Violation Date:	06-22-2018	
Citation:	23 CCR 16 2637 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2637	
Violation Description:	Failure to conduct secondary containment testing, or one or more of the following requirements: Perform the test within six months of installation and every 36 months thereafter. Use a procedure that demonstrates the system works as well as at installation. Use applicable manufacturer guidelines, industry codes, engineering standard, or professional engineer approval. Performed by a certified service technician or a licensed tank tester.	
Violation Notes:	Based on an inspection report issued on 10/25/17 by Albert Wolff, Hazardous Materials Specialist from our office. The SB989 Secondary Containment testing took place on that date. However, the only components that passed/or were tested on that day were the 3 -UDCs. All STP sumps and all product lines for all three tanks still remain	

MABURY YARD CITY OF SAN JOSE (Continued)		1000595791
Violation Division:	to be tested. Within 30 days complete the secondary containment testing for the components mentioned above. Additionally, contact Ana Bui (408)918-1952 or ana.bui@cep.scgov.org to witness testing of these components.

Citation:	49 CFR 1 172.201(e) - U.S. Code of Federal Regulations, Title 49, Chapter 1, Section(s) 172.201(e)	
Violation Description:	Failure of the universal waste handler to transfer universal waste to another universal waste handler, or appropriate destination facility. Failure to package, label, mark and placard shipments and prepare shipping papers for any universal waste that meets the hazardous materials definition in accordance with DOT 49 CFR parts 171-180.	
Violation Notes:	At the time of this inspection I was provided with only one copy of the Bill of Lading for the high pressure low sodium lamps, which were disposed of on 12/31/17 from HCl Environmental Engineering Services. However, some of the boxes of used fluorescent lamps had a LW that read: VM Lamp Tracker2, Inc. Disposal receipts from this company were not provided to me during this inspection. At least 3 years worth of records must be made available for review during an inspection.

Violation Date:	06-19-2018	
Citation:	23 CCR 16 2712(b) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)	
Violation Description:	Failure to maintain records of repairs, lining, and upgrades on site, or off site if approved by the UPA, for the life of the UST.	
Violation Notes:	Based on the alarm history provided by the technician, there was a High Liquid alarm for L-9; T-1 Diesel Tank Annular. There were no maintenance records to indicate how was this alarm addressed. Keep copies of maintenance records on-site available during an inspection. Additionally, there were leak alarms that occurred on other months as well for the fill sumps, and annular sensor (Low-liquid alarm) for some tanks. Maintenance records were not kept on-site for these alarms.

Violation Date:	09-01-2015	
Citation:	HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple	
Violation Description:	Haz Waste Generator Program - Administration/Documentation - General	
Violation Notes:	Returned to compliance on 10/21/2015. IN ORDER TO AVOID HAZARDOUS WASTE FROM ENDING AT THE "DUMP SITE LOCATION" ADDITIONAL SIGNAGE NEEDS TO BE AVAILABLE POINTING EMPLOYEES TO THE EXACT LOCATION OF WHERE THE HAZARDOUS WASTE CAN BE DROP-OFF INSTEAD. THE SIGNAGE THAT IT IS CURRENTLY AVAILABLE AT THE "DUMP SITE" TELLS EMPLOYEES TO DUMP ALL HAZARDOUS WASTE IN THE ASSIGNED DESIGNATED LOCATIONS BUT IT FAILS TO DIRECT THEM TO WHERE ARE THE "DESIGNATED LOCATIONS" ARE. THIS IS PARTICULAR IMPORTANT FOR THOSE EMPLOYEES THAT ARE NOT D.O.T. EMPLOYEES AND ARE DUMPING DEBRIS IN THE "DUMP SITE AREA". ADDITIONALLY, DAILY INSPECTIONS OF THE "DUMP SITE" AREA ARE NOT BEING CONDUCTED DAILY AS IT IS DESCRIBED ON YOUR S.O.P.S. THIS WAS ALSO REQUIRED OF YOU TO CONDUCT ON THE LAST INSPECTION REPORT ISSUED ON 9/18/14 DURING A COMPLIANT INVESTIGATION. ENSURE THAT DAILY INSPECTIONS ARE BEING LOGGED OF THE DUMP SITE AREA.

MABURY YARD CITY OF SAN JOSE (Continued) 1000595791

Violation Description: Chapter 23, Section(s) 66273.31(a) Failure of the universal waste handler to transfer universal waste to the appropriate destination facility.

Violation Notes: Electrical warehouse - Observed broken glass from high pressure low sodium lamps and commercial type batteries inside one of the trash cans at the warehouse. At the time of the walk-through part of the broken bulb was removed and placed inside a 55 gallon metal drum which contained broken glass. The commercial type batteries were placed in its appropriate container. However, due to how much garbage was inside the trash can, I was unable to determine if there was anymore broken glass or other type of universal waste. At this time, remove all of the trash from the 3 metal trash cans inside the warehouse and remove any broken bulbs or any other universal waste from the trash cans and manage it accordingly. In the future all universal waste must be recycled and not thrown in the trash can. Notify our office in writing how you will prevent this from happening in the future.

Eval Notes: Other, not routine, done by local agency  
Inspection began yesterday with site visit and concluded today with issuance of this report. On site yesterday to accompany State Water Resources Control Board (SWRCB) inspectors Tom Henderson and Rebecca Green as they performed an underground storage tank (UST) inspection as part of the SWRCB's Government-Owned Tanks initiative. UST Service Technician Anthony McIntyre of TEC Accutite was on-site to provide access to the tank top sumps and under dispenser containment (UDC) systems. This inspection also follows up on HMCD's last annual UST compliance inspection, which occurred on 6/27/2014. Notes: 1. Violation U036 cited in 6/27/2014 Official Notice of Inspection was corrected on 8/1/2014 when Designated UST Operator trained facility employees. No further action is required. However, ensure that you address all violations cited in all Official Notices of Inspection from now onward and submit written notice of corrective actions taken as required. 2. Monitoring system [Truncated]

NOTE: Facility walk-through took place on 3/22/18. At the time of the walk-through at fleet services observed the power light on the veeeder root panel to be burn out. Additionally, L2 and L5 were in alarm On 3/27/18 the veeeder root panel light was working and the alarms had been cleared. A work order was provided to show that TEC Accutite came out on 3/23/18 to the facility to cleared the alarms. It was noted that the alarms were both in the fill sumps and small amount of water was removed to clear the alarms. Additionally, the light bulb was replaced on the veeeder root panel. No further action is required at this time.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

LEASING SYSTEMS INC (Continued)

1000382352

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 CERS ID: 10725175  
 CERS Description: Chemical Storage Facilities

Violations:

Site ID: 419773  
 Site Name: ONE STOP SHOP TRUCK & TRAILER INC  
 Violation Date: 10-19-2018  
 Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31

Violation Description:

Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violation Notes:

Returned to compliance on 11/15/2018. Observed a partially paved area outside of the repair bay that is used to repair steel trailers. Part of the repair process involves welding and metal grinding. Metal grindings were observed to likely impact soil. Cease all metal work in unpaved areas. Limit this work to paved areas or indoors, and ensure all metal grindings are collected and managed as scrap metal. Recommendation: Do not park any leaking vehicles on dirt lot. Isolate these vehicles to paved areas and utilize drip pans to collect any potential leaks of automotive fluids.

 HW  
 CERS

Site ID:

419773  
 Site Name: ONE STOP SHOP TRUCK & TRAILER INC  
 Violation Date: 10-19-2018  
 Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description:

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Notes:

Returned to compliance on 11/15/2018. The quantity of Acetylene and Oxygen compressed gas reported on CERS is lower than that observed on-site. Within 30 days, revise your inventory on CERS to reflect accurate quantities of both gases handled on-site.

Eval Division: Santa Clara County Environmental Health  
 Eval Program: HMRRP  
 Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection  
 Eval Date: 10-19-2018  
 Violations Found: Yes  
 Eval Type: Routine done by local agency  
 Eval Notes: On-site to conduct a routine hazardous waste inspection. Facility repairs trucks. Performed a walk-through with Mr. Dominguez, and observed the following hazardous waste in the repair bay: -Used oil: 2 x 55 gallon drums -Used oil & fuel filters (metal filters only): 1 x 55 gallon drum The following violations were corrected on-site at time of inspection: -G412, used oil filter markings, accumulation start date was added to label -G211, emergency posting, a posting was filled-out and affixed to wall in the office NOTES: -CAL000353229 is active. Fire extinguishers and spill absorbent were observed. -Weekly inspections are conducted. -Hazardous waste training is provided via monthly safety meetings. -Consolidated manifests were reviewed. Used oil is picked-up approximately every 1-2 months, and used oil filters picked-up approximately every 2-3 months. -Facility stated that no waste coolant is generated. Any coolant removed from trucks is put back into it [Truncated]

 Quarterly Update: Clean Harbors San Jose, LLC operates a rail spur transfer facility at 660 Lenfest Road in San Jose for bulk liquid which includes both hazardous wastes and hazardous substances. The type of hazardous wastes allowed at the facility is Oily Water, Lean Water, Fuels, Aqueous Solution and Recyclable Liquids. DTSC issued a Standardized Hazardous Waste Facility Permit on October 26, 2007. The Permit became effective on November 27, 2007 and expires on November 26, 2017. The maximum hazardous waste transfer and storage capacity at the Lenfest Facility at any given time is 56,500 gallons. The Lenfest Facility only accepts bulk liquid hazardous wastes originating from Clean Harbors San Jose, LLC, located at 1021 Berryessa Road, San Jose, California (Berryessa Facility). The Berryessa Facility has a Hazardous Waste Facility Permit for treatment and storage of hazardous waste and provides the staff, supervision and management for the Lenfest Facility. The Berryessa Facility also provides Lenfest Facility with registered hazardous waste transporters or licensed third party haulers to transport hazardous wastes in closed tanker trucks or vacuum trucks from the Berryessa Facility to the Lenfest Facility. Both the Berryessa Facility and Lenfest Facility are operated by Clean Harbors San Jose LLC, located at 1021 Berryessa Road, San Jose, California. The distance between the Berryessa Facility and the Lenfest Facility is approximately one mile. The Lenfest Facility has one permitted Transfer and Storage Unit for transfer and storage of hazardous waste. There are four rail tank cars stationed at the rail spur at any given time. Each rail tank car has a rail tank pan for collecting drips and possible spills. Two of the rail tank pans connected by a collection header or drain pipe to an open sump. Transfer of hazardous waste from the tanker truck or vacuum truck parked on a concrete pad into the rail tank car is only allowed at rail tank cars that have rail tank pans connected to the open sump. Transfer of hazardous waste from

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)  
 Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.  
 Violation Notes: Facility failed to disclose the storage of the following materials: approximately 2000 gallons HD/LD 50-50 antifreeze (55 gallon largest), approximately 1750 gallons HD 50-50 antifreeze (55 gallon largest), and 12x12 gallon containers propane.  
 Violation Division: Santa Clara County Environmental Health

 Violation Source: CERS  
 Site ID: 439659  
 Site Name: Clean Harbors Environmental Services- Lenfest  
 Violation Date: 03-09-2020  
 Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)  
 Violation Description: Failure to complete and electronically submit a site map with all required content.  
 Violation Notes: Map submitted via CERS is incomplete in that it does not address the areas of storage of materials or storm/sewer drains, shutoff valves, or locations of emergency equipment. Also, strongly suggest denoting on map those areas utilized for 10 day transfer activities to clearly denote the "transient nature" of materials in these areas to emergency

response personnel.  
 Violation Division: Santa Clara County Environmental Health  
 Violation Program: HMRRP  
 Violation Source: CERS  
 Evaluation:  
 Eval General Type: Compliance Evaluation Inspection  
 Eval Date: 03-09-2020  
 Violations Found: Yes  
 Eval Type: Routine done by local agency  
 Eval Notes: CERS 10766179 Annual submittal 1/20/2020, 4/2/2019 Business owns property Emergency and Training plan utilize template, updated in 2020 to reflect new personnel. Site is primarily an "exempt 10-day transfer facility" used to temporarily hold, organize and build loads during transport via truck-to truck transfer of containers. - Per Mr. Castro no consolidation of wastes or opening of containers occurs. Site does not currently store various oils (tube and hydraulic), as of date of inspection. See discussion below. Site is no longer holding stainless steel totes for DSM customers post-empty but prior to return to filer. Front 2/3 of building is used for transport facility, last 1/3 used for storage of field services and Safety Kleen equipment, to include racks, booms, drums, totes, bins, spill response materials. Two large tanks observed during last inspection, noted as "to be used" at the Berryessa facility are still present onsite, behind the building. Yard is [Truncated]  
 Eval Division: Santa Clara County Environmental Health  
 Eval Program: HMRRP  
 Eval Source: CERS  
 Eval General Type: Other/Unknown  
 Eval Date: 03-09-2020  
 Violations Found: No  
 Eval Type: Other, not routine, done by local agency  
 Eval Notes: Facility currently does not store any quantity of APSA eligible petroleum. Filing on CERS and declaration of activities was done based on proposed business model and site use which has not yet been implemented. Site has installed three large double stacked containment buildings to facilitate oil storage, but as of inspection, no oil stored. Two of the containment buildings were zip-tied closed and inaccessible. third building confirmed to be empty. No other eligible petroleum storage onsite. First 2/3 of building are used as exempt transfer facility per HSC 25141, with all items noted considered "in the course of transit". Permit and plan will be re-examined once APSA eligible materials are onsite.

 Completed Sub Area Name: Not reported

WATSON PARK (Continued) S107737590

Completed Document Type: Design/Implementation Workplan  
 Completed Date: 07/02/2009  
 Comments: The design and implementation plan for Watson Park includes grading plans and air monitoring plans for consolidation and capping of contaminated soils at the site. This work is expected to take between 8 and 12 weeks. Once the material is capped, additional park improvement work will be conducted without DTSC oversight.

Completed Area Name: Terrace Drive Properties  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Removal Action Workplan  
 Completed Date: 03/14/2008  
 Comments: Responsiveness summary approved 3-14-08. Final RAW approves the final remedy as the expedited removal from 2006 which removed 3-5 feet of contaminated soil and capped with clean fill and land use covenants (LUCs)(no digging below 3 feet, soil management plans, annual inspections) for the eight residential properties.

Completed Area Name: Terrace Drive Properties

 Completed Document Type: Other Report  
 Completed Date: 09/22/2009  
 Comments: After edits were made, the memo was approved by email.

Completed Area Name: Terrace Drive Properties  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Removal Action Completion Report  
 Completed Date: 11/25/2009  
 Comments: The removal action consisted of additional excavation of lead-contaminated soil around the fences and other selected locations in the backyards of the Terrace Drive properties. A slurry seal was placed in the crawl spaces of the foundations over the exposed lead-contaminated soil for 450 and 456 Terrace Drive to prevent contact with the soil. A total of 160 cubic yards of lead-contaminated soil was removed and placed on Watson Park in the area designated for the soil cap and land use covenant.

Completed Area Name: Park  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Soils Management Plan  
 Completed Date: 12/04/2018  
 Comments: The Site Management Plan: 1) presents general health and safety guidelines for Site construction or maintenance workers who may be exposed to soil that may contain residual constituents of concern; 2) presents soil management guidelines for the excavation, characterization, reuse of Site soil, and import of clean fill material; 3) summarizes portions of the Land Use Covenants for the homeowners at 414, 420, 426, 432, 438, 444, 450, 456, and 460 Terrace Drive that are relevant to management of soil generated in the course of future activities at the Site; and 4) provides ongoing requirements for inspections and/or repairs to the soil or paved cap areas.

 Completed Document Type: Remedial Investigation Report  
 Completed Date: 12/11/2006  
 Comments: Investigations at the site have determined that contamination above screening levels (primarily lead) exists in soil in the southern portion of Watson Park, under Empire Gardens Elementary School and on some adjacent residential properties along Terrace Drive. Contamination was not found in the Dog Park, the Soccer Bowl, in Coyote Creek or along 21st Street or Jackson Avenue. Contamination above screening levels was also not found in ground water or surface water at the Site.

Completed Area Name: Terrace Drive Properties  
 Completed Sub Area Name: 456 Terrace Drive  
 Completed Document Type: Land Use Restriction  
 Completed Date: 06/01/2016  
 Comments: Land Use Covenant between DTSC and the property owner recorded with Santa Clara County for contamination left in place at 456 Terrace Drive. The Land Use Covenant restricts the disturbance of limited portions of the property where lead-contaminated soil is beneath concrete and soil caps.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Annual Oversight Cost Estimate  
 Completed Date: 11/08/2011  
 Comments: DTSC sent out the 2011 Annual Cost Estimation letter.

Completed Area Name: Terrace Drive Properties  
 Completed Sub Area Name: 438 Terrace Drive  
 Completed Document Type: Land Use Restriction  
 Completed Date: 08/12/2010  
 Comments: Soil contaminated with lead remains under caps at the property.

Completed Area Name: Terrace Drive Properties  
 Completed Sub Area Name: 432 Terrace Drive

Completed Document Type: Letter - Demand  
 Completed Date: 06/15/2011  
 Comments: Demand Letter #1

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Annual Oversight Cost Estimate  
 Completed Date: 10/19/2010  
 Comments: The annual cost estimation letter was sent out on October 19, 2010 with a cost estimate of \$6,560 for oversight cost of implementation report and overseeing operation and maintenance activities.

Completed Area Name: Terrace Drive Properties  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Amendment - Order/Agreement  
 Completed Date: 03/11/2010  
 Comments: VCA amended to cover additional costs.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Removal Action Completion Report  
 Completed Date: 03/28/2007  
 Comments: The report documents the removal of 5000 yards of lead contaminated soil and 200 cubic yards of debris from 8 residential properties.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Design/Implementation Workplan  
 Completed Date: 07/02/2009  
 Comments: The design and implementation plan for Watson Park includes grading plans and air monitoring plans for consolidation and capping of contaminated soils at the site. This work is expected to take between 8 and 12 weeks. Once the material is capped, additional park improvement work will be conducted without DTSC oversight.

Completed Area Name: Terrace Drive Properties  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Removal Action Workplan  
 Completed Date: 03/14/2008  
 Comments: Responsiveness summary approved 3-14-08. Final RAW approves the final remedy as the expedited removal from 2006 which removed 3-5 feet of contaminated soil and capped with clean fill and land use covenants (LUCs)(no digging below 3 feet, soil management plans, annual inspections) for the eight residential properties.

Completed Area Name: Terrace Drive Properties  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Other Report  
 Completed Date: 09/22/2009  
 Comments: After edits were made, the memo was approved by email.

Completed Area Name: Terrace Drive Properties  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Removal Action Completion Report  
 Completed Date: 11/25/2009  
 Comments: The removal action consisted of additional excavation of lead-contaminated soil around the fences and other selected locations

WATSON PARK (Continued)

S107737590

in the backyards of the Terrace Drive properties. A slurry seal was placed in the crawl spaces of the foundations over the exposed lead-contaminated soil for 450 and 456 Terrace Drive to prevent contact with the soil. A total of 160 cubic yards of lead-contaminated soil was removed and placed on Watson Park in the area designated for the soil cap and land use covenant.

Completed Area Name: Park  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Soils Management Plan  
 Completed Date: 12/04/2018  
 Comments: The Site Management Plan: 1) presents general health and safety guidelines for Site construction or maintenance workers who may be exposed to soil that may contain residual constituents of concern; 2) presents soil management guidelines for the excavation, characterization, reuse of Site soil, and import of clean fill material; 3) summarizes portions of the Land Use Covenants for the homeowners at 414, 420, 426, 432, 438, 444, 450, 456, and 460 Terrace Drive that are relevant to management of soil generated in the course of future activities at the Site; and 4) provides ongoing requirements for inspections and/or repairs to the soil or paved cap areas.

 Completed Date: 04/21/2006  
 Comments: Soil/water sampling completed.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Remedial Investigation Report  
 Completed Date: 12/11/2005  
 Comments: Investigations at the site have determined that contamination above screening levels (primarily lead) exists in soil in the southern portion of Watson Park, under Empire Gardens Elementary School and on some adjacent residential properties along Terrace Drive. Contamination was not found in the Dog Park, the Soccer Bowl, in Coyote Creek or along 21st Street or Jackson Avenue. Contamination above screening levels was also not found in ground water or surface water at the Site.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Remedial Action Plan  
 Completed Date: 02/19/2009  
 Comments: The RAP approves capping and institutional controls for the remedy for the park. The soil from the Terrace Drive Properties Expedited Removal Action and two hot spots in the northeast corner of the park will be capped with the clean soil from the northern section of the park resulting in a change to the floodplain. Some additional sampling will be done in the area behind the Terrace Drive Properties that had not been sampled previously.

 Completed Document Type: Technical Report  
 Completed Date: 02/07/2014  
 Comments: A series of subsurface investigations and limited remedial work was performed at the site from 2005 to 2008. Because the site development was put on hold due to real estate economic conditions, data evaluation and reporting was not performed. The Site Status Update was submitted prior to preparing the Preliminary Endangerment Assessment Report in order to obtain a determination from DTSC on whether additional sampling was needed. The Site Status Update summarized sampling activities performed as part of the Preliminary Endangerment Assessment investigation and presented a synopsis of the sample analytical data. DTSC identified additional areas where sampling was needed in the letter it sent in response.

S102820182

Comments: The soil vapor report presents the results of soil gas sampling at three locations along the northeastern site boundary that was performed to assess the lateral extent of tetrachloroethylene (PCE) in soil gas. The sampling showed that the PCE in soil gas does not extend to the northeastern site boundary. PCE and other volatile organic compounds were not detected, except at one location where PCE was detected at a concentration of 4.2 micrograms per cubic meter, which was below the residential screening level of 450 micrograms per cubic meter.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Public Notice  
 Completed Date: 07/20/2016  
 Comments: A public notice was published in the Metro newspaper that announced DTSC's intent to enter into a Land Use Covenant with the Site owner based on the findings of the Preliminary Endangerment Assessment.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Soils Management Plan  
 Completed Date: 12/16/2016  
 Comments: The Soil Management Plan this SMP provides the environmental protections for the planned multifamily residential development of the Site, including excavation to remove soils with elevated hexavalent chromium in the vicinity of soil sample location SB-36, collection of additional samples to further characterize nickel concentrations in soil in the vicinity of soil sample locations SB-36 and SB-37, and management of potential construction worker exposure to volatile organic compounds (VOCs) in areas with potentially-affected soil.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Supplemental Site Investigation Workplan  
 Completed Date: 04/14/2017  
 Comments: The Work Plan describes additional sampling to be performed to characterize the residual volatile organic compounds (VOCs) in soil gas within an affected area that was identified during previous Site investigations. The soil gas sampling results will be used to assess whether there remains an unacceptable risk to human health via the vapor intrusion pathway and whether the residential buildings that are to be constructed in the VOC-affected area require a vapor intrusion mitigation system as recommended by the Preliminary Endangerment Assessment Report.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Design/Implementation Workplan  
 Completed Date: 11/22/2017  
 Comments: The Vapor Mitigation Plan includes the design and operation and maintenance procedures for the vapor intrusion mitigation systems to be installed at Buildings A and B at the Site. Buildings A and B are to be constructed within the Volatile Organic Compound-Affected Area that is defined by and subject to restrictions and requirements included in Section 4.4 of the Land Use Covenant for the Site between DTSC and Pulte Home Company, LLC, which was recorded with Santa Clara

SERRA CORPORATION, SILICON VAL (Continued)

S102820182

County on September 21, 2017. DTSC approved revisions to the sub-slab vapor barrier and venting system design drawings with a February 2, 2018 letter.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 12/23/2019  
 Comments: The reports summarize the results of the soil vapor monitoring event that was conducted at the Former Serra Silicon Valley Company Site on December 13, 2018 (Baseline monitoring event) to meet the requirements of the Revised Vapor Mitigation Plan for the Site. Soil vapor samples were collected from vapor monitoring points below the vapor intrusion mitigation systems (VIMS) constructed beneath Buildings A and B at the Site.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 12/23/2019  
 Comments: The reports summarize the results of the soil vapor monitoring event that was conducted at the Former Serra Silicon Valley Company Site on June 11, 2019 (6-month monitoring event) to meet the requirements of the Revised Vapor Mitigation Plan for the Site. Soil vapor samples were collected from vapor monitoring points below the vapor intrusion mitigation systems (VIMS) constructed beneath Buildings A and B at the Site.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 06/17/2020  
 Comments: DTSC approved two reports: the Report on 1-Year Sub-Barrier Soil Vapor Monitoring Results Building A, Citation Townhomes/Onyx V, and the Report on 1-Year Sub-Barrier Soil Vapor Monitoring Results Building B, Citation Townhomes/Onyx V (Reports) dated February 19, 2020 prepared by Haley & Aldrich, Inc. (HA). The reports summarize the results of the soil vapor monitoring event that was conducted at the Site on December 27, 2019 to meet the requirements of the Vapor Mitigation Plan (VMP) approved by DTSC on November 22, 2017. Soil vapor samples were collected from vapor monitoring points below the vapor intrusion mitigation systems (VIMS) constructed beneath Buildings A and B at the Site. DTSC requested that RP submit a report that evaluates the first year of sub-barrier soil vapor monitoring results and including an evaluation/discussion of the effectiveness of the VIMS and plans for additional sampling. Also requested that RP submit the 2019 Annual Inspection Report.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Land Use Restriction  
 Completed Date: 09/21/2017  
 Comments: The Land Use Covenant was recorded with Santa Clara County and includes restrictions on the type of residential land use on the Site. A portion of the Site has soil vapor impacted with volatile organic compounds, primarily tetrachloroethene. This portion of the Site is identified in the Covenant as the VOC-Affected Area and there

SERRA CORPORATION, SILICON VAL (Continued)

S102820182

is a restriction in the Covenant that no structures may be built on this area without a vapor intrusion mitigation system approved by DTSC.

 Comments: The Department of Toxic Substances Control (DTSC) received the Annual Inspection Checklist (Report) dated January 4, 2021 for the Garden Valley Fertilizer Site located at 565 Charles Street in San Jose, California. An inspection was performed as required by Section 7.07 of the Land Use Covenant (LUC) on January 4, 2019. The Report verifies that there is no evidence of activities prohibited by the LUC and that the site is compliant with the restrictions and requirements of the LUC. DTSC has no comments and hereby approves the Report. The next inspection report is due on January 15, 2022. -EC

 Completed Sub Area Name: Not reported  
 Completed Document Type: Land Use Restriction Monitoring Report  
 Completed Date: 01/21/2021  
 Comments: The Department of Toxic Substances Control (DTSC) received the Annual Inspection Checklist (Report) dated January 4, 2021 for the Garden Valley Fertilizer Site located at 565 Charles Street in San Jose, California. An inspection was performed as required by Section 7.07 of the Land Use Covenant (LUC) on January 4, 2019. The Report verifies that there is no evidence of activities prohibited by the LUC and that the site is compliant with the restrictions and requirements of the LUC. DTSC has no comments and hereby approves the Report. The next inspection report is due on January 15, 2022. -EC

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: \*Site Inspection (SI) Report  
 Completed Date: 10/21/1988  
 Comments: Completed SI. In August 1986, while transferring solvent from one subsurface underground tank to another, about 260 gallons solvent (Hi Sol #10) spill occurred in the underground storage tank (UST) farm. The subsequent investigation found levels of total hydrocarbons in the soil (7600 ppm) at the site and in the groundwater (56 ppb) below the site. SF Regional Water Quality Control Board (RWQCB) issued Cleanup and Abatement Order (CAO) No. 87-004 to Dap. Starting in August 1986, seven USTs and contaminated soil were removed. The soil analyses results showed ethyl benzene (5 to 14 ppb), 1,4-dichlorobenzene (15 ppb), toluene (0.8 to 20 ppb) and xylene (15 to 150 ppb).

 Comments: Pre-Hazard Appraisal and Recognition Pre-site Form - October 2020  
 Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Site Inspections/Visit (Non LUR)  
 Completed Date: 03/09/1977  
 Comments: The Regional Water Quality Control Board conducted a site inspection of the Moyer Chemical facility and found a number of violations and issued a Cleanup and Abatement Order requiring cleanup of the site.  
 Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Consent Agreement  
 Completed Date: 04/15/2013  
 Comments: DTSC entered into a Corrective Action Consent Agreement (CACA) with the former owners/operators of the Site and generators who sent wastes to the former Ultra Chem facility. The former Ultra Chem facility was a permitted RCRA hazardous waste treatment and storage facility that accepted wastes from off-site generators. Releases to the soil, soil gas, and groundwater from past operations requires corrective actions at the Site. The CACA tasks include RCRA Facility

ULTRA-CHEM/ALL-CHEM/SCOTT ENTERPRISES (Continued)

 Completed Document Type: Community Profile  
 Completed Date: 01/27/2021  
 Comments: Community Profile describes anticipated public participation activities, community and potential community concerns regarding possible health risks associated with current status and cleanup of the Site.

ULTRA-CHEM/ALL-CHEM/SCOTT ENTERPRISES (Continued) S109467291

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Corrective Measures Study Workplan Addendum  
 Completed Date: 09/25/2020  
 Comments: The Workplan was prepared to meet the requirements of the 2013 Consent Agreement and the DTSC request that additional data are necessary to confirm the lateral extent of volatile organic compounds (VOCs) in soil gas, and to conduct a vapor intrusion assessment in the office building. The Workplan proposes collecting soil gas samples at 17 existing permanent soil gas monitoring wells as well as at the eight (8) proposed soil vapor pins, indoor air samples inside the office building and ambient air samples at the Site.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Fieldwork  
 Completed Date: 10/22/2020  
 Comments: Fieldwork scope of work is outlined in the DTSC-approved RCRA Facility Investigation (RFI) Workplans from August 19, 2013, March 19, 2014, and March 2, 2015 and the Vapor Intrusion Assessment and Soil Vapor Monitoring Work Plan Addendum dated September 22, 2020. Fieldwork activities included the collection of groundwater, soil vapor, sub-slab vapor, indoor air, and ambient air samples. Results from the investigation will be incorporated into an updated Corrective Measures Study (CMS) Report.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Health & Safety Plan  
 Completed Date: 10/09/2020  
 Comments: Plan designed to comply with the California Code of Regulations Title 8 OSHA requirements for hazardous waste release sites. Plan identifies COCs and related risks and establishes work practices which will minimize the risk of occupational accidents and exposure to hazardous substances associated with environmental investigation and cleanup activities. The plan provides emergency response procedures and identifies contacts in the event of occupational accident or hazardous substance exposure. Plan's Appendix C (COVID-19 Interim Health and Safety Guidance) establishes work practices, administrative procedures, and engineering controls to minimize potential exposure to SARS-CoV-2, the virus that causes COVID-19.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Notice of Contamination  
 Completed Date: 11/03/2020  
 Comments: A non-reportable quantity of nonhazardous purge water from semiannual groundwater monitoring was discovered on October 1, 2020. A 55-gal drum containing nonhazardous purge water was damaged during relocation by the property tenant (American Drilling) and its contents released to a concrete surface and, likely, evaporated. The area where the damaged 55-gal drum likely released its contents to the surface appears to be at least 150 feet from any site drains, with no direct path to storm drains and it is covered with a concrete cap.

Completed Area Name: PROJECT WIDE

ULTRA-CHEM/ALL-CHEM/SCOTT ENTERPRISES (Continued) S109467291

Completed Sub Area Name: Not reported  
 Completed Document Type: Unilateral Order (I/SE, RAO, CAO, EPA AO)  
 Completed Date: 05/02/2012  
 Comments: DTSC issued a Corrective Action Enforcement Order to the current and previous property owners and generators who sent wastes to the former Ultra-Chem facility. The Order requires the respondents to conduct an investigation to determine the extent of contamination and to clean up the site.

 Completed Date: 06/03/2009  
 Comments: Site Condition Report describes the current condition of the former Ultra-Chem site. The report provide a summary of the past investigations for soil, soil gas, groundwater.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Technical Report  
 Completed Date: 10/15/2009  
 Comments: Report presents the results of the preliminary soil, soil vapor, and groundwater quality evaluation performed at the Site. The Scope of Work as described in the May 7, 2009 Work Plan was based on the May 6, 2009, Site Conditions Report.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Technical Report  
 Completed Date: 08/03/2010  
 Comments: Moyer Chemical consultants collected downgradient off-site groundwater samples along Old Bayshore Highway. There were detectable concentrations of volatile organic compounds in grab groundwater samples collected from two of the three boreholes.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Technical Workplan  
 Completed Date: 06/03/2009  
 Comments: The Phase II Investigation Workplan describes procedures to address data gaps for soil, soil gas, and groundwater at the former Ultra-Chem site. Workplan includes the proposed sampling locations to determine the extent of contamination.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: RFI Workplan  
 Completed Date: 08/21/2013  
 Comments: The purpose of the Resource Conservation and Recovery Act (RCRA) Facility Investigation (RFI) workplan is to describe procedures to determine the nature and extent of releases of hazardous waste or constituents from formerly permitted units, solid waste management

ULTRA-CHEM/ALL-CHEM/SCOTT ENTERPRISES (Continued) S109467291

units (SWMUs), and other source areas at the Site and to gather all necessary data to support the Corrective Measures Study.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Fieldwork  
 Completed Date: 12/01/2013  
 Comments: The RFI sampling fieldwork for the collection of soil, soil gas, and groundwater has been completed. A meeting has been scheduled in January 2014 to discuss the results.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Risk Assessment Workplan  
 Completed Date: 04/14/2014  
 Comments: The risk assessment workplan has been approved. The Risk Assessment will be included in the RCRA Facility Investigation.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Work Notice  
 Completed Date: 10/03/2013  
 Comments: Work notice informing local community about RCRA Facility investigation fieldwork activities at the site. The purpose of the investigation is to characterize the nature and extent of hazardous waste or constituents to soil, soil vapor, and groundwater at or potentially emanating from the Site. Fieldwork to begin on October 10, 2013.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Corrective Measures Study Workplan  
 Completed Date: 12/16/2015  
 Comments: The Corrective Measure Study (CMS) Workplan describes the methodology for developing and evaluating the potential corrective measures that will be used to develop the CMS Report for the Site. The CMS Workplan generally follows the requirements in Attachment 5 of the Corrective Action Consent Agreement between DTSC and the Respondents.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: RFI Report  
 Completed Date: 04/28/2016  
 Comments: The RCRA Facility Investigation (RFI) report documents the results of an investigation that was performed to determine the nature and extent of releases of hazardous waste or constituents from formerly permitted units, solid waste management units, and other source areas. Soil and groundwater were found to be contaminated with pesticides, total petroleum hydrocarbon, volatile organic compounds (VOCs), and metals. VOCs in soil gas were found in limited areas of the Site. The data gathered during the RFI will be used to prepare a Corrective Measures Study report that will evaluate corrective measures alternatives for the Site.

Completed Area Name: PROJECT WIDE

 Completed Document Type: RFI Workplan Addendum

ULTRA-CHEM/ALL-CHEM/SCOTT ENTERPRISES (Continued)		S109467291
Completed Date:	04/03/2014	
Comments:	The RFI Workplan Addendum summarizes the RFI field program that was started in October 2013, provides preliminary conclusions based on the data collected, defines the remaining data gaps, and presents a scope of work to address the data gaps. The additional investigation activities outlined in the Workplan include drilling and sampling six soil borings, installation and sampling of six groundwater monitoring wells, installation and sampling of a multi-depth soil vapor well, and pneumatic slug testing of six existing monitoring wells.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	Work Notice	
Completed Date:	03/20/2014	
Comments:	Work notice informing local community about RCRA Facility investigation fieldwork activities at the site. The purpose of the investigation is to characterize the nature and extent of hazardous waste or constituents to soil, soil vapor, and groundwater at or potentially emanating from the Site. Fieldwork to begin on April 7, 2014.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	Fieldwork	
Completed Date:	05/16/2014	
Comments:	The Phase II investigation to investigate off-site areas and the deeper aquifer was completed.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	Risk Assessment Workplan	
Completed Date:	09/23/2014	
Comments:	DTSO approves the Human Health Risk Assessment Workplan with the recommendation that the potential human health hazards be identified in the section along with the proposed analytical methods, data quality objectives and risk assessment methodologies.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	Monitoring Report	
Completed Date:	02/12/2015	
Comments:	DTSO reviewed the November 2014 Quarterly Monitoring Report and discussed the results with ROUX Associates. It was agreed that step-out sampling was necessary across the street to determine the extent of contamination.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	RFI Workplan Addendum	
Completed Date:	03/12/2015	
Comments:	RFI Workplan Addendum 2 outlines a scope of work to address remaining data gaps. The additional investigation activities included in the Addendum are focused on an area to the west of the site across Old Bayshore Highway and include groundwater and soil gas sampling.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	

ULTRA-CHEM/ALL-CHEM/SCOTT ENTERPRISES (Continued)		S109467291
Completed Document Type:	Monitoring Report	
Completed Date:	01/21/2016	
Comments:	Report summarizes groundwater monitoring results of Ultra-Chem site for the third quarter of 2015. Groundwater samples collected on August 18 and 19, 2015.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	Monitoring Report	
Completed Date:	04/07/2016	
Comments:	The quarterly groundwater monitoring data were consistent with the previous quarters. However, one observation was made in wells MW-4 and MW-5 that some of the constituents in the analytical results do not meet the Data Quality Objectives. If the comparison criteria are not met during the next quarterly sampling, DTSO requested that a discussion be included in the quarterly monitoring report explaining why the comparison criteria were not met (e.g. interferences because of TPH products).	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	Monitoring Report	
Completed Date:	07/06/2016	
Comments:	The report presents the results and findings of the February 2016 quarterly well sampling. A trend analysis was performed using the data from the February 2016 and past groundwater sampling events and showed the February 2016 results were consistent with the previous sampling events. Based on the trend analysis, DTSO concurred with the recommendation to reduce the groundwater sampling program from quarterly to semi-annual basis. The next semi-annual report will be due to DTSO in November 2016.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	Community Profile	
Completed Date:	08/11/2016	
Comments:	The Community Profile describes community demographics and land uses and documents the results of a community survey that was mailed out to determine the potential concerns that the community has or might have regarding health risks and cleanup at the site. It describes anticipated public participation activities. Recommended activities include publishing a notice of the draft Removal Action Workplan, providing a public comment period of 30 days, holding a public meeting if necessary, and preparing a response to public comments.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	Monitoring Report	
Completed Date:	12/15/2016	
Comments:	The report presents the results of groundwater sampling from 13 monitoring wells across the Site on September 7 and 8, 2016. This was the tenth groundwater sampling event and the first semi-annual sampling event for the Site with the current monitoring well network. The results were consistent with the previous monitoring results.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	

ULTRA-CHEM/ALL-CHEM/SCOTT ENTERPRISES (Continued)		S109467291
Completed Document Type:	Monitoring Report	
Completed Date:	07/05/2017	
Comments:	The Semiannual Groundwater Monitoring Report presents the results of the March 2017 sampling event. The groundwater results were consistent with the previous sampling events. Groundwater elevations in both the A-zone and B-zone monitoring wells had increased from the previous sampling event in September 2016.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	Monitoring Report	
Completed Date:	02/23/2018	
Comments:	Report summarizes groundwater monitoring results of Ultra-Chem site for September 2017 semiannual sampling event. Groundwater samples collected on September 19, 2017.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	Monitoring Report	
Completed Date:	06/19/2018	
Comments:	Report summarizes groundwater monitoring results of Ultra-Chem site for March 2018 semiannual sampling event. Groundwater samples collected on March 5 and 6, 2018.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	Monitoring Report	
Completed Date:	12/07/2018	
Comments:	Report summarizes groundwater monitoring results of Ultra-Chem site for September 2018 semiannual sampling event. Groundwater samples collected on September 5, 2018.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	Monitoring Report	
Completed Date:	10/18/2019	
Comments:	According to the revised Memorandum, groundwater elevations increased in all A-zone and B-zone wells relative to elevations measured in September 2018. COCs (pesticides, VOCs, SVOCs, petroleum, and metals) concentrations were largely consistent with concentration ranges observed during previous sampling events.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	Monitoring Report	
Completed Date:	03/25/2020	
Comments:	Memorandum presents the findings of the September 2019 Semiannual Monitoring Well Sampling conducted at the former Ultra-Chem Facility. This is the 16th groundwater sampling event and seventh semiannual sampling event for the Site with the current network of monitoring wells. Groundwater elevations decreased in all A-zone and B-zone wells relative to elevations measured in March 2019. During the September 2019 sampling event, concentrations of pesticides, volatile organic compounds, semivolatile organic compounds, petroleum, and metals observed in groundwater were consistent with concentrations observed during previous sampling events, except where noted.	

