**SUMMARY**

7 Acres of Land  
1300 Berryessa Road  
San Jose, Santa Clara County, CA

Terreno Realty Corporation engaged CODA Consulting Group (CODA) to perform a Phase I Environmental Site Assessment (ESA) and Additional Services of the property located at 1300 Berryessa Road in San Jose, Santa Clara County, CA (subject property). The subject property is an irregular-shaped parcel of land totaling approximately 7.19 acres. The land was developed with a concrete recycling facility and included two small sheds used as an office and breakroom, truck scales, a domestic water well, concrete areas used for material (sand and gravel) storage, an undeveloped riparian area and concrete and dirt driveways. The property was developed for the current use in 2002. The subject property was located in an area characterized by commercial and industrial properties. Prior to current uses, the subject property was developed with a cattle feed lot, meat plant and slaughterhouse back to at least 1939.

Based on the information obtained to date, CODA's conclusions and recommendations are as follows:

- The results of CODA's subject property and area reconnaissance did not indicate *recognized environmental conditions* or *controlled recognized environmental conditions* associated with current subject property or surrounding land use. Review of historical and regulatory agency information did not indicate on-site or off-site sources of *recognized environmental conditions* or *controlled recognized environmental conditions* associated with current or historical subject property or surrounding land use.
- The property previously contained three underground storage tanks (USTs) that were removed on August 10, 1989, under permit No. C 44598. Harris Feeding Co., under the former property address, was identified as a Leaking Underground Storage Tank (LUST) Cleanup Site. The information and reports obtained from the State Water Resources Control Board (SWRCB) GeoTracker website indicates this release occurred on the subject property. After excavation, investigation, and groundwater sampling activities were completed, the Santa Clara Valley Water District (SCVWD) and Regional Water Quality Control Board (RWQCB) provided case closure letters on August 19, 1991, and September 4, 1991, respectively. Both agencies agreed that no further investigation or cleanup of hydrocarbon contamination related to the former tanks was necessary. Based on past subsurface investigations conducted by other consultants, it appears former USTs and past historical industrial uses at the subject property have not significantly impacted the subject property's subsurface. CODA considers the former USTs and any residual hydrocarbons in subsurface soils as a *historical recognized environmental condition*. No further investigation is recommended.
- CODA conducted additional services in accordance with the proposed scope of work, including the assessment of those enumerated in Section 10.0.

## **ASTM Issues**

CODA has performed a Phase I ESA of 7 Acres of Land located at 1300 Berryessa Road in San Jose, Santa Clara County, CA in general conformance with the scope and limitations of ASTM Practice E1527-13. Exceptions to, or deletions from, this practice are described in Section 9.0 of this report.

- CODA did not identify *recognized environmental conditions, controlled recognized environmental conditions* or *de minimis conditions* associated with the subject property.

## **Non-ASTM Issues**

In accordance with the proposed scope of work, CODA conducted additional services as discussed in Section 10.0 of this report. Based on CODA's understanding of the Client's objectives, risk tolerance, and future plans for the subject property, this assessment/review did not identify *business environmental risks* associated with the additional services performed.

CODA notes that the EPA has no existing bans on most asbestos-containing material (ACM) or uses, and the EPA does not track the manufacture, processing, or distribution in commerce of ACM. The two small buildings were constructed in 2002 and suspect ACM identified at the subject property was limited to wall and ceiling systems (including wallboard, joint compound and texture). The suspect ACM was observed by CODA to be in good condition and non-friable.

Based on the good condition and age of the suspect ACM identified, asbestos is not considered to be a *business environmental risk* to the subject property. However, the asbestos survey was not comprehensive and should not be relied upon in preparation of renovation or demolition projects. Prior to demolition/renovation activities or other activities that could potentially disturb suspect ACM, additional sampling and analysis of the materials using protocols specified in AHERA (40 CFR 763) should be performed. Alternatively, the material can be assumed to contain asbestos and treated accordingly. Future activities that involve the disturbance or removal of confirmed or suspect ACM are required to be conducted in accordance with NESHAP and other applicable local, state, and federal regulations.

This summary is for convenience only and should not be relied upon without first reading the full contents of this report, including appendix materials.

## **1.0 INTRODUCTION**

### **1.1 PURPOSE**

The purpose of this Phase I Environmental Site Assessment (ESA) was to identify *recognized environmental conditions* in connection with the subject property. As defined by ASTM E1527-13, "The term *recognized environmental conditions* means the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (1) due to any *release* to the *environment*; (2) under conditions indicative of a *release* to the *environment*; or (3) under conditions that pose a *material threat* of a future *release* to the *environment*. *De minimis conditions* are not *recognized environmental conditions*."

The term *controlled recognized environmental condition* as defined by ASTM is a “*recognized environmental condition* resulting from a past release of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property use restrictions, activity and use limitations, institutional controls, or engineering controls*).”

The term *historical recognized environmental condition* as defined by ASTM is “a past release of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls (for example, *property use restrictions, activity and use limitations, institutional controls, or engineering controls*).

The term suspect *recognized environmental condition* as used throughout this report is cited from Section 12.5 of ASTM E1527-13. CODA uses this term for conditions that have a potential to be a *de minimis condition, a recognized environmental condition, a controlled recognized environmental condition, or a historical recognized environmental condition* for the subject property and requires further discussion as presented within the text of this report. Section 7.0 summarizes each of the known or suspect *recognized environmental conditions* associated with the subject property. In Section 7.0, CODA presents its opinion of the potential impact a known or suspect *recognized environmental condition* has on the subject property and whether or not the suspect *recognized environmental condition* is currently a *de minimis condition, a recognized environmental condition, a controlled recognized environmental condition, or a historical recognized environmental condition*, based on site-specific characteristics.

ASTM E1527-13 states that an ESA “meeting or exceeding” this practice and completed less than 180 days prior to the date of acquisition of the *property* or (for transactions not involving an acquisition) the date of the intended transaction, is presumed to be valid if the report is being relied on by the User for whom the assessment was originally prepared. The components of the practice to be completed within 180 days include: interviews, searches for recorded environmental cleanup liens, the regulatory review, site visit and the declaration by the environmental professional responsible for the assessment. The ASTM E1527-13 practice also states that within this 180 day period, if the assessment will be used by a different user than the user for whom the assessment was originally prepared, the subsequent user must also satisfy the User’s Responsibilities.

## 1.2 DETAILED SCOPE-OF-SERVICES

The scope of services was performed in general conformance with the ASTM E1527-13 document *Standard Practice for Environmental Site Assessment: Phase I Environmental Site Assessment Process*<sup>1</sup> and Client-specified requirements (see Section 1.5).

The Phase I ESA consisted of a historical review of the subject property and area use, regulatory database review, assessment of the physical setting, subject property and area

<sup>1</sup> ASTM E1527-13 is incorporated by reference; CODA can assist the Client with obtaining a copy of this standard on request.

reconnaissance, and a report of CODA's findings, opinions, conclusions, and recommendations. Data gaps or deviations from this standard, if applicable, are described in Section 9.0.

