

Piercy Creek Coho Habitat Restoration Project (Project ID: 1730024) 2023

Introduction:

Grantee will improve the geomorphic function and ecological complexity in Piercy Creek for salmonid habitat through a process-based approach. A total of 32 Large Wood (LW) structures containing 97 pieces of LW, including 44 key pieces will be constructed along 1.03 miles of Piercy Creek. The roughness elements added to the stream for this project will provide winter velocity refugia, increase the pool and flatwater shelter and depths, sort substrate, and increase the frequency of flood-plain and side channel inundation.

The Grantee shall not proceed with on the ground implementation until all necessary permits, consultations, and/or Notice to Proceed are secured. All habitat improvement(s) will follow techniques in the *California Salmonid Stream Habitat Restoration Manual Volume I Section VII*, <https://www.wildlife.ca.gov/Grants/FRGP/Guidance>

Does the project involve the construction of beaver analogs?

Yes or No

Is the project located in a tidally influenced [California coastal zone](#)?

Yes or No

Project Description:

Location:

This project is located on Piercy Creek, a tributary to the South Fork Eel River, tributary to the Eel River. The project is near the town of Piercy, CA, and is located in Township 05 South, Range 03 East, Section 35 of the Piercy 7.5 Minute U.S. Geological Survey Quadrangle. The downstream extent of the project is 500 feet upstream of the confluence of Piercy Creek and the SF Eel River. The upstream end of the reach is 1.03 miles upstream from the confluence of Piercy Creek and the SF Eel River. Project coordinates are: 39.97106 North latitude, -123.80871 West longitude.

Project Set Up:

Grantee and/or the California Conservation Corps (CCC) will move LW into place utilizing wire rope rigging techniques, grip hoists, and other hand tools.

Grantee and/or CCC will also anchor and/or pin the features according to designs, conduct forest floor rehab, and install small wood as instructed.

Qualified subcontractors (to be determined) will conduct environmental compliance surveys, fell approved redwood and Douglas-fir trees at feature locations, plant redwood seedlings and perform aquatic species surveys and monitoring required for mitigation.

Materials:

All materials will be purchased by applicant. Some logs will be donated by landowner. Anchoring hardware including 1" Rebar, 5/8" Wire Rope, 5/8" Clamps, Nuts and Plates (Washers) will be used to anchor logs to live trees, bedrock and other logs. Hilti epoxy glue is used to attach wire rope to bedrock.

Conifer logs are the primary elements of the habitat features.

Conifer trees will be used to plant areas disturbed by project activities and areas within the project reach that are lacking canopy cover.

Tasks:

Task 1: Project Oversight, Monitoring, and Environmental Compliance

Project oversight and administrative activities will be conducted by the Grantee, including but not limited to, acquiring permits, subcontracts, access agreements, invoicing, data collection, water quality monitoring and reporting. Qualified subcontractor will conduct a site assessment for aquatic species and conduct on-site monitoring during construction as needed. Qualified subcontractors will conduct archeological, botanical and paleontological surveys within the Project reach.

Task 2: Large Wood Selection and Structure Construction

Site construction on 32 large wood features will involve cutting down or uprooting trees accomplished by qualified subcontractors. The licensed equipment operator will place logs into the stream in accordance with design plans. When necessary, CCC Corpsmembers will move LW into position. The project will utilize living riparian trees as anchors by wedging the logs between them where feasible. CCC Corpsmembers will anchor the sites according to design and anchoring specifications. Corpsmembers will use one inch threaded rebar to anchor logs to mature riparian trees and other logs. Holes will be drilled through the logs and their anchor trees. One inch rebar will be pounded through the log and secured with nuts and washers. Site construction, wood placement, and anchoring will be in accordance with the CDFW, California Salmonid Stream Habitat Restoration Manual, Section VII (Flosi et al. 2010). Erosion control methods will be employed by the CCC as required at each structure and along equipment corridors to eliminate the possibility of sediment transport to the stream. To address concerns over invasive species this project will follow the CDFW Aquatic Invasive Species Decontamination Protocol.

