of service under background plus project conditions with the near-term project-specific improvements of conversion to all-way stop control, and the addition of southbound right lane, eastbound left, westbound left and exclusive westbound through lane.

All-way stop control is frequently used as an interim solution prior to installing a traffic signal and that is the case in this scenario<sup>1</sup>. The near-term project-specific improvements mitigations will improve the intersection to a LOS C in both peak hours.

Table 1-13: Improved Level of Service for the Near-Term Project-Specific Improvements

Intersection	Background Conditions (Without Quarry Complex)				Background + Project Conditions (Without Quarry Complex)				Change in Delay (Seconds)	
	AM Peak		PM Peak		AM Peak		PM Peak		AM	PM
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS		
Stoddard Wells Road / I-15 Northbound Ramps	22.0	C	25.5	D	362.7 <sup>†</sup>	F	249.7	F	340.7	224.2
w/Improvements: convert to AWSC and provide SBR, EBL, WBL and WBTH	Not Applicable				15.4	C	20.1	C	(6.6)	(5.4)
Notes: <sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6 <sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle. *Positive numbers represent increases in delay while negative numbers (shown in parenthesis) represent reductions, or improvements, in delay.										

**Table 1-14** on the following page shows the intersection level of service under future year 2040 plus project conditions with the recommended long-term improvement of installing a traffic signal and reconfigure the southbound lanes.

The long-range cumulative measures will improve the intersection to a LOS D or better in this scenario for both peak hours.

<sup>1</sup> Section 2B.07 of the California Manual on Uniform Traffic Control Devices (CA MUTCD) provides requirements or “warrants” to consider before implementing all-way stop control. This intersection in this scenario meets at least one warrant justifying the installation of a traffic signal which is one of the requirements when considering all-way stop control. Further study of the all-way stop requirements is required to fully justify the implementation of this mitigation measure.

Table 1-14: Improved Level of Service for the Long-Range Cumulative Measures

Intersection	Future Year 2040 Conditions (With Quarry Complex)				Future Year 2040 + Project Conditions (With Quarry Complex)				Change in Delay (Seconds)	
	AM Peak		PM Peak		AM Peak		PM Peak		AM	PM
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS		
Stoddard Wells Road / I-15 Northbound Ramps	1,048.1 <sup>†</sup>	F	3,911.3 <sup>†</sup>	F	2,241.0 <sup>†</sup>	F	11,415.4 <sup>†</sup>	F	1,192.9	7,504.1
w/cumulative improvements: Traffic Signal and SB reconfiguration	Not Applicable				34.9	C	37.2	D	(1013.2)	(3874.1)
Notes: <sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6 <sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle. *Positive numbers represent increases in delay while negative numbers (shown in parenthesis) represent reductions, or improvements, in delay.										

D. Dale Evans Parkway / Cordova Road

**Table 1-15** shows the level of service under background plus project conditions with the proposed project specific improvements of adding a northbound right, southbound left, westbound right, and a two way left turn lane along Dale Evans Parkway. Dale Evans Parkway and Cordova Road intersection—a primary access road serving both the Quarry Complex and the Cordova Complex projects.

Cordova Road needs to be constructed to provide access to project site and the intersection widening improvements summarized in **Table 1-5** should be implemented when Cordova Road is constructed. These improvements are discussed in **Section 1.9** (Project-Specific Frontage and Access Improvements). The near-term project-specific improvements mitigations will improve the intersection to a LOS B in both peak hours.

Table 1-15: Improved Level of Service for the Near-Term Project-Specific Improvements

Intersection	Background Conditions (Without Quarry Complex)				Background + Project Conditions (Without Quarry Complex)				Change in Delay (Seconds)	
	AM Peak		PM Peak		AM Peak		PM Peak		AM	PM
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS		
Dale Evans Parkway / Cordova Road	9.5	A	10.1	B	12.5	B	16.3	C	N/A	
w/ improvements: provide NBR, SBL, TWLTL, WBL	Not Applicable				11.1	B	13.8	B		
Notes: *Positive numbers represent increases in delay, or impacts, while negative numbers (shown in parenthesis) represent reductions, or improvements, in delay.										

**Table 1-16** shows the intersection level of service under future year 2040 plus project conditions with the project specific improvements of adding a northbound right, southbound left, westbound right, and a two way left turn lane along Dale Evans Parkway. The near-term project-specific improvements mitigations will improve the intersection to a LOS D or better in both peak hours.

Table 1-16: Improved Level of Service for the Long-Range Cumulative Measures

Intersection	Future Year 2040 Conditions (With Quarry Complex)				Future Year 2040 + Project Conditions (With Quarry Complex)				Change in Delay (Seconds)	
	AM Peak		PM Peak		AM Peak		PM Peak		AM	PM
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS		
Dale Evans Parkway / Cordova Road	16.8	C	22.3	C	35.4	E	152.4	F	18.6	130.1
w/ improvements: Retain the project- specific improvements	Not Applicable				16.3	C	34.1	D	(0.5)	11.8
Notes: *Positive numbers represent increases in delay, or impacts, while negative numbers (shown in parenthesis) represent reductions, or improvements, in delay.										

## 1.8 Traffic Signal Warrant Analysis

Stop-controlled intersections operating with a LOS deficiency in any project-related scenario are subject to a warrant analysis to determine the need for a traffic signal. Satisfying a warrant or multiple warrants for a traffic signal does not automatically require the installation of a signal. Warrants are tools used in conjunction with engineering assessment and judgement regarding improving safety and operating conditions at stop-controlled intersections.

**Table 1-17** summarizes the findings of the signal warrant analyses conducted for each deficient intersection under each project-related scenario. The three study intersections experiencing the most dramatic increases in delay meet the signal warrant in all project-related scenarios.

Table 1-17: Summary of Traffic Signal Warrant Analyses of Deficient Intersections

Deficient Intersection	Scenarios Satisfying Warrant 3 (Peak Hour) at Deficient Intersections [a]			
	Year 2024 Project Conditions *	Year 2024 Project Conditions **	Future 2040 + Project Conditions *	Future 2040 + Project Conditions **
Dale Evans Parkway / Johnson Road	YES	YES	YES	YES
Stoddard Wells Road / Johnson Road	YES	YES	YES	YES
Stoddard Wells Road / I-15 Northbound Ramps	YES	YES	YES	YES
Dale Evans Parkway / Cordova Road	NO	NO	NO	YES

**Notes:**  
 \* Scenario excluding traffic from the Quarry Complex project. \*\* Scenario including traffic from the Quarry Complex project.  
 [a] The California Manual on Uniform Traffic Control Devices (CA MUTCD) provides procedures and standards for evaluating the need for installation of a traffic signal at a stop-controlled intersection. Of the nine warrants included in the MUTCD, warrant 3 (based on peak hour traffic volumes) is frequently used in planning and impact studies because it is standard practice to evaluate peak hour operating conditions using traffic forecasts. The other warrants generally require data that cannot be accurately forecasted.  
 The MUTCD emphasizes that satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic signal and a traffic signal should not be installed unless an engineering study indicates that installing a traffic signal will improve the overall safety and/or operation of the intersection.

## 1.9 Project-Specific Frontage and Access Improvements

This study recommends the following site frontage and access improvements typically required in the town's Conditions of Approval:

### 1. Construct access and site frontage improvements on Cordova Road:

- a. Construct Cordova Road<sup>2</sup> from Dale Evans Parkway to Navajo Road.
  - The project will need to construct the non-fronting portion of Cordova Road from Dachshund Avenue to Dale Evans Parkway for access purposes. This segment of Cordova Road should be constructed as the two inner lanes of the Secondary Road typical section (or as required by the Town).
  - If Cordova Road is not extended east to serve the Quarry Complex concurrently with construction of the Cordova Complex project, and Navajo Road is not extended south to Johnson Road, a temporary turnaround will be required at the eastern terminus of Cordova Road east of Navajo Road.
  - Construction of Cordova Road may be shared (or with cost reimbursement) with the Quarry Complex if it is constructed in a similar timeframe as the project.
- b. Construct and improve the project's frontage with Cordova Road from Dachshund Avenue to the eastern

<sup>2</sup> Cordova Road is designated as a Secondary Road in the General Plan with an 88-foot right of way to accommodate a four-lane traveled way with shoulder, bike lanes, or street parking, and a 12-foot parkway / sidewalk on both side of the street

property line.

- The project will be required to dedicate land and construct the 44-foot half-width of a secondary road section including the project's primary truck access driveway. Until the northern half of Cordova Road is constructed by others the two travel lanes constructed with the half-width section can provide for two-way traffic.
- The project should also construct a minimum two-way two-lane (one in each direction) roadway between its eastern property line and Navajo Road to fill the gap created by the non-project owned property in the southwest corner of Cordova and Navajo.

**2. Construct access and site frontage improvements on Dachshund Avenue:**

- a. Construct and improve the project's frontage with Dachshund Avenue between Cordova Road and the project's southern property line.
  - Dachshund Avenue is also designated a secondary road with an 88-foot right of way. The project will be required to construct the 44-foot half-width of a secondary road section including the proposed driveways accessing the project from Dachshund Avenue.
  - If the project does not extend and improve Dachshund Avenue south to Johnson Road for access, a temporary turnaround will be required at the southern terminus of Dachshund Avenue.

**3. Construct access and site frontage improvements on Navajo Road:**

- a. Construct and improve the project's frontage with Navajo Road.
  - The project will be required to dedicate land and construct the 44-foot half-width of Navajo Road's secondary road designation including the proposed driveways accessing Navajo Road.
  - The project should construct the section of Navajo Road fronting non-project owned property between Cordova Road and the project's property line as a minimum two-way two-lane (one in each direction) roadway to close this gap.
- b. Fire Department secondary access requirements.
  - The fire department will require a secondary paved access road to the project site from an existing paved street.
  - The project should consider extending Navajo Road to Johnson Road to provide access to the project for employees and trucks destined to the project which will also serve as a secondary access road for emergency vehicles.
  - The extension need only be a minimum two-way, two-lane paved roadway 24-feet in width until the surrounding properties develop and improve Navajo Road to Town standards.

**1.10 Vehicle Miles of Travel (VMT) Analysis**

The VMT analysis screening assessment included in the approved October 19, 2022, scoping agreement concluded that the Cordova Complex project was required to prepare a detailed analysis of project-generated VMT and its effect on VMT town-wide as part of the project's environmental clearance under CEQA.

The VMT analysis was prepared in accordance with the Town's adopted Resolution No. 2021-08 (Adopting Thresholds of Significance for Vehicle Miles Traveled (VMT) Under the California Environmental Quality Act (CEQA)) which states that a development project would result in a significant project-generated VMT impact if either of the following conditions are satisfied:

1. The baseline project generated VMT per service population (population plus employees) exceeds the Town of Apple Valley General Plan Buildout VMT per service population, or

- The cumulative (2040) project generated VMT per service population exceeds the Town of Apple Valley General Plan Buildout VMT per service population.

In addition to project-generated VMT, the Town adopted significance thresholds for a project’s effect on VMT in Apple Valley. The resolution states that a project’s effect on VMT would be considered significant if it resulted in either of the following conditions to be satisfied:

- The baseline link-level boundary Town-wide VMT per service population increases under the plus project condition compared to the no project condition, or
- The cumulative link-level boundary Town-wide VMT per service population increases under the plus project condition compared to the no project condition.

The term “link-level boundary Town-wide” refers to all vehicle miles of travel on all roadways with the town limits of Apple Valley. The following describes the key findings and the conclusions of the VMT analysis. The full report is in **Appendix E**.

#### A. Project-Generated VMT Analysis

The SBTAM model is used estimate project-generated VMT for both baseline (2016) and horizon year (2040) scenarios. The SBTAM socioeconomic database for each scenario were updated with the project land use to calculate project VMT. The databases were also used to obtain the town’s population and employment to estimate service population.

The VMT analysis for the adjacent Quarry Complex project is used as a baseline to update the anticipated VMT generated by the expansion of the Cordova Complex project. The Cordova Complex Project is 1,559,952 SF and the Quarry Complex project is 1,540,120 SF. This is a difference of 19,832 SF. The VMT analysis is calculated based on employee estimates. When comparing the two project sites the Cordova Complex project is anticipated to utilize 9 additional employees (based on a factor of 2,111 SF per employee).

**Table 1-18** on the following page present the outcome of the project-generated VMT analyses for the baseline and horizon year scenarios. As shown in **Table 1-18**, in both the baseline and horizon year scenarios, the VMT/service population metric for the Cordova Complex project is less than the Town of Apple Valley’s general plan buildout significance threshold.

The OD VMT is estimated based on the Quarry Complex Project and an average trip length of 30 miles for the additional 9 employees. The Quarry Complex Project is provided in **Table 1-18** and **Appendix E**.

Metric	2016 Baseline Conditions			2040 Conditions		
	Quarry Complex Warehouse (project)	Cordova Complex Warehouse (project)	Town of Apple Valley General Plan Buildout (Threshold) [a]	Quarry Complex Warehouse (project)	Cordova Complex Warehouse (project)	Town of Apple Valley General Plan Buildout (Threshold) [a]
Population	0	0		0	0	
Employment [b]	730	739		730	739	
Service Population	730	739		730	739	
OD VMT [c]	23,469	23,766[d]		22,310	22,580[d]	
OD VMT per service population	32.186	32.160	33.2	30.562	30.555	33.2

Notes:  
[a] Source: SBCTA VMT Screening Tool: <https://www.gosbcta.com/vmtscreening>  
[b] Source: SCAG Employment Density Study Summary Report, October 31, 2001 (using 2,111 square feet per employee).  
[c] The project’s Origin/Destination (OD) VMT derived from the San Bernardino Traffic Analysis Model (SBTAM)  
[d] Calculation assumed an average trip length of 30 miles for the additional 9 employees. This is added to the VMT calculated by the model for the Quarry Complex Project.  
Source of analysis: General Technologies and Solutions (GTS)

The outcome of the second analysis, the project’s effect on town-wide VMT, is presented in **Table 1-19**. The SBTAM model was used to estimate the VMT on all roadways within the town’s limits for the baseline and 2040 scenarios with and without the project. Using the resulting town-wide VMT, the metric indicating a significant impact (VMT/Service population) at a town-wide scale was calculated.

**Table 1-19** shows that the VMT/Service population metric under the “with project” conditions compared to the metric under the “without project” conditions in both scenarios does not increase and does not satisfy the town’s significance threshold described above.

Table 1-19: Project Effect on Roadway VMT within Town of Apple Valley

Metric	2016 Baseline		2040 Conditions	
	With Project	Without Project	With Project	Without Project
Roadway VMT [a]	854,224	847,823	1,364,732	1,362,981
Service population [b]	91,852	91,113	127,545	126,806
VMT per service population	9.3	9.3	10.7	10.7
Notes: [a] Roadway VMT = sum of all vehicle miles travel on all streets within the town limits of Apple Valley [b] Service population = sum of residents and employees in Apple Valley in the scenario being analyzed. Source: 2016 and 2040 land use summaries from the San Bernardino Traffic Analysis Model (SBTAM) Source of analysis: General Technologies and Solutions (GTS)				

**B. Conclusions of the VMT Analyses**

The VMT analysis conducted to identify potentially significant project-generated VMT impacts under CEQA concludes that the proposed project generates a VMT / Service population less than the VMT / Service population representing buildout of Apple Valley’s general plan and, therefore, does not cause a significant impact based on the town’s adopted significance thresholds for project-generated VMT.

Another VMT analysis conducted to identify potentially significant impacts of the project’s “effects on town-wide VMT” under CEQA concludes that the VMT / service population metric for the baseline and horizon year scenarios “with the project” do not increase the metric over the “without project” scenarios. Therefore, the proposed Cordova Complex project does not cause a significant impact based on the town’s adopted significance thresholds for the project’s effect on town-wide VMT.

Based on the assumption of an average trip length of 30 miles for the additional 9 employees beyond the estimate for the Quarry Complex project the OD VMT per service population is estimated to be same for the 2016 Baseline and the 2040 Conditions. As such the estimated additional 270 VMT has a negligible effect on VMT.

## 2 INTRODUCTION

This report identifies the traffic impacts and presents recommendations for access and traffic mitigation for the proposed Cordova Complex project in the Town of Apple Valley, California. The proposed project consists of a 1,559,952 square foot speculative warehouse facility located on approximately 38.4-acres in the north part of the town and within the North Apple Valley Industrial Specific Plan area.

The North Apple Valley Industrial Specific Plan is the regulatory plan that governs all development within its boundaries. It designates land uses and provides design standards for the construction of buildings and defines the area's required infrastructure for transportation / circulation, public services, and utilities.

The project site is located at the southwest corner of Cordova Road and Navajo Road, as illustrated in the vicinity map shown in **Figure 1**. The site is bounded to the north by unimproved Cordova Road and undeveloped land; to the south by undeveloped land and the existing Walmart Distribution Center south of Johnson Road; to the west by unimproved Dachshund Avenue and undeveloped land; and to the east by unimproved Navajo Road and undeveloped land. **Figure 2** illustrates the proposed project site plan.

The intent of this report is to evaluate potentially significant traffic impacts caused by the proposed development in accordance with the Town of Apple Valley and San Bernardino County traffic impact analysis requirements under the following scenarios:

### 2.1 Analysis Scenarios

The scenarios analyzed in this study are consistent with the requirements of San Bernardino County's Transportation Impact Study Guidelines (July 2019). Additional analysis scenarios are included in this study to reflect conditions with and without the Cordova Complex's (project) sister warehouse development—Quarry Complex—located at the northeast corner of extensions of Cordova Road and Pawnee Road.

The project's sister site, the Quarry Complex, is expected to develop generally in the same timeframe as the Cordova Complex (project). The proposed project is analyzed, however, in scenarios without the Quarry Complex warehouse to represent a potential situation in which the Quarry Complex is significantly delayed, or the application is abandoned or withdrawn, and the sister project is never built. In either case, the Cordova Complex could be responsible for a larger share of off-site improvements that would normally be proportionately shared between the two developments. The additional scenario without the Quarry Complex assumed as background development will produce more realistic off-site improvements and more reasonable and accurate fair-share estimates of the cost of the off-site improvements in the event the Quarry Complex does not develop. The same set of analysis scenarios (with and without the Cordova Complex) is included in the traffic impact analysis for the Quarry Complex project. The expanded list of analysis scenarios includes:

#### Scenarios Without Development of the Quarry Complex

- Existing conditions
- Background conditions (year 2024) without Quarry Complex
- Background + project conditions (year 2024) without Quarry Complex
- Future year 2040 conditions without Quarry Complex
- Future year 2040 + project conditions without Quarry Complex

#### Scenarios With Development of the Quarry Complex

- Background conditions (year 2024) with Quarry Complex
- Background + project conditions (year 2024) with Quarry Complex
- Future year 2040 conditions with Quarry Complex
- Future year 2040 + project conditions with Quarry Complex

**FIGURE 1: VICINITY MAP  
CORDOVA COMPLEX  
APPLE VALLEY**

**FIGURE 2: PROJECT SITE PLAN  
CORDOVA COMPLEX  
APPLE VALLEY**

### 3 EXISTING CONDITIONS

#### 3.1 Town of Apple Valley and Caltrans Intersection Level of Service Policies

The Town of Apple Valley's General Plan policy (Policy 1.A, Program 1.A.4) on level of service is to maintain a level of service (LOS) D in the AM and PM peak hours on all its roadways. This level of service policy applies to local Apple Valley roadways, roads of regional importance as part of the county's Congestion Management Program (CMP) network, and state highways.

The Caltrans' Guide for the Preparation of Traffic Impact Studies (December 2002) states "Caltrans endeavors to maintain a target level of service at the transition between LOS "C" and LOS "D" on State highway facilities. However, Caltrans acknowledges that this may not always be feasible, so their practice is to allow level of service thresholds equal to the threshold of the jurisdiction where the facility is located but preferably no greater than a 45 second average delay per vehicle in the peak hour (mid LOS D). For this study, the town's LOS D is assumed to be the minimum level of service criteria for the study intersections.

#### 3.2 Study Intersections

This focused traffic study evaluates key intersections on routes expected to be used by project traffic to access the site. **Figure 3** and the list below identifies the intersections analyzed in this study.

1. I-15 Southbound Ramps / Dale Evans Parkway
2. I-15 Northbound Ramps / Dale Evans Parkway
3. Dale Evans Parkway / Quarry Road
4. Dale Evans Parkway / Johnson Road
5. Stoddard Wells Road / Johnson Road
6. Stoddard Wells Road / I-15 Northbound Ramps
7. Stoddard Wells Road / Quarry Road
8. I-15 Southbound Ramps / Quarry Road
9. Johnson Road / Navajo Road
10. Dale Evans Parkway / Cordova Road

The intersection of Dale Evans Parkway / Johnson Road is currently all-way stop-controlled. All the remaining study intersections are currently side street stop controlled.

#### 3.3 Existing Traffic Volumes

Turn movement counts were conducted in November 2022 by Newport Traffic Studies, an independent traffic data collection company. These counts were collected during the AM (7:00-9:00 AM) and PM (4:00-6:00 PM) peak periods. The existing turn movement counts are included in **Appendix B** of this study. **Figure 4** illustrates the existing peak hour traffic volumes in the study area.

#### 3.4 Intersection Capacity Analysis Methodology

In this study, intersection level of service (LOS) was determined using Synchro software<sup>3</sup> which implements the methodologies in Chapter 19 and Chapter 20 of the Highway Capacity Manual, 6<sup>th</sup> Edition (HCM 6)<sup>4</sup> and conforms to the procedures and assumptions in the county's Traffic Impact Analysis Guidelines.

The intersection analyses use existing intersection geometrics and existing traffic volumes in determining AM and PM peak hour intersection level of service. **Table 3-1** provides LOS thresholds for both two-way stop-controlled (TWSC) and all-way stop-controlled intersections which is determined by the computed or measured control delay. Unsignalized intersections have lower delay criteria than signalized intersections because stop-control is associated with more uncertainty for users, as delays are less predictable than they are at signals, which reduces the user's tolerance for delay.

The level of service at TWSC intersections is measured as the control delay for the worst stop-controlled movement at the intersection regardless of the movement's traffic volume.

<sup>3</sup>Trafficware Ltd, version 10.

<sup>4</sup>Transportation Research Board, Washington D.C., 2010.

**FIGURE 3: STUDY INTERSECTIONS

**FIGURE 4: EXISTING TRAFFIC VOLUMES  
CORDOVA COMPLEX  
APPLE VALLEY**

The level of service at AWSC intersections is also measured as the control delay, but it applies to the entire intersection not individual movements.

Table 3-1: Level of Service Criteria for Two-Way and All-Way Stop Controlled (TWSC & AWSC) Intersections

Control Delay (s/veh)	LOS by Volume-to-Capacity Ratio <sup>a</sup>	
	≤1.0	>1.0
0 - 10	A	F
> 10 - 15	B	F
> 15 - 25	C	F
> 25 - 35	D	F
> 35 - 50	E	F
> 50	F	F

Note:  
The LOS criteria apply to each lane on a given approach and to each approach on the minor street. LOS is not calculated for the uncontrolled major-Street approaches or for the intersection as a whole.  
[a] For approaches and intersectionwide assessment, LOS is defined solely by control delay.  
Source: Highway Capacity Manual 6<sup>th</sup> Edition, Exhibit 20-2.

### 3.5 Existing Traffic Analysis

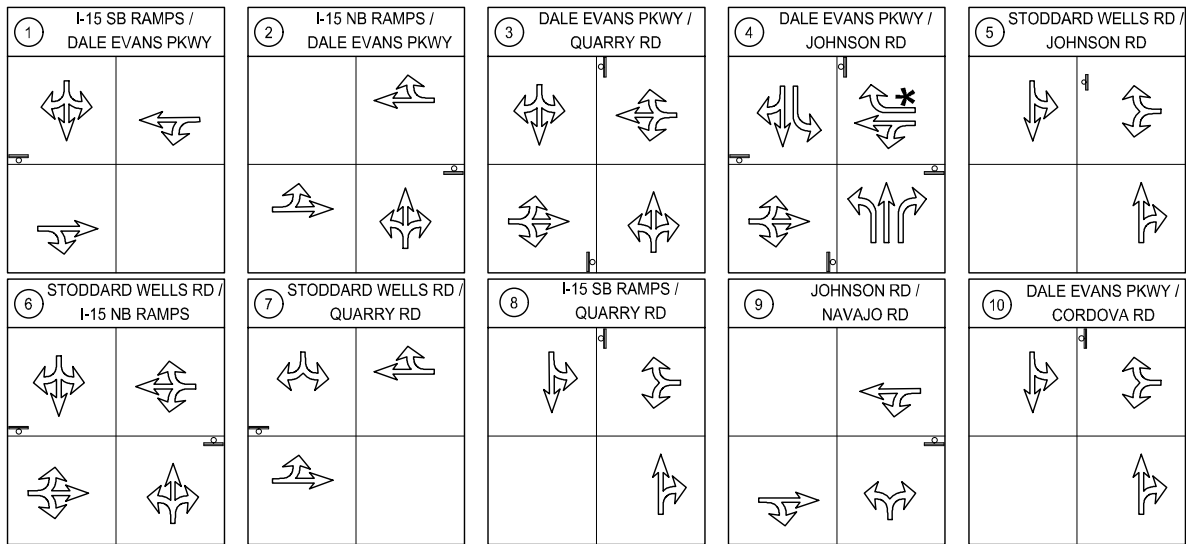

Existing intersection geometrics and existing AM and PM peak hour traffic counts are used in analyzing existing intersection capacity. **Table 3-2** and **Appendix D** provide the results of the analysis. **Figure 5** illustrates the existing intersection geometrics utilized in the capacity analysis.