### **Subject Property and Area Use**

Using selected sources of reasonably ascertainable public information, CODA reviewed the current and historical uses of the subject property. The Phase I ESA historical review extends back until 1940 or, for uses prior to that date, back to the time the subject property was undeveloped. Sources of historical use information relating to the subject property and its adjoining properties were acquired and reviewed according to the reasonable availability of the information, the time limits provided for data acquisition and review, as permitted, by the project schedule and cost, and CODA's judgment of the likely value of the information for indicating environmental conditions. Historical sources reviewed by CODA are listed in Section 11.0 and typically include local city directories, aerial photographs, and a topographic map. If available through the database provider, the historical sources reviewed also included Fire Insurance Maps.

### **Regulatory Status Review**

CODA reviewed a report of select regulatory databases published for the local area to identify facilities potentially constituting a suspect *recognized environmental condition* in regard to the subject property. CODA reviewed the databases to identify recorded facilities located on, or in proximity to, the subject property using the ASTM E1527-13 standard environmental record sources and recommended approximate minimum search distances.

CODA attempted to obtain additional information regarding listed facilities that, in our professional judgment, may constitute *recognized environmental conditions* in connection with the subject property. In addition, local agencies were contacted regarding recorded information, incidents, or activities of environmental concern relating to the subject property and its immediate environs.

### **Subject Property Physical Setting**

CODA obtained and reviewed reasonably ascertainable published subject property information to characterize the physical setting of the subject property. Sources reviewed are listed in Section 11.0 of this report. If reasonably ascertainable, CODA reviewed the current *USGS 7.5 Minute Topographic Map* showing the area on which the subject property is located. CODA reviewed one or more physical setting sources at the discretion of the environmental professional to obtain information about the geologic, hydrogeologic, hydrologic, or topographic characteristics of the subject property. Discretionary physical setting sources may have been sought if (1) conditions had been identified in which hazardous substances or petroleum products in any form including vapor, are likely to be present on-site or to migrate to the subject property from off-site sources and (2) more information is generally obtained, pursuant to local good commercial or customary practice.

### **Subject Property and Area Reconnaissance**

The subject property reconnaissance consisted of field observations of the subject property and adjoining land areas by CODA personnel experienced in environmental site assessments.

CODA observed and documented current uses of the subject property and indicators of hazardous substances, petroleum products, storage tanks, odors, pools of liquid, drums, containers, polychlorinated biphenyls (PCBs), heating and cooling systems, stains, corrosion, drains and sumps, pits, ponds, lagoons, stressed vegetation, wastes, wells, and septic systems. The area reconnaissance was performed on foot within areas that were reasonably accessible and at CODA's discretion by automobile along publicly accessible roads.

### **Additional Services**

As requested by the Client, CODA conducted certain specified additional services in an attempt to identify *business environmental risk* associated with the subject property. As defined by ASTM E1527-13, the term *business environmental risk* is a potential risk which can have a material environmental or environmentally-driven financial impact that could affect the current or planned use of the subject property. These conditions are not necessarily limited to those environmental issues required to be assessed under ASTM E1527-13. Rather, consideration of *business environmental risk* typically is associated with one or more Client-specified, non-ASTM scope assessment activities such as described in Section 10.0 of this report.

### **Report**

CODA has prepared this report, which includes the findings concerning known or suspect *recognized environmental conditions* and an opinion as to the potential impact those conditions would have on the subject property. CODA's services also included assessment of conditions that may constitute potential *business environmental risks* at the time of the Phase I ESA. Finally, this report concludes whether or not the assessment revealed *recognized environmental conditions*, *controlled recognized environmental conditions*, *historical recognized environmental conditions*, *de minimis conditions*, and *business environmental risks*, and provides recommendations, if appropriate.

### **1.3 SIGNIFICANT ASSUMPTIONS**

Information obtained from the Client, the Client's representative, individuals interviewed, and prior environmental reports were considered to be accurate unless CODA's reasonable inquiries clearly revealed otherwise.

Conditions observed were considered to be representative of areas that were not observed unless otherwise indicated.

The primary direction of groundwater flow was assumed to be dictated by topography, unless otherwise indicated by measurement of potentiometric surface or other quantifiable data. Additionally, the groundwater flow direction was assumed to control the distribution of impact, if present.

### **1.4 LIMITATIONS AND EXCEPTIONS**

The findings and opinions presented are relative to the dates the work was conducted and should not be relied on to represent conditions at later dates. The opinions included herein are based on information obtained during the assessment and CODA's experience. If additional information becomes available that may impact CODA's environmental assessment findings,

CODA requests the opportunity to review the information, reassess the potential concerns, and modify CODA's opinions, if warranted.

This assessment included visual observations to identify obvious features or conditions indicative of *recognized environmental conditions*.

Although this assessment has attempted to identify *recognized environmental conditions*, CODA cannot eliminate all uncertainty as to *recognized environmental conditions* in connection with the subject property nor represent or warrant that the subject property contains no hazardous substances or petroleum products or other latent conditions beyond those identified through the scope of work identified herein. Other features, conditions, and constituents may have escaped detection due to: (1) the limited scope of this assessment, (2) the inaccuracy of public records, (3) the presence of undetected or unreported environmental incidents, (4) inaccessible areas, and/or (5) deliberate concealment of detrimental information.

Although this assessment has attempted to identify *business environmental risks*, potential *business environmental risks* may have escaped detection due to: (1) the limited scope of this assessment, (2) the inaccuracy of public records, (3) the presence of undetected or unreported environmental incidents, (4) inaccessible areas, (5) deliberate concealment of detrimental information, and/or (6) the subjective nature of materiality to the User with respect to *business environmental risks*.

CODA's professional services have been performed using that degree of care and skill ordinarily exercised, under similar conditions, by reputable environmental consultants undertaking similar studies and practicing in this locality during the same timeframe. No other warranty, expressed or implied, is intended or made with respect to this report or CODA's services. This assessment was not exhaustive, and Users of this report should consider the scope and limitations related to these services when developing opinions as to risks associated with the subject property.

This report presents an assessment of the subject property as defined by information provided by the Client, Client's representative, or Key Site Manager. CODA's findings, opinions, conclusions, and recommendations are based on the locations and boundaries of the subject property as evident in the field and on maps or plats provided by the Client, Client's representative, or Key Site Manager.

The discussion in Section 2.1 defines the subject property as understood by CODA and unique conditions related thereto.

### 1.5 SPECIAL TERMS AND CONDITIONS

The work was conducted in general conformance with CODA's proposal P21-4155, dated April 28, 2021, and the terms and conditions established therein. The User is defined as the party seeking to use ASTM E1527-13 to complete an ESA of the property. The User of this Phase I ESA is CODA's Client, Terreno Realty Corporation.

## 1.6 USER RELIANCE

This report represents CODA's services as of the date hereof. As CODA's final document, it may not be altered after final issuance. This assessment and report were prepared on behalf of and for the exclusive use of Terreno Realty Corporation solely for its use and reliance, subject to the terms and conditions agreed upon between CODA and Terreno Realty Corporation. The Client and CODA were solely involved in shaping the scope of services. Accordingly, reliance on this report by any other party may involve assumptions leading to an unintended interpretation of findings and opinions. As such, reliance by other parties on the contents of this document is not granted, and any such reliance shall be at the sole risk of the User. With the consent of CODA and the Client and for a fee, CODA may offer reliance to third parties or contract with other parties to develop findings and opinions related to such party's specific risk management objectives. Except as otherwise agreed in writing, any and all third party reliance upon this Phase I ESA shall be subject to the terms in CODA's standard Terms and Conditions; the \$50,000 liability limitation listed in CODA's standard Terms and Conditions (available upon request) constitutes CODA's aggregate liability to any and all relying third parties for any and all claims.

