1 INTRODUCTION

Ninyo & Moore was retained by ICF International (herein referred to as the client) to perform a Phase I Environmental Site Assessment (ESA) on behalf of the City of Los Angeles (the user) for a property comprising two Assessor's Parcel Numbers (APNs) (5168-022-900 and -901), located in the City of Los Angeles, California (hereinafter referred to as the site). The site is planned for improvements to the asphalt plant to create a more functional environment for reclaimed asphalt pavement production. Proposed improvements include a new canopy, improved utility connections, new office space with restrooms, modernized reclaimed asphalt pavement processing equipment, new truck weighing scales, new concrete pavement, and the removal of old concrete structures. The following sections discuss the purpose, the involved parties, the scope of services, and the limitations and exceptions associated with the Phase I ESA.

1.1 Purpose

In accordance with the ASTM International (ASTM) Standard Practice for ESAs on Commercial Real Estate E1527-13, the objective of the Phase I ESA is to evaluate for recognized environmental conditions (RECs). The term recognized environmental conditions means "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions."

Identification of RECs fall into the following three categories: existing RECs (as defined above); Historical RECs (HRECs); or Controlled RECs (CRECs). HRECs and CRECs are defined as follows:

- **HREC** – An HREC is defined as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations [AULs], institutional controls, or engineering controls)." An HREC is an environmental condition, which in the past, would have been considered a REC, but currently may or may not be considered a REC. An example of an HREC may be a former gas station where a release of gasoline had occurred, but the site was cleaned up to an unrestricted land use standard.
- **CREC** – A CREC is defined as a "recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by a regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, AULs, institutional controls, or engineering controls)." An example of a CREC could be a former gas station where a release of gasoline has been cleaned up to a commercial use standard, but does not meet unrestricted residential cleanup criteria.

1.2 Scope of Services

Ninyo & Moore's scope of services for this Phase I ESA included the activities listed below.

- Reviewed physical setting and background information.
- Performed a site reconnaissance.
- Reviewed federal, state, tribal, and local regulatory agency databases for the site and for properties located within a specified radius of the site.
- Reviewed reasonably ascertainable local regulatory agency files for the site, as applicable.
- Reviewed historical information for the site, such as historical aerial photographs, historical topographic maps, reverse street directories, Sanborn fire insurance maps, and building department records.
- Reviewed user-provided information, as available.
- Interviewed the property owner representative regarding the environmental status of the site, if available.
- Prepared this Phase I ESA report, summarizing findings and providing opinions and conclusions regarding RECs at the site.

1.3 Significant Assumptions

Ninyo & Moore assumes the information sources from the third-party environmental database vendor, regulatory agencies, and interviewees utilized for this report provided adequate and accurate information. Other significant assumptions were not made during the preparation of this report.

1.4 Limitations and Exceptions

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard of care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information or has questions regarding the content, interpretations presented, or completeness of this document.

The findings, opinions, and conclusions are based on an analysis of the observed site conditions and the referenced literature. It should be understood that the conditions of a site could change with time as a result of natural processes or the activities of man at the subject site or nearby

sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control. Ninyo & Moore cannot warrant or guarantee that not finding indicators of any particular hazardous material means that this particular hazardous material or any other hazardous materials do not exist on the site. Additional research, including invasive testing, can reduce the uncertainty, but no techniques now commonly employed can eliminate the uncertainty altogether.

1.5 Special Terms and Conditions

This study did not include an evaluation of geotechnical conditions or potential geologic hazards. In addition, unless otherwise indicated in this report, this Phase I ESA does not include analysis of the following, which is not intended to be all-inclusive: asbestos-containing materials, methane gas, radon, lead-based paint, lead-containing surfaces, lead in drinking water, underground pipelines, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, mold, or high voltage power lines. Asbestos and lead surveys were conducted by Ninyo & Moore and reported separately.

1.6 User Reliance

This report may be relied upon by, and is intended exclusively for, the client (and its assigns) and the user. Any use or reuse of the findings, opinions, and/or conclusions of this report by parties other than these is undertaken at said parties' sole risk.