Table 3-2: Intersection Level of Service for Existing (2022) Conditions

Intersection	Control Type	Existing Conditions			
		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	10.5	B	9.3	A
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	10.0	B	8.8	A
3. Dale Evans Parkway / Quarry Road	TWSC	10.9	B	13.3	B
4. Dale Evans Parkway / Johnson Road	AWSC	8.7	A	12.4	B
5. Stoddard Wells Road / Johnson Road	TWSC	10.2	B	14.5	B
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	20.5	C	23.0	C
7. Stoddard Wells Road / Quarry Road	TWSC	16.6	C	12.8	B
8. I-15 Southbound Ramps / Quarry Road	TWSC	10.7	B	11.3	B
9. Johnson Road / Navajo Road	TWSC	10.2	B	9.7	A
10. Dale Evans Parkway / Cordova Road	TWSC	9.4	A	10.0	B

Notes:  
Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
Abbreviations:  
TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

As presented in **Table 3-2**, under existing conditions, all study intersections currently operate at LOS C or better in both peak hours.

#### 4 BACKGROUND CONDITIONS (WITHOUT QUARRY COMPLEX)

This scenario evaluates impacts due to ambient growth in traffic and traffic generated by other area development projects affecting the study area up to the year 2024 when project construction is expected to be completed. An annual growth rate in traffic of 3.5% represents both ambient growth and other area development projects.

##### 4.1 Background Conditions Traffic Analysis (Without Quarry Complex)

The background conditions intersection level of service analysis uses existing intersection geometrics and the projected AM and PM peak hour traffic for background conditions. The background projections in this scenario exclude traffic from the Quarry Complex—the Cordova Complex’s sister project. **Table 4-1** and **Appendix D** provides the results of the analysis.

Table 4-1: Intersection Level of Service for Background Conditions

Intersection	Control Type	Background Conditions (Without Quarry Complex)			
		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	10.7	B	9.4	A
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	10.2	B	8.9	A
3. Dale Evans Parkway / Quarry Road	TWSC	11.1	B	13.8	B
4. Dale Evans Parkway / Johnson Road	AWSC	8.9	A	13.3	B
5. Stoddard Wells Road / Johnson Road	TWSC	10.5	B	15.7	C
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	22.0	C	25.5	D
7. Stoddard Wells Road / Quarry Road	TWSC	18.1	C	13.5	B
8. I-15 Southbound Ramps / Quarry Road	TWSC	10.9	B	11.7	B
9. Johnson Road / Navajo Road	TWSC	10.4	B	9.9	A
10. Dale Evans Parkway / Cordova Road	TWSC	9.5	A	10.1	B

Notes:  
Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
Abbreviations:  
TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

As presented in **Table 4-1**, under background conditions, the study intersections operate at a LOS C or better in both peak hours.

## 5 BACKGROUND PLUS PROJECT CONDITIONS (WITHOUT QUARRY COMPLEX)

This scenario evaluates potential impacts with the project generated traffic at opening day (2024) conditions added to the background conditions scenario.

### 5.1 Project Description and Trip Generation

The proposed project is a speculative warehouse where the tenant(s) and function as a potential short term storage facility, distribution center, fulfillment center, etc. is unknown. While the impact analysis needs to reflect a reasonable spectrum of tenant types, there is a risk when estimating trip generation of over or under-estimating traffic. The 11<sup>th</sup> Edition of the Institute of Transportation Engineers' Trip Generation manual contains data for the most common types of warehouse operations with a wide range of rates. **Table 5-1** summarizes the trip generation rates for warehouse facilities in the current edition of ITE's Trip Generation.

Table 5-1: Trip Generation Rates for ITE Land Use Categories of Warehousing

Warehouse Type	ITE Land Use Code	Average Trip Generation Rates for Warehouse Types (Trips Per KSF) (Source: ITE Trip Generation 11th Edition)		
		Average Daily Traffic	AM Peak Hour of Adjacent Street Traffic	PM Peak Hour of Adjacent Street Traffic
		Total (In + Out)	Total (In + Out)	Total (In + Out)
High-Cube Transload and Short-Term Storage Warehouse	154	1.54	0.08	0.10
High-Cube Cold Storage Warehouse	157	2.12	0.11	0.12
High-Cube Fulfillment Center Warehouse - Non-Sort	155	1.81	0.15	0.16
General Warehouse	150	1.71	0.17	0.18
High-Cube Parcel Hub Warehouse	156	4.63	0.70	0.64
High-Cube Fulfillment Center Warehouse - Sort	155	6.44	0.87	1.20
Average of All Warehouse Types		3.04	0.35	0.40
Average Without High-Cube Sort Fulfillment Center		2.36	0.24	0.24

To help select a trip generation rate for the proposed project representative of the range of potential owners/tenants, **Table 5-1** includes the average of the rates for all warehouse types in the ITE Trip Generation manual and the average of the rates for all warehouse types except High-Cube Fulfillment Sort Facility—the most intensive type of warehouse which is not expected for the proposed project. The secondary average rate (excluding High-Cube Fulfillment Sort Facility) represents two thirds the ITE warehouse types and covers a broad range of tenant types and operations.

**Table 5-2** summarizes the estimated trip generation of the proposed project for an average weekday, and weekday AM (7-9 AM) and PM (4-6 PM) peak hours, based on the secondary average rates identified in **Table 5-1**. The proposed warehouse complex would generate about 3,682 vehicle trips per day and 375 vehicle trips in both the AM and PM peak hours.

It is standard practice to convert vehicle trips to passenger car equivalents (PCEs) for intersection capacity analysis. This conversion reflects the effects of large vehicles on intersection operations both from the physical space a truck occupies but also from their effect on the intersection's saturation flow rate due to the slower acceleration of trucks.

When converted to PCEs, the Cordova complex generates about 5,173 daily PCEs, and 528 PCEs in both the AM and PM peak hour.

Table 5-2: Cordova Complex Project Trip Generation

Land Use	Gross Floor Area (KSF)	Daily	AM Peak Hour of Adjacent Street Traffic			PM Peak Hour of Adjacent Street Traffic		
			In	Out	Total	In	Out	Total
<b>Warehouse</b> (ITE Land Use Category 150)	1,559.95	Vehicle Trip Generation Rates (Trips Per 1,000 Square Feet of Gross Floor Area)						
		2.36	0.18	0.06	0.24	0.07	0.17	0.24
		Total Vehicle Trip Generation						
		3,682	289	86	375	105	270	375
	Mode Share	Project Trip Generation by Vehicle Type						
Passenger Cars (Percent of Total)	74.21%	2,732	214	64	278	78	200	278
2-Axle Trucks (Percent of Total)	4.55%	168	13	4	17	5	12	17
3-Axle Trucks (Percent of Total)	4.18%	154	12	4	16	4	11	16
4-Axle Trucks (Percent of Total)	17.04%	627	49	15	64	18	46	64
	PCE Factor	Project Trip Generation in Passenger Car Equivalents (PCE)						
Passenger Cars)	1.0	2732	214	64	278	78	200	278
2-Axle Trucks	1.5	252	20	6	26	7	19	26
3-Axle Trucks	2.0	308	24	8	32	9	23	32
4 + Axle Trucks	3.0	1881	147	45	192	54	138	192
<b>Total Passenger Car Equivalents (PCE)</b>		<b>5,173</b>	<b>405</b>	<b>123</b>	<b>528</b>	<b>148</b>	<b>380</b>	<b>528</b>
Notes: KSF = Thousands of Square Feet. AM / PM Peak Hour of Adjacent Street Traffic = Trip generation coinciding with the highest hourly volumes of traffic on the adjacent streets during the AM (7:00 AM and 9:00 AM) and PM (4:00 PM and 6:00 PM) commuter peak periods. Source of trip generation rates: Institute of Transportation Engineers (ITE) Trip Generation (11th Edition). Average rates for land use category 150 (Warehouse). Source of passenger car / truck mode share (percentage of total): South Coast Air Quality Management District High Cube Warehouse Trip Generation Study (2016). Based on data from eight high cube warehouses in the Inland Empire over 1,000,000 square feet in size. The average warehouse building size is 1,364,496 square feet. Passenger Car Equivalents (PCE) factors: Industry standard values utilized in neighboring jurisdictions								

## 5.2 Project Trip Distribution and Assignment

Project traffic is distributed by direction separately for automobiles (employees) and trucks. The automobile distribution is based on where the warehouse employees are likely to reside or perform other activities (e.g., concentration of residential neighborhoods and commercial centers). The truck distribution is based on the most direct routes to major roadways and highways trucks are likely to use to access the project and depart for delivery of freight. Project trips are assigned to the area streets that provide the most direct route to the destinations.

An exhibit showing the distribution of project-generated automobile and truck trips to roadways as a percentage by direction and route can be viewed in the approved scoping memorandum in **Appendix A** (Exhibit D).

The assignment of updated project generated traffic at the study intersections for the AM and PM peak hours can be viewed in the **Figure 6**. In this figure, truck traffic volumes have been converted into passenger car equivalents (PCEs) as required in the San Bernardino County guidelines for intersection capacity analysis.

### 5.3 Background + Project Conditions Traffic Analysis (Without Quarry Complex)

**Table 5-3** compares intersection level of service of background and background plus project conditions based on the AM and PM peak hour traffic volumes shown in **Figure 7**. The capacity analysis worksheets are in **Appendix D**.

Table 5-3: Comparison of Background (Without Quarry Complex) and Background Plus Project LOS

Intersection	Control Type	Background Conditions				Background + Project Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	10.7	B	9.4	A	11.2	B	9.5	A
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	10.2	B	8.9	A	10.6	B	9.0	A
3. Dale Evans Parkway / Quarry Road	TWSC	11.1	B	13.8	B	11.6	B	14.6	B
4. Dale Evans Parkway / Johnson Road	AWSC	8.9	A	13.3	B	15.2	C	53.4	F
5. Stoddard Wells Road / Johnson Road	TWSC	10.5	B	15.7	C	14.0	B	68.8	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	22.0	C	25.5	D	362.7	F	249.7	F
7. Stoddard Wells Road / Quarry Road	TWSC	18.1	C	13.5	B	20.2	C	13.7	B
8. I-15 Southbound Ramps / Quarry Road	TWSC	10.9	B	11.7	B	11.4	B	14.0	B
9. Johnson Road / Navajo Road	TWSC	10.4	B	9.9	A	10.4	B	9.9	A
10. Dale Evans Parkway / Cordova Road	TWSC	9.5	A	10.1	B	12.5	B	16.3	C

**Notes:**  
Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).

**Abbreviations:**  
TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

As presented in **Table 5-3**, under background + project conditions, three of the study intersections experience substantial increases in delay and degrade from LOS D or better to LOS F in at least one peak hour.

<p>① I-15 SB RAMPS / DALE EVANS PKWY</p>	<p>② I-15 NB RAMPS / DALE EVANS PKWY</p>	<p>③ DALE EVANS PKWY / QUARRY RD</p>	<p>④ DALE EVANS PKWY / JOHNSON RD</p>	<p>⑤ STODDARD WELLS RD / JOHNSON RD</p>

## 6 FUTURE 2040 CONDITIONS (WITHOUT THE QUARRY COMPLEX)

The future conditions scenario reflects regional growth in traffic up to the year 2040. Growth in traffic is from forecasts from the San Bernardino County Transportation Analysis Model (SBTAM). Intersection turn movements were derived from post processing forecasted approach volumes and balancing the turn movement volumes for each study intersection. The SBTAM traffic model plots are provided in **Appendix C**.

### 6.1 Future Conditions Traffic Analysis

The future year 2040 conditions intersection capacity analysis uses existing intersection geometrics and the projected AM and PM peak hour traffic volumes using the process described above. **Table 6-1** and **Appendix D** provide the results of the analysis.

Table 6-1: Intersection Level of Service for Future Year 2040 Conditions (Without Quarry Complex)

Intersection	Control Type	Future 2040 Conditions (Without Quarry Complex)			
		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	12.9	B	10.9	B
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	11.4	B	9.7	A
3. Dale Evans Parkway / Quarry Road	TWSC	12.7	B	17.5	C
4. Dale Evans Parkway / Johnson Road	AWSC	13.1	B	58.6	F
5. Stoddard Wells Road / Johnson Road	TWSC	20.9	C	307.9	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	144.1	F	680.9	F
7. Stoddard Wells Road / Quarry Road	TWSC	20.8	C	15.6	C
8. I-15 Southbound Ramps / Quarry Road	TWSC	11.5	B	14.8	B
9. Johnson Road / Navajo Road	TWSC	10.5	B	10.0	B
10. Dale Evans Parkway / Cordova Road	TWSC	12.6	B	12.6	B
<p><u>Notes:</u> Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).</p> <p><u>Abbreviations:</u> TWSC = Two-way (or side street) stop control, AWSC = All-way stop control</p>					

As presented in **Table 6-1**, under future year 2040 conditions, three intersections are projected to operate at deficient levels of service even without the proposed project. These three will be consistently showing LOS deficiencies as traffic volumes increase in later scenarios. The fact that Dale Evans Parkway and Johnson Road, Stoddard Wells Road and Johnson Road, and Stoddard Wells Road and I-15 Northbound Ramps are located on primary routes for trucks and automobiles accessing I-15 is an important contributing factor.

## 7 FUTURE 2040 PLUS PROJECT CONDITIONS (WITHOUT THE QUARRY COMPLEX)

The future plus project conditions scenario adds the project’s estimated traffic generation to the future condition’s scenario described in section 6. As described in the previous section, the forecasted future year 2040 traffic intersection turn movements were derived from post processing forecasted approach volumes from the SBTAM model for each study intersection. The SBTAM traffic model plots are provided in **Appendix C**.

### 7.1 Future Plus Project Traffic Analysis

The intersection level of service analysis for future plus project conditions uses existing intersection geometrics and the projected AM and PM peak hour traffic volumes shown in **Figure 8. Table 7-1** and **Appendix D** provide the results of the analysis.

Table 7-1: Comparison of Future 2040 (Without Quarry Complex) and Future 2040 Plus Project LOS

Intersection	Control Type	Future Year 2040 Conditions				Future Year 2040 + Project Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	12.9	B	10.9	B	13.8	B	11.1	B
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	11.4	B	9.7	A	11.8	B	9.8	A
3. Dale Evans Parkway / Quarry Road	TWSC	12.7	B	17.5	C	13.4	B	18.7	C
4. Dale Evans Parkway / Johnson Road	AWSC	13.1	B	58.6	F	42.5	E	208.8	F
5. Stoddard Wells Road / Johnson Road	TWSC	20.9	C	307.9	F	73.8	F	989.8	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	144.1	F	680.9	F	804.2	F	1993.4	F
7. Stoddard Wells Road / Quarry Road	TWSC	20.8	C	15.6	C	23.6	C	16.0	C
8. I-15 Southbound Ramps / Quarry Road	TWSC	11.5	B	14.8	B	12.1	B	19.1	C
9. Johnson Road / Navajo Road	TWSC	10.5	B	10.0	B	10.5	B	10.0	B
10. Dale Evans Parkway / Cordova Road	TWSC	12.6	B	12.6	B	18.7	C	29.4	D

**Notes:**  
Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
**Abbreviations:**  
TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

As presented in **Table 7-1**, the addition of project traffic in this scenario exacerbates the intersection LOS deficiencies at the same intersections impacted by the addition of project traffic to future year 2040 conditions: Dale Evans Parkway / Johnson Road, Stoddard Wells Road / Johnson Road, and Stoddard Wells Road / I-15 Northbound Ramps, but with substantially higher delays.

## 8 BACKGROUND CONDITIONS TRAFFIC ANALYSIS (WITH QUARRY COMPLEX)

This scenario evaluates impacts due to ambient growth in traffic and traffic generated by other area development projects affecting the study area up to the year 2024 when project construction is expected to be completed. An annual growth rate in traffic of 3.5% represents both ambient growth and other area development projects. Traffic from the proposed project's sister development, the Quarry Complex, is included in this scenario

### 8.1 Background Conditions Traffic Analysis (With Quarry Complex)

The background conditions intersection level of service analysis uses existing intersection geometrics and the projected AM and PM peak hour traffic volumes from Section 4 plus traffic from the Quarry Complex. **Table 8-1** and **Appendix D** provides the results of the analysis.

Table 8-1: Intersection Level of Service for Background Conditions

Intersection	Control Type	Background Conditions (With Quarry Complex)			
		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	11.2	B	9.5	A
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	10.6	B	9.0	A
3. Dale Evans Parkway / Quarry Road	TWSC	11.5	B	14.6	B
4. Dale Evans Parkway / Johnson Road	AWSC	14.9	B	58.0	F
5. Stoddard Wells Road / Johnson Road	TWSC	13.9	B	66.7	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	601.2	F	683.1	F
7. Stoddard Wells Road / Quarry Road	TWSC	18.1	C	13.5	B
8. I-15 Southbound Ramps / Quarry Road	TWSC	11.4	B	14.0	B
9. Johnson Road / Navajo Road	TWSC	10.4	B	9.9	A
10. Dale Evans Parkway / Cordova Road	TWSC	11.7	B	14.3	B

Notes:  
Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
Abbreviations:  
TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

As presented in **Table 8-1**, under background conditions with traffic from the Quarry Complex, the study intersections operate at a LOS C or better in both peak hours except for the three consistently deficient intersections of Dale Evans Parkway / Johnson Road, Stoddard Wells Road / Johnson Road, and Stoddard Wells Road / I-15 Northbound Ramps.

## 9 BACKGROUND PLUS PROJECT CONDITIONS TRAFFIC ANALYSIS (WITH QUARRY COMPLEX)

### 9.1 Background Plus Project Conditions Traffic Analysis

**Table 9-1** compares the weekday AM and PM peak hour background and background plus project LOS at the study intersections with the inclusion of traffic generated by the Quarry Complex. The background plus project (With Quarry Complex) intersection capacity analysis uses existing intersection geometrics and the projected AM and PM peak hour traffic shown in **Figure 9**. The capacity analysis worksheets are in **Appendix D**.

Table 9-1: Comparison of Background (With Quarry Complex) and Background Plus Project LOS

Intersection	Control Type	Background Conditions (With Quarry Complex)				Background + Project Conditions (With Quarry Complex)			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	11.2	B	9.5	A	11.7	B	9.6	A
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	10.6	B	9.0	A	11.0	B	9.1	A
3. Dale Evans Parkway / Quarry Road	TWSC	11.5	B	14.6	B	12.1	B	15.4	C
4. Dale Evans Parkway / Johnson Road	AWSC	14.9	B	58.0	F	89.5	F	204.2	F
5. Stoddard Wells Road / Johnson Road	TWSC	13.9	B	66.7	F	24.6	C	300.5	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	601.2	F	683.1	F	1888.0	F	2710.5	F
7. Stoddard Wells Road / Quarry Road	TWSC	18.1	C	13.5	B	20.2	C	13.7	B
8. I-15 Southbound Ramps / Quarry Road	TWSC	11.4	B	14.0	B	11.9	B	17.6	C
9. Johnson Road / Navajo Road	TWSC	10.4	B	9.9	A	10.4	B	9.9	A
10. Dale Evans Parkway / Cordova Road	TWSC	11.7	B	14.3	B	17.1	C	39.0	E

**Notes:**  
Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).

**Abbreviations:**  
TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

In this scenario, the addition of project traffic and traffic from the Quarry Complex further exacerbates the intersection LOS deficiencies at Dale Evans Parkway / Johnson Road, Stoddard Wells Road / Johnson Road, and Stoddard Wells Road / I-15 Northbound Ramps, with exponential increases in the delay for the stop-controlled movements. In addition, LOS deficiencies are anticipated to occur at the intersection of Dale Evans Parkway / Cordova Road during the PM peak hour.

## 10 FUTURE 2040 CONDITIONS TRAFFIC ANALYSIS (WITH QUARRY COMPLEX)

The future 2040 conditions scenario in this section is the same scenario presented in Section 6 except that traffic from the Quarry Complex has been added as cumulative development. The cumulative growth in traffic is from forecasts from the San Bernardino County Transportation Analysis Model (SBTAM), but the Quarry Complex traffic has been added manually on top of the SBTAM model projections.

### 10.1 Future 2040 Conditions Traffic Analysis

The intersection capacity analysis for the future year 2040 conditions uses existing intersection geometrics and the projected 2040 AM and PM peak hour traffic volumes developed in Section 6 plus traffic from the Quarry Complex. **Table 10-1** and **Appendix D** provide the results of the analysis.

Table 10-1: Intersection Level of Service for Future 2040 (With Quarry Complex) Conditions

Intersection	Control Type	Future 2040 Conditions (With Quarry Complex)			
		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	13.7	B	11.1	B
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	11.8	B	9.8	A
3. Dale Evans Parkway / Quarry Road	TWSC	13.3	B	18.7	C
4. Dale Evans Parkway / Johnson Road	AWSC	38.2	E	192.3	F
5. Stoddard Wells Road / Johnson Road	TWSC	71.6	F	982.9	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	1048.1	F	3911.3	F
7. Stoddard Wells Road / Quarry Road	TWSC	20.8	C	15.6	C
8. I-15 Southbound Ramps / Quarry Road	TWSC	12.1	B	19.0	C
9. Johnson Road / Navajo Road	TWSC	10.5	B	10.0	B
10. Dale Evans Parkway / Cordova Road	TWSC	16.8	C	22.3	C

Notes:  
Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
Abbreviations:  
TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

The Quarry Complex, as cumulative development, adds nearly 500 peak hour trips to the circulation system. This additional traffic, added to stop controlled movements, causes unstable operations whereas the delay experienced by the stop-controlled approaches increases exponentially. This is caused by a combination of the traffic added to the stop-controlled approaches and an increase in the uncontrolled movements on the major street resulting in fewer acceptable gaps in the flow of traffic in both directions.

## 11 FUTURE 2040 PLUS PROJECT CONDITIONS TRAFFIC ANALYSIS (WITH QUARRY COMPLEX)

The future 2040 conditions scenario in this section is the same scenario presented in Section 7 where the traffic from the proposed Cordova Complex project is added to the future 2040 background conditions which also includes traffic from the Quarry Complex as cumulative development. This final long-range scenario in this study results in the highest traffic volumes at the study intersections than in any previous scenario.

### 11.1 Future 2040 Plus Project Conditions Traffic Analysis

The intersection capacity analysis for the future year 2040 plus project conditions with the addition of traffic from the Quarry Complex uses existing intersection geometrics and the projected AM and PM peak hour traffic shown in **Figure 10. Table 11-1** and **Appendix D** provide the results of the analysis.

Table 11-1: Comparison of Future 2040 (With Quarry Complex) and Future 2040 Plus Project LOS

Intersection	Control Type	Future Year 2040 Conditions				Future Year 2040 + Project Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	13.7	B	11.1	B	14.9	B	11.3	B
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	11.8	B	9.8	A	12.3	B	9.9	A
3. Dale Evans Parkway / Quarry Road	TWSC	13.3	B	18.7	C	14.0	B	20.1	C
4. Dale Evans Parkway / Johnson Road	AWSC	38.2	E	192.3	F	174.4	F	370.8	F
5. Stoddard Wells Road / Johnson Road	TWSC	71.6	F	982.9	F	289.5	F	1818.4	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	1048.1	F	3911.3	F	2241.0	F	11415.4	F
7. Stoddard Wells Road / Quarry Road	TWSC	20.8	C	15.6	C	23.6	C	16.0	C
8. I-15 Southbound Ramps / Quarry Road	TWSC	12.1	B	19.0	C	12.7	B	26.4	D
9. Johnson Road / Navajo Road	TWSC	10.5	B	10.0	B	10.5	B	10.0	B
10. Dale Evans Parkway / Cordova Road	TWSC	16.8	C	22.3	C	35.4	E	152.4	F

**Notes:**  
Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
**Abbreviations:**  
TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

When the proposed project's traffic is added to year 2040 background conditions (with Quarry Complex) there is a complete breakdown in the operation of the single lane stop-controlled approaches with spikes in the calculated delay that are not achievable in real life conditions. These theoretical and unrealistically high delays are indications of complete over-saturation of the stop-controlled approaches and the need for traffic control strategies with significantly greater capacity.

The addition of traffic from the proposed project (Cordova Complex) in the future year 2040 conditions (with Quarry Complex) exacerbates the three consistently impacted intersections of Dale Evans Parkway and Johnson Road, Stoddard Wells Road and Johnson Road, and Stoddard Wells Road and I-15 Northbound Ramps and causes a LOS deficiency at the previously unimpacted intersection of Dale Evans Parkway and Cordova Road. Project traffic causes the PM peak hour LOS at the stop-controlled approach (Cordova Road) to change from a LOS C in the future year 2040 background conditions to a LOS F in future year 2040 background + project conditions.

<p>① I-15 SB RAMPS / DALE EVANS PKWY</p> <p>24/11 6/3 373/241 10/10 42/42</p> <p>37/7 15/11</p>	<p>② I-15 NB RAMPS / DALE EVANS PKWY</p> <p>196/175 44/50</p> <p>9/17 401/231 8/2 4/2 29/26</p>	<p>③ DALE EVANS PKWY / QUARRY RD</p> <p>3/3 214/401 42/32 52/19 16/41 2/4</p> <p>10/5 16/36 11/2 19/7 239/260 8/10</p>	<p>④ DALE EVANS PKWY / JOHNSON RD</p> <p>76/235 147/468 32/38 30/12 235/462 35/102</p> <p>280/106 319/234 59/104 79/71 318/219 140/78</p>	<p>⑤ STODDARD WELLS RD / JOHNSON RD</p> <p>137/386 8/109 120/105 287/732</p> <p>236/156 653/288</p>

**Subject:** Re: Scoping Agreements, N. Apple Valley

Hi Jessica,

I have reviewed the scoping agreements. I am satisfied that the scope of the analysis covers the potential traffic impacts at and around the project. I have one suggestion, that the ingress and egress driveway(s) be reviewed to determine if they are sufficient to handle the capacity of the projects themselves. Though, the project on Navajo Road appears to have sufficient driveway access, the other project on Cordova could have issues. The Walmart Distribution Center on Johnson Road has experienced congestion at their main driveway at the end of their work day shifts. They have requested that a traffic signal be installed at their main driveway on Johnson Road.