## 2.0 SUBJECT PROPERTY DESCRIPTION

### 2.1 LOCATION AND LEGAL DESCRIPTION

The subject property is located at 1300 Berryessa Road in San Jose, Santa Clara County, CA. Figures depicting the subject property are located in Appendix A of this report. A summary of the legal description obtained from a preliminary title report, dated July 31, 2000, is as follows:

- A portion of that certain tract of land conveyed to Adrien Lassere, et al, by Deed recorded January 17, 1924, in Book 64 of Official Records, page 285.

The parcel identification number is 25413090. Terreno Realty Corporation provided a site plan indicating the site boundaries.

### 2.2 SUBJECT PROPERTY AND VICINITY GENERAL CHARACTERISTICS

The subject property and area reconnaissance, performed on September 30, 2021, consisted of visual observations made during a foot and vehicular tour of the subject property and adjoining land area. The subject property was an irregular-shaped property consisting of one parcel of land totaling 7.19 acres. The subject property was generally flat and was observed as developed with a concrete recycling facility and included two small sheds used as an office and breakroom, truck scales, a domestic water well, concrete areas used for material (sand and gravel) storage, an undeveloped riparian area and concrete and dirt driveways.

The surrounding areas were generally sloped toward the north. The surrounding areas were developed with commercial and industrial properties.

### 2.3 CURRENT USE OF THE PROPERTY

The subject property was developed with a concrete recycling facility. No industrial activities that would impact the site's subsurface were observed.

### 2.4 DESCRIPTIONS OF STRUCTURES, ROADS, OTHER IMPROVEMENTS ON THE SUBJECT PROPERTY

There is a portable trailer at the truck scale and a metal container with windows and a through-wall air conditioner that serves as a breakroom for employees adjacent to the trailer. Drive lanes are primarily paved with asphalt pavement and stockpile and material crushing areas are concrete pavement.

The subject property sanitary sewage is discharged to the municipal sewage system operated by the City of San Jose. A representative of the City of San Jose Planning Department reported that their records indicate the subject property address was connected to the City sewer system in 1975. The potable water supply source is from an on-site water well, although City water is accessible along Berryessa Road. A more detailed description of the subject property is included in CODA's Report of Property Condition Assessment (submitted under separate cover).

### 2.5 CURRENT USES OF THE ADJOINING PROPERTIES

Observed current uses of adjoining properties are discussed as follows according to their respective geographic relationship to the subject property.

#### **West and Northwest**

The subject property is bordered to the northwest by an abandoned rail spur and an entrance road to Bay Area Scavenger & Recycling and Berryessa Road followed by (from north to south) an undeveloped area and Coyote Creek, Graniterock (11711 Berryessa Road) and Schnitzer Steel (11665 Berryessa Road). The 11711 Berryessa Road and 11665 Berryessa Road addresses were identified on regulatory databases and are discussed in detail in Section 4.1.

#### **North**

The subject property is bordered to the north by an entrance road to Bay Area Scavenger & Recycling (11740 Berryessa Road) followed by Coyote Creek.

#### **Southeast**

The subject property is bordered to the southeast (from north to south) by Bay Area Scavenger & recycling (11740 Berryessa Road), Gonzalez Pallets, Inc. (1261 Yard Court) and California Waste Solutions (1005 Timothy Drive). All three addresses were identified on regulatory databases and are discussed in detail in Section 4.1.

#### **Southwest**

The subject property is bordered to the southwest (from east to west) by Elcon Precision, LLC (1009 Timothy Drive), California Waste Solutions (1120 Berryessa Road) and an abandoned railroad spur. The 1009 Timothy Drive and 1120 Berryessa Road addresses were identified on regulatory databases and are discussed in detail in Section 4.1.

Suspect *recognized environmental conditions* were not identified in association with current, adjoining property uses.

### 3.0 USER-PROVIDED INFORMATION

ASTM E1527-13 requires that the environmental professional request from the User of the Phase I ESA, the Client, certain information (discussed below) concerning the subject property that will help identify the possibility of *recognized environmental conditions* in connection with the subject property or to request from the User the names of other individuals who can provide this information.

ASTM E1527-13 assigns to the Client or its representative the responsibility to provide the environmental professional with information pertaining to environmental liens or AULs<sup>2</sup> (including institutional controls, physical or engineered controls, land use restrictions, restrictive covenants, easements, etc.) applicable to the subject property, whether recorded or not. ASTM E1527-13 states that the User can engage a title company or title professional as an addition to the scope of work to be performed by the environmental professional. ASTM E1527-13 and the supporting regulation<sup>3</sup> state that the search for environmental liens/AULs by the User may be a significant component in the Environmental Protection Agency's (EPA's) determination of whether a property owner has satisfied the requirements for landowner liability protection against the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA) liability.

Depending on available information and specific site conditions, CODA may conclude that the failure of the User to provide environmental lien/AUL search documentation does not present a significant Data Gap and therefore, can declare that CODA has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. However, failure of the User to provide the information or to engage the environmental consultant or others to obtain and consider that information may separately weaken a defense to CERCLA liability.

If the Client or its representative is aware of specialized knowledge or experience that is material to the identification of *recognized environmental conditions*, or if it has actual knowledge that the purchase price of the subject property is significantly less than the purchase price of comparable properties, ASTM E1527-13 assigns to the Client the obligation to communicate that information to the environmental professional prior to the subject property reconnaissance. ASTM E1527-13 requires that an explanation of a significant decrease in purchase price be provided in writing.

ASTM E1527-13 assigns to the Client or its representative the responsibility to inform the environmental professional of the reason it wants the Phase I ESA performed and to provide commonly known, reasonably available information about the subject property that is material to *recognized environmental conditions*. Absent information to the contrary, the purpose for assessment is assumed to be in preparation for a *commercial real estate transaction*.

---

<sup>2</sup> See ASTM E2091 for additional information about *activity and use limitations* (AULs), their use and function, and standard means to check for existence and evaluate compliance with these controls. CODA can assist the Client with obtaining a copy on request.

<sup>3</sup> 40 CFR 312 Standards and Practices for All Appropriate Inquiries.

As part of CODA's engagement to conduct this work, this information was requested from Client or its representative. In addition, CODA has requested from Client or its representative helpful documents such as those specified in Section 10.8 of ASTM E1527-13 and as provided in Appendix G. Finally, CODA inquired whether Client or its representative was aware of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the subject property; or (3) any notices from governmental entities regarding possible violations of environmental laws or possible liabilities relating to hazardous substances or petroleum products.

Information provided by others is discussed in Section 6.0. Information and excerpts from reports provided by Client, its representative, or others are included in Appendix G of this report and are listed in Section 11.0.

### 3.1 TITLE RECORDS

CODA was not engaged by Client to secure a title report as part of the Services. CODA was not provided with title records by the client.