1.7 Involved Parties

Mr. David Kelly, Project Environmental Scientist with Ninyo & Moore, performed the site reconnaissance on August 17, 2021. Ms. Sonia Cisneros Ortiz performed historical research and document review in the month of August 2021. Mr. Patrick Cullip, Senior Project Engineer, and Mr. John Jay Roberts, Principal Geologist, performed quality review.

3 USER-PROVIDED INFORMATION

Ninyo & Moore provided a user questionnaire to be filled out by the City of Los Angeles. However, to date, a completed user questionnaire has not been filled out and returned to Ninyo & Moore. This is considered a data gap. If information from the completed user questionnaire alters the findings and conclusions of this report, an addendum will be prepared.

4 RECORDS REVIEW

The following sections summarize records reviewed for the site.

4.1 Standard Environmental Record Source - Environmental Database Search

A computerized, environmental information database search was performed by Environmental Data Resources, Inc. (EDR) on August 20, 2021. The search included federal, state, tribal, and local databases. A summary of the environmental databases searched, their corresponding search radii, and number of noted properties of potential environmental concern, is presented in the EDR report (Appendix C). The review was conducted to evaluate whether the site or properties within the site vicinity have been documented as having experienced significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects.

4.1.1 Geocoded (Mapped) Listings

Properties within 1 mile of the site were listed on various regulatory agency databases. The following table lists databases that were searched and the number of listings (excluding non-geocoded [unmapped] properties).

According to the EDR Certified Sanborn Map report (Section 4.4.2), three addresses (2601, 2611, and 2611 ½ E. 25th Street) were historically associated with the site. One of the three historical site addresses (2611 East 25th Street) was listed under the Waste Management Unit Database (WMUDS)/Solid Waste Assessment Test (SWAT) database. According to the database, the site was listed as a historical landfill/solid waste disposal site in 1958 and 1967 as Los Angeles City Public Works. Information concerning the type or quantity of solid waste handled at the site was not provided. This listing is further discussed in Section 4.2.7.

Off-site properties/facilities listed in the database report were evaluated for their potential to impact soil and/or groundwater at the site. To supplement the information in the EDR report, the State Water Resources Control Board (SWRCB) GeoTracker online database, Department of Toxic Substances Control (DTSC) EnviroStor website, and South Coast Air Quality Management District (SCAQMD) Facility Information Detail (FIND) website were reviewed as applicable. Information from the EDR database report and supplemental sources is included in the facilities of potential concern summaries below. The following properties/facilities were interpreted to represent a potential environmental concern to the site, based on their proximity to the site, the nature of the database on which they are listed, and/or the assumed direction of groundwater flow in the site vicinity (south to southwest).

According to the EDR report, a 550-gallon underground storage tank was present at the facility and was used to store regular unleaded gasoline. The date the UST was installed at this facility is unknown. This facility is not listed on any other online regulatory database and additional information was not available for this facility. Based on the direction and lack of reported release, this facility is not considered an environmental concern.</p>

According to information provided on the SWRCB's GeoTracker online database, rendering activities and trucking operations have occurred at the facility. In July and August of 1992, upon removal of a diesel UST and a hydraulic oil UST, soil beneath the tanks were found to be impacted with stoddard solvents at a depth of approximately 12 feet below ground surface (bgs). On October 8, 1992 a Limited Subsurface Investigation (LSI) was performed to formally evaluate the nature and extent of impacted soil at the property. Based on the results from the LSI, the Los Angeles City Fire Department approved the remediation plan consisting of excavating slot trenches to remove the impacted soil. Nineteen soil samples were collected from the bottoms and sidewalls of the slot excavations and from the impacted stockpiles. Analytical results from the excavation soil samples showed stoddard solvent concentrations of 979 milligrams per kilogram (mg/kg) and 1,414 mg/kg at depths of 21 and 16 feet, respectively. Diesel was detected at a concentration of 2,236 mg/kg, and xylenes were detected at 0.11 mg/kg at a depth of 16 feet bgs, respectively. Stoddard solvent impacted soil was excavated from a localized area of approximately 20 feet by 20 feet, and ranging from 22 to 29 feet in depth. Excavation areas were backfilled with slurry to 12 feet bgs based on non-detect concentrations reported in confirmation soil samples. The facility received case closure on January 12, 2012. Based on the regulatory status and media affected, this facility is not considered an environmental concern to the site.</p> <p>In 2020, the facility was reported to have generated air emissions of approximately 14.241 tons per year of carbon monoxide, 1.022 tons per year of volatile organic compounds (VOCs), 0.28 to 2 tons per year of reactive organic gases, 1.511 tons per year of nitrogen oxides (NOx), 0.111 tons per year of sulfur oxides (SOx), and 1.406 tons per year of particulate matter, and toxic pollutants.</p>