ULTRA-CHEM/ALL-CHEM/SCOTT ENTERPRISES (Continued)		S109467291
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	Monitoring Report	
Completed Date:	08/06/2020	
Comments:	Memorandum presents the findings of the March 2020 Semiannual Monitoring Well Sampling conducted at the former Ultra-Chem Facility. This is the 17th groundwater sampling event and eight semiannual sampling event for the Site with the current network of monitoring wells. Groundwater elevations decreased relative to elevations measured in September 2019 in the A-zone wells except for MW-4, MW-8, and MW-9, which increased, and MW-11 which did not change. Groundwater elevations in the B-zone increased relative to elevations measured in September 2019. During the September 2019 sampling event, concentrations of pesticides, volatile organic compounds, semivolatile organic compounds, petroleum, and metals observed in groundwater were consistent with concentrations observed during previous sampling events, except where noted. The Memorandum is conditionally approved because DTSO comment II (iv) was not satisfactorily addressed. The response to comment II (iv) indicates that concentrations of alpha- and gamma-Chlordane isomers (somers) in groundwater samples were screened individually against the California maximum contaminant level (MCL) of 0.1 micrograms per liter. The response provides that the single detection of Gamma Chlordane and the extremely low screening criteria for Technical Chlordane as the basis for not summing the Chlordane isomer concentrations.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	Technical Report	
Completed Date:	05/15/2019	
Comments:	This Progress Report provides updates for the period from February 1, 2019 through April 30, 2019 as outlined in Attachment 6 of the Corrective Action Consent Agreement, dated April 15, 2013. The Progress Report did not note any problems or potential problems, or actions taken and/or planned to rectify problems in this reporting period.	
Completed Area Name:	PROJECT WIDE	
Completed Sub Area Name:	Not reported	
Completed Document Type:	Technical Report	
Completed Date:	06/14/2019	
Comments:	The Site Inspection for Potential for Vapor Intrusion Technical Report (Report) provides updated documentation of the main office building and an adjoining trailer containing overflow office space. The office building is described as slab on grade. The utilities present include electrical as well as sanitary sewer connections to the kitchen and bathrooms. The adjoining trailer is elevated and is not directly located on the concrete slab. The Report states that the concrete slab surface appears intact and in good condition. The layout of the southern portion of the site remains relatively unchanged since initially inspected during the 2016 RCRA Facility Investigation. There is a trailer office elevated several feet off the concrete surface that is located along the southeast edge of the property, but no other buildings.

 Quarterly Update: STATUS: The Department of Toxic Substances Control (DTSC) will meet with the Responsible Parties (RPs) in early 2008, to discuss implementation of a Resource Conservation and Recovery Act (RCRA) Facility Investigation (RFI). The RFI will be conducted to determine the extent of contamination at the site. A draft corrective action consent agreement (CACA) has recently been provided to the RPs for review. The CACA is signed by both the RPs and DTSC and describes what the investigation should entail and the associated costs involved in the State over-seeing investigation of the site. SITE HISTORY: The DTSC conducted a RCRA Facility Assessment (RFA) pursuant to the RCRA Corrective Action process. The purpose of the RFA is to identify Solid Waste Management Units (SWMUs) and Areas of Concern (AOCs), collect existing information on contaminant releases, and evaluate site information to determine if further investigation is necessary. The report presents the results of the RFA, documents the process leading to its conclusions and recommendations, and consolidates pertinent information on the facility and its SWMUs and AOCs. The subject property, located at 1300-1310 Old Bayshore Highway, has a history of commercial and industrial operations. Current operations demonstrate no evidence of release of hazardous materials to the environment. The thick concrete and asphalt cap currently in place prevents contaminant migration. Presently contamination is documented to be limited to near surface the soil; groundwater has reportedly not been impacted. The mobility of existing contamination is thought to be minimal because of the presence of the cap, and the presumed low solubility of suspected contaminants. 4/11/2018- Facility was issued a permit effective 09/30/1983 to 09/30/1988. According to CACA dated 03/27/2013, facility notified DHS that it was closing operations on February 1986. A letter dated 06/01/1988 and a memorandum of the Chronology of Events dated 07/17/1992 stated that closure was not completed and that facility

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Info:

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Technical Report  
 Completed Date: 08/12/1997  
 Comments: The Report describes a Preliminary Site Assessment that was conducted on the Site on July 16, 1997. Work included advancement of five soil borings, completion of three groundwater monitoring wells, and

**CRISTINA WHSE CO INC (Continued)** 1000388960

collection and chemical analysis of soil and groundwater samples. The work was conducted in accordance with a work plan approved by the Santa Clara Valley Water District. The Report concluded that there were minimal subsurface impacts, no further action at the Site was warranted, and recommended a request for case closure be submitted to the Santa Clara Valley Water District.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Phase 1  
 Completed Date: 03/23/2017  
 Comments: Originally, Cristina Warehouse operated as a storage facility for hazardous materials. In 1980, Cristina Warehouse submitted a Part A hazardous waste storage permit application to the U.S. Environmental Protection Agency (EPA). Due to economic reasons, Cristina Warehouse withdrew the Part A application and discontinued storing hazardous materials/wastes. In August 1987, the Department of Health Services, Toxic Substances Control Division notified Cristina Warehouse that its operation was no longer regulated as a treatment, storage or disposal facility under State law and regulations as authorized by EPA according to the provisions of the Resources Conservation and Recovery Act and its interim status document was rescinded. Two underground storage tanks, a 550-gallon gasoline tank and a 5,000 gallon diesel tank, were removed from the Site in 1988. On February 23, 1999, Santa Clara Valley Water District issued a Fuel Leak Site Case Closure letter. Based on the documentation found and reviewed during this site screening, DTSC has determined that no further action is needed for the Site.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Completed Date: 01/31/2019  
 Comments: San Jose Concrete Transfer Company, Inc. notified DTSC that the Site had been sold to Old Bayshore South, LLC.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Standard Voluntary Agreement  
 Completed Date: 02/08/2019  
 Comments: This Agreement applies to the Site located at 1336 Old Bayshore Highway, San Jose in Santa Clara County, California 95112 (Site).

MOYER CHEMICAL (Continued)

S111842224

Completed Date: 05/15/2013  
 Comments: The PRP search was completed and Moyer Chemical and San Jose Concrete Transfer Co. were the only 2 RPs that were identified. DTSC may add additional parties if other RPs are identified.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Unilateral Order (I/SE, RAO, CAO, EPA AO)  
 Completed Date: 09/25/2013  
 Comments: DTSC issued the Imminent and Substantial Endangerment Determination and Order and Remedial Action Order for the former Moyer Chemical Company. The Order prescribes the procedures and deadlines for the investigation and cleanup of the Site.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Site Characterization Workplan  
 Completed Date: 02/26/2015  
 Comments: This second Addendum Workplan outlines additional investigation activities to address data gaps remaining after implementation of the Remedial Investigation Workplan and the first Addendum Workplan. The activities included in the second Addendum Workplan will determine the extent of total petroleum hydrocarbons and pesticide contamination in soil and the extent of the groundwater plume.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 02/12/2015  
 Comments: DTSC reviewed the November 2014 Quarterly Monitoring Report and discussed the results with ROUX Associates. It was agreed that step-out sampling was necessary on the adjacent property to determine the extent of contamination.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Risk Assessment Workplan  
 Completed Date: 07/21/2015  
 Comments: The Health Risk Assessment Work Plan describes the methods to be used in preparing a site-specific risk assessment.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 01/21/2016  
 Comments: The report documents the August 2015 quarterly monitoring well sampling. The results for this quarter were consistent with the

MOYER CHEMICAL (Continued)

S111842224

Completed Date: 04/28/2014  
 Comments: The Remedial Investigation Workplan outlines investigation activities to further characterize the nature and extent of contamination from past historical operations. The scope of work outlined in the Workplan includes cone penetrometer testing at three locations, collection of soil samples from up to 15 soil borings, installation of three groundwater monitoring wells, sampling of the three new and existing monitoring wells, and installation and sampling of four multi-depth soil vapor wells.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Work Notice  
 Completed Date: 03/20/2014  
 Comments: Work notice informing local community about remedial investigation fieldwork activities at the site. The purpose of the investigation is to characterize the nature and extent of hazardous waste or constituents to soil, soil vapor, and groundwater at or potentially emanating from the Site.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Fieldwork  
 Completed Date: 05/16/2014  
 Comments: The work outlined in the Remedial Investigation Workplan, approved by DTSC on April 28, 2014, was completed.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Remedial Investigation Report  
 Completed Date: 12/10/2015  
 Comments: The Remedial Investigation (RI) Report was prepared pursuant to the Imminent and Substantial Endangerment and Remedial Action Order issued to the former Moyer Chemical Company (previous owner) and San Jose Concrete Transfer Company (current owner). The RI field activities were conducted between April 2014 and March 2015 which included soil, soil gas, and groundwater sampling. Volatile organic compounds (VOCs) were detected in soil vapor above residential screening levels. In soil, petroleum, pesticides, and metals were found across the site. In groundwater, petroleum, arsenic and pesticides were detected primarily along the eastern property boundary with some exceedances along the western property boundary and northern central portion of the site. A Remedial Action Workplan will be prepared to address the contamination at the site.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Removal Action Workplan  
 Completed Date: 11/14/2016  
 Comments: The Final Removal Action Workplan (RAW) addresses soil and groundwater impacted with metals, pesticides, volatile organic compounds, and total petroleum hydrocarbons (TPH). The selected removal action includes capping the contaminated soil, TPH free product removal, institutional controls, and groundwater monitoring. Field activities are scheduled to begin in the spring 2017.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported

previous quarterly sampling results. The Site groundwater continues to be impacted by petroleum hydrocarbons, pesticides, and metals that exceed regulatory screening levels in the upper A-zone.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 04/07/2016  
 Comments: The quarterly groundwater monitoring data were consistent with the previous quarters. However, an observation was made that there were constituents in the analytical results for well SJMW-4 that did not meet the Data Quality Objectives (screening values, e.g. benzene, ethylbenzene etc.). If the comparison criteria are not met during the next quarterly sampling, DTSC requested that a discussion be included in the quarterly monitoring report explaining why the comparison criteria were not met (e.g. interferences because of TPH products).

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 07/06/2016  
 Comments: The report presents the results and findings of the February 2016 quarterly well sampling. A trend analysis was performed using the data from the February 2016 and past groundwater sampling events and showed the February 2016 results were consistent with the previous sampling events. Based on the trend analysis, DTSC concurred with the recommendation to reduce the groundwater sampling program from quarterly to semi-annual basis. The next semi-annual report will be due to DTSC in November 2016.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Phase 1  
 Completed Date: 06/01/2012  
 Comments: A Phase II Environmental Site Assessment was performed at the site. Soil and groundwater samples taken indicated the presence of pesticides and total petroleum hydrocarbons in soil and groundwater. Further investigation is recommended to determine the extent of contamination.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Phase 1  
 Completed Date: 02/13/2012  
 Comments: The Phase I Environmental Site Assessment was performed on the property in January/February 2012. Operations have included Moyer Chemical and Diamond Alkali Chemical from 1953 through the mid 1960s as pesticide manufacturers, Howard Electric, Inc. from the mid 1960s to late 1980s, and San Jose Concrete Pipe Company from the late 1980s to present. From the file and record search and based upon the historical uses, the property may have contributed to the contamination to soil or groundwater in the surrounding area and the report recommended collection of soil and groundwater samples for the property.

 Completed Document Type: Fieldwork  
 Completed Date: 10/22/2019  
 Comments: DTSC PM conducted a site visit to verify compliance with Removal Action Design and Implementation Plan. Based on the findings noted during the site visit, DTSC PM observed the following: Tree protection zone (TPZ; landscaping structure (existing planter area) that contains five mature trees) areas were constructed according to specifications conveyed to AVOCET. Former unpaved area (Tee-Shaped) that wrapped around the southwest corner of the office building was paved with similar specifications as those paved areas of site to attain same integrity and effectiveness to prevent surface water infiltration into the vadose zone.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Remedy Constructed with O&M  
 Completed Date: 06/09/2020  
 Comments: The Report documents removal actions completed at Former Moyer Chemical Company Property (Site) between February 4, 2019, and October 21, 2019. Removal actions were performed in accordance with the Removal Action Workplan (RAW), dated November 14, 2016, and approved by DTSC. To support removal actions, Avocet prepared "Removal Action Design and Implementation Plan; RADIP", dated January 4, 2019, Soil Management Plan; SM Plan, dated January 18, 2019, Operation and Maintenance Plan; O&M Plan, dated December 23, 2019, and Groundwater Monitoring Plan; GWM Plan, dated December 23, 2019. These plans were approved by DTSC in January 2019 (RDIP and SM Plan), and in March 2020 (O&M Plan and GWM Plan).

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Operation and Maintenance Plan  
 Completed Date: 03/02/2020  
 Comments: The O&M Plan expands on the O&M components of the Removal Action Workplan, dated November 14, 2016, and the Removal Action Design and Implementation Plan, dated January 8, 2019. The O&M Plan is intended to serve as a stand-alone plan for ongoing operations and maintenance of the engineering controls at the Site.

Completed Area Name: PROJECT WIDE

Completed Sub Area Name: Not reported  
 Completed Document Type: Work Notice  
 Completed Date: 04/08/2019  
 Comments: Work notice sent to inform local community of cap installation at the Site.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Remedial Investigation Workplan  
 Completed Date: 11/18/2014  
 Comments: The Addendum was prepared to address data gaps that were identified after a preliminary evaluation of the data collected during the remedial investigation field program. The activities outlined in the Addendum include drilling and sampling of seven soil borings and installation of one additional groundwater monitoring well.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Fieldwork  
 Completed Date: 02/09/2019  
 Comments: Three sentinel wells (two in the A-zone and one in the B-zone) were installed and developed. Noted lithology and depth to ground water are similar to findings from previous investigations conducted at the Site. Former Well MW-1 was destroyed by over-drilling to address the Santa Clara Valley Water District's request. Sediments (mud) deposited on top of the Site's concrete/asphalt cover ( Cap ) were consolidated on Site using a backhoe/loader. Sediments were handled per the approved Soil Management Plan. Sediments were stockpiled (approximately 130 cubic yards) and covered with heavy duty polyethylene sheeting. The stockpiled sediments have been sampled and will be disposed once lab results are available.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Health & Safety Plan  
 Completed Date: 02/12/2019  
 Comments: The Health and Safety Plan (HASP) prepared by Avocet Environmental, Inc. on behalf of Old Bayshore South LLC, addresses environmental activities that may be performed at the Site. The HASP is consistent with California Code of Regulations Title 8 requirements for hazardous substance release sites, and identifies constituents of concern and related risks, establishes work practices to minimize the risk of accidents and exposure to hazardous substances, and provides emergency response procedures and contacts.

property with Santa Clara County Assessor Parcel Number 237-06-087 (Site).

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Technical Report  
 Completed Date: 06/26/2019  
 Comments: Technical Report provides an evaluation of the health and structural condition of the trees within the landscaping structure in the southwest corner area of the site based on a visual inspection from the ground. DTSC has not reviewed and provided comments on the Technical Report.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 09/03/2019  
 Comments: The Report documents the installation of three groundwater monitoring wells (wells); and discusses the groundwater monitoring activities performed and presents the data collected during the second quarter 2019 monitoring event (2Q 2019 monitoring event).

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 12/04/2019  
 Comments: This Report documents the second quarterly groundwater monitoring event since the implementation of the Removal Action Workplan. Because this is the second monitoring event, no trend analysis was made. Chemical of concerns (pesticides, volatile organic compounds, semivolatile organic compounds, petroleum, and metals) concentrations were largely consistent with concentration ranges observed during previous sampling event.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 04/14/2020  
 Comments: This Report documents the third quarterly groundwater monitoring event since the implementation of the Removal Action Workplan. Because this is the third monitoring event, no trend analysis was made. Trend analysis will be conducted after results of four consecutive groundwater monitoring events became available. Chemical of concerns (pesticides, volatile organic compounds, semivolatile organic compounds, petroleum, and metals) concentrations were largely consistent with concentration ranges observed during previous sampling event. Well SJMW 4 was replaced with Well SJMW 4R in December 2019 in accordance with the Removal Action Design and Implementation Plan (RADIP) and Santa Clara Valley Water District (SCVWD) requirements. Well SJMW 4R will be sampled in the first quarter of 2020 and results will be reported in the First Quarter 2020 Groundwater Monitoring Report.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 06/18/2020

**MOYER CHEMICAL (Continued)** **S111842224**

Comments: This report documents the fourth quarterly groundwater monitoring event since the implementation of the Removal Action Workplan. Because this is the fourth monitoring event, no trend analysis was made. Trend analysis will be conducted after the results of four consecutive groundwater monitoring events became available. Apart from the metal lead, chemical of concerns (pesticides, volatile organic compounds, semivolatile organic compounds, petroleum, and metals) concentrations were largely consistent with concentration ranges observed during the previous sampling event. Reported concentrations of lead have exceeded the regulatory action level of 15 micrograms per liter. Split groundwater (GW) samples will be submitted to the selected California Environmental Laboratory Accreditation Program (CA ELAP) laboratory) and at least one other CA ELAP laboratory to confirm the First Quarter (1Q) 2020 detections of lead in the upper-bearing groundwater unit (A-zone). Split GW samples results will be used to assess the results of the 1Q GW sampling event and 2Q GW sampling event, if appropriate.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 10/01/2020  
 Comments: Report documents second quarter 2020 groundwater monitoring at the Site. Main findings during the reporting period are the following: Petroleum hydrocarbons were detected in all the A-zone well. Highest reported concentrations are consistent with areas where light non-aqueous phase liquid has been reported. Polycyclic aromatic hydrocarbons and chlorinated volatile organic compounds (VOCs) were detected in four of the A zone monitoring wells, with the highest concentrations and the most VOCs in Well SJMW-4R. Naturally occurring metals were detected in all the groundwater samples. Only arsenic and lead exceeded state and federal maximum contaminant levels (MCL). Trace concentrations of organochlorine pesticides (OCPs) were detected in five A-zone wells. Only Technical Chloridane exceeded the state MCL in Well SJMW-2. No OCPs were detected in A-zone Well SJMW-6 or B-zone Well SJMW-6B, both of which are designated sentinel wells.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Plan  
 Completed Date: 03/24/2020  
 Comments: The Groundwater Monitoring Plan expands on the groundwater monitoring components of the Removal Action Workplan, dated November 14, 2016, and the Removal Action Design and Implementation Plan, dated January 8, 2019. The Groundwater Monitoring Plan is intended to serve as a stand-alone plan for ongoing groundwater monitoring at the Site.

replacement well because only one water-bearing zone will be penetrated; and Replacement well construction features.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Fieldwork  
 Completed Date: 12/04/2019  
 Comments: DTSC GSB staff Alex Woodward and Jerry Aarons were present at the site to witness the destruction of SJMW-4 and installation of replacement well. Soil profile was continuous cored from -5 ft 28 ft bgs with a GeoProbe rig. This is a deviation from Workplan as continuous core was anticipated from 15 to 28 ft bgs. Visual inspection of continuous core clearly showing a LNAPL petroleum sheen (rainbow colors) in that gravelly-clay interval between 16 ft - 18 ft bgs. PID readings in a bagged headspace sample was in the range of ~60 ppm v/v. DTSC staff notices that there was a petroleum sheen on the concrete at the work site where they dropped the 8 hollow stem augers so we asked Cascade (selected driller company) to steam-clean those augers and to stage them on plastic sheeting a portable diesel delivery truck shows up each day to fill each bus with diesel. The steam portion of the on-site steam cleaner was now functioning so they used the pressure washer only.

 Completed Sub Area Name: Not reported  
 Completed Document Type: Risk Assessment Workplan  
 Completed Date: 07/21/2015  
 Comments: The Health Risk Assessment Work Plan describes the methods to be used in preparing a site-specific risk assessment.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 01/21/2016  
 Comments: The report documents the August 2015 quarterly monitoring well sampling. The results for this quarter were consistent with the previous quarterly sampling results. The Site groundwater continues to be impacted by petroleum hydrocarbons, pesticides, and metals that exceed regulatory screening levels in the upper A-zone.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 04/07/2016  
 Comments: The quarterly groundwater monitoring data were consistent with the previous quarters. However, an observation was made that there were constituents in the analytical results for well SJMW-4 that did not meet the Data Quality Objectives (screening values, e.g. benzene, ethylbenzene etc.). If the comparison criteria are not met during the next quarterly sampling, DTSC requested that a discussion be included in the quarterly monitoring report explaining why the comparison criteria were not met (e.g. interferences because of TPH products).

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 07/06/2016  
 Comments: The report presents the results and findings of the February 2016 quarterly well sampling. A trend analysis was performed using the data from the February 2016 and past groundwater sampling events and showed the February 2016 results were consistent with the previous sampling events. Based on the trend analysis, DTSC concurred with the recommendation to reduce the groundwater sampling program from quarterly to semi-annual basis. The next semi-annual report will be due to DTSC in November 2016.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Phase 1  
 Completed Date: 06/01/2012  
 Comments: A Phase II Environmental Site Assessment was performed at the site.

**MOYER CHEMICAL (Continued)** **S111842224**

Soil and groundwater samples taken indicated the presence of pesticides and total petroleum hydrocarbons in soil and groundwater. Further investigation is recommended to determine the extent of contamination.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Phase 1  
 Completed Date: 02/13/2012  
 Comments: The Phase I Environmental Site Assessment was performed on the property in January/February 2012. Operations have included Moyer Chemical and Diamond Alkali Chemical from 1953 through the mid 1960s as pesticide manufacturers, Howard Electric, Inc. from the mid 1960s to late 1980s, and San Jose Concrete Pipe Company from the late 1980s to present. From the file and record search and based upon the historical uses, the property may have contributed to the contamination to soil or groundwater in the surrounding area and the report recommended collection of soil and groundwater samples for the property.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Site Characterization Workplan  
 Completed Date: 04/28/2014  
 Comments: The Remedial Investigation Workplan outlines investigation activities to further characterize the nature and extent of contamination from past historical operations. The scope of work outlined in the Workplan includes cone penetrometer testing at three locations, collection of soil samples from up to 15 soil borings, installation of three groundwater monitoring wells, sampling of the three new and existing monitoring wells, and installation and sampling of four multi-depth soil vapor wells.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Work Notice  
 Completed Date: 03/20/2014  
 Comments: Work notice informing local community about remedial investigation fieldwork activities at the site. The purpose of the investigation is to characterize the nature and extent of hazardous waste or constituents to soil, soil vapor, and groundwater at or potentially emanating from the Site.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Fieldwork  
 Completed Date: 05/16/2014  
 Comments: The work outlined in the Remedial Investigation Workplan, approved by DTSC on April 28, 2014, was completed.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Remedial Investigation Report  
 Completed Date: 12/10/2015  
 Comments: The Remedial Investigation (RI) Report was prepared pursuant to the Imminent and Substantial Endangerment and Remedial Action Order issued to the former Moyer Chemical Company (previous owner) and San

**MOYER CHEMICAL (Continued)** **S111842224**

Jose Concrete Transfer Company (current owner). The RI field activities were conducted between April 2014 and March 2015 which included soil, soil gas, and groundwater sampling. Volatile organic compounds (VOCs) were detected in soil vapor above residential screening levels. In soil, petroleum, pesticides, and metals were found across the site. In groundwater, petroleum, arsenic and pesticides were detected primarily along the eastern property boundary with some exceedances along the western property boundary and northern central portion of the site. A Removal Action Workplan will be prepared to address the contamination at the site.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Removal Action Workplan  
 Completed Date: 11/14/2016  
 Comments: The Final Removal Action Workplan (RAW) addresses soil and groundwater impacted with metals, pesticides, volatile organic compounds, and total petroleum hydrocarbons (TPH). The selected removal action includes capping the contaminated soil, TPH free product removal, institutional controls, and groundwater monitoring. Field activities are scheduled to begin in the spring 2017.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Fact Sheets  
 Completed Date: 09/22/2016  
 Comments: The fact sheet describes the proposed removal action and announces the public comment period for the draft Removal Action Workplan from October 4 through November 4, 2016.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Public Notice  
 Completed Date: 09/22/2016  
 Comments: The public notice announces the public comment period for the draft Removal Action Workplan from October 4 through November 4, 2016.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Fieldwork  
 Completed Date: 10/22/2019  
 Comments: DTSC PM conducted a site visit to verify compliance with Removal Action Design and Implementation Plan. Based on the findings noted during the site visit, DTSC PM observed the following: Tree protection zone (TPZ; landscaping structure (existing planter area) that contains five mature trees) areas were constructed according to specifications conveyed to AVOCET. Former unpaved area (Tee-Shaped) that wrapped around the southwest corner of the office building was paved with similar specifications as those paved areas of site to attain same integrity and effectiveness to prevent surface water infiltration into the vadose zone.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Remedy Constructed with O&M  
 Completed Date: 06/09/2020  
 Comments: The Report documents removal actions completed at Former Moyer

**MOYER CHEMICAL (Continued)** **S111842224**

Chemical Company Property (Site) between February 4, 2019, and October 21, 2019. Removal actions were performed in accordance with the Removal Action Workplan (RAW), dated November 14, 2016, and approved by DTSC. To support removal actions, Avocet prepared "Removal Action Design and Implementation Plan; RADIP, dated January 4, 2019, Soil Management Plan; SM Plan, dated January 18, 2019, Operation and Maintenance Plan; O&M Plan, dated December 23, 2019, and Groundwater Monitoring Plan; GWM Plan, dated December 23, 2019. These plans were approved by DTSC in January 2019 (RDIP and SM Plan), and in March 2020 (O&M Plan and GWM Plan).

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Operation and Maintenance Plan  
 Completed Date: 03/24/2020  
 Comments: The O&M Plan expands on the O&M components of the Removal Action Workplan, dated November 14, 2016, and the Removal Action Design and Implementation Plan, dated January 8, 2019. The O&M Plan is intended to serve as a stand-alone plan for ongoing operations and maintenance of the engineering controls at the Site.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Work Notice  
 Completed Date: 04/08/2019  
 Comments: Work notice sent to inform local community of cap installation at the Site.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Remedial Investigation Workplan  
 Completed Date: 11/18/2014  
 Comments: The Addendum was prepared to address data gaps that were identified after a preliminary evaluation of the data collected during the remedial investigation field program. The activities outlined in the Addendum include drilling and sampling of seven soil borings and installation of one additional groundwater monitoring well.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Fieldwork  
 Completed Date: 02/09/2019  
 Comments: Three sentinel wells (two in the A-zone and one in the B-zone) were installed and developed. Noted lithology and depth to ground water are similar to findings from previous investigations conducted at the Site. Former Well MW-1 was destroyed by over-drilling to address the Santa Clara Valley Water District's request. Sediments (mud) deposited on top of the Site's concrete/asphalt cover ( Cap ) were consolidated on Site using a backhoe/bobcat. Sediments were handled per the approved Soil Management Plan. Sediments were stockpiled (approximately 130 cubic yards) and covered with heavy duty polyethylene sheeting. The stockpiled sediments have been sampled and will be disposed once lab results are available.

 Completed Document Type: Other Report  
 Completed Date: 01/31/2019  
 Comments: Document records a Grant Deed from San Jose Concrete Pipe Company and San Jose Transfer Company, Inc., to Old Bayshore South LLC, the real property with Santa Clara County Assessor Parcel Number 237-06-087 (Site).

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Technical Report  
 Completed Date: 06/26/2019  
 Comments: Technical Report provides an evaluation of the health and structural condition of the trees within the landscaping structure in the southwest corner area of the site based on a visual inspection from the ground. DTSC has not reviewed and provided comments on the Technical Report.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 09/03/2019  
 Comments: The Report documents the installation of three groundwater monitoring wells (wells) and discusses the groundwater monitoring activities performed and presents the data collected during the second quarter 2019 monitoring event (2Q 2019 monitoring event).

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 12/04/2019  
 Comments: This Report documents the second quarterly groundwater monitoring event since the implementation of the Removal Action Workplan. Because this is the second monitoring event, no trend analysis was made. Chemical of concerns (pesticides, volatile organic compounds, semivolatile organic compounds, petroleum, and metals) concentrations were largely consistent with concentration ranges observed during previous sampling event.

Completed Area Name: PROJECT WIDE

MAP FINDINGS

MOYER CHEMICAL (Continued) S111842224

Completed Date: 04/14/2020  
 Comments: This Report documents the third quarterly groundwater monitoring event since the implementation of the Removal Action Workplan. Because this is the third monitoring event, no trend analysis was made. Trend analysis will be conducted after results of four consecutive groundwater monitoring events became available. Chemical of concerns (pesticides, volatile organic compounds, semivolatile organic compounds, petroleum, and metals) concentrations were largely consistent with concentration ranges observed during previous sampling event. Well SJMW 4R was replaced with Well SJMW 4R in December 2019 in accordance with the Removal Action Design and Implementation Plan (RADIP) and Santa Clara Valley Water District (SCVWD) requirements. Well SJMW 4R will be sampled in the first quarter of 2020 and results will be reported in the First Quarter 2020 Groundwater Monitoring Report.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 06/18/2020  
 Comments: This report documents the fourth quarterly groundwater monitoring event since the implementation of the Removal Action Workplan. Because this is the fourth monitoring event, no trend analysis was made. Trend analysis will be conducted after the results of four consecutive groundwater monitoring events became available. Apart from the metal lead, chemical of concerns (pesticides, volatile organic compounds, semivolatile organic compounds, petroleum, and metals) concentrations were largely consistent with concentration ranges observed during the previous sampling event. Reported concentrations of lead have exceeded the regulatory action level of 15 micrograms per liter. Split groundwater (GW) samples will be submitted to the selected California Environmental Laboratory Accreditation Program (CA ELAP) laboratory) and at least one other CA ELAP laboratory to confirm the First Quarter (1Q) 2020 detections of lead in the upper-bearing groundwater unit (A-zone). Split GW samples results will be used to assess the results of the 1Q GW sampling event and 2Q GW sampling event, if appropriate.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 10/01/2020  
 Comments: Report documents second quarter 2020 groundwater monitoring at the Site. Main findings during the reporting period are the following: Petroleum hydrocarbons were detected in all the A-zone well. Highest reported concentrations are consistent with areas where light non-aqueous phase liquid has been reported. Polycyclic aromatic hydrocarbons and chlorinated volatile organic compounds (VOCs) were detected in four of the A zone monitoring wells, with the highest concentrations and the most VOCs in Well SJMW-4R. Naturally occurring metals were detected in all the groundwater samples. Only arsenic and lead exceeded state and federal maximum contaminant levels (MCLs). Trace concentrations of organochlorine pesticides (OCPs) were detected in five A-zone wells. Only Technical Chlordane exceeded the state MCL in Well SJMW-2. No OCPs were detected in A-zone Well SJMW-6

MAP FINDINGS

MOYER CHEMICAL (Continued) S111842224

or B-zone Well SJMW-6B, both of which are designated sentinel wells.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Plan  
 Completed Date: 03/24/2020  
 Comments: The Groundwater Monitoring Plan expands on the groundwater monitoring components of the Removal Action Workplan, dated November 14, 2016, and the Removal Action Design and Implementation Plan, dated January 8, 2019. The Groundwater Monitoring Plan is intended to serve as a stand-alone plan for ongoing groundwater monitoring at the Site.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Well Installation Workplan  
 Completed Date: 11/15/2019  
 Comments: Based on the technical recommendations included in the well replacement workplan, DTSC concurs with the following: Replacement well should be permitted, installed, developed and surveyed in accordance with Santa Clara Valley Water District's requirements and adhered to the DTSC-approved Removal Action Design (RADIP); A hollow-stem auger drilling equipment may be selected to install the replacement well because only one water-bearing zone will be penetrated; and Replacement well construction features.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Fieldwork  
 Completed Date: 12/04/2019  
 Comments: DTSC GSB staff Alex Woodward and Jerry Aarons were present at the site to witness the destruction of SJMW-4 and installation of replacement well. Soil profile was continuous cored from -5 ft 28 ft bgs with a GeoProbe rig. This is a deviation from Workplan as continuous core was anticipated from 15 to 28 ft bgs. Visual inspection of continuous core clearly showing a LNAPL petroleum sheen (rainbow colors) in that gravelly-sand interval between 16 ft - 18 ft bgs. PID readings in a bagged headspace sample was in the range of ~60 ppm v/v. DTSC staff notices that there was a petroleum sheen on the concrete at the work site where they dropped the 8 hollow stem augers so we asked Cascade (selected driller company) to steam-clean those augers and to stage them on plastic sheeting a portable diesel delivery truck shows up each day to fill each bus with diesel. The steam portion of the on-site steam cleaner was now functioning so they used the pressure washer only.

 CERS Description: Chemical Storage Facilities

**Violations:**  
 Site ID: 34001  
 Site Name: GORILLA CIRCUITS  
 Violation Date: 12-19-2017  
 Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)  
 Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.  
 Violation Notes: Returned to compliance on 02/01/2018. Step can for contaminated solids in waste water treatment area missing most information except "empty every nite", 55 gal drum dry film strip missing properties and physical state; 5 gal white poly drum unlabeled; 55 gal drum spent cobronnd with faded illegible label; mop water tank unlabeled; 15 gal steel container tin anode (used) only marked with date 12/6/17; numerous drums from weekend PMs are stored temporarily in covered area marked only with contents and date until fully labeled or treated; step can in dryfilm room no label; hall outside plasma room marked only "equip cleaning" and date; step can in Cu/Posit Haz/Mat label (not HW) marked "empty every nite"; 2x55 gal white poly drums used Cu/Posit solution being held prior to treatment; blue 5 gal bucket and white 5 gal bucket in stencil room unlabeled; step can in stencil room illegible; recycle bin near new machine in back of mask area unlabeled holding debris and crystals; 55 gal "used pumice" in pumice scrub area. [Truncated]

 Violation Date: 12-19-2017

**GORILLA CIRCUITS (Continued)** 1008153124

**Citation:** 22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173  
**Violation Description:** Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.  
**Violation Notes:** Returned to compliance on 02/01/2018. 2x55 gallon drums "HCl rinse" from PMs open, missing bungs. Blue 5 gal bucket and white 5 gal bucket in stencil room open. 15 gal recycle bin with debris and crystals in room with new machine behind mask area. 15 gal lined trash can at sheet grinder holding grind pads with copper.  
**Violation Division:** Santa Clara County Environmental Health  
**Violation Program:** HWLQG  
**Violation Source:** CERS  
 Site ID: 34001  
 Site Name: GORILLA CIRCUITS  
 Violation Date: 12-19-2017  
 Citation: 22 CCR 15 66265.31 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.31  
**Violation Description:** Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.  
**Violation Notes:** Returned to compliance on 02/01/2018. Liquid noted in most containment structures in plating area, most piping and waste containment trenches. Crystals noted outside containment behind tank 430 on sulfuric etch cleaner. Crystals behind doors under Cu/Posit line. Lots of standing liquid in containment and outside containment on ramp in and around stencil wash/ tanks 179 and 180; crystals in containment at loading end of automated plate line; liquid in containment in dry film room.

Violation Description:	Tiered Permitting Program - Operations/Maintenance - General Treatment of the following wastes was noted as being conducted (either through verbal description or logged in operating logs) without the wastes being eligible for onsite treatment or the notification not accounting for the waste treatment process: "Nitric Acid": Logs not treatment of nitric acid. Please demonstrate how nitric acid treated is not an oxidizer or reactive waste. Permanganate wastes at Cu-Post line. Permanganates are generally oxidative. Please demonstrate how these wastes are not oxidizers. Peroxide and sulfonperoxide wastes. Please demonstrate how these wastes are not oxidative.

environmental or public health enforcement agency concerning the operation of the facility within the last three years, as the documents would be available under the California Public Records Act. The current waste analysis plan is incomplete. Current plan does not include details as noted in #1-4 below. This is a repeat violation from 4/24/15 inspection report, and it was recommended on 4/24/15 to include rationale in your plan specifying the reason for each tier selected, the current plan does not include this information.

Violation Description:	RCRA Large Quantity Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General	
Violation Notes:	Facility had a recorded discharge to the publicly owned treatment works (POTW) of a hazardous waste (pH of 12.6). Duration of discharge is estimated to be 5 minutes. According to facility, unintentional discharge is believed to have occurred when an operator dumped a developer solution (sodium hydroxide based) to Sump #2 during routine preventative maintenance activities (PM's). Prior correspondence with City of San Jose Environmental Services Division have indicated that Gorilla Circuits has no way to stop a discharge once in the sumps located below grade in the waste treatment area.

Eval General Type: Compliance Evaluation Inspection  
 Eval Date: 12-19-2017  
 Violations Found: Yes  
 Eval Type: Routine done by local agency  
 Eval Notes: Facility operates four onsite treatment units. FTU1: 17 tank/container treatment system consisting of three collection sumps (in which incidental neutralization may occur to lo commingling), ph buffering tank, filter and ion exchange, sand filtration (for pumice particulate material). System accepts waste at front end from metal bearing wastes, pH buffers, and removes via ion exchange. Once metal removed, commingled with non-metal bearing wastes and further pH adjusted and metal scrubbed. Pumice wastes with copper are processed through separator and sand filter prior to being added to original collection sump and mixture with other metal bearing wastes. Filter media is removed and managed as hazardous waste as efficiency drops. Batch treated wastes from FTU2, FTU3, and FTU4 are combined with untreated wastes in Sump 1 (tank 640) for additional processing. Reviewed the following onsite treatment related documentation: CERS submittal containing application dated [Truncated]

 CERS Description: US EPA Air Emission Inventory System (EIS)

Violations:  
 Site ID: 34001  
 Site Name: GORILLA CIRCUITS  
 Violation Date: 12-19-2017  
 Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)  
 Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.  
 Violation Notes: Returned to compliance on 02/01/2018. Step can for contaminated solids in waste water treatment area missing most information except "empty every nite", 55 gal drum dry film strip missing properties and physical state; 5 gal white poly drum unlabeled; 55 gal drum spent cobronnd with faded illegible label; mop water tank unlabeled; 15 gal steel container in anode (used) only marked with date 12/8/17; numerous drums from weekend PMs are stored temporarily in covered area marked only with contents and date until fully labeled or treated; step can in dryfilm room no label; hall outside plasma room marked only "equip cleaning" and date; step can in Cu/Posit HazMat label (not HW) marked "empty every nite"; 2x55 gal white poly drums used Cu/Posit solution being held prior to treatment; blue 5 gal bucket and white 5 gal bucket in stencil room unlabeled; step can in stencil room illegible; recycle bin near new machine in back of mask area unlabeled holding debris and crystals; 55 gal "used pumice" in pumice scrub area. [Truncated]

Violation Date: 04-24-2015  
Citation: 22 CCR 45 67450.13(a)(1) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.13(a)(1)  
Violation Description: Failure to prepare a written estimate of the cost of closing each unit which includes the cost that would be incurred for closing a treatment unit when using the owner or operator or generator's own staff and/or personal equipment taking into account any salvage value that may be realized from the sale of wastes, facility structure or equipment, land or other facility assets. This estimate shall be submitted as an attachment to the Certification of Financial Assurance for Permit by Rule and Conditionally Authorized Operations/ Maintenance page(s) of the Unified Program Consolidated Form (x/99).

Violation Notes: Returned to compliance on 07/17/2015. The closure cost estimate is complete, please submit a copy to this agency and include date completed.

Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16

Violation Description: Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

Violation Notes: Returned to compliance on 02/01/2018. The training plan provided by the facility is not a comprehensive plan that includes all required elements. Example of training plan format provided with report.

Violation Date: 12-19-2017

Citation: 22 CCR 15 66265.52 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.52

Violation Description: Failure to include all of the following in the Contingency Plan: description of actions personnel will take in response to a release or emergency, arrangements with local authorities, list of emergency coordinators including name, addresses & phone numbers, list of emergency equipment and their physical description, location and capabilities - evacuation plan, and OES phone number. (If the owner or operator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) Plan or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate hazardous waste management provisions.)

Violation Notes: Returned to compliance on 02/01/2018. Facility is using the consolidated contingency/emergency plan version which is missing tech emergency contact names and numbers. Please either update to use the new format or add contact name and numbers to the existing form. Additionally, CUPA phone number is incorrect (408-918-3400) and nearest hospital should be Regional Medical Center on Jackson Ave.

 Violation Description: RCRA Large Quantity Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General  
 Violation Notes: Facility had a recorded discharge to the publicly owned treatment works (POTW) of a hazardous waste (pH of 12.6). Duration of discharge is estimated to be 5 minutes. According to facility, unintentional discharge is believed to have occurred when an operator dumped a developer solution (sodium hydroxide based) to Sump #2 during routine preventative maintenance activities (PM's). Prior correspondence with City of San Jose Environmental Services Division have indicated that Gorilla Circuits has no way to stop a discharge once in the sumps located below grade in the waste treatment area.