### 3.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS (AULs)

No information regarding environmental liens, AULs, or governmental notification relating to past or recurrent violations of environmental laws with respect to the subject property was reported to CODA by Client or its representative.

### 3.3 SPECIALIZED KNOWLEDGE

No specialized environmental knowledge or experience concerning the subject property was reported to CODA by Client or its representative. The User Questionnaire was returned to CODA by the Client.

### 3.4 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

No information indicating that the purchase price of the subject property was significantly less than the purchase price of comparable properties was reported to CODA by Client or its representative.

### 3.5 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

No commonly known or reasonably ascertainable information about the subject property within the local community that was material to *recognized environmental conditions* in connection with the subject property was reported to CODA by Client or its representative.

### 3.6 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

The owner is SRDC, Inc. The Client requested that CODA contact Mr. Roy Ferrari, the property owner and representative with SRDC, Inc. (SRDC), to obtain information and access to the subject property. CODA met Mr. Marten Mercado, facility Foreman, but conducted a self-guided tour of the subject property. Mr. Ferrari has been associated with the property since SRDC

purchased the property in 2000 and indicated that he had good knowledge of the uses and physical characteristics of the subject property and was therefore; considered the Key Site Manager. Information obtained from interviews with the Key Site Manager and others is presented in relevant sections of this report.

Site occupants were tenant employees.

### 3.7 REASON FOR PERFORMING PHASE I

CODA understands this assessment was required prior to the proposed acquisition of an interest in the subject property. CODA understands that the purpose of this assessment was to complete an evaluation that meets the applicable standard of “all appropriate inquiry into the previous ownership and uses of the subject property consistent with good commercial or customary practice” with the objective of assembling documentation that may help to support one of the threshold criteria for satisfying one or more defenses to CERCLA liability (LLPs<sup>4</sup>) and to assist Client in understanding potential environmental conditions that could materially impact the operation of the business associated with the subject property (*business environmental risk*).

### 3.8 OTHER

Other information that was provided is discussed throughout this report in applicable sections.

## 4.0 RECORDS REVIEW

### 4.1 STANDARD ENVIRONMENTAL RECORD SOURCES

CODA reviewed selected federal and state regulatory lists in an attempt to identify recorded information concerning environmental impacts or conditions or concerns associated with the subject property. CODA reviewed the regulatory lists included in the following table as obtained from Environmental Data Resources (EDR). Pertinent sections of the database report are attached as Appendix D, including a listing of the databases, an explanation of each database, and figures depicting the approximate locations of regulated facilities in the near vicinity of the subject property.

Regulatory listings are limited and include only those facilities or incidents that are known to the regulatory agencies at the time of publication to be contaminated, in the process of evaluation for potential contamination, or to store/generate potentially hazardous substances, waste, or petroleum.

#### **Federal, State, and Tribal Lists**

The following table includes the approximate minimum search distances and a list of the databases reviewed. These databases were selected based on minimum requirements of ASTM E1527-13 and several additional databases that CODA believes are important. CODA reviewed the regulatory information provided in the database report to identify listed facilities located within the above approximate minimum search distances. Descriptions of the environmental databases with facilities identified in the respective search radius are presented below followed by a detailed description of regulatory agency file review information and site status.

### Subject Property

The subject property address of 1300 Berryessa Road was not listed in any regulatory databases. The property address of 11740 Berryessa Road, which until the early 2000s included the subject property, under the name Bay Area Scavenger & Recycling is listed in the CA CERS<sup>5</sup> database. The Bay Area Scavenger & Recycling property is located adjacent to the northeast and is discussed in detail below.

CODA searched the CalEPA<sup>6</sup>, Site Portal for the current and former subject property addresses. No information was identified for the current subject property address. However, under the former address, the current property owner (SRDC) was listed under the U.S. EPA Air Emission Inventory System (EIS). SRDC is listed as having a CA NPDES<sup>7</sup> permit (CAZ184292) for industrial stormwater. The information indicates the permit has been in violation since July 1, 2020, for "failure to submit required report (non-DMR)," violation ID 3652159584. The permit appears to be related to the on-site designated riparian area located at the northern portion of the subject property, referred to as Upper Penitencia Creek – Coyote Creek watershed.

CODA also reviewed the California State Water Resources Control Board's (CSWRCB) GeoTracker online database (GeoTracker). Harris Feeding Co., under the former address was identified as a LUST site. The information and reports obtained from the GeoTracker website indicates this release occurred on the subject property. Included in the information is a *Harris Ranch Feeding Company, Tank Removal Report, 11740 Berryessa Road – San Jose, CA*, prepared by Environmental Health Consultants, Inc. (EHC), dated December 1990. The report was prepared for the Santa Clara Valley Water District (SCVWD). The report indicated the property was used as a slaughterhouse until 1981, and then converted to a self-storage facility. The facility had one 1,000-gallon and two 7,500-gallon diesel USTs. The tanks had not been

<sup>7</sup> NPDES – National Pollution Discharge Elimination System.

used since 1981 and as a result of a 1988 fire inspection, Harris Ranch was ordered to either reactivate or remove the three tanks. The three tanks were leak tested in October and December 1988 and found to be liquid tight. The three tanks were removed on August 10, 1989, under permit No. C 44598, under the supervision of a fire inspector. Five confirmation soil samples were collected from the tank pit at the time of removal operations. All five samples were collected in backfill material, as opposed to native soils. The soil analytical results indicated that TPH-d<sup>8</sup> results ranged from less than 10 parts per million (ppm) to 11,000 ppm, TPH-g<sup>9</sup> results ranged from less than 0.5 ppm to 58 ppm, and benzene, toluene, ethylbenzene and total xylenes (BTEX) levels ranged from less than 0.05 ppm to 1.2 ppm.

On October 16, 1989, the tank pit was over-excavated in an attempt to remove soil impacts. Additional confirmation soil sampling (eight soil samples total) identified ND levels of TPH-d, TPH-g and low levels of BTEX (ND to 4.4 ppm). One water grab sample was collected from the tank excavation which had 0.052 ppb of TPH-g and BTEX levels ranged from ND to 1.8 ppb.

A trench was dug in the bottom the excavation and allowed to fill with groundwater three times and pumped out, then allowed to stabilize and two additional groundwater samples were collected on March 8, 1990, and March 29, 1990, respectively. The first water grab sample contained 66 ppb for extractable TPH as oil and non-detect (ND) for BTEX (TPH-g was not analyzed). The second water sample was ND for BTEX, TPH-g and extractable TPH. The excavation was backfilled on March 29, 1990. A letter from the SCVWD to Harris Feeding Co., dated March 14, 1991, requested further investigation to determine the lateral and vertical extent of the of soil impacts and to determine if groundwater contamination had resulted from the tank leak. The letter stated that at least one groundwater monitoring well should be installed in the downgradient direction and within 10 feet of the former USTs. The information also contained a *Preliminary Site Assessment, Harris Ranch Company Site*, prepared by Parametrix, Inc. (Parametrix), dated July 1991 indicated the former USTs were located behind (east) of the former main building, located east of Berryessa Road, near the center of the property. The subsurface investigation included drilling three soil borings south (MW-1), east (MW-2) and north (MW-1) of the former tank area. The three borings were converted into temporary groundwater monitoring wells. One soil sample was collected from MW-1 and two soil samples were collected from MW-2 and MW-3 each, for a total of five soil samples. Water samples were collected from each completed well. All samples were analyzed for TPH and BTEX. None of the soil samples had detectable concentrations of benzene, ethylbenzene or xylenes. Toluene was detected in each soil sample (except for sample MW-2, 6.5 feet) with concentrations ranging from 5.4 ppb (MW-3, 6 feet) to 21 ppb (MW-2, 10 feet). No TPH or BTEX was detected in any of the three groundwater samples. Groundwater was determined to flow toward the north to northwest.