Task 3: Riparian Planting

The tree planting subcontractor will plant 400 redwood seedlings, with a primary focus in areas lacking sufficient conifer cover or riparian vegetation.

Deliverables:

A total of 32 Large Wood (LW) structures containing 97 pieces of LW, including 44 key pieces will be constructed along 1.03 miles of Piercy Creek.

Timelines:

June 15 through October 31 of the years 2024, 2025 and 2026, Grantee will install large wood features within approved project reach. Erosion control will be installed as project features are completed.

Riparian planting will occur from December through April annually.

Additional Requirements:

The Grantee will not proceed with on the ground implementation until all necessary permits and consultations are secured. Work in flowing streams is restricted per the United States Army Corp of Engineers (USACE) Regional General Permit. Actual project start and end dates, within this timeframe, are at the discretion of the CDFW.

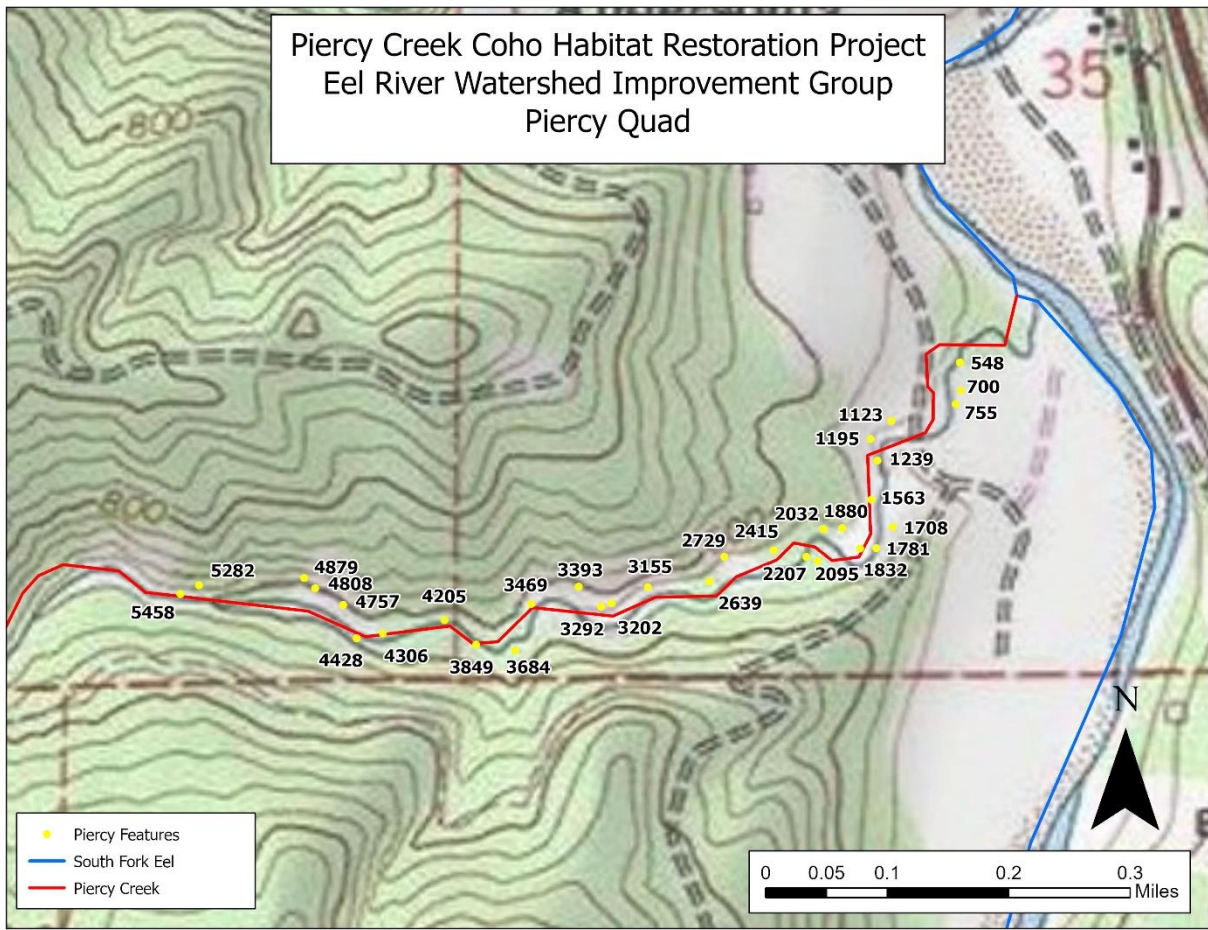

No equipment maintenance will be performed within or near the stream channel where pollutants (such as petroleum products) from the equipment may enter the channel via rainfall or runoff. Appropriate spill containment devices (e.g., oil absorbent pads, tarpaulins) will be used when refueling equipment. All equipment will be removed from the streambed and flood plain areas at the end of each workday.

All equipment and gear will be brushed with a stiff brush prior to leaving each stretch of stream to avoid the transport of aquatic invasive species (AIS). When transporting traps out of the area, each numbered trap will be bagged in its own bag to avoid cross contamination during transport in and out of the work area. All crew members will decontaminate equipment and shoes for AIS according to the standards detailed in the CDFW Aquatic Invasive Species Decontamination Protocol.

