INDUSTRIAL OUTDOOR VENTURES (MA2123) FOCUSED TRAFFIC ASSESSMENT

Urban Crossroads, Inc. is pleased to provide the following Focused Traffic Assessment for the Industrial Outdoor Ventures development (**Project**), which is located north of Riverside Drive and west of Wineville Avenue in the City of Jurupa Valley.

PROJECT OVERVIEW

It is our understanding that the Project is to consist of the development of a 25,000 square foot general light industrial building with 5,616 square feet of retail/office space (total of 30,616 square feet) on a 6.88-acre site (or 299,718 square feet). There is also a large portion of the site that is identified for uncovered outdoor sales area that could be converted to accommodate additional parking spaces. Assuming that the site could be developed with a floor-to-area-ratio (**FAR**) of 25% (or 0.25), the proposed Project is assumed to consist of up to 74,930 square feet of general light industrial use and 5,616 square feet of retail/office space. The square footage of the general light industrial use has been determined assuming an FAR of 0.25 on the site area of 299,718 square feet. The preliminary site plan for the proposed Project is shown on Exhibit 1. It is anticipated that the Project will be operational by Year 2024. Access to the Project site will be provided to Riverside Drive via 3 driveways.

EXHIBIT 1: PRELIMINARY SITE PLAN**TRIP GENERATION**

Trip generation represents the amount of traffic that is attracted and produced by a development and is based upon the specific land uses planned for a given project. The trip generation rates used for this analysis are based upon information collected by the Institute of Transportation Engineers (ITE) as provided in their [Trip Generation Manual](#) (11th Edition, 2021). Trip generation rates for the Project are shown in Table 1. For purposes of the traffic analysis, the following ITE land use codes and vehicle mixes will be utilized:

- ITE land use code 110 (General Light Industrial) has been used to derive site specific trip generation estimates for up to 74,930 square feet of the proposed Project. A light industrial facility is a free-standing facility devoted to a single use that has an emphasis on activities other than manufacturing. Typically, there is minimum office space. The vehicle mix has been obtained from the ITE's [Trip Generation Manual](#). The truck percentages were further broken down by axle type per the following South Coast Air Quality Management District (SCAQMD) recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.
- ITE land use code 822 (Strip Retail) is an integrated group of commercial establishments that is planned, developed, owned, and managed as a unit. Each surveyed site has less than 40,000 square feet of gross leasable area.

² TSF = thousand square feet

³ Truck Mix: South Coast Air Quality Management District’s (SCAQMD) recommended truck mix, by axle type.

Normalized % - Without Cold Storage: 16.7% 2-Axle trucks, 20.7% 3-Axle trucks, 62.6% 4-Axle trucks.

⁴ Trip generation rates based on the fitted curve regression equation.

Passenger Car Equivalent (**PCE**) factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+-axles). PCEs allow the typical “real-world” mix of vehicle types to be represented as a single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses. The PCE factors are consistent with the recommended PCE factors in the City’s Guidelines. The PCE factors utilized for the trip generation estimates are consistent with other traffic studies in throughout the City.

The trip generation summary for the proposed Project is also shown on Table 2 in actual vehicles and on Table 3 in PCE. As shown on Table 2, the proposed Project is anticipated to generate a total of 840 two-way trips per day (rounded up to the nearest 10 from 834) with 74 AM peak hour trips and 100 PM peak hour trips. The PCE trip generation shown in Table 3 will be utilized for the purposes of the operations analyses consistent with the City’s Guidelines. As shown on Table 3, the Project is anticipated to generate 870 two-way PCE trips per day (rounded up to the nearest 10 from 864) with 76 PCE AM peak hour trips and 102 PCE PM peak hour trips.

The Project trip generation assumptions would also cover any potential expansion of the site in the future since the potential future development has been considered for the purposes of this traffic assessment. This assessment could be utilized as long as the future development is consistent with the industrial zoning and does not generate substantially greater traffic volumes than that disclosed in Table 2 and Table 3.

TRIP DISTRIBUTION

The Project trip distribution represents the directional orientation of traffic to and from the Project site. Trip distribution is the process of identifying the probable destinations, directions or traffic routes that will be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered, to identify the route where the Project traffic would distribute. In addition, truck routes for neighboring agencies have been taken into consideration in the development of the trip distribution patterns for heavy trucks. Exhibits 2 and 3 show the Project truck and passenger car trip distribution patterns, respectively.