If you would like to discuss please contact me at 760-240-7000 ext. 7352

Thank you,  
Richard

Mr. Pedersen,

Good morning, I hope your week has gone well. This email contains two (2) traffic scoping agreements for our 2 proposed projects located in the Industrial Specific Plan (I-SP); also known as **PA2022-005** and **PA2022-006**. We are anticipating a November '22 formal application submittal date. Therefore, if you find these agreements to be acceptable, please let me know so we may move forward with the traffic study.

[@Daniel Alcayaga,](#)

Will a completed Traffic Study be a requirement to submit our formal application? Could we (*once the above traffic scoping agreements are approved*) submit the application with the items on the checklist and reference on our transmittal letter that *"the traffic study is underway"* and proceed with our formal application? Please advise.

Job No. VVLI0000-0001

## MEMORANDUM

To: Ramsey Sheehan  
Josh Malhi  
VVLIG Holdings, LLC  
  
c/o Jessica Haughton  
Synergy Consulting  
410 Patti Ann Woods Drive  
Henderson, NV 89002

From: James Daisa, PE  
Senior Transportation Project Manager / Associate

**RE: FOCUSED TRAFFIC IMPACT ANALYSIS SCOPING AGREEMENT FOR THE PROPOSED CORDOVA COMPLEX WAREHOUSE DEVELOPMENT (PRE-APPLICATION NO. 2022-005) LOCATED AT THE SWC OF CORDOVA ROAD AND NAVAJO ROAD IN THE TOWN OF APPLE VALLEY, CA (APN: 0463-213-05)**

This memorandum presents key elements of the proposed Focused Traffic Impact Analysis (TIA Report) scope of work for the above referenced development project. The purpose of this memorandum is to inform the Town of Apple Valley of the TIA's assumptions and methodologies prior to preparing the analysis. We will incorporate any changes specified by the Town, and once approved, this document will serve as our notification to proceed.

The Town of Apple Valley does not have guidelines for conducting intersection level of service deficiency studies, therefore the assumptions and methods described in this document conform to San Bernardino County's Transportation Impact Study Guidelines (July 2019).

With respect to VMT impacts, the Town of Apple Valley adopted Resolution No. 2021-08 in May 2021. This resolution defines the Town's thresholds of significance for project generated VMT and the project's overall effect of VMT at the town-wide scale. The resolution also defines the specific methods for analyzing VMT in Apple Valley.

The Town has not, however, adopted criteria for screening development from requiring a VMT analysis under CEQA. This scoping agreement uses the county's screening criteria to identify if the proposed project requires a VMT analysis as part of its environmental review.

### **A. Project Description**

The proposed project consists of a 1,388,220 square foot speculative warehouse facility located on approximately 79-acres in the north part of the town and within the North Apple Valley Industrial Specific Plan area. The floor area includes 5,000 square feet of office space on the first floor and the mezzanine level (2<sup>nd</sup> floor). The North Apple Valley Industrial Specific Plan is the regulatory plan that governs all development within its boundaries. It designates land uses and provides design standards for the construction of buildings and defines the area's required infrastructure for transportation / circulation, public services, and utilities.

The project site is located at the southeast corner of Cordova Road and Dachshund Avenue, as illustrated in **Exhibit A**. The site is bounded to the north by unimproved Cordova Road and undeveloped land; to the south by undeveloped land and the existing Walmart Distribution Center south of Johnson Road; to the west by unimproved Dachshund Avenue and undeveloped land; and to the east by unimproved Navajo Road and

undeveloped land. The warehouse building includes 129 loading docks on both the north and south sides, 561 automobile parking spaces, and 911 trailer parking spaces within a secured yard. **Exhibit B** shows the proposed site plan.

### Site Access and Circulation Improvements

Access to the site will be from driveways on Cordova Road, Dachshund Avenue, and Navajo Road. The proposed circulation and access include improving Cordova Road from Dale Evans Parkway to Navajo Road and improving Navajo Road from Johnson Road to Cordova Road and providing driveways on the improved roads as shown in the site plan. Dachshund Avenue would be improved from Cordova Road to the south property line for providing driveway access. The driveways accessed from Dachshund Avenue and Navajo Road provide access to employee parking and are segregated from truck access and internal truck circulation. The primary gated truck access driveway is on Cordova Road at the eastern end of the site as shown in **Exhibit B**.

To gain access to a related development (the Quarry Complex site) Cordova Road would be further extended east to Flint Road to provide access to that site as described in a separate scoping memorandum.

### **B. Project Trip Generation**

The proposed project is a speculative warehouse where the tenant(s) and function as a potential short term storage facility, distribution center, fulfillment center, etc. is unknown. While the impact analysis needs to reflect a reasonable spectrum of tenant types, there is a risk when estimating trip generation of over or under-estimating traffic. The 11<sup>th</sup> Edition of the Institute of Transportation Engineers' Trip Generation manual contains data for the most common types of warehouse operations with a wide range of rates. **Table 1** summarizes the trip generation rates for warehouse facilities in the current edition of ITE's Trip Generation.

Table 1: Trip Generation Rates for ITE Land Use Categories of Warehousing

Warehouse Type	ITE Land Use Code	Average Trip Generation Rates for Warehouse Types (Trips Per KSF) (Source: ITE Trip Generation 11th Edition)		
		Average Daily Traffic	AM Peak Hour of Adjacent Street Traffic	PM Peak Hour of Adjacent Street Traffic
		Total (In + Out)	Total (In + Out)	Total (In + Out)
High-Cube Transload and Short-Term Storage Warehouse	154	1.54	0.08	0.10
High-Cube Cold Storage Warehouse	157	2.12	0.11	0.12
High-Cube Fulfillment Center Warehouse - Non-Sort	155	1.81	0.15	0.16
General Warehouse	150	1.71	0.17	0.18
High-Cube Parcel Hub Warehouse	156	4.63	0.70	0.64
High-Cube Fulfillment Center Warehouse - Sort	155	6.44	0.87	1.20
Average of All Warehouse Types		3.04	0.35	0.40
Average Without High-Cube Sort Fulfillment Center		2.36	0.24	0.24

To help select a trip generation rate for the proposed project representative of the range of potential owners/tenants, **Table 1** includes the average of the rates for all warehouse types in the ITE Trip Generation manual and the average of the rates for all warehouse types except High-Cube Fulfillment Sort Facility—the most intensive type of warehouse. The secondary average rate (excluding High-Cube Fulfillment Sort Facility) represents two thirds the ITE warehouse types and covers a broad range of tenant types and operations.

**Table 2** summarizes the estimated trip generation of the proposed project for an average weekday, and weekday AM (7-9 AM) and PM (4-6 PM) peak hours, based on the secondary average rates identified in

**Table 1.** The proposed warehouse complex would generate about 3,300 vehicle trips per day and 336 and 333 vehicle trips in the AM and PM peak hours respectively.

It is standard practice to convert vehicle trips to passenger car equivalents (PCEs) for intersection capacity analysis. This conversion reflects the effects of large vehicles on intersection operations both from the physical space a truck occupies but also from their effect on the intersection’s saturation flow rate due to the slower acceleration of trucks.

When converted to PCEs, the Cordova complex generates about 4,600 daily PCEs, and 468 PCEs in both the AM and PM peak hour.

Table 2: Cordova Complex Project Trip Generation

Land Use	Gross Floor Area (KSF)	Daily	AM Peak Hour of Adjacent Street Traffic			PM Peak Hour of Adjacent Street Traffic		
			In	Out	Total	In	Out	Total
<b>Warehouse</b> (Rates are the Average of ITE Land Use Categories 150, 154, 156, and 157)	1,388.22	Vehicle Trip Generation Rates (Trips Per 1,000 Square Feet of Gross Floor Area)						
		2.36	0.18	0.06	0.24	0.07	0.17	0.24
		Total Vehicle Trip Generation						
		3,276	257	77	333	93	240	333
	Mode Share	Project Trip Generation by Vehicle Type						
Passenger Cars (Percent of Total)	74.21%	2,431	190	57	247	69	178	247
2-Axle Trucks (Percent of Total)	4.55%	149	12	3	15	4	11	15
3-Axle Trucks (Percent of Total)	4.18%	137	11	3	14	4	10	14
4-Axle Trucks (Percent of Total)	17.04%	558	44	13	57	16	41	57
	PCE Factor	Project Trip Generation in Passenger Car Equivalents (PCE)						
Passenger Cars)	1.0	2,431	190	57	247	69	178	247
2-Axle Trucks	1.5	224	18	5	23	6	16	23
3-Axle Trucks	2.0	274	21	6	28	8	20	28
4 + Axle Trucks	3.0	1675	131	39	170	48	123	170
<b>Total Passenger Car Equivalents (PCE)</b>		<b>4,604</b>	<b>360</b>	<b>108</b>	<b>468</b>	<b>131</b>	<b>337</b>	<b>468</b>
Notes: [1] Trip generation rates are the average of the rates of each ITE warehouse type except the High-Cube Fulfillment Sort Center Warehouse, which is the most intense use like an Amazon Fulfillment Center which sorts individual packages for delivery to end users. This type of use is not anticipated for the Cordova Complex. See Table 1. KSF = Thousands of Square Feet. AM / PM Peak Hour of Adjacent Street Traffic = Trip generation coinciding with the highest hourly volumes of traffic on the adjacent streets during the AM (7:00 AM and 9:00 AM) and PM (4:00 PM and 6:00 PM) commuter peak periods. Source of trip generation rates: Institute of Transportation Engineers (ITE) Trip Generation (11th Edition). Source of passenger car / truck mode share (percentage of total): South Coast Air Quality Management District High Cube Warehouse Trip Generation Study (2016). Based on data from eight high cube warehouses in the Inland Empire over 1,000,000 square feet in size. The average warehouse building size is 1,364,496 square feet. Passenger Car Equivalents (PCE) factors: Industry standard values utilized in neighboring jurisdictions								

### C. Study Intersections

This focused traffic study evaluates key intersections on routes expected to be used by project traffic to access the site. **Exhibit C** and the list below identify the intersections proposed for inclusion in the study.

1. I-15 Southbound Ramps / Dale Evans Parkway
2. I-15 Northbound Ramps / Dale Evans Parkway
3. Dale Evans Parkway / Quarry Road
4. Dale Evans Parkway / Johnson Road
5. Stoddard Wells Road / Johnson Road
6. Stoddard Wells Road / I-15 Northbound Ramps
7. Stoddard Wells Road / Quarry Road
8. I-15 Southbound Ramps / Quarry Road
9. Johnson Road / Navajo Road
10. Dale Evans Parkway / Cordova Road

Project driveways will be reviewed for required traffic control and the primary truck gated driveway will be analyzed for traffic control, lane geometries, and queuing behind the access gate based on industry standard gate processing time.

All the study intersections are currently side-street stop controlled, or all-way stop-controlled.

#### **D. Project Trip Distribution and Assignment**

Project traffic is distributed by direction separately for automobiles (employees) and trucks. The automobile distribution is based on where the warehouse employees are likely to reside or perform other activities (e.g., concentration of residential neighborhoods and commercial centers). The truck distribution is based on the most direct routes to major roadways and highways trucks are likely to use to access the project and depart for delivery of freight. Project trips are assigned to the area streets that provide the most direct route to the destinations.

**Exhibit D** shows the distribution of project-generated automobile and truck trips to roadways as a percentage by direction and route. The following exhibits show the assignment of project generated traffic at the study intersections. Truck traffic volumes have been converted into passenger car equivalents (PCEs) as required in the San Bernardino County guidelines for intersection capacity analysis.

- **Exhibit E1 and E2** – Total Project PCE Trips (AM Peak Hour)
- **Exhibit F1 and F2** – Total Project PCE Trips (PM Peak Hour)

#### **E. Traffic Analysis Scenarios**

The traffic analysis scenarios, consistent with the county's impact analysis guidelines, include:

1. Existing conditions AM (7-9 AM) and PM (4-6 PM)
2. Background conditions (representing the project's opening year of 2024 with growth in background traffic without the project):
  - a. Growth forecasts (based on the estimated combination of the ambient growth in traffic plus traffic generated by nearby, but unidentified, development equaling 3.5% annually).
3. Project conditions
  - a. Project traffic in PCE's added to background condition forecasts
4. Future year 2040 conditions (representing the regional planning horizon of 2040 without project)<sup>1</sup>
  - a. Forecasts derived from the San Bernardino Transportation Analysis Model (SBTAM) representing buildout of the General Plan
  - b. If required by the Town, the future year 2040 conditions will include proposed development within and affecting the study area.
5. Future year 2040 plus project
  - a. Project traffic in PCE's added to the forecasts developed for future year 2040 conditions

#### **F. Level of Service Standard**

The Town's General Plan policy on level of service is to maintain a level of service (LOS) D in the AM and PM peak hours.

#### **G. Analyses Included in Traffic Impact Analysis**

- Intersection capacity analyses will be conducted using SYNCHRO software based on the unsignalized methods in the 6<sup>th</sup> Edition of the Highway Capacity Manual.

---

<sup>1</sup> Caltrans typically requires that cumulative traffic forecasts represent a 20-year design life for infrastructure. If required, the cumulative scenario will be linearly extrapolated to the year 2044.

- A traffic signal warrant analysis (warrant 3 – peak hour) will be conducted at public intersections found to operate at LOS E or F under any project scenario.
- A queuing analysis will be conducted at intersections with high left turn volumes but currently do not provide left turn storage lanes. The 95<sup>th</sup> percentile queue will inform the roadway improvement design process. See Section C regarding project driveways.

#### H. Vehicle Miles of Travel (VMT) Screening

The Town of Apple Valley has adopted thresholds of significance for potential VMT impacts of development as well as the specific methodology for analyzing VMT impacts (Resolution No. 2021-08 - Adopting Thresholds of Significance for Vehicle Miles Traveled (VMT) Under the California Environmental Quality Act (CEQA)). According to the Town's resolution a development project would result in a significant project-generated VMT impact if either of the following conditions are satisfied:

1. The baseline (2022) project generated VMT per service population (population plus employees) exceeds the Town of Apple Valley General Plan Buildout VMT per service population, or
2. The cumulative (2040-44) project generated VMT per service population exceeds the Town of Apple Valley General Plan Buildout VMT per service population

The Town, however, has not adopted criteria for screening projects from requiring a VMT analysis. The county and nearby municipalities have adopted such criteria consistent with the technical advisories published by the Governor's Office of Planning and Research. In this scoping agreement, the county's screening criteria are applied to the proposed project for the Town's consideration.

Applying the county's VMT screening criteria results in demonstrating that the proposed project requires a detailed VMT analysis under CEQA.

Screening criteria includes:

1. The project serves the local community and has the potential to reduce VMT by providing services that capture trips locally (the proposed Cordova Complex is not a locally serving type of land use).
2. The project is located within a Transit Priority Area (the proposed Cordova Complex is not located in a TPA).
3. The project generates less than 110 daily vehicle trips (the proposed Cordova Complex generates more than 110 daily trips).
4. The project is in a low VMT generating traffic analysis zone (the proposed Cordova Complex is not located in a low VMT generating zone in baseline year 2022, see **Figure 1**).

The proposed project does not meet the county's four screening criteria and therefore is required to conduct a VMT analysis to identify potentially significant impacts under CEQA.

If you have any questions or comments, please feel free to contact me at (909) 912-7304.

Attachments:

1. Exhibit A – Cordova Complex Vicinity Map
2. Exhibit B – Project Site Plan
3. Exhibit C – Study Intersections
4. Exhibit D – Project Automobile and Truck Trip Distribution
5. Exhibit E1 – Total Project PCE Trips (AM Peak Hour)
6. Exhibit E2 – Total Project PCE Trips (AM Peak Hour) (continued)
7. Exhibit F1 – Total Project PCE Trips (PM Peak Hour)
8. Exhibit F2 – Total Project PCE Trips (PM Peak Hour) (continued)

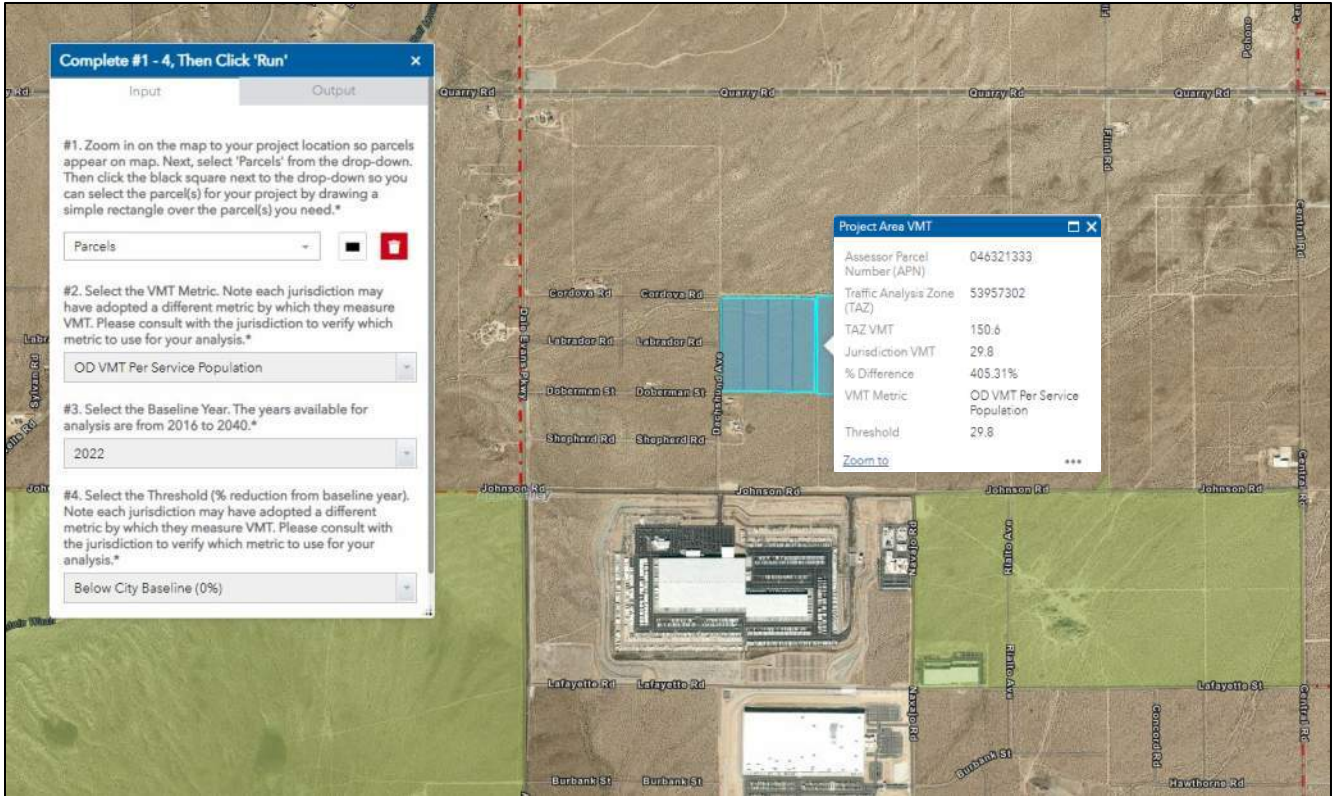

Figure 1: low VMT generating traffic analysis zones are highlighted in green. The traffic analysis zone in which the project is located is forecast to generate VMT that exceeds the jurisdictional threshold based on allowed General Plan land uses. Therefore, the proposed project is not located in a low VMT generating area.

## MEMORANDUM

<b>Date:</b>	December 07, 2022	<b>GTS:</b> 221106.1
<b>To:</b>	James M. Daisa, DEA	
<b>From:</b>	Rawad Hani, GTS	
<b>Subject:</b>	<b>Vehicle Miles Traveled (VMT) Analysis Quarry Complex Warehouse, Town of Apple Valley, CA</b>	

This memorandum describes the development of vehicle miles traveled (VMT) analysis for the proposed Quarry Complex Warehouse in the Town of Apple Valley (City), CA. The project is located at the northeast corner of Cordova Road and Pawnee Road (within the North Apple Valley Industrial Specific Plan area) in the Town of Apple Valley. The project proposes development of approximately 78-acres into 1,540,120 square foot (SF) speculative warehouse. This VMT analysis evaluated the project using the 2016 and 2040 model years obtained from the San Bernardino County Transportation Authority (SBCTA).

### Background

On December 28, 2018, the California Office of Administrative Law cleared the revised California Environmental Quality Act (CEQA) guidelines for use. Among the changes to the guidelines was removal of vehicle delay and level of service from consideration under CEQA. With the adopted guidelines, transportation impacts are to be evaluated based on a project's effect on vehicle miles traveled (VMT).

### Methodology

The project VMT analysis was conducted using the Town of Apple Valley Resolution Number 2021-08, "A Resolution of the City Council of the Town of Apple Valley, California, Adopting Thresholds of Significance for Vehicle Miles Traveled (VMT) Under the California Environmental Quality Act (CEQA)" adopted during the Town Council Meeting, May 11, 2021. A full VMT analysis was conducted using San Bernardino County Transportation Analysis Model (SBTAM). The guidelines recommend use of VMT per service population to evaluate land use projects. The project would have a significant impact if the project VMT per service population is greater than Town of Apple Valley's General Plan Buildout VMT per service population.

SBTAM model is a socioeconomic data-based model and so the project land uses were converted into model employment categories using conversion factors from SCAG's "Employment Density Study Summary Report – dated October 31, 2001". The land use conversion yielded a total of 730 employees as shown in Table 1 which was used as input for the model runs.

**Table 1: Quarry Complex Warehouse – Employment Estimates**

Land Use Type	Square Footage (SF)	SF/Employee *	Total Employees
Warehouse	1,540,120	2,111	730
<b>Total</b>	<b>1,540,120</b>		<b>730</b>

*Source: SCAG Employment Density Study Summary Report, October 31, 2001*

## VMT Analysis

Both baseline (2016) and horizon year (2040) model runs were used to estimate project’s VMT impacts. SBTAM socioeconomic databases for the scenarios were updated with the project land use to calculate project VMT. Typically, project VMT is calculated by isolating the project in a new TAZ or multiple TAZs depending on the diversity of project land uses and project size. Since, SBTAM does not allow addition of new TAZs, one TAZ was borrowed for this project. The project TAZ was utilized to calculate project specific VMT per service population.

No project specific network modifications were conducted for the model scenarios. Full model runs with feedback loops were conducted for all of the project scenarios. It should be noted that the project land use was included in the model as additional land use in the cumulative (2040) scenario and no shifting of land use from other TAZs was used. In that regard, the cumulative VMT analysis can be considered as a conservative estimate.

The project’s Origin/Destination (OD) VMT per service population can be used to evaluate project impact according to the guidelines. Origin-destination matrix outputs were used as trips and the trip lengths were derived from the skimming step to estimate OD VMT. OD matrix outputs include vehicle trips and hence no conversion for auto occupancy was applied. The trip length or distance was obtained using the model outputs from the “Skimming” step. The model skim outputs include peak and off-peak skim matrices by mode, similar to trip outputs from the model. OD VMT was estimated for both peak and off-peak and added together to estimate the total daily VMT for the project.

Based on the guidelines, the project would constitute a significant impact if the project OD VMT per service population for base and cumulative scenarios is greater than Town of Apple Valley General Plan Buildout OD VMT per service population. The Town of Apple Valley General Plan Buildout OD VMT per service population was obtained from SBCTA VMT Screening Tool.

Table 2 below shows the project VMT metrics for both baseline (2016) and cumulative (2040) conditions along with the regional VMT thresholds.

**Table 2: Project VMT Analysis**

<b>2016</b>	<b>Quarry Complex Warehouse (project)</b>	<b>Town of Apple Valley General Plan Buildout (Threshold) *</b>
Population	0	
Employment	730	
Service Population	730	
OD VMT	23,496	
OD VMT per service population	32.2	33.2

<b>2040</b>	<b>Quarry Complex Warehouse (project)</b>	<b>Town of Apple Valley General Plan Buildout (Threshold) *</b>
Population	0	
Employment	730	
Service Population	730	
OD VMT	22,310	
OD VMT per service population	30.6	33.2

\* Threshold value obtained from SBCTA VMT Screening Tool: <https://www.gosbcta.com/vmtscreening>

Table 3 illustrates the project’s effect on VMT. The project’s effect on VMT is a comparison of roadway VMT within Town of Apple Valley for both “With project” and “Without project” conditions.

**Table 3: Roadway VMT within Town of Apple Valley**

<b>2016</b>	<b>With Project</b>	<b>Without Project</b>
Roadway VMT	854,590	847,823
Service population	91,843	91,113
VMT per service population	9.3	9.3

<b>2040</b>	<b>With Project</b>	<b>Without Project</b>
Roadway VMT	1,367,015	1,362,981
Service population	127,536	126,806
VMT per service population	10.7	10.7

## Conclusion

Based on the VMT analysis as shown in above Tables 2 and 3, the project doesn’t constitute a significant impact for both “project generated VMT” and “project’s effect on VMT”.

**RE: FINAL FOCUSED TRAFFIC IMPACT ANALYSIS REPORT FOR THE PROPOSED QUARRY COMPLEX WAREHOUSE DEVELOPMENT (PRE-APPLICATION NO. 2022-006) LOCATED AT THE NWC OF CORDOVA ROAD AND FLINT ROAD IN THE TOWN OF APPLE VALLEY, CALIFORNIA (APN: 0463-214-06, 07, 08, & 09)**

Dear Ms. Haughton,

**David Evans and Associates, Inc.** is pleased to submit this Final Traffic Impact Analysis report for your proposed warehouse development in Apple Valley. The proposed project consists of a 1,462,342 square foot warehouse located on 78.14-acres in the Town of Apple Valley, California.

This report was prepared in accordance with San Bernardino County's Traffic Impact Study Guidelines for level of service (LOS) assessment published in July 2019, and the Town's adopted Resolution No. 2021-08 (May 2021) establishing thresholds of significance for a development's project-generated vehicle miles traveled (VMT) and the development's overall effect of VMT on the town's circulation system.