The impacted soil was over-excavated and confirmation soil samples were collected for analysis. Results of the soil confirmation samples were non-detect (ND). Excavated impacted soil was disposed of off the property. A No Further Action (NFA) letter was issued by the City of Vernon Environmental Health Department. This facility received one violation in 2019 for deficient BMP implementation. Based on the lack of reported release, distance, and direction, this facility is not considered an environmental concern to the site.

Information was not provided regarding the type and source of the release. In 1997, Dames & Moore conducted a Phase I site assessment and Phase II subsurface investigation to evaluate the potential for soil and groundwater contamination resulting from property and nearby operations. Seven soil borings were sampled to depth of approximately 15 to 21 feet bgs and analyzed for total petroleum hydrocarbons (TPH), VOCs, and heavy metals. TPH C₁₁ and above carbon ranges were detected at concentrations ranging from 12 to 1,131 mg/kg. VOCs were not detected in any of the samples above the laboratory reporting limits. Metals concentrations detected at the facility were considered to be consistent with typical naturally occurring background levels at the property, with the exception of lead. Lead was detected at concentrations ranging from 35.3 to 415 mg/kg in five shallow samples collected at depths ranging from 1 to 5 ft bgs. Based on the results of this investigation, the RWQCB granted NFA for subsurface investigation and remediation in August 2002. ACTA NORTH – Permanent Exclusive Easement 2630 Washington Blvd.	639 feet northeast	CA CPS-SLIC CA CERS	According to information provided by EDR and SWRCB’s GeoTracker online database, this facility was listed as a closed cleanup program site. Information was not provided regarding the type and source of the release. In 1997, Tetra Tech, Inc. conducted a Phase I site assessment and Phase II subsurface investigation to evaluate the potential for soil and groundwater contamination resulting from property and nearby operations. One soil boring was sampled to depth of approximately 21 feet bgs and analyzed for TPH, VOCs, and heavy metals. TPH and VOCs were not detected above their respective laboratory detection limits. Metals concentrations detected at the facility were considered to be consistent with typical naturally occurring background levels at the property. Based on the results of this investigation, the RWQCB granted NFA for subsurface investigation and remediation in September 2002. Based on the lack of reported contaminants and regulatory status, this facility is not considered an environmental concern to the site.

Notes:
- Distances and direction measured on GeoTracker.
- A complete description of each database is provided in the EDR Report (Appendix C).

It is our opinion that there is a low likelihood that the remaining listings for off-site properties in the database report represent a REC to the site at the current time. This opinion is based on one or more of the following factors:

- The nature of the database(s) on which the property is listed, and/or because the property was not listed on a database that reports unauthorized releases of hazardous substances;
- Reported regulatory agency status (i.e., case closed);
- Reported nature of the case (i.e., soil contamination only);
- Reported distance of the property from the site; and/or
- Location of the property in relation to the site with respect to topography or expected groundwater flow direction (south to southwest).

4.1.2 Non-Geocoded (Unmapped) Listings

Five unmapped properties, due to poor or inadequate address information, were in the EDR report. Unmapped properties are shown by EDR as Orphan Sites. Based on the general location information provided for these properties, the types of databases on which they are listed, and/or the approximate distance from the site, Ninyo & Moore concluded it is unlikely the environmental integrity of the site has been impacted by these unmapped properties and are not considered a REC or indicators of a REC for the site.