**GORILLA CIRCUITS (Continued)** 1008153124

Violations Found: Yes  
 Eval Type: Routine done by local agency  
 Eval Notes: Facility operates four onsite treatment units. FTU1: 17 tank/container treatment system consisting of three collection sumps (in which incidental neutralization may occur to commingling), ph buffering tank, filter and ion exchange, sand filtration (for pumice particulate material). System accepts waste at front end from metal bearing wastes, pH buffers, and removes via ion exchange. Once metal removed, commingled with non-metal bearing wastes and further pH adjusted and metal scrubbed. Pumice wastes with copper are processed through separator and sand filter prior to being added to original collection sump and mixture with other metal bearing wastes. Filter media is removed and managed as hazardous waste as efficiency drops. Batch treated wastes from FTU2, FTU3, and FTU4 are combined with untreated wastes in Sump 1 (tank 640) for additional processing. Reviewed the following onsite treatment related documentation: CERS submittal containing application dated [Truncated]

RCRA Large Quantity Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General

Violation Description: Facility had a recorded discharge to the publicly owned treatment works (POTW) of a hazardous waste (pH of 12.6). Duration of discharge is estimated to be 5 minutes. According to facility, unintentional discharge is believed to have occurred when an operator dumped a developer solution (sodium hydroxide based) to Sump #2 during routine preventative maintenance activities (PM's). Prior correspondence with City of San Jose Environmental Services Division have indicated that Gorilla Circuits has no way to stop a discharge once in the sumps located below grade in the waste treatment area.

 Address: 1509 BERGER DR  
 City, State, Zip: SAN JOSE, CA 95112  
 Site ID: 34001  
 CERS ID: 263132  
 CERS Description: Industrial Facility Storm Water  
 Violations:  
 Site ID: 34001  
 Site Name: GORILLA CIRCUITS  
 Violation Date: 12-19-2017  
 Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)  
 Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.  
 Violation Notes: Returned to compliance on 02/01/2018. Step can for contaminated solids in waste water treatment area missing most information except "empty every nite", 55 gal drum dry film strip missing properties and physical state; 5 gal white poly drum unlabeled; 55 gal drum spent cobronod with faded illegible label; mop water tank unlabeled; 15 gal steel container in anode (used) only marked with date 12/6/17; numerous drums from weekend PMs are stored temporarily in covered area marked only with contents and date until fully labeled or treated; step can in dryfilm room no label; hall outside plasma room marked only "equip cleaning" and date; step can in CuPosit HazMat label (not HW) marked "empty every nite"; 2x55 gal white poly drums used CuPosit solution being held prior to treatment; blue 5 gal bucket and white 5 gal bucket in stencil room unlabeled; step can in stencil room illegible; recycle bin near new machine in back of mask area unlabeled holding debris and crystals; 55 gal "used pumice" in pumice scrub area; [Truncated]

 Violation Program: HWLQG  
 Violation Source: CERS  
 Site ID: 34001  
 Site Name: GORILLA CIRCUITS  
 Violation Date: 12-19-2017  
 Citation: 22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173  
 Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.  
 Violation Notes: Returned to compliance on 02/01/2018. 2x55 gallon drums "HCl rinse" from PMs open, missing bungs. Blue 5 gal bucket and white 5 gal bucket in stencil room open. 15 gal recycle bin with debris and crystals in room with new machine behind mask area. 15 gal lined trash can at sheet grinder holding grind pads with copper.

Site ID: 34001  
 Site Name: GORILLA CIRCUITS  
 Violation Date: 12-19-2017  
 Citation: 22 CCR 15 66265.31 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.31  
 Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violation Notes: Returned to compliance on 02/01/2018. Liquid noted in most containment structures in plating area, most piping and waste containment trenches. Crystals noted outside containment behind tank 430 on sulfuric etch cleaner. Crystals behind doors under OuPosit line. Lots of standing liquid in containment and outside containment on ramp in and around slat wash tanks 179 and 180; crystals in containment at loading end of automated plate line; liquid in containment in dry film room;

 Site Name: GORILLA CIRCUITS  
 Violation Date: 07-09-2015  
 Citation: 22 CCR 45 67450.13(a)(1) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.13(a)(1)  
 Violation Description: Failure to prepare a written estimate of the cost of closing each unit which includes the cost that would be incurred for closing a treatment unit when using the owner or operator or generator's own staff and/or personal equipment taking into account any salvage value that may be realized from the sale of wastes, facility structure or equipment, land or other facility assets. This estimate shall be submitted as an attachment to the Certification of Financial Assurance for Permit by Rule and Conditionally Authorized Operations/ Maintenance page(s) of the Unified Program Consolidated Form (v/99).

Violation Notes: The closure cost estimate appears complete, send a copy to this agency and include date completed. This is a repeat violation from inspection report completed on 4/24/15.

construction or installation such as cracks, punctures, damaged fittings. All discrepancies shall be documented in the assessment and remedied before the tank system

Violation Notes: Returned to compliance on 03/29/2018. The hazardous waste tank system assessment is complete, send a copy to this agency.

Violation Division: Santa Clara County Environmental Health  
 Violation Program: PBR  
 Violation Source: CERS

Site ID: 34001  
 Site Name: GORILLA CIRCUITS  
 Violation Date: 04-24-2015  
 Citation: 22 CCR 15 66265.31 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.31  
 Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health or the environment.

Violation Notes: Observed free liquids in plating areas inside secondary containment. Observed waste filter cake (blue crystalline salts) adjacent to satellite filter cake containers. Spills are not cleaned up in a timely manner.

Violation Division: Santa Clara County Environmental Health  
 Violation Program: HWLQG  
 Violation Source: CERS

Site ID: 34001  
 Site Name: GORILLA CIRCUITS  
 Violation Date: 01-06-2015  
 Citation: 22 CCR 45 67450.3(c)(8) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(8)  
 Violation Description: Failure to maintain, reproduce, and provide the following documents at the facility where the FTU is operating: 1) The waste analysis plan for the treatment operation; 2) The written inspection schedule; 3) All training documents; 4) The contingency plan; 5) A copy of the most recent treatment notification and a copy of the most recent acknowledgement received from the Department, CUPA or authorized agency; 6) A copy of any local Air District permit and other permits required for the operation of the FTU; 7) A copy of the closure plan; 8) A copy of documents related to the environmental investigation and any cleanup, abatement or other necessary remedial action taken; and 9) Documentation of any convictions, judgments, settlements, or orders resulting from any action by any local, State, or federal environmental or public health enforcement agency concerning the operation of the facility within the last three years, as the documents would be available under the California Public Records Act. Facility has not prepared a complete Waste Analysis Plan for all the hazardous wastes being treated onsite in 4 fixed treatment units.

**GORILLA CIRCUITS (Continued)** **1008153124**

Violation Description: 31, Section(s) 67100.9  
Failure of a large quantity generator to prepare a summary progress report every four years, using DTSCG s Form # 1262 (3/99) titled "Summary Progress Report".

Violation Notes: Returned to compliance on 02/01/2018. Facility does not have a SB 14 waste minimization plan or summary report for 2015.

Violation Division: Santa Clara County Environmental Health  
Violation Program: HWLQG  
Violation Source: CERS

Site ID: 34001  
Site Name: GORILLA CIRCUITS  
Violation Date: 07-09-2015  
Citation: 22 CCR 15 66265.31 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.31

Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health or the environment.

Violation Notes: Observed free liquid below tank #258 - Sulfuric Acid inside secondary containment of board plating and processing area. The free liquid indicated approximately pH 1 on field pH paper. On 4/24/15 this violation was noted for free liquids inside secondary containment in plating areas. Spills, dragout and small leaks are not cleaned up when they occur and the current operational procedures do not appear adequate to maintain this area in a manner to minimize the possibility of a release.

Violation Division: Santa Clara County Environmental Health

Citation: 22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)

Violation Description: Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, and tank systems authorized under Permit-by-Rule, Conditional Authorization, and Conditional Exemption or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated

**GORILLA CIRCUITS (Continued)** **1008153124**

Violation Notes: onsite.  
Returned to compliance on 03/29/2018. Facility was able to provide a draft tank assessment but could not locate the PE stamped/signed copy. A copy of the stamped document should be uploaded to CERS with annual renewal in 2018.

Citation: 22 CCR 45 67450.3(c)(8) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(8)

Violation Description: Failure to maintain, reproduce, and provide the following documents at the facility where the FTU is operating: 1) The waste analysis plan for the treatment operation; 2) The written inspection schedule; 3) All training documents; 4) The contingency plan; 5) A copy of the most recent treatment notification and a copy of the most recent acknowledgement received from the Department, CUPA or authorized agency; 6) A copy of any local Air District permit and other permits required for the operation of the FTU; 7) A copy of the closure plan; 8) A copy of documents related to the environmental investigation and any cleanup, abatement or other necessary remedial action taken; and 9) Documentation of any convictions, judgments, settlements, or orders resulting from any action by any local, State, or federal environmental or public health enforcement agency concerning the operation of the facility within the last three years, as the documents would be available under the California Public Records Act. The current waste analysis plan is incomplete. Make sure the plan includes all details as noted in #1-4 below. Note: It is recommended to include the rationale in your plan that indicates the reason a specified Tier was selected, i.e. FTU-3 Permit by Rule; treatment of aqueous inasewaters with hazardous waste levels of copper and nickel and pH of 1.4; 2500 ppm metals and 20,000 gallons per month treated, thus Permit by Rule tier was selected for this treatment unit.

6.5, Section(s) Multiple Sections  
 Violation Description: RCRA Large Quantity Generator Program - Abandonment/Illegal Disposal/Unauthorized Treatment - General

Violation Notes: Facility had a recorded discharge to the publicly owned treatment works (POTW) of a hazardous waste (pH of 12.6). Duration of discharge is estimated to be 5 minutes. According to facility, unintentional discharge is believed to have occurred when an operator dumped a developer solution (sodium hydroxide based) to Sump #2 during routine preventative maintenance activities (PM's). Prior correspondence with City of San Jose Environmental Services Division have indicated that Gorilla Circuits has no way to stop a discharge once in the sumps located below grade in the waste treatment area.

Eval General Type: Compliance Evaluation Inspection  
 Eval Date: 12-19-2017  
 Violations Found: Yes  
 Eval Type: Routine done by local agency  
 Eval Notes: Facility operates four onsite treatment units. FTU1: 17 tank/container treatment system consisting of three collection sumps (in which incidental neutralization may occur to lo commingling), ph buffering tank, filter and ion exchange, sand filtration (for pumice particulate material). System accepts waste at front end from metal bearing wastes, pH buffers, and removes via ion exchange. Once metal removed, commingled with non-metal bearing wastes and further pH adjusted and

**GORILLA CIRCUITS (Continued)** 1008153124

metal scrubbed. Pumice wastes with copper are processed through separator and sand filter prior to being added to original collection sump and mixture with other metal bearing wastes. Filter media is removed and managed as hazardous waste as efficiency drops. Batch treated wastes from FTU2, FTU3, and FTU4 are combined with untreated wastes in Sump 1 (tank 640) for additional processing. Reviewed the following onsite treatment related documentation: CERS submittal containing application dated [Truncated]

CA BOND EXP. PLAN:

Responsible Party: COST RECOVERY/OPERATION AND MAINTENANCE SITE  
 Project Revenue Source Company: Not reported  
 Project Revenue Source Addr: Not reported  
 Project Revenue Source City,St,Zip: Not reported  
 Project Revenue Source Desc: The responsible party voluntarily conducted all characterization and removal  
 activities. The Department did not issue a remedial action order to the  
 responsible party. DHS has certified the site. DHS will recover all costs  
 related to the project including staff costs and overhead. The Department is  
 currently in the cost recovery stage.

Site Description: This site was used in the 1960s and 1970s to manufacture cosmetic products,  
 cleaning compounds, plaster statues and as a chemist's research and development  
 workshop. Currently, it is leased to a truck repair service and plastics  
 molding company.

Hazardous Waste Desc: Approximately 50 drums were stored or buried onsite. Several drums contained  
 phenols. A pile of empty five and ten-gallon metal containers, including paint  
 thinner cans, was stored onsite.

Threat To Public Health & Env: Prior to the removal action, there was a concern that there was soil  
 contamination and a potential for ground water contamination. In addition,  
 there was a potential for a fire hazard if sodium perborate was stored with  
 organic compounds. These potential threats have been eliminated with the  
 removal of the onsite drums.

Site Activity Status: In July, 1988, the responsible parties completed, under the oversight of the  
 Department, a removal action which involved the removal and disposal of 50  
 drums of which 8 contained phenols. The removal action resulted in a final  
 remediation of the site. Post removal sampling results indicated that no  
 residual soil contamination was present. DHS certified the site in December,  
 1988.

MAP FINDINGS

SAFETY-KLEEN SYSTEMS, INC (Continued) 1000224435

Waste Description: D-GLUCOSE, 2-DEOXY-2-[(METHYLNITROSAmino)-CARBONYLAMINO]- (OR) GLUCOPYRANOSE, 2-DEOXY-2-(3-METHYL-3-NITROUREIDO)-D- (OR) STREPTOZOTOCIN

Waste Code: U208  
Waste Description: 1,1,1,2-TETRACHLOROETHANE (OR) ETHANE, 1,1,1,2-TETRACHLORO-

Waste Code: U209  
Waste Description: 1,1,2,2-TETRACHLOROETHANE (OR) ETHANE, 1,1,2,2-TETRACHLORO-

Waste Code: U210  
Waste Description: ETHENE, TETRACHLORO- (OR) TETRACHLOROETHYLENE

Waste Code: U211  
Waste Description: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

Waste Code: U213  
Waste Description: FURAN, TETRAHYDRO-(I) (OR) TETRAHYDROFURAN (I)

Waste Code: U219  
Waste Description: THIOUREA

Waste Code: U220  
Waste Description: BENZENE, METHYL- (OR) TOLUENE

Waste Code: U226  
Waste Description: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Waste Code: U227  
Waste Description: 1,1,2-TRICHLOROETHANE (OR) ETHANE, 1,1,2-TRICHLORO-

Waste Code: U228  
Waste Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Waste Code: U237  
Waste Description: 2,4-(1H,3H)-PYRIMIDINEDIONE, 5-[BIS(2-CHLOROETHYL)AMINO]- (OR) URACIL MUSTARD

Waste Code: U239  
Waste Description: BENZENE, DIMETHYL- (LT) (OR) XYLENE (I)

Waste Code: U240  
Waste Description: 2,4-D, SALTS & ESTERS (OR) ACETIC ACID, (2,4-DICHLOROPHENOXY)-, SALTS & ESTERS (OR) DICHLOROPHENOXYACETIC ACID 2,4-D

Waste Code: U248  
Waste Description: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYL-BUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS OF 0.3% OR LESS (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS OF 0.3% OR LESS

Waste Code: U328  
Waste Description: BENZENAMINE, 2-METHYL- (OR) O-TOLUIDINE

Waste Code: U353  
Waste Description: BENZENAMINE, 4-METHYL- (OR) P-TOLUIDINE

Waste Description:	VINYL CHLORIDE
Waste Code:	F001
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F002
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE, ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F004
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F005
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	P051
Waste Description:	2,7,8-DIMETHANONAPHTH[2,3-B]OXIRENE, 3,4,5,6,9-HEXACHLORO-1A,2,2A,3,6,6A,7,7A-OCTAHYDRO-, (1AALPHA, 2BETA, 2ABETA, 3ALPHA, 6ALPHA, 6ABETA, 7BETA, 7AALPHA)- & METABOLITES

 Quarterly Update: Update 6/29/07 - DTSC staff met with Brian Culnan of SK on 6/5/07 at the DTSC Sacramento Regional Office to discuss corrective action and AB1651 at SK San Jose. Based on the 6/5/07 meeting, the following is the history of the site. This was converted to a transfer facility years ago. Tanks were removed as part of past closure; closure certification was not completed because of extensive contamination to soil and groundwater. The site work was further complicated by corrective action work performed on the groundwater at an adjacent site. There is a CACA in place (2003). An earlier RFI Work Plan was submitted to DTSC regarding soil borings only because at the time, DTSC was the lead on soil and the RWQCB was the lead for groundwater. Later, in September 2003, when DTSC took jurisdiction over groundwater, a subsequent RFI Work Plan was submitted to DTSC for groundwater issues. SK has been monitoring the groundwater (semiannually) near the dewatering tanks which show high contamination

Completed Info:  
 Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Fieldwork  
 Completed Date: 08/11/2014  
 Comments: Soil, groundwater, subslab, and indoor air sampling event completed

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Other Report  
 Completed Date: 06/16/2015  
 Comments: The 1st Quarter Progress Report discusses the activities during the quarter and projected activities for the next quarter. During the 1st quarter, Safety-Kleen conducted additional vapor and indoor air sampling and the results were submitted to DTSC. No groundwater monitoring activities occurred during this quarter but are scheduled for the next quarter.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Risk Assessment Workplan  
 Completed Date: 08/12/2016  
 Comments: The Human Health Risk Assessment (HHRA) Work Plan outlines the approach for a risk assessment to evaluate potential human health risks associated with exposure to chemicals detected in the site subsurface and indoor air that will be presented in the Human Health Risk Assessment Report.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 11/03/2015  
 Comments: No activities were reported for the quarter in the 2015 3rd Quarter Progress Report since semi-annual groundwater monitoring is performed and reports are submitted during the 2nd and 4th quarters.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported

**SAFETY-KLEEN SAN JOSE (Continued)**

S103985988

Completed Document Type: Monitoring Report  
 Completed Date: 05/24/2016  
 Comments: The Quarterly Progress Report, Fourth Quarter 2015 describes activities that were performed from October through December 2015 and activities projected to occur during the first quarter of 2016 (January through March). During the fourth quarter 2015, activities performed included groundwater monitoring and presenting the results, additional investigation to delineate the vertical extent of impacts by volatile organic compounds at monitoring well MW-10, and the submittal of the revised RCRA Facility Investigation Addendum.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 05/24/2016  
 Comments: No activities were reported for the quarter in the Quarterly Progress Report, First Quarter 2016, since semi-annual groundwater monitoring is performed and the results are presented in the reports submitted for the second and fourth quarters of the year.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 10/10/2016  
 Comments: The Quarterly Progress Report, Second Quarter 2016, describes activities that were performed during the second quarter 2016 and activities projected to occur during the third quarter of 2016. Activities performed during the second quarter 2016 included groundwater monitoring and the finalization of the Human Health Risk Assessment Workplan. Activities for the third quarter 2016 include the preparation of the Human Health Risk Assessment Report and the finalization of the RCRA Facility Investigation Report Addendum and Cone Penetrometer Testing Report.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 11/07/2016  
 Comments: The activities reported for the third quarter of 2016 were the submittals of the Revised Second Quarter 2016 Groundwater Monitoring Report, the Revised Human Health Risk Assessment Workplan, and the Human Health Risk Assessment Report. No groundwater monitoring occurred during the quarter since the semi-annual groundwater monitoring is performed and the results are presented in the reports submitted for the second and fourth quarters.

 Comments: The estimated annual oversight cost for the 2013/14 fiscal year is \$33,104.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 06/30/2015  
 Comments: The 2014 4th Quarter Progress Report describes the activities that were performed during the quarter and presents the next quarter activities. During the 4th quarter, Safety-Kleen collected groundwater samples from all nine monitoring wells and presented the results as part of the semiannual monitoring program for the site. Several volatile organic compounds (PCE, TCE, and CFC) were detected that have not been detected in groundwater since 2001 to 2002. The monitoring wells were resampled and the results were consistent with the historical detections. It was determined that residual equipment contamination resulted in a false positive detections and the Standard Operating Procedures for decontaminating equipment were updated to prevent this from recurring. For the next quarter (1st Quarter 2015), Safety-Kleen will conduct soil vapor/indoor air sampling. No groundwater monitoring activities are planned for the next quarter.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Monitoring Report  
 Completed Date: 10/22/2015  
 Comments: The Second Quarter 2015 Progress Report describes activities that were performed from April through June 2015 and activities projected to occur during the third quarter of 2015 (July through September 2015). During the second quarter 2015, activities performed included groundwater monitoring and presenting the results, submittal of the second soil vapor/indoor air sampling report, discussions with DTSC about additional investigation around monitoring well MW10, and preparation of a risk assessment work plan.

**GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING**

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

**STANDARD ENVIRONMENTAL RECORDS**

**Federal NPL site list**

**NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/29/2021 Source: EPA  
 Date Data Arrived at EDR: 08/04/2021 Telephone: N/A  
 Date Made Active in Reports: 08/31/2021 Last EDR Contact: 09/01/2021  
 Number of Days to Update: 27 Next Scheduled EDR Contact: 10/11/2021  
 Data Release Frequency: Quarterly

EPA Region 10 Telephone: 206-553-8665

**Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2021 Source: EPA  
 Date Data Arrived at EDR: 08/04/2021 Telephone: N/A

 Data Release Frequency: Quarterly

**NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

 Data Release Frequency: Varies

**SEMS: Superfund Enterprise Management System**

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

**Federal CERCLIS NFRAP site list**

**SEMS-ARCHIVE: Superfund Enterprise Management System Archive**

**GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING**

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

**Federal RCRA non-CORRACTS TSD facilities list**

**RCRA-TSDF: RCRA - Treatment, Storage and Disposal**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Data Release Frequency: Varies

**US INST CONTROLS: Institutional Controls Sites List**  
 A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

**State- and tribal - equivalent CERCLIS**

**ENVIROSTOR: EnviroStor Database**  
 The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

	Data Release Frequency: Varies

**State and tribal Brownfields sites**

**BROWNFIELDS: Considered Brownfields Sites Listing**  
 A listing of sites the SWRCB considers to be Brownfields since these are sites have come to them through the MOA Process.

Date of Government Version: 06/17/2021	Source: State Water Resources Control Board
Date Data Arrived at EDR: 06/17/2021	Telephone: 916-323-7905
Date Made Active in Reports: 09/13/2021	Last EDR Contact: 09/21/2021
Number of Days to Update: 88	Next Scheduled EDR Contact: 01/03/2022
	Data Release Frequency: Quarterly

**ADDITIONAL ENVIRONMENTAL RECORDS**

**Local Brownfield lists**

**US BROWNFIELDS: A Listing of Brownfields Sites**  
 Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfields sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 06/10/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/10/2021	Telephone: 202-566-2777

 Data Release Frequency: No Update Planned

**US CDL: Clandestine Drug Labs**

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

**DEED: Deed Restriction Listing**

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

**GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING**

**EPA WATCH LIST: EPA WATCH LIST**

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

**2020 COR ACTION: 2020 Corrective Action Program List**

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

**RMP: Risk Management Plans**

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes (a) Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

**RAATS: RCRA Administrative Action Tracking System**

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

**US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)**  
 The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

Date of Government Version: 10/12/2016 Source: EPA

**ABANDONED MINES: Abandoned Mines**

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

**HAZNET: Facility and Manifest Data**

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

**WASTEWATER PITS: Oil Wastewater Pits Listing**

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

**WDR: Waste Discharge Requirements Listing**

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

**CERS: CalEPA Regulated Site Portal Data**

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

**EDR HIGH RISK HISTORICAL RECORDS**

**EDR Exclusive Records**

**EDR MGP: EDR Proprietary Manufactured Gas Plants**

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whole oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oil waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

**EDR Hist Auto: EDR Exclusive Historical Auto Stations**

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**LOS ANGELES CO LF METHANE:** Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapelite contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health.

**OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

**CT MANIFEST:** Hazardous Waste Manifest Data  
 Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 03/24/2021 Source: Department of Energy & Environmental Protection  
 Date Data Arrived at EDR: 05/11/2021 Telephone: 860-424-3375  
 Date Made Active in Reports: 07/28/2021 Last EDR Contact: 08/10/2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

**GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General NW

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

**GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

**HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

**FEMA FLOOD ZONE**

Flood Plain Panel at Target Property	FEMA Source Type
06085C023ZH	FEMA FIRM Flood data
<b>Additional Panels in search area:</b>	
06085C0069H	FEMA FIRM Flood data
06001C0650G	FEMA FIRM Flood data
06085C0251J	FEMA FIRM Flood data

**NATIONAL WETLAND INVENTORY**

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN JOSE WEST	YES - refer to the Overview Map and Detail Map

**HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**Site-Specific Hydrogeological Data\*:**

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles WSW
Site Name:	MODERN MACHINE CO
Site EPA ID Number:	CAD982400467
Groundwater Flow Direction:	North-Northeast
Measured Depth to Water:	16 feet to 17 feet.
Hydraulic Connection:	The site is located in the pressure (confined) zone, although interconnection between the upper and lower aquifers has been demonstrated within a one mile radius of the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

**AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

**GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

**GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

**GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

**ROCK STRATIGRAPHIC UNIT**

**GEOLOGIC AGE IDENTIFICATION**

Era: Cenozoic Category: Stratified Sequence  
 System: Quaternary  
 Series: Quaternary  
 Code: Q (decoded above as Era, System & Series)

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

**DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

**GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

**Soil Layer Information**

Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS: Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

**OTHER SOIL TYPES IN AREA**

Based on Soil Conservation Service STATSGO data, the following additional subordinated soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

**LOCAL / REGIONAL WATER AGENCY RECORDS**

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## PHYSICAL SETTING SOURCE RECORDS SEARCHED

### TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)  
Source: United States Geologic Survey  
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map  
Source: U.S. Geological Survey

### HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA  
Telephone: 877-336-2627  
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory  
Source: Department of Fish and Wildlife  
Telephone: 916-445-0411

### HYDROGEOLOGIC INFORMATION

AQUIFLOW<sup>R</sup> Information System  
Source: EDR proprietary database of groundwater flow information  
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

### GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit  
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database  
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)  
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database  
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)  
Telephone: 800-672-5559  
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

### LOCAL / REGIONAL WATER AGENCY RECORDS

#### FEDERAL WATER WELLS

PWS: Public Water Systems  
Source: EPA/Office of Drinking Water  
Telephone: 202-564-3750  
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data  
Source: EPA/Office of Drinking Water  
Telephone: 202-564-3750  
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)  
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program  
State Water Resources Control Board  
Telephone: 916-341-5577  
The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources: Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database  
Source: Department of Water Resources  
Telephone: 916-651-9648

California Drinking Water Quality Database  
Source: Department of Public Health  
Telephone: 916-324-2319  
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations  
Source: Dept of Conservation, Geologic Energy Management Division  
Telephone: 916-323-1779  
Oil and Gas well locations in the state.

California Earthquake Fault Lines  
Source: California Division of Mines and Geology  
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United States Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

## PHYSICAL SETTING SOURCE RECORDS SEARCHED

#### Area Radon Information

Source: USGS  
Telephone: 703-356-4020  
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA  
Telephone: 703-356-4020  
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

#### OTHER

Airport Landing Facilities: Private and public use landing facilities  
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater  
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United States Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

October 12, 1990

Mr. Jay Groh  
Scott Company  
1919 Market Street  
Oakland, CA 94604

Dear Mr. Groh:

**Subject: Fuel Leak at San Jose Meat Company, 11740 Berryessa Road, San Jose, CA 95133**

This letter informs you that a subsurface release of petroleum hydrocarbons which has impacted, or threatens to impact, waters of the State, has been reported and that you have been identified as a responsible party. We request that you submit a technical report to the Santa Clara Valley Water District (District) on the investigation and remediation activities at the above site. Pursuant to the California Water Code, polluted soil and groundwater must be remediated to the satisfaction of the Regional Water Quality Control Board (Regional Board). The Regional Board is the state agency responsible for enforcing the California Water Code to protect beneficial uses of both surface and groundwater.

Due to the large numbers of subsurface fuel leak cases being reported, the Regional Board has been unable to provide detailed regulatory oversight on these cases. A pilot program has been developed between the Regional Board and the District for the District to provide oversight on fuel leak cases. The Regional Board would provide enforcement and close cases.

The investigation and remediation of polluted soils and groundwater will generally follow the steps listed in the enclosed summary which is excerpted from the District's guidelines entitled, "Investigation and Remediation at Fuel Leak Sites Guidelines for Investigation and Technical Report Preparation," dated March 1989. These guidelines describe the steps for investigation and remediation that are necessary for case closure and are available to you by calling the District's "Self-Directed Case Advisor." This document has been sent to all the known consultants who currently work in Santa Clara County.

By December 12, 1990, please submit a technical report containing a work plan and proposed schedule for the next phase of work you plan to complete according to the enclosed summary. This technical report is being requested pursuant to the Regional Board's authority under the California Water Code, Section 13267.

Copies of all future reports, letters, etc., should be submitted to the District, Attention Self-Directed Program, the Regional Board, and the local fire department or agency which has jurisdiction over chemical storage on your site. The contacts and addresses are provided below:

Regional Water Quality Control Board  
Attention: Penny Silzer  
1800 Harrison Street  
Oakland, CA 94612

San Jose Fire Department  
Attention: Dan Firth  
4 North Second Street, Suite 1100  
San Jose, CA 95113-1305

Until you receive further notice, your case is considered to be "self-directed." At this time, the District will not be providing you with detailed review and comments on your investigation and remediation. However, you may contact the District's "Self-Directed Case Advisor" for general guidance and clarification. Please be advised that the District will routinely review selected self-directed cases to determine whether or not investigation or cleanup is being pursued in a timely manner. At that time, we may consider providing direct oversight or recommending that enforcement action be taken by the Regional Board.

Please check with your consultants to determine whether or not they have the District's guidelines. If you or your consultants would like to contact the "Self-Directed Case Advisor," please call Ruth Malcolm at (408) 927-0710, extension 649, or write to her at the District's address.

Sincerely,

Attention: Belinda A. Allen, P.E.

As per my conversation with Ruth Malcolm, this letter is to advise Santa Clara Valley Water District about San Jose Meat Company.

Jay Groh/Scott Co. has only acted as the contractor on the job site at 11740 Berryessa Road, San Jose. Jay Groh/Scott Co. is not the generator nor the owner of this property. Jay Groh/Scott Co. is not the responsible party as indicated in the attached letter.

If you have any questions concerning this matter, I can be contacted at (415) 834-2333.

Very truly yours,

SCOTT CO. OF CALIFORNIA

Ladies & Gentlemen:

Subject: San Jose Meat Co., 11740 Berryessa Road, San Jose

The purpose of this letter is to request a technical report from you and inform you of how the District will monitor progress of your investigation and cleanup of soil and/or groundwater at your fuel leak site. It is hereby requested that you proceed with your investigation or remediation without delay.

By December 31, 1990, please submit a technical report and proposed schedule for the next phase of work you plan to complete according to the enclosed summary. The technical report is being requested pursuant to the Regional Board's authority under the California Water Code Section 13267. The enclosed summary is excerpted from the District's guidelines entitled "Investigation and Remediation at Fuel Leak Sites Guidelines for Investigation and Technical Report Preparation" dated March 1989. These guidelines describe the steps for investigation and remediation which are necessary for case closure. This document has been sent to all the known consultants who currently work in Santa Clara County.

Until you receive further notice, your case is considered to be "self-directed." Although we will not be providing you detailed review and comments on your investigation and remediation, you may contact the "Self-Directed Case Advisor" for general guidance and clarification. Be advised that the District will routinely select several "self-directed" cases in order to determine whether or not the responsible parties are pursuing investigation or cleanup in a timely manner. At that time, we may consider providing direct District oversight or recommending that enforcement action be taken by the Regional Board.

Please check with your consultant to determine whether or not they have the District guidelines. If you or your consultant have questions please call (408) 927-0710, extension 649, and ask to speak with the "Self-Directed Case Advisor," or write the Self Directed Fuel Leak Program at the District's address.

Sincerely,

Dear Ms. Allen;

9392 '90 NOV -5 P3:20

I am writing in response to your October 12 letter to the Scott Company regarding the property located at 11740 Berryessa Road in San Jose, previously the site of the San Jose Meat Company.

Neither Jay Groh nor the Scott Company should be identified as the property owners or responsible parties for the site. The Scott Company was contracted for the purpose of the tank removal and sampling of the soil and groundwater.

The property owner is the Harris Ranch Beef Company. For your records, you may contact;

Mr. Manny De La Ossa  
Harris Feeding Company  
Rte. 1, Box 400  
Coalinga, CA 93210

This information was provided to Ms. Louise Dion of your office today.

Environmental Health Consultants (EHCI) has been retained by Harris Feeding Company to assist in addressing your request. A technical report will be submitted in accordance with your letter.

If you have any questions or require additional information, please feel free to contact me.

Respectfully,

Irene S. Fanelli, CIH  
President

Re: SELF DIRECTED PROGRAMS

1773 '90 DEC 24 11:41

Dear Ms. Allen:

I am writing in reference to your request for a self directed investigation of the Harris Ranch property at 11740 Berryessa Road in San Jose. In light of my telephone conversation with Ms. Louise Dion on November 1, 1990, we are providing the existing investigation information for the site.

Harris Ranch respectfully requests a determination from your office and/or the RWQCB regarding the sufficiency of this existing site information to satisfy any concerns that the site has raised. Specifically, we hope the District and the RWQCB will find that the existing site data demonstrates the absence of any significant threat to the groundwater, such that further investigation and/or remediation is unnecessary.

We would appreciate a response to this request by January 31, 1990. If we do not receive any response by January 31, 1990, Harris Ranch will consider the matter closed, with no further action to be taken.

If you have any further questions or require additional clarification of the attached information, please feel free to contact me.

Respectfully,

*Irene S. Fanelli*

## 1.0 Site History

The Harris Ranch property at 11740 Berryessa Road in San Jose is the former location of the San Jose Meat Company. The property was used for a slaughter house operation. In support of trucking operations associated with the facility, there were three underground fuel storage tanks. The capacities of the tanks included one 1000 gallon tank, and two 7500 gallon tanks. The tanks were reportedly used for storage of #2 diesel fuel. The slaughter house was closed in the 1981. The property was subsequently converted to a Self Storage facility, and has continued in such a capacity to the present.

A fire inspection was conducted at the property on November 30, 1988. As a result of the inspection, Harris Ranch was ordered to provide proposals for closure or reactivation of the tanks. Given the absence of any need for the tanks, Harris Ranch chose to remove all three tanks.

Two of the tanks were leak tested on October 22, 1988. The third tank test was completed on December 11, 1988. All three tanks were found to be liquid tight within the NFPA criteria of  $\pm$  0.050 gallons per hour. The test data is attached in Appendix A.

## 2.0 Tank Removal

All three tanks were removed on August 10, 1989. The work was conducted pursuant to permit number C 44598, issued by the City of San Jose on June 16, 1989. Fire Inspector Steve Gubber was present during the removal operation. A copy of the fire inspection report and permit are attached in Appendix B.

Five soil samples were collected at the time of the removal, as directed by Mr. Gubber. All of these samples were collected in backfill material, as opposed to native soil. TPH (diesel) results ranged from <10 to 11000 PPM, and TPH (gasoline) results ranged from <0.5 to 58 PPM. BTXE results for the excavation ranged from <0.05 to 1.2 PPM. The analytical reports and a diagram of the sample locations are attached as Appendix C.

prior to excavation of the trench. The trench was allowed to fill with water. This initial water was then pumped off and disposed. The trench was allowed to refill, and the water was again removed. The trench was allowed to fill a third time and then left to stabilize for 48 hours. A water sample collected from the trench on March 8, 1990 was found to contain <0.5 PPB of BTXE and 66 PPB of extractable TPH as oil. A final water sample collected from the trench on March 29, 1990 was found to contain <0.5 PPB of BTXE, <50 PPB of TPH as gasoline and <50 PPB of extractable TPH. All of the analytical results and a diagram of sample locations discussed in this section are attached in Appendix D.

The excavation was backfilled on March 29, 1990. Backfilling was approved by the Fire Department.

### 3.0 Additional Excavation

As a result of the contamination found at the time of the tank removal, further excavation was performed on October 16, 1989. The purpose of this additional excavation was to attempt to excavate to the limits of any lateral and/or vertical contamination. In addition, it was desirable to obtain native soil samples since it was believed that the extent of contamination would be limited to the backfill materials. The Fire Department was advised of the additional efforts being taken at the site.

A total of eight soil samples were collected from the sides of the expanded excavation, and in the bottom just above the water table. One corner of the excavation was slightly deeper than the rest of the excavation, and groundwater was encountered. A water sample was collected to determine the presence or absence of the tank materials in the groundwater. The sidewall samples demonstrated nondetectable levels of TPH as diesel and gasoline. The bottom samples were found to contain <100 PPM of TPH as diesel and gasoline. BTXE results were obtained for one of the bottom samples, and the results showed <0.05 PPM. BTXE results for the sidewall samples ranged from <0.05 to 4.4 PPM. The water sample was found to contain 52 PPB of TPH as gasoline. BTXE results for the water sample ranged from <0.5 to 1.8 PPB.

Based upon the results of the October 16 samples, Harris Ranch was advised by the contractor that it appeared they had reached the limits of the source of contamination. Additional groundwater samples were recommended to determine what, if any, groundwater contamination might exist. The Fire Department was advised of the additional activities and the reasons for undertaking the additional work.

A trench was excavated in the bottom of the overall excavation. The trench ran approximately 3/4 of the length of the excavation. It is estimated the excavation had reached 15 - 18 feet in depth

#### 4.0 Conclusion

Initial soil samples collected at the time of the removal of the three tanks revealed diesel contamination in excess of 100 PPM. Gasoline was present at <100 PPM. Following further excavation at the site, soil samples from the sidewalls and bottom of the excavation were found to contain <100 PPM of both diesel and gasoline. One water sample collected at that time contained 52 PPB of gasoline. Final trenching in the bottom of the excavation was accomplished in order to obtain a composite water sample from the bottom of the excavation. The first sample collected after allowing water to fill and refill the trench a total of three times, contained 66 PPB of oil. A final sample of water taken 21 days later, contained <50 PPB of oil and <50 PPB of gasoline.

Reference: Tank Testing - #2 Diesel  
Harris Ranch  
11740 Berryessa Road  
San Jose, CA

Gentlemen:

On October 22, 1988, we precision tested two (2) tanks using the "Petro-Tite" system.

The results for the tanks were as follows:

<u>PRODUCT</u>	<u>CAPACITY</u>	<u>RESULTS</u>
NO. 2 DIESEL (Tank No. 1)	1,000	-.010 GPH
NO. 2 DIESEL (Tank No. 2)	7,500	-.038 GPH

The above leak rates are within the NFPA criteria of  $\pm 0.050$  gallons per hour; therefore, these tanks and attached piping can be considered liquid tight at this time.

The test results are attached.

If you have any questions or need additional information, please do not hesitate to contact us.

Very truly yours,

TANK TESTING SERVICES

August 14, 1989  
Sample Log 1048

Jay Groh  
Scott Company  
1919 Market Street  
Oakland, CA 94607

Subject: Analytical Results for 5 Soil Samples Identified as  
"Hydro-Chem Tank Pull", Received August 10, 1989.

Dear Mr. Groh:

Analysis of the samples referenced above has been completed. This report is written to confirm results transmitted verbally on August 14, 1989 and describes procedures used to analyze the samples.

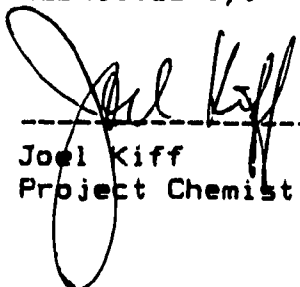

Samples were received in brass sleeves that were sealed with aluminum foil and plastic endcaps. Each sample was transported and received under documented chain of custody, assigned a consecutive log number and stored at 4 degrees C until analysis was performed.

Samples were analyzed for content of Total Petroleum Hydrocarbons as Gasoline (Modified EPA Method 8015) and Benzene, Toluene, Ethylbenzene, and Total Xylenes (EPA Method 8020). Samples were prepared for analysis by purge-and-trap concentration and analyzed by a gas chromatograph with a photoionization detector in series with a flame ionization detector.

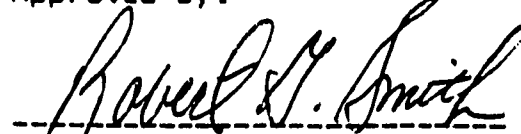

Four samples were analyzed for content of Total Petroleum Hydrocarbons as Diesel (Modified EPA Method 8015). These samples were prepared for analysis by acetone/hexane extraction. The extracts were analyzed by a gas chromatograph with a flame ionization detector.

Please refer to the following table(s) for summarized analytical results and contact us if you have questions regarding procedures or results. Enclosed is a copy of the chain of custody record.

Dear Mr. De La Ossa:

Subject: Oversight and Investigation Cost Recovery for Site Number 14G, former San Jose Meat Company, 11740 Berryessa Road, San Jose, CA

In March of 1988, the Santa Clara Valley Water District and the State Water Resources Control Board (SWRCB) entered into a contractual agreement. This agreement provides state and federal money to the District for the oversight costs associated with cleanup of petroleum hydrocarbon releases within Santa Clara County. The District will be invoicing the SWRCB for these funds on a quarterly basis. The SWRCB will then seek recovery of the funds from the responsible party.

The purpose of this letter is to notify you that District staff is now working on your case and any significant staff time for review, inspection or other related activities will be charged accordingly.

Attached is the SWRCB's Notice of Reimbursement to ensure that proper notification is given to the responsible party. Please check to ensure that the information is correct. The responsible party name, the company name and the address should coincide with the billing address.