A VMT analysis was prepared to identify potentially significant transportation impacts for environmental clearance under the California Environmental Quality Act (CEQA). The VMT analysis findings and conclusions are summarized in the Executive Summary of this report and the full VMT analysis report is included in the appendix.

We are pleased to have been of assistance to you in processing and obtaining approval for the project. If you have any questions or comments, please feel free to contact me at 909-912-7304.

Respectfully submitted,

**DAVID EVANS AND ASSOCIATES, INC.**

James M. Daisa, P.E.  
Senior Project Manager / Associate

## 1 EXECUTIVE SUMMARY

This executive summary presents the findings and recommendations of this study.

### 1.1 Project Description

The proposed project consists of a 1,462,342 square foot speculative warehouse facility located on approximately 78-acres in the north part of the town and within the North Apple Valley Industrial Specific Plan area. The project site is located at the northwest corner of Cordova Road and Flint Road. The project includes automobile parking spaces on the north side and northeast corner of the site, loading docks on the west and east sides of the building, and trailer parking spaces within the secure loading areas on both sides of the building.

Access to the site is from Flint Road which parallels the project's eastern property line with three driveways accessing the site. Quarry Road, paralleling the northern property line, is a private road owned and operated by Cemex and is used to convey raw materials extracted from their White Mountain quarry. Further, an active railroad spur runs parallel to the north side of Quarry Road separated from the paved lanes by about 20-feet of dirt shoulder. No access from Quarry Road is proposed.

### 1.2 Town of Apple Valley and Caltrans Intersection Level of Service Policies

The Town of Apple Valley's General Plan policy (Policy 1.A, Program 1.A.4) on level of service is to maintain a level of service (LOS) D in the AM and PM peak hours on all its roadways. This level of service policy applies to local Apple Valley roadways, roads of regional importance as part of the county's Congestion Management Program (CMP) network, and state highways.

The Caltrans' Guide for the Preparation of Traffic Impact Studies (December 2002) states "Caltrans endeavors to maintain a target level of service at the transition between LOS "C" and LOS "D" on State highway facilities. However, Caltrans acknowledges that this may not always be feasible, so their practice is to allow level of service thresholds equal to the threshold of the jurisdiction where the facility is located but preferably no greater than a 45 second average delay per vehicle in the peak hour (mid LOS D). For this study, the town's LOS D is assumed to be the minimum level of service criteria for the study intersections.

### 1.3 Analysis Scenarios

The scenarios analyzed in this study are consistent with the requirements of the county's Transportation Impact Study Guidelines (July 2019). Additional analysis scenarios are included in this study to reflect conditions with and without the Quarry Complex's (project) sister warehouse development—Cordova Complex—located at the southwest corner of extensions of Cordova Road and Navajo Road.

The project's sister site, the Cordova Complex, is expected to develop generally in the same timeframe as the Quarry Complex (project). The proposed project is analyzed, however, in scenarios without the Cordova Complex warehouse to represent a potential situation in which the Cordova Complex project is significantly delayed, or the application is abandoned or withdrawn, and the sister project is never built. In either case, the project could be responsible for a larger share of off-site improvements that would normally be shared between the two developments. The additional scenario without the Cordova Complex assumed as background development will produce more realistic off-site improvements and more reasonable and accurate fair-share estimates of the cost of the off-site improvements in the event the Cordova Complex project does not develop. The same set of analysis scenarios (with and without the Quarry Complex) is included in the traffic analysis for the Cordova Complex project. The expanded list of analysis scenarios includes:

#### Scenarios Without Development of the Cordova Complex

- Existing conditions
- Background conditions (year 2024) without Cordova Complex
- Background + project conditions (year 2024) without Cordova Complex
- Future year 2040 conditions without Cordova Complex
- Future year 2040 + project conditions without Cordova Complex

Scenarios With Development of the Cordova Complex

- Background conditions (year 2024) with Cordova Complex
- Background + project conditions (year 2024) with Cordova Complex
- Future year 2040 conditions with Cordova Complex
- Future year 2040 + project conditions with Cordova Complex

A. *Level of Service Comparison With and Without the Proposed Project (Without Cordova Complex)*

**Table 1-1** compares the weekday AM and PM peak hour background and background plus project LOS at the study intersections. Background conditions represent the project’s opening year of 2024 and includes growth in ambient traffic from regional and local development equaling 3.5 percent annually but excludes the Cordova Complex in the cumulative traffic forecasts. In this scenario, the addition of project traffic causes intersection LOS deficiencies (from LOS D or better to LOS E or F) at Dale Evans Parkway / Johnson Road, Stoddard Wells Road / Johnson Road, and Stoddard Wells Road / I-15 Northbound Ramps.

Table 1-1: Comparison of 2024 Background (Without Cordova Complex) and 2024 Background Plus Project LOS

Intersection	Control Type	Background W/O Project Conditions				Background + Project Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	10.7	B	9.4	A	11.2	B	9.5	A
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	10.2	B	8.9	A	10.6	B	9.0	A
3. Dale Evans Parkway / Quarry Road	TWSC	11.1	B	13.8	B	11.5	B	14.6	B
4. Dale Evans Parkway / Johnson Road	AWSC	8.9	A	13.3	B	14.9	B	58.0	F
5. Stoddard Wells Road / Johnson Road	TWSC	10.5	B	15.7	C	13.9	B	66.7	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	22.0	C	25.5	D	601.2 <sup>†</sup>	F	683.1 <sup>†</sup>	F
7. Stoddard Wells Road / Quarry Road	TWSC	18.1	C	13.5	B	18.1	C	13.5	B
8. I-15 Southbound Ramps / Quarry Road	TWSC	10.9	B	11.7	B	11.4	B	14.0	B
9. Johnson Road / Navajo Road	TWSC	10.4	B	9.9	A	10.4	B	9.9	A
10. Dale Evans Parkway / Cordova Road	TWSC	9.5	A	10.1	B	11.7	B	14.3	B

Notes:  
<sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6<sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle.  
 Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
Abbreviations:  
 TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

**Table 1-2** compares the weekday AM and PM peak hour future year 2040 and future year 2040 plus project LOS at the study intersections. Future year 2040 conditions represent a long-range forecast for addressing the cumulative impacts of regional growth in traffic as determined through traffic forecasts from the San Bernardino Countywide Traffic Analysis Model (SBTAM). The Cordova Complex is not included in the future 2040 scenarios.

In the future year 2040 without project scenario, the growth in background traffic through the year 2040 causes intersection LOS deficiencies (changes from LOS D or better to LOS E or F) at Dale Evans Parkway / Johnson Road (PM peak hour), Stoddard Wells Road / Johnson Road (PM peak hour), and Stoddard Wells Road / I-15 Northbound Ramps (AM and PM peak hour).

The addition of project traffic in this future year 2040 scenario exacerbates the intersection LOS deficiencies at the same three intersections impacted by the addition of project traffic to year 2024 conditions: Dale Evans Parkway / Johnson Road, Stoddard Wells Road / Johnson Road, and Stoddard Wells Road / I-15 Northbound Ramps, but with substantially higher delays and impacts both peak hours.

Table 1-2: Comparison of Future 2040 (Without Quarry Complex) and Future 2040 Plus Project LOS

Intersection	Control Type	Future Year 2040 W/O Project Conditions				Future Year 2040 + Project Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	12.9	B	10.9	B	13.7	B	11.1	B
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	11.4	B	9.7	A	11.8	B	9.8	A
3. Dale Evans Parkway / Quarry Road	TWSC	12.7	B	17.5	C	13.3	B	18.7	C
4. Dale Evans Parkway / Johnson Road	AWSC	13.1	B	58.6	F	38.2	E	192.3	F
5. Stoddard Wells Road / Johnson Road	TWSC	20.9	C	307.9	F	71.6	F	982.9 <sup>†</sup>	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	144.1	F	680.9 <sup>†</sup>	F	1,048.1 <sup>†</sup>	F	3,911.3 <sup>†</sup>	F
7. Stoddard Wells Road / Quarry Road	TWSC	20.8	C	15.6	C	20.8	C	15.6	C
8. I-15 Southbound Ramps / Quarry Road	TWSC	11.5	B	14.8	B	12.1	B	19.0	C
9. Johnson Road / Navajo Road	TWSC	10.5	B	10.0	B	10.5	B	10.0	B
10. Dale Evans Parkway / Cordova Road	TWSC	12.6	B	12.6	B	16.8	C	22.3	C

**Notes:**  
<sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6<sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle.  
 Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
**Abbreviations:**  
 TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

**Table 1-3** compares the weekday AM and PM peak hour opening year of 2024 background and opening year of 2024 background plus project LOS at the study intersections reflecting growth in ambient traffic from other regional and local development (equaling 3.5 percent annually) and including traffic generated by the Cordova Complex.

In the opening year 2024 background scenarios, cumulative traffic from the Cordova Complex combined with project traffic exacerbates the intersection LOS deficiencies at Dale Evans Parkway / Johnson Road, Stoddard Wells Road / Johnson Road, and Stoddard Wells Road / I-15 Northbound Ramps, with exponential increases in the delay for the stop-controlled movements.

Table 1-3: Comparison of Background (With Cordova Complex) and Background Plus Project LOS

6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	362.7 <sup>†</sup>	F	249.7	F	1,888.0 <sup>†</sup>	F	2,710.5 <sup>†</sup>	F
7. Stoddard Wells Road / Quarry Road	TWSC	20.2	C	13.7	B	20.2	C	13.7	B
8. I-15 Southbound Ramps / Quarry Road	TWSC	11.4	B	14.0	B	11.9	B	17.6	C
9. Johnson Road / Navajo Road	TWSC	10.4	B	9.9	A	10.4	B	9.9	A
10. Dale Evans Parkway / Cordova Road	TWSC	12.5	B	16.3	C	17.1	C	39.0	E

**Notes:**  
<sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6<sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle.  
 Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
**Abbreviations:**  
 TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

**Table 1-4** on the following page compares the weekday AM and PM peak hour future year 2040 and future year 2040 plus project LOS at the study intersections, including cumulative traffic generated by the Cordova Complex.

The Cordova Complex, as cumulative development, adds over 450 peak hour trips to the circulation system. When combined with project traffic added to stop controlled movements, the combination of Quarry (project) and Cordova Complex traffic results in unstable operations whereas the delay experienced by the stop-controlled approaches increases exponentially. This is caused by both a significant increase in traffic at stop-controlled approaches and an increase in traffic at the uncontrolled approaches on the major streets resulting in fewer acceptable gaps in the flow of traffic in both directions.

Table 1-4: Comparison of Future 2040 (With Cordova Complex) and Future 2040 Plus Project LOS

Intersection	Control Type	Future Year 2040 W/O Project Conditions				Future Year 2040 + Project Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	13.8	B	11.1	B	14.9	B	11.3	B
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	11.8	B	9.8	A	12.3	B	9.9	A
3. Dale Evans Parkway / Quarry Road	TWSC	13.4	B	18.7	C	14.0	B	20.1	C
4. Dale Evans Parkway / Johnson Road	AWSC	42.5	E	208.8	F	174.4	F	370.8 <sup>†</sup>	F
5. Stoddard Wells Road / Johnson Road	TWSC	73.8	F	989.8 <sup>†</sup>	F	289.5	F	1,818.4 <sup>†</sup>	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	804.2 <sup>†</sup>	F	1,993.4 <sup>†</sup>	F	22,410.0 <sup>†</sup>	F	11,415.4 <sup>†</sup>	F
7. Stoddard Wells Road / Quarry Road	TWSC	23.6	C	16.0	C	23.6	C	16.0	C
8. I-15 Southbound Ramps / Quarry Road	TWSC	12.1	B	19.1	C	12.7	B	26.4	D
9. Johnson Road / Navajo Road	TWSC	10.5	B	10.0	B	10.5	B	10.0	B
10. Dale Evans Parkway / Cordova Road	TWSC	18.7	C	29.4	D	35.4	E	152.4	F

**Notes:**  
<sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6<sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle.  
 Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
**Abbreviations:**  
 TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

When the proposed project’s traffic is added to future year 2040 background conditions (with Cordova Complex) there is a complete breakdown in the operation of the stop-controlled approaches with spikes in the calculated delay that are not achievable in real life conditions. These unrealistically high delays are indications of over-saturation of the stop-controlled approaches and the need for a traffic control strategy with significantly greater capacity.

The addition of traffic from the proposed project in the future year 2040 (with Cordova Complex) conditions causes a LOS deficiency at the previously unimpacted intersection of Dale Evans Parkway / Cordova Road. This intersection becomes the primary access road for both the Quarry and the Cordova Complexes. The addition of project traffic causes the PM peak hour LOS at the stop-controlled approach (Cordova Road) to change from a LOS C in the future year 2040 background conditions to a LOS F in future year 2040 background + project conditions.

#### 1.4 Recommended Measures to Improve Level of Service at Deficient Intersections

**Table 1-5** summarizes the recommended near-term project-specific and long-range cumulative intersection improvements required to improve deficient intersection levels of service to conform with the town’s general plan policy of maintaining a minimum LOS D during peak hours. The near-term project-specific improvements are based on background + project scenario without traffic from the Cordova Complex project. The long-range cumulative measures are based on the future 2040 + project conditions with traffic from the Cordova Complex project.

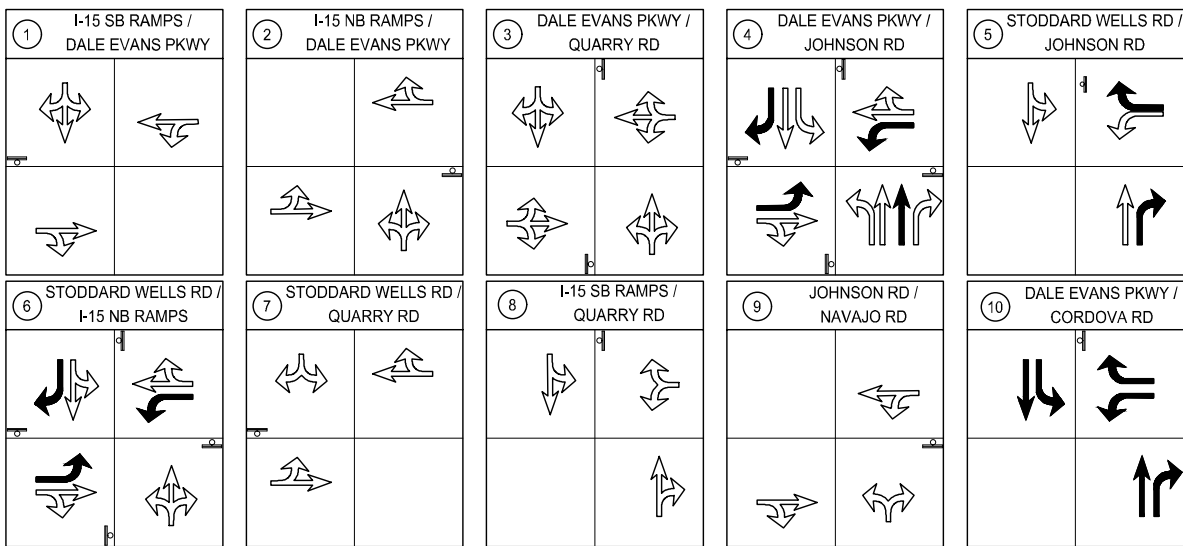

**Figure ES- 1** illustrates the near-term project-specific intersection improvements required to improve deficient intersection levels of service in the background (year 2024) plus project scenario. **Figure ES- 2** illustrates the long-range cumulative intersection improvements required to improve deficiencies in the future 2040 plus project scenario.

Table 1-5: Recommended Project-Specific and Cumulative Improvements to Mitigate LOS Deficiencies

Intersection	Quarry Complex Project-Specific Improvements (See <b>Figure ES- 1</b> )	Cumulative Long-Term Improvements (See <b>Figure ES- 2</b> )
Dale Evans Parkway and Johnson Road	<p><b>Retain existing all-way stop control</b></p> <p>Reconfigure intersection:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Westbound approach: remove free right and convert the lane to a through-right lane, and convert the existing shared through-left lane to an exclusive left turn lane (250 feet long + a 120-foot transition)</li> <li><input type="checkbox"/> Eastbound approach: provide an exclusive left turn lane (250 feet long + 120-foot transition) and shared through-right lane</li> <li><input type="checkbox"/> Northbound approach: remove the northbound offset right turn lane and add a second through lane and an exclusive right turn lane</li> <li><input type="checkbox"/> Southbound approach: provide an exclusive right turn lane</li> </ul> <p>If the Cordova Complex is constructed concurrently with the Quarry Complex, then the following additional improvements are required:</p> <ul style="list-style-type: none"> <li>■ Westbound approach: provide an additional through lane prior to occupancy of the Cordova Complex project <b>[a]</b></li> <li>■ Westbound departure: widen Johnson Road’s east leg departure approach to accommodate two receiving lanes and merge to single westbound lane after 750 feet <b>[a]</b></li> </ul>	<p><b>Install a traffic signal at Dale Evans Parkway and Johnson Road</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Retain the project-specific improvements implemented with construction of the Quarry and Cordova Complex developments.</li> </ul>
[a] These are Cordova Complex project-specific improvements		
Stoddard Wells Road and Johnson Road	<p><b>Retain side-street stop-control of Johnson Road</b></p> <p>Reconfigure intersection:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Northbound approach: add an exclusive right turn lane (250 feet long + a 120-foot transition)</li> <li><input type="checkbox"/> Westbound approach: add an exclusive westbound right turn lane</li> </ul> <p>If the Cordova Complex is constructed concurrently with the Quarry Complex, then the following additional improvements are required:</p> <ul style="list-style-type: none"> <li>■ Convert intersection to all-way stop-control <b>[a]</b></li> <li>■ Westbound approach: provide an exclusive left turn lane and a shared left-right lane <b>[a]</b></li> <li>■ Northbound approach: provide a free-right turn lane with an exclusive receiving lane eastbound on Johnson Road; design radius of free right turn lane to accommodate an STAA or California legal truck at a speed of 25 to 30 mph <b>[a]</b></li> <li>■ Southbound approach: add a second through lane; retain the existing shared through left-turn lane <b>[a]</b></li> </ul>	<p><u>Two mitigation options</u></p> <p><b>1. Convert intersection to all-way stop-control – Preferred Alternative</b></p> <p>Reconfigure intersection:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Westbound approach: widen approach to accommodate dual left-turn lanes and an exclusive right-turn lane</li> <li><input type="checkbox"/> Northbound approach: convert exclusive right turn lane into a free-right turn lane with an exclusive receiving lane eastbound on Johnson Road; design radius of free right turn lane to accommodate an STAA or California legal truck at a speed of 25 to 30 mph</li> <li><input type="checkbox"/> Southbound approach: add an exclusive left-turn lane and an additional through lane</li> </ul> <p><b>2. Install traffic signal and reconfigure approaches</b></p> <p>Reconfigure intersection:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Westbound approach: widen approach to accommodate an exclusive left turn lane and an exclusive right turn lane</li> <li><input type="checkbox"/> Northbound approach: retain project-specific improvement to add an exclusive right turn lane; retain one through lane</li> <li><input type="checkbox"/> Southbound approach: provide an exclusive left turn / deceleration lane; retain one through lane</li> </ul>

Table 1-5: Recommended Project-Specific and Cumulative Improvements to Mitigate LOS Deficiencies

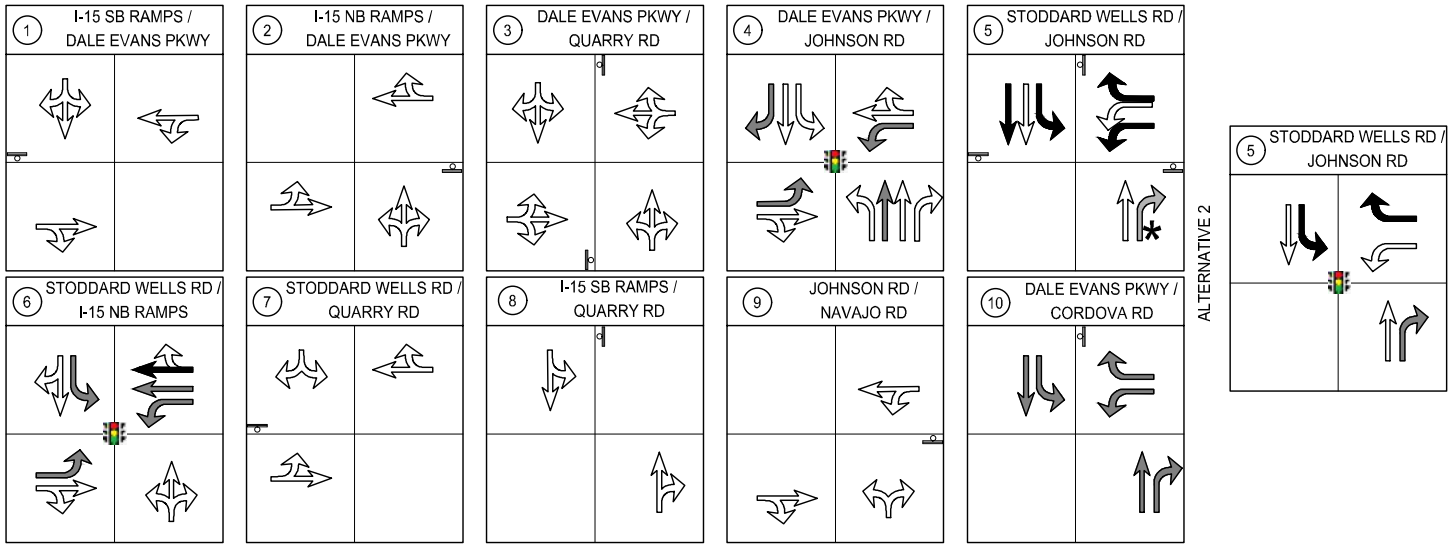

Intersection	Quarry Complex Project-Specific Improvements (See <b>Figure ES- 1</b> )	Cumulative Long-Term Improvements (See <b>Figure ES- 2</b> )
[a] These are Cordova Complex project-specific improvements		
Stoddard Wells Road and I-15 Northbound Ramps	<p><b>Convert intersection to all-way stop control</b> Widen the eastbound, westbound, and southbound approaches to accommodate turn lanes Reconfigure intersection:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Eastbound approach: add left turn lane from Stoddard Wells Road to I-15 NB on-ramp (250 feet long + a 120-foot transition) and maintain a shared through-right lane</li> <li><input type="checkbox"/> Westbound approach: add left turn lane from Stoddard Wells Road to Outer Highway 15 N (250 feet long + a 120-foot transition) and maintain a shared through-right lane</li> <li><input type="checkbox"/> Northbound approach: retain existing shared left-through-right lane</li> <li><input type="checkbox"/> Southbound approach: widen and configure the I-15 southbound off-ramp to add a right turn lane (250-feet long + 120-foot transition) and shared left-through lane</li> </ul>	<p><b>Install a traffic signal</b> Reconfigure approaches:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Westbound approach: add an exclusive through lane. Reconfigure approach to accommodate an exclusive left turn lane, through lane, and maintain a shared through-right lane</li> <li><input type="checkbox"/> Southbound approach: provide a left turn lane from the I-15 NB off-ramp to Stoddard Wells Road and a shared through-right turn lane</li> <li><input type="checkbox"/> Eastbound approach: retain project-specific improvement</li> </ul>
Dale Evans Parkway and Cordova Road	<p><b>Construct Cordova Road from Dale Evans Parkway to Navajo Road concurrent with project for access</b> Maintain side-street (Cordova Road) stop-control at intersection. Configure the approaches of Cordova Road and Dale Evans Parkway:</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Westbound approach: flare the westbound approach to accommodate an exclusive left turn lane and an exclusive right turn lane with both lanes having storage for four 75-foot STAA or 75-foot California Legal trucks (350 feet long + adequate transition for speed of road) with right turn curb return radius adequate for the swept path and overhang of a 75-foot STAA or 75-foot California legal truck</li> <li><input type="checkbox"/> Northbound approach: maintain existing through lane and add a northbound right turn storage / deceleration lane (consistent with the design standards in the Caltrans Highway Design Manual Section 405)</li> <li><input type="checkbox"/> Southbound approach: maintain existing through lane and add a southbound left turn storage / deceleration lane (consistent with the design standards in the Caltrans Highway Design Manual Section 405)</li> <li><input type="checkbox"/> The southbound left turn storage / deceleration lane should transition into a center two way left turn lane along Dale Evans Parkway for approximately 1,000 feet</li> <li><input type="checkbox"/> Add in a two-way-left turn lane along Dale Evans Parkway</li> </ul>	<p>Retain the project-specific improvements implemented with construction of the Cordova Complex Project and the Quarry Complex</p>

### 1.5 Project Fair-Share Contribution to Level of Service Deficiency Improvements

Table 1-6 shows the proposed project's percent contribution to the total growth in entering traffic volumes, otherwise known as the fair-share calculation. The formula for calculating the percentages in the table is:

$$\text{Percent of Total} = \frac{(\text{Total Project Trips})}{((\text{Total Non-Project Forecasted Trips} + \text{Total Project Trips}) - \text{Existing Trips})} \times 100\%$$

Table 1-6: Project's Percent Contribution (Fair Share) to Deficient Intersections by Year and Peak Hour

Intersection	Near-Term Conditions*		Long-Range Cumulative Conditions**	
	AM Peak Hour	PM Peak Hour	AM Peak Hour	PM Peak Hour
4.Dale Evans Parkway / Johnson Road	93.1%	89.4%	32.7%	31.0%
5.Stoddard Wells Road / Johnson Road	94.2%	90.8%	28.2%	25.4%
6.Stoddard Wells Road / I-15 Northbound Ramps	87.6%	84.8%	26.9%	24.7%

**Notes:**  
\* Scenario excluding traffic from the Cordova Complex project. \*\* Scenario including traffic from the Cordova Complex project. Project traffic used in calculating the fair-share percentage is based on Passenger Car Equivalents (PCEs).