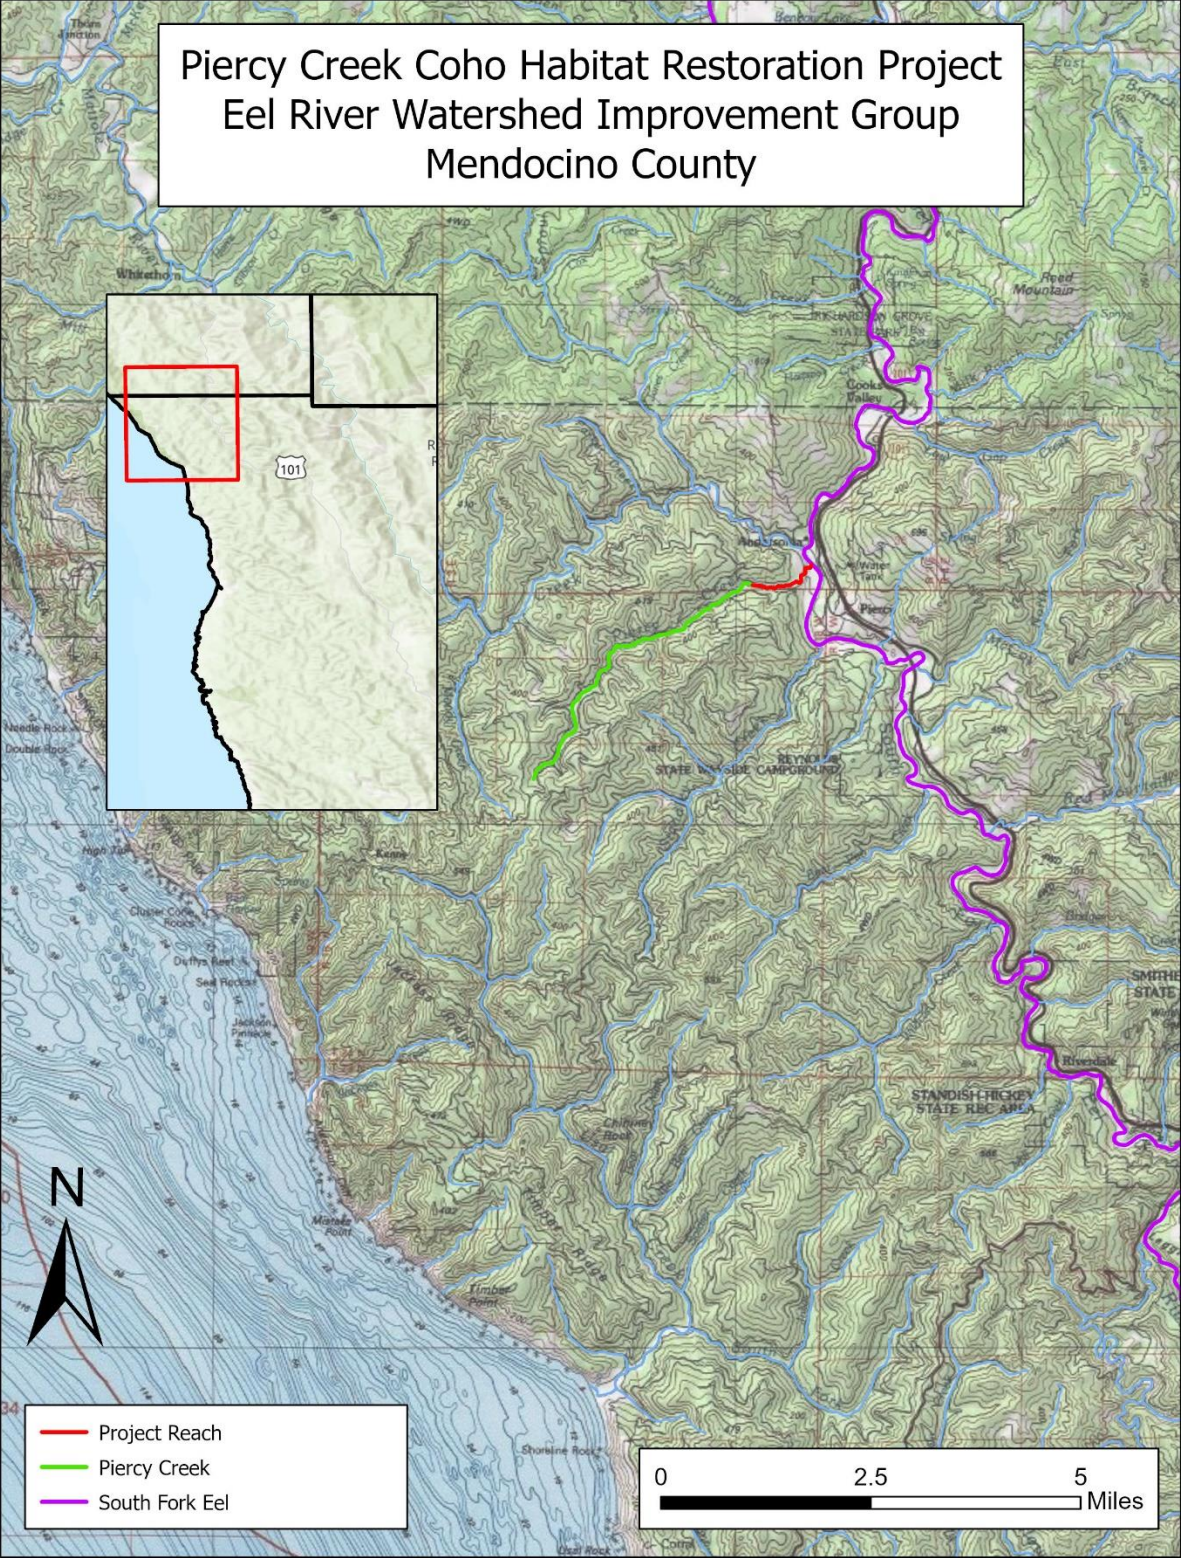

During project activities, all trash that may attract predators will be properly contained, removed from the work site, and disposed of regularly. Following construction, all trash and construction debris will be removed from work areas.

All habitat improvements will follow techniques described in the California Salmonids Stream Habitat Restoration Manual, Volume I and Volume II. Final structure design and placement will be determined by field consultation between the Grantee and the CDFW Personnel.