4.2 Additional Environmental Record Sources

According to the ASTM Standard, “if the property or any of the adjoining properties is identified on one or more of the standard environmental record sources, pertinent regulatory files and/or records associated with the listing should be reviewed.” There is no current address associated with the site. Regulatory agency files were requested for the historical site addresses 2601, 2611, and 2611 ½ East 25th Street, and adjoining properties located at 2601 East 24th Street and 2626 East 25th Street. The review of regulatory agency records for the site is discussed in the following sections. Regulatory records for the site are provided in Appendix D.

4.2.1 Department of Toxic Substances Control (DTSC)

According to representatives of the DTSC Chatsworth and Cypress Offices, files were not found for the historical site addresses of 2601, 2611, and 2611 ½ East 25th Street. An additional request for records was made for adjoining properties located at 2601 East 24th Street and 2626 East 25th Street; however, no response was received for these addresses to date. This is considered a data gap. If information from the DTSC alters the findings and conclusions of this report, an addendum will be prepared.

Other on-site equipment listed for this address included a direct flame afterburner, order control unit, aqueous urea storage tank no controls, rendered products storage tank, toxics venting and chemical scrubbers. This facility received 76 notices of violations from 1989 to 2021 and 20 notices to comply from 2001 to 2020. Each notice achieved compliance. This information is not considered a REC.

4.2.8 Online Regulatory Databases

Online regulatory databases were reviewed by Ninyo & Moore to supplement the environmental database search conducted by EDR. The following is a summary of information.

Table 4 – Online Regulatory Databases

Online Database/Website	Findings
California Department of Toxic Substances Control (DTSC) EnviroStor	The site was not listed on the EnviroStor website. Eight properties within 1,000 feet were listed on the EnviroStor website. Properties of potential concern are discussed in Section 4.1.1.
State Water Resources Control Board (SWRCB) GeoTracker	The site was not listed on the GeoTracker website. Six properties within 1,000 feet were listed on the GeoTracker website. Properties of potential concern are discussed in Section 4.1.1.
State of California, Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) Well Finder website	Site is not within the administrative boundaries of an oil field. Oil wells were not depicted within one mile of the site.
Los Angeles Zoning Information and Map Access System (ZIMAS)	Site was not listed in a Methane Zone or Methane Buffer Zone.
California Department of Resources Recycling and Recovery (CalRecycle)	Ninyo & Moore reviewed the CalRecycle website for additional information concerning the former land use as a landfill/solid waste disposal site. According to CalRecycle, the site was not listed on their database. The former site use as a landfill is further discussed in Section 4.4.1.

4.3 Physical Setting

The following table summarizes topographic, geologic, and hydrogeologic conditions in the vicinity of the site, based upon the referenced documents review and/or our visual reconnaissance of the site.

Table 5 – Physical Setting

Physical Settings	Reference	Summary
Topography	A	The site elevation ranges from approximately 210 to 220 feet above mean sea level. The regional topography slopes gently to the south.
Site Geology	B	The site is located in the northeastern portion of the Downey Plain, which comprises the central portion of the Coastal Plain of Los Angeles and is located in the Peninsular Range Geomorphic Province. The upper portion of the stratigraphy beneath the subject property consists of Recent Alluvium, the upper Pleistocene Lakewood Formation, and the lower Pleistocene San Pedro Formation, consisting of interbedded layers of gravel, sand, silt, and clay.
Surface Water	A	The nearest surface water is the Los Angeles River, approximately 0.1 mile east of the site.
Groundwater	B, C	The site is located in the Coastal Plain of Los Angeles - Central Groundwater Basin. The Coastal Plain of Los Angeles - Central Groundwater Basin has existing beneficial uses for municipal, industrial service, industrial process, and agricultural supplies. Groundwater measurement data for the site was not available. According to a Phase II Subsurface Investigation report (Fulcrum, 2020) for a nearby property located at 2305 South Santa Fe Avenue (approximately 1,500 feet west-northwest of the site), information from the Los Angeles County Department of Public Works was used to provide an indication of depth to groundwater and groundwater flow direction at the site. Depth to groundwater measured in public groundwater well (Well 2779AD) was measured at 219 feet bgs in October 2012. Groundwater gradient at the site is expected to be generally to the south or southwest, based on the local topography and regional aquifer flow direction.

