Re: Phase II Subsurface Investigation Letter Report  
Vacant 13-parcel Assemblage, Southeast Corner of Ramona Expressway & Webster Avenue,  
Perris, California

Dear Mr. Arellano:

Roux Associates, Inc. (Roux) has prepared this Phase II Subsurface Investigation Letter Report (Phase II Report) for Duke Realty Corporation (Duke, Client), to summarize the findings of the shallow soil sampling conducted at the approximately 29.21-acre, 13-parcel assemblage of land located at the southeast corner of Ramona Expressway and Webster Avenue, City of Perris, Riverside County, California (Site; Figure 1). The scope of work, as presented in Roux's a proposal dated, June 10, 2022, was developed to address the following recognized environmental condition (REC) identified for the Site in Roux's Phase I Environmental Site Assessment (ESA) report, dated July 15, 2022.

- **REC 1 - Historical Agricultural Usage.** Potential pesticide impacts to shallow soils from agricultural (row crop) uses from as early as 1938 through approximately 1978.

To address the identified REC, Roux collected a total of 40 discreet shallow soil samples from 10 uniform grids placed across the Site to establish baseline conditions and identify potential impacts in the shallow subsurface associated with the potential pesticide use. The 40 samples were combined into 10 composite samples in general accordance with the California Department of Toxic Substances Control (DTSC) *Interim Guidance for Sampling Agricultural Properties*, dated August 7, 2008. Additionally, for quality assurance/quality control (QA/QC) purposes, one duplicate composite sample was collected from a randomly selected grid at the Site.

## BACKGROUND

The Site consists of approximately 29 acres of vacant land and is bound by Morgan Street to the south, Brennan Avenue to the east, and Ramona Expressway to the north. The western portion of the Site (located east of Webster Avenue) consists of vacant, former agricultural land (row crops). The eastern portion of the Site (located west of Brennan Avenue) consists of partially vacant, former agricultural land, and commercial land, currently utilized for storage of containers and miscellaneous equipment by Starcrest Products of California. The Site has been used for agricultural purposes as early as 1938 until at least 1978. At the time of Roux' Phase II investigation, the Site was primarily undeveloped vacant land with some portions used for storage.

## METHODS OF INVESTIGATION

The following sections summarize the investigation methods used during soil sampling events, including pre-field activities, sampling locations and procedures, and field observations.

### ***Pre-Field Activities***

Prior to the start of field activities, Roux prepared a Site-specific Health and Safety Plan (HASP) to ensure worker safety. In addition to containing information regarding Roux's standard safety practices, the HASP contained information about potential hazards related to Site activities and provided the locations and contact information of nearby emergency services. Field workers acknowledged their familiarity with all safety procedures and indicated their intent to follow the HASP by signing the HASP after the tailgate safety meeting, which took place at the beginning of each field day. At least 48 hours prior to fieldwork, the Site boundary was marked in white paint and Underground Service Alert (USA) was notified of the intended work.

### ***Shallow Soil Sampling***

On June 20, 2022, a total of 44 soil samples (40 primary and 4 duplicates) were collected from 10 uniform grids (1 through 10) across the Site at depths of 0.5 feet below ground surface (bgs), as shown in Figure 2. Sampling equipment was cleaned in a solution of laboratory-grade detergent and rinsed with distilled water prior to sample collection at each quadrant location.

Four soil samples were collected with a trowel from each uniform grid (1-A, 1-B, 1-C, 1-D, etc.) and placed into laboratory-provided glass jars. A total of 44 soil samples were composited into 11 composite samples (1-COMP through 10-COMP and 10-DUP-COMP) by the laboratory. Soil samples were labeled with unique sample identifiers, placed on ice, and transported under proper chain-of-custody procedures to Enthalpy Analytical (Enthalpy) of Orange, California, a California-certified laboratory, for analysis. All composite soil samples were analyzed for organochlorine pesticides (OCPs) by USEPA Method 8081A. One discrete soil sample from each uniform grid was selected for analysis of select metals (total lead and arsenic) by USEPA Method 6010B.

## RESULTS

Analytical results were compared to the United States Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs) and/or DTSC Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note Number 3 DTSC-modified Screening Levels (DTSC SLs) for commercial/industrial soil. In addition, select metal concentrations were compared with regional background levels, as presented in *Background Concentrations of Trace and Major Elements in California Soils*<sup>1</sup> and *Determination of a Southern California Regional Background Arsenic Concentration in Soil*<sup>2</sup>. Summaries of analytical results are provided in Tables 1 and 2. The analytical laboratory reports are provided in Appendix A.