If you have any questions, please call Ali Sheikholeslami at (408) 927-0710, extension 645.

Sincerely,

David J. Chesterman  
Supervising Engineer  
Groundwater Protection Division

Dear Sir or Madam;

I am writing to follow up upon my letter of 12/20/90 regarding the Harris Ranch property located at 11740 Berryessa Road in San Jose.

We have contracted with Parametrix, Inc. to provide engineering services for the site investigation to be conducted at the site. We anticipate the completion of the workplan by mid to late March and field work starting towards the end of March. A more definite work schedule will be included with the workplan.

If you have any questions or require additional information, please feel free to contact me.

Respectfully,

*Irene S. Fanelli*

March 14, 1991

Mr. Manny De La Ossa  
Harris Feeding Company  
Route 1 Box 400  
Coalinga, CA 93210

Dear Mr. De La Ossa:

**Subject: Fuel Leak Investigation at Former San Jose Meat Company, 11740 Berryessa Road, San Jose**

The purpose of this letter is to request the submittal of a technical report containing a work plan for further investigation of the reported groundwater contamination due to a release of petroleum hydrocarbon products at the subject site.

The following issues are of concern to the Santa Clara Valley Water District (SCVWD):

1. On August 10, 1989, three underground storage tanks, previously containing diesel fuel, were removed from the subject site. Soil samples indicated concentrations of Total Petroleum Hydrocarbons as diesel ranging from nondetectable to 11,000 ppm. Groundwater was encountered during further excavation of contaminated soil at this site on October 16, 1989. It has not been demonstrated that the contaminated soil has been remediated or removed.
2. On March 8, 1990, a trench dug into the floor of the excavation, was allowed to fill with groundwater. A report dated December 1990, submitted to the District by Environmental Health Consultants, does not describe methods for disposal, treatment, or containment of the possibly contaminated groundwater pumped from the trench.
3. The Environmental Health Consultants, in a report dated December 1990, states that the excavation was backfilled on March 29, 1990. This report does not describe the material used to backfill the excavation.
4. The local groundwater gradient needs to be determined. Further investigation is required to determine if groundwater contamination has resulted from the on-site fuel leak. At least one groundwater monitoring well should be constructed in the verified downgradient direction and within ten feet of the former underground tank.
5. A more thorough investigation to define the lateral and vertical extent of soil contamination must be implemented immediately. This investigation should provide information concerning the subsurface lithology at this site.

#### Technical Report Request

Pursuant to the Regional Water Quality Control Board's (RWQCB) authority under Section 13267 of the California Water Code, a technical report containing a work plan for further investigation at the site is

requested to be submitted by April 18, 1991. The technical report shall address the comments in this letter and shall contain a time schedule for implementation of the work.

An investigation to define the vertical and horizontal extent of soil contamination must be implemented immediately. All soils containing contamination of 1000 ppm are required to be removed or remediated. The scope of work to be performed shall be to define the vertical and horizontal extent of soil contamination to non-detectable concentration. If groundwater is encountered before the vertical definition of soil contamination is completed, a groundwater monitoring well shall be installed within ten feet of, and in the verified downgradient direction from, the former tank location. Water samples shall be collected from this well and submitted for laboratory analysis to determine whether groundwater has been impacted.

The work plan is to include:

1. Objective and scope of the proposed work.
2. Background and history of the site.
3. A site map showing locations of proposed sampling sites, boreholes, including existing and former structures, tanks, piping, underground utilities and nearby roads. This map shall be drawn to scale and show a northerly direction.
4. A survey and summary of wells within a one-half mile radius of the site.
5. Description of local topography, nearby creeks, rivers, groundwater recharge facilities in relation to the site.
6. Current and historical depth to groundwater based on mean sea level.
7. The proposed sample collection procedures for both soil and water.
8. The proposed sample preservation method for both soil and water.
9. The proposed well construction details. This includes the rationale used to select boring and well locations and what the criteria for selection will be.
10. Proposed well development and purging methods. Includes criteria for development and measurement of physical parameters (pH, temperature, conductivity, turbidity, sediment production, etc.).
11. The proposed chemical analyses to be conducted on soil and water samples.
12. The proposed quality assurance and quality control procedures (see Appendix C of the District Guidelines).
13. A schedule of when work is to be completed.

The format and content of all technical reports submitted for District review should be in accordance with those described in the "Investigation and Remediation at Fuel Leak Sites," Santa Clara Valley Water

District, October 1990 (District Guidelines). All technical reports shall contain a signatory statement attesting to legitimacy of the report and shall be signed by an officer or legally authorized representative of Harris Feeding Company, as stated in the District Guidelines (Appendix A, page 2). All work and technical reports containing geologic or engineering evaluations and/or judgements must be performed under the direction of an appropriately registered or certified professional (Sections 6735, 7835, and 7835.1 of the Business and Professions Code). Technical reports are required to contain a statement of professional certification with the appropriate professional signatures and seals.

Please send copies of all correspondence and technical reports submitted for District review to the RWQCB (Attention: Penny Silzer) and to the San Jose Fire Department (Attention: Dan Firth).

If you have any questions please contact Kristin Cozza at (408) 927-0710, extension 661.

Sincerely,

Dear Ms. Cozza:

This letter will provide notification to Santa Clara Valley Water District that Environmental Health Consultants, Inc. is legally authorized to sign technical reports and other correspondence as a legal agent for, and in behalf of Harris Feeding Company, in connection with the site investigation and associated work to be performed at the Harris property located at 11740 Berryessa Road in San Jose. This authority has been granted specifically in addressing the Santa Clara Valley Water District requirement for the signature of an officer or legally authorized representative of Harris Feeding Company, as required by your letter of March 14, 1991. Environmental Health Consultants, Inc. is fully authorized to attest to the legitimacy of all technical reports and correspondence submitted to Santa Clara Valley Water District on our behalf.

In light of the notification above, please provide Environmental Health Consultants, Inc. with copies of all future correspondence to Harris Feeding Company relating to this project.

If you have any questions or require additional information, please contact me.

Dear Ms. Cozza;

Enclosed is the workplan and health and safety plan for the site investigation at the Harris Ranch Company property located at 11740 Berryessa Road in San Jose.

I declare, under penalty of perjury, that the information and/or recommendations contained in the attached proposal or report is true and correct. Representatives of Harris Ranch have reviewed the workplan prior to submittal.

We would like to begin the fieldwork portion of the project as soon as possible, and would appreciate your comments or approval at your earliest convenience.

If you have any questions or require additional information, please feel free to contact me.

Respectfully,

Irene S. Fanelli, CIH

April 26, 1991

Ms. Irene Fanelli  
Environmental Health Consultants  
P.O. Box 117910  
Burlingame, CA 94011-7910

Dear Ms. Fanelli:

Subject: Fuel Leak Investigation at Former San Jose Meat Company, 11740 Berryessa Road, San Jose

Santa Clara Valley Water District (District) staff have reviewed the proposed workplan and health and safety plan dated April 1991, prepared and submitted by Parametrix and Environmental Health Consultants on behalf of the Harris Ranch Feeding Company concerning the investigation being conducted at the subject site. The District staff comments on the workplan and the request for a technical report are presented below. Please address the comments in the technical report.

#### GENERAL COMMENTS

Part 3, Task 4 of the proposed workplan dated April 1991 states, "Up to six soil samples (two from each boring) collected from above the groundwater table will be selected for chemical analyses, based on PID readings, petroleum product odor, or visible staining of the soils."

Appendix B, Section III.1.a of the District Guidelines states "During the construction of all monitoring wells, soil samples are to be taken at a minimum of every five feet in the unsaturated zone and at changes in lithology. For construction of the monitoring well within 10 feet of the contaminant source, all samples collected are to be analyzed in the laboratory for the appropriate constituents." Soil samples, other than those collected during installation of the monitoring well within 10 feet of the contaminant source, can be subjectively screened before analyses using the above stated methods.

#### TECHNICAL REPORT REQUEST

Pursuant to the Regional Water Quality Control Board's authority under Section 13267 of the California Water code, the following technical report is requested.

##### Technical Report #1

The District hereby requests a technical report which summarizes the results of the investigation and the investigative methods used to perform the next phase of work at the site as described in the April 1991 workplan. The report should also address the comments in this letter. The technical report is requested to be submitted by June 30, 1991.

The format and content of all technical reports submitted to the District are requested to be in accordance with those described in the "Investigation and Remediation at Fuel Leaks Sites" revised October 1990 (District Guidelines). All technical reports shall contain a signatory statement attesting to the legitimacy of the report, and be signed by an officer or legally authorized representative of the Harris Ranch Feeding Company, as stated in the District Guidelines (Appendix A, Page 2).

All work and technical reports containing geologic or engineering evaluations and/or judgements must be performed under the direction of an appropriately registered or certified professional (Section 6735, 6835, and 7835.1 of the Business and Professional code). Technical reports must contain a statement of professional certification with the appropriate professional signatures and seals.

If you have any questions concerning this request, please call Kristin Cozza at (408) 927-0710, Extension 661.

Sincerely,

David D. Drury

San Jose, CA 95118

Dear Ms. Cozza;

Attached please find the Preliminary Site Assessment Report for the Harris Ranch property located at 11740 Berryessa Road in San Jose. Harris Ranch staff have reviewed the report and agree with the information and conclusions provided.

We are very pleased that the investigation confirmed prior site sampling associated with the underground storage tank removal conducted in 1989. All groundwater samples were found to contain less than detectable quantities of petroleum hydrocarbons. Only trace quantities of toluene were found in all but one of the soil borings completed during this investigation.

In light of the results noted for this investigation, Harris Ranch respectfully requests that this project be judged complete with no further action required.

Thank you for your assistance during this investigation. If you have any questions or require additional information, please contact me.

Respectfully,

**Site Code: 14G****Dear Mr. De La Ossa,**

The Santa Clara Valley Water District has submitted a report which summarizes the investigation and cleanup of hydrocarbon pollution related to the removal of three underground storage tanks used for diesel fuel storage at the above referenced site and recommends that the case be closed. Regional Board staff have reviewed this report and concur with this recommendation. Therefore, based on available information, it appears that further investigation and cleanup of hydrocarbon contamination related to this tank is not necessary. Further work could be required if conditions change or a water quality threat is discovered at the site.

If you have any questions, please contact Penny Silzer at (415) 464-1331.

re: Workplan for Preliminary Site Assessment, Harris Ranch Company

Dear Irene:

Parametrix is submitting this workplan for site assessment work to be performed at the Harris Ranch Company site located at 11740 Berryessa Road in San Jose, California. The proposed workplan is designed to assess soil and shallow groundwater conditions in the vicinity of the former underground storage tanks on the site.

If you have any questions, please feel free to call.

Sincerely,

PARAMETRIX, INC.

Kurt A. Easthouse, R.G. #4859  
Project Geologist

Jim Kao  
Project Manager

## 1. INTRODUCTION

### 1.1 LOCATION OF SITE

The Harris Ranch/San Jose Self-Storage Company is located at 11740 Berryessa Road in San Jose, California (see Figure 1).

### 1.2 BACKGROUND/SITE HISTORY

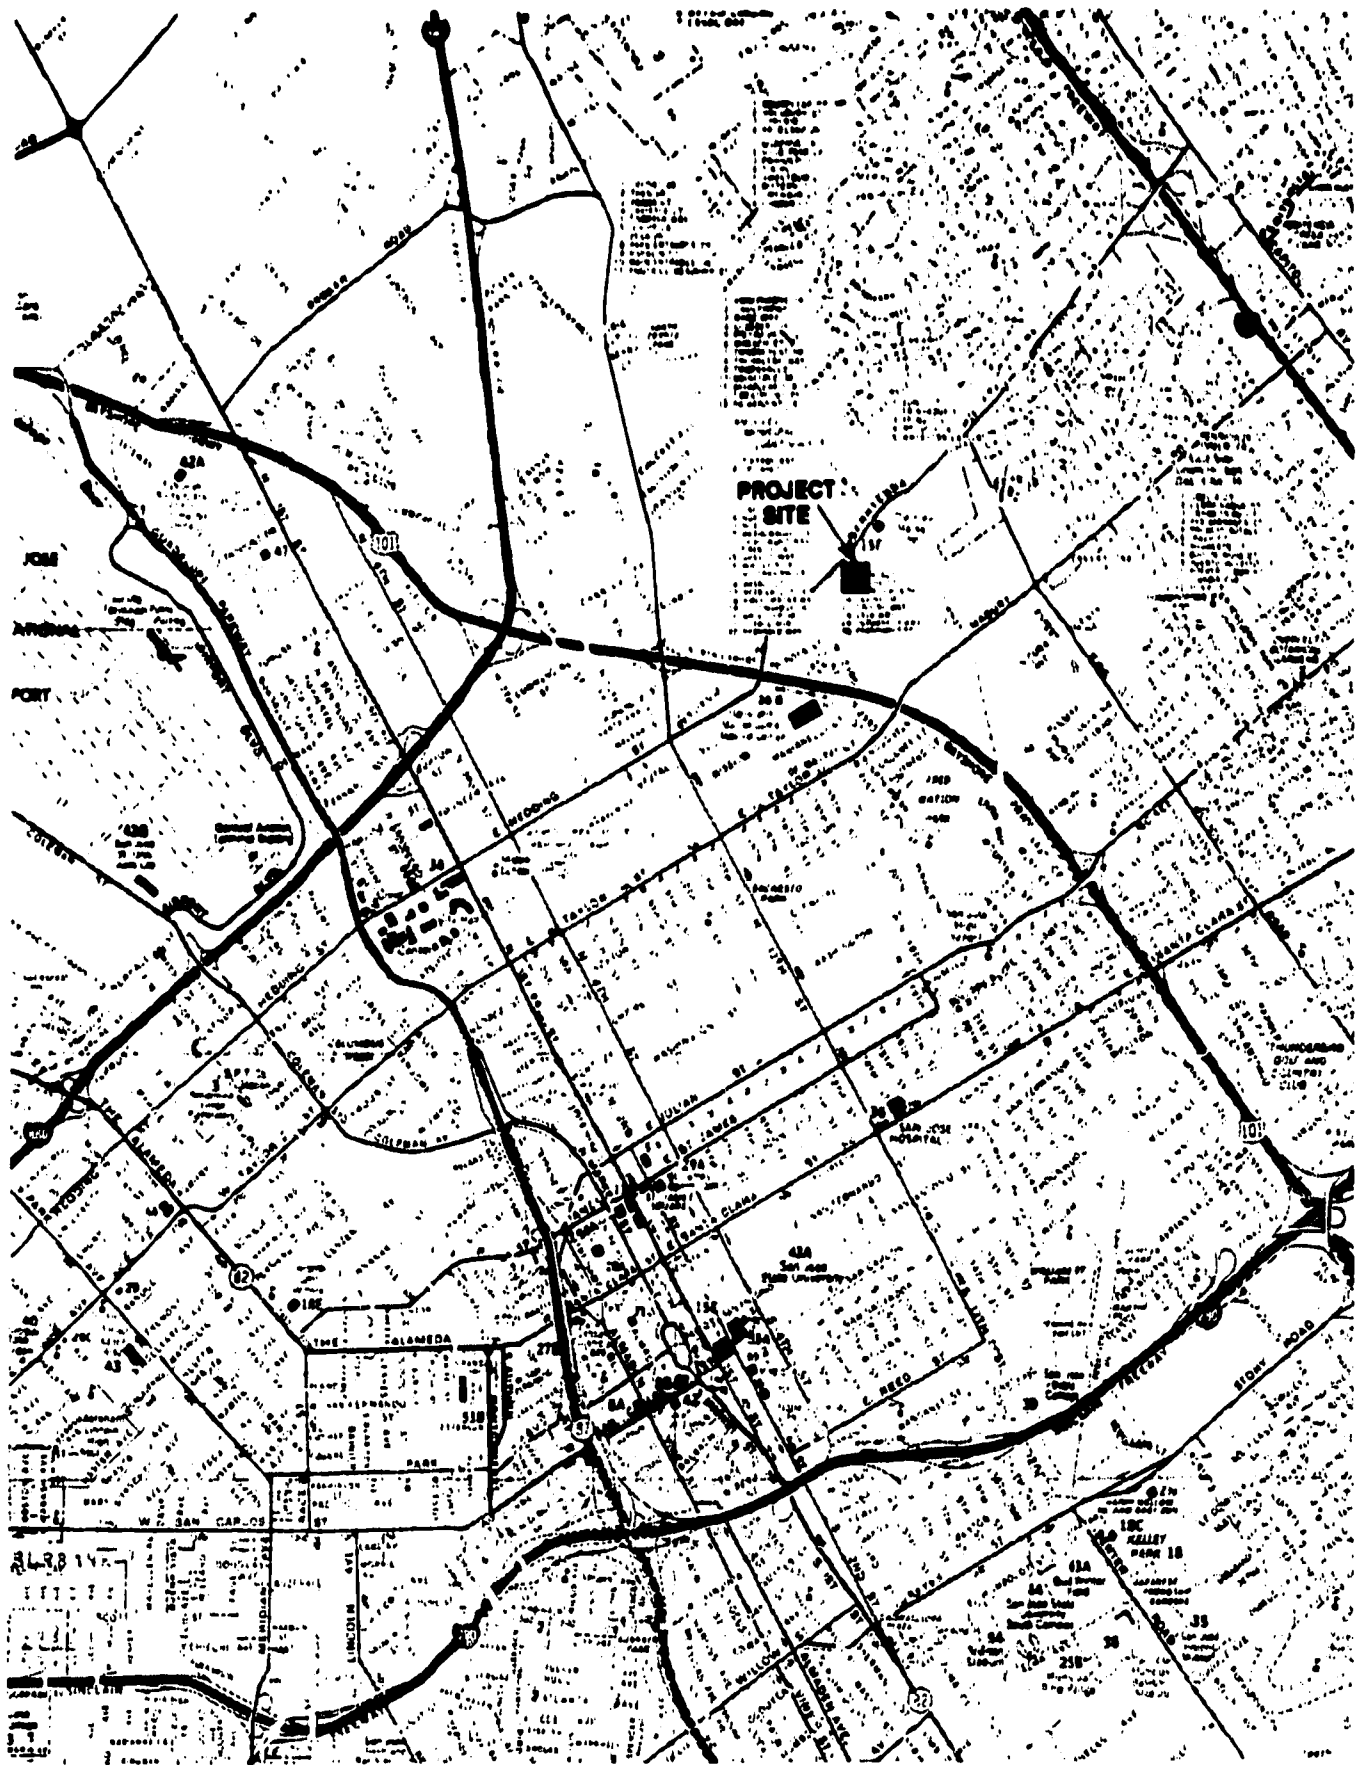

The current & previous site owner for the subject property is the Harris Ranch Feeding Company, Route 1 Box 400, Coalinga, California. The site contact for the property is Mr. Manny De La Ossa. The Harris Ranch site is presently used as a self-storage facility. Prior to 1981, the property was occupied by the San Jose Meat Company which used the site as a slaughterhouse. Three underground storage tanks that reportedly contained #2 diesel fuel were used to service trucks used in the operation of the facility. Two of the tanks had a capacity of 7,500 gallons and one of 1000 gallons. It was reported to Parametrix that there were no documented releases of product but the possibility exists that overfilling of the tanks may have occurred (Personal Communication, Ms. Irene Fanelli, Environmental Health Consultants, Inc. [EHCI] April 2, 1991).

#### Previous Subsurface Work Performed at the Site

A fire inspection was conducted on November 30, 1988 and Harris Ranch was instructed to either remove or close the tanks. They decided to remove the tanks and as a first step had the tanks tested. Two of the tanks were tested on October 22, 1988 and one on December 11, 1988. All three tanks tested tight.

The three storage tanks were removed on August 10, 1989. Five soil samples were collected during excavation activities from tank backfill material. The samples were analyzed for total petroleum hydrocarbons (TPH) as diesel, TPH as gasoline, and benzene, toluene, xylenes, and ethylbenzene (BTXE). The reported results are as follows: TPH (diesel) < 10 to 11,000 ppm; TPH (gasoline) < 0.5 to 58 ppm; and BTXE < 0.05 to 1.2 ppm.

Based on these initial results, Harris Ranch decided to resume excavation activities on October 16, 1989. The excavation was expanded and eight soil samples were collected from the sidewalls and base of the pit. It was reported that the above mentioned samples were collected from native materials (Personal Communication, Ms. Irene Fanelli, EHCI, April 2, 1991). Groundwater was reportedly encountered at a depth of approximately 15 to 18 feet below grade. TPH as gasoline and diesel were not detected in the sidewall and bottom samples. BTXE was below detection limits in the bottom samples (< 0.05 ppm) and ranged from < 0.05 to 4.4 ppm in sidewall samples. The groundwater in the base of the excavation was sampled and analyzed for TPH as gasoline (52 ppb) and BTXE (0.5 to 1.8 ppb).

NOT TO SCALE

**Figure 1.**  
**Site Location Map**  
**Harris Ranch Company**  
**11740 Serran Road**  
**San Jose, California**

Subsequent to these activities, a trench was dug in the excavation and allowed to fill with groundwater for the purpose of additional groundwater sampling. The trench was allowed to fill with water, pumped out two or three times, and then allowed to stabilize for 48 hours. The water was containerized and transported offsite for disposal. A groundwater sample was collected on March 8, 1990, and was analyzed for extractable TPH as oil (66 ppb) and BTXE (<0.5 ppb). On March 29, 1990, the trench was sampled again and analyzed for extractable TPH (<50 ppb), TPH as gasoline (<50 ppb), and BTXE (<0.5 ppb). The trench was reportedly backfilled with clean material that same day under approval from the San Jose Fire Department. All excavated soils were reportedly transported offsite. The area has since been paved with asphalt and a storage locker now sits above the former excavation. The exact limits of the excavation are unknown at this time.

This discussion of the site history is based on a review of a tank removal report (December 20, 1990) submitted to the SCVWD by Environmental Health Consultants, Inc. (EHCI), and verbal conversations with Ms. Irene Fanelli (EHCI). The following information about the site was not available to EHCI or supplied to Parametrix:

- Soil and groundwater sampling procedures other than as described on lab report
- Rationale for selection of different analytical methods
- Decontamination procedures
- Material safety data sheets (MSDS) for previous tank contents.

### Regulatory Interaction

The Santa Clara Valley Water District (SCVWD) requested that a self-directed site investigation and characterization be performed to determine extent of contamination at the site in a letter dated October 12, 1990. Ms. Irene Fanelli (EHCI) prepared and submitted a report (December 20, 1990) to the SCVWD summarizing site activities conducted by Harris Ranch. Additionally, she requested that the SCVWD review the December report and determine if it was necessary to perform a full site investigation and characterization. In late December 1990 the SCVWD verbally told Ms. Fanelli (EHCI) that a site investigation was necessary (verbal communication, Ms. Irene Fanelli, EHCI, March 27, 1991).

Parametrix was verbally contacted by Ms. Fanelli in regards to the Harris Ranch site on January 11, 1991. She requested that Parametrix prepare a scope of work and cost estimate for the initial phase of a site characterization. Parametrix submitted a proposal on January 17, 1991 and began developing a detailed workplan on February 28, 1991. On March 14, 1991, Harris Ranch was sent a letter from the SCVWD indicating the site no longer falls under the jurisdiction of self-directed studies and now is subject to overview by

the SCVWD, RWQCB, and San Jose Fire Department. The SCVWD requested a technical report containing a workplan for further study be submitted by April 18, 1991.

## **2. SITE DESCRIPTION**

### **2.1 VICINITY MAP**

A map of the area surrounding the Harris Ranch/San Jose Self-Storage Site is provided on Figure 2.

### **2.2 SITE MAP**

A map of the Harris Ranch/San Jose Self-Storage site is provided on Figure 3.

### **2.3 WATER WELL SURVEY AND TOPOGRAPHIC MAP**

Parametrix performed a groundwater well data search within a 0.5 mile radius of the site by contacting the SCVWD. They identified 41 groundwater wells in the area. Twenty-four of these are destroyed and 17 are either active or inactive. The water well locations are plotted on the topographic map in Figure 4.

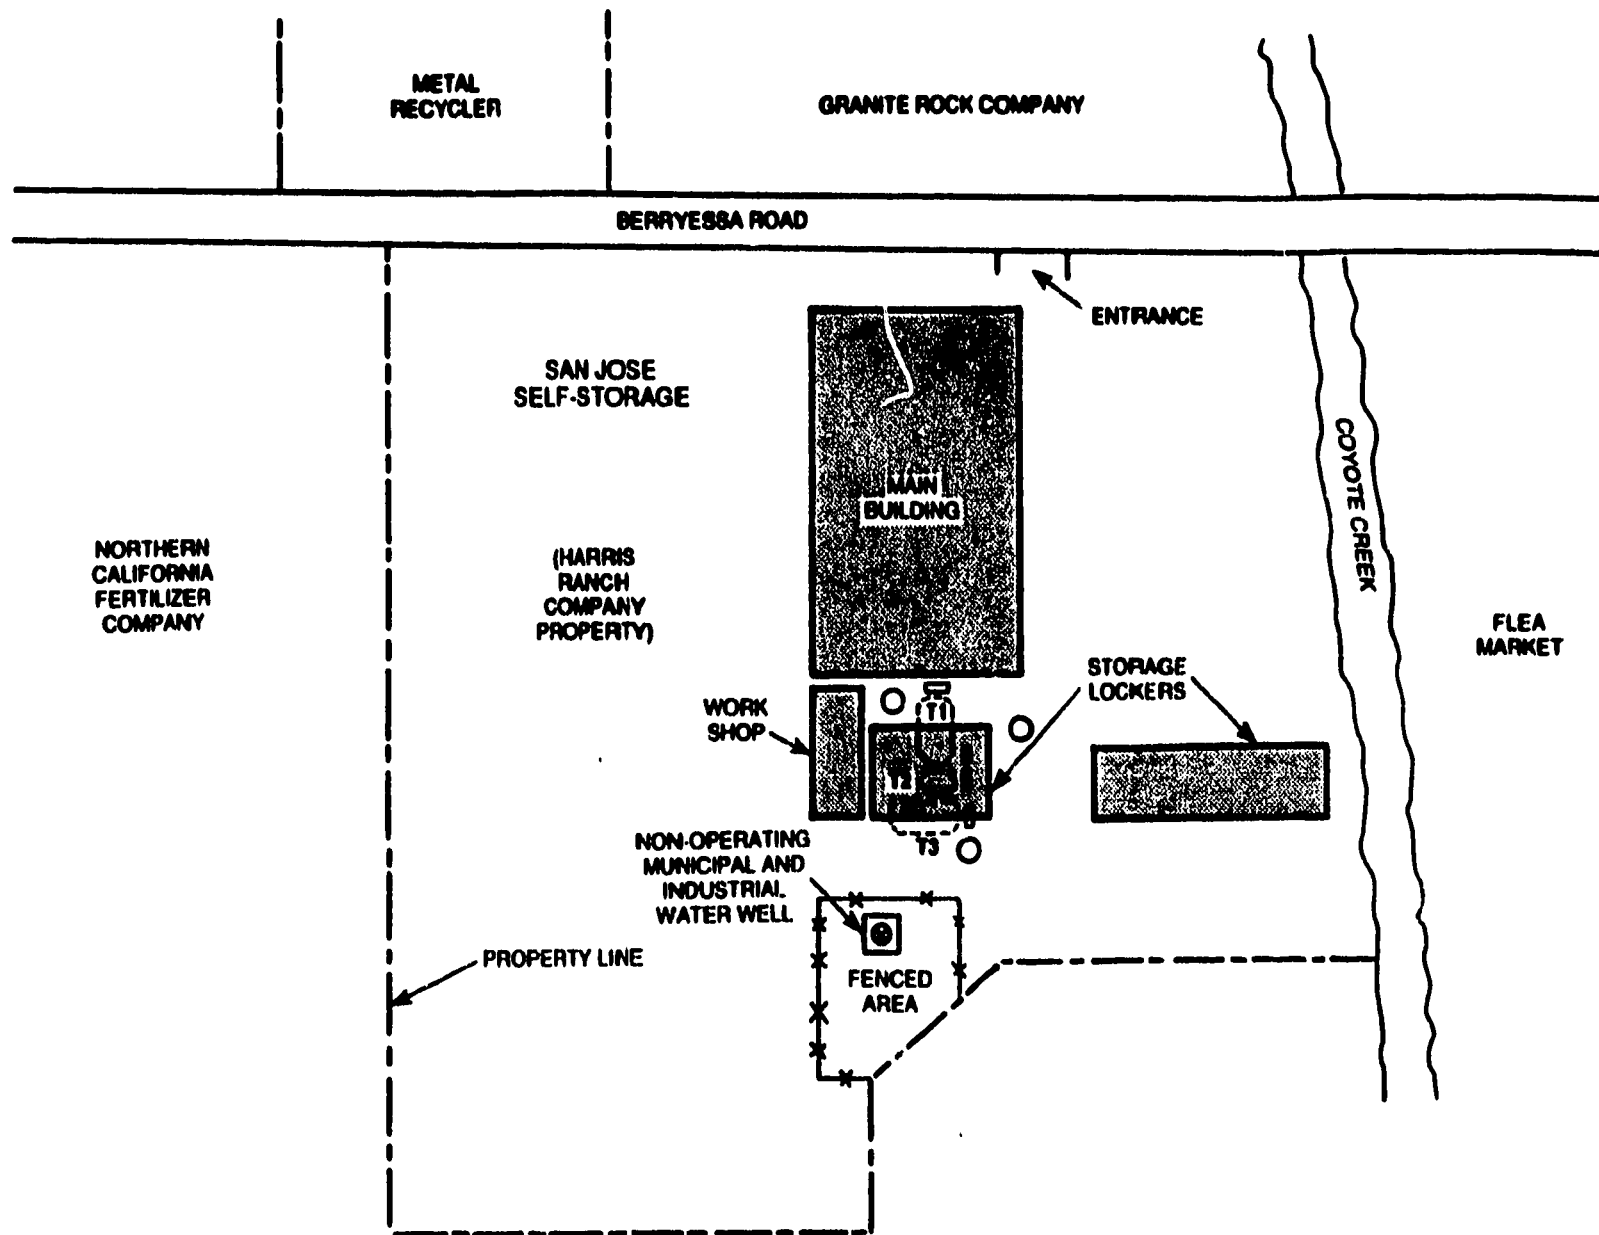

### **2.4 REGIONAL HYDROGEOLOGY**

The project site is located in the Santa Clara Valley, which is a long, narrow structural trough that extends 90 miles southwestward from San Francisco. The valley is bordered by the Santa Cruz mountains on the southwest and by the Diablo Range on the northeast. The topography in the vicinity of the project site is relatively flat with a slight grade to the west. Coyote Creek, which flows northward toward San Francisco Bay, is located adjacent to the eastern boundary of the site. In addition, Upper Penitencia Creek flows into Coyote Creek and is located directly east of the site.

Based on a review of well logs and geologic cross-sections (Poland and Ireland 1988), the project site appears to be underlain by unconsolidated alluvium of late Pleistocene and Holocene age composed of clay, silt, and possibly sand and gravel. The well logs indicate that the alluvial deposits attain a thickness of 1,000 feet or more in the trough of the valley.

Groundwater is expected to be encountered at approximately 15 to 18 feet below grade (Environmental Health Consultants, Inc., 1990). This appears to support depth to water information from two monitoring wells located approximately 600 feet north of the project site on the Granite Rock Company property. Static groundwater was measured at 14 to 15 feet below grade in October 1985 (SCVWD, monitoring well printout, March 25, 1991). The anticipated direction of groundwater flow is towards Coyote Creek.

### **3. PROPOSED WORKPLAN**

#### **TASK 1 - Prefield Activities and Utility Location**

On behalf of Harris Ranch, Parametrix will arrange for necessary field materials and equipment. In addition, appropriate permits required for drilling and well installation will be obtained. Prior to commencement of the field work, available information regarding the locations of underground utilities and other structures at the site will be reviewed. An underground utility locating service will be used to locate all utilities at the site and to provide guidance in placing the borings.

#### **TASK 2 - Exploratory Drilling and Soil Sampling**

##### **Boring Locations**

Parametrix proposes to install three monitoring wells in the vicinity of the former tank cluster. The borings will be located within 10 feet of the former tanks where possible and in assumed up - and down-gradient positions. The final locations of the borings will depend on underground or aboveground obstructions. Through systematic soil sampling and sample analysis of the three proposed well borings, the lateral and vertical extent of soil-petroleum hydrocarbons in the subsurface beneath the project site will be defined. Furthermore, any potential petroleum-hydrocarbon impact on groundwater located hydraulically up - and down-gradient from the former tank cluster will be assessed.

##### **Field Procedures**

The exploratory borings will be drilled using 8-inch diameter, continuous flight hollow-stem auger drilling equipment. The borings will be logged under the direct supervision of a registered geologist in accordance with the Unified Soil Classification System (USCS). The drilling equipment will be steam cleaned prior to the beginning of each boring. Soil samples will be collected at 5-foot depth intervals above the water table and at 3-ft intervals below to the total depth explored. Upon completion, the borings will be converted to groundwater monitoring wells as described below.

A California modified split spoon sampler, equipped with brass liners, will be used to collect the soil samples. The sampler will be driven 18 inches into undisturbed soil by a 140 pound hammer with a 30-inch drop. Soil samples selected for laboratory analysis will be: (1) retained in the liners; (2) sealed on each end by Teflon tape and plastic caps; (3) labeled with the date, depth, job number, sampler's initials and sample identification number; and (4) stored at approximately 4 degrees celsius. Two samples from each boring collected above the water table will be transported to a state-certified laboratory along with appropriate chain-of-custody documentation. Drill cuttings will be contained onsite in sealed drums until the condition of the soil is determined. EHCI will assist Harris Ranch

with appropriate disposal of the soil cuttings.

During logging operations a Photovac TIP II photoionization detector (PID) will be used to detect the presence of analyte vapors (volatile organic compounds, or VOCs) in the sample interval. The test will be performed by placing soil in a nine ounce sample jar sealed with plastic wrap and screw on lid. Afterwards, the Teflon™ tip of the PID will be inserted through the plastic wrap and the highest reading will be recorded. The PID will be calibrated to 100 ppm isobutylene at the beginning of each field day and at additional times, as appropriate. The instrument reading will be recorded on the boring log form.

### TASK 3 - Groundwater Monitoring Well Installation and Sampling

The three exploratory borings will be advanced beyond first encountered groundwater and will be terminated in 3-5 feet of competent clay aquitard or 20 feet into the first-encountered water-bearing zone, whichever is shallower. The borings will be converted into groundwater monitoring wells by installing 2-inch diameter, flush threaded, schedule 40 PVC casing, with 0.02-inch machine slotting. The well casing will be lowered into the boring and shall be suspended at the desired depth of completion for the remainder of the installation. The well will be screened at the water table surface to allow for detection of any floating product. All well casings and screens will be thoroughly steam cleaned prior to installation. A graded sand pack will be placed in the annular space between the well casing and the wall of each boring to slightly above the slotted section of well casing. A bentonite seal will be emplaced above the sand pack, and a cement grout surface seal will be set from the top of the bentonite seal to the ground surface.

The well heads will be secured below the ground surface with watertight casing caps and locking devices in concrete vault boxes that are mounted flush with the pavement. Identification tags will be affixed to the well locking devices. The elevations and locations of the groundwater monitoring wells will be measured by a state-licensed surveyor to mean sea-level.

After the wells are completed, Parametrix will collect groundwater samples from the wells. Prior to purging and sampling, groundwater levels will be measured and all wells will be checked for the presence of petroleum product using a clear acrylic bailer. Wells that do not contain floating product will be developed by bailing, and the purged water will be monitored for temperature, conductivity, and pH. Standing water in the well and filter pack will be purged by removing a minimum of three to five casing volumes from the well to ensure that representative groundwater samples are obtained from the aquifer. The groundwater samples will be collected with an inert, non-wettable, Teflon™ bailer attached to a braided nylon line. The Teflon™ bailer will be steam cleaned and the nylon line will be changed prior to sampling each well. The groundwater samples obtained for laboratory analysis will be: (1) collected in appropriate U.S. EPA-approved containers; (2) labeled with the date, job number, sampler's initials and sample identification number; and (3) stored at approximately 4 degrees celsius for transport to the laboratory along with appropriate chain-

of-custody documentation. Quality assurance/quality control (QA/QC) samples include one duplicate sample, one trip blank, and one field blank. Details on the QA/QC samples are included in Attachment 1. Information forms used to record field data are included in Attachment 2. Purged water will be contained on-site in sealed drums until the condition of the groundwater is determined. EHCI will assist Harris Ranch with appropriate disposal of purged groundwater after the condition of the water is determined.

#### **TASK 4 - Laboratory Analysis**

Up to six soil samples (two from each boring) collected from above the groundwater table will be selected for chemical analysis based on PID readings, petroleum product odor, or visible staining of soils. Included in the six will be the samples collected from the deepest sampling interval above the groundwater table. These soil samples will be analyzed for total petroleum hydrocarbons (TPH) as diesel (GCFID 3550) and BTXE (U.S. EPA method 8020).

Up to three groundwater samples (one from each well) will be analyzed for TPH as diesel (GCFID 3510) and BTXE (U.S. EPA method 602).

All soil and groundwater samples will be analyzed by CKY Laboratories located in Pleasanton, California. Their state certification number is E711.

#### **TASK 5 - Data Evaluation and Report Preparation**

Following completion of the field activities and receipt of the analytical results, the data will be evaluated to characterize the extent of petroleum hydrocarbon compounds in the soil and groundwater beneath the site. A summary report of the findings will be prepared, and will include the following:

- Description of local topography and background information
- Description of the hydrogeologic setting
- Description of the exploratory techniques
- Description of the analytical techniques
- Exploratory boring logs and well details
- Geologic cross-section
- Site map and groundwater contour map
- Results of the chemical analyses of soil and groundwater samples, including

**copies of the Certified Analytical Reports**

- **Discussion of the findings, leading to recommendations for remedial actions, if necessary**

**TASK 6 - Confirmation Monitoring**

**Confirmation monitoring will be implemented upon completion of the initial investigation. The time intervals for confirmation sampling will be agreed upon with the Santa Clara Valley Water District.**

## **SCHEDULE**

<b>April 18, 1991</b>	<b>Deliver Workplan to Santa Clara Valley Water District</b>
<b>May 6-10, 1991</b>	<b>Install/sample groundwater wells</b>
<b>May 27, 1991</b>	<b>Receive analytical results from laboratory</b>
<b>June 24, 1991</b>	<b>Deliver report to:</b>  <b>Santa Clara Valley Water District Regional Water Quality Control Board San Jose Fire Department</b>

**ATTACHMENT 1**

**QUALITY ASSURANCE/QUALITY CONTROL PLAN**

## **QUALITY ASSURANCE/QUALITY CONTROL PLAN**

To maintain quality assurance, the field investigation team will submit trip blanks, field blanks, and field duplicates to the laboratory. The QA/QC plan includes:

- Trip blanks will be prepared at the same time and location as the sample containers for a particular sampling event. Trip blanks will accompany these containers to and from that event, but at no time will they be opened or exposed to the atmosphere. Trip blanks will be used to assess sample container cleanliness and contamination originating from sample handling and transportation. One trip blank will be included per sampling event.
- Field blanks will be prepared in the same manner as the trip blanks but will be exposed to the ambient atmosphere at a specified monitoring point during sample collection to determine the influence of the external field conditions on sample integrity. One field blank will be included for each day of sampling.
- Duplicate groundwater samples will be collected to document field precision. For each sampling event, one duplicate sample will be collected and shipped "blind" to the laboratory for analysis with the samples from that particular event (i.e., these samples will not exhibit any special markings indicating they are quality control samples).

**April 1991**

***Environmental Health Consultants***

1.0 INTRODUCTION

This health and safety plan addresses the minimum requirements for protection of Parametrix, Inc. and Environmental Health Consultants, Inc. employees during drilling, well installation, and well development/sampling activities at the Harris Ranch Property located at 11740 Berryessa Road in San Jose, California. This document describes the minimum safety procedures to be utilized by onsite personnel. Any employee has the ability to use a higher level of protection than that specified for a given activity or situation.

Site conditions are expected to change throughout the duration of this project. Any part of this plan may be upgraded or downgraded, as appropriate, in light of actual field conditions. Any changes in this plan must be approved by the project health and safety officer, prior to implementation. These changes will be documented in the daily field reports used during the project, and communicated to all personnel working under this plan.

The information in this plan will be reviewed by all personnel assigned to the project, and a copy of the plan will be maintained onsite during the work activities. All personnel are expected to be familiar with, and comply with, all portions of this plan.

2.0 KEY PERSONNEL

Project Geologist: Mr. Kurt Easthouse is the Project Manager for the activities covered by this plan. The Project Manager is responsible for overall management of the technical aspects of the project, and implementation of this health and a safety plan. Mr. Easthouse will also function as the Site Safety Officer during most of the field work activities. As such, Mr. Easthouse will conduct onsite monitoring for total hydrocarbons and designate appropriate personnel protection levels based upon the results of the air monitoring.