Upon reviewing the results of the subsurface investigation, the SCVWD submitted a *Case Closure Recommendation* report for the site to the California Regional Water Quality Control Board – San Francisco Bay Region (RWQCB), dated August 19, 1991. In a letter dated September 4, 1991, the RWQCB concurred with the SCVWD's recommendations and agreed that no further investigation or cleanup of hydrocarbon contamination related to the former tanks was necessary.

The subject property owner provided supplemental documents including a report titled *Soil and Ground Water Quality Evaluation, San Jose Self Storage, San Jose, California, prepared by Lowney Associates (Lowney)*, dated July 10, 2000. The report was prepared for Proptech, Inc. The work was performed to evaluate the subsurface conditions at the site and the sump beneath the “kill area” of the main building. Lowney had completed a Phase I ESA on the subject property in December 1999. Lowney reported that historically, the site was operated by San Jose Meat Co./Harris Ranch and used as a slaughterhouse, feed lot, and meat packaging facility until approximately 1985. At the time of the Lowney ESA, the site was developed with a 25,000-square foot building (main building) used primarily for storage and office purposes. The current site tenant was San Jose Self Storage. Potential areas of concern (AOC) identified during the ESA included the cattle management areas where pesticides may have been used to control insects and the “kill area” sump. Lowney was unclear as to the purpose of the sump. In addition, one diesel UST and one gasoline UST had reportedly been removed approximately 10 years earlier. Two groundwater monitoring wells were observed during the Lowney’s ESA site reconnaissance.

Lowney’s scope of work included the following:

- Collect four soil samples (two from the former cattle area and two from the former non-cattle areas) at depths of approximately 3-feet bgs. These samples were analyzed for organochlorine pesticides, lead, arsenic and mercury.
- Sample the standing water and soil beneath the sump located under the “kill area” of the main building. Two soils samples were collected and analyzed for organochlorine pesticides, TPH-g, TPH-d, BTEX, volatile organic compounds (VOCs), methyl tert-butyl ether (MTBE) and 17 CAM metals.
- Sample the two groundwater monitoring wells. The two water samples were analyzed for TPH-g, TPH-d, BTEX, and MTBE.

The soils samples collected from both the former cattle area and the former non-cattle areas were ND for organochlorine pesticides, lead and arsenic, with the exception of one sample collected from the non-cattle area, which contained 12.9 ppm of lead. Mercury was identified in all four soil samples with concentrations ranging from 0.0390 to 0.109 ppm.

Pesticides, TPH-g, TPH-d, BTEX, and MTBE were ND for the soil samples (two samples collected at 13 feet bgs) and standing water sample collected beneath the sump. Chloroform, a common laboratory contaminant, was the only detected VOC in one soil sample at 0.07 ppm. All metals concentrations were well below the Preliminary Remediation Goals (PRGs) for Industrial Sites and below the stricter PRGs for Residential Properties, with the exception of one soil sample had levels of Thallium slightly above the Residential PRG.

The two groundwater monitoring well samples were ND for TPH-g, BTEX and MTBE. TPH-d was detected at 68.8 ppb in well WS-2, located north of the former UST area (originally designated as MW-1 in the Parametrix 1991 *Preliminary Site Assessment* report).

Lowney had the following conclusions:

- The arsenic, lead and mercury concentrations detected in on-site soil samples appeared to be consistent with typical background concentrations. No pesticides were detected.

- Neither groundwater sample had detectable concentrations of TPH-g, BTEX and MTBE. One water sample had a concentration of TPH-d (0.67.8 ppb) just above the laboratory detection limit (0.50 ppb). The low detected level may be associated with oxygenated organic compounds produced by biologic degradation of organic material and not diesel fuel.
- The soil samples collected from the sump area contained typical background levels for metals or lower and below residential and industrial PRGs. The low detected level of chloroform may have been due to laboratory error.
- The water sample collected from the sump did not contain detectable levels of pesticides, fuels, BTEX or VOCs. The detected metals concentrations were below the action levels. Total chromium was detected at a level (74.2 ppb), slightly above the drinking water standard (50.0 ppb).

No additional investigation was recommended by Lowney.

Based on the reviewed information (reports) and LUST Case Closure letters prepared by the SCVWD and RWQCB, it appears the former on-site USTs were properly removed from the subject property and all elevated levels of TPH and BTEX were remediated with only residual levels of toluene remaining in the shallow subsurface soils and no groundwater impacts remaining. Therefore, the former USTs and associated soil impacts are considered a *historical recognized environmental condition*. No further assessment is recommended.

### Off-Site Facilities

The hydraulic relationship of the off-site facilities to the subject property was made by CODA after reviewing the latest topographic map, nearby groundwater investigation reports and observations made during the site/area reconnaissance. For this assessment, groundwater flow direction is toward the northwest. The actual groundwater flow direction may vary for a given area.

#### Bay Area Scavenger & Recycling (11740 Berryessa Road)

The facility is located adjacent to the northeast and cross-gradient to the subject property. The facility is listed in the CA CERS<sup>10</sup> database. According to the EDR report, the facility had hazardous waste generator violations in 2014 that consisted of administrative reporting violations and open containers of used oil and used oil containers not labeled properly. The facility changed operations from a tallow facility (San Jose Tallow Co.) to the current operations as a recycling facility for construction and demolition debris in 2017. The facility is also listed as a LUST Cleanup Site in the EDR report. CODA reviewed the property address in GeoTracker. Information contained in the database indicates the San Jose Tallow Co. had one 10,000-gallon unleaded gasoline underground storage tank (UST) removed in March 1991. The UST was determined to have leaked, and the facility was required to complete a subsurface investigation to determine the extent of subsurface impacts.

A *Soil and Groundwater Investigation Report*, prepared by D & D Management Consultants, Inc. (D&D) dated May 24, 1996, indicated five soil borings (B-1 through B-5) were drilled at the site on May 9, 1996. One soil sample was collected from each boring at 13 to 14 feet below ground surface (bgs). Boring B-1 was extended to 17.5 feet bgs, where a sixth soil sample was

<sup>10</sup> CA-CERS – California Environmental Reporting System.

collected for analysis. In addition, groundwater was encountered in one boring and one groundwater sample was collected. All samples were analyzed for TPH-g and BTEX. Levels of TPH-g in the soil samples ranged from non-detectable (ND) to 46 ppm. Levels of BTEX in soil samples ranged from ND to 29 ppm (Benzene), 45 ppm (Toluene), 32 ppm (Ethylbenzene) and 110 ppm (total Xylenes). The groundwater grab sample contained 5,700 parts per billion (ppb) for TPH-g and 8.4 ppb (Benzene), 8.6 ppb (Toluene), 7.8 ppb (Ethylbenzene) and 21 ppb (total Xylenes). Based on the results of the investigation and low levels of detected TPH-g and BTEX identified in soil and groundwater samples in the area of the release and that the low level of groundwater impacts appears to be “localized to near the former tank pit”, the Santa Clara Valley water District (SCVWD) issued a UST Case Closure (Case No. 14-308), No Further Action (NFA) letter for the LUST case on August 29, 1996.