EXHIBIT 2: PROJECT (TRUCKS) TRIP DISTRIBUTION

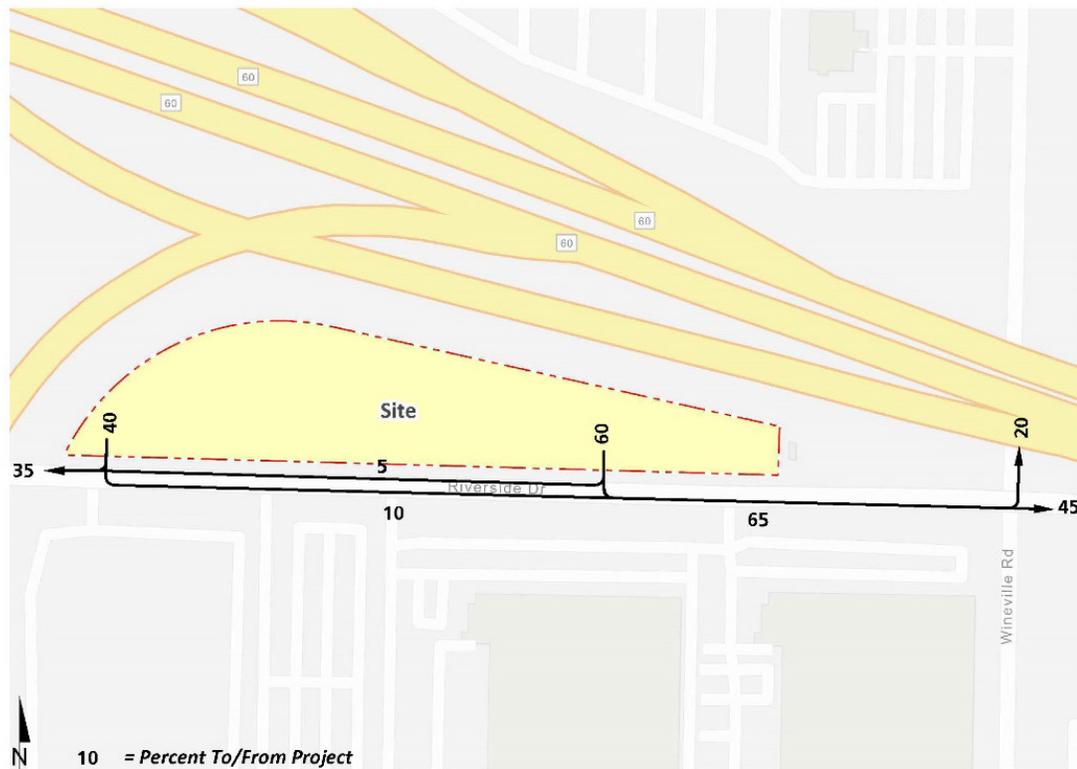

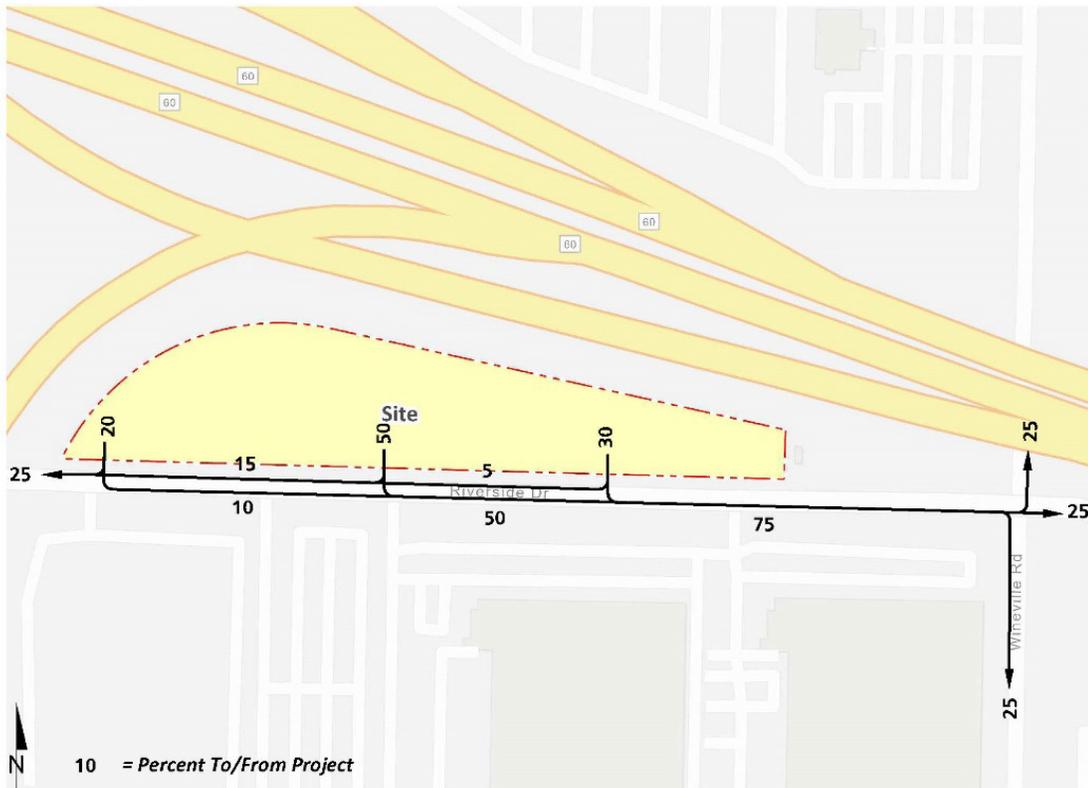

EXHIBIT 3: PROJECT (PASSENGER CARS) TRIP DISTRIBUTION

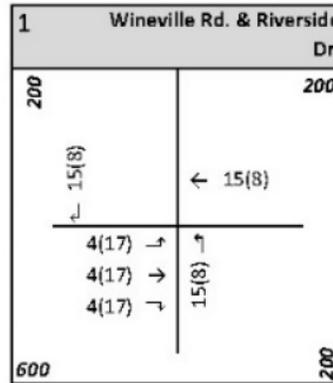

PROJECT TRIP ASSIGNMENT

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project only ADT and peak hour intersection turning movement volumes at the intersection of Wineville Road and Riverside Drive are shown on Exhibit 4. ADTs and peak hour volumes on Exhibit 4 are expressed in actual vehicles (AM total volume = 57; PM total volume = 75).

It is our understanding that the City has completed a traffic signal warrant analysis for the intersection of Wineville Road and Riverside Drive. The Project’s trip assignment shown on Exhibit 4 for the intersection of Wineville Road and Riverside Drive will be used by City staff to determine a fair share contribution towards the future signalization and lane improvements planned for the intersection of Wineville Road and Riverside Drive. The 2022 traffic counts collected at the intersection of Wineville Road and Riverside Drive are provided in Attachment A.

EXHIBIT 4: PROJECT ONLY VOLUMES

SITE ACCESS AND ROADWAY IMPROVEMENTS

The following recommendations are based on the minimum improvements needed to accommodate site access for the proposed Project. The driveway intersection recommendations and roadway improvements are summarized below.

- All Project driveways will need to be designed and constructed to ensure adequate sight distance.
- Riverside Drive will be designed to include a median two-way left-turn lane and wide enough through lanes to accommodate truck turn movements into and out of the site on both sides of the street without encroaching into the path of any oncoming traffic.
- Riverside Drive is an east-west oriented roadway. The ultimate cross-section of Riverside Drive will be reviewed by City staff to determine what a practical cross-section is given the width restrictions under the I-15 Freeway overcrossing and the large steel utility poles along the south side of Riverside Drive, in addition to the number of lanes being provided on the Ontario side of Riverside Drive west of the I-15 Freeway Corridor.
 - Riverside Drive is designated as a Major Highway (118-foot right-of-way) along the Project’s frontage per the City’s General Plan (2017) Mobility Element (and identified as a Primary Corridor). A Major Highway accommodates up to four lanes of travel with two lanes in each direction, 8-foot shoulders, and a 12-foot painted median.
 - Riverside Drive is designated as a Minor Arterial per The Ontario Plan (2050 TOP) with up to six lanes.

VEHICLE MILES TRAVELED (VMT)

Vehicle miles traveled assessment and associated mitigation measure will be provided under separate cover.