4.4 Site Historical Use Information

Ninyo & Moore conducted a historical record search for the site. This included a review of city directories, historical fire insurance maps, historical aerial photographs, topographic maps, and building department records. The following sections summarize information obtained from the historical sources utilized for this assessment.

4.4.1 City Directories

Available street directories for the site and site vicinity from 1924 through 2015 were provided by EDR. The historical site address of 2611 East 25th Street and the adjoining property at 2626 East 25th Street were listed in city directories between 1924 and 2015 under various industrial facilities. The historical site address of 2611 East 25th Street was listed as the City of Los Angeles Bureau of Sanitation, Refuse Collection Division and the Central District Yard in 1958 and 1967. The adjoining property at 2626 East 25th Street was primarily listed as Peterson Rendering Manufacturing Co., Inc. from 1957 to 1991 and as Darling Delaware of Los Angeles from 1990 to 2015. Other listings for the adjoining property include Frank Nelson Junk in 1924, L.A. Fertilizer Co. in 1958, Santa Fe Lease, Inc. in 1962 and 1967, Embassy Leasing Co. in 1971, B & H Processing Co. in 1986, and Frailich Commodities, Inc. in 1999.

The EDR City Directory Report is provided in Appendix E. The historical use of the site as a refuse collection and disposal site is considered a REC, due to the potential for improper disposal of chemicals at the site.

4.4.2 Sanborn® Fire Insurance Maps

Sanborn® fire insurance maps were provided by EDR for the years 1920, 1949, 1953, 1955, 1956, 1960, 1963, 1967, 1968, and 1970. Sanborn® fire insurance maps displayed the site and adjoining areas to the north, south, east and west. The following table provides a summary of the site and adjoining properties.

Table 6 – Sanborn Fire Insurance Maps

Year	Site	Site Vicinity
1920	The site was developed with a vacant shed in the central portion of the site. A railroad spur passed through the northeast corner of the site.	Harriet Street and East 25 th Street (called Edwin Street) were developed in their current configurations. A fertilizer company was developed adjoining to the east. Dwellings were developed to the south. A paint manufacturing building was developed to the west. A railroad spur was developed north of the site, along Richfield Oil Co. (approximately 200 feet north-northwest of the site), including several ASTs and pump houses.

Table 6 – Sanborn Fire Insurance Maps

Year	Site	Site Vicinity
1949	The site was listed as City of Los Angeles, Refuse Collection Division. The eastern portion of the site was developed with the current concrete ramp and metal canopy (labeled as run-off salvage garbage unloading shed). A garbage loading platform was developed in the central portion of the site, with rail spurs developed in the northern and northwest portions of the site. Office buildings were also developed in the western and southwestern portions of the site.	Peterson Manufacturing Company (rendering plant) was developed adjoining to the east and southeast, with an auto repair station developed approximately 80 feet southeast of the site. A sausage casing company was developed to the south of the site. A machine shop was developed to the west of the site. Several welding and machine shops were developed to the southwest.
1953 1955 1956 1963 1967 1968 1970	The garbage loading platform was removed by 1953.	Several ASTs at the Richfield Oil Co. were removed. Additional ASTs were developed at the Peterson Mfg Co. to the east. A foundry was developed to the west.

As stated in Section 4.4.1, the historical use of the site as a refuse collection and disposal site is considered a REC. According to the 1920 to 1970 Sanborn maps, historical addresses associated with the site include 2601, 2611, and 2611 ½ East 25th Street. EDR-provided Sanborn® fire insurance maps are included in Appendix E.

