A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Quarterly Update: Inactive Facility - Landuse Covenant. International Metals Ecko, Ltd (Ecko) was a dealer in scrap metals, mainly non-ferrous metals. They also had an onsite facility to reclaim lead from used lead-acid batteries. The lead reclaiming facility operations were ceased in June 1985. Ecko submitted a RCRA Part A Permit Application in May 1984. A Part B permit application was submitted in August 1986 for treatment and storage of hazardous waste onsite in four solid waste management units (SWMUs). A RCRA Facility Assessment (RFA) was completed in June 1998 to identify and evaluate solid waste management units (SWMUs) and other areas of concern at the facility. In June 1998, Ecko submitted a closure certification report for proper closure of the SWMUs. The closure verification was attained in June 2000. A covenant to restrict use of the property was recorded on June 5, 2001.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Alternate Address: 2435 E. WASHINGTON BLVD.
Alternate City,St,Zip: LOS ANGELES, CA 90021
Background Info: The historic usage of the site is a railroad maintenance yard. Chlorinated solvents TCE and PCE have been identified in the soil along the border of the site with 2425 E. Washington Blvd. Possible pathways for contamination migration are soil and groundwater. Possible receptors are on-site workers and the population which may drink contaminated drinking water extracted from nearby drinking wells. Some shallow soil gas sampling has been performed on-site in 1995. This survey was concentrated along the border of 2455 E. Washington Blvd. Results showed decreasing contaminant concentrations with increasing distance from 2425 E. Washington Blvd. property boundary. No source was identified at the Amtrak property.
Not reported
An approximately 50-acres site located in an industrial/commercial area of Los Angeles, one-half mile south of the Santa Monica freeway. The site is also known as the Redondo Junction Facility. Various buildings are located on the property for support and maintenance of trains. Rail Spurs run throughout the property in a general north-south direction. The Los Angeles river is located directly to the east. Previous owner of the property from 1885 to 1976 was Atchison, Topeka, and Sante Fe Railroad Corporation.
Not reported
Investigation of this site is key to determining the extent of soil gas and groundwater contamination found on the adjacent property 2425 E. Washington Boulevard, known as State Surplus Parcel (SSL-497). A draft VCA was prepared by DTSC for recovery of oversight costs. A limited subsurface soil gas survey is proposed as a first step to

 Site History: The Site is comprised of the former Cal Doran facility, which consists of two parcels of land totaling approximately 9.76 acres. It is located along the southern side of East Washington Boulevard, just east of Soto Street, and includes one block of Lugo Street, in the City and County of Los Angeles, California. The Cal Doran facility has been closed since early 2006, and the buildings have been demolished. Bodycote Thermal Processing, Inc. (Bodycote) owns two parcels of land totaling approximately 9.76 acres, located along the southern side of East Washington Boulevard and east side of Soto Street, and including one block of Lugo Street, in the City of Los Angeles, California. The subject site (Site) is also known as the Former Cal Doran Facility. Volatile organic compounds (VOC) used during previous operations at the Site (currently vacant) have been released to soil and groundwater. Subsurface investigations conducted at the Site have detected VOCs throughout the Site in the vapor phase, in soil to depths of 230 feet below ground surface (bgs), and in the underlying groundwater. The underlying groundwater, first encountered at approximately at 238 feet bgs, flows toward the northwest with a calculated gradient of 0.003 foot per foot (ft/ft). The most recent reported trichloroethene (TCE) concentrations in groundwater monitoring wells MW-3, MW-4 and MW-7 (a new well) are