CODA obtained a report titled *Phase II Environmental Investigation, San Jose Tallow Company, 11740 Berryessa Road, San Jose, CA*, prepared by Lee & Pierce, Inc. (Lee & Pierce), dated September 12, 2008, from the Santa Clara County Environmental Health Department (SCCEHD). The work was done to address “potential environmental concerns, as researched by Sequoia Environmental Corp.” The scope of work for the investigation included drilling four borings in the following areas of concern:

- Boring SB1 was drilled to a total depth of 20 feet bgs near a concrete ramp of the main building, the location of a former gasoline UST (removed in 1991). Groundwater was not encountered. Soil samples were collected at 12 and 20 feet bgs and analyzed for TPH-g and VOCs. No constituents of concern were detected.
- Boring SB2 was drilled to a total depth of 8 feet bgs near the vehicle maintenance area. A soil sample was collected at 4 feet bgs and analyzed for TPH-d, TPH as motor oil (TPH-mo) and VOCs. No constituents of concern were detected.
- Boring SB3 was drilled to a total depth of 20 feet bgs near a diesel AST. Groundwater was not encountered. Soil samples were collected at 8 and 20 feet bgs and analyzed for TPH-d, TPH-mo and VOCs. No constituents of concern were detected.
- Boring SB4 was drilled to a total depth of 12 feet bgs near the grease, wastewater and sludge ASTs, where pooling liquids were previously observed. Groundwater was not encountered. Soil samples were collected at 1, 8 and 10 feet bgs and analyzed for TPH-d, TPH-mo and VOCs. No constituents of concern were detected.

Lee & Pierce concluded that based on “the results of the limited Phase II investigation, there is no evidence that current site operations have resulted in and subsurface contamination at the site.”

Based on the results of the limited subsurface investigation conducted at the site, the low level of groundwater impacts identified, which appear to be limited to the site, and the closed status of the LUST case, CODA does not consider the site to represent a *recognized environmental condition*, including a *vapor migration* threat, to the subject property. No further assessment is recommended.

**Gonzalez Pallets, Inc. (1261 Yard Court)**

The facility is located adjacent to the southeast and cross-gradient to the subject property. The facility is listed in the CA HWTS<sup>11</sup>, CA HAZNET<sup>12</sup>, CA HAZMAT (Hazardous Materials Facilities), CA CERS HAZ WASTE<sup>13</sup>, CA CUPA Listings<sup>14</sup>, RCRA NonGen / NLR<sup>15</sup>, CA NPDES, CA CIWQS<sup>16</sup> and CA CERS databases. According to the EDR report, the facility had hazardous waste violations reported (primarily administrative) by local agencies in 2014 and 2018. There were no reported RCRA violations. All of the violations were corrected. There are no reported releases for the facility. Based on the lack of releases and hydrological cross-gradient location of the site to the subject property, CODA does not consider the site to represent a *recognized environmental condition*, including a *vapor migration* threat, to the subject property. No further assessment is recommended.

**Bay Area Truck Services / TESI Leasing (1255 Yard Court)**

The facility is located adjacent to the southeast and cross-gradient to the subject property. The facility is listed in the RCRA NonGen / NLR, CA CERS HAZ WASTE and CA CERS databases. According to the EDR report, the facility has no reported violations or releases. Based on the lack reported violations or releases and hydrological cross-gradient location to the subject property, CODA does not consider the site to represent a *recognized environmental condition*, including a *vapor migration* threat, to the subject property. No further assessment is recommended.

**California Waste Solutions (1005 Timothy Drive)**

Based on the lack reported releases and hydrological cross-gradient location to the subject property, CODA does not consider the site to represent a *recognized environmental condition*, including a *vapor migration* threat, to the subject property. No further assessment is recommended.

EMI<sup>24</sup>, FINDS<sup>25</sup> and ECHO<sup>26</sup> databases. According to the EDR report and information obtained from the California Department of Toxic Substances Control's (DTSC) online ENVIROSTOR database, the facility generates ignitable, corrosive, reactive, chromium, lead, silver, methane and naphthalene and various spent non-halogenated solvent waste. The facility also generates spent cyanide and wastewater sludge from electroplating operations. The facility had violations reported in 2007, 2014 and 2017. All violations were corrected.

The facility was required to complete a Preliminary Endangerment Assessment (PEA) by the DTSC in 2014. A REA report was submitted to the DTSC on August 3, 2015, which identified low concentrations of various metals, volatile organic compounds (VOCs) and semi-VOCs in soil and groundwater beneath the site. Groundwater was determined to flow toward the west to northwest at the site. Based on the low concentrations of identified constituents, the DTSC concluded in a May 13, 2016, letter to the site owners that there is not a significant potential human health risk with the current property use. However, there is a Land Use Covenant for the site, limiting the property to industrial/commercial use only. No further action was required. Based on hydrological cross-gradient location to the subject property and regulatory status (case closed) of the site, CODA does not consider the site to represent a *recognized environmental condition*, including a *vapor migration* threat, to the subject property. No further assessment is recommended.

#### **Norcal Waste Systems of San Jose / California Waste Solutions (1120 Berryessa Road)**

The facility is located adjacent to the south and cross-gradient to the subject property. The facility is listed in the CA AST (Aboveground Storage Tanks), RCRA NonGen / NLR, CA CUPA Listings, CA HAZMAT, CA WDS, CA CERS HAZ WASTE, CA CERS TANKS, CA NPDES, and CERS databases. According to the EDR report, the facility has no reported RCRA violations, although there are chemical storage violations reported in 2014, 2015 and 2018 by local agencies. All violations were corrected. There are no reported releases at the facility. Based on the lack reported releases and hydrological cross-gradient location to the subject property, CODA does not consider the site to represent a *recognized environmental condition*, including a *vapor migration* threat, to the subject property. No further assessment is recommended.

#### **City Metals & Salvage / Genesis Environmental / Schnitzer Steel (11665 Berryessa Road)**

The facility is located adjacent to the northwest (across Berryessa Road) and down-gradient to the subject property. The facility is listed in the CA UST, CA SWEEPS UST, CA NPDES, CA CIWQS, CA LUST, CA HIST LUST, CA SWRCY, CA CERS HAZ WASTE, CA CERS TANKS, RCRA NonGen / NLR, CA CUPA Listings, CA HAZMAT, CA WDS, CA CERS, CA PROC, CA CORTESE, CA HIST CORTESE, FINDS, ECHO and ICIS databases. According to the EDR report and information obtained from the GeoTracker online database, the facility, under City Metals, had a gasoline release reported in 1985 (Case No. 08-024) during removal of a 550-gallon unleaded gasoline UST. The release case was closed in 1997. Concentrations of TPH-g, TPH-d and BTEX were identified in six on-site groundwater monitoring wells. Although no remediation occurred, the levels of groundwater contaminants decreased significantly over time to ND or below actionable levels and the impacts were believed to be localized and would further decline through natural attenuation. Groundwater was determined to flow toward the north. The release case was closed on January 23, 1997, by the SCVWD.