By 1920, a railroad right-of-way (ROW) crossed the northeast corner of the site. The central and northern portions of the site were developed with railroad ROWs by 1949. Equipment and materials often historically used in association with railroads, such as lead, ballast materials containing steel slag with potential regulated heavy metal concentrations, total petroleum hydrocarbon fuel leaks, polychlorinated biphenyl (PCB) leaks, and railroad lubricators utilizing petroleum products, may have been used within the site. In addition, herbicides were often historically applied on railroad ROWs to prevent the growth of vegetation between railroad tracks. The potential presence of residual chemicals from a railroad ROW on the site is considered a REC.

4.4.3 Historical Aerial Photographs

Historical aerial photographs were provided by EDR and reviewed online using Google Earth for select years from 1923 through 2016. A listing of the photographs reviewed and summary of notable observations from the photograph review are provided in the table below. EDR-provided aerial photographs are included in Appendix E.

The site and vicinity were used for industrial purposes from 1923 to present day. By 1923, four structures were developed on the northeastern, central, and southern portions of the site, and a railroad ROW was present to the north of the site, and two other railroad ROWs traversed the northwestern portion of the site and the northeastern corner of the site. The current concrete ramp and metal canopy structure were developed in the eastern portion of the site by 1952. By 1989, the historical buildings on the site were demolished. The site currently consists of a concrete platform with a steel canopy and supports located along the eastern portion of the site, and a storage room located below the concrete platform.

4.4.4 Building Department Records

Available building department records were provided by the City of Los Angeles on August 30, 2021. The historical research focused on review of permits that documented conditions that constitute evidence of RECs associated with the site (such as underground storage tanks [USTs], boiler tanks, wells, ASTs, etc.). According to building permits reviewed, the historical site address 2611 East 25th Street has been occupied with an office, locker and storage/utility

building, two vehicle sheds, garbage loading ramp, and garbage loading shed between 1922 to 1988. Applications to demolish the remaining structures at 2611 East 25th Street was issued in 1988. Review of building permit records did not indicate evidence of RECs associated with the site. Building permits are provided in Appendix E.

4.4.5 Historical Topographic Maps

Historical topographic maps were provided by EDR. A summary of the maps is provided in the table below and they are included in Appendix E.

Date	Summary
1894 1896 1898	The site is depicted as vacant land. Adjacent to the north of the site are railroad tracks, which travel east of the site. The Los Angeles River is present to the east of the site.
1925 1952	The site vicinity was developed into an industrial area. A railroad ROW traverses the northwestern portion of the site. Four buildings were developed on the site by 1925. The site and vicinity were shaded for urban development by 1952 (structures not depicted on the site or vicinity).
1964 1972 1981 1991 2012	East 24 th Street is present at the northwestern corner of the site and East 25 th Street is present to the south of the site.

4.5 Previous Reports

Previous reports were not provided to Ninyo & Moore for the site.

4.6 Adjoining Property History

The adjoining properties to the north, south, east and west are primarily industrial properties. The railroad ROW was adjacent to the north of the site from 1896 to present. From 1925 to 1953, railroad ROWs have traversed the northwestern portion and northeastern corner of the site. A rendering plant was developed adjoining to the east by 1949.

5 SITE RECONNAISSANCE

The objective of the site reconnaissance was to obtain information indicating the potential for RECs in connection with the site. Mr. David Kelly conducted the reconnaissance on August 16, 2021, and met with Shun Yu Zhang of the Los Angeles Department of Public Works. A site plan is provided as Figure 2 and photographic documentation is provided in Appendix A.

5.1 Methodology and Limiting Conditions

The site reconnaissance consisted of walking on public right of ways to observe potential RECs, if any, in association with the site or nearby vicinity.

5.2 General Site Setting

At the time of the site reconnaissance, the site was occupied by the City of Los Angeles with a reclaimed asphalt pavement production plant. Several containers with coolant, grease, and hydraulic oil were observed inside the storage room at the site. A pole-mounted transformer was observed adjacent on the southwestern corner of the site; however, signs of release of PCB-containing oils were not observed near the transformer. During the site reconnaissance, Mr. Zhang was not able to provide any information about the site during the site reconnaissance. Mr. Zhang was not aware of past environmental issues with the site.