Project Health and Safety Officer: Ms. Irene Fanelli will provide health and safety support for the project, and coordinate all changes to the health and safety plan.

### 3.0 HAZARD ANALYSIS

The work activities associated with the drilling program and well installation present potential physical and chemical hazards to the workers involved. In all instances, precautionary measures will be implemented to minimize these risks.

#### 3.1 Physical Hazards

As on all construction sites, there is a recognized potential for personal injury due to struck by/against accidents. Personal protection equipment such as steel-toed boots, hardhats and safety glasses will be used in appropriate circumstances.

A potential for elevated noise exposure exists when working around drilling rigs. The use of hearing protection such as ear plugs and/or ear muffs will be required, as necessary.

Overhead power lines which may be located throughout the site present a potential for electrical contact. All overhead lines located in a work area will be noted prior to starting work. A minimum distance of 10 feet from power lines will be maintained at all times.

It is anticipated that underground utilities may be encountered during the drilling activities. Efforts will be made to locate such utilities, and prevent contact during the drilling.

A potential heat stress hazard is associated with high ambient temperature, use of protective clothing, heavy physical labor, and/or any combination thereof.

Procedures which will be implemented to reduce the risk of heat stress include:

- training to familiarize personnel with heat stress symptoms.
- implementation of work/rest cycles, as appropriate, to periodically allow employees to remove protective clothing and cool down.
- availability of liquids to replace lost body fluids.
- monitoring of employee stress levels.
- utilization of cooling devices, such as ice vests, if necessary.

All employees will be encouraged to take rest breaks as necessary. This approach has been found more effective than designated breaks in many instances, because individual tolerances to heat may vary considerably.

Monitoring of heat stress levels may be accomplished by the following method:

Count the radial pulse during a 30-second period immediately following the end of a work period. If the heart rate exceeds 130 beats per minute at the end of the work period, shorten the next work period by one-third. If the heart rate still exceeds 130 beats per minute at the end of the next work period, shorten the following work period by one-third again.

### 3.2 Chemical Hazards

This drilling program is being implemented as a result of prior underground storage tank excavation, and the detection of diesel and gasoline components in the soil. The tank excavation was extended to include removal of all apparent source material such that remaining soil concentrations of total hydrocarbons were less than 100 parts per million (PPM). Only diesel and/or gasoline were known to have been stored in the tanks.

The potential compounds of concern during this project include gasoline, diesel fuel, and normal components of these materials including benzene, toluene, xylene and ethylbenzene. Benzene is a carcinogenic compound linked to leukemia in humans, and is listed on the Proposition 65 list of compounds known to the State of California to cause cancer and/or reproductive harm. Exposure to the compounds listed above may occur through inhalation, ingestion and/or absorption through intact skin. The potential effects of exposure are discussed in Section 3.2.1.

The potential for increased emissions from the active work area during the project activities is generally considered to be low for the drilling and well development programs. The potential for dermal contact is moderate. The potential for inhalation exposure is considered low. Control of exposures to site materials will be accomplished through the use of air monitoring, action level responses, training, and personal protective equipment. Any dust which is generated as a result of site activities will be controlled through application of water to affected areas.

### 3.2.1 CHEMICAL DATA

**BENZENE** Acute exposure may result in irritation of the eyes, skin, and respiratory tract, central nervous system (CNS) depression, headache, nausea, convulsions, and possible coma and death. Benzene exposure has been associated with leukemia. The Permissible Exposure Limit (PEL) for benzene is 1 PPM as an 8-hour time weighted average (TWA) exposure.

**TOLUENE** Acute exposure may result in irritation of the eyes, skin, and respiratory tract. Systemic effects may include CNS depression, dizziness, weakness, fatigue, incoordination, and coma. The PEL for Toluene is 100 PPM as an 8-hour TWA exposure.

**XYLENE** Acute exposure may result in irritation of the eyes, skin, and respiratory tract. Systemic effects may include dizziness, CNS depression, unconsciousness, nausea, vomiting, pulmonary edema and reversible liver and kidney function changes. The PEL for xylene is 100 PPM as an 8-hour TWA exposure.

**GASOLINE** Acute exposure may result in irritation of the eyes, skin and respiratory system. Systemic effects may include CNS depression, mental confusion, slurred speech and flushing of the face. High acute exposures may result in unconsciousness and possibly death due to respiratory failure. The PEL for gasoline is 300 PPM as an 8-hour TWA exposure. The symptoms of exposure for diesel are similar to those of gasoline. There is no designated PEL for diesel.

4.0 PERSONNEL TRAINING

All project personnel will have prior work experience and/or training which meet the requirements of 29 CFR 1910.120 prior to being assigned to work at the site. All personnel will be adequately trained to perform the work assigned. The specifics of this plan will be included in any site-specific training.

Overall site-specific training will address the following areas:

- chemical and physical hazards
- proper use, maintenance, and limitations of protective gear
- site layout
- work rules and work practices
- emergency procedures
- medical monitoring
- exposure monitoring and action levels
- protection levels
- decontamination procedures

Site safety meetings will be scheduled at the discretion of the Site Safety Officer. All meetings/training sessions will be documented on the daily field logs.

## 5.0 PERSONAL PROTECTION EQUIPMENT

Personal protective equipment will be provided for use by onsite personnel. Such equipment is used to prevent direct skin contact with waste materials and inhalation of chemical emissions. Modified Level D protection will be required as a minimum for all onsite personnel. Air monitoring levels in excess of the site action levels will trigger the use of higher protection levels. Modified Level D protection includes;

- hardhat;
- neoprene or PVC steel-toed/shank calf-length boots, or overboots of the same materials worn over workboots;
- safety glasses (during windy conditions);
- hearing protection, as necessary;
- polyvinyl latex gloves for handling soil or liquid samples;
- PVC or neoprene overgloves for handling augers or other contaminated items;
- polycoated Tyvek coveralls for working with wet materials;
- uncoated Tyvek coveralls for working with dry materials.

If Level C protection is necessary, the protective equipment will include;

- Modified Level D equipment including gloves;
- respiratory protection which includes a half-face or full-face respirator with organic vapor cartridges. Dust pre-filters may be added for dusty conditions;
- polycoated Tyvek coveralls.

If Level B protection is necessary, the protective equipment will include;

- Level C clothing including gloves and Saranac coveralls
- pressure-demand air-supplied respirator or SCBA.

The Site Safety Officer will be responsible for designating the appropriate levels of protection, and may designate more or less stringent levels than those described, where site conditions warrant such action.

All personnel will report to work clean shaven every day. Mustaches are allowed so long as they do not interfere with the seal of a respirator. This requirement is necessary because of the potential need for respiratory protection in the work areas.

All subcontractor and regulatory personnel are expected to provide protective clothing and respirators which are at least equal to that designated for Parametrix and EHCI personnel.

**6.0 MEDICAL SURVEILLANCE**

A medical surveillance program helps in protecting personnel through the selection of employees who are physically able to safely perform the work assigned, and by monitoring their health on a regular basis.

The program consists of a pre-employment, annual and termination examination. Additional testing may be implemented in light of specific hazards, as designated by the Project Health and Safety Officer.

The standard medical exam includes, as a minimum:

- medical history
- physical exam
- pulmonary function test
- resting EKG
- urinalysis, including microscopic morphology and dipstick
- complete blood count with platelets and differential
- SMAC chemistry screen
- seven-frequency audiogram

## 7.0 AIR MONITORING

### 7.1 Work Area Monitoring

Work area air monitoring will be conducted using a Photovac or other equivalent Photoionization Detector (PID), or Foxboro Century Organic Vapor Analyzer (OVA). The PID utilizes an ultraviolet photoionization detector to measure airborne concentrations of total hydrocarbons. The OVA utilizes a flame ionization detector to measure airborne levels of total hydrocarbons. The PID is calibrated against zero air and a known concentration of isobutylene. The OVA is calibrated against zero air and a known concentration of methane in air.

### 7.2 Action Levels

If total hydrocarbon levels in the work area reach 10 parts per million (PPM) in the breathing zone for five minutes, half mask respirators with organic vapor cartridges will be required.

If total hydrocarbon levels reach 25 PPM in the breathing zone for five minutes, full face cartridge respirators will be used, with the same cartridges designated above.

If total hydrocarbon levels reach 50 PPM in the breathing zone for five minutes, work activities will cease until the airborne levels decrease to less than 25 PPM. If the airborne levels remain at 50 PPM or more, all work activities will cease until all personnel are equipped with Level B protection including pressure demand air supplied respirators or self contained breathing apparatus (SCBA).

All personnel are specifically instructed to use respiratory protection whenever they feel it is necessary, prior to being required to do so. Once an action level is reached, all personnel are required to wear at least the designated protection.

**8.0 SITE CONTROL MEASURES**

The active work areas are considered exclusion areas. Access to these areas will be strictly limited to personnel needed to conduct the work.

A contamination reduction area will be designated adjacent to each active work area. Disposable protective gear will be removed and placed in garbage bags prior to leaving the active work area. Heavy equipment and non-disposable gear may be cleaned at a decon area to be designated by the Site Safety Officer.

Support areas will be located away from the active work areas, and are not expected to be impacted by the work activities.

## 2.0 DECONTAMINATION

### 2.1 Personnel Decontamination

All personnel must remove disposable protective clothing prior to leaving the active work area. Boots may be cleaned at the site decontamination area. Respirators may be cleaned with alcohol wipes if they are not heavily soiled. If they are heavily soiled, they must be washed in sanitizing solution and air dried. Cartridges will be changed at least daily.

After removing protective clothing, personnel should proceed to a restroom and wash thoroughly before eating or drinking. If possible, personnel should wash before leaving the site.

Work clothing should be washed separate from other personal clothing.

### 2.2 Vehicle and Equipment Decontamination

Vehicles which become heavily contaminated with mud or other materials should be decontaminated at the site decontamination area before leaving the site. Personnel should wear boots, gloves and a polycoated Tyvek coverall while steam cleaning vehicles.

### 2.3 Soil Cuttings and Rinsate Water

All soil cuttings and rinsate water will be containerized for subsequent disposal. Samples of these materials will be collected for analysis to determine appropriate disposal methods.

10.0 EMERGENCY PROCEDURES

Injuries requiring treatment will be treated at San Jose Medical Center, located at 17th street and Santa Clara Street in San Jose. Directions to the facility are attached in Table I.

In the event emergency personnel must enter a work area, all work activities will cease. All non-essential personnel will be removed from the area. The Site Safety Officer will assist emergency personnel, as appropriate.

A list of emergency phone numbers and emergency routes is contained in Table I. An area map is attached at the end of this plan.

**Table I

**re: Results of Preliminary Site Assessment, Harris Ranch Company Site**  
**11740 Berryessa Road, San Jose, California**

**Dear Irene:**

This report summarizes the results of a soil and groundwater assessment at the Harris Ranch Company Site located at the address of 11740 Berryessa Road in San Jose, California. The work was conducted by the EHCI/Parametrix team on behalf of the Santa Clara Valley Water District (SCVWD).

The objectives of this project were to (1) determine the lateral and vertical extent of petroleum hydrocarbons in the subsurface soil beneath the project site and (2) assess any potential petroleum-hydrocarbon impact to groundwater located near the former tank cluster.

If you have any questions regarding the results of the assessment, please feel free to call.

Sincerely,

**PARAMETRIX, INC.**

## 1. INTRODUCTION

### 1.1 LOCATION OF SITE

The Harris Ranch/San Jose Self-Storage Company is located at 11740 Berryessa Road in San Jose, California (see Figure 1).

### 1.2 BACKGROUND/SITE HISTORY

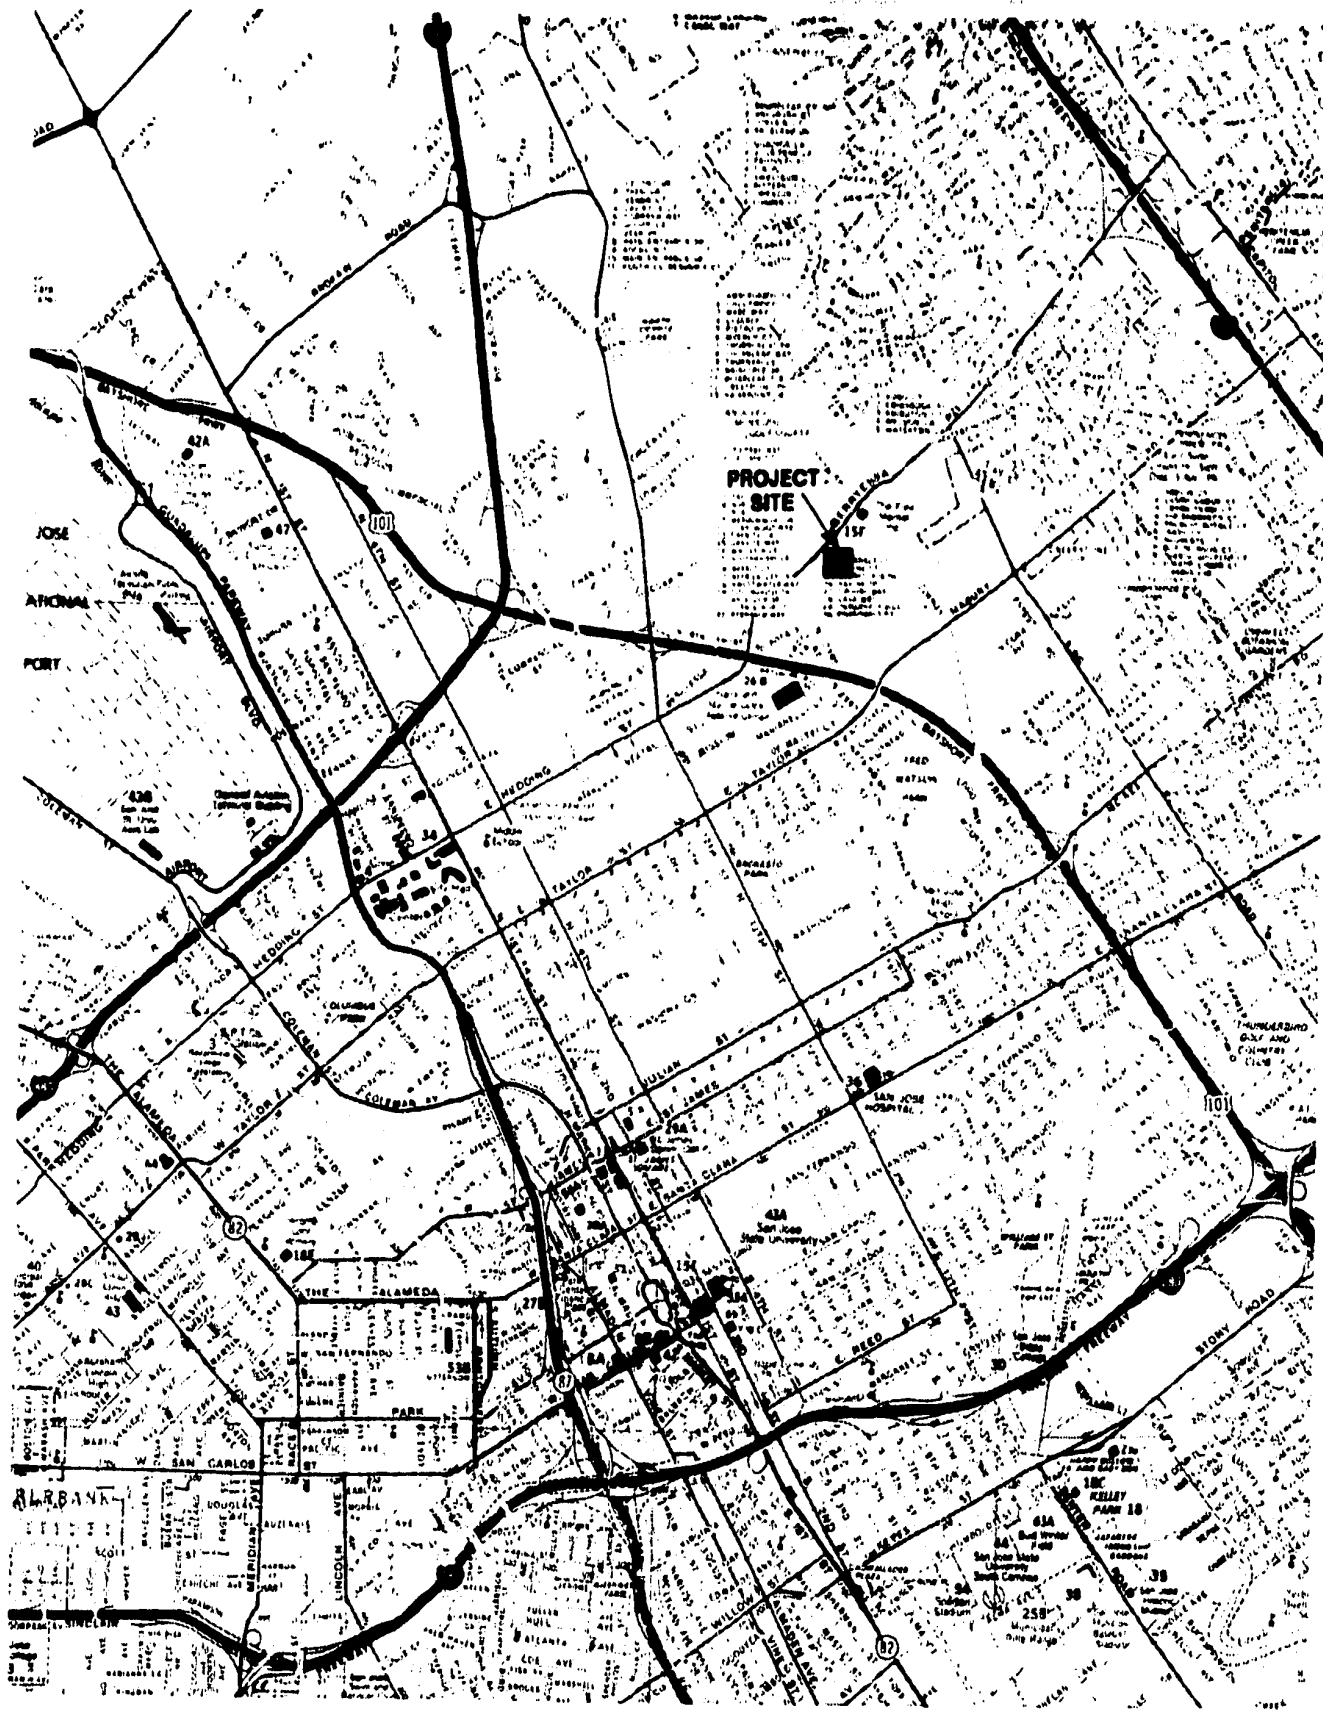

The current site owner for the subject property is the Harris Ranch Feeding Company, Route 1 Box 400, Coalinga, California. The site contact for the property is Mr. Manny De La Ossa (phone # 209-884-2435). The Harris Ranch site is presently used as a self-storage facility and has been since 1983. Prior to 1981, the property was occupied by the San Jose Meat Company which used the site as a slaughterhouse. Three underground storage tanks that reportedly contained #2 diesel fuel were used to service trucks used in the operation of the facility. Two of the tanks had a capacity of 7,500 gallons and one of 1000 gallons. These tanks were taken out of service in May 1981 when the slaughterhouse ceased operations. It was reported to Parametrix that there were no documented releases of product but the possibility exists that overfilling of the tanks may have occurred (Personal Communication, Ms. Irene Fanelli, Environmental Health Consultants, Inc. [EHCI] April 2, 1991).

The previous site owner and site activity prior to Harris Ranch and the slaughterhouse is unknown. Ms. Fanelli (EHCI) contacted Ms. Kristin Cozza (SCVWD) to see if a thorough investigation into the previous owner and activity was warranted and was told this would not be necessary (Personal Communication, Ms. Irene Fanelli, EHCI, July 8, 1991).

#### Previous Subsurface Work Performed at the Site

A fire inspection was conducted on November 30, 1988 and Harris Ranch was instructed to either remove or close the tanks. They decided to remove the tanks and as a first step had the tanks tested. Two of the tanks were tested on October 22, 1988 and one on December 11, 1988. All three tanks tested tight.

The three storage tanks were removed on August 10, 1989. Five soil samples were collected during excavation activities from tank backfill material. The samples were analyzed for total petroleum hydrocarbons (TPH) as diesel, TPH as gasoline, and benzene, toluene, xylenes, and ethylbenzene (BTXE). The reported results are as follows: TPH (diesel) <10 to 11,000 ppm; TPH (gasoline) <0.5 to 58 ppm; and BTXE <0.05 to 3.3 ppm.

NOT TO SCALE

**Figure 1.**  
**Site Location Map**  
**Harris Ranch Company**  
**11740 Berryessa Road**  
**San Jose, California**

Based on these initial results, Harris Ranch decided to resume excavation activities on October 16, 1989. The excavation was expanded and eight soil samples were collected from the sidewalls and base of the pit. It was reported that the October 16, 1989 samples were collected from native materials (Personal Communication, Ms. Irene Fanelli, EHCI, April 2, 1991). Groundwater was reportedly encountered at a depth of approximately 15 to 18 feet below grade. TPH as gasoline and diesel were not detected in the sidewall samples. The samples from the bottom of the excavation were found to contain less than 100 ppm of TPH as diesel and gasoline. One of the bottom samples was analyzed for BTXE and the results showed <0.05 ppm. The sidewall samples were also analyzed for BTXE and results ranged from <0.05 to 4.4 ppm. The groundwater in the base of the excavation was sampled and analyzed for TPH as gasoline (52 ppb) and BTXE (0.5 to 1.8 ppb).

Subsequent to these activities, a trench was dug at the base of the excavation and allowed to fill with groundwater for the purpose of additional groundwater sampling. The trench was allowed to fill with water, pumped out two or three times, and then allowed to stabilize for 48 hours. The water was containerized and transported offsite for disposal. A groundwater sample was collected on March 8, 1990, and was analyzed for TPH as diesel and oil and BTXE. The laboratory reported 66 ppb TPH as oil and <0.5 ppb BTXE. On March 29, 1990, the trench was sampled again and analyzed for TPH as diesel and oil (<50 ppb), TPH as gasoline (<50 ppb), and BTXE (<0.5 ppb). The trench was reportedly backfilled with clean material that same day under approval from the San Jose Fire Department. All excavated soils were reportedly transported offsite. The area has since been paved with asphalt and a storage locker now sits above the former excavation. The exact limits of the excavation are unknown at this time.

This discussion of the site history is based on a review of a tank removal report (December 20, 1990) submitted to the SCVWD by Environmental Health Consultants, Inc. (EHCI), and verbal conversations with Ms. Irene Fanelli (EHCI). The following information about the site was not available to EHCI or supplied to Parametrix:

- Soil and groundwater sampling procedures other than as described on lab report
- Rationale for selection of different analytical methods
- Decontamination procedures
- Material safety data sheets (MSDS) for previous tank contents.

## **Regulatory Interaction**

The Santa Clara Valley Water District (SCVWD) requested that a self-directed site investigation and characterization be performed to determine extent of contamination at the site in a letter dated October 12, 1990. Ms. Irene Fanelli (EHCI) prepared and submitted a report (December 20, 1990) to the SCVWD summarizing site activities previously conducted by Harris Ranch. Additionally, she requested that the SCVWD review the December report and determine if it was necessary to perform a full site investigation and characterization. In late December 1990 the SCVWD verbally told Ms. Fanelli (EHCI) that a site investigation was necessary (verbal communication, Ms. Irene Fanelli, EHCI, March 27, 1991).

Parametrix was contacted by Ms. Fanelli in regards to the Harris Ranch site on January 11, 1991. She requested that Parametrix prepare a scope of work and cost estimate for the initial phase of a site characterization. Parametrix submitted a proposal on January 17, 1991 and began developing a detailed workplan on February 28, 1991. On March 14, 1991, Harris Ranch was sent a letter from the SCVWD indicating that the site no longer fell under the jurisdiction of self-directed studies and was now subject to overview by the SCVWD, RWQCB, and San Jose Fire Department. The SCVWD requested that a technical report containing a workplan for further study be submitted to them by April 18, 1991.

The workplan was submitted to the SCVWD on April 16, 1991 and approval was given by the district in a letter to EHCI dated April 26, 1991 with one modification. The SCVWD requested that the soil samples in the unsaturated zone collected during installation of the monitoring well closest to the source be submitted for laboratory analysis, and to address this issue in the technical report.

### **1.3 OBJECTIVES**

The objectives of the approved workplan were to (1) determine the lateral and vertical extent of soil-petroleum hydrocarbons in the subsurface beneath the project site and (2) assess any potential petroleum-hydrocarbon impact to groundwater located near the former tank cluster.

## **2. SITE DESCRIPTION**

### **2.1 VICINITY MAP**

A map of the area surrounding the Harris Ranch/San Jose Self-Storage Site is provided on Figure 1.

### **2.2 SITE MAP**

A map of the Harris Ranch/San Jose Self-Storage site is provided on Figure 2.

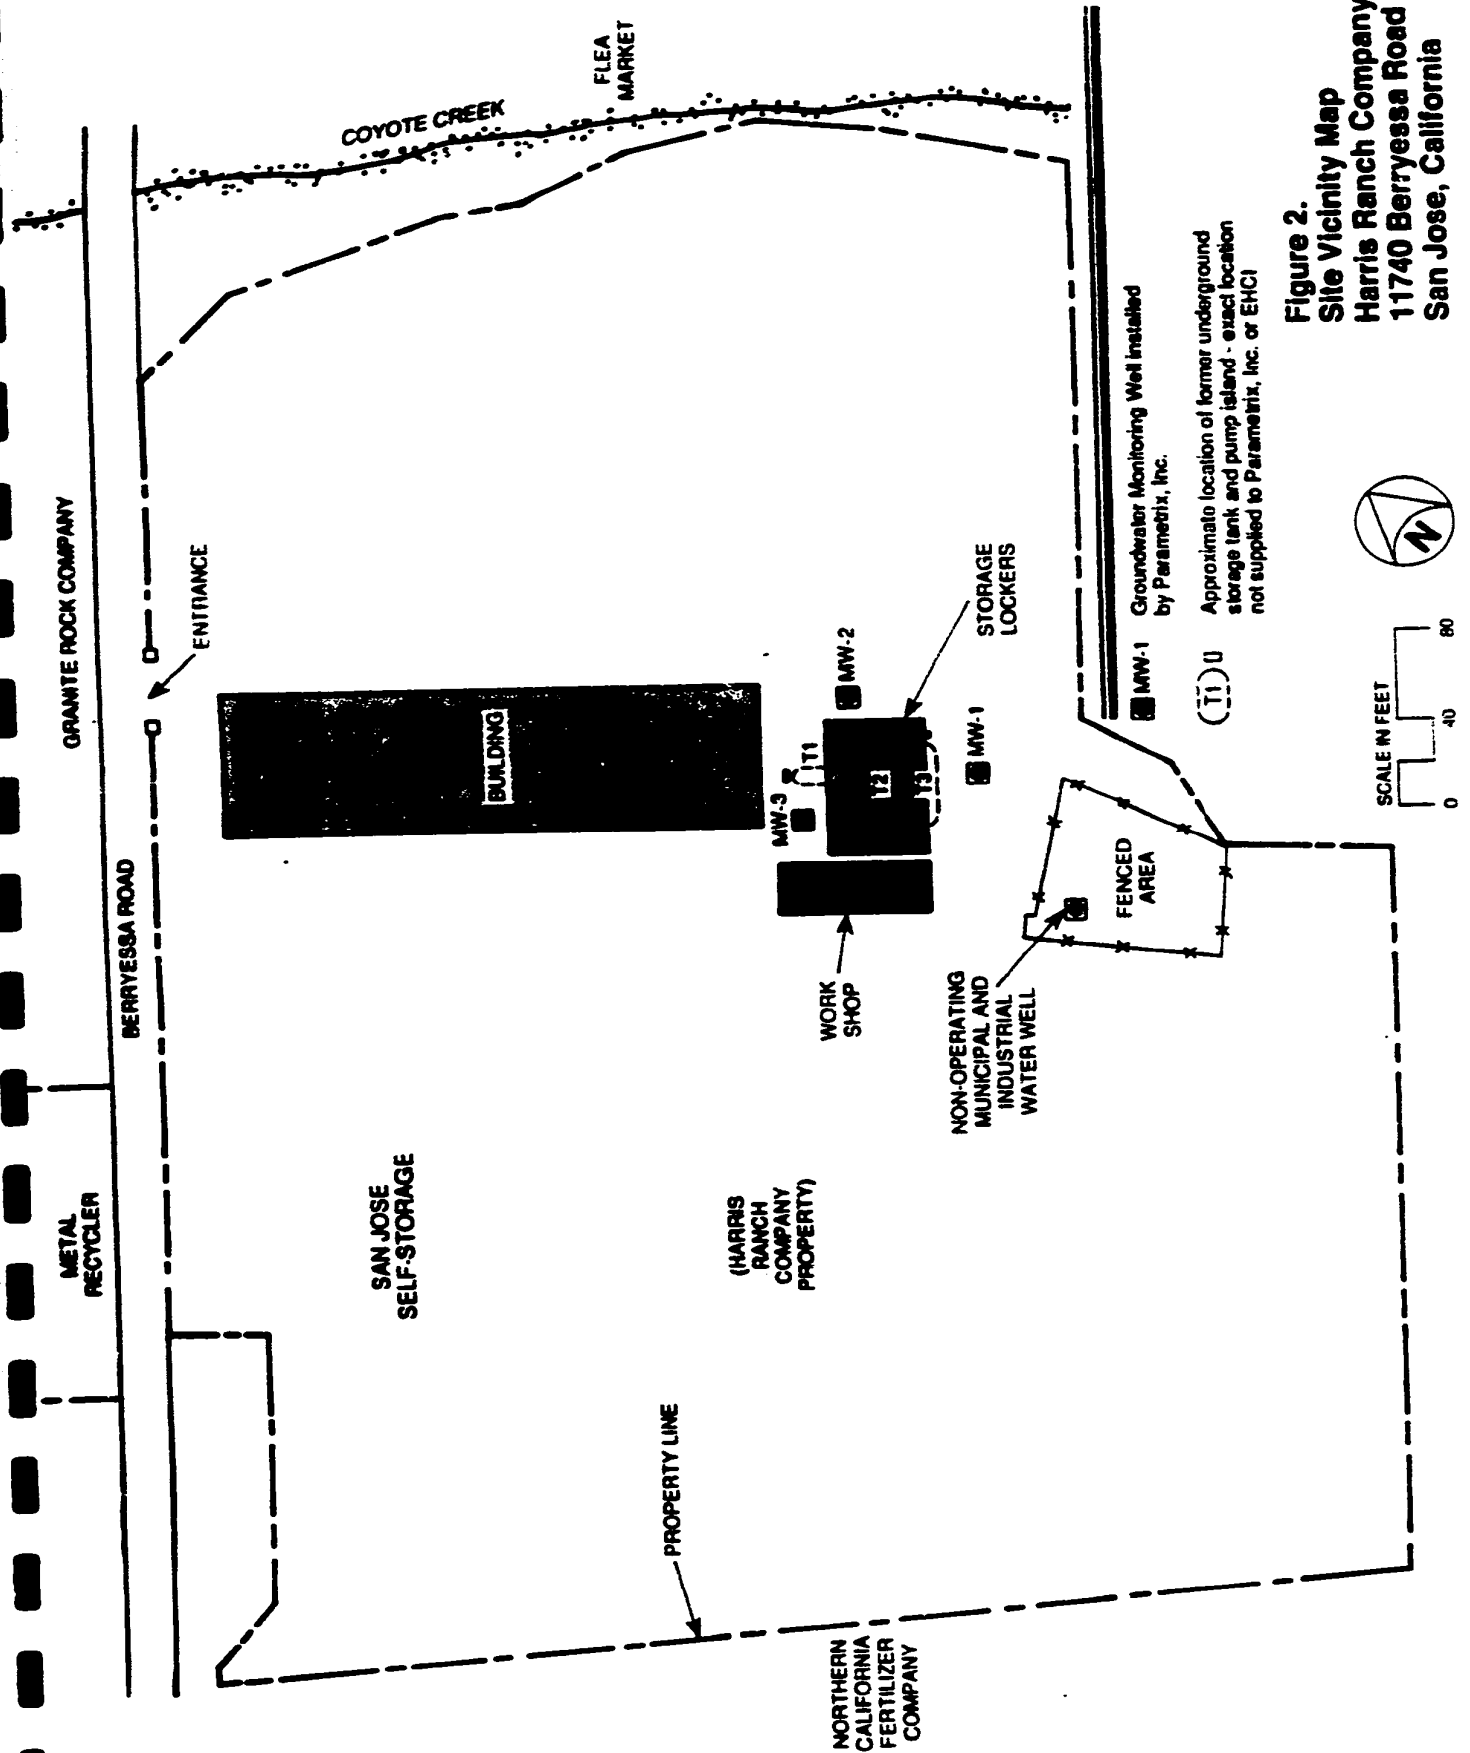

### **2.3 WATER WELL SURVEY AND REGIONAL HYDROGEOLOGY**

Parametrix performed a groundwater well data search within a 0.5 mile radius of the site by contacting the SCVWD. Forty-one groundwater wells were identified in the area. Twenty-four of these are destroyed and 17 are either active or inactive. The groundwater well locations are plotted on the topographic map in Figure 3.

The project site is located in the Santa Clara Valley, which is a long, narrow structural trough that extends 90 miles southwestward from San Francisco. The valley is bordered by the Santa Cruz mountains on the southwest and by the Diablo Range on the northeast. The topography in the vicinity of the project site is relatively flat with a slight grade to the west. Coyote Creek, which flows northward toward San Francisco Bay, is located adjacent to the eastern boundary of the site. In addition, Upper Penitencia Creek flows into Coyote Creek and is located directly east of the site.

Based on a review of well logs and geologic cross-sections (Poland and Ireland 1988), the project site appears to be underlain by unconsolidated alluvium of late Pleistocene and Holocene age composed of clay, silt, and possibly sand and gravel. The well logs indicate that the alluvial deposits attain a thickness of 1,000 feet or more in the valley.

Groundwater was expected to be encountered at approximately 15 to 18 feet below grade (Environmental Health Consultants, Inc., 1990). This appeared to be supported by depth to water information from two monitoring wells located approximately 600 feet north of the project site on the Granite Rock Company property. Static groundwater was measured in the wells on the Granite Rock Company property at 14 to 15 feet below grade in October 1985 (SCVWD, monitoring well printout, March 25, 1991). The anticipated direction of groundwater flow was towards Coyote Creek.

### 3. FIELD PROGRAM

The field investigation was conducted May 14 through May 18, 1991. Three exploratory borings (MW-1, MW-2, MW-3) were drilled to depths ranging from 29 to 31 feet below grade to investigate soil and groundwater conditions in the vicinity of the former underground storage tanks. The boring locations were cleared by an underground locating service prior to drilling. One of the borings (MW-1) had to be moved approximately 10 to 15 feet from the preferred location due to underground obstructions. The borings were located in assumed up and downgradient positions. An attempt was made to locate the borings within 10 feet of the contaminant source, however the exact location of the former tanks and limits of the excavation were not supplied to Parametrix or EHCI. In addition, a metal storage locker now sits above the reported location of the former excavation.

The drilling was accomplished by West Hazmat, a licensed well driller in the state of California. Soil samples were collected at 5-foot depth intervals (or less) to the total depth explored. Upon completion, the borings were converted to groundwater monitoring wells. Details of the drilling activities, soil and groundwater sampling, and decontamination procedures are presented in Attachment 1. Logs of exploratory borings are included in Attachment 2. Well permits approved by the SCVWD are in Attachment 3. Well construction details are summarized in Table 1. Well elevations for each well were surveyed to mean sea-level by a qualified survey crew. A groundwater contour map was constructed based on water level elevation data from the wells (see Figure 4). Soil samples collected during drilling were also field screened for volatile organic compounds (VOCs) using headspace analysis and a photoionization detector (PID).

A total of five soil samples were analyzed for TPH by U.S. EPA method modified 8015 and BTXE by U.S. EPA method 8020. One sample was submitted from MW-1, two from MW-2, and two from MW-3. Only one sample was submitted from MW-1 due to encountering saturated conditions during the collection of the second sample. Groundwater samples were collected from MW-1, MW-2, and MW-3 on May 18, 1991, and analyzed for TPH by U.S. EPA method modified 8015 and BTXE by U.S. EPA method 602. QA/QC samples were also collected and analyzed for the above mentioned parameters and included a duplicate groundwater sample (MW-1A), a trip blank, and a field blank. All samples were analyzed by a state-certified laboratory. Certified analytical reports and chain-of-custody documentation are included in Attachment 4. Soil cuttings, purge water, and decontamination solutions were stored on-site in 55 gallon drums.

## 4.0 RESULTS

### 4.1 LAB ANALYSIS

A summary of the analytical results are presented in Table 2.

Soil Samples: TPH, benzene, xylenes, and ethylbenzene were not detected in the soil samples submitted for analysis. Toluene was detected in each sample (except MW-2, 6.5 feet) with concentrations ranging from 5.4 ug/kg (MW-3, 6 feet) to 21 ug/kg (MW-2, 10 feet).

Groundwater Samples: TPH and BTXE were not detected in the groundwater samples collected from MW-1, MW-2, MW-3 or in the QA/QC samples (trip blank, field blank, duplicate groundwater samples MW-1A).

### 4.2 QUALITY ASSURANCE/QUALITY CONTROL

Quality Assurance/Quality Control (QA/QC) methods were employed during this investigation. Samples were analyzed by CKY Incorporated Analytical Laboratories.

1. Holding times and conditions were all acceptable.
2. Method blanks were all below detection limits.
3. No analytical replicates were taken.
4. The field duplicate for water was acceptable. No soil field duplicate was taken.
5. Matrix spikes and matrix spike duplicates for soil and water were all acceptable.
6. Surrogate recoveries were all acceptable.

This data set is acceptable for qualitative and quantitative uses. No qualifiers were required for any of the data.

**Table 2. Analysis for soil and groundwater samples. Harris Ranch Company, San Jose, California.**

### 43 HYDROGEOLOGIC CONDITIONS

The three borings drilled by Parametrix encountered soils ranging from sand to clay. All three borings were terminated in a competent clay layer which was detected at the 27-28.5 foot level and extended to the maximum depth of exploration. See Figure 5 for the geologic cross section depicting the subsurface lithology encountered during drilling. The location of the section is shown in figure 6.

Upon completion of drilling and well installation, the depth to groundwater was measured in monitoring wells MW-1, MW-2, and MW-3. Static groundwater levels measured on May 18, 1991 ranged from approximately 9.28 to 9.65 feet below the top of the casing (see Table 3). No free product was detected in any of the wells. The gradient is relatively flat across the site. The three water levels indicate that the approximate direction of groundwater flow is to the north-northwest at a gradient of 0.11 feet per 100 feet.

## 5.0 SUMMARY AND CONCLUSIONS

- **Non-detectable levels of TPH, benzene, ethylbenzene, and xylenes were reported in the soil samples collected from MW-1, MW-2, and MW-3. Extremely low levels (5.4 ug/kg to 21 ug/kg) of toluene were detected in all but one of those same samples.**
- **Petroleum hydrocarbons were not detected in the groundwater samples collected from MW-1, MW-2, and MW-3 on May 18, 1991.**
- **Based on the analytical results from the soil and groundwater samples collected during this preliminary site assessment, no further action appears warranted.**

**ATTACHMENT 1 - DETAILS OF DRILLING ACTIVITIES, SOIL AND  
GROUNDWATER SAMPLING, AND DECONTAMINATION PROCEDURES**

## ATTACHMENT 1

### Exploratory Borings and Soil Sampling

Exploratory borings MW-1, MW-2, and MW-3 were drilled under the supervision of Parametrix personnel using hollow-stem auger drilling equipment. The borings were logged by a California registered geologist in accordance with the Unified Soil Classification System (USCS). Soil samples were collected at 5-foot depth intervals (or less) to the total depth of exploration. The drilling equipment was steam cleaned prior to the beginning of each boring. The exploratory borings were drilled to a maximum depth of 31 feet below grade. Upon completion all three borings were converted to groundwater monitoring wells.

Soil samples collected by Parametrix for chemical analysis were obtained by using a modified California split- spoon sampler equipped with brass liners. The samples were collected by advancing the sampler into undisturbed soil using a 140-pound hammer with a 30-inch drop. After sampling, the liners were sealed with Teflon tape and plastic end caps, stored at approximately 4°C, and transported to the laboratory with appropriate chain-of-custody documentation. All drill cuttings were stored onsite in 55-gallon drums.