### 1.6 Project Fair-Share Fee Contribution to Level of Service Deficiency Improvements

The fair share percentages calculated in Chapter 1.5 are used to determine the Fair Share Fee for each intersection and by forecast year.

The Fair Share Fee provided in Table 1-7 represent the estimated cost associated with the near-term project-specific improvements described in Table 1-5 and are based on background + project scenario without traffic from the Cordova Complex project. The near-term Project-Specific Improvements are improvements for which the Quarry Complex project is solely responsible. Therefore, these improvements do not include the Cordova Complex as background development to isolate only the Quarry Complex's required improvements. The traffic impact study for the Cordova Complex project is analyzed in the same manner so that it's project-specific improvements can be isolated.

Table 1-7: Project's Fair Share Fee for Near-Term Project-Specific Improvements

Intersection	Cost (\$)	Fair Share %	Fair Share Fee
4. Dale Evans Parkway / Johnson Road	\$200,000	93.1%	\$186,177
5. Stoddard Wells Road / Johnson Road	\$300,000	94.2%	\$282,609
6. Stoddard Wells Road / I-15 Northbound Ramps/	\$300,000	87.6%	\$262,803

**Notes:**  
Project traffic used in calculating the fair-share percentage is based on Passenger Car Equivalents (PCEs).  
The project specific improvements exclude traffic from the Cordova Complex project.

The Fair Share Fee provided in Table 1-8 represent the estimated cost associated with the long-range cumulative measures described in Table 1-5 and are based on the future 2040 + project conditions with traffic from the Cordova Complex project.

Table 1-8: Project's Fair Share Fee for Long-Range Cumulative Measures

Intersection	Cost	Fair Share %	Fair Share Fee
4. Dale Evans Parkway / Johnson Road	\$700,000	32.7%	\$228,561
5. Stoddard Wells Road / Johnson Road*	\$900,000	28.2%	\$253,906
6. Stoddard Wells Road / I-15 Northbound Ramps	\$1,100,000	26.9%	\$295,699

**Notes:**  
\* - Based on Option 1: Convert intersection to all-way stop-control – Preferred Alternative  
Project traffic used in calculating the fair-share percentage is based on Passenger Car Equivalents (PCEs).  
The ultimate cumulative improvements include traffic from the Cordova Complex project.

### 1.7 Level of Service With Recommended Improvements

This section presents the level of service at deficient intersections before and after implementation of the recommended mitigation measures summarized in **Table 1.5**. The near-term background + project scenarios in the following tables present the mitigated levels of service for project-specific improvements—improvements for which the Quarry Complex project is solely responsible. Therefore, the mitigated levels of service for the near-term scenarios do not include the Cordova Complex as background development to isolate only the Quarry Complex’s required improvements. The traffic impact study for the Cordova Complex project is analyzed in the same manner so that it’s project-specific improvements can be isolated.

If the Quarry Complex and Cordova Complex are developed concurrently then **Table 1-5** also presents the improvements needed if both projects are developed simultaneously. Regardless of which complex develops first, both projects will likely share in the cost of improving Cordova Road and its intersection with Dale Evans Parkway.

The improved level of service under the long-term future 2040 + project scenarios include traffic from the Cordova Complex project because the long-term scenarios reflect cumulative conditions for which all development is responsible for its fair-share of the cost of the improvements. The last columns in the series of tables in this section present the change in delay (the measurement used to establish LOS). The top row shows the increase in delay caused by the proposed project’s traffic added to the without project scenario. The bottom row shows the reduction in delay after implementation of the mitigation measure.

Because most of the study intersections are side-street stop-controlled intersections, for which level of service is defined as the LOS of the worst stop-controlled movement, the method of calculating average delay at saturated intersections produces exponentially high delays. Calculated delays in the thousands of seconds are not at all realistic but, suffice it say, the method is making a clear statement that side-street stop as a form of traffic control at high volume intersections will fail.

#### A. Dale Evans Parkway and Johnson Road

**Table 1-9** shows the intersection level of service under background plus project conditions with the near-term project-specific improvements of adding northbound through lane, southbound right turn lane, eastbound left turn lane, and westbound left turn lane. The intersection of Dale Evans Parkway / Johnson Road, with its current all-way stop-control, will begin to fail as development occurs in north Apple Valley. The near-term project-specific improvements mitigation will improve the intersection to a LOS C or better in this scenario for both peak hours.

Table 1-9: Improved Level of Service for the Near-Term Project-Specific Improvements

Intersection	Background Conditions (Without Cordova Complex)				Background + Project Conditions (Without Cordova Complex)				Change in Delay (Seconds) *	
	AM Peak		PM Peak		AM Peak		PM Peak		AM	PM
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS		
Dale Evans Parkway / Johnson Road	8.9	A	13.3	B	14.9	B	58.0	F		44.7
w/Improvements: Reconfigure intersection add NBTH, SBR, EBL, and WBL	Not Applicable				11.8	B	24.6	C	N/A	11.3
Notes: *Positive numbers represent increases in delay, or impacts, while negative numbers (shown in parenthesis) represent reductions, or improvements, in delay.										

**Table 1-10** on the following page shows the intersection level of service under future year 2040 plus project conditions with the long-range cumulative measures of installing a traffic signal intersection. In the long-term further lane capacity added to Dale Evans Parkway consistent with the general plan’s ultimate section for this road will keep up with traffic growth. The long-range cumulative measures will improve the intersection to a LOS D or better in this scenario for both peak hours.

Table 1-10: Improved Level of Service for the Long-Range Cumulative Measures

Intersection	Future Year 2040 Conditions (With Cordova Complex)				Future Year 2040 + Project Conditions (With Cordova Complex)				Change in Delay (Seconds) *	
	AM Peak		PM Peak		AM Peak		PM Peak		AM	PM
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS		
Dale Evans Parkway / Johnson Road	42.5	E	208.8	F	174.4	F	370.8 <sup>†</sup>	F	131.9	162.0
w/cumulative improvements: Retain the project-specific improvements implemented and install traffic signal	Not Applicable				20.3	C	39.9	D	(22.2)	(168.9)
Notes: <sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6 <sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle. *Positive numbers represent increases in delay while negative numbers (shown in parenthesis) represent reductions, or improvements, in delay.										

**B. Stoddard Wells Road and Johnson Road**

**Table 1-11** shows the intersection level of service under background plus project conditions with the near-term project-specific improvements of adding exclusive turn lanes at the busiest approaches.

The growth in traffic at this skewed intersection with stop-control on Johnson Road primarily affects movements traveling to and from I-15 via the on and off-ramps at Stoddard Wells Road. The northbound right turn from Stoddard Wells Road to Johnson Road and the stop-controlled westbound left turn from Johnson Road to Stoddard Wells Road experience the intersection's highest growth in traffic and the largest increase in associated delay for these movements. The near-term project-specific improvements mitigation will improve the intersection to a LOS D or better in this scenario.

Table 1-11: Improved Level of Service for the Near-Term Project-Specific Improvements

Intersection	Background Conditions (Without Cordova Complex)				Background + Project Conditions (Without Cordova Complex)				Change in Delay (Seconds) *	
	AM Peak		PM Peak		AM Peak		PM Peak		AM	PM
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS		
Stoddard Wells Road / Johnson Road	10.5	B	15.7	C	13.9	B	66.7	F	N/A	51.0
w/Improvements: Reconfigure intersection add a NBR and WBR	Not Applicable				10.7	B	34.9	D	N/A	19.2
Notes: *Positive numbers represent increases in delay, or impacts, while negative numbers (shown in parenthesis) represent reductions, or improvements, in delay.										

While the addition of lanes mitigates the LOS deficiency in the near-term, as development continues in north Apple Valley, the stop-controlled east leg of Johnson Road will eventually fail.

**Table 1-12** on the following page shows the intersection level of service under future year 2040 plus project conditions with the long-range cumulative measures. Preferred Option 1 is to convert the intersection to all-way stop-control, add a southbound left turn, a southbound through lane, a westbound left turn, a westbound right turn, and converting the northbound right turn to a free right turn. Option 2 install a traffic signal and add a southbound left turn and a westbound right turn. With the Preferred Option 1 mitigations of adding turn lanes will improve the intersection to a LOS D or better in this scenario.

Table 1-12: Improved Level of Service for the Long-Range Cumulative Measures

Intersection	Future Year 2040 Conditions (With Cordova Complex)				Future Year 2040 + Project Conditions (With Cordova Complex)				Change in Delay (Seconds)*	
	AM Peak		PM Peak		AM Peak		PM Peak		AM	PM
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS		
Stoddard Wells Road / Johnson Road	73.8	F	989.8 <sup>†</sup>	F	289.5	F	1,818.4 <sup>†</sup>	F	215.7	828.6
w/cumulative improvements Preferred Option 1: convert to AWSC, add SBL, SBTH, WBL, WBR, and free NBR	Not Applicable				12.0	B	35.0	D	(61.8)	(954.8)
w/cumulative improvements Option 2: install traffic signal, add SBL and WBR	Not Applicable				16.3	B	19.4	B	(57.5)	(970.4)
Notes: <sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6 <sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle. *Positive numbers represent increases in delay while negative numbers (shown in parenthesis) represent reductions, or improvements, in delay.										

C. Stoddard Wells Road / I-15 Northbound Ramps

The existing side-street stop-controlled approach (I-15 southbound on and off ramps) of this intersection will experience failure in background plus project conditions.

**Table 1-13** shows the intersection level of service under background plus project conditions with the near-term project-specific improvements of conversion to all-way stop control, and the addition of southbound right lane, eastbound left, westbound left and exclusive westbound through lane.

All-way stop control is frequently used as an interim solution prior to installing a traffic signal and that is the case in this scenario<sup>1</sup>. The near-term project-specific improvements mitigations will improve the intersection to a LOS C or better in both peak hours.

Table 1-13: Improved Level of Service for the Near-Term Project-Specific Improvements

Intersection	Background Conditions (Without Cordova Complex)				Background + Project Conditions (Without Cordova Complex)				Change in Delay (Seconds)*	
	AM Peak		PM Peak		AM Peak		PM Peak		AM	PM
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS		
Stoddard Wells Road / I-15 Northbound Ramps	22.0	C	25.5	D	601.2 <sup>†</sup>	F	683.1 <sup>†</sup>	F	579.2	657.6
w/Improvements: convert to AWSC and provide SBR, EBL, WBL and WBTH	Not Applicable				14.8	B	16.7	C	(586.4)	(666.4)
Notes: <sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6 <sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle. *Positive numbers represent increases in delay while negative numbers (shown in parenthesis) represent reductions, or improvements, in delay.										

**Table 1-14** on the following page shows the intersection level of service under future year 2040 plus project conditions with the recommended long-term improvement of installing a traffic signal and reconfigure the southbound lanes.

The long-range cumulative measures will improve the intersection to a LOS D or better in this scenario for both peak hours.

<sup>1</sup> Section 2B.07 of the California Manual on Uniform Traffic Control Devices (CA MUTCD) provides requirements or “warrants” to consider before implementing all-way stop control. This intersection in this scenario meets at least one warrant justifying the installation of a traffic signal which is one of the requirements when considering all-way stop control. Further study of the all-way stop requirements is required to fully justify the implementation of this mitigation measure.

Table 1-14: Improved Level of Service for the Long-Range Cumulative Measures

Intersection	Future Year 2040 Conditions (With Cordova Complex)				Future Year 2040 + Project Conditions (With Cordova Complex)				Change in Delay (Seconds)*	
	AM Peak		PM Peak		AM Peak		PM Peak		AM	PM
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS		
Stoddard Wells Road / I-15 Northbound Ramps	804.2 <sup>†</sup>	F	1,993.4 <sup>†</sup>	F	2,241.0 <sup>†</sup>	F	11,415.4 <sup>†</sup>	F	1,436.8	9,422.0
w/cumulative improvements: Traffic Signal and SB reconfiguration	Not Applicable				34.9	C	37.2	D	(769.3)	(1956.2)

Notes:  
<sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6<sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle.  
 \*Positive numbers represent increases in delay while negative numbers (shown in parenthesis) represent reductions, or improvements, in delay.

*D. Dale Evans Parkway / Cordova Road (With Cordova Complex)*

**Table 1-15** shows the level of service under background plus project conditions with the proposed project specific improvements of adding a northbound right, southbound left, westbound right, and a two way left turn lane along Dale Evans Parkway. Dale Evans Parkway and Cordova Road intersection—a primary access road serving both the Quarry Complex and the Cordova Complex projects.

Cordova Road needs to be constructed to provide access to project site and the intersection widening improvements summarized in **Table 1-5** should be implemented when Cordova Road is constructed. These improvements are discussed in **Section 1.9** (Project-Specific Frontage and Access Improvements). The near-term project-specific improvements mitigations will improve the intersection to a LOS B in both peak hours.

Table 1-15: Improved Level of Service for the Near-Term Project-Specific Improvements

Intersection	Background Conditions (Without Cordova Complex)				Background + Project Conditions (Without Cordova Complex)				Change in Delay (Seconds) *	
	AM Peak		PM Peak		AM Peak		PM Peak		AM	PM
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS		
Dale Evans Parkway / Cordova Road	9.5	A	10.1	B	11.7	B	14.3	B	N/A	
w/ improvements: provide NBR, SBL, TWLTL, WBL	Not Applicable				10.8	B	12.8	B		

Notes:  
 \*Positive numbers represent increases in delay while negative numbers (shown in parenthesis) represent reductions, or improvements, in delay.

**Table 1-16** shows the intersection level of service under future year 2040 plus project conditions with the project specific improvements of adding a northbound right, southbound left, westbound right, and a two way left turn lane along Dale Evans Parkway. The near-term project-specific improvements mitigations will improve the intersection to a LOS D or better in both peak hours.

Table 1-16: Improved Level of Service for the Long-Range Cumulative Measures

Intersection	Future Year 2040 Conditions (With Cordova Complex)				Future Year 2040 + Project Conditions (With Cordova Complex)				Change in Delay (Seconds) *	
	AM Peak		PM Peak		AM Peak		PM Peak		AM	PM
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS		
Dale Evans Parkway / Cordova Road	17.6	C	24.7	C	31.2	D	117.4	F	13.6	92.7
w/ improvements: Retain the project- specific improvements	Not Applicable				16.3	C	34.1	D	(0.5)	11.8

Notes:  
 \*Positive numbers represent increases in delay while negative numbers (shown in parenthesis) represent reductions, or improvements, in delay.

## 1.8 Traffic Signal Warrant Analysis

Stop-controlled intersections operating with a LOS deficiency in any project-related scenario are subject to a warrant analysis to determine the need for a traffic signal. Satisfying a warrant or multiple warrants for a traffic signal does not automatically require the installation of a signal. Warrants are tools used in conjunction with engineering assessment and judgement regarding improving safety and operating conditions at stop-controlled intersections.

**Table 1-17** summarizes the findings of the signal warrant analyses conducted for each deficient intersection under each project-related scenario. The three study intersections experiencing the most dramatic increases in delay meet the signal warrant in all project-related scenarios.

Table 1-17: Summary of Traffic Signal Warrant Analyses of Deficient Intersections

Deficient Intersection	Scenarios Satisfying Warrant 3 (Peak Hour) at Deficient Intersections [a]			
	Year 2024 Project Conditions *	Year 2024 Project Conditions **	Future 2040 + Project Conditions *	Future 2040 + Project Conditions **
Dale Evans Parkway / Johnson Road	YES	YES	YES	YES
Stoddard Wells Road / Johnson Road	YES	YES	YES	YES
Stoddard Wells Road / I-15 Northbound Ramps	YES	YES	YES	YES
Dale Evans Parkway / Cordova Road	NO	NO	NO	YES

**Notes:**  
 \* Scenario excluding traffic from the Cordova Complex project. \*\* Scenario including traffic from the Cordova Complex project.  
 [a] The California Manual on Uniform Traffic Control Devices (CA MUTCD) provides procedures and standards for evaluating the need for installation of a traffic signal at a stop-controlled intersection. Of the nine warrants included in the MUTCD, warrant 3 (based on peak hour traffic volumes) is frequently used in planning and impact studies because it is standard practice to evaluate peak hour operating conditions using traffic forecasts. The other warrants generally require data that cannot be accurately forecasted.  
 The MUTCD emphasizes that satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic signal and a traffic signal should not be installed unless an engineering study indicates that installing a traffic signal will improve the overall safety and/or operation of the intersection.

## 1.9 Project-Specific Frontage and Access Improvements

This study recommends the site frontage and access improvements listed below that are typically required in the town's Conditions of Approval. Because the location of the Quarry Complex project has no improved roads accessing the site, construction of an access road is required. Further, the responsibility for the construction of certain elements of the access road depends on the timing of the Cordova Complex project. The recommended access road improvements are based on the following assumptions:

- The improvement recommendations assume that the Quarry Complex project is constructed before the Cordova Complex project. The traffic impact analysis report for the Cordova Complex project describes the access road improvements assuming the Cordova Complex project is constructed before the Quarry Complex project. If constructed concurrently, each project is responsible for their project-specific elements and their fair-share cost of non-frontage shared elements.
- The costs of constructing the non-frontage improvements to the segment of Cordova Road between Dale Evans Parkway and Dachshund Avenue are shared between the two projects, and subject to a reimbursement agreement if one of the two projects is not constructed for an extended period.

**1. Construct access and site frontage improvements on Cordova Road:**

- a. Construct a partial section of Cordova Road<sup>2</sup> from Dale Evans Parkway to the western property line of the Quarry Complex project.
  - The project will need to construct the non-fronting center portion of Cordova Road from Dale Evans Parkway to the site for access purposes. This segment of Cordova Road should be constructed as the two inner lanes of the Secondary Road typical section (or as required by the Town).
  - The project should widen the Cordova Road approach to Dale Evans Parkway and construct the near-term intersection improvements described in **Table 1-5**.
- b. Construct and improve the project's frontage with Cordova Road.
  - The project will be required to dedicate land and construct the 44-foot half-width of a secondary road section of Cordova Road along its southern property line. This improvement is shown on the site plan. Until the southern half of Cordova Road is constructed by development of the property south of Cordova Road, the Town may require that the two travel lanes constructed with the half-width section provide for two-way traffic, or a third center lane be constructed for eastbound traffic.
  - The project proposes a single access driveway from Cordova Road, located near the western property line. The remainder of the southern end of the site is used for a detention basin.

**2. Construct access and site frontage improvements on Flint Road:**

- a. Construct and improve the project's frontage with Flint Road from Cordova Road to the project's northern property line.
  - Flint Road is designated as an industrial and commercial local street with a 66-foot right of way. The project will be required to construct the 33-foot half-width of a local street section including the three proposed driveways accessing the project from Flint Road. This improvement is shown on the site plan with construction of 22 feet of pavement (including curb and gutter) from the future centerline of Flint Road to the face of curb.
  - Flint Road will not intersect with the privately owned Quarry Road and therefore a turnaround is provided at the northern terminus of Flint Road.

**1.10 Vehicle Miles of Travel (VMT) Analysis**

The VMT analysis screening assessment included in the approved October 19, 2022, scoping agreement concluded that the Cordova Complex project was required to prepare a detailed analysis of project-generated VMT and its effect on VMT town-wide as part of the project's environmental clearance under CEQA.

The VMT analysis was prepared in accordance with the Town's adopted Resolution No. 2021-08 (Adopting Thresholds of Significance for Vehicle Miles Traveled (VMT) Under the California Environmental Quality Act (CEQA)) which states that a development project would result in a significant project-generated VMT impact if either of the following conditions are satisfied:

1. The baseline project generated VMT per service population (population plus employees) exceeds the Town of Apple Valley General Plan Buildout VMT per service population, or
2. The cumulative (2040) project generated VMT per service population exceeds the Town of Apple Valley General Plan Buildout VMT per service population.

---

<sup>2</sup> Cordova Road is designated as a Secondary Road in the General Plan with an 88-foot right of way to accommodate a four-lane traveled way with shoulder, bike lanes, or street parking, and a 12-foot parkway / sidewalk on both side of the street.

In addition to project-generated VMT, the Town adopted significance thresholds for a project’s effect on VMT in Apple Valley. The resolution states that a project’s effect on VMT would be considered significant if it resulted in either of the following conditions to be satisfied:

3. The baseline link-level boundary Town-wide VMT per service population increases under the plus project condition compared to the no project condition, or
4. The cumulative link-level boundary Town-wide VMT per service population increases under the plus project condition compared to the no project condition.

The term “link-level boundary Town-wide” refers to all vehicle miles of travel on all roadways within the town limits of Apple Valley. The following describes the key findings and the conclusions of the VMT analysis. The full report is in **Appendix E**.

*A. Project-Generated VMT Analysis*

The SBTAM model is used estimate project-generated VMT for both baseline (2016) and horizon year (2040) scenarios. The SBTAM socioeconomic database for each scenario was updated with the project land use to calculate project VMT. The databases were also used to obtain the town’s population and employment to estimate service population.

**Table 1-18** presents the results of the project-generated VMT analyses for the baseline and horizon year scenarios. As shown in **Table 1-18**, in both the baseline and horizon year scenarios, the VMT/service population metric for the Quarry Complex project is less than the Town of Apple Valley’s general plan buildout significance threshold.

Table 1-18: Project-Generated VMT Analysis

Metric	2016 Baseline Conditions		2040 Conditions	
	Quarry Complex Warehouse (project)	Town of Apple Valley General Plan Buildout (Threshold) [a]	Quarry Complex Warehouse (project)	Town of Apple Valley General Plan Buildout (Threshold) [a]
Population	0		0	
Employment [b]	730		730	
Service Population	730		730	
OD VMT [c]	23,469		22,310	
OD VMT per service population	32.2	33.2	30.6	33.2
Notes: [a] Source: SBCTA VMT Screening Tool: <a href="https://www.gosbcta.com/vmtscreening">https://www.gosbcta.com/vmtscreening</a> [b] Source: SCAG Employment Density Study Summary Report, October 31, 2001 (using 2,111 square feet per employee). [c] The project’s Origin/Destination (OD) VMT derived from the San Bernardino Traffic Analysis Model (SBTAM) Source of analysis: General Technologies and Solutions (GTS)				

The outcome of the second analysis, the project’s effect on town-wide VMT, is presented in **Table 1-19**. The SBTAM model was used to estimate the VMT on all roadways within the town’s limits for the baseline and 2040 scenarios with and without the project. Using the resulting town-wide VMT, the metric indicating a significant impact (VMT/Service population) at a town-wide scale was calculated.

**Table 1-19 on the following page** shows that the VMT/Service population metric under the “with project” conditions compared to the metric under the “without project” conditions in both scenarios does not increase and does not satisfy the town’s significance threshold described above.

Table 1-19: Project Effect on Roadway VMT within Town of Apple Valley

Metric	2016 Baseline		2040 Conditions	
	With Project	Without Project	With Project	Without Project
Roadway VMT [a]	854,590	847,823	1,367,015	1,362,981
Service population [b]	91,843	91,113	127,536	126,806
VMT per service population	9.3	9.3	10.7	10.7
Notes:				
[a] Roadway VMT = sum of all vehicle miles travel on all streets within the town limits of Apple Valley				
[b] Service population = sum of residents and employees in Apple Valley in the scenario being analyzed. Source: 2016 and 2040 land use summaries from the San Bernardino Traffic Analysis Model (SBTAM)				
Source of analysis: General Technologies and Solutions (GTS)				

**B. Conclusions of the VMT Analyses**

The VMT analysis conducted to identify potentially significant project-generated VMT impacts under CEQA concludes that the proposed project generates a VMT / Service population less than the VMT / Service population representing buildout of Apple Valley’s general plan and, therefore, does not cause a significant impact based on the town’s adopted significance thresholds for project-generated VMT.

Another VMT analysis conducted to identify potentially significant impacts of the project’s “effects on town-wide VMT” under CEQA concludes that the VMT / service population metric for the baseline and horizon year scenarios “with the project” do not increase the metric over the “without project” scenarios. Therefore, the proposed Cordova Complex project does not cause a significant impact based on the town’s adopted significance thresholds for the project’s effect on town-wide VMT.

## 2 INTRODUCTION

This report identifies the traffic impacts and presents recommendations for access and traffic mitigation for the proposed Quarry Complex project in the Town of Apple Valley, California. The proposed project consists of a 1,462,342 square foot speculative warehouse facility located on approximately 78-acres in the north part of the Town within the North Apple Valley Industrial Specific Plan area.

The North Apple Valley Industrial Specific Plan (NAVISP) is the regulatory plan that governs all development within its boundaries. It designates land uses and provides design standards for the construction of buildings and defines the area's required infrastructure for transportation / circulation, public services, and utilities. The proposed project is consistent with the circulation element of the NAVISP.

The project site is located at the northwest corner of Cordova Road and Flint Road, as illustrated in the vicinity map shown in **Figure 1**. The site is bounded to the north by the privately owned Quarry Road and undeveloped land; to the south by unimproved Cordova Road and undeveloped land; to the west by undeveloped land; and to the east by unimproved Flint Road and undeveloped land. **Figure 2** illustrates the proposed project site plan.

The intent of this report is to evaluate potentially significant traffic impacts caused by the proposed development in accordance with the Town of Apple Valley and San Bernardino County traffic impact analysis requirements under the scenarios described in the next section.

### 2.1 Analysis Scenarios

The scenarios analyzed in this study are consistent with the requirements of San Bernardino County's Transportation Impact Study Guidelines (July 2019). Additional analysis scenarios are included in this study to reflect conditions with and without the Quarry Complex's (project) sister warehouse development—Cordova Complex—located at the southwest corner of extensions of Cordova Road and Navajo Road.