5.3 Adjoining Property Observations

Adjoining properties were observed from the site and from publicly accessible vantage points (e.g., streets, sidewalks) during the site reconnaissance. The properties adjoining to the site are as follows and as depicted on Figure 2:

- **North:** Railroad tracks.
- **East:** Industrial property, DARPRO (2643 E. 25th Street).
- **South:** Industrial properties, including S&H Packing & Season Produce (2590 East 25th Street) and DARPRO (2626 E. 25th Street).
- **West:** Railroad tracks, followed by Harriet Street, MOR-CAST Aluminum Foundry (2561 Harriet St), and City Fibers Inc. (2545 E. 25th Street).
- **Middle:** Between the northern and southern portions of the site (APNs: 5168-022-900 and -901, respectively) is an alleyway.

5.4 Site Observations

Ninyo & Moore evaluated the site for evidence of the following potential environmental concerns:

Conditions	Observed or Noted	Comments
Hazardous Substances/Petroleum Products	X	One small quantity (less than 5-gallon) container of grease, and 11 small quantity (less than 5-gallon) containers of hydraulic oil were observed inside the storage room.
Waste Generation/Storage/Disposal		Not observed
ASTs	X	Approximately 9'x9' size metal storage tank observed inside concrete storage tank. Unknown contents or age of storage tank.
Potential Evidence of USTs		Not observed
Potential PCB-Containing Equipment	X	Pole mounted transformer observed adjacent southwest to the site. Signs of release of PCBs not observed.
Chemical/Petroleum Odors	X	Foul odors observed on the site, potentially emanating from the adjoining DARPRO property. Notifications posted on the outside of the DARPRO property were observed which state that DARPRO has to comply with South Coast Air Quality Management District's air emission standards and regulations.

Table 9 – Site Observations Summary

6 INTERVIEWS

Interviews were conducted by Ninyo & Moore with the objective of obtaining information regarding potential RECs in connection with the site. Interviews with present owners, operators, and/or occupants of the site, as well as other knowledgeable parties as appropriate, is mandated by ASTM E 1527-13. A summary of the interviews conducted is provided in the table below.

Table 10 – Interviews

Representative	Summary
Property Owner	To date, Ninyo & Moore has not received a completed owner questionnaire from the property owner, the City of Los Angeles. This is considered a data gap. If information from the completed owner questionnaire alters the findings and conclusions of this report, an addendum will be prepared.
Key Site Manager	Mr. Shun Zhang of the City of Los Angeles Department of Public Works was not able to provide any information about the site during the site reconnaissance. Mr. Zhang was not aware of past environmental issues with the site, including underground storage tanks, or spills of hazardous waste.
Past Owners	Past ownership entities were not made available to Ninyo & Moore during the preparation of this ESA. Therefore, interviews with past site owners were not conducted.

7 FINDINGS

Based upon the results of this Phase I ESA, the following findings are provided.

- The site consists of two APNs, totaling approximately 1.2 acres in the City of Los Angeles, California. The site is divided into two areas: the northern area is associated with APN 5168-022-900; the southern area is associated with APN 5168-022-900. An alley traverses east-west through the two parcels that comprise the site. Planned improvements to the site

includes a new canopy, improved utility connections, new office space with restrooms, modernized RAP processing equipment, new truck weighing scales, new concrete pavement, and the removal of old concrete structures.