---

<sup>1</sup> Bradford, G. R., Change, A. C., Page, A. L., Bakhtar, D., Frampton, J. A., and Wright, H. Background Concentrations of Trace and Major Elements in California Soils. March 1996.

<sup>2</sup> Chernoff, G., Bosan, W., and Oudiz, D. and DTSC, Determination of a Southern California Regional Background Arsenic Concentration in Soil. March 2008.

### ***Arsenic in Soil***

Arsenic was detected above the laboratory reporting limit in all 11 soil samples at concentrations ranging from 1.4 to 2.5 milligrams per kilogram (mg/kg). Arsenic, however, was not detected above the regional background concentration of 12 mg/kg in any sample (Table 1).

### ***Lead in Soil***

Lead was detected above the laboratory reporting limit in all 11 samples at concentrations ranging from 3.3 to 7.8 mg/kg, well below the DTSC SL for commercial/industrial soil of 500 mg/kg (Table 1).

### ***Organochlorine Pesticides in Soil***

Two OCP constituents, dichlorodiphenyldichloroethylene (4,4'-DDE) and dichlorodiphenyltrichloroethane (4,4'-DDT), were reported at concentrations above the laboratory reporting limits in all 11 composite soil samples (Table 2). No detections exceeded the applicable SLs of 6,200 microgram per kilogram (ug/kg) for 4,4'-DDE or 7,100 ug/kg for 4,4'-DDT.

## **CONCLUSIONS**

The results of the Phase II subsurface investigation indicate that shallow soil OCP and select metals concentrations are below conservative regulatory thresholds for commercial/industrial land use and/or regional background concentrations. The REC identified in the Phase I ESA has been addressed and no further investigation is recommended at this time.

## **LIMITATIONS**

This Phase II is limited in scope to identify (not fully delineate) potential impacts in the subsurface. No investigation is thorough enough to describe all conditions of interest at a given site. If conditions are not identified during the Phase II, such a finding should not be construed as a guarantee of the absence of such conditions at the Site, but rather as the result of the services performed within the scope, limitations, and cost of the work performed. We will not be able to report on, or accurately predict, events that may change the Site conditions after the described services are performed. This Report summarizes the results of recently completed shallow soil sampling conducted at the Site.

## **CLOSING**

Should you have any questions or require any further information regarding the contents of this Report, please do not hesitate to contact Justin Allen by telephone at 714-904-4867 or by email at [jallen@rouxinc.com](mailto:jallen@rouxinc.com) or Mauricio Escobar by telephone at 310-879-4920 or by email at [mescobar@rouxinc.com](mailto:mescobar@rouxinc.com).

Sincerely,

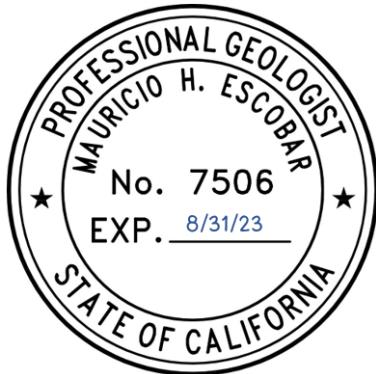

**ROUX ASSOCIATES, INC.**

Justin Allen

**ENTHALPY**  
ANALYTICAL  
SAMPLE ACCEPTANCE CHECKLIST

**Section 1**

Client: Roux  
Date Received: 6/21/22

Project: Duke Perris

Sampler's Name Present:  Yes  No

**Section 2**

Sample(s) received in a cooler?  Yes, How many? 1  No (skip section 2) Sample Temp (°C) (No Cooler): \_\_\_\_\_

Sample Temp (°C), One from each cooler: #1: 5.9 #2: \_\_\_\_\_ #3: \_\_\_\_\_ #4: \_\_\_\_\_

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information:

**Section 3**

Was the cooler packed with:  Ice  Ice Packs  Bubble Wrap  Styrofoam  
 Paper  None  Other \_\_\_\_\_

Cooler Temp (°C): #1: 5.2 #2: \_\_\_\_\_ #3: \_\_\_\_\_ #4: \_\_\_\_\_

**Section 4**

	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

**Section 5 Explanations/Comments**
**Section 6**

For discrepancies, how was the Project Manager notified?  Verbal PM Initials: \_\_\_\_\_ Date/Time: \_\_\_\_\_  
 Email (email sent to/on): \_\_\_\_\_ / \_\_\_\_\_

Project Manager's response:

Completed By: Gage Date: 6/21/22