The project's sister site, the Cordova Complex, is expected to develop generally in the same timeframe as the Quarry Complex (project). The proposed project is analyzed, however, in scenarios without the Cordova Complex warehouse to represent a potential situation in which the Cordova Complex project is significantly delayed, or the application is abandoned or withdrawn, and the sister project is never built. In either case, the Quarry Complex could be responsible for a larger share of off-site improvements that would normally be proportionately shared between the two developments. The additional scenario without the Cordova Complex included in the background traffic projections will produce more realistic off-site improvements and more reasonable and accurate fair-share estimates of the cost of the off-site improvements in the event the Cordova Complex project does not develop. The same set of analysis scenarios (with and without the Quarry Complex) is included in the traffic impact analysis for the Cordova Complex project. The expanded list of analysis scenarios includes:

#### Scenarios Without Development of the Cordova Complex

- Existing conditions
- Background conditions (year 2024) without Cordova Complex
- Background + project conditions (year 2024) without Cordova Complex
- Future year 2040 conditions without Cordova Complex
- Future year 2040 + project conditions without Cordova Complex

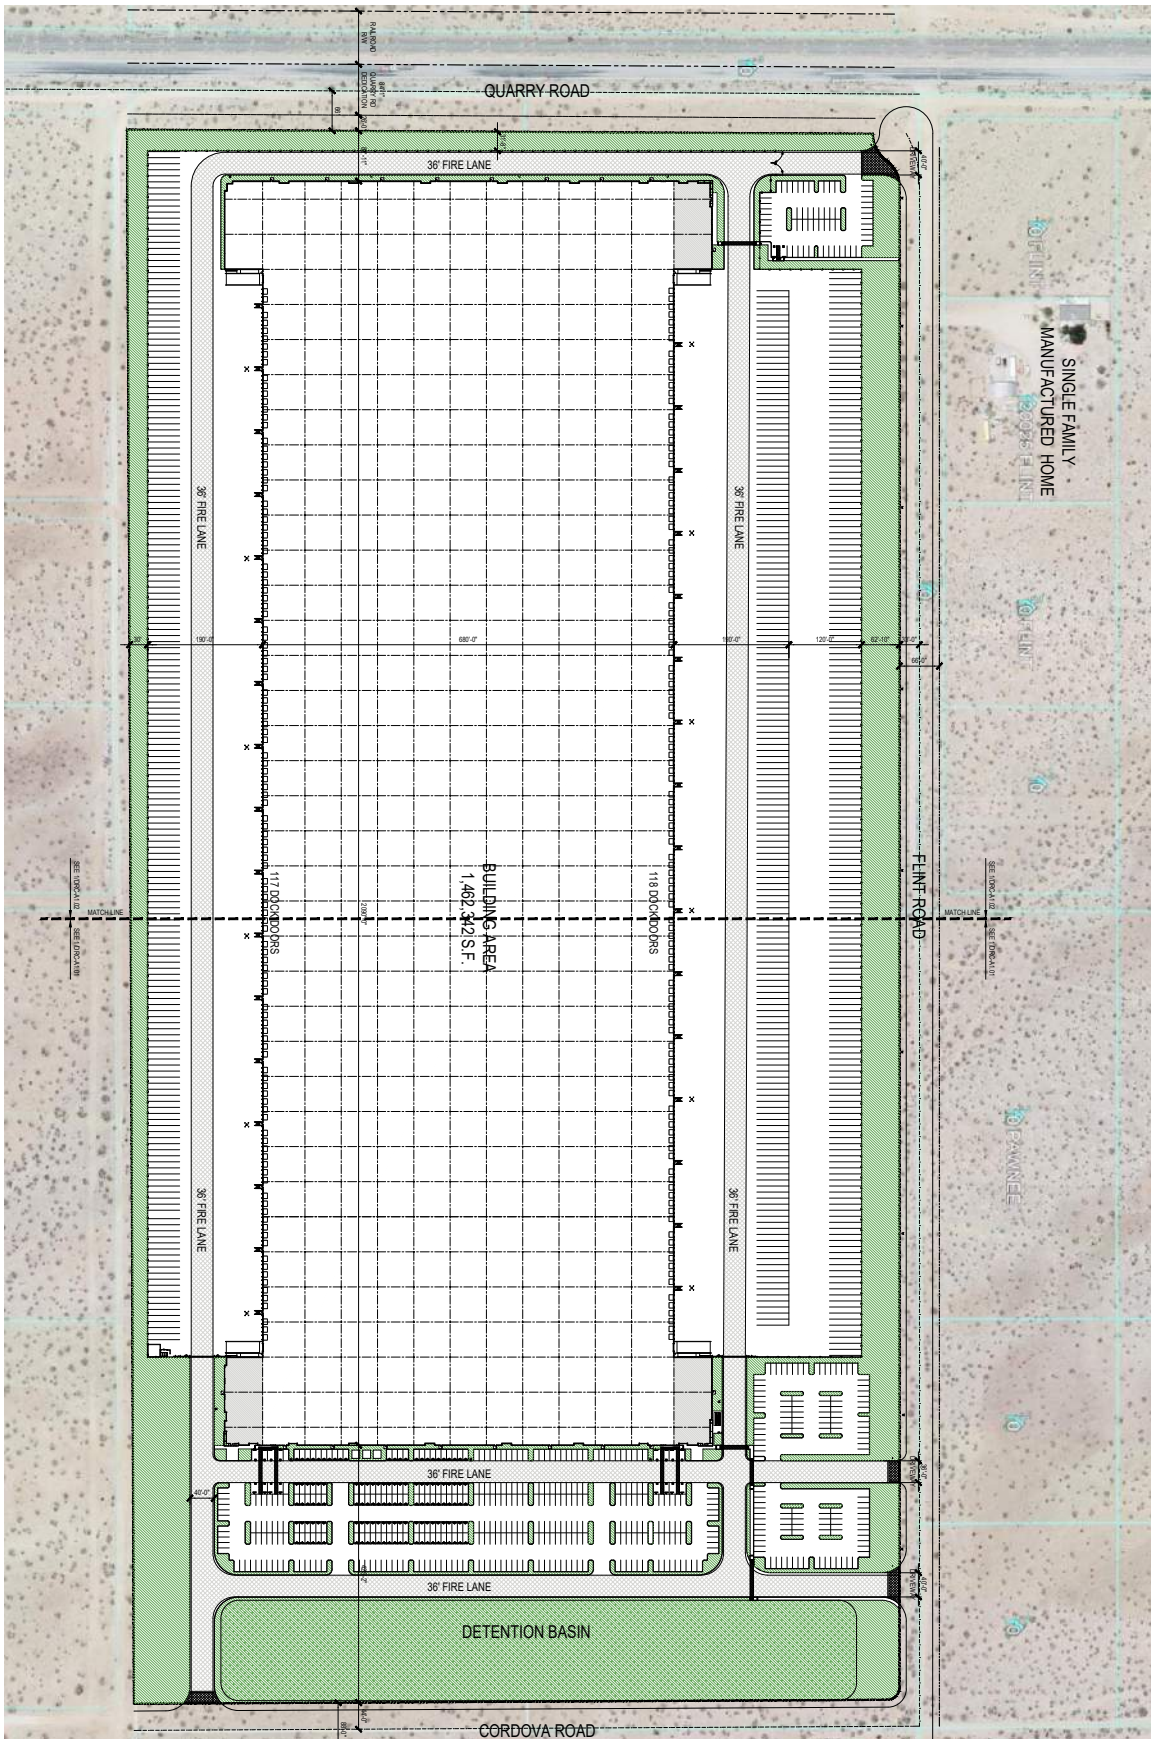

#### Scenarios With Development of the Cordova Complex

- Background conditions (year 2024) with Cordova Complex
- Background + project conditions (year 2024) with Cordova Complex
- Future year 2040 conditions with Cordova Complex
- Future year 2040 + project conditions with Cordova Complex

**FIGURE 2: PROJECT SITE PLAN  
QUARRY COMPLEX  
APPLE VALLEY**

### 3 EXISTING CONDITIONS

#### 3.1 Town of Apple Valley and Caltrans Intersection Level of Service Policies

The Town of Apple Valley's General Plan policy (Policy 1.A, Program 1.A.4) on level of service is to maintain a level of service (LOS) D in the AM and PM peak hours on all its roadways. This level of service policy applies to local Apple Valley roadways, roads of regional importance as part of the county's Congestion Management Program (CMP) network, and state highways.

The Caltrans' Guide for the Preparation of Traffic Impact Studies (December 2002) states "Caltrans endeavors to maintain a target level of service at the transition between LOS "C" and LOS "D" on State highway facilities. However, Caltrans acknowledges that this may not always be feasible, so their practice is to allow level of service thresholds equal to the threshold of the jurisdiction where the facility is located but preferably no greater than a 45 second average delay per vehicle in the peak hour (mid LOS D). For this study, the town's LOS D is assumed to be the minimum level of service criteria for the study intersections.

#### 3.2 Study Intersections

This focused traffic study evaluates key intersections on routes expected to be used by project traffic to access the site. **Figure 3** and the list below identifies the intersections analyzed in this study.

1. I-15 Southbound Ramps / Dale Evans Parkway
2. I-15 Northbound Ramps / Dale Evans Parkway
3. Dale Evans Parkway / Quarry Road
4. Dale Evans Parkway / Johnson Road
5. Stoddard Wells Road / Johnson Road
6. Stoddard Wells Road / I-15 Northbound Ramps
7. Stoddard Wells Road / Quarry Road
8. I-15 Southbound Ramps / Quarry Road
9. Johnson Road / Navajo Road
10. Dale Evans Parkway / Cordova Road

The intersection of Dale Evans Parkway / Johnson Road is currently all-way stop-controlled. All the remaining study intersections are currently side street stop controlled.

#### 3.3 Existing Traffic Volumes

Turn movement counts were conducted in November 2022 by Newport Traffic Studies, an independent traffic data collection company. These counts were collected during the AM (7:00-9:00 AM) and PM (4:00-6:00 PM) peak periods. The existing turn movement counts are included in **Appendix B** of this study. **Figure 4** illustrates the existing peak hour traffic volumes in the study area.

#### 3.4 Intersection Capacity Analysis Methodology

In this study, intersection level of service (LOS) was determined using Synchro software<sup>3</sup> which implements the methodologies in Chapter 19 and Chapter 20 of the Highway Capacity Manual, 6<sup>th</sup> Edition (HCM 6)<sup>4</sup> and conforms to the procedures and assumptions in the county's Traffic Impact Analysis Guidelines.

The intersection analysis uses existing intersection geometrics and existing traffic volumes in determining AM and PM peak hour intersection level of service. **Table 3-1** provides LOS thresholds for both two-way stop-controlled (TWSC) and all-way stop-controlled intersections which is determined by the computed or measured control delay. Unsignalized intersections have lower delay criteria than signalized intersections because stop-control is associated with more uncertainty for users, as delays are less predictable than they are at signals, which reduces the user's tolerance for delay.

The level of service at TWSC intersections is measured as the control delay for the worst stop-controlled movement at the intersection regardless of the movement's traffic volume.

- SIGNALIZED INTERSECTION
- STOP CONTROLLED APPROACH

**FIGURE 4: EXISTING TRAFFIC VOLUMES  
QUARRY COMPLEX  
APPLE VALLEY**

The level of service at AWSC intersections is also measured as the control delay, but it applies to the entire intersection not individual movements.

Table 3-1: Level of Service Criteria for Two-Way and All-Way Stop Controlled (TWSC & AWSC) Intersections

Control Delay (s/veh)	LOS by Volume-to-Capacity Ratio <sup>a</sup>	
	≤1.0	>1.0
0 - 10	A	F
> 10 - 15	B	F
> 15 - 25	C	F
> 25 - 35	D	F
> 35 - 50	E	F
> 50	F	F

Note:

[a] For approaches and intersectionwide assessment, LOS is defined solely by control delay.

For TWSC intersections, c on the minor street and the LOS is based on the minor stop-controlled movement or approach with the highest delay. In the TWSC methodology, LOS is not calculated for the uncontrolled major-street approaches or for the entire intersection.

For AWSC intersections, the delay criteria are applied to the average controlled delay of all approaches and the LOS is presented for the entire intersection.

Source: Highway Capacity Manual 6<sup>th</sup> Edition, Exhibit 20-2.

### 3.5 Existing Traffic Analysis

Existing intersection geometrics and existing AM and PM peak hour traffic counts are used in analyzing existing intersection capacity. **Table 3-2** and **Appendix D** provide the results of the analysis. **Figure 5** illustrates the existing intersection geometrics utilized in the capacity analysis.

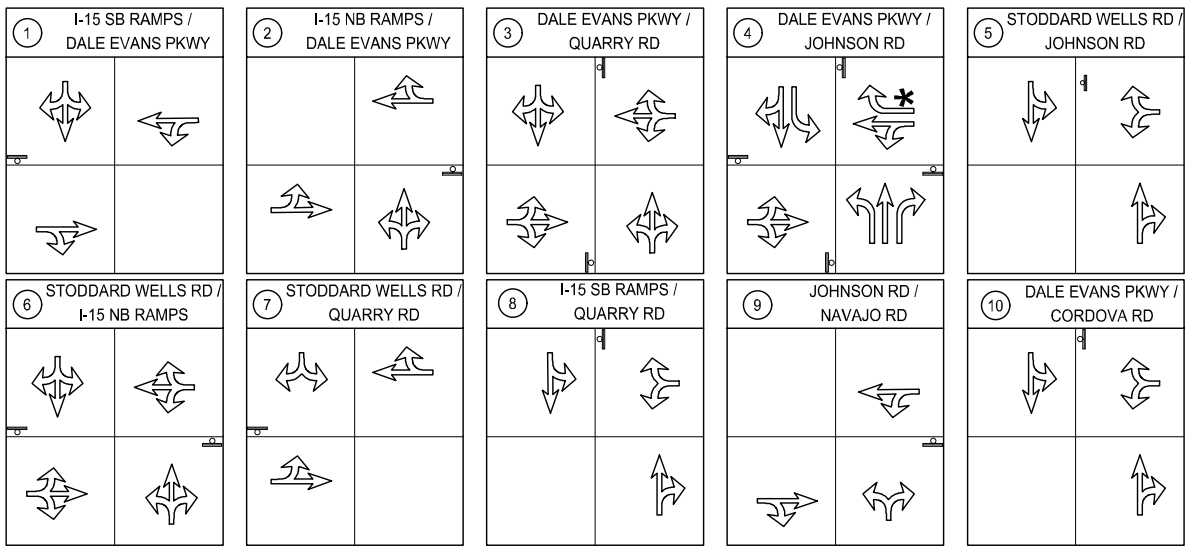

Table 3-2: Intersection Level of Service for Existing (2022) Conditions

Intersection	Control Type	Existing Conditions			
		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	10.5	B	9.3	A
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	10.0	B	8.8	A
3. Dale Evans Parkway / Quarry Road	TWSC	10.9	B	13.3	B

#### 4 BACKGROUND CONDITIONS (WITHOUT CORDOVA COMPLEX)

This scenario evaluates impacts due to ambient growth in traffic and traffic generated by other area development affecting the study area up to the year 2024 when construction of the Quarry Complex is expected to be completed and the building occupied. An annual growth rate in traffic of 3.5% represents both ambient growth and other area development.

##### 4.1 Background Conditions Traffic Analysis (Without Cordova Complex)

The background conditions intersection level of service analysis uses existing intersection geometrics and the projected AM and PM peak hour traffic for background conditions. The background projections in this scenario exclude traffic from the Cordova Complex—the Quarry Complex’s sister project. **Table 4-1** and **Appendix D** provides the results of the analysis.

Table 4-1: Intersection Level of Service for Background Conditions

Intersection	Control Type	Background Conditions (Without Cordova Complex)			
		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	10.7	B	9.4	A
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	10.2	B	8.9	A
3. Dale Evans Parkway / Quarry Road	TWSC	11.1	B	13.8	B

9. Johnson Road / Navajo Road	TWSC	10.4	B	9.9	A
10. Dale Evans Parkway / Cordova Road	TWSC	9.5	A	10.1	B
<p><u>Notes:</u> Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).</p> <p><u>Abbreviations:</u> TWSC = Two-way (or side street) stop control, AWSC = All-way stop control</p>					

As presented in **Table 4-1**, under background conditions, the study intersections operate at a LOS C or better in both peak hours.

## 5 BACKGROUND PLUS PROJECT CONDITIONS (WITHOUT CORDOVA COMPLEX)

This scenario evaluates potential impacts of the background scenario with the addition of project generated traffic in opening year (2024).

### 5.1 Project Description and Trip Generation

The proposed project is a speculative warehouse where the tenant(s) and function as a potential short term storage facility, distribution center, fulfillment center, etc. is unknown. While the impact analysis needs to reflect a reasonable spectrum of tenant types, there is a risk when estimating trip generation of over or under-estimating traffic. The 11<sup>th</sup> Edition of the Institute of Transportation Engineers' Trip Generation manual contains data for the most common types of warehouse operations with a wide range of rates. **Table 5-1** summarizes the trip generation rates for warehouse facilities in the current edition of ITE's Trip Generation.

Table 5-1: Trip Generation Rates for ITE Land Use Categories of Warehousing

Warehouse Type	ITE Land Use Code	Average Trip Generation Rates for Warehouse Types (Trips Per KSF) (Source: ITE Trip Generation 11th Edition)		
		Average Daily Traffic	AM Peak Hour of Adjacent Street Traffic	PM Peak Hour of Adjacent Street Traffic
		Total (In + Out)	Total (In + Out)	Total (In + Out)
High-Cube Transload and Short-Term Storage Warehouse	154	1.54	0.08	0.10
High-Cube Cold Storage Warehouse	157	2.12	0.11	0.12
High-Cube Fulfillment Center Warehouse - Non-Sort	155	1.81	0.15	0.16
General Warehouse	150	1.71	0.17	0.18
High-Cube Parcel Hub Warehouse	156	4.63	0.70	0.64
High-Cube Fulfillment Center Warehouse - Sort	155	6.44	0.87	1.20
Average of All Warehouse Types		3.04	0.35	0.40
Average Without High-Cube Sort Fulfillment Center		2.36	0.24	0.24

To help select a trip generation rate for the proposed project representative of the range of potential owners/tenants, **Table 5-1** includes the average of the rates for all warehouse types in the ITE Trip Generation manual and the average of the rates for all warehouse types except High-Cube Fulfillment Sort Facility—the most intensive type of warehouse which is not expected for the proposed project. The secondary average rate (excluding High-Cube Fulfillment Sort Facility) represents two thirds the ITE warehouse types and covers a broad range of tenant types and operations.

**Table 5-2** on the following page, summarizes the estimated trip generation of the proposed project for an average weekday, and weekday AM (7-9 AM) and PM (4-6 PM) peak hours, based on the secondary average rates identified in **Table 5-1**. The proposed warehouse complex would generate about 3,451 vehicle trips per day and 351 vehicle trips in both the AM and PM peak hours.

It is standard practice to convert vehicle trips to Passenger Car Equivalents (PCEs) for intersection capacity analysis. This conversion reflects the effects of large vehicles on intersection operations both from the physical space a truck occupies and from their effect on the intersection's saturation flow rate due to the slower acceleration of trucks.

When converted to PCEs, the Cordova complex generates about 4,849 daily PCEs, and 493 PCEs in both the AM and PM peak hour.

Table 5-2: Quarry Complex Project Trip Generation

Land Use	Gross Floor Area (KSF)	Daily	AM Peak Hour of Adjacent Street Traffic			PM Peak Hour of Adjacent Street Traffic		
			In	Out	Total	In	Out	Total
<b>Warehouse</b> (ITE Land Use Categories 150, 154, 155, 156, 157)	1,462.342	Vehicle Trip Generation Rates [1] (Trips Per 1,000 Square Feet of Gross Floor Area)						
		2.36	0.18	0.06	0.24	0.07	0.17	0.24
		Total Vehicle Trip Generation						
		3,451	270	81	351	98	253	351
	Mode Share	Project Trip Generation by Vehicle Type						
Passenger Cars (Percent of Total)	74.21%	2,561	201	60	260	73	188	260
2-Axle Trucks (Percent of Total)	4.55%	157	12	4	16	4	11	16
3-Axle Trucks (Percent of Total)	4.18%	144	11	3	15	4	11	15
4-Axle Trucks (Percent of Total)	17.04%	588	46	14	60	17	43	60
	PCE Factor	Project Trip Generation in Passenger Car Equivalents (PCE)						
Passenger Cars)	1.0	2,561	201	60	260	73	188	260
2-Axle Trucks	1.5	236	18	6	24	7	17	24
3-Axle Trucks	2.0	289	23	7	29	8	21	29
4 + Axle Trucks	3.0	1,764	138	41	179	50	129	179
<b>Total Passenger Car Equivalents (PCE)</b>		<b>4,849</b>	<b>380</b>	<b>113</b>	<b>493</b>	<b>138</b>	<b>355</b>	<b>493</b>
Notes:								
[1] Trip generation rates are the average of the rates of each ITE warehouse type except the High-Cube Fulfillment Sort Center Warehouse, which is the most intense use like an Amazon Fulfillment Center which sorts individual packages for delivery to end users. This type of use is not anticipated for the Quarry Complex. See Table 5-1.								
KSF = Thousands of Square Feet.								
AM / PM Peak Hour of Adjacent Street Traffic = Trip generation coinciding with the highest hourly volumes of traffic on the adjacent streets during the AM (7:00 AM and 9:00 AM) and PM (4:00 PM and 6:00 PM) commuter peak periods.								
Source of trip generation rates: Institute of Transportation Engineers (ITE) Trip Generation (11th Edition).								
Source of passenger car / truck mode share (percentage of total): South Coast Air Quality Management District High Cube Warehouse Trip Generation Study (2016). Based on data from eight high cube warehouses in the Inland Empire over 1,000,000 square feet in size. The average warehouse building size is 1,364,496 square feet.								
Passenger Car Equivalents (PCE) factors: Industry standard values utilized in neighboring jurisdictions								

## 5.2 Project Trip Distribution and Assignment

Project traffic is distributed by direction separately for automobiles (employees) and trucks. The automobile distribution is based on where the warehouse employees are likely to reside or perform other activities (e.g., concentration of residential neighborhoods and commercial centers). The truck distribution is based on the most direct routes to major roadways and highways trucks are likely to use to access the project and depart for delivery of freight. Project trips are assigned to the area streets that provide the most direct route to the destinations.

An exhibit showing the distribution of project-generated automobile and truck trips to roadways as a percentage by direction and route can be viewed in the approved scoping memorandum in **Appendix A** (Exhibit D).

The exhibits in the appendix depict the assignment of project generated traffic at the study intersections for the AM and PM peak hours and can be viewed in the approved scoping memorandum in **Appendix A** (Exhibits E1-E2 and F1-F2). In these exhibits, truck traffic volumes have been converted into passenger car equivalents (PCEs) as required in the San Bernardino County guidelines for intersection capacity analysis.

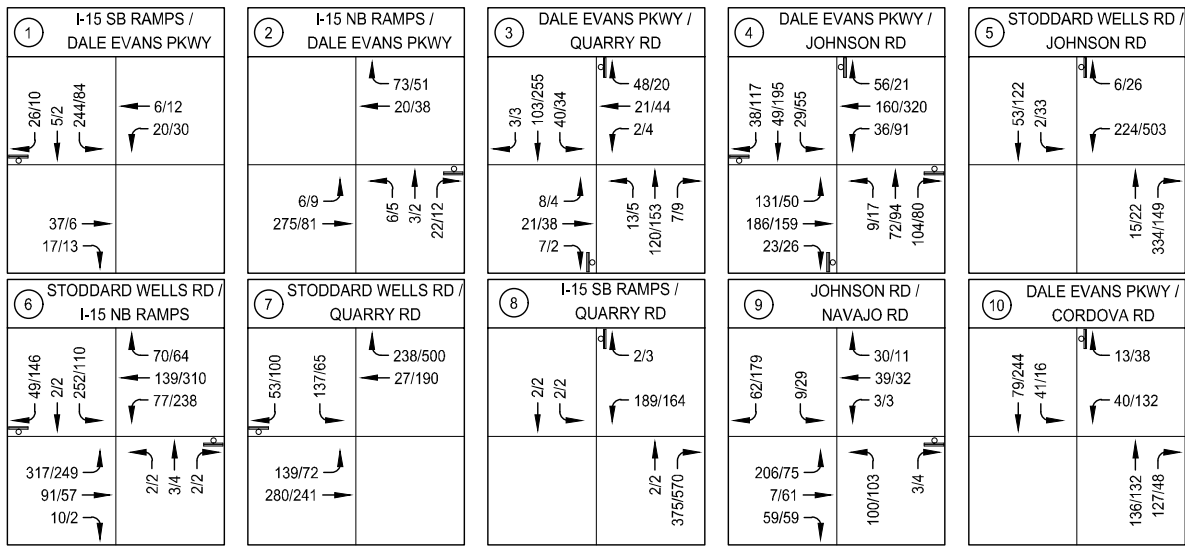

### 5.3 Background + Project Conditions Traffic Analysis (Without Cordova Complex)

**Table 5-3** compares intersection level of service of background and background plus project conditions based on the AM and PM peak hour traffic volumes shown in **Figure 6**. The capacity analysis worksheets are in **Appendix D**.

Table 5-3: Comparison of Background (Without Quarry Complex) and Background Plus Project LOS

Intersection	Control Type	Background Conditions				Background + Project Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	10.7	B	9.4	A	11.2	B	9.5	A
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	10.2	B	8.9	A	10.6	B	9.0	A
3. Dale Evans Parkway / Quarry Road	TWSC	11.1	B	13.8	B	11.5	B	14.6	B
4. Dale Evans Parkway / Johnson Road	AWSC	8.9	A	13.3	B	14.9	B	58.0	F
5. Stoddard Wells Road / Johnson Road	TWSC	10.5	B	15.7	C	13.9	B	66.7	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	22.0	C	25.5	D	601.2 <sup>†</sup>	F	683.1 <sup>†</sup>	F
7. Stoddard Wells Road / Quarry Road	TWSC	18.1	C	13.5	B	18.1	C	13.5	B
8. I-15 Southbound Ramps / Quarry Road	TWSC	10.9	B	11.7	B	11.4	B	14.0	B
9. Johnson Road / Navajo Road	TWSC	10.4	B	9.9	A	10.4	B	9.9	A
10. Dale Evans Parkway / Cordova Road	TWSC	9.5	A	10.1	B	11.7	B	14.3	B
<p><u>Notes:</u>  <sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6<sup>th</sup> Edition designates this magnitude of delay simply as &gt;300 seconds per vehicle.            Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  <u>Abbreviations:</u>            TWSC = Two-way (or side street) stop control, AWSC = All-way stop control</p>									

As presented in **Table 5-3**, under background + project conditions, three of the study intersections experience substantial increases in delay and degrade from LOS D or better to LOS F in at least one peak hour.