- At the time of the site reconnaissance, the site was occupied by the City of Los Angeles with a reclaimed asphalt pavement production plant. Small quantities of hazardous materials/petroleum products (less than 5 gallons), such as grease and hydraulic oil, were observed as being stored at the site. Minor surface staining was observed on concrete in the storage area. Evidence of past releases of hazardous materials/petroleum products or environmental evaluations was not observed.
- A pole-mounted transformer was observed adjacent on the southwestern corner of the site; however, signs of release of PCB-containing oils were not observed near the transformer.
- Based on a review of historical resources, the site was used for industrial purposes by the City of Los Angeles as a refuse collection and disposal site from approximately 1922 to 1952, and as an asphalt production plant from approximately 1952 to present day. By 1922, four structures were developed on the northeastern, central, and southern portions of the site, and a railroad ROW was present to the north of the site, and two other railroad ROWs traversed the northwestern portion of the site and the northeastern corner of the site. The current concrete ramp and metal canopy were developed in the eastern portion of the site by 1949. By 1988, the historical buildings on the site were demolished. The railroad tracks on the western and central portions of the site were not observed by 1972. The site currently consists of a concrete platform with a steel canopy and supports located along the eastern portion of the site, and a storage room located below the concrete platform. The historical site use as a disposal site is considered a REC.
- Based on the presence of historical railroad ROWs at the site, chemicals such as lead, heavy metals, petroleum hydrocarbons, PCBs are often historically used in association with railroads and may be present in the site soils. In addition, herbicides were often historically applied on railroad ROWs to prevent the growth of vegetation between railroad tracks. The presence of railroad ROWs on the site is considered a REC.
- The site was listed on the WMUDS/SWAT database as a historical landfill/solid waste disposal site in 1958 and 1967 as Los Angeles City Public Works. Information concerning the type or quantity of solid waste handled at the site was not provided.
- Several off-site facilities were listed on several environmental databases. Based on the information provided, these listings were not considered an environmental concern to the site.

8 OPINIONS

The rationale for concluding whether the conditions listed in Section 8, above, do not represent RECs, HRECs, or CRECs (i.e., the presence or likely presence of hazardous substances or petroleum products on a property under conditions indicative of releases, past releases, or a material threat of a release of hazardous substances, pollutants, contaminants, and/or petroleum/petroleum products at the site) is provided below.

8.1 Evaluation of Recognized Environmental Conditions

Based on a review of historical records, the site has historically been used as a refuse collection and disposal site. Available records did not indicate the types of waste accepted at the site. Therefore, there is a potential that improper disposal of chemicals at the site occurred. Additionally, with the presence of historical and current railroad ROWs at the site, chemicals such as lead, heavy metals, petroleum hydrocarbons, PCBs are often historically used in association with railroads and may be present in the site soils. In addition, herbicides were often historically applied on railroad ROWs to prevent the growth of vegetation between railroad track; therefore, the presence of railroad ROWs on the site is considered a REC.

8.2 Data Gaps

To date, Ninyo & Moore has not received responses from the DTSC for the adjoining properties 2601 East 24th Street and 2626 East 25th Street or from the LAFD for the adjoining property at 2626 East 25th Street. Additionally, completed user and owner questionnaires have not been filled out and returned to Ninyo & Moore. These are considered data gaps. If information from DTSC, LAFD, the user, or the owner alters the conclusions of this report, an addendum will be prepared.

9 CONCLUSIONS

We have performed a Phase I ESA, in conformance with the scope and limitations of the ASTM Practice E 1527-13, of the two APNs in the City of Los Angeles, California, the site. Any exceptions to, or deletions from, this practice are described in Section 1.4 and in the body of this report. This assessment has revealed no evidence of RECs in connection with the site, except for the following:

- The historical use of the site for refuse collection and disposal.
- The presence of historical and current railroad ROWs at the site.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2021 has revealed that there are 8 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/22/2021 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 04/23/2021 has revealed that there are 64 CA ENVIROSTOR sites within approximately 1 mile of the target property.

CA LOS ANGELES CO LF METHANE: This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

A review of the CA LOS ANGELES CO LF METHANE list, as provided by EDR, and dated 02/04/2021 has revealed that there are 2 CA LOS ANGELES CO LF METHANE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

OSHA ESTABLISHMENT

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

HAZARDOUS WASTE BIENNIAL REPORTER

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS AIR POLLUTANT MAJOR

OSHA ESTABLISHMENT

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

STATE MASTER
 ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

OSHA ESTABLISHMENT

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