<sup>24</sup> EMI – Emissions Inventory Data.

<sup>25</sup> FINDS - USEPA database that contains pointers to other sources of information.

<sup>26</sup> ECHO - USEPA database that contains Enforcement and Compliance information.

Additional information acquired from GeoTracker indicates a 1,000-gallon diesel UST was subsequently installed in the same location as the previous 550-gallon gasoline UST. On February 2006 the 1,000-gallon diesel UST was removed, and soil samples collected from tank excavation showed the following contaminants: TPH as motor oil (TPH-mo) at 3,300 ppm, TPH-g at 57ppm, Benzene at .0075 ppm and MTBE at .0078 ppm at 10.5 feet bgs. A LUST Case (Case No. 14-758) was then opened. Work plan with proposed scope of work including removal of petroleum hydrocarbon impacted soil, soil sampling and grab groundwater sampling was received by Local Oversight Program (LOP) and approved in letter dated February 17, 2009. In a December 2, 2014, letter prepared by the County of Santa Clara Department of Environmental Health (SCCDEH), due to the low levels of residual contaminants remaining in soil and groundwater at the site, the LUST Case was closed. Based on down-gradient location to the subject property and regulatory status (LUST cases closed) of the site, CODA does not consider the site to represent a *recognized environmental condition*, including a *vapor migration* threat, to the subject property. No further assessment is recommended.

### **Granite Rock Co. / San Jose Asphalt (11711 Berryessa Road)**

The facility is located adjacent to the northwest (across Berryessa Road) and down-gradient to the subject property. The facility is listed in the CA UST, CA SWEEPS UST, CA AST, CA LUST, CA HIST LUST, CA HAZMAT, CA CERS HAZ WASTE, CA CERS TANKS, RCRA NonGen / NLR, CA CUPA Listings, CA HAZMAT, CA CERS, CA CORTESE, and CA HIST CORTESE databases. EDR LIGHTBOX indicated numerous administrative violations, monitoring failure of the USTs and stormwater runoff violations between 2011 and 2019. The subject property returned to compliance.

According to the EDR report and information obtained from the GeoTracker online database, the facility had two gasoline and two diesel USTs removed in 1998. During tank removal operations, a ruptured pipeline from an existing heating oil tank, located near the USTs, was observed. Confirmation soil and a groundwater grab sample indicated levels of TPH-d, TPH-g, TPH-og (oil and grease) and BTEX. The excavation was later over-excavated with elevated TPH-og levels remaining. Later that year soil borings were drilled to define the lateral and vertical extent of the impacts. In addition, groundwater monitoring's wells were installed to monitor the groundwater impacts. Groundwater flow at the site was determined to be toward the west to northwest. Based on the results of the soil testing and groundwater monitoring, it was determined that while petroleum hydrocarbon contamination remained at the site, the extent of the soil impacts appeared to be localized at 5 feet bgs and groundwater impacts appeared to have attenuated to below regulatory concern. Therefore, it was concluded that a threat to human health and the environment from the residual contaminants did not exist. The SCVWD issued a Closure letter for the release on December 6, 1999. Based on down-gradient location to the subject property and regulatory status (LUST case closed) of the site, CODA does not consider the site to represent a *recognized environmental condition*, including a *vapor migration* threat, to the subject property. No further assessment is recommended.

### **Kunde Property (1259 Yard Court)**

The facility is located approximately 0.05 miles southeast and cross-gradient to the subject property. The facility is listed in the CA LUST, CA HIST LUST, CA SWEEPS UST<sup>27</sup>, CA CORTESE<sup>28</sup>, CA HIST CORTESE and CA CERS databases. According to the EDR report the site had a diesel release from a UST reported in May 1992. The LUST case was closed in 1997.

<sup>27</sup> SWEEPS UST- Statewide Environmental Evaluation and Planning System (no longer updated or maintained).

<sup>28</sup> CA Cortese - California LUST, SWF/LS and Cal-Sites list.

Based on the distance and cross-gradient location to the subject property and regulatory status (case closed) of the site, CODA does not consider the site to represent a *recognized environmental condition*, including a *vapor migration* threat, to the subject property. No further assessment is recommended.

### **Clean Harbors, San Jose (1021 Berryessa Road)**

The facility is located approximately 0.16 miles southwest and down-gradient to the subject property. The facility is listed in the SEM-ARCHIVE, CORRACTS<sup>29</sup>, RCRA-TSD<sup>30</sup>, RCRA-LQG, CA ENVIROSTOR, CA CPS-SLIC<sup>31</sup>, CA CERS HAZ WASTE, CA HIST UST, US FIN ASSUR, 2020 COR ACTION, ROD (Record of Decision), PRP (Potential Responsible Party), ICIS<sup>32</sup>, FINDS, ECHO, CA ICE, CA HWP, WI MANIFEST, NY MANIFEST, CA NPDES, CA HAZMAT, CA CIWQS and CA CERS databases. According to the EDR report and information obtained from the GeoTracker online database, the facility is an active hazardous waste treatment, storage and disposal facility (TSDF) that has operated since 1975 (formerly Safety-Kleen and Solvent Services Company).

Groundwater and soil contamination were discovered in 1983. Various investigations have been performed to characterize the magnitude and extent of contamination. Several remedial actions have been implemented to address soil and groundwater contamination. Four groundwater extraction trenches incorporating five groundwater recovery wells are operated to contain and remediate groundwater. A steam injection and vacuum extraction (SIVE) system, later modified to a dual phase soil vapor extraction (DPSVE) system, operated in the central area of the site to remediate soil contamination in the source area. An off-site DPSVE system was installed in the Commercial Street Business Park (CSBP) to contain and remove volatile organic compound (VOC) impacted groundwater that had migrated beyond the influence of the on-site trench system. The site has been capped to minimize infiltration of precipitation or potential surface spills and to limit exposure to contaminated soil. In addition, a deed restriction has been instituted to prevent future residential use of the site or use of shallow groundwater for water supply. Additional remedial efforts have taken place over the years to reduce the levels of contaminants. Groundwater at the site was determined to flow toward the west and groundwater impacts have been shown to be limited to the site. Annual groundwater monitoring at the site continued through at least 2020. Based on the distance and hydrologically down-gradient location of the site to the subject property and reviewed information, CODA does not consider the site to represent a *recognized environmental condition*, including a *vapor migration* threat, to the subject property. No further assessment is recommended.

### **Additional Off-Site Facilities**

Several of the remaining listed facilities were listed in environmentally significant databases including the RCRA-TSDF<sup>33</sup>, RCRA-LQG, RCRA-SQG<sup>34</sup>, HIST LUST, SEMS-ARCHIVE, CORRACTS, CA RESPONSE<sup>35</sup>, CA ENVIROSTOR, CA SWF/LF, LUST, CA CPS-SLIC, CERS HAZ WASTE, CA SWEEPS UST, UST, HIST UST, CA CERS<sup>36</sup>, CA CERS TANKS, CA FID

CODA reviewed the remaining facilities and determined that the facilities were significantly distanced from the subject property considering the groundwater gradient and site statuses; therefore, the remaining sites were not considered to represent *recognized environmental conditions*, including *vapor migration* threats, to the subject property.