## 6 FUTURE 2040 CONDITIONS (WITHOUT CORDOVA COMPLEX)

The future conditions scenario reflects regional growth in traffic up to the year 2040. Growth in traffic is from forecasts from the San Bernardino County Transportation Analysis Model (SBTAM). Intersection turn movements were derived from post processing forecasted approach volumes and balancing the turn movement volumes for each study intersection. The SBTAM traffic model plots are provided in **Appendix C**.

### 6.1 Future Conditions Traffic Analysis

The future year 2040 conditions intersection capacity analysis uses existing intersection geometrics and the projected AM and PM peak hour traffic volumes using the process described above. **Table 6-1** and **Appendix D** provide the results of the analysis.

Table 6-1: Intersection Level of Service for Future Year 2040 Conditions (Without Cordova Complex project)

Intersection	Control Type	Future 2040 Conditions (Without Cordova Complex)			
		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	12.9	B	10.9	B
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	11.4	B	9.7	A
3. Dale Evans Parkway / Quarry Road	TWSC	12.7	B	17.5	C
4. Dale Evans Parkway / Johnson Road	AWSC	13.1	B	58.6	F
5. Stoddard Wells Road / Johnson Road	TWSC	20.9	C	307.9	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	144.1	F	680.9 <sup>†</sup>	F
7. Stoddard Wells Road / Quarry Road	TWSC	20.8	C	15.6	C
8. I-15 Southbound Ramps / Quarry Road	TWSC	11.5	B	14.8	B
9. Johnson Road / Navajo Road	TWSC	10.5	B	10.0	B
10. Dale Evans Parkway / Cordova Road	TWSC	12.6	B	12.6	B

**Notes:**  
<sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6<sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle.  
 Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
**Abbreviations:**  
 TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

As presented in **Table 6-1**, under future year 2040 conditions, three intersections are projected to operate at deficient levels of service even without the proposed project. These three will be consistently showing LOS deficiencies as traffic volumes increase in later scenarios. The fact that Dale Evans Parkway and Johnson Road, Stoddard Wells Road and Johnson Road, and Stoddard Wells Road and I-15 Northbound Ramps are located on primary routes for trucks and automobiles accessing I-15 is an important contributing factor.

## 7 FUTURE 2040 PLUS PROJECT CONDITIONS (WITHOUT CORDOVA COMPLEX)

The future plus project conditions scenario adds the project's estimated traffic generation to the future condition's scenario described in Section 6. As described in the previous section, the forecasted future year 2040 traffic intersection turn movements were derived from post processing forecasted approach volumes from the SBTAM model for each study intersection. The SBTAM traffic model plots are provided in **Appendix C**.

### 7.1 Future Plus Project Traffic Analysis

The intersection level of service analysis for future plus project conditions uses existing intersection geometrics and the projected AM and PM peak hour traffic volumes shown in **Figure 7. Table 7-1** and **Appendix D** provide the results of the analysis.

Table 7-1: Comparison of Future 2040 (Without Cordova Complex) and Future 2040 Plus Project LOS

Intersection	Control Type	Future Year 2040 Conditions				Future Year 2040 + Project Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	12.9	B	10.9	B	13.7	B	11.1	B
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	11.4	B	9.7	A	11.8	B	9.8	A
3. Dale Evans Parkway / Quarry Road	TWSC	12.7	B	17.5	C	13.3	B	18.7	C
4. Dale Evans Parkway / Johnson Road	AWSC	13.1	B	58.6	F	38.2	E	192.3	F
5. Stoddard Wells Road / Johnson Road	TWSC	20.9	C	307.9	F	71.6	F	982.9 <sup>†</sup>	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	144.1	F	680.9 <sup>†</sup>	F	1,048.1 <sup>†</sup>	F	3,911.3 <sup>†</sup>	F
7. Stoddard Wells Road / Quarry Road	TWSC	20.8	C	15.6	C	20.8	C	15.6	C
8. I-15 Southbound Ramps / Quarry Road	TWSC	11.5	B	14.8	B	12.1	B	19.0	C
9. Johnson Road / Navajo Road	TWSC	10.5	B	10.0	B	10.5	B	10.0	B
10. Dale Evans Parkway / Cordova Road	TWSC	12.6	B	12.6	B	16.8	C	22.3	C

**Notes:**  
<sup>†</sup> Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6<sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle.  
 Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
**Abbreviations:**  
 TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

As presented in **Table 7-1**, the addition of project traffic in this scenario exacerbates the intersection LOS deficiencies at the same intersections impacted by the addition of project traffic to year 2024 conditions: Dale Evans Parkway / Johnson Road, Stoddard Wells Road / Johnson Road, and Stoddard Wells Road / I-15 Northbound Ramps, but with substantially higher delays.

<p>① I-15 SB RAMPS / DALE EVANS PKWY</p>	<p>② I-15 NB RAMPS / DALE EVANS PKWY</p>	<p>③ DALE EVANS PKWY / QUARRY RD</p>	<p>④ DALE EVANS PKWY / JOHNSON RD</p>	<p>⑤ STODDARD WELLS RD / JOHNSON RD</p>

**FIGURE 7: FUTURE 2040 + PROJECT TRAFFIC VOLUMES (W/O CORDOVA COMPLEX) QUARRY COMPLEX APPLE VALLEY**

## 8 BACKGROUND CONDITIONS TRAFFIC ANALYSIS (WITH CORDOVA COMPLEX)

This scenario evaluates impacts due to ambient growth in traffic and traffic generated by other area development projects affecting the study area up to the year 2024 when project construction is expected to be completed and the building occupied. An annual growth rate in traffic of 3.5% represents both ambient growth and other area development projects. Traffic from the proposed project's sister development, the Cordova Complex, is included in this scenario.

### 8.1 Background Conditions Traffic Analysis (With Cordova Complex)

The background conditions intersection level of service analysis uses existing intersection geometrics and the projected AM and PM peak hour traffic volumes from Section 4 plus traffic from the Cordova Complex project. The background and background plus project intersection capacity analysis uses existing intersection geometrics and the projected AM and PM peak hour traffic shown in **Figure 8. Table 8-1** and **Appendix D** provides the results of the analysis.

Table 8-1: Intersection Level of Service for Background Conditions (With Cordova Complex)

Intersection	Control Type	Background Conditions (With Cordova Complex)			
		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	11.2	B	9.5	A
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	10.6	B	9.0	A
3. Dale Evans Parkway / Quarry Road	TWSC	11.6	B	14.6	B
4. Dale Evans Parkway / Johnson Road	AWSC	15.2	C	53.4	E
5. Stoddard Wells Road / Johnson Road	TWSC	14.0	B	68.8	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	362.7	F	249.7	F
7. Stoddard Wells Road / Quarry Road	TWSC	20.2	C	13.7	B
8. I-15 Southbound Ramps / Quarry Road	TWSC	11.4	B	14.0	B
9. Johnson Road / Navajo Road	TWSC	10.4	B	9.9	A
10. Dale Evans Parkway / Cordova Road	TWSC	12.5	B	16.3	C

Notes:  
Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).

Abbreviations:  
TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

As presented in **Table 8-1**, under background conditions with traffic from the Cordova Complex project, the study intersections operate at a LOS C or better in both peak hours except for the three consistently deficient intersections of Dale Evans Parkway / Johnson Road, Stoddard Wells Road / Johnson Road, and Stoddard Wells Road / I-15 Northbound Ramps.

## 9 BACKGROUND PLUS PROJECT CONDITIONS TRAFFIC ANALYSIS (WITH CORDOVA COMPLEX)

### 9.1 Background Plus Project Conditions Traffic Analysis

**Table 9-1** compares the weekday AM and PM peak hour background and background plus project LOS at the study intersections with the inclusion of traffic generated by the Cordova Complex project. The background plus project intersection capacity analysis uses existing intersection geometrics and projected AM and PM peak hour traffic shown in **Figure 8**. The capacity analysis worksheets are in **Appendix D**.

Table 9-1: Comparison of Background (With Cordova Complex) and Background Plus Project LOS

Intersection	Control Type	Background Conditions (With Cordova Complex)				Background + Project Conditions (With Cordova Complex)			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	11.2	B	9.5	A	11.7	B	9.6	A
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	10.6	B	9.0	A	11.0	B	9.1	A
3. Dale Evans Parkway / Quarry Road	TWSC	11.6	B	14.6	B	12.1	B	15.4	C
4. Dale Evans Parkway / Johnson Road	AWSC	15.2	C	53.4	E	89.5	F	204.2	F
5. Stoddard Wells Road / Johnson Road	TWSC	14.0	B	68.8	F	24.6	C	300.5	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	362.7	F	249.7	F	1888.0	F	2710.5	F
7. Stoddard Wells Road / Quarry Road	TWSC	20.2	C	13.7	B	20.2	C	13.7	B
8. I-15 Southbound Ramps / Quarry Road	TWSC	11.4	B	14.0	B	11.9	B	17.6	C
9. Johnson Road / Navajo Road	TWSC	10.4	B	9.9	A	10.4	B	9.9	A
10. Dale Evans Parkway / Cordova Road	TWSC	12.5	B	16.3	C	17.1	C	39.0	E

**Notes:**  
† Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6<sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle.  
Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
**Abbreviations:**  
TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

In this scenario, the addition of project traffic and traffic from the Cordova Complex project further exacerbates the intersection LOS deficiencies at Dale Evans Parkway / Johnson Road, Stoddard Wells Road / Johnson Road, and Stoddard Wells Road / I-15 Northbound Ramps, with exponential increases in the delay for the stop-controlled movements. In addition, LOS deficiencies are anticipated to occur at the intersection of Dale Evans Parkway / Cordova Road during the PM peak hour.

## 10 FUTURE 2040 CONDITIONS TRAFFIC ANALYSIS (WITH CORDOVA COMPLEX)

The future 2040 conditions scenario in this section is the same scenario presented in Section 6 except that traffic from the Cordova Complex project has been added as cumulative development. The cumulative growth in traffic is from forecasts from the San Bernardino County Transportation Analysis Model (SBTAM), but the Cordova Complex traffic has been added manually on top of the SBTAM model projections.

### 10.1 Future 2040 Conditions Traffic Analysis

The intersection capacity analysis for the future year 2040 conditions uses existing intersection geometrics and the projected 2040 AM and PM peak hour traffic volumes developed in Section 6 plus traffic from the Cordova Complex project. **Table 10-1** and **Appendix D** provide the results of the analysis.

Table 10-1: Intersection Level of Service for Future 2040 (With Cordova Complex) Conditions

Intersection	Control Type	Future 2040 Conditions (With Cordova Complex)			
		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	13.8	B	11.1	B
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	11.8	B	9.8	A
3. Dale Evans Parkway / Quarry Road	TWSC	13.4	B	18.7	C
4. Dale Evans Parkway / Johnson Road	AWSC	42.5	E	208.8	F
5. Stoddard Wells Road / Johnson Road	TWSC	73.8	F	989.8	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	804.2	F	1993.4	F
7. Stoddard Wells Road / Quarry Road	TWSC	23.6	C	16.0	C
8. I-15 Southbound Ramps / Quarry Road	TWSC	12.1	B	19.1	C
9. Johnson Road / Navajo Road	TWSC	10.5	B	10.0	B
10. Dale Evans Parkway / Cordova Road	TWSC	18.7	C	29.4	D
<p><u>Notes:</u>  † Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6<sup>th</sup> Edition designates this magnitude of delay simply as &gt;300 seconds per vehicle.  Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).</p> <p><u>Abbreviations:</u>  TWSC = Two-way (or side street) stop control, AWSC = All-way stop control</p>					

The Cordova Complex, as cumulative development, adds nearly 530 peak hour trips to the circulation system. This additional traffic, added to stop controlled movements, causes unstable operations whereas the delay experienced by the stop-controlled approaches increases exponentially. This is caused by a combination of the traffic added to the stop-controlled approaches and an increase in the uncontrolled movements on the major street resulting in fewer acceptable gaps in the flow of traffic in both directions.

## 11 FUTURE 2040 PLUS PROJECT CONDITIONS TRAFFIC ANALYSIS (WITH CORDOVA COMPLEX)

The future 2040 conditions scenario in this section is the same scenario presented in Section 7 where the traffic from the proposed Quarry Complex (project) is added to the future 2040 background conditions which also includes traffic from the Cordova Complex as cumulative development. This final long-range scenario in this study results in the highest traffic volumes at the study intersections than in any previous scenario.

### 11.1 Future 2040 Plus Project Conditions Traffic Analysis

The intersection capacity analysis for the future year 2040 plus project conditions with the addition of traffic from the proposed project uses existing intersection geometrics and the projected AM and PM peak hour traffic shown in **Figure 9. Table 11-1** and **Appendix D** provide the results of the analysis.

Table 11-1: Comparison of Future 2040 (With Cordova Complex) and Future 2040 Plus Project LOS

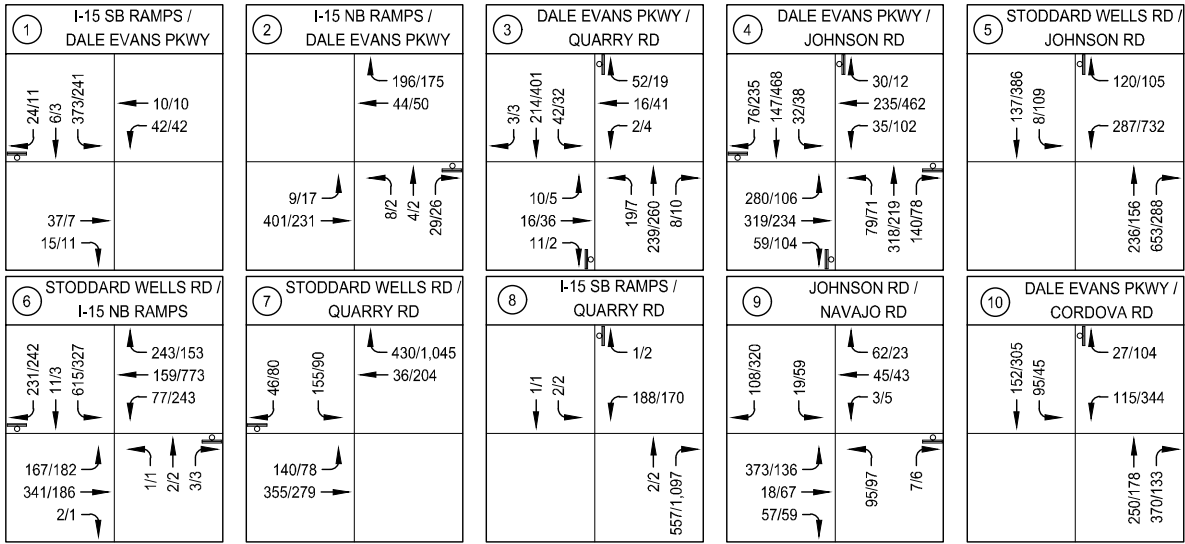

Intersection	Control Type	Future Year 2040 Conditions (With Cordova Complex)				Future Year 2040 + Project Conditions (With Cordova Complex)			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. I-15 Southbound Ramps / Dale Evans Parkway	TWSC	13.8	B	11.1	B	14.9	B	11.3	B
2. I-15 Northbound Ramps / Dale Evans Parkway	TWSC	11.8	B	9.8	A	12.3	B	9.9	A
3. Dale Evans Parkway / Quarry Road	TWSC	13.4	B	18.7	C	14.0	B	20.1	C
4. Dale Evans Parkway / Johnson Road	AWSC	42.5	E	208.8	F	174.4	F	370.8	F
5. Stoddard Wells Road / Johnson Road	TWSC	73.8	F	989.8	F	289.5	F	1818.4	F
6. Stoddard Wells Road / I-15 Northbound Ramps	TWSC	804.2	F	1993.4	F	2241.0	F	11415.4	F
7. Stoddard Wells Road / Quarry Road	TWSC	23.6	C	16.0	C	23.6	C	16.0	C
8. I-15 Southbound Ramps / Quarry Road	TWSC	12.1	B	19.1	C	12.7	B	26.4	D
9. Johnson Road / Navajo Road	TWSC	10.5	B	10.0	B	10.5	B	10.0	B
10. Dale Evans Parkway / Cordova Road	TWSC	18.7	C	29.4	D	35.4	E	152.4	F

**Notes:**  
Shaded cells in the table represent intersection peak hours with LOS deficiencies (LOS E or F).  
† Exponentially high delays, although unrealistic, represent over-saturated conditions. The Highway Capacity Manual 6<sup>th</sup> Edition designates this magnitude of delay simply as >300 seconds per vehicle.

**Abbreviations:**  
TWSC = Two-way (or side street) stop control, AWSC = All-way stop control

When the proposed project's traffic is added to year 2040 background conditions (with Cordova Complex) there is a complete breakdown in the operation of the single lane stop-controlled approaches with spikes in the calculated delay that are not achievable in real life conditions. These theoretical and unrealistically high delays are indications of complete over-saturation of the stop-controlled approaches and the need for traffic control strategies with significantly greater capacity.

The addition of traffic from the proposed project (Quarry Complex) in the future year 2040 conditions (with the Cordova Complex) exacerbates the three consistently impacted intersections of Dale Evans Parkway and Johnson Road, Stoddard Wells Road and Johnson Road, and Stoddard Wells Road and I-15 Northbound Ramps and causes a LOS deficiency at the previously unimpacted intersection of Dale Evans Parkway and Cordova Road. Project traffic causes the PM peak hour LOS at the stop-controlled approach (Cordova Road) to change from a LOS C in the future year 2040 background conditions to a LOS F in future year 2040 background + project conditions.

**FINAL REPORT**  
**October 11, 2023**

REVISED JANUARY 29, 2024

### **Appendix A: Approved Scope Agreement**

NOTE: THE FOLLOWING APPROVED SCOPE AGREEMENT WAS BASED ON A FLOOR AREA OF 1,540,120 SQUARE FEET WHICH WAS SUBSEQUENTLY REVISED TO A FLOOR AREA OF 1,462,342 SQUARE FEET. SOME OF THE INFORMATION IN THE APPROVED SCOPE AGREEMENT WAS REVISED DURING THE PREPARATION OF THE TRAFFIC STUDY AND IS NOW INCONSISTENT BETWEEN THE TWO DOCUMENTS. THE TRAFFIC STUDY CONTAINS THE MOST UP TO DATE INFORMATION. AFFECTED MATERIAL IN THE SCOPE AGREEMENT ARE MARKED AS "SUPERSEDED".

**Subject:** Re: Scoping Agreements, N. Apple Valley

Hi Jessica,

I have reviewed the scoping agreements. I am satisfied that the scope of the analysis covers the potential traffic impacts at and around the project. I have one suggestion, that the ingress and egress driveway(s) be reviewed to determine if they are sufficient to handle the capacity of the projects themselves. Though, the project on Navajo Road appears to have sufficient driveway access, the other project on Cordova could have issues. The Walmart Distribution Center on Johnson Road has experienced congestion at their main driveway at the end of their work day shifts. They have requested that a traffic signal be installed at their main driveway on Johnson Road.

If you would like to discuss please contact me at 760-240-7000 ext. 7352

Thank you,  
Richard

Mr. Pedersen,

Good morning, I hope your week has gone well. This email contains two (2) traffic scoping agreements for our 2 proposed projects located in the Industrial Specific Plan (I-SP); also known as **PA2022-005** and **PA2022-006**. We are anticipating a November '22 formal application submittal date. Therefore, if you find these agreements to be acceptable, please let me know so we may move forward with the traffic study.

[@Daniel Alcayaga,](#)

Will a completed Traffic Study be a requirement to submit our formal application? Could we (*once the above traffic scoping agreements are approved*) submit the application with the items on the checklist and reference on our transmittal letter that "*the traffic study is underway*" and proceed with our formal application? Please advise.

## MEMORANDUM

To: Ramsey Sheehan  
Josh Malhi  
VVLIG Holdings, LLC  
  
c/o Jessica Haughton  
Synergy Consulting  
410 Patti Ann Woods Drive  
Henderson, NV 89002

From: James Daisa, PE  
Senior Transportation Project Manager / Associate

**RE: FOCUSED TRAFFIC IMPACT ANALYSIS SCOPING AGREEMENT FOR THE PROPOSED QUARRY COMPLEX WAREHOUSE DEVELOPMENT (PRE-APPLICATION NO. 2022-006) LOCATED AT THE NEC OF CORDOVA ROAD AND PAWNEE ROAD IN THE TOWN OF APPLE VALLEY, CA (APN: 0463-214-06, 07, 08, & 09)**

This memorandum presents key elements of the proposed Focused Traffic Impact Analysis (TIA Report) scope of work for the above referenced development project. The purpose of this memorandum is to inform the Town of Apple Valley of the TIA's assumptions and methodologies prior to preparing the analysis. We will incorporate any changes specified by the Town, and once approved, this document will serve as our notification to proceed.

The Town of Apple Valley does not have guidelines for conducting intersection level of service deficiency studies, therefore the assumptions and methods described in this document conform to San Bernardino County's Transportation Impact Study Guidelines (July 2019).

With respect to VMT impacts, the Town of Apple Valley adopted Resolution No. 2021-08 in May 2021. This resolution defines the Town's thresholds of significance for project generated VMT and the project's overall effect of VMT at the town-wide scale. The resolution also defines the specific methods for analyzing VMT in Apple Valley.

The Town has not, however, adopted criteria for screening development from requiring a VMT analysis under CEQA. This scoping agreement uses the county's screening criteria to identify if the proposed project requires a VMT analysis as part of its environmental review.

### **A. Project Description**

The proposed project consists of a 1,540,120 square foot speculative warehouse facility located on approximately 78-acres in the north part of the town and within the North Apple Valley Industrial Specific Plan area. The North Apple Valley Industrial Specific Plan is the regulatory plan that governs all development within its boundaries. It designates land uses and provides design standards for the construction of buildings and defines the area's required infrastructure for transportation / circulation, public services, and utilities.

The project site is located at the northeast corner of Cordova Road and Pawnee Road, as illustrated in **Exhibit A**. The site is bounded to the north by the privately-owned Quarry Road and undeveloped land; to the south by Cordova Road and undeveloped land; to the west by unimproved Pawnee Road and

undeveloped land; and to the east by unimproved Flint Road and undeveloped land. The warehouse building includes 126 loading docks on the west side, and 125 loading docks on the east side of the building, 785 automobile parking spaces, and 615 trailer parking spaces within a secured yard. **Exhibit B** shows the proposed site plan.

### Site Access and Circulation Improvements

The initial site plan shows access to the site from Quarry Road with five direct driveways and by improving existing Flint Road and its intersection with Quarry Road to provide access to the south end of the complex. However, Quarry Road is a private road owned and operated by Cemex and is used to convey raw materials extracted from their White Mountain quarry. Further, an active railroad spur runs parallel to the north side of Quarry Road separated from the paved lanes by about 20-feet of dirt shoulder. Cemex has no obligation to grant an access easement to the site.

A recommended access scheme is notated on the site plan shown **Exhibit B** to include the following:

- Extend and improve Cordova Road from Navajo Road to Flint Road. The improvement of Cordova Road from Dale Evans Parkway is assumed for access to the proposed Cordova Complex development, but this Cordova Road improvement may be a shared cost between both developments.
- Driveway access to the Quarry Complex is recommended from the extension of Cordova Road at the south end of the facility and/or from an improved Flint Road between Cordova Road and a recommended turnaround at the north end of Flint Road with no access to Quarry Road.
- Access to the southern end of the facility could also be provided via a driveway on Flint Road as shown in the current site plan.
- The turnaround could provide access to the automobile parking lots and gated truck access to the loading docks at the northern end of the facility as currently shown on the site plan

### **B. Project Trip Generation**

The proposed project is a speculative warehouse where the tenant(s) and function as a potential short term storage facility, distribution center, fulfillment center, etc. is unknown. While the impact analysis needs to reflect a reasonable spectrum of tenant types, there is a risk when estimating trip generation of over or under-estimating traffic. The 11<sup>th</sup> Edition of the Institute of Transportation Engineers' Trip Generation manual contains data for the most common types of warehouse operations with a wide range of rates. **Table 1** summarizes the trip generation rates for warehouse facilities in the 11<sup>th</sup> edition of ITE's Trip Generation.

Table 1: Trip Generation Rates for ITE Land Use Categories of Warehousing

Warehouse Type	ITE Land Use Code	Average Trip Generation Rates for Warehouse Types (Trips Per KSF) (Source: ITE Trip Generation 11th Edition)		
		Average Daily Traffic	AM Peak Hour of Adjacent Street Traffic	PM Peak Hour of Adjacent Street Traffic
		Total (In + Out)	Total (In + Out)	Total (In + Out)
High-Cube Transload and Short-Term Storage Warehouse	154	1.54	0.08	0.10
High-Cube Cold Storage Warehouse	157	2.12	0.11	0.12
High-Cube Fulfillment Center Warehouse - Non-Sort	155	1.81	0.15	0.16
General Warehouse	150	1.71	0.17	0.18
High-Cube Parcel Hub Warehouse	156	4.63	0.70	0.64
High-Cube Fulfillment Center Warehouse - Sort	155	6.44	0.87	1.20
Average of All Warehouse Types		3.04	0.35	0.40
Average Without High-Cube Sort Fulfillment Center		2.36	0.24	0.24

To help select a trip generation rate for the proposed project representative of the range of potential owners/tenants, **Table 1** includes the average of the rates for all warehouse types in the ITE Trip Generation manual and the average of the rates for all warehouse types except High-Cube Fulfillment Sort Facility—the most intensive type of warehouse. The secondary average rate (excluding High-Cube Fulfillment Sort Facility) represents two thirds of the ITE warehouse types and covers a broad range of the tenant types and operations that may occur at the Quarry Complex.