### Headspace Analysis

A headspace measurement was conducted on soil samples collected above the water table. The test was performed by placing soil in a 9-ounce jar sealed with aluminum foil and screw-on lid. Afterwards the Teflon tip of a photoionization detector (micro-tip) was inserted through the foil and the highest reading was recorded. The micro-tip was calibrated to 100 ppm isobutylene at the beginning of each field day. Headspace readings were recorded on the boring logs presented in Attachment 2. The headspace results of the 6-foot soil samples from MW-1 and MW-3 were relatively high (1440 ppm, 741 ppm); however, analytical results indicated only low levels of toluene in the samples.

### Groundwater Monitoring Well Installation

Groundwater monitoring wells MW-1, MW-2, and MW-3 were designed and installed under the direct supervision of the Parametrix geologist in accordance with appropriate agency regulations. All three wells were constructed using a 2-inch diameter PVC casing with 0.02-inch machine slotting. The well casing was lowered into the boring and was suspended at the desired depth of well completion for the remainder of the installation. All well casings and well screens were thoroughly steam cleaned prior to installation.

A graded sand pack was placed in the annulus of each well across from and slightly above the slotted section. Each well was completed at the surface by (1) placing a bentonite seal above the graded sand pack, (2) backfilling the annulus above the bentonite seal with cement grout, and (3) installing a locking well cover, and flush mounted vault box over the well-head. The well construction details are provided in Table 1.

### Groundwater Sampling

Groundwater samples were collected from MW-1, MW-2, and MW-3 on May 18, 1991. The groundwater levels were measured and the wells were checked for the presence of any immiscible liquids. If none were detected, groundwater samples were collected. Prior to sampling a Teflon bailer was used to purge a minimum of five casing volumes of water from the well to ensure that representative groundwater samples were obtained from the aquifer. The groundwater samples were collected with dedicated Teflon bailers. The water samples obtained for laboratory analysis were collected in appropriate EPA-designated containers and stored at approximately 4°C for transport to the laboratory along with appropriate chain-of-custody documentation. Purge water was stored onsite in 55-gallon drums.

### Decontamination Procedures

All sampling equipment was decontaminated before use, between samples, and upon completion of sampling operations. The drilling equipment was steam cleaned prior to commencing drilling activities, between drilling locations, and upon demobilization. Split-spoon samplers, bailers, and other sampling devices were pressure washed with a steam cleaner prior to commencing sampling activities, between sampling locations, and upon removal from the site. In addition, the split-spoon samplers were washed using a laboratory-grade detergent/potable water solution and triple-rinsed with deionized water before commencement of sampling and between samples.

### Drum Disposal

Soil cuttings, purge water, and decontamination solutions were stored on-site in 55 gallon drums. After reviewing the analytical results contained in Attachment 4, approval was given to EHCI for on-site disposal of these materials by Ms. Kristin Cozza of the SCVWD (Personal Communication, Ms. Irene Fanelli, EHCI, July 8, 1991).

**ATTACHMENT 2 - LOGS OF EXPLORATORY BORINGS**

## EXPLANATION OF SYMBOLS ON EXPLORATORY BORING LOGS

 Denotes undisturbed sample collected with 2.5-inch O.D. split spoon sampler

 Denotes bag (disturbed) sample

**7.5 yr 48** Denotes color as defined in Munsell Soil Color Chart (1990 edition) of GSA Rock Color Chart

 Denotes depth to first encountered groundwater

 Denotes depth to static groundwater

## Unified Soil Classification System

Compiled by B. W. Peat, University of Southern California

MAJOR DIVISIONS		GROUP SYMBOLS	TYPICAL NAMES	
<b>COURSE-GRAINED SOILS</b> More than half of material is larger than no. 200 sieve size.	<b>GRAVELS</b> More than half of coarse fraction is larger than no. 4 sieve size.	GW	Well-graded gravels, gravel-sand mixtures, little or no fines.	
		GP	Poorly graded gravels, gravel-sand mixtures, little or no fines.	
		GM	Silty gravels, gravel-sand mixtures.	
		GC	Clayey gravels, gravel-sand mixtures.	
		SW	Well-graded sands, gravelly sands, little or no fines.	
		SP	Poorly graded sands, gravelly sands, little or no fines.	
	<b>SANDS</b> More than half of coarse fraction is smaller than no. 4 sieve size.	SM	Silty sands, sand-silt mixtures.	
		SC	Clayey sands, sand-clay mixtures.	
		<b>SILTS AND CLAYS</b>	ML	Inorganic silts and very fine sands, non fissure, silty or clayey fine sands, or clayey silts, with slight plasticity.
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays.
OL	Organic silts and organic silty clays of low plasticity.			
<b>SILTS AND CLAYS</b>	MH	Inorganic silts, micaceous or diatomaceous fine silty or silty clays, elastic silts.		
	CH	Inorganic clays of high plasticity, fat clays.		
	OH	Organic clays of medium to high plasticity, organic silts.		
Highly organic soils		Pt	Peat and other highly organic soils.	

Method of Soil Classification  
 taken from the American  
 Geological Institute (AGI)  
 Data Sheets, 1982.

DISTRICT WELL PERMIT NO. 91W0980

WELL CONSTRUCTION APPLICATION

Based on information on the application and attachment(s) hereto (if any) and subject to approval noted below, permission is hereby granted to construct (drill) the described well. Permission to start may be withheld until a field check verifies all statements made on application by Permittee and is also subject to the "General" and "Special" Conditions stated below.

GENERAL CONDITIONS

- A. S.C.V.W.D. Well Inspection Department (Telephone 408-927-0710, ext. 660) must be notified a minimum of one working day prior to starting work. Construction under this Permit is subject to any instructions by District representative relative to the "Standards for the Construction of Wells in Santa Clara County". A District Inspector must be on site to witness all annular sanitary seals.
- B. Permit may be voided before work begins if field check reveals any misrepresentation under "well location" or "Topographic Features" on application.
- C. This Permit is valid only for the purpose specified herein. No change in construction procedure as prescribed in District Standards and in Special Conditions below will be allowed except upon written permission of the District.
- D. Permittee shall assume entire responsibility for all activities and uses under this Permit and shall indemnify, defend and save the District, its officers, agents and employees free and harmless from any and all expense, cost or liability in connection with or resulting from the exercise of this Permit including, but not limited to, property damage, personal injury and wrongful death.
- E. Compliance with "CAL/OSHA", California Labor Code Section 6300 (and following) is required.
- F. Water quality and production from all wells to be used for public water supply must be approved by the County Environmental Health Services.
- G. Permit will be automatically canceled if not exercised or if extension is not requested by Permittee within 180 calendar days.
- H. Driller is to complete State DWR Form 188 and mail original to Santa Clara Valley Water District within 30 days of completion of well construction.
- I. For the construction of all types of wells, a Permittee must be a licensed C-57 water well drilling contractor.
- J. Dry holes shall be backfilled within one week of drilling. Backfilling shall be done in accordance with District Standards.
- K. Each well requires a separate Well Construction Application and Permit.
- L. Permittee shall seal all abandoned wells on the property.
- M. All drilling fluid and materials will be safely handled and properly disposed of in the appropriate method.
- N. Permittee shall have a current copy of their Workman's Compensation Insurance on file with the S.C.V.W.D.

Estimated depth of completed well:  Less than 50 ft.  50 to 300 ft.  Over 300 ft.

Purpose of Well:  Domestic  Municipal/Industrial  Agricultural  \*Monitoring  Cathodic Protection

\*Monitoring wells are those constructed for the purpose of obtaining repetitive water level measurements and/or repetitive air samples for analysis. This includes wells constructed for general exploration and investigation purposes as well as those to be constructed in conformance with the Hazardous Materials Storage Permit Ordinance for site-specific groundwater monitoring of existing underground hazardous materials storage tanks.

**THIS SECTION TO BE COMPLETED FOR ALL MONITORING WELLS OR EXTRACTION/RECOVERY WELLS**

Purpose of Monitoring Well:  To comply with City or County Hazardous Materials Storage Permit Ordinance  Exploration studies  
 Other (specify): **Install wells under direction of SCVWD to determine any impact to groundwater**  Extraction/Recovery

NAME OF BUSINESS AT WELL SITE: **San Jose Self-storage**

If proposed well is to meet compliance with a Hazardous Materials Storage Permit Ordinance has the City or County been contacted?  Yes  No

If yes, give name of City or County:

Consultant's Name (Company):  
**Parametrix, Inc.**

Address:  
**13020 Northrup way**

City, State, Zip:  
**Bellevue, WA 98005**

Telephone No.:  
**(206) 455-2550**

Type of monitoring device:  Groundwater  Vadose

Type of extraction device:  Groundwater  Vadose

Monitoring well use:  Depth  Quality  Chloride

Vadose device installation:  Vapor  Interface  Suction Lyometer

**R T A [Signature]**

Re: San Jose Meat, 11740 Berryessa Rd, San Jose, Santa Clara County  
Site Code: 14G

Dear Mr. De La Ossa,

The Santa Clara Valley Water District has submitted a report which summarizes the investigation and cleanup of hydrocarbon pollution related to the removal of three underground storage tanks used for diesel fuel storage at the above referenced site and recommends that the case be closed. Regional Board staff have reviewed this report and concur with this recommendation. Therefore, based on available information, it appears that further investigation and cleanup of hydrocarbon contamination related to this tank is not necessary. Further work could be required if conditions change or a water quality threat is discovered at the site.

If you have any questions, please contact Penny Silzer at (415) 464-1331.

Sincerely,

Steven R. Ritchie  
Executive Officer

Dear Mr. Dalke:

Subject: Case Closure for Site No. 14G

I am pleased to submit to you the District's case closure recommendation for San Jose Meat, 11740 Berryessa Road, San Jose. Based on available information, the District believes this site does not appear to pose a threat to groundwater.

Please contact me with any questions or concerns as you proceed with the resolution of this case.

Sincerely,

*ORIGINAL SIGNED BY*

David J. Chesterman  
Supervising Engineer  
Groundwater Protection Division

**SANTA CLARA VALLEY WATER DISTRICT  
CASE CLOSURE RECOMMENDATION FOR  
FORMER SAN JOSE MEAT COMPANY  
11740 BERRYESSA ROAD, SAN JOSE, CA  
August 12, 1991**

**INTRODUCTION**

The purpose of this report is to provide the basis of the Santa Clara Valley Water District (District) staff recommendation for case closure of the subject site. This basis includes a description of the site history, an evaluation of the site investigation results, and source removal action.

**SITE HISTORY**

The site is located at 11740 Berryessa Road, San Jose, CA (Attachment 1).

The Responsible Party's agent is:                      Ms. Irene Fanelli  
   Environmental Health Consultants  
   P.O. Box 117910  
   Burlingame, CA 94011-7910

The Responsible Party is:                                      Mr. Manny De La Ossa  
   Harris Feed Ranch  
   Route 1 Box 400  
   Coalinga, CA 93210

Harris Ranch Feeding Company owns the site which is presently being used as a self-storage facility. Prior to 1981 the San Jose Meat Company occupied and used the site as a slaughterhouse. Three underground storage tanks containing diesel fuel were taken out of service in 1981 when the slaughterhouse ceased operation (Attachment 2). The tanks tested tight October 22, 1988 prior to their removal on August 10, 1989.

TABLE 1: Tanks Removed August 10, 1989

<b>Tank</b>	<b>Capacity (Gallons)</b>	<b>Contents</b>	<b>Comments</b>
T1	7,500	Diesel	Holes observed, corrosion pitting
T2	1,000	Diesel	No holes observed
T3	7,500	Diesel	One hole observed, pitting, and evidence of product on tank

The excavation was backfilled on March 29, 1990 using clean imported fill.

The surrounding land use is primarily commercial and industrial.

## CASE CLOSURE EVALUATION

This section provides a brief description and evaluation of the investigation accomplished to date, beneficial uses of groundwater aquifers underlying and adjacent to the site, immediate source removal, and preliminary characterization of the soil and groundwater pollution.

### Investigative Methods Used

#### I. Tank Tightness Testing

On October 22 and December 11, 1988, Tank Testing Services of San Jose conducted precision testing of all three underground storage tanks using the Petro-Tite system. The leak rates for all three tanks were within NFPA criteria and were therefore considered liquid tight at that time (Attachments 3 and 4).

#### II. Tank Excavation

August 10, 1989, Jay Groh/Scott Company excavated two 7,500-gallon and one 1,000-gallon diesel fuel tank from the site. Soil samples were collected from under both ends of the 7,500-gallon tanks and from beneath the center of the 1,000-gallon tank (Attachment 5). Samples were collected using clean brass tubes. The brass tubes were sealed with aluminum foil and plastic end-caps and transported on ice to the laboratory.

The samples were analyzed by Western Environmental Science and Technology (WEST) for Total Petroleum Hydrocarbons (TPH) as gasoline and TPH as diesel using EPA Method 8015 and for Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) using EPA method 8020.

TABLE 2: Analytical Results for Soil Samples Collected 8/10/89 (Attachment 6)

Sample Number	B (ppm)	T (ppm)	E (ppm)	X (ppm)	TPHG (ppm)	TPHD (ppm)
1	NA	NA	NA	NA	NA	11,000
2	NA	NA	NA	NA	NA	1,500
3	ND	ND	ND	ND	ND	ND
4	0.24	0.77	0.62	2.3	12	NA
5	0.21	0.38	1.2	3.3	58	ND
Method Detection Limit	0.05	0.05	0.05	0.05	0.5	10

NA = not analyzed for that particular chemical  
 ND = nondetectable above method detection limits

#### III. Over-Excavation

Jay Groh/Scott Company performed subsequent excavation at the site on October 16, 1989 to remove all excessively contaminated soil and collect additional soil samples from the native soil

beneath the former tanks. A total of eight soil samples were collected from the sidewalls of the expanded excavation and from the bottom of the pit just above the water table which was encountered at a depth of 18 feet below grade (Attachment 7). One water sample was also collected from the pit (Attachment 7).

The soil samples were collected in clean brass tubes, sealed with aluminum foil and plastic end-caps. The water sample was collected in a clean 1-liter glass bottle with a teflon lined plastic cap. All samples were transported under documented chain of custody forms and stored at 4°C.

The samples were analyzed by WEST for TPH as gasoline and TPH as diesel using EPA Method 8015 and for BTEX using EPA method 8020.

TABLE 3: Analytical Results for Soil and Water Samples Collected 10/16/89 (Attachments 8, 9, 10 and 11)

Sample Number	Sample Location	Sample Depth	TPDH (ppm)	TPHG (ppm)	BTEX (ppm)
1	North Sidewall	15	NA	19	B=1.1, T= 1.4, E=0.83, X=3.6
2	North Sidewall	Unknown	NA	ND	ND
3	Excavation Bottom	15	NA	42	B=0.29, T=1.4, E=1.3, X=4.4

Detection Limits			10	0.5	0.05
2A	Water Sample	18	NA	0.052	NA
Detection Limits			NA	0.05	NA

#### IV. Groundwater Extraction Project

A trench, dug in the bottom of the excavation pit, was allowed to fill with groundwater which was then pumped out of the excavation. This process was completed twice. The trench was allowed to fill with water a third time and stabilize for 48 hours, after which time two additional groundwater samples were collected.

The samples were collected in one liter glass bottles with teflon lined plastic caps and transported on ice to WEST laboratory for analysis.

TABLE 4: Analytical Results of Water Samples Collected From the Excavation Trench (Attachments 12 and 13)

Date Sampled	Sample Type	TPHG (ppb)	BTEX (ppb)	TPHD (ppb)
3/8/90	Water	NA	ND	66
3/29/90	Water	ND	ND	ND
Laboratory Analysis Method Number		8015	602	8015
Detection Limit		50	0.5	50

V. *Installation of Groundwater Monitoring Wells*

Between May 14 and May 18, 1991, three exploratory soil borings were completed as groundwater monitoring wells at this site. All wells were located approximately 10 to 15 feet from the tank excavation in the upgradient and downgradient directions (Attachment 2).

The borings were drilled using a hollow stem auger. Soil samples were collected at maximum intervals of 5 feet to the total depth explored of 31 feet.

Samples were recovered by advancing a California modified split spoon sampler equipped with brass liners into undisturbed soil using a forty pound hammer. After sampling, the brass liners were sealed with tape and plastic end caps, stored at 4°C and delivered to the laboratory with the appropriate chain of custody documentation.

CKY Analytical Laboratories analyzed the samples for TPH as diesel, TPH as gasoline, and BTEX using EPA Methods 8015, 8015 and 8020, respectively.

Drill cuttings and decontamination solution were stored on site in 55-gallon drums.

TABLE 5: Soil Samples Collected May 17, 1991 During Monitoring Well Installation (Attachments 14-19)

Monitoring Well Number	Depth (Feet)	TPH as Gasoline (ppm)	TPH as Diesel (ppm)	BTEX (ppm)
MW-1	6.0	ND	ND	T=6.1 BEX=ND
MW-2	6.5	ND	ND	ND
MW-2	10	ND	ND	T=21 BEX=ND
MW-3	6.0	ND	ND	T=5.4 BEX=ND
MW-3	9.5	ND	ND	T=9.5 BEX=ND
Detection Limits		1.0	1.0	0.005

All three groundwater monitoring wells were constructed using a 2-inch diameter Schedule 40 PVC casing with 0.02-inch machined slotting extending 8 to 28 feet below grade. Groundwater was initially encountered at 10 feet below grade. A graded sand pack was placed in the annulus of each well across from and slightly above the slotted section.

Prior to purging and sampling, groundwater levels were measured and the wells were checked for floating free-product using a clear acrylic bailer. There was no free product in the wells.

The wells were developed and purged by bailing. Measurements of conductivity, temperature and pH were recorded and at least three to five well casing volumes of water were removed to ensure that the groundwater samples collected were representative of true aquifer conditions. Water from development and purging of the wells was stored on site in 55-gallon drums.

The water samples were collected using a clean teflon bailer and were stored in EPA approved containers at 4°C for transport to CKY Analytical Laboratories. The water samples were analyzed for TPH as diesel, TPH as gasoline and BTEX using EPA methods 8015, 8015 and 602 respectively.

TABLE 6: Analytical Results of Water Samples Collected May 18, 1991 From Three On-Site Monitoring Wells (Attachments 20-22)

Monitoring Well Number	Sample Number	TPH as Gasoline (ppb)	TPH as Diesel (ppb)	BTEX (ppb)
MW-1	MW-1	ND	ND	ND
MW-1	MW-1A	ND	ND	ND
MW-2	MW-2	ND	ND	ND
MW-3	MW-3	ND	ND	ND
Detection Limit		50	50	0.5

All samples were collected, preserved, and transported in accordance with the requirements of the State Water Resource Control Board (SWRCB).

Western Environmental Science and Technology and CKY Analytical Laboratories are certified by the California Department of Health Services (DHS) for the analyses conducted on the soil samples.

### Local and Regional Hydrogeology

Boring logs prepared by Parametrix, Inc., indicate layers of sand and clay to the total depth explored of approximately 30 feet (see Attachments 23-24). All three borings were terminated in a competent clay layer.

Groundwater was encountered at a depth of 9 feet in boring MW-1 and at 10 feet in borings MW-2 and MW-3. The groundwater gradient at this site flows to the north (Attachment 25).

Coyote Creek borders the site to the northwest and is located approximately 280 feet from the former tank locations. The groundwater sensitivity at this site is rated 4 based on a scale of 1 to 4 (4 being the most sensitive).

### **Extent of Soil Pollution**

Six soil samples collected and analyzed after the removal of three diesel storage tanks indicated concentrations of TPH as gasoline of nondetectable to 58 ppm, TPH as diesel ranging from nondetectable to 11,000 ppm, and BTEX constituents ranging from nondetectable to 1.2 ppm (Table 2).

Eight additional samples were collected after overexcavation work was performed. The analytical results of these samples indicated a maximum concentration of TPH as gasoline of 42 ppm. BTEX concentration ranged from nondetectable to 4.4 ppm. TPH as diesel was not detected (Table 3).

Five soil samples collected from three borings all drilled within 15 feet of the former excavation revealed nondetectable concentrations of TPH as diesel and TPH as gasoline. Toluene was the only BTEX constituent detected at a maximum concentration in boring MW-3 (Table 4).

### **Extent of Groundwater Pollution**

Groundwater was encountered during the over-excavation of contaminated soil at a depth of 15 feet. One grab sample collected from the excavation pit revealed 52 parts per billion (ppb) TPH as gasoline. Additional water samples were collected from a trench dug into the bottom of the excavation. Analyses conducted on the samples revealed 66 ppb TPH as diesel and nondetectable results of TPH as gasoline and BTEX (Tables 3 and 4).

Water samples were also collected after the installation of three monitoring wells at this site in May 1991. Analyses of these samples revealed nondetectable concentrations of TPH as diesel and TPH as gasoline (Table 6).

### **Beneficial Uses**

The present and potential beneficial uses of the groundwater aquifers underlying and adjacent to the site, as defined in the Regional Water Quality Control Board's (RWQCB) 1986 report "Water Quality Control Plan—San Francisco Bay Region," include water supply for domestic, municipal, agricultural, and industrial use.

### **Remediation Performed and Options Evaluated**

No in-place soil or groundwater remediation has been performed at the subject site, other than over-excavation and limited groundwater removal from the tank pit.

### **Tank and Immediate Soil Removal or Remediation**

Three underground diesel storage tanks were excavated and removed from the site on August 10, 1989. Additional excavation of contaminated soil was performed on October 16, 1989 to a depth of 18 feet. All excavated soils were reportedly transported off-site. The excavation was backfilled on March 29, 1990, using clean imported fill.

**STAFF RECOMMENDATIONS**

District staff have concluded that further soil/groundwater investigation is not warranted due to low and nondetectable concentrations of residual contaminants found in the soil or groundwater. District staff have concluded that a threat to groundwater from the reported release does not appear to exist at this site and that the RWQCB objectives have not been compromised.

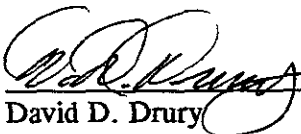

The investigation was performed in accordance with state and local guidelines, and the results indicate that no significant soil or groundwater contamination exists at the site. District staff recommend that the RWQCB conclude this case with final appropriate procedures.

Harris Ranch  
11740 Berryessa Road  
San Jose, CA

Gentlemen:

On October 22, 1988, we precision tested two (2) tanks using the "Petro-Tite" system.

The results for the tanks were as follows:

<u>PRODUCT</u>	<u>CAPACITY</u>	<u>RESULTS</u>
NO. 2 DIESEL (Tank No. 1)	1,000	-.010 GPH
NO. 2 DIESEL (Tank No. 2)	7,500	-.038 GPH

The above leak rates are within the NFPA criteria of  $\pm 0.050$  gallons per hour; therefore, these tanks and attached piping can be considered liquid tight at this time.

The test results are attached.

If you have any questions or need additional information, please do not hesitate to contact us.

Very truly yours,

TANK TESTING SERVICES

**Qualifications of Environmental Professionals**

**Coni Hennesdorf** is a seasoned professional with over 40 years of diversified business experience providing technical recommendations to real estate professionals and institutional investors of commercial property for investments, improvements, and business risk management. She has demonstrable ability to manage several complex projects simultaneously while maintaining constant attention to detail and execution. Her career focuses on engineering studies as they relate to the condition of commercial real estate holdings. Her broad range of experience extends to mixed use developments, Brownfield projects; industrial and office properties; medical office buildings and laboratory; multi-family residential units, and urban infill redevelopment projects including mixed use facilities or office, industrial, and retail space as well as live-work projects.

Coni has extensive expertise in office, hotel, industrial warehouse/distribution centers and shopping centers, having worked on transactions involving more than 130 regional, million-plus square foot centers in more than 34 states. Most recently she has managed a portfolio of 120 industrial properties totaling 9,645,163 square feet built between 1960 and 2001 in 11 metropolitan areas in 9 states.

Her clients have included banking institutions, real estate investment trusts, national insurance companies, pension fund advisors, national real estate developers and big box and department store retailers. Her past work as a design engineer and developer's project manager provides a basis for understanding the client's point of view in evaluating the transaction and recommending that includes decisions that make business sense.

### **Project Experience**

- Met Life, four-building corporate campus for AT&T that is situated on an irregular-shaped, 197-acre site in Bedminster, New Jersey. The campus comprises three five-story interconnected office buildings totaling 1.105 million square feet, a three-story security and operations building, two parking garages, development amenities, associated drive lanes and surface parking areas, and separate ingress and egress bridges over the North Branch Raritan River at the campus entrance off Disabled American Veterans Highway (State Road 206). The building had been occupied since construction as a triple net lease with the tenant. The Scope of Work was performed to evaluate the facility and conduct a reuse study which would necessitate dividing utilities between the structures should the tenant vacate the facility.
- Olympus Ventures, The Resorts & Residences by CuisinArt encompasses approximately 313 acres on the southwestern coast of Anguilla, an island in the British West Indies. The Resorts & Residences by CuisinArt includes not only the subject property, the Residences at CuisinArt, but also The Reef by CuisinArt and its larger sister property, CuisinArt Golf Resort & Spa, approximately two miles to the east. The Reef by CuisinArt is a small luxury resort comprised of a seven-floor hotel, The Reef, containing 80 guestrooms, and four two- and three-story buildings, Villas, containing six guest suites each. Construction of The Reef and the four Villas was reportedly completed in 2016. Associated with The Reef by CuisinArt, the Residences at CuisinArt (completed buildings, shell buildings, and undeveloped lots) includes three single-family /multi-family residential

components comprising a total of 48 planned residential buildings to contain a total of 61 units for private ownership and /or rental. The Residences is a twenty-building planned development of multifamily two-story, two-unit buildings, TR-1 to TR-20, located to the west and southeast of The Reef by CuisinArt. The Estate Homes is an eighteen-building planned development of single-family, two-story buildings, EH-8 to EH-25, to the east of the Reef by CuisinArt, and The Villas is a ten-building planned development of single-family, two-story homes, TV-1 to TV-7 and TV-26 to TV-28, to the east of The Reef by CuisinArt and inland of The Estate Homes. Based on available aerial photography, construction of The Estate Homes residential component originally commenced sometime in 2004, followed by construction start on The Residences and The Villas; however, not all construction of the planned buildings was started and, if started, not all construction was completed as construction was reportedly stopped sometime in 2010. Scope of Work was a property condition assessment with specialty subconsultants.

- 18-property California Portfolio including 3 industrial warehouse assets, 6 truck terminal assets and 4 truck yard assets located in Southern California and Northern California. Scope of Work was a property condition assessment. and environmental site assessments.

**LeeAnne Walker** has been qualified to conduct environmental assessments and compliance assessments since 1995, and her total business experience spans over 26 years. LeeAnne's realm of experience is focused on environmental assessments (Phase I and Phase II) for commercial properties. Tasks involved in such projects include evaluation of chemical/hazardous substance storage, historical research of site use, compliance of operations within regulatory requirements, audits of properties containing underground and aboveground storage tanks, and tenant audits. Subsurface site assessments include the placement of soil borings, field screening of soil samples, selection of soil samples for laboratory analysis, and installation of groundwater monitoring wells with associated groundwater sample collection.

As Environmental Associate, Ms. Walker is responsible for coordinating with sub-consultants, audits, report peer review, and directing the work of contractors assigned to the various projects. Her knowledge base includes familiarity with numerous state environmental regulations and federal regulations along with the Texas Commission on Environmental Quality (TCEQ) and their Leaking Petroleum Storage Tank (LPST) Program. She has worked with the TCEQ in obtaining No Further Action Letters and formulating work plans to bring properties into compliance and acquiring site closure documentation.

### **Project Experience**

- Unoccupied industrial building (Phase I ESA).
- Occupied industrial building with a commercial printing business as tenant.
- Phase I of undeveloped land (Phase I ESA).
- Travel Park - Broward County, FL (Phase I ESA), located within a National Priority List facility, groundwater contaminant plume.
- Farmland - Houston, TX (Phase I ESA), land located over former landfill.
- Apartment Complex - Denver, CO, (Lead Paint Sampling and Phase I ESA).
- Apartment Complex - Fort Worth, TX (Phase I ESA and Radon Gas Sampling).
- Palestine, TX, Underground Storage Tank (UST) removals.
- Apartment Complex - Philadelphia, PA (Drinking Water Sampling for Lead, and Phase I Site ESA).

OSHA Hazardous Waste  
Operations (HAZWOPER)

**Kurt Martin** has been qualified to conduct environmental assessments and compliance assessments since 1990. He has over 27 years of environmental consulting experience conducting or managing environmental projects in compliance site auditing; environmental site assessments (due diligence); industrial hygiene including, air testing, monitoring, and permitting, indoor air quality surveying, and asbestos surveying and management; underground storage tank removal/upgrading; soil and groundwater assessment and remediation, including CERCLA sites; training; and litigation support. These projects have been conducted for petroleum, petrochemical, plastics, and automotive manufacturing businesses, commercial, local, state and federal governments, health care and other institutional client

#### **Recent Project Experience, 2012 and 2011**

- *U.S. National Parks Service* – Mr. Martin has conducted or managed Phase I Environmental Site Assessments (Level I Surveys) on over 500 properties throughout the U.S. for the National Parks Service as part of the National Park Service's due-diligence process when purchasing properties. The scope-of-work for the projects has included sampling for asbestos-containing building materials, lead-based paint and potentially contaminated soil. Types of properties assessed include undeveloped land, mining sites, and residentially and commercially developed sites. Mr. Martin also oversaw the development of the Level I Survey Guidance Manual used nationally by the National Parks Service when they purchase properties.
- *Environmental Services; Various Locations* - Mr. Martin has managed or conducted over hundreds of Phase I and Phase II ESAs for various commercial clients on properties located throughout the United States and internationally. Numerous projects have involved soil and groundwater assessment and remediation for heavy metals, petroleum hydrocarbons and volatile organic compounds. Project scopes routinely include asbestos and lead-based paint surveys, abatement and monitoring. In addition, Mr. Martin oversaw the preparation of a nationwide Operation and Maintenance Program for one of the largest real estate investment trusts (REIT) in the world.
- *Environmental Compliance Audits; U.S. Air Force* - Mr. Martin conducted environmental compliance audits of numerous U.S. Air Force-owned aerospace facilities. His responsibilities included conducting audits in various areas including radon, asbestos and lead-based paint management, pesticide management, hazardous chemical management, solid waste management, and hazardous waste management.
- *U.S. Postal Service* - Mr. Martin was the Project Manager for the removal or upgrade of 65 underground storage tanks at 31 USPS

*Kurt Martin*

*Senior  
Associate*

#### **Education:**

Bachelor of Arts,  
Biology, Hope  
College,

University of  
California at Irvine,  
1991

sites throughout California. His responsibilities included project scoping and cost proposal preparation, contract negotiations, conducting or overseeing site inspection teams, preparation of technical specification, attending pre-conference meetings, project set-up, and coordination between USPS and contractors.

- *Federal Government Buildings, Washington, D.C.* – Mr. Martin designed and implemented the equipment and processes used to test all mail for potential anthrax contamination prior to entering the Pentagon, National Security Agency (NSA) facility, and U.S. Congress building.

**Information Requested From Client**  
**Excerpts from Documents Provided by**  
**Client or Others**

## USER INFORMATION REQUEST

In accordance with ASTM E1527-13 (All Appropriate Inquiry) in order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001, the **USER OF THE ASSESSMENT REPORT MUST** provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete. The Key Site Manager has good knowledge of the uses and physical characteristics of the property.

Property Name: 7 Acres of Land

Address: 1300 Berryessa Road, San Jose, CA

Contact for Site Access: \_\_\_\_\_

Contact Number: \_\_\_\_\_

### AAI-Required Information (per 40 CFR§312):

1. Is the **USER** aware of environmental liens (federal, state, tribal, or local) associated with the property?  
 No       Yes      If yes, please attach an explanation and copies of environmental lien information.
  
2. Is the **USER** aware of deed restrictions, engineering or institutional controls, or other Activity and Use Limitations (AULs) filed under federal, state, tribal, or local law?  
 No       Yes      If yes, please attach an explanation copies of AUL information.
  
3. Does the **USER** possess actual or specialized knowledge or experience that is material to potential *recognized environmental conditions*?  
 No       Yes      If yes, please attach an explanation.
  
4. If the property is being purchased, is the purchase price...  
 less than fair market value?  
 more than fair market value?  
 the same as fair market value?  
 relationship to fair market value unknown?

(NOTE: You do not have to disclose the purchase price.)

If the purchase price is *less than* fair market value, is the **USER** aware of reasons, environmental or otherwise, that would explain the differential?

- No       Yes      If yes, please attach an explanation.

5. Is the **USER** aware of commonly known or reasonably ascertainable information that is material to potential *recognized environmental conditions*?

For example: Do you know the past uses of the *property*?

Do you know of specific chemicals that are present or once were present at the *property*? Do you know of spills or other chemical releases that have occurred at the *property*?

Do you know of chemical cleanups that have occurred at the *property*?

No     Yes If yes, please attach an explanation.

6. Does the **USER** possess knowledge of (1) pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property; or (3) notices from governmental entity regarding possible violations of environmental laws or possible liability relating to hazardous substances or petroleum products?

No     Yes If yes, please attach an explanation.

7. What is the **USER'S** reason for having the Phase I Environmental Site Assessment performed?

Purchase     Lease     Other (please attach explanation)  
 Sale     Loan

points were selected. One sample container of soil was collected at each of the individual sample collection points after clearing away the upper twelve inches (12") of surface material. The sample container (a new brass sample liner) was forced into the newly exposed soil. After being properly sealed and labeled, the four sample containers from each section were packaged together and stored in an ice chest for transport to the laboratory (The samples were designated #3A-D, #4A-D and #5A-D).

Sample #6A-D was a four part composite collected from the smaller stockpile which was located northeast of the shop/garage. This stockpile was estimated to contain approximately 50 cubic yards of soil. This sample was made up of four individual brass sample liners (#6-A, #6-B, #6-C, and #6-D) which were collected from different areas of the stockpile.

The location of individual sampling points is shown on the diagram on page four. Additional information on the method of sample collection will be found in the **Sampling Methodology** section.

After completion of the field work, the sample containers were delivered to Sequoia Analytical Laboratory in Redwood City, California. Sequoia Analytical Laboratory is a California Department of Health Services certified Hazardous Materials Testing Laboratory and is listed as DOHS HMTL #1210.

It was requested that the analytical procedures used for these analyses be those specified by the Regional Water Quality Control Board -- San Francisco Bay Region. The methods are defined in attachments to the San Francisco RWQCB (Region 2) publication, Guidelines For Addressing Fuel Leaks and in documents issued to clarify the Board's interpretation of the California LUFT Manual.

## SAMPLING METHODOLOGIES USED ON THIS PROJECT

---

**Standard RWQCB Interface Samples:** Samples taken immediately following a tank removal are required to conform to criteria established by the Regional Water Quality Control Boards. Interpretation of these criteria is usually entrusted to the discretion of the local implementing agency inspector, but are widely known and conformance with these criteria is expected even when no regulatory agency personnel are present to direct the procedures. Accordingly, "Standard Interface samples" are those which have been taken in accordance with the standard protocol for obtaining interface samples. These samples fall into the category of samples which are known to be of primary concern to the interested regulatory agencies for determining if additional action will be required at a site and the methodology has been closely defined in state and RWQCB publications, supplements, and presentations. These specify both the acceptable depth and lateral situation of sample collection points. In accordance with these specifications, sample collection is executed as close as possible to the center line (longitudinal axis) of the tank and on a vertical axis with the fill pipe. A corresponding location is also found at the opposite end of the tank whenever standard interface samples are being collected.

Briefly, the method consists of digging up native soil from directly below the fill pipe and the corresponding opposite end of the tank and obtaining a sample from the backfill/native soil interface or a short distance below the interface. A short distance has been defined by Region 2 Board engineers as not greater than twenty-four inches below the backfill/native soil interface and is generally taken to be one foot below the backfill/native soil interface.

This soil is brought up in the backhoe bucket. A shovel or trowel is used to cut away surface soil and backfill material which may have been included in the bucket, and the sample is taken by pushing or driving a brass sample liner into the newly exposed soil from the designated depth and location. Additional clarifications by Region 2 Board engineers have indicated that when there is an obvious difference in the relative contamination of soil brought up from the interface depth, then it is the relatively more contaminated soil that should be selected for inclusion in the sample.

**Stockpile Survey (Modified BAAQMD Protocol):** This sampling follows a survey pattern, but uses a modified BAAQMD protocol for sampling stockpiles of material that have been newly removed from a tank pit excavation. This protocol calls for a discrete sample container to be collected for every 12.5 cubic yards of material. The survey includes opposite sides of the stockpile. Strict observance of the BAAQMD protocol (for purposes of evaluating the levels of fuel vapor likely to be discharged from a stockpile) calls for incision of the surface material in the brass liner which is driven into the pile at a right angle (to the angle of repose) until the liner is full. Unless specifically asked to follow the BAAQMD protocol, our personnel routinely modify the procedure to exclude the surface soil and collect soil from a depth of eight to eighteen inches. While this prejudices the sample in the direction of yielding higher results than would a strict BAAQMD sample, it is more representative of the levels of fuel hydrocarbons present in the soil and is not likely to mislead the client or contractor into offhauling or backfilling with soil stockpiles that are relatively clean at the surface, but unacceptably contaminated through the remainder of their volume.

#### Sample Containers

Our firm uses new sample containers of the type specified by either EPA or the RWQCB for the collection of samples at sites where underground storage tanks are involved. Soil samples for volatile, semivolatile and nonvolatile analyses are all collected in properly prepared new brass liners which are 2 inches in diameter by 4 inches in length. Closure is accomplished with press fit plastic end caps which are fitted to the open ends of brass tube liners after a sheet of aluminum foil is wrapped over the exposed sample material. No preservative other than cold storage is used on samples captured in sample containers of this type.

#### Sample Handling Procedures

Solid sample material is captured by advancing the liner into the soil. This may be done by pushing the liner into soft soils or by containing the liner in a drive shoe which can be advanced and then retracted by means of a slide hammer. The open ends of the sample liner are covered with aluminum foil and plastic end caps. The brass liner is then labeled

with the appropriate identification numbers which specify the sampling activity designation number, sample collection area, depth etc. that apply to that particular sample. The sample liner is then placed in an ice chest which contains pre-frozen blocks of an inert ice substitute such as Blue Ice or Super Ice.

#### **Sample Designations**

All sample containers are identified with both a sampling event number and a discrete sample identification number. Please note that the sampling event number is the number that appears on our chain of custody. It is roughly equivalent to a job number, but applies only to work done on a particular day of the year rather than spanning several days as jobs and projects often do. This is followed by the sample I.D. number which is usually a simple number such as #1, #2, #3.

#### **Chain of Custody**

Samples are continuously maintained in either a chilled ice chest, refrigerator, or freezer from the time of collection until acceptance by the State certified Hazardous Materials Testing Laboratory selected to perform the analytical procedures. If the samples are taken charge of by a different party (such as another person from our office, a courier, etc.) prior to being delivered to the laboratory, appropriate release and acceptance records are made on the chain of custody (time, date, and signature of person releasing the samples followed by the time, date and signature of the person accepting custody of the samples).

#### **Laboratory Identification Numbers**

Following receipt of the samples and completion of the Chain of Custody form, the laboratory then assigns their own identification numbers to the samples. Different laboratories use different numbering systems and according to their own internal conventions, may or may not assign sequential numbers to samples which are placed on temporary "hold", pending the results of other analyses. Laboratory identification numbers (if assigned and available) are included on the DIAGRAM page, and will be found on the certified analytical report by the analytical laboratory.

#### **Certified Analytical Report**

The certified analytical report generated by the laboratory is the official document in which they issue their findings. The certified analytical report is included as an attachment at the close of this report.

#### **General Advisory on Test Results**

Blaine Tech Services, Inc. provides sampling and documentation. The proper technical execution of this work demands a high level of dedication to the principle that data gathering should be performed by impartial individuals who are also disinterested in the outcome of the analytical procedures. To function as a disinterested and independent third party, Blaine Tech Services, Inc. makes it a policy to not become involved in either the interpre-

tation of results or the sale of any consulting services or remediation packages. There are an ample number of firms who can provide consulting services and make proposal on whatever level of work they feel should be undertaken.

Even though we do not engage in the interpretation of analytical results, the making of recommendations, or the issuance of proposals on how best to remediate environmental conditions, we have been asked by the engineering staff of the Regional Water Quality Control Board to include in our reports an advisory section outlining the general type of additional actions which may be required when contamination is found. This advisory is not intended to characterize conditions at this particular site or replace the services of a consulting firm specializing in the investigation, characterization and remediation of such conditions as may exist. Rather, it is intended to advise you that such additional actions may be required even though some time may elapse before you are contacted by one of the interested regulatory agencies.

In Region 2 (which is regulated by the San Francisco Regional Water Quality Control Board), the thresholds are readily defined in the Board's publication, Guidelines For Addressing Fuel Leaks. According to this document, soil which has less than 100 parts per million total petroleum fuel hydrocarbon (TPH) contamination does not generally require immediate additional action. Board engineers emphasize that this does not mean that some action might not be required in the future. Still, the site is assigned a low priority unless it is situated in an area of high hydrogeologic concern.

The detection of more than 100 ppm TPH in the native soil beneath a tank is generally considered grounds for requiring an additional investigation in the form of soil borings and installation of at least one groundwater monitoring well followed by periodic monitoring. The detection of 1000 ppm TPH is usually viewed by the Board as an unacceptable level of fuel saturation which will mandate excavation of the effected ground down to the furthest practicable reach of conventional excavating machinery followed by soil borings and installation of groundwater monitoring wells.

Other regions use different standards for determining when a groundwater investigation will be required. For example benzene is often used in lieu of TPH. Even very low levels of benzene are often seen as grounds for requiring a subsurface investigation. This criteria may be relaxed or stiffened depending on the location of the site in relation to different groundwater systems, the depth to water, type of soil, and the concentrations of benzene involved.

The above standards apply only to fuels. When samples taken in connection with a waste oil tank or a solvent tank are found to contain even small amounts of any of the EPA priority pollutants (such as TCE, PCE, DCE etc. which are detected by EPA methods 8010, 8020, and 8240) more stringent standards are often applied. In these cases, soil borings and monitoring well installation may be required if there is any detectable amount of any of the EPA priority pollutant compounds.

When contaminants are found to have reached the water underlying a site, the Board customarily requires that additional work be undertaken in order to define the extent of the contamination.

**Reportage**

Submission to the Regional Water Quality Control Board and the local implementing agency should include copies of the sampling report, the chain of custody, and the certified analytical report issued by the Hazardous Materials Testing Laboratory. The property owner should attach a cover letter and submit all documents together in a package.

PROJECT:  
Tank Removal

SAMPLED ON:  
March 20, 1991

## TANK REMOVAL SAMPLING REPORT 910320-C-1

Blaine Tech Services, Inc. performs specialized environmental sampling and documentation as an independent third party. In order to avoid compromising the objectivity necessary for the proper and disinterested performance of this work, Blaine Tech Services, Inc. does not participate in the interpretation of analytical results or become involved with the marketing or installation of remedial systems. The interpretation of results should be performed by representatives of interested regulatory agencies and/or those professionals who are engaged as paid consultants in the business of providing opinions and proposals for further investigation or clean-up activities.

This report describes the initial environmental sampling and documentation performed by our firm on this project. In addition to the text of the Sampling Report, supporting documents are provided as attachments. These include the chain of custody and the certified analytical laboratory report. All of these documents should be kept together and preserved as a file of interrelated records which, together, comprise the documentation of the work performed at the site.

### Scope of Requested Service

In accordance with your request, field personnel would be dispatched to San Jose Tallow to collect soil samples following the removal of an underground gasoline storage tank. We would arrange for the requested analyses of the samples, and maintain adequate documentation resulting in the issuance of a formal Sampling Report. The collection of environmental samples was to be performed in accordance with the requirements of the Regional Water Quality Control Board and the specific directions of the Local Implementing Agency (LIA) inspector present at the site at the time of removal.

### Execution of the Tank Removal Sampling

Personnel were dispatched from our office and arrived at San Jose Tallow at 1315 hours on Wednesday, March 20, 1991.

The subject site is located within the overall jurisdiction of the Regional Water Quality Control Board -- San Francisco Bay Region. Initial inspection and evaluation of sites in this area is customarily conducted by the local implementing agency (LIA): the City of San Jose Fire Department. The local implementing agency was represented by Mr. Andrew Dyer, who was present to observe the tank removal and sampling.

Pearson Equipment was represented by Mr. Jack Bail, who was present to direct the excavation and removal of the tank.

According to Mr. Dyer and Mr. Bail, the tank was used to store unleaded gasoline and had been originally designed as an above ground vertical tank. The tank was converted to an underground storage tank and had been buried horizontally.

The City of San Jose Fire Department uses combustible gas meter readings to establish the condition of the atmosphere inside the tank and determine whether that atmosphere meets standards the Department considers adequately inert to allow for the safe removal of the tank from the excavation. In addition to the meter normally brought to the site by the LIA inspector, Pearson Equipment Company normally requests that Blaine Tech Services, Inc. provide an additional meter (and preferably two additional meters) to be on hand in case the LIA meter is not operable. Our personnel had brought two Gastech model 1314s to the site.

At 1400 hours, measurements were taken of the atmosphere inside the tanks with the available combustible vapor meters. The level of combustible vapor inside the tank was measured at zero percent (0%) on the lower explosion limit (LEL) scale. The level of available oxygen inside the tank was measured at 20% on the oxygen deficiency (O<sub>2</sub>) scale. Despite the amount of dry ice which had been placed inside, the tank did not meet the standard of acceptability set by the local implementing agency (which, we were told, called for no more than 10% LEL and no more than 10% oxygen).

Following discussions with Mr. Dyer, Pearson Equipment personnel installed caps on the tank to help reduce the oxygen level to a point where it would meet the 10% O<sub>2</sub> standard.

It had continued to rain since the arrival of our personnel at the site at 1315 hours. By 1430 hours, rain water run-off began to collect at the bottom of the tank pit. The surface of this water had a dark sheen. By observing the thickness, odor and appearance of this floating material all the parties present were able to agree that it appeared to be petroleum residue escaping from inside the tank. It was assumed that a hole (at that point in time not yet located) in the tank was allowing the petroleum and dry ice mixture to escape.

With the approval of Inspector Dyer, Mr. Bail of Pearson Equipment used absorbent pads to soak up the contaminants pooling on the surface of the water in the pit.

At 1500 hours, the interior atmosphere of the tank was again checked with a combustible vapor meter. The internal oxygen level was found to have dropped to 10%, an acceptable level for the removal of the tank.

The tank was lifted out of the pit and rolled on its side for inspection. In accordance with the local regulations and the field judgment of the LIA representative, a detailed inspection of the tank was conducted. The tank was visually inspected and likely failure points were probed with small pointed metal examination tools. The inspection found a four inch by two inch (4"x2") hole in the middle of the tank bottom. When the tank was lifted out of the tank pit, a dark black-brown liquid mixture escaped through this hole.

↓

TANK I.D.	SIZE IN GALLONS	TANK CONTENT	MATERIAL OF CONSTRUCTION	INSPECTION FOUND
A	10,000	GAS/UNLEADED	STEEL	ONE HOLE

Because the tank pit was accumulating rain water run-off, Mr. Dyer instructed the backhoe operator to remove soil from the middle of the tank pit so that the water would drain from both ends of the pit. This allowed for the collection of interface samples from either end of the bottom of the tank pit.

Standard RWQCB interface samples were taken of the native soil at points corresponding to both ends of the tank. Stockpile samples of the soil generated during the excavation of the tank were also obtained. The sampling was performed in accordance with the direction of the LIA representative, Mr. Dyer. In the paragraphs that follow, the samples are described in the order in which they were collected:

Sample #1 was a standard interface sample taken at the end of the tank opposite the building at a depth of fifteen feet (15.0') below grade.

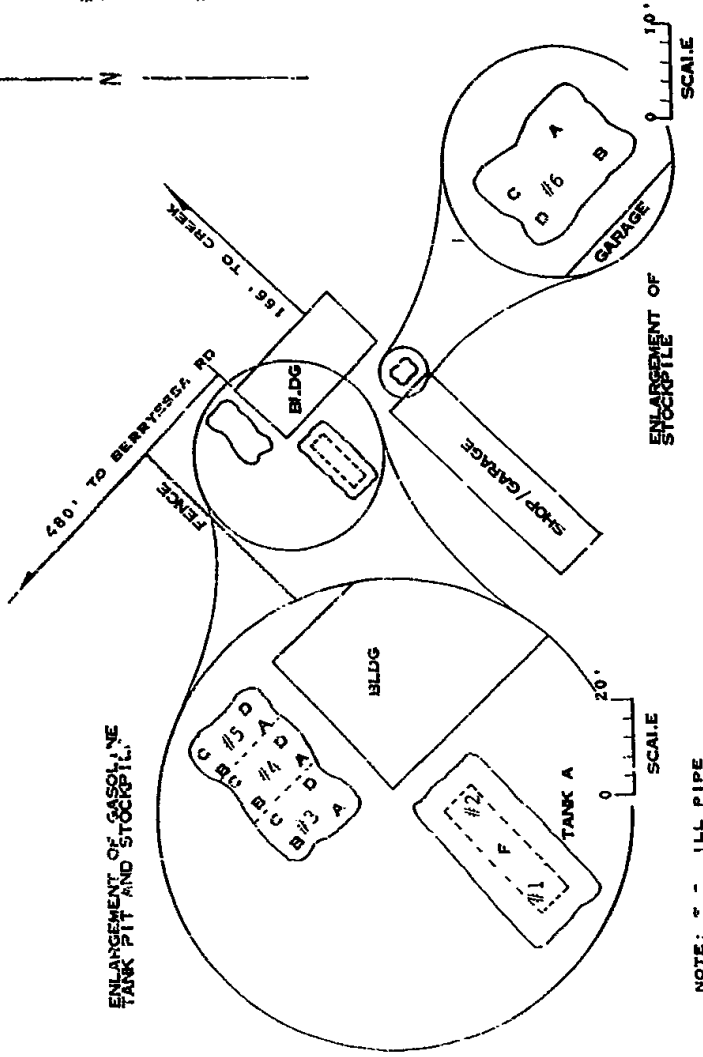

Sample #2 was a standard interface sample taken at the end of the tank closest to the building at a depth of fifteen feet (15.0') below grade.

The stockpiled soil was arranged in two piles. The larger stockpile was located northwest of the building and was estimated to contain approximately 155 cubic yards of soil. To facilitate sample collection, this stockpile was arbitrarily divided into three sections (#3, #4, and #5). Within each section, four individual sample collection

SAMPLING PERFORMED BY GLEN BENNETT  
DIAGRAM PREPARED BY LI PAN

points were selected. One sample container of soil was collected at each of the individual sample collection points after clearing away the upper twelve inches (12") of surface material. The sample container (a new brass sample liner) was forced into the newly exposed soil. After being properly sealed and labeled, the four sample containers from each section were packaged together and stored in an ice chest for transport to the laboratory (The samples were designated #3A-D, #4A-D and #5A-D).

Sample #6A-D was a four part composite collected from the smaller stockpile which was located northeast of the shop/garage. This stockpile was estimated to contain approximately 50 cubic yards of soil. This sample was made up of four individual brass sample liners (#6-A, #6-B, #6-C, and #6-D) which were collected from different faces of the stockpile.

The location of individual sampling points is shown on the diagram on page four. Additional information on the exact method of sample collection will be found in the **Sampling Methodology** section of this report.

After completion of the field work, the sample containers were delivered to Sequoia Analytical Laboratory in Redwood City, California. Sequoia Analytical Laboratory is a California Department of Health Services certified Hazardous Materials Testing Laboratory and is listed as DOHS HMTL #1210.

It was requested that the analytical procedures used for these analyses be those specified by the Regional Water Quality Control Board -- San Francisco Bay Region. The methods are defined in attachments to the San Francisco RWQCB (Region 2) publication, Guidelines For Addressing Fuel Leaks and in documents issued to clarify the Board's interpretation of the California LUFT Manual.

## **SAMPLING METHODOLOGIES USED ON THIS PROJECT**

---

**Standard RWQCB Interface Samples:** Samples taken immediately following a tank removal are required to conform to criteria established by the Regional Water Quality Control Boards. Interpretation of these criteria is usually entrusted to the discretion of the local implementing agency inspector, but are widely known and conformance with these criteria is expected even when no regulatory agency personnel are present to direct the procedures. Accordingly, "Standard Interface samples" are those which have been taken in accordance with the standard protocol for obtaining interface samples. These samples fall into the category of samples which are known to be of primary concern to the interested regulatory agencies for determining if additional action will be required at a site and the methodology has been closely defined in state and RWQCB publications, supplements, and presentations. These specify both the acceptable depth and lateral situation of sample collection points. In accordance with these specifications, sample collection is executed as close as possible to the center line (longitudinal axis) of the tank and on a vertical axis with the fill pipe. A corresponding location is also found at the opposite end of the tank whenever standard interface samples are being collected.

Briefly, the method consists of digging up native soil from directly below the fill pipe and the corresponding opposite end of the tank and obtaining a sample from the backfill/native soil interface or a short distance below the interface. A short distance has been defined by Region 2 Board engineers as not greater than twenty-four inches below the backfill/native soil interface and is generally taken to be one foot below the backfill/native soil interface.

This soil is brought up in the backhoe bucket. A shovel or trowel is used to cut away surface soil and backfill material which may have been included in the bucket, and the sample is taken by pushing or driving a brass sample liner into the newly exposed soil from the designated depth and location. Additional clarifications by Region 2 Board engineers have indicated that when there is an obvious difference in the relative contamination of soil brought up from the interface depth, then it is the relatively more contaminated soil that should be selected for inclusion in the sample.

**Stockpile Survey (Modified BAAQMD Protocol):** This sampling follows a survey pattern, but uses a modified BAAQMD protocol for sampling stockpiles of material that have been newly removed from a tank pit excavation. This protocol calls for a discrete sample container to be collected for every 12.5 cubic yards of material. The survey includes opposite sides of the stockpile. Strict observance of the BAAQMD protocol (for purposes of evaluating the levels of fuel vapor likely to be discharged from a stockpile) calls for inclusion of the surface material in the brass liner which is driven into the pile at a right angle (to the angle of repose) until the liner is full. Unless specifically asked to follow the BAAQMD protocol, our personnel routinely modify the procedure to exclude the surface soil and collect soil from a depth of eight to eighteen inches. While this prejudices the sample in the direction of yielding higher results than would a strict BAAQMD sample, it is more representative of the levels of fuel hydrocarbons present in the soil and is not likely to mislead the client or contractor into offhauling or backfilling with soil stockpiles that are relatively clean at the surface, but unacceptably contaminated through the remainder of their volume.

### Sample Containers

Our firm uses new sample containers of the type specified by either EPA or the RWQCB for the collection of samples at sites where underground storage tanks are involved. Soil samples for volatile, semi-volatile and non-volatile analyses are all collected in properly prepared new brass liners which are 2 inches in diameter by 4 inches in length. Closure is accomplished with press fit plastic end caps which are fitted to the open ends of brass tube liners after a sheet of aluminum foil is wrapped over the exposed sample material. No preservative other than cold storage is used on samples captured in sample containers of this type.

### Sample Handling Procedures

Solid sample material is captured by advancing the liner into the soil. This may be done by pushing the liner into soft soils or by containing the liner in a drive shoe which can be advanced and then retracted by means of a slide hammer. The open ends of the sample liner are covered with aluminum foil and plastic end caps. The brass liner is then labeled

with the appropriate identification numbers which specify the sampling activity designation number, sample collection area, depth etc. that apply to that particular sample. The sample liner is then placed in an ice chest which contains pre-frozen blocks of an inert ice substitute such as Blue Ice or Super Ice.

### **Sample Designations**

All sample containers are identified with both a sampling event number and a discrete sample identification number. Please note that the sampling event number is the number that appears on our chain of custody. It is roughly equivalent to a job number, but applies only to work done on a particular day of the year rather than spanning several days as jobs and projects often do. This is followed by the sample I.D. number which is usually a sample number such as #1, #2, #3.

### **Chain of Custody**

Samples are continuously maintained in either a chilled ice chest, refrigerator, or freezer from the time of collection until acceptance by the State certified Hazardous Materials Testing Laboratory selected to perform the analytical procedures. If the samples are taken charge of by a different party (such as another person from our office, a courier, etc.) prior to being delivered to the laboratory, appropriate release and acceptance records are made on the chain of custody (time, date, and signature of person releasing the samples followed by the time, date and signature of the person accepting custody of the samples).

### **Laboratory Identification Numbers**

Following receipt of the samples and completion of the Chain of Custody form, the laboratory then assigns their own identification numbers to the samples. Different laboratories use different numbering systems and, according to their own internal conventions, may or may not assign sequential numbers to samples which are placed on temporary "hold", pending the results of other analyses. Laboratory identification numbers (if assigned and available) are included on the DIAGRAM page, and will be found on the certified analytical report by the analytical laboratory.

### **Certified Analytical Report**

The certified analytical report generated by the laboratory is the official document in which they issue their findings. The certified analytical report is included as an attachment at the close of this report.

### **General Advisory on Positive Results**

Blaine Tech Services, Inc. provides sampling and documentation. The proper technical execution of this work demands a high level of dedication to the principle that data gathering should be performed by impartial individuals who are also disinterested in the outcome of the analytical procedures. To function as a disinterested and independent third party, Blaine Tech Services, Inc. makes it a policy to not become involved in either the interpre-

tation of results or the sale of any consulting services or remediation packages. There are an ample number of firms who can provide consulting services and make proposal on whatever level of work they feel should be undertaken.

Even though we do not engage in the interpretation of analytical results, the making of recommendations, or the issuance of proposals on how best to remediate environmental conditions, we have been aided by the engineering staff of the Regional Water Quality Control Board to include in our reports an advisory section outlining the general type of additional actions which may be required when contamination is found. This advisory is not intended to characterize conditions at this particular site or replace the services of a consulting firm specializing in the investigation, characterization and remediation of such conditions as may exist. Rather, it is intended to advise you that such additional actions may be required even though some time may elapse before you are contacted by one of the interested regulatory agencies.

In Region 2 (which is regulated by the San Francisco Regional Water Quality Control Board), the thresholds are readily defined in the Board's publication, Guidelines For Addressing Fuel Leaks. According to this document, soil which has less than 100 parts per million total petroleum fuel hydrocarbon (TPH) contamination does not generally require immediate additional action. Board engineers emphasize that this does not mean that some action might not be required in the future. Still, the site is assigned a low priority unless it is situated in an area of high hydrogeologic concern.

The detection of more than 100 ppm TPH in the native soil beneath a tank is generally considered grounds for requiring an additional investigation in the form of soil borings and installation of at least one groundwater monitoring well followed by periodic monitoring. The detection of 1000 ppm TPH is usually viewed by the Board as an unacceptable level of fuel saturation which will mandate excavation of the effected ground down to the furthest practical reach of conventional excavating machinery followed by soil borings and installation of groundwater monitoring wells.

Other regions use different standards for determining when a groundwater investigation will be required. For example benzene is often used in lieu of TPH. Even very low levels of benzene are often seen as grounds for requiring a subsurface investigation. This criteria may be relaxed or stiffened depending on the location of the site in relation to different groundwater systems, the depth to water, type of soil, and the concentrations of benzene involved.

The above standards apply only to fuels. When samples taken in connection with a waste oil tank or a solvent tank are found to contain even small amounts of any of the EPA priority pollutants (such as TCE, PCE, DCE etc. which are detected by EPA methods 8010, 8020, and 8240) more stringent standards are often applied. In these cases, soil borings and monitoring well installation may be required if there is any detectable amount of any of the EPA priority pollutant compounds.

When contaminants are found to have reached the water underlying a site, the Board customarily requires that additional work be undertaken in order to define the extent of the contamination.

**Reportage**

Submission to the Regional Water Quality Control Board and the local implementing agency should include copies of the sampling report, the chain of custody, and the certified analytical report issued by the Hazardous Materials Testing Laboratory. The property owner should attach a cover letter and submit all documents together in a package.

Name of Intero: \_\_\_\_\_  
Local Permit No. or Date: 85WC737

State Well No. 06S1E32J01  
Other Well No. \_\_\_\_\_

(1) OWNER: Name SAN JOSE TALLOW CO.  
Address 11750 Berryessa Road  
City San Jose Zip 95103  
(2) LOCATION OF WELL (See instructions)  
County Santa Clara Owner's Well Number AEC-1  
Well address if different from above \_\_\_\_\_  
Township T6S Range R1E Section \_\_\_\_\_  
Distance from (city, road, railroads, fences, etc) \_\_\_\_\_

(12) WELL LOG: Total depth 39 ft. Depth of completed well 39 ft.  
from ft. to ft. Formation (Describe by color, character, size or material)  
0 - 2 1/3 2" Asphalt, 6" Baserock  
2 1/3 - 8 Silty Sand, gray-brown, damp, medium dense  
8 - 11 1/2 Sandy Clay, dark gray, moist, moderate plasticity, hard.

(3) TYPE OF WORK:  
New Well  Drizzane   
Reconstruction   
Reconducing   
Horizontal Well   
Destruction  (Describe destruction materials and procedures in Item 12)  
(4) PROPOSED USE:  
Domestic   
Irrigation   
Industrial   
Test Well   
Stock   
Municipal   
Other

11 1/2 - 16 Silty Clay, gray with some blue & brown, moist, high plasticity, hard.  
16 - 20 Sandy Clay, blue-gray, wet, moderate plasticity, very stiff  
20 - 22 1/2 Fine Sand, brown, wet, medium dense,  
22 1/2 - 25 Sandy Clay, gray-brown and blue, very moist, low plasticity, very stiff

(5) EQUIPMENT:  
Rotary  Reverse   
Cable  Hollow Air   
Other  Hollow stem Bucket

(6) GRAVEL PACK:  
Yes  No  Size #4 Aqua  
Diameter of bore 7"  
Packed from 7' to 39' ft.

25 - 27 Silty Sand, blue & brown, wet, medium dense

(7) CASING INSTALLED:

From ft.	To ft.	Dia. in.	Gage or Wall	From ft.	To ft.	Slot size
0	39	2"	Sch 40	9	39	.020

(8) PERFORATIONS:  
Type of perforation or size of screen

27 - 29 1/2 Sandy Clay, gray & brown, very moist, very stiff, low plasticity.  
29 1/2 - 39 Alternating thin layers of Silty Sand and Sandy Clay, gray & blue & brown, wet.

(9) WELL SEAL:  
Was surface sanitary seal provided? Yes  No  If yes, to depth 7 ft.  
Were strata sealed against pollution? Yes  No  Inter   
Method of seal: Cement with Bentonite

Work started 6-5-85 Completed 6-5-85

(10) WATER LEVELS:  
Depth of first water, if known 16 ft.  
Standing level after well completion 15 ft.

WELL DRILLER'S STATEMENT:  
This well was drilled under my supervision and this report is true to the best of my knowledge and belief.

(11) WELL TESTS:  
Was well test made? Yes  No  If yes, by whom? \_\_\_\_\_  
Type of test Pump  Bailor  Air lift   
Depth to water at start of test \_\_\_\_\_ ft. At end of test \_\_\_\_\_ ft.  
Discharge \_\_\_\_\_ gal/min after \_\_\_\_\_ hours. Water temperature \_\_\_\_\_  
Chemical analysis made? Yes  No  If yes, by whom? \_\_\_\_\_  
Was electric log made? Yes  No  If yes, attach copy to this report.

RE: 11740 Berryessa Road, San Jose  
Lowney Associates Letter dated 7/10/00 for Proptech, Inc.

Dear Sir or Madam,

In response to recommendations of Lowney Associates in their letter of 7/10/00 we are hereby notifying Santa Clara Valley Water District of the release described.

We have enclosed for your records the Lowney Associates letter of 7/10/00 and the Soil and Ground Water Quality Evaluation also dated 7/10/00.

We are proposing no new building or excavation at this time.

Please call me if you have any questions or need additional information.

Sincerely,

SRDC, INC

RE: **FIRE DEPARTMENT FILE REVIEW**  
**SAN JOSE SELF STORAGE**  
**SAN JOSE, CALIFORNIA**

Dear Mr. Buhnash:

This letter summarizes our review of the City of San Jose Fire Department's (SJFD) files for San Jose Self Storage, located at 11740 Berryessa Road in San Jose, California. This letter was prepared in accordance with our agreement dated May 9, 2000.

#### **BACKGROUND**

Three underground storage tanks (USTs) were installed on the San Jose Self Storage property in 1970. Two of the three tanks were 7,000-gallon single wall steel/iron tanks and the third tank was a 1,000-gallon single wall steel/iron tank. Based on Water Resources Control Board UST Program Tank Permit Application Information forms completed by Jay Groh on May 22, 1989, all three tanks reportedly stored diesel fuels.

#### **REGULATORY FILE REVIEW**

Based on the files reviewed, it is unclear when the tanks were removed from service/abandoned. A fire inspection report (November 30, 1988) prepared by Oscar D. Bazarro, SJFD, requested a proposal on status of the tank closure or reactivation of their use. The fire inspection report was supplemented with a letter sent to Mr. Robert Green, Harris Ranch Beef Company (May 10, 1989) stating that the tanks did not have a monitoring system to detect leaks or inspections wells to monitor ground water. The letter requested that the facility be brought into compliance by removing the tanks or performing the necessary monitoring and inspections to verify if leaks had occurred.

The Scott Company of California filed for a tank removal permit in June 1989 on behalf of San Jose Self Storage. Additionally, an Underground Tank Closure Plan was submitted to the San Jose Fire Department in June 1989. The closure plan indicated that Hydro Chem Services would be hauling the tank to H&H Shipyard.

An invoice from the City of San Jose Fire Department indicated that the final inspection for the tank removal occurred on August 10, 1989. Scott Company submitted five soil

samples to West Environmental Science and Technology on August 10, 1989 for the Hydro Chem Tank Pull. Table 1 shows the sample results reported by the laboratory.

**Table 1. Analytical Results of Soil Samples Collected by Scott Company**  
(concentrations in parts per million)

< Indicates that the compound was not detected at or above the stated laboratory reporting limit

\* Preliminary Remediation Goal-EPA Region 9, 1999

NE Not established

NR Not reported

NS Not tested

Based on the soil sampling performed, a diesel release occurred near the west end of tank 1; however, the magnitude of the vertical and horizontal impact was not reported. Mr. George Hunt, Proptech, indicated that at the time of the UST removal, contaminated soil was excavated and disposed off-site. No post excavation soil samples were found in the files reviewed.

## CONCLUSIONS

At the time of the Phase I Environmental Site Assessment, two monitoring wells were observed. The Santa Clara Valley Water District was contacted prior to conducting the SJFD file review to determine if they had a file for the site. The SCVWD had a file for 11740 Berryessa Road; however, the file was for a petroleum fuel release UST removal at the adjacent San Jose Tallow Company, which had been given case closure in 1996. Additionally, at the time of the Phase I Environmental Site Assessment, the environmental database report did not identify the site as an open fuel leak case.

During our Phase II investigation of the site, ground water samples were collected from the two on-site monitoring wells. Petroleum hydrocarbons in the gasoline range, BTEX, and MTBE were not detected in the ground water samples collected from the two on-site wells. Petroleum hydrocarbons in the diesel range (0.0678 mg/l) were detected in the water sample collected from well WS-2 at a level near the laboratory detection limit (0.050 mg/l). This compound did not appear to be a significant concern; it may be associated with oxygenated organic compounds produced by biologic degradation of organic materials or a diesel fuel.

- The position of the former tanks with respect to the two on-site monitoring well is unknown. Additionally, no measured ground water flow direction was reported in the documents reviewed.

We recommend that this release be reported to the Santa Clara Valley Water District. If future site development involving soil movement and excavation is planned for the area where the former USTs were located, pockets of petroleum-contaminated soil may be encountered. If impacted soil is encountered the soil should be appropriately handled.

#### LIMITATIONS

As with all site assessments, the extent of information obtained is a function of client demands, time limitations, and budgetary constraints. Our conclusions and recommendations regarding the site are based on readily observable site conditions, review of readily available documents, maps, aerial photographs, and data collected and/or reported by others. Due to poor or inadequate address information, the regulatory agency database report listed several sites that may be inaccurately mapped or could not be mapped; leaks or spills from these or other facilities, if nearby, could impact the site. As directed by you, we are relying on information presented in reports provided to us by you or your representative. We are not responsible for the accuracy of information or data presented by others.

Because publicly available information cannot affirm that a release or spill of hazardous materials has or has not occurred at the site, there is the possibility of on-site contamination. Our recommendation that no further work appeared required is not a guarantee of site cleanliness; it is only a statement that there is no affirmative representation that the site has been significantly impacted.

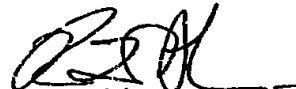

This report was prepared for the sole use of Proptech. We make no warranty, expressed or implied, except that our services have been performed in accordance with environmental principles generally accepted at this time and location.

Very truly yours,

LOWNEY ASSOCIATES

Robert M. Bacci, I.H.I.T., C.A.C.

**SOIL AND GROUND WATER QUALITY EVALUATION**  
**SAN JOSE SELF STORAGE**  
**SAN JOSE, CALIFORNIA**

**1.0 INTRODUCTION**

**1.1 Purpose**

In this report, we present the results of the soil and ground water quality evaluation performed at San Jose Self Storage site in San Jose, California. This work was performed to evaluate subsurface conditions at the site and the sump beneath the "kill area" of the main building.

**1.2 Site Background**

The approximately 7½-acre site, shown in Figures 1 and 2, is located at 11740 Berryessa Road in San Jose, California 95133, and is denoted as assessor's parcel number (APN) 254-13-090. The site is located in a commercial/industrial area and is bounded by Coyote Creek to the north and east, Berryessa Road and Union Pacific Railroad Lines to the west, and U.S. Route 101 to the south. Proptech, Inc. currently owns the site.

Lowney Associates performed a Phase I Environmental Site Assessment of the site in December 1999. Based on the information reviewed, the site's first developed use appeared as two buildings, which were depicted on the topographic maps dating back to 1897. Historically, the site reportedly was operated by San Jose Meat Company/Harris Ranch and utilized as a slaughterhouse, feed lot, and meat packaging facility up until approximately 15 years ago.

At the time of our site visit, the site was developed with a 25,000-square-foot building (main building) utilized primarily for storage and office purposes. In addition to the building, 2,104 individual storage units utilized for self-storage were located on-site. The current site tenant is San Jose Self Storage.

Potential areas of concern identified in the Phase I included the cattle management areas where pesticides may have been used to control insects and the "kill area" sump. At the time of the site visit, the purpose of this sump was unclear; sampling was recommended to help evaluate if hazardous materials may have been dumped into the sump.

Additionally, one diesel and one gas UST had been removed approximately 10 years ago. At the time of the Phase I site visit, two monitoring wells were observed.

### 1.3 Scope of Work

The scope of work for this study was outlined in our agreement dated May 9, 2000 and included the following tasks.

- ▼ Collect four soil samples (two from the former cattle area and two from the non-cattle areas) from a depth of approximately 3 feet.
- ▼ Sample the standing water and the soil beneath the sump located under the "kill area" of the main building.
- ▼ Sample ground water from two on-site monitoring wells.

## 2.0 SOIL AND GROUND WATER QUALITY EVALUATION

### 2.1 Subsurface Investigation

On June 5, 2000, and under the supervision of project industrial hygienist, Robert M. Bacci, James Dobson, staff environmental scientist, collected four soil samples (two from historic cattle areas and two from non-cattle areas) to evaluate the presence of pesticides. Additionally, Mr. Dobson directed a subsurface exploration program to approximate depths of 12 to 13 feet adjacent to the sump located beneath the "kill area." Exploratory borings SS-5 and SS-6 were drilled to approximately 5 feet beneath the bottom of the sump to evaluate if releases from the sump had occurred. Soil sampling protocols are presented in Appendix A.

### 2.2 Soil Sample Collection and Analyses

To evaluate soil quality in the historic cattle areas and the non-cattle areas, two soil samples were collected from each of the above areas. Four soil samples were analyzed for organochlorine pesticides (EPA Test Method 8081), and the metals lead, arsenic, and mercury.

To evaluate the soil quality beneath the sump in the "kill area," two soil samples were analyzed for organochlorine pesticides (EPA Test Method 8081), total petroleum hydrocarbons in the gasoline range (TPHg), benzene, toluene, ethylbenzene, and xylenes (RTEX), and methyl tertiary butyl ether (MTBE) (EPA Test Method 8015/8020); total petroleum hydrocarbons in the diesel range (TPHd); halogenated volatile organic compounds (VOCs) (EPA Test Method 8010); and 17 CAM metals.

The soil samples collected from both the former cattle management areas and non-cattle management areas were below the analytical limits of detection for organochlorine pesticides, lead, and arsenic. Only one sample (SS-4) collected from the non-cattle area contained detectable levels of lead (12.9 mg/kg). Mercury concentrations ranging from 0.0390 to 0.109 mg/kg were detected in all of the soil samples collected. Copies of the analytical reports and chain-of-custody documentation are presented in Appendix B.

Analytical results of the soil and standing water samples collected from the sump are presented in Table 1. Pesticides, BTEX, MTBE, TPHg, and TPHd, were not detected above the analytical limits of detection in the samples analyzed. Chloroform (0.07 mg/kg) was detected in the soil sample collected near the sump (SS-5). This compound was the only VOC detected in the samples collected from the water and soil in the sump area. Copies of the analytical reports and chain of custody documentation are presented in Appendix B.

**Table 1. Analytical Results of "Kill Area" Sump**  
(concentrations in mg/kg)

Boring Number	Depth (feet)	Ba	Cr	Co	Cu	Ni	Tl	V	Zn	pH
SS-5	13	111	43.8	10.7	24.7	63.7	7.65	35.8	55.3	8.53
SS-6	13	47.0	30.0	6.52	12.1	44.3	6.02	25.6	31.3	9.37

< Indicates that the compound was not detected at or above the stated laboratory reporting limit

\* Preliminary Remediation Goal—EPA Region 9, 1999

• Units for water sample and MCL are mg/l

\*\* Drinking water Maximum Contaminant Levels—California DHS, May 23, 2000

Chloroform was detected in SS-5 at 0.070 ppm.

NE Not established

NA Not applicable

The preliminary remediation goals (PRGs) presented in Table 1 are risk-based concentrations developed by EPA Region 9; PRGs are for use as screening levels in determining if further evaluation is warranted, in prioritizing areas of concern, in establishing initial cleanup goals, and in estimation of potential health risks.

The PRGs are chemical concentrations that correspond to fixed levels of risk (either a cancer risk of one in one million [ $10^{-6}$ ] or a non-carcinogenic hazard quotient of one, whichever occurs at a lower concentration). These levels are based on common exposure pathways, but effects of exposure to multiple contaminants and other site-specific conditions are not considered. Thus, they are not intended as a substitute for a site-specific health risk assessment. Chemical concentrations above the PRGs would not automatically designate the site as a health threat or trigger a response action. Exceeding a PRG, however, may suggest that further evaluation of potential risks is appropriate. This further evaluation may include additional sampling and/or the reassessment of the assumptions and routes of exposure that were used to develop the non-site-specific PRGs.

### 2.3 Ground Water Sample Collection and Analyses

To evaluate ground water quality at the site, ground water samples were collected from each of the two wells. Copies of the well sampling logs and a discussion of sampling protocol are included in Appendix B.

The ground water samples were analyzed for TPHg, BTEX, and MTBE (EPA Test Method 8015/8020) and TPHd. TPHg, BTEX, and MTBE were not detected in the ground water samples collected from the two on-site wells. Petroleum hydrocarbons in the diesel range were detected in the water sample collected from WS-2 (0.0678 mg/l). Copies of the laboratory reports are attached in Appendix B.

### 3.0 CONCLUSIONS AND RECOMMENDATIONS

#### 3.1 General Soil Quality Former Cattle Management and Non-Cattle Management Areas

Arsenic, lead, and mercury concentrations detected in on-site soil appeared to be consistent with typical background concentrations. Naturally-occurring arsenic and lead concentrations for Northern Santa Clara County soils are generally in the range of less than 10 ppm and 20 ppm, respectively (Boemgen, 1981; Scott, 1991). Based on our experience in the Santa Clara Valley, typical background mercury levels are less than 1.0 ppm.

Pesticides were not detected above the limits of analytical detection in the samples collected.

#### 3.2 General Ground Water Quality (Monitoring Wells)

During this investigation, ground water samples were collected from the two on-site monitoring wells. Petroleum hydrocarbons in the gasoline range, BTEX, and MTBE were not detected in the ground water samples collected from the two on-site wells. Petroleum hydrocarbons in the diesel range (0.0678 mg/l) were detected in the water sample collected from well WS-2 at a level near the laboratory detection limit (0.050 mg/l). This compound did not appear to be a significant concern; it may be associated with oxygenated organic compounds produced by biologic degradation of organic materials and not a diesel fuel.

#### 3.3 General Soil Quality Near Sump In the "Kill Area"

The soil samples collected near to the sump contained detectable levels of various metals (barium, chromium, cobalt, copper, nickel, thallium, vanadium, and zinc). The concentrations of these metals were less than typical background levels. The background concentrations of chromium, copper, nickel, and zinc for Northern Santa Clara County soils are generally in the range of less than 51, 36, 75, and 55 ppm, respectively (Scott, 1991). All other metals detected were below the residential and industrial PRGs. The chloroform (0.07 mg/kg) detected may be due to laboratory error.

### 3.4 General Water Quality Of The Sump

The water sample (WS-1) collected from the sump did not contain pesticides, fuels, BTEX, and chlorinated organic compounds. Several metals were detected but at concentrations less than drinking water standards (MCLs). Total chromium (0.0742 mg/L) was detected slightly higher than its drinking water standard (0.05 mg/L).

### 3.5 General Conclusions

We understand that Proptech, Inc. is considering selling the property for continued commercial use. Based on the information obtained during this survey, the planned use appeared compatible with the known on-site environmental conditions. No further environmental work appeared required at this time.

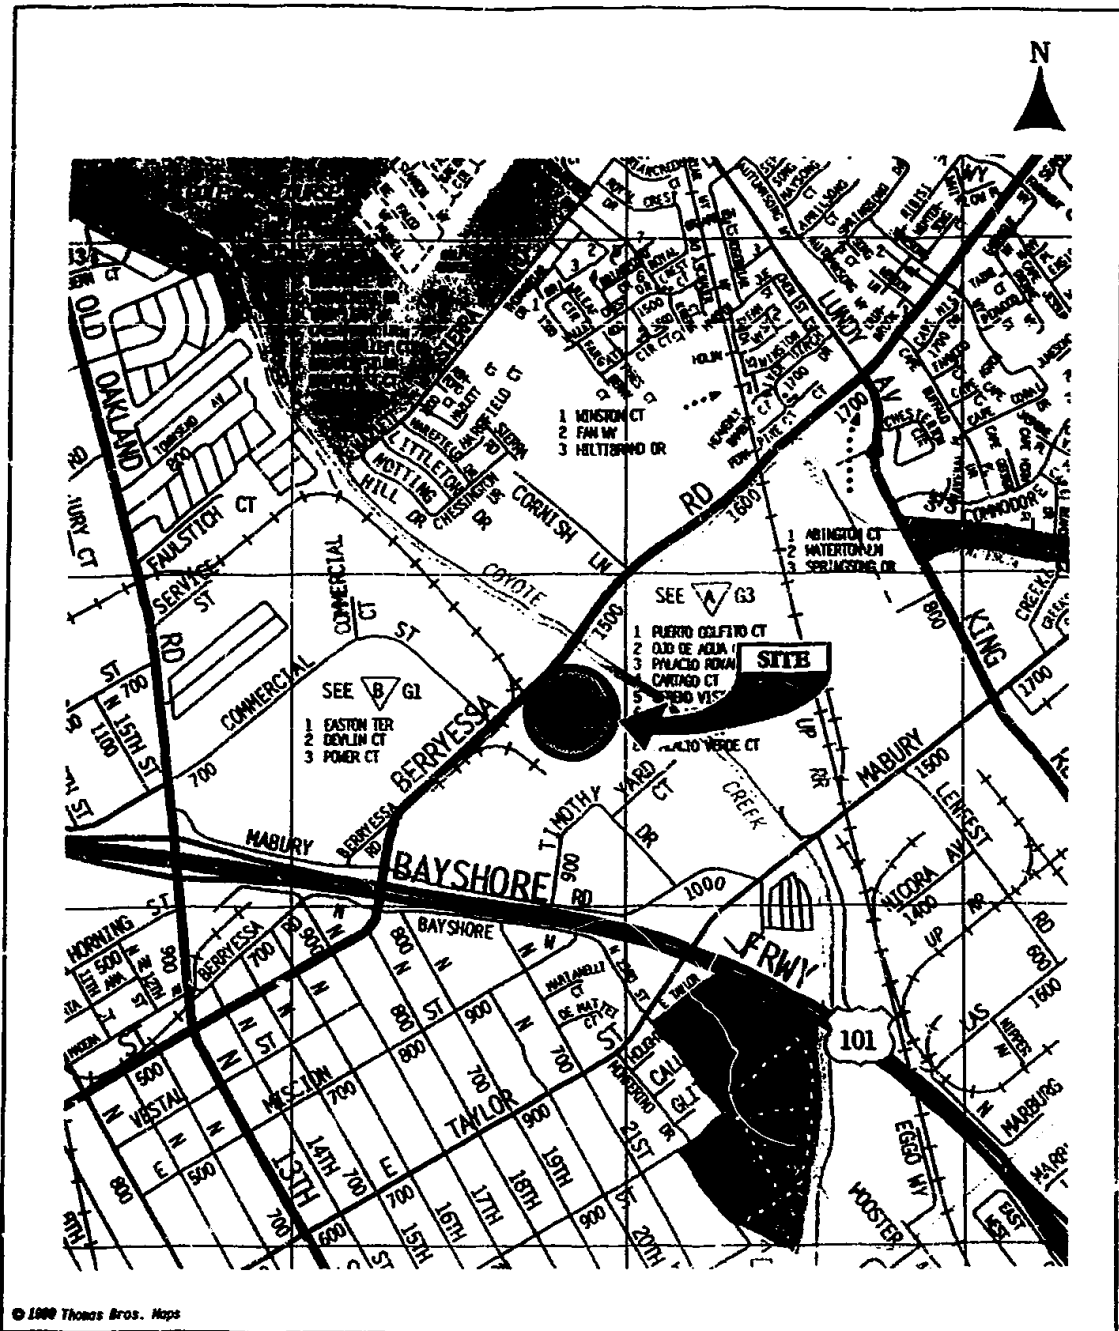

### 4.0 LIMITATIONS

This report was prepared for the use of Proptech, Inc. in evaluating soil and ground water quality at the San Jose Self Storage at the time of this study. We make no warranty, expressed or implied, except that our services have been performed in accordance with environmental principles generally accepted at this time and location. The chemical and other data presented in this report can change over time and are applicable only to the time this study was performed. We are not responsible for the data presented by others.