**Table 2** summarizes the estimated trip generation of the proposed project for an average weekday, and weekday AM (7-9 AM) and PM (4-6 PM) peak hours, based on the secondary average rates identified in **Table 1**. The proposed warehouse complex would generate about 3,600 vehicle trips per day and 370 vehicle trips in both the AM and PM peak hours.

It is standard practice to convert vehicle trips to passenger car equivalents (PCEs) for intersection capacity analysis. This conversion reflects the effects of large vehicles on intersection operations both from the physical space a truck occupies but also from their effect on the intersection’s saturation flow rate due to the slower acceleration of trucks.

When converted to PCEs, the Quarry Complex generates about 5,100 daily PCEs, and 519 PCEs in both the AM and PM peak hour.

Table 2: Quarry Complex Project Trip Generation

Land Use	Gross Floor Area (KSF)	Daily	AM Peak Hour of Adjacent Street Traffic			PM Peak Hour of Adjacent Street Traffic		
			In	Out	Total	In	Out	Total
<b>Warehouse</b> (ITE Land Use Categories 150, 154, 155, 156, 157)	1,540.12	Vehicle Trip Generation Rates (Trips per 1,000 Square Feet of Gross Floor Area)						
		2.36	0.18	0.06	0.24	0.07	0.17	0.24
		Total Vehicle Trip Generation						
		3,600	285	85	370	103	266	370
	Mode Share	Project Trip Generation by Vehicle Type						
Passenger Cars (Percent of Total)	74.21%	2,697	211	63	274	77	197	274
2-Axle Trucks (Percent of Total)	4.55%	165	13	4	17	5	12	17
3-Axle Trucks (Percent of Total)	4.18%	152	12	4	15	4	11	15
4-Axle Trucks (Percent of Total)	17.04%	619	48	14	63	18	45	63
	PCE Factor	Project Trip Generation in Passenger Car Equivalents (PCE)						
Passenger Cars	1.0	2,697	211	63	274	77	197	274
2-Axle Trucks	1.5	248	19	6	25	7	18	25
3-Axle Trucks	2.0	304	24	7	31	9	22	31
4 + Axle Trucks	3.0	1,858	145	43	189	53	136	189
<b>Total Passenger Car Equivalents (PCE)</b>		<b>5,107</b>	<b>400</b>	<b>119</b>	<b>519</b>	<b>145</b>	<b>374</b>	<b>519</b>
Notes: KSF = Thousands of Square Feet. AM / PM Peak Hour of Adjacent Street Traffic = Trip generation coinciding with the highest hourly volumes of traffic on the adjacent streets during the AM (7:00 AM and 9:00 AM) and PM (4:00 PM and 6:00 PM) commuter peak periods. Source of trip generation rates: Institute of Transportation Engineers (ITE) Trip Generation (11th Edition). Average rates for land use category 150 (Warehouse). Source of passenger car / truck mode share (percentage of total): South Coast Air Quality Management District High Cube Warehouse Trip Generation Study (2016). Based on data from eight high cube warehouses in the Inland Empire over 1,000,000 square feet in size. The average warehouse building size in the study is 1,364,496 square feet. Passenger Car Equivalents (PCE) factors: Industry standard values utilized in neighboring jurisdictions								

### C. Study Intersections

This focused traffic study evaluates key intersections on routes expected to be used by project traffic to access the site. **Exhibit C** and the list below identify the intersections proposed for inclusion in the study.

1. I-15 Southbound Ramps / Dale Evans Parkway
2. I-15 Northbound Ramps / Dale Evans Parkway
3. Dale Evans Parkway / Quarry Road
4. Dale Evans Parkway / Johnson Road
5. Stoddard Wells Road / Johnson Road
6. Stoddard Wells Road / I-15 Northbound Ramps
7. Stoddard Wells Road / Quarry Road
8. I-15 Southbound Ramps / Quarry Road
9. Johnson Road / Navajo Road
10. Dale Evans Parkway / Cordova Road

Project driveways will be reviewed for required traffic control and the primary truck gated driveways will be analyzed for traffic control, lane geometries, and queuing behind the access gate based on industry standard gate processing time.

All the study intersections are currently side-street stop controlled, or all-way stop-controlled.

### D. Project Trip Distribution and Assignment

Project traffic is distributed by direction separately for automobiles (employees) and trucks. The automobile distribution is based on where the warehouse employees are likely to reside or perform other activities (e.g., concentration of residential neighborhoods and commercial centers). The truck distribution is based on the most direct routes to major roadways and highways trucks are likely to use to access the project and depart for delivery of freight. Project trips are assigned to the area streets that provide the most direct route to the destinations.

**Exhibit D** shows the distribution of project-generated automobile and truck trips to roadways as a percentage by direction and route. The following exhibits show the assignment of project generated traffic at the study intersections. Truck traffic volumes have been converted into passenger car equivalents (PCEs) as required in the San Bernardino County guidelines for intersection capacity analysis.

- **Exhibit E1** and **E2** – Total Project PCE Trips (AM Peak Hour)
- **Exhibit F1** and **F2** – Total Project PCE Trips (PM Peak Hour)

### E. Traffic Analysis Scenarios

The traffic analysis scenarios, consistent with the county's impact analysis guidelines, include:

1. Existing conditions AM (7-9 AM) and PM (4-6 PM)
2. Background conditions (representing the project's opening year of 2024 with growth in background traffic without the project):
  - a. Growth forecasts (based on the estimated combination of the ambient growth in traffic plus traffic generated by nearby, but unidentified, development equaling 3.5% annually).
3. Project conditions
  - a. Project traffic in PCE's added to background condition forecasts
4. Future year 2040 conditions (representing the regional planning horizon of 2040 without project)<sup>1</sup>
  - a. Forecasts derived from the San Bernardino Transportation Analysis Model (SBTAM) representing buildout of the General Plan
  - b. If required by the Town, the future year 2040 conditions will include proposed development within and affecting the study area.

---

<sup>1</sup> Caltrans typically requires that cumulative traffic forecasts represent a 20-year design life for infrastructure. If required, the cumulative scenario will be linearly extrapolated to the year 2044.

5. Future year 2040 plus project
  - a. Project traffic in PCE's added to the forecasts developed for future year 2040 conditions

#### **F. Level of Service Standard**

The Town's General Plan policy on level of service is to maintain a level of service (LOS) D in the AM and PM peak hours.

#### **G. Analyses Included in Traffic Impact Analysis**

- Intersection capacity analyses will be conducted using SYNCHRO software based on the unsignalized methods in the 6<sup>th</sup> Edition of the Highway Capacity Manual.
- A traffic signal warrant analysis (warrant 3 – peak hour) will be conducted at public intersections found to operate at LOS E or F under any project scenario.
- A queuing analysis will be conducted at intersections with high left turn volumes but currently do not provide left turn storage lanes. The 95<sup>th</sup> percentile queue will inform the roadway improvement design process. See Section C regarding project driveways.

#### **H. Vehicle Miles of Travel (VMT) Screening**

The Town of Apple Valley has adopted thresholds of significance for potential VMT impacts of development as well as the specific methodology for analyzing VMT impacts (Resolution No. 2021-08 - Adopting Thresholds of Significance for Vehicle Miles Traveled (VMT) Under the California Environmental Quality Act (CEQA)). According to the Town's resolution a development project would result in a significant project-generated VMT impact if either of the following conditions are satisfied:

1. The baseline (2022) project generated VMT per service population (population plus employees) exceeds the Town of Apple Valley General Plan Buildout VMT per service population, or
2. The cumulative (2040-44) project generated VMT per service population exceeds the Town of Apple Valley General Plan Buildout VMT per service population

The Town, however, has not adopted criteria for screening projects from requiring a VMT analysis. The county and nearby municipalities have adopted such criteria consistent with the technical advisories published by the Governor's Office of Planning and Research. In this scoping agreement, the county's screening criteria are applied to the proposed project for the Town's consideration.

Applying the county's VMT screening criteria results in demonstrating that the proposed project requires a detailed VMT analysis under CEQA.

Screening criteria includes:

1. The project serves the local community and has the potential to reduce VMT by providing services that capture trips locally (the proposed Quarry Complex is not a locally serving type of land use).
2. The project is located within a Transit Priority Area (the proposed Quarry Complex is not located in a TPA).
3. The project generates less than 110 daily vehicle trips (the proposed Quarry Complex generates more than 110 daily trips).
4. The project is in a low VMT generating traffic analysis zone (the proposed Quarry Complex is not located in a low VMT generating zone in baseline year 2022, see **Figure 1**).

The proposed project does not meet the county's four screening criteria and therefore is required to conduct a VMT analysis to identify potentially significant impacts under CEQA.

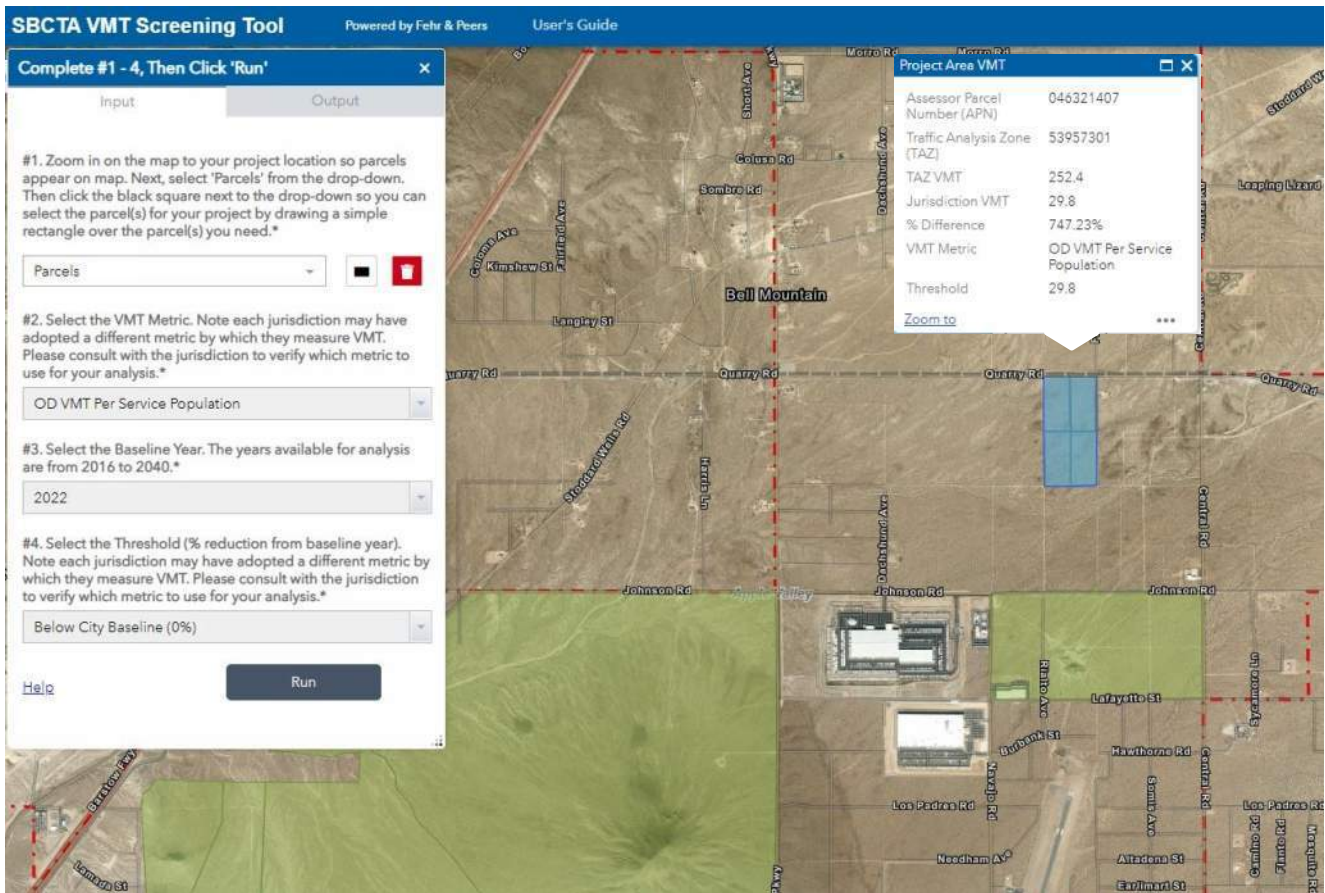

Figure 1: low VMT generating traffic analysis zones are highlighted in green. The traffic analysis zone in which the project is located is forecast to generate VMT that exceeds the jurisdictional threshold based on allowed General Plan land uses. Therefore, the proposed project is not located in a low VMT generating area.

If you have any questions or comments, please feel free to contact me at (909) 912-7304.

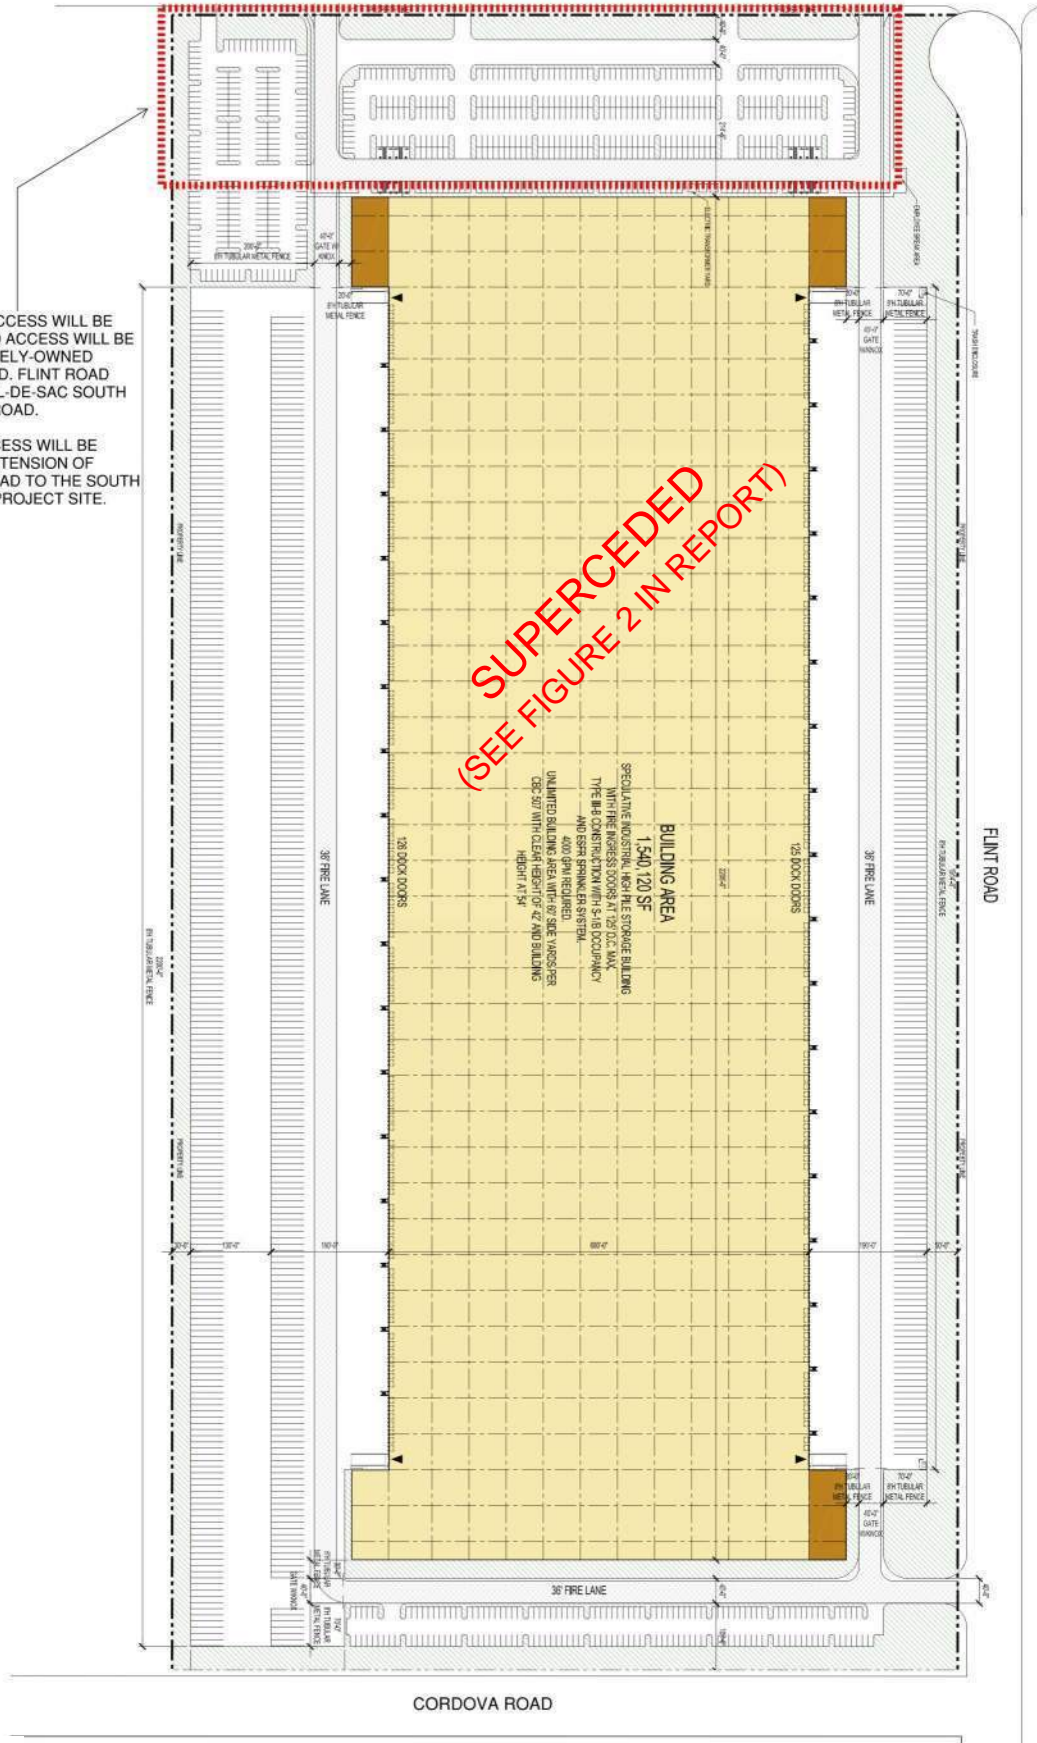

Attachments:

1. Exhibit A – Quarry Complex Vicinity Map
2. Exhibit B – Project Site Plan
3. Exhibit C – Study Intersections
4. Exhibit D – Project Automobile and Truck Trip Distribution
5. Exhibit E1 – Total Project PCE Trips (AM Peak Hour)
6. Exhibit E2 – Total Project PCE Trips (AM Peak Hour) (continued)
7. Exhibit F1 – Total Project PCE Trips (PM Peak Hour)
8. Exhibit F2 – Total Project PCE Trips (PM Peak Hour) (continued)

NOTE: SITE ACCESS WILL BE MODIFIED. NO ACCESS WILL BE FROM PRIVATELY-OWNED QUARRY ROAD. FLINT ROAD WILL BE A CUL-DE-SAC SOUTH OF QUARRY ROAD.

PRIMARY ACCESS WILL BE FROM THE EXTENSION OF CORDOVA ROAD TO THE SOUTH END OF THE PROJECT SITE.

### **Appendix E: Vehicle Miles Traveled (VMT) Analysis**

NOTE: THE VMT ANALYSIS IS BASED ON A FLOOR AREA OF 1,540,120 SQUARE FEET WHICH WAS SUBSEQUENTLY REVISED TO A FLOOR AREA OF 1,462,342 SQUARE FEET. AS A RESULT, THE VMT ANALYSIS REMAINS VALID BUT CONSERVATIVE. SINCE THERE WAS NO SIGNIFICANT IMPACT UNDER THE LARGER FLOOR AREA VMT ANALYSIS, THE CURRENT PROPOSED QUARRY COMPLEX (1,462,342 SQUARE FEET) ALSO RESULTS IN LESS THAN SIGNIFICANT TRANSPORTATION IMPACTS.

## MEMORANDUM

<b>Date:</b>	December 07, 2022	<b>GTS:</b> 221106.1
<b>To:</b>	James M. Daisa, DEA	
<b>From:</b>	Rawad Hani, GTS	
<b>Subject:</b>	<b>Vehicle Miles Traveled (VMT) Analysis Quarry Complex Warehouse, Town of Apple Valley, CA</b>	

This memorandum describes the development of vehicle miles traveled (VMT) analysis for the proposed Quarry Complex Warehouse in the Town of Apple Valley (City), CA. The project is located at the northeast corner of Cordova Road and Pawnee Road (within the North Apple Valley Industrial Specific Plan area) in the Town of Apple Valley. The project proposes development of approximately 78-acres into 1,540,120 square foot (SF) speculative warehouse. This VMT analysis evaluated the project using the 2016 and 2040 model years obtained from the San Bernardino County Transportation Authority (SBCTA).

### Background

On December 28, 2018, the California Office of Administrative Law cleared the revised California Environmental Quality Act (CEQA) guidelines for use. Among the changes to the guidelines was removal of vehicle delay and level of service from consideration under CEQA. With the adopted guidelines, transportation impacts are to be evaluated based on a project's effect on vehicle miles traveled (VMT).

### Methodology

The project VMT analysis was conducted using the Town of Apple Valley Resolution Number 2021-08, "A Resolution of the City Council of the Town of Apple Valley, California, Adopting Thresholds of Significance for Vehicle Miles Traveled (VMT) Under the California Environmental Quality Act (CEQA)" adopted during the Town Council Meeting, May 11, 2021. A full VMT analysis was conducted using San Bernardino County Transportation Analysis Model (SBTAM). The guidelines recommend use of VMT per service population to evaluate land use projects. The project would have a significant impact if the project VMT per service population is greater than Town of Apple Valley's General Plan Buildout VMT per service population.

SBTAM model is a socioeconomic data-based model and so the project land uses were converted into model employment categories using conversion factors from SCAG's "Employment Density Study Summary Report – dated October 31, 2001". The land use conversion yielded a total of 730 employees as shown in Table 1 which was used as input for the model runs.

**Table 1: Quarry Complex Warehouse – Employment Estimates**

Land Use Type	Square Footage (SF)	SF/Employee *	Total Employees
Warehouse	1,540,120	2,111	730
<b>Total</b>	<b>1,540,120</b>		<b>730</b>

*Source: SCAG Employment Density Study Summary Report, October 31, 2001*

## VMT Analysis

Both baseline (2016) and horizon year (2040) model runs were used to estimate project’s VMT impacts. SBTAM socioeconomic databases for the scenarios were updated with the project land use to calculate project VMT. Typically, project VMT is calculated by isolating the project in a new TAZ or multiple TAZs depending on the diversity of project land uses and project size. Since, SBTAM does not allow addition of new TAZs, one TAZ was borrowed for this project. The project TAZ was utilized to calculate project specific VMT per service population.

No project specific network modifications were conducted for the model scenarios. Full model runs with feedback loops were conducted for all of the project scenarios. It should be noted that the project land use was included in the model as additional land use in the cumulative (2040) scenario and no shifting of land use from other TAZs was used. In that regard, the cumulative VMT analysis can be considered as a conservative estimate.

The project’s Origin/Destination (OD) VMT per service population can be used to evaluate project impact according to the guidelines. Origin-destination matrix outputs were used as trips and the trip lengths were derived from the skimming step to estimate OD VMT. OD matrix outputs include vehicle trips and hence no conversion for auto occupancy was applied. The trip length or distance was obtained using the model outputs from the “Skimming” step. The model skim outputs include peak and off-peak skim matrices by mode, similar to trip outputs from the model. OD VMT was estimated for both peak and off-peak and added together to estimate the total daily VMT for the project.

Based on the guidelines, the project would constitute a significant impact if the project OD VMT per service population for base and cumulative scenarios is greater than Town of Apple Valley General Plan Buildout OD VMT per service population. The Town of Apple Valley General Plan Buildout OD VMT per service population was obtained from SBCTA VMT Screening Tool.

Table 2 below shows the project VMT metrics for both baseline (2016) and cumulative (2040) conditions along with the regional VMT thresholds.

**Table 2: Project VMT Analysis**

<b>2016</b>	<b>Quarry Complex Warehouse (project)</b>	<b>Town of Apple Valley General Plan Buildout (Threshold) *</b>
Population	0	
Employment	730	
Service Population	730	
OD VMT	23,496	
OD VMT per service population	32.2	33.2

<b>2040</b>	<b>Quarry Complex Warehouse (project)</b>	<b>Town of Apple Valley General Plan Buildout (Threshold) *</b>
Population	0	
Employment	730	
Service Population	730	
OD VMT	22,310	
OD VMT per service population	30.6	33.2

\* Threshold value obtained from SBCTA VMT Screening Tool: <https://www.gosbcta.com/vmtscreening>

Table 3 illustrates the project’s effect on VMT. The project’s effect on VMT is a comparison of roadway VMT within Town of Apple Valley for both “With project” and “Without project” conditions.

**Table 3: Roadway VMT within Town of Apple Valley**

<b>2016</b>	<b>With Project</b>	<b>Without Project</b>
Roadway VMT	854,590	847,823
Service population	91,843	91,113
VMT per service population	9.3	9.3

<b>2040</b>	<b>With Project</b>	<b>Without Project</b>
Roadway VMT	1,367,015	1,362,981
Service population	127,536	126,806
VMT per service population	10.7	10.7

**Conclusion**

Based on the VMT analysis as shown in above Tables 2 and 3, the project doesn’t constitute a significant impact for both “project generated VMT” and “project’s effect on VMT”.