The accuracy and reliability of geo- or hydrochemical studies are a reflection of the number and type of samples taken and extent of the analyses conducted, and are thus inherently limited and dependent upon the resources expended. Chemical analyses were performed for specific parameters during this investigation, as detailed in the scope of services. Please note that additional constituents not analyzed for during this evaluation may be present in soil and ground water at the site. Our sampling and analytical plan was designed using accepted environmental principles and our judgment for the performance of a soil and ground water quality evaluation and was based on the degree of investigation approved by you. It is possible to obtain a greater degree of certainty, if desired, by implementing a more rigorous soil and ground water sampling program or evaluating the risk posed by the contaminants detected, if any.

**APPENDIX A**  
**SOIL SAMPLING PROTOCOL**

Soil samples for laboratory analysis were collected in brass liners. The ends of the liners were covered in aluminum foil or Teflon film, fitted with plastic end caps, taped, and labeled with a unique identification number. The samples were then placed in an ice-chilled cooler, and transported to a state-certified analytical laboratory with chain-of-custody documentation.

Appendix B

**APPENDIX B**  
**ANALYTICAL RESULTS**

The chilled samples were delivered to a state-certified analytical laboratory. Chain of custody documentation was maintained for all samples. Attached are copies of the analytical results and the chain-of-custody forms.

RE: LONC023

Dear Robert Bacci:

Enclosed are the results of analyses for sample(s) received by the laboratory on June 5, 2000. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Wayne Stevenson  
Project Manager

CA ELAP Certificate Number I-2360

## 1 INTRODUCTION

---

On behalf of City of San José (City / Client), Kleinfelder has prepared this report to summarize our findings of the limited sampling and analyses of shallow soil collected at the proposed San José RV Park at 1300 Berryessa Road in San José, Santa Clara County, California (Site/Subject Property). The environmental soil sampling and analysis is intended to facilitate the on-Site reuse or off-haul disposal and/or re-use of soil generated during proposed Recreational Vehicle (RV) Park development activities.

This work was conducted in accordance with the terms of our proposal titled “Proposal for Limited Soil Sampling and Analyses, 1300 Berryessa Road, San José, Santa Clara County, California 95133”, dated May 3, 2023, and as modified in subsequent emails between Kleinfelder and the City dated May 9, 2023 (added bioswale and changed depths of two locations to 4 feet below ground surface [bgs] and removed two locations), June 21, 2023 (modified the bioswale location), June 26, 2023 (confirmed to not to core through concrete), and July 5, 2023 (added two additional asbestos analyses).

Historically, the Site was most recently developed as a concrete recycling facility in 2002 and, based on a Phase I Environmental Site Assessment (ESA) prepared by CODA Consulting Group (CODA, 2021), was previously a self-storage facility, cattle feed lot, meat plant, and slaughterhouse since at least 1939. The Site also previously contained three diesel underground storage tanks (USTs) that were removed in 1989. After the USTs were removed, soil excavation was completed, and soil and groundwater sampling were conducted, the Santa Clara Valley Water District (SCVWD) and San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) provided case closure letters on August 19, 1991 and September 4, 1991, respectively, for the former USTs (CODA, 2021).

CODA’s Phase I ESA for the 1300 Berryessa Road property did not reveal recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs), or business environmental risks (BERs) for the Subject Property. CODA did consider the former USTs and any residual hydrocarbons in the subsurface soils as a historical recognized environmental condition (HREC). In addition, CODA noted that a previous survey for asbestos on the Subject Property was non-comprehensive and there is a possibility of naturally occurring asbestos in the base rock, as well as metals and remaining hydrocarbons from previous on-Site

activities, which would impact the potential for on-Site and/or off-Site reuse or the cost of off-Site disposal (CODA, 2021).

## 2 PROJECT DESCRIPTION

---

The approximately 7.19-acre Site is located at 1300 Berryessa Road, San José, Santa Clara County, California (Figure 1). Based on Site maps received from the City, approximately 40 percent (%) of the Site is currently covered with asphalt and concrete and the City plans to pave or concrete over the remainder of the Site when they redevelop it as an RV parking lot for use by the unhoused. The bulk of the ground disturbance activities associated with proposed RV park is the removal of the top 8-inches (0.67 foot) bgs of the soil in the non-concrete areas of the proposed park.

Based on the 7.19-acres size of the Site, and that 40% of the property is covered in concrete and will not be excavated, the size of the area with ground disturbance activities was calculated at approximately 4.3 acres. On May 2, 2023, based on an excavation depth of 8-inches or 0.67-foot bgs, the expected excavated volume of soil was estimated to be approximately 4,700-cubic yards, which was conservatively rounded up to 5,000-cubic yards.

On May 9, an approximately 6,000-square feet, up to four-foot-deep bioretention area and associated utility line was added to the proposed ground disturbance activities. The location of the proposed bioretention area is shown on Figure 2.

### 3 FIELD INVESTIGATION ACTIVITIES

---

#### 3.1 PREPARATORY ACTIVITIES

A site-specific health and safety plan (HASP) was prepared for the field exploration activities. This HASP was discussed with the field crews prior to the start of field exploration work.

Prior to performing subsurface exploration, Kleinfelder marked the exploratory boring locations and notified Underground Service Alert of Northern California (USA North 811) on June 8, 2023, to assist in the location of subsurface public utilities. USA North 811 was notified by Kleinfelder of the proposed intrusive activities more than 48 hours (2 business days) prior to advancing the assessment's soil borings.

#### 3.2 FIELD ACTIVITIES

On June 22, 2023, Kleinfelder conducted environmental sampling activities using hand tools and appropriate decontamination procedures for the collection of the shallow soil samples. Figure 2 shows the environmental soil sample locations (RV-1 through RV-16).

Prior to any intrusive subsurface activities on June 22, 2023, Kleinfelder's private utility locating subcontractor, 1st Call, performed a subsurface survey using electromagnetic field induction and ground penetrating radar in an attempt to locate any underground utilities not previously identified that may interfere with the proposed sampling locations. All locations were cleared prior to sampling.

Discrete shallow soil samples were collected from depths of approximately 4- and 8- inches bgs (0.33 foot and 0.67 foot, respectively) at each location except RV-13, where one sample was collected from a depth of 4-inches bgs. At locations RV-15 and RV-16, near the proposed bioretention area, deeper discrete soil samples were also collected at depths of approximately 2 and 4 feet bgs.

Sampling types and locations are summarized below in Table 1.

**Table 1 – Environmental Sampling Summary**

Location	Borings	Depth (feet bgs)	Number of Discrete Environmental Soil Samples	Number of Discrete Sub-Samples for VOC Analysis	4:1 Composite Soil Samples for Environmental Analysis		
RV-1	1	0.33, 0.67	2	--	2		
RV-2	1	0.33, 0.67	2	--			
RV-4	1	0.33, 0.67	2	1			
RV-6	1	0.33, 0.67	2	1			
RV-3	1	0.33, 0.67	2	--	2		
RV-5	1	0.33, 0.67	2	1			
RV-7	1	0.33, 0.67	2	1			
RV-8	1	0.33, 0.67	2	--			
RV-9	1	0.33, 0.67	2	--	2		
RV-10	1	0.33, 0.67	2	1			
RV-11	1	0.33, 0.67	2	--			
RV-12	1	0.33, 0.67	2	1			
RV-13	1	0.33	1	--	1	--	--
RV-14	1	0.33, 0.67	2	2		--	
RV-15 Bioretention	1	0.33, 0.67, 2, 4	4	2		1	1
RV-16 Bioretention	1	0.33, 0.67, 2, 4	4	--			
<b>Excavation Totals</b>	<b>16</b>	<b>--</b>	<b>35</b>	<b>10</b>	<b>9</b>		

Notes:

- not applicable
- bgs below ground surface
- VOC volatile organic compound

Soil samples for environmental laboratory analysis were collected from the borings at approximately equal depth intervals to represent the soil conditions at each location. As Table 1 above indicates, four discrete samples were composited from between two and four adjacent borings for laboratory analysis, except for the sub-samples for volatile organic compound (VOC) analysis, which were analyzed as discrete samples.

Soil samples collected using hand auger were transferred into wide-mouthed glass jars provided by the analytical laboratory. A portion of each soil sample submitted for laboratory VOC analysis was preserved in the field in accordance with United States Environmental Protection Agency (USEPA) Method 5035. Sampling equipment (including the hand auger) was cleaned before each use to preserve the quality of the samples collected.

The environmental soil samples were placed into laboratory-provided glassware that were labeled and immediately placed in an ice-chilled cooler. Samples were submitted accompanied by chain-

of-custody form (COC) to the subcontracted California Environmental Laboratory Accreditation Program (ELAP)-approved laboratory, McCampbell Analytical Inc., of Pittsburgh, California. The soil samples were analyzed by the laboratory using its standard results turn-around time. A total nine (9) composite samples and 10 discrete samples were analyzed as part of this investigation.

The soils encountered during borehole advancement were logged in accordance with the Visual-Manual Procedure of ASTM International D2488 and the Unified Soil Classification System (USCS). Kleinfelder field personnel, under the supervision of a State of California Professional Geologist, prepared lithologic logs of the soil encountered during the sampling activities. Soil boring logs are presented in Appendix A. Borings were backfilled with soil cuttings generated during the hand-augering activities.

## 4 FIELD OBSERVATIONS

---

### 4.1 GENERAL FIELD OBSERVATIONS

The Site was underlain by a highly compacted aggregate base with a mixture of recycled concrete. This fill material consisted as a sandy well-graded gravel. The investigation mainly encountered this fill material, except for native soil encountered in the southeast location, RV-16, at a depth of 3.5 feet bgs. The native soil encountered was a gray clayey sand with gravel. Various intermixed anthropogenic material was found throughout the Site which was demarked by brick and plastic pieces. Moisture content increased with depth and no groundwater was encountered at the Site.

In the southern section, near RV-10, RV-11, and RV-12, there was more fine-grained darker soil where runoff would collect. At the time of the investigation, water was pooled in a concrete section directly north of RV-10, RV-11, and RV-12.

PID readings ranged from 0.010 to 0.090 parts per million by volume (ppmv) with no odors observed in the boreholes completed. No signs of environmental impacts including staining, decolorization or odors nor signs of serpentinite or other naturally occurring asbestos (NOA) were observed during sampling collection.

## 5 ANALYTICAL RESULTS

---

### 5.1 LABORATORY METHODS

In accordance with Kleinfelder's May 3, 2023 proposal, nine (9) composite soil samples were analyzed by McCampbell Analytical for the following parameters:

- Total petroleum hydrocarbons (TPH) quantified as gasoline (TPH-g) using USEPA Methods 8021B/8015Bm, and quantified as diesel (TPH-d) and motor oil (TPH-mo) using USEPA Methods 8015B;
- Semi-volatile organic compounds (SVOCs) using USEPA Method 8270C;
- California Code of Regulations (CCR) Title 22 Metals using USEPA Method 6020;
- Organochlorine pesticides (OCPs) using USEPA Method 8081A;
- Polychlorinated biphenyls (PCBs) using USEPA Method 8082; and
- Asbestos using California Air Resources Board (CARB) Test Method 435.

Additionally, 10 discrete sub-samples were analyzed by McCampbell Analytical for:

- VOCs using USEPA Method 8260B.

### 5.2 ENVIRONMENTAL SCREENING

The analytical concentrations detected during this investigation were compared against their respective environmental screening levels, state and federal hazardous waste screening levels, and for select metals, against their Bay Area naturally occurring background levels.

The analytical concentrations were compared to their most conservative Tier 1 SFBRWQCB Environmental Screening Levels (ESLs) (SFBRWQCB, 2019), as well as when available, for ESLs for protection of residential, commercial/industrial, and construction workers, terrestrial habitats, leaching into groundwater, gross contamination, and odor nuisance levels.

For hazardous waste screening, after receipt of the initial total metal soil sample analytical data, results were compared to their respective CCR Title 22 Total Threshold Limit Concentration (TTLC) and Soluble Threshold Limit Concentration (STLC), if the metal has such values, to characterize whether the soil, once excavated, would be categorized as California-regulated hazardous waste. Results with total metal concentrations that exceed 10 times their respective STLC value required additional analysis using the California Waste Extraction Test (CA-WET) for leachable constituents. Results were also compared to their respective federal Toxicity Characteristic Leaching Procedure (TCLP) value to characterize whether the soil, once excavated, would be categorized as a Resource Conservation and Recovery Act (RCRA) hazardous waste. Results of total metals exceeding 20 times their respective TCLP value required analysis using the TCLP.

For background screening, the metal concentrations were compared against their Bay Area naturally occurring background levels developed by Lawrence Berkeley National Laboratory (LBNL) located in the Berkeley/Oakland Hills of Alameda County, California (Diamond, 2009).

### 5.3 LABORATORY ANALYTICAL RESULTS

The laboratory results of the nine (9) analyzed composite soil samples and 10 discrete samples are summarized in Tables 2 through 7. The tables are broken into separate tables for metals, TPH, OCPs/PCBs, VOCs, SVOCs, and asbestos. The tables are then further separated based on comparison to 1) SFBRWQCB ESLs (SFBRWQCB, 2019), and 2) California and federal waste classification criteria (i.e., TTLC, STLC, and TCLP).

#### 5.3.1 Metals

The soil metals analytical results that were above one or more of their ESLs, above waste screening trigger levels, and/or below background levels are discussed below. These include arsenic, chromium, cobalt, lead, nickel, and vanadium. The soils would not be considered a California-regulated or federal hazardous waste based on metal concentrations tested in the soils. All metal results are presented in Table 2.

#### Arsenic

Arsenic was detected above its Tier 1 ESL of 0.067 milligram/kilogram (mg/kg) in each of the composite samples tested. The reported arsenic concentrations ranged from 3.7 mg/kg in sample

RV-1,2,4,6-0-4 to 12 mg/kg in sample RV-13,14,15,16-0-4. The Tier 1 ESL is based on the protection of residential properties with shallow soil exposure. Additionally, each of the reported arsenic concentrations exceeded the commercial/industrial and construction worker ESLs. However, these reported concentrations of arsenic are below the Bay Area upper estimate background value of 24 mg/kg (Diamond, 2009). In addition, all but one sample reported at 12 mg/kg was below commonly cited arsenic background concentration of 11 mg/kg for urbanized areas of the San Francisco Bay Region (Duverge, 2011). Since the area will be covered with pavement or concrete, there is little risk for residential exposure for future RV residents. For construction worker exposure, mitigation measures can be put forth in a Health and Safety plan to limit contact with soil.

Each of the reported arsenic concentrations are also below its associated STLC and TCLP trigger values for soluble analyses, which are 50 mg/kg and 100 mg/kg respectively. The soil tested would not be considered a California-regulated or federal hazardous waste based on the reported arsenic concentrations.

### Chromium

Chromium was detected above its Tier 1 ESL of 160 mg/kg in one composite sample, RV-15,16-1.5-2.0/15,16-3.5-4.0 at 320 mg/kg. The four composite samples that composed this composite sample were collected between 1.5 and 4.0 feet bgs from the proposed location of the bioswale. The Tier 1 ESL is based protection of both significantly vegetated terrestrial habitats such as parklands or single-family homes with yards and minimally vegetated terrestrial habitats such as high density residential or commercial/industrial properties. There is no total chromium human exposure ESL. Based on proposed RV development being constructed on concrete or paved surfaces, the depth of the samples collected above screening levels would not be exposed to terrestrial habitats, and there is no established soil screening level for residential use, no additional measures are recommended.

The reported chromium concentrations exceeded its STLC trigger value of 50 mg/kg in three of the 4:1 composite samples tested, RV-9,10,11,12-0-4 at 56 mg/kg, RV-13,14,15,16-0-4 at 66 mg/kg, and RV-15,16-1.5-2.0/15,16-3.5-4.0 at 320 mg/kg<sup>1</sup>. Soluble STLC chromium testing using the CCR Title 22 CA-WET was performed on these three samples to assess whether the CA-WET

---

<sup>1</sup> The chromium concentration in RV-14,15,16-4-8 of 120 mg/kg also exceeded its STLC and TCLP screening levels but was not run for these soluble tests.

chromium results would exceed the STLC and warrant characterization of the soil as a California-regulated hazardous waste. CA-WET chromium results did not exceed the STLC limit of 5 mg/L for chromium.

The reported chromium concentrations for composite sample RV-15,16-1.5-2.0/15,16-3.5-4.0 is also above the TCLP trigger value of 100 mg/kg. Soluble chromium testing using TCLP was performed to assess whether the TCLP chromium result of the soil would warrant characterization of the soil as a Federal RCRA hazardous waste. Chromium was not detected above the TCLP reporting limit of 0.10 mg/L or the TCLP screening level of 5 mg/L. The soil tested would not be considered a California-regulated or federal hazardous waste based on the reported chromium concentrations.

### Cobalt

Cobalt was detected above its Tier 1 ESL of 23 mg/kg in one composite sample, RV-15,16-1.5-2.0/15,16-3.5-4.0 at 30 mg/kg. The four composite samples that composed this composite sample were collected between 1.5 and 4.0 feet bgs from the proposed location of the bioswale. The other 8 samples analyzed were the below the Tier 1 ESL and the averages and 95% UCL of all 9 samples are below the Tier 1 ESL. The Tier 1 ESL is based on the protection of direct exposure to human health in residential properties with shallow soil exposure. Additionally, the reported cobalt concentration in composite sample, RV-15-16-1.5-2.0/15, 16-3.5-4.0 slightly exceeded the construction worker ESL of 28 mg/kg for any land use or soil exposure. This reported concentration is below its commercial/industrial ESL of 350 mg/kg. Since the area will be covered with pavement or concrete, there is little risk for residential exposure to future RV residents. For construction worker exposure, mitigation measures can be put forth in a Health and Safety plan to limit contact with soil.

The reported cobalt concentration is below its STLC trigger value of 800 mg/kg. There is no TCLP value established for cobalt. The soil tested would not be considered a California-regulated or federal hazardous waste based on the reported cobalt concentrations.

### Lead

Lead was detected slightly above its Tier 1 ESL of 32 mg/kg in one composite sample, RV-15,16-1.5-2.0/15,16-3.5-4.0 at 35 mg/kg but below the residential ESL of 80 mg/kg, the construction worker ESL of 160 mg/kg, and the Bay Area upper estimate background value for lead of 43

mg/kg (Diamond, 2009). The Tier 1 ESL is based protection of both significantly vegetated terrestrial habitats such as parklands or single-family homes with yards and minimally vegetated terrestrial habitats such as high density residential or commercial/industrial properties.

Since the samples collected above screening levels are below background concentrations and that the depth of the samples collected above screening levels would not be exposed to terrestrial habitats, no additional measures are recommended.

The reported lead concentration in composite sample RV-15,16-1.5-2.0/15 did not exceed the state and federal hazardous waste trigger values of 50 mg/kg and 100 mg/kg respectively, which would require further soluble analysis. The soil tested would not be considered a California-regulated or federal hazardous waste based on the reported lead concentrations.

### Nickel

Nickel was detected above its Tier 1 ESL of 86 mg/kg in three composite samples, RV-13,14,15,16-0-4 at 98 mg/kg, RV-14,15,16-4-8 at 170 mg/kg, RV-15,16-1.5-2.0/15,16-3.5-4.0 at 550 mg/kg. The Tier 1 ESL is based protection of construction workers for any land use or soil exposure. Each of these reported concentrations are below the residential and commercial ESLs for nickel. Based on the exceedance of the construction worker ESL, mitigation measures for the protection of construction workers should be considered, which can be put forth in a Health and Safety plan to limit contact with soil.

The reported concentration of nickel in sample RV-15,16-1.5-2.0/15,16-3.5-4.0 exceeds the STLC trigger value of 200 mg/kg, indicating a need for further analysis. There is no TCLP value established for nickel. Soluble nickel testing using the CCR Title 22 CA-WET was performed on the triggered sample to assess whether the nickel result would exceed the STLC and warrant characterization of the soil as a California-regulated hazardous waste. The CA-WET resulting concentration for nickel of 11 mg/L is below the STLC limit of 20 mg/L. The soil tested would not be considered a California-regulated or federal hazardous waste based on the reported nickel concentrations.

### Vanadium

Vanadium was detected above its Tier 1 ESL of 18 mg/kg in each of the composite samples tested. The reported vanadium concentrations ranged from 44 mg/kg in sample RV-8,7,5,3-0-4

to 69 mg/kg in sample RV-9,10,11,12-0-4. The Tier 1 ESL is based protection of terrestrial habitats, both significantly and minimally vegetated. Each of these reported concentrations are below its residential and construction worker ESLs for vanadium of 390 mg/kg and 470 mg/kg, respectively. These reported concentrations of vanadium are also below the Bay Area upper estimate background value of 90 mg/kg (Diamond, 2009). Given the concentrations of vanadium exceeding the screening levels are below background levels, no additional measures are recommended.

No composite samples tested exceeded the STLC trigger value of 240 mg/kg, which would require additional analysis. There is no TCLP value established for vanadium. The soil would not be considered a California-regulated or federal hazardous waste based on the reported vanadium concentrations.

### 5.3.2 TPH

The soil TPH analytical results were compared to environmental and human health screening levels (Table 3). The comparison indicated reported concentrations of TPH-g, TPH-d, and TPH-mo in the soil samples are below their respective Tier 1 ESLs. There are no hazardous waste criteria for TPH.

### 5.3.3 OCPs

The soil OCP analytical results were compared to environmental and human health screening levels and waste classification criteria (Table 4). As indicated in Table 4, 4,4'-dichlorodiphenyltrichloroethane (4,4'-DDT), dieldrin, and technical chlordane were present at concentrations that exceed their respective Tier 1 ESLs, but were below residential ESLs. None of the soil tested would be considered a California-regulated or federal hazardous waste based on the reported OCP concentrations.

### 5.3.4 PCBs

The PCB analytical results were compared to environmental and human health screening levels and waste classification criteria (Table 4). As indicated in Table 4, Aroclor-1254 and total PCBs were present at concentrations above their respective laboratory reporting limit (RL) in one composite soil sample. Aroclor-1254 and total PCBs were reported to be present in sample RV-8,7,5,3-0-4 at a concentration of 0.096 mg/kg. This concentration is below the established Tier 1,

residential, and commercial/industrial ESLs for total PCBs, and Aroclor-1254 does not have ESLs. Based on PCB concentrations detected in the soil tested, it would not be considered a California-regulated or federal hazardous waste.

### 5.3.5 VOCs

The VOC analytical results were compared to environmental and human health screening levels and waste classification criteria (Table 5). VOCs were not detected above their respective laboratory reporting limits. The reporting limits for VOCs in the soil samples are below their respective Tier 1, residential and commercial ESLs, and would not be classified as a California-regulated or federal hazardous waste.

### 5.3.6 SVOCs

The SVOC analytical results were compared to environmental and human health screening levels and waste classification criteria (Table 6). The comparison indicated reported concentrations of SVOCs detected in the soil are below their respective Tier 1, residential, and commercial/industrial ESLs, and below thresholds for classification as a California-regulated or federal hazardous waste.

### 5.3.7 Asbestos

The asbestos analytical results were compared to environmental and human health screening levels and waste classification criteria (Table 7). As indicated in Table 7, asbestos was detected in one sample above the laboratory reporting limit of 0.25%, RV-15,16-1.5-2.0/15,16-3.5-4.0 at 0.50%. This result was assigned a k15 qualifier, indicating the type of asbestos detected is the most common type, chrysotile. Following these results, two additional 2:1 composite samples consisting of soil from the 1.5 to 2 feet bgs sampling depth and the 3.5 to 4 feet bgs sampling depth at locations RV-15 and RV-16, were analyzed for asbestos content. Asbestos was detected in only one of these samples, RV-15-1.5-2/RV-16-1.5-2 at less than 0.25% with the qualifier of k12, indicating asbestos was present but below the laboratory reporting limit. Asbestos has no established ESLs. In comparison to the CCR Title 22 TTLC for asbestos of 1 percent, reported asbestos concentrations for the locations tested are below the threshold for a California-regulated hazardous waste.

## 6 CONCLUSIONS

---

This report summarizes Kleinfelder's environmental evaluation of findings for the on-Site reuse and/or off-Site reuse or disposal of soil related to the San José RV Park Project. This work was conducted in accordance with the terms of our proposal titled "Proposal for Limited Soil Sampling and Analyses, 1300 Berryessa Road, San José, Santa Clara County, California 95133" dated May 3, 2023.

Based on Kleinfelder's review of the analytical data, the soils analyzed would not be considered a California-regulated or RCRA hazardous waste.

With the exception of the detection of arsenic in all 9 samples and cobalt in one sample out of nine, none of the soil samples tested exceeded residential ESLs. Arsenic is found to be naturally occurring in San Jose well above ESLs and all 9 samples were within naturally occurring background concentrations. The one sample with cobalt that slightly exceeded its residential ESL is within naturally occurring background concentrations in San Jose, and the average concentration of cobalt is below residential ESLs. There were a couple of soil samples with arsenic, cobalt and nickel that exceeded construction worker ESLs. To address the exposure risk for construction workers, mitigation measures to be put in place during construction can be included in a health and safety plan.

If the soil conditions exposed during construction or after proposed development or found to vary from those discussed in this report, Kleinfelder should be notified to evaluate whether our conclusions or recommendations require modification. If impacted soils are encountered during construction, these soils should be segregated and stock-piled separately to allow for further waste disposal characterization testing following a Soil Management Plan (SMP) to be prepared for the proposed development.

## 7 LIMITATIONS

---

This report was prepared in a manner consistent with that level of care and skill ordinarily exercised by other members of Kleinfelder's profession practicing in the same locality, under similar conditions and at the date the services are provided. Our conclusions, opinions, and recommendations are based on a limited number of observations and data. It is possible that conditions could vary between or beyond the data evaluated. Kleinfelder makes no other representation, guarantee, or warranty, express or implied, regarding the services, communication (oral or written), report, opinion, or instrument of service provided.

This report may be used only by the Client and the project designers, and only for the purposes stated for this specific engagement within a reasonable time from its issuance, but in no event later than 2 years from the date of the report. This report was prepared specifically for the Client and its designated representatives and may not be provided to others without Kleinfelder's express written permission.

**APPENDIX A**  
Boring Logs

---

**SAMPLE/SAMPLER TYPE GRAPHICS**

**GROUND WATER GRAPHICS**

- WATER LEVEL (level where first observed)
- WATER LEVEL (level after exploration completion)
- WATER LEVEL (additional levels after exploration)
- OBSERVED SEEPAGE

**NOTES**

- The report and graphics key are an integral part of these logs. All data and interpretations in this log are subject to the explanations and limitations stated in the report.
- Lines separating strata on the logs represent approximate boundaries only. Actual transitions may be gradual or differ from those shown.
- No warranty is provided as to the continuity of soil or rock conditions between individual sample locations.
- Logs represent general soil or rock conditions observed at the point of exploration on the date indicated.
- In general, Unified Soil Classification System designations presented on the logs were based on visual classification in the field and were modified where appropriate based on gradation and index property testing.
- Fine grained soils that plot within the hatched area on the Plasticity Chart, and coarse grained soils with between 5% and 12% passing the No. 200 sieve require dual USCS symbols, i.e., GW-GM, GP-GM, GW-GC, GP-GC, GC-GM, SW-SM, SP-SM, SW-SC, SP-SC, SC-SM.
- If sampler is not able to be driven at least 6 inches then 50/X indicates number of blows required to drive the identified sampler X inches with a 140 pound hammer falling 30 inches.

**ABBREVIATIONS**

- WOH** - Weight of Hammer
- WOR** - Weight of Rod

**GRAIN SIZE**

DESCRIPTION	SIEVE SIZE	GRAIN SIZE	APPROXIMATE SIZE
Boulders	>12 in. (304.8 mm.)	>12 in. (304.8 mm.)	Larger than basketball-sized
Cobbles	3 - 12 in. (76.2 - 304.8 mm.)	3 - 12 in. (76.2 - 304.8 mm.)	Fist-sized to basketball-sized
Gravel	coarse 3/4 - 3 in. (19 - 76.2 mm.)	3/4 - 3 in. (19 - 76.2 mm.)	Thumb-sized to fist-sized
	fine #4 - 3/4 in. (#4 - 19 mm.)	0.19 - 0.75 in. (4.8 - 19 mm.)	Pea-sized to thumb-sized
Sand	coarse #10 - #4	0.079 - 0.19 in. (2 - 4.9 mm.)	Rock salt-sized to pea-sized
	medium #40 - #10	0.017 - 0.079 in. (0.43 - 2 mm.)	Sugar-sized to rock salt-sized
	fine #200 - #40	0.0029 - 0.017 in. (0.07 - 0.43 mm.)	Flour-sized to sugar-sized
Fines	Passing #200	<0.0029 in. (<0.07 mm.)	Flour-sized and smaller

**SECONDARY CONSTITUENT**

Term of Use	AMOUNT	
	Secondary Constituent is Fine Grained	Secondary Constituent is Coarse Grained
Trace	<5%	<15%
With	≥5 to <15%	≥15 to <30%
Modifier	≥15%	≥30%

**MOISTURE CONTENT**

DESCRIPTION	FIELD TEST
Dry	Absence of moisture, dusty, dry to the touch
Moist	Damp but no visible water
Wet	Visible free water, usually soil is below water table

**CEMENTATION**

DESCRIPTION	FIELD TEST
Weakly	Crumbles or breaks with handling or slight finger pressure
Moderately	Crumbles or breaks with considerable finger pressure
Strongly	Will not crumble or break with finger pressure

**CONSISTENCY - FINE-GRAINED SOIL**

CONSISTENCY	SPT - N <sub>60</sub> (# blows / ft)	Pocket Pen (tsf)	UNCONFINED COMPRESSIVE STRENGTH (Q <sub>u</sub> )(psf)	VISUAL / MANUAL CRITERIA
Very Soft	<2	PP < 0.25	<500	Thumb will penetrate more than 1 inch (25 mm). Extrudes between fingers when squeezed.
Soft	2 - 4	0.25 ≤ PP <0.5	500 - 1000	Thumb will penetrate soil about 1 inch (25 mm). Remolded by light finger pressure.
Medium Stiff	4 - 8	0.5 ≤ PP <1	1000 - 2000	Thumb will penetrate soil about 1/4 inch (6 mm). Remolded by strong finger pressure.
Stiff	8 - 15	1 ≤ PP <2	2000 - 4000	Can be imprinted with considerable pressure from thumb.
Very Stiff	15 - 30	2 ≤ PP <4	4000 - 8000	Thumb will not indent soil but readily indented with thumbnail.
Hard	>30	4 ≤ PP	>8000	Thumbnail will not indent soil.

**REACTION WITH HYDROCHLORIC ACID**

DESCRIPTION	FIELD TEST
None	No visible reaction
Weak	Some reaction, with bubbles forming slowly
Strong	Violent reaction, with bubbles forming immediately

**APPARENT / RELATIVE DENSITY - COARSE-GRAINED SOIL**

APPARENT DENSITY	SPT-N <sub>60</sub> (# blows/ft)	MODIFIED CA SAMPLER (# blows/ft)	CALIFORNIA SAMPLER (# blows/ft)	RELATIVE DENSITY (%)
Very Loose	<4	<4	<5	0 - 15
Loose	4 - 10	5 - 12	5 - 15	15 - 35
Medium Dense	10 - 30	12 - 35	15 - 40	35 - 65
Dense	30 - 50	35 - 60	40 - 70	65 - 85
Very Dense	>50	>60	>70	85 - 100

FROM TERZAGHI AND PECK, 1948

**PLASTICITY**

DESCRIPTION	LL	PI
Non-Plastic	NP	NP
Low	< 30	< 15
Medium	30 - 50	15 - 25
High	> 50	> 25

LL is from Casagrande, 1948. PI is from Holtz, 1959.

**STRUCTURE**

DESCRIPTION	CRITERIA
Stratified	Alternating layers of varying material or color with layers at least 1/4-in. thick, note thickness.
Laminated	Alternating layers of varying material or color with the layer less than 1/4-in. thick, note thickness.
Fissured	Breaks along definite planes of fracture with little resistance to fracturing.
Slickensided	Fracture planes appear polished or glossy, sometimes striated.
Blocky	Cohesive soil that can be broken down into small angular lumps which resist further breakdown.
Lensed	Inclusion of small pockets of different soils, such as small lenses of sand scattered through a mass of clay; note thickness.

**ANGULARITY**

DESCRIPTION	CRITERIA
Angular	Particles have sharp edges and relatively plane sides with unpolished surfaces.
Subangular	Particles are similar to angular description but have rounded edges.
Subrounded	Particles have nearly plane sides but have well-rounded corners and edges.
Rounded	Particles have smoothly curved sides and no edges.

 San Jose, CA

**Date Begin - End:** 6/22/2023  
**Logged By:** Z. Jaco, PG  
**Hor.-Vert. Datum:**  
**Plunge:** -90 degrees  
**Weather:** Cloudy/Sunny Hi-75

**Drilling Company:** Kleinfelder  
**Drill Crew:** Z. Jaco, C. Conti  
**Drilling Equipment:** Hand Auger  
**Drilling Method:** See Drilling Method Column  
**Auger Diameter:** 4 in. O.D.

**HAND EXPLORATION LOG RV-16**

FIELD EXPLORATION						
Depth (feet)	Drilling Method	Sample Type	Sample Number	Recovery (NR=No Recovery)	PID / FID (ppmv)	Graphical Log
Surface Condition: Aggregate Base Coarse						
Lithologic Description						
1			RV-16-0-4  RV-16-4-8		0.040  0.048	
2	Manual		RV-16-1.5-2.0		0.024	
3						
4			RV-16-3.5-4.0		0.041	

The exploration was terminated at approximately 4 ft. below ground surface.

**GROUNDWATER LEVEL INFORMATION:**  
 Groundwater was not observed during drilling or after completion.  
**GENERAL NOTES:**  
 The hand exploration was backfilled with soil cuttings.

PROJECT NO.:  
24000669.001A

"When Quality Counts"

## Analytical Report

**WorkOrder:** 2306K08 **Amended:** 07/19/2023

**Revision:** 2

**Report Created for:** Kleinfelder, Inc.

1512 Franklin St, Ste. 100  
Oakland, CA 94612

**Project Contact:** Bob Horwath

**Project P.O.:** 24000669.001A

**Project:** 24000669.001A; 1300 Berryessa

**Project Received:** 06/23/2023

Analytical Report reviewed & approved for release on 07/06/2023 by:

Yen Cao

Project Manager

*The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in a case narrative.*

## Revision History

**Client:** Kleinfelder, Inc.  
**Project:** 24000669.001A; 1300 Berryessa

**WorkOrder:** 2306K08

<u>Date</u>	<u>Revision</u>	<u>Reason</u>
07/06/2023	1	Included a detection summary
07/19/2023	2	Combined into one report

## Glossary of Terms & Qualifier Definitions

**Client:** Kleinfelder, Inc.

**WorkOrder:** 2306K08

**Project:** 24000669.001A; 1300 Berryessa

### Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit <sup>1</sup>
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit <sup>2</sup>
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure

<sup>1</sup> MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016. Values are based upon our default extraction volume/amount and are subject to change.

<sup>2</sup> RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.) Values are based upon our default extraction volume/amount and are subject to change.

## Glossary of Terms & Qualifier Definitions

**Client:** Kleinfelder, Inc.

**WorkOrder:** 2306K08

**Project:** 24000669.001A; 1300 Berryessa

TEQ Toxicity Equivalents  
TZA TimeZone Net Adjustment for sample collected outside of MAI's UTC.  
WET (STLC) Waste Extraction Test (Soluble Threshold Limit Concentration)

### Analytical Qualifiers

A The reported value is determined using a "single point" calibration by GC-ECD as allowed by the method.  
J Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.  
P Agreement between the quantitative dual-column confirmation results exceed method recommended limits of 40% RPD. The lowest concentration is reported.  
S Surrogate recovery outside accepted recovery limits.  
a2 Sample diluted due to cluttered chromatogram.  
a3 Sample diluted due to high organic content interfering with quantitative/or qualitative analysis.  
a4 Reporting limits raised due to the sample's matrix prohibiting a full volume extraction.  
a9 Reporting limit near, but not identical to, our standard reporting limit due to variable Encore, Terracore, or Solid sample weight.  
c1 Surrogate recovery outside of the control limits due to the dilution of the sample.  
d7 Strongly aged gasoline or diesel range compounds are significant in the TPH(g) chromatogram.  
e2 Diesel range compounds are detected; no recognizable pattern.  
e7 Oil range compounds are detected.  
h7 Copper (EPA 3660B) cleanup.  
k10 CARB 435 Exception 1 - No asbestos detected. The limit of quantitation (LOQ) = 0.25%.  
k15 Chrysotile.

### Quality Control Qualifiers

F1 MS/MSD recovery and/or RPD is out of acceptance criteria; LCS validates the prep batch.  
F2 LCS/LCSD recovery and/or RPD/RSD is out of acceptance criteria.  
F3 The surrogate standard recovery and/or RPD is outside of acceptance limits.  
F5 LCS/LCSD recovery is outside of acceptance limits; however, the data is acceptable based upon the TNI allowable marginal exceedances.

**NOTES:** \* STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U\*\* = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.

NOTES: \* STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U\*\* = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate \$250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.						Comments / Instructions
Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate \$250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

\* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

### Sample Receipt Checklist

Client Name: Kleinfelder, Inc.  
Project: 24000669.001A; 1300 Berryessa  
WorkOrder No: 2306K08 Matrix: Soil  
Carrier: Antonio Mason (MAI Courier)

Date and Time Received: 6/23/2023 14:25  
Date Logged: 6/23/2023  
Received by: Valerie Alfaro  
Logged by: Valerie Alfaro

#### Chain of Custody (COC) Information

- Chain of custody present? Yes  No
- Chain of custody signed when relinquished and received? Yes  No
- Chain of custody agrees with sample labels? Yes  No
- Sample IDs noted by Client on COC? Yes  No
- Date and Time of collection noted by Client on COC? Yes  No
- Sampler's name noted on COC? Yes  No
- COC agrees with Quote? Yes  No  NA

#### Sample Receipt Information

- Custody seals intact on shipping container/cooler? Yes  No  NA
- Custody seals intact on sample bottles? Yes  No  NA
- Shipping container/cooler in good condition? Yes  No
- Samples in proper containers/bottles? Yes  No
- Sample containers intact? Yes  No
- Sufficient sample volume for indicated test? Yes  No

#### Sample Preservation and Hold Time (HT) Information

- All samples received within holding time? Yes  No  NA
- Samples Received on Ice? Yes  No

(Ice Type: WET ICE )

- Sample/Temp Blank temperature Temp: 4.1°C NA
- ZHS conditional analyses: VOA meets zero headspace requirement (VOCs, TPHg/BTEX, RSK)? Yes  No  NA
- Sample labels checked for correct preservation? Yes  No
- pH acceptable upon receipt (Metal: <2; Nitrate 353.2/4500NO3: <2; 522: <4; 218.7: >8)? Yes  No  NA

#### UCMR Samples:

- pH tested and acceptable upon receipt (200.7: ≤2; 533: 6 - 8; 537.1: 6 - 8)? Yes  No  NA
- Free Chlorine tested and acceptable upon receipt (<0.1mg/L) [not applicable to 200.7]? Yes  No  NA