### EDR LIGHTBOX Orphan Sites

The database report listed no “orphan” facilities (facilities that are not mapped in the database report due to poor or inadequate address information).

### EDR LIGHTBOX Proprietary Databases

EDR LIGHTBOX provides proprietary databases that identify manufactured gas plants, historical cleaners and historical auto stations that are known to EDR LIGHTBOX, typically based on city directory reviews and/or Sanborn Maps. Facilities included on this database typically operated before current regulations requiring notification/registration. These facilities may not be listed on regulatory databases but may be suspect *recognized environmental conditions* due to proximity to the subject property. No manufactured gas plants, historical auto stations or historical cleaners were identified by EDR LIGHTBOX within the search distance.

## 4.2 ADDITIONAL ENVIRONMENTAL RECORD SOURCES

CODA conducted the following local inquiries to enhance and supplement the ASTM E1527-13 standard environmental record sources when, in the judgment of the environmental professional, such additional records were deemed to be reasonably ascertainable; were sufficiently useful and accurate, and complete in light of the objective of the records review; and were generally obtained pursuant to local good commercial or customary practice.

CODA submitted a FOIA Request for Records to the SJFD, SCCDEH, DTSC and RWQCB. The SJFD and RWQCB had not responded to CODA's request at the time of this report. Any new or relevant information received from either agency will be forwarded to the client.

The DTSC responded that their file information can be accessed on their online Hazardous Waste Tracking System (HWTS) website and their online Envirostor website. CODA accessed these websites for additional information, which included information regarding the adjacent S. J. Tallow Company and Bay Area Scavenger and Recycling, which was identified and was discussed in Section 4.1. No additional information regarding the subject property was identified.

CODA searched the California DOGGR website for the subject property address. No wells were identified in the area of the subject property.

CODA reviewed the CalEPA files on its Regulated Site Portal website. Information on the CalEPA Regulated Site Portal comes from five sources: California Environmental Reporting System, EnviroStor, GeoTracker, the California Integrated Water Quality System (CIWQS) and the Toxics Release Inventory (TRI). Information identified for the subject property was previously discussed in Section 4.1.

CODA reviewed the GeoTracker website, which contains listings for most of the sites for which the LARWQCB has opened a case file. Information identified for the subject property was previously discussed in Section 4.1.

Based upon review of other regulatory information discussed above and in Section 4.1, findings indicating unknown suspect *recognized environmental conditions* to the subject property were not anticipated from the local inquiries presented above.

Copies of the requests and records of communication for these inquiries are included in Appendix E of this report.

#### 4.3 PHYSICAL SETTING SOURCE(S)

Physical setting sources specified in Section 11.0 of this report were reviewed to provide information about the physical setting of the subject property. Based upon the topographic map reviewed, the subject property was located at a surface elevation of approximately 74 feet (above the National Geodetic Vertical Datum of 1929) and was generally flat. The surrounding areas were generally flat with a slight downslope toward the north. Observation of the subject property topography corresponded with information presented on the topographic map.

##### **Soil Setting**

According to reviewed sources soil at the subject property is primarily mapped as Botella clay loam soils. Botella clay loam soils are deep and moderately deep, moderately well and well drained soils with moderately coarse textures. Previous on-site subsurface investigations identified onsite soils ranging from sand to clay. A competent clay layer was identified at 27 to 28.5 feet bgs.

##### **Geologic Setting**

Review of the referenced sources indicated that the subject property appears to be underlain by unconsolidated alluvium of late Pleistocene and Holocene age composed of clay, silt, and possibly sand and gravel.

##### **Groundwater**

Shallow groundwater generally flows in directions subparallel to the ground surface slopes and under the influence of gravity toward points of discharge such as creeks, swamps, drainage swales, or pumped groundwater wells. Previous on-site subsurface investigations conducted by

others indicated groundwater was encountered at an approximate depth of 30 feet below ground surface and flowed generally toward the west-northwest.

According to the EDR LIGHTBOX report, 46 registered water wells were located within one-quarter mile of the subject property. No additional useful information regarding the wells was identified.

### **Wetlands**

CODA screened the subject property for the presence of suspect wetlands during the site reconnaissance and by viewing the U.S. Department of the Interior, Fish and Wildlife Service, National Wetlands Inventory viewer online, and the most recently available topographic map. A wetland delineation was beyond the scope of this assessment. Review of the Wetland Inventory Map and topographic map indicates the subject property is not in an area mapped as a potential wetlands area. Coyote Creek, to the north, may be within a wetlands area. CODA notes that the Wetlands Inventory Map is prepared through the analysis of aerial photography and not by actual ground reconnaissance. It is normally used as a screening method to assess if potential wetlands areas exist in a given area. During CODA's site reconnaissance, suspect wetlands areas were not observed or reported at the subject property. CODA notes that the Environmental Professional who performed the site reconnaissance is not a specialist trained in wetlands delineation. No further assessment is recommended.

### **4.4 HISTORICAL USE INFORMATION ON THE SUBJECT PROPERTY**

Historical sources specified in Section 11.0 of this report were reviewed to assess on-site historical activities. CODA's findings are presented in the following table. A 2021 aerial photograph of the subject property is included in Appendix A of this report, and additional aerial photographs reviewed are included in Appendix C.

## **Discussion**

Based on the review of historical sources, the subject property was developed as a cattle farm in the early 1900s and later included slaughterhouse operations. By 1981, the cattle feed/slaughterhouse operations terminated, and the property was used as a self-storage facility with some of the original buildings remaining and several other storage buildings were added. The property was sold in 2000 to the current property owner (SRDC) and has been used as a concrete recycling facility as recently as present day.

Based on city directory listings, the current subject property address (1300 Berryessa Road) does not appear in any city directory listings. However, SRDC appears in 2017 under the former

site address (11740 Berryessa Road). The former address (11740 Berryessa Road) was initially listed in 1994 under the name U Haul Co. and San Jose Self Storage. Additional year listings are as follows:

1999 U-Haul Co. Independent Dealers, San Jose Self Storage.  
 2009 San Jose Tallow Co.  
 2014 San Jose Tallow Co.  
 2017 San Jose Tallow Co., SRDC Recycling.

In addition to the historical information presented in the table above, an assessment as to whether or not historical uses are considered to present a suspect *recognized environmental condition* to the subject property was based on whether or not addresses for the subject property were listed on the regulatory databases reviewed (Section 4.1), interviews with local agency personnel (Section 4.2), information obtained from prior reports (Section 4.6) CODA's subject property reconnaissance observations (Section 5.0) or interviews with the Key Site Manager and/or owner's representative (Sections 5.0 and 6.0). Based on information obtained by CODA and as presented in the above-referenced sections, other than discussed above, historical uses of the subject property do not present suspect *recognized environmental conditions* to the subject property.

Instances of data failure resulting in significant data gaps that affect the ability of the environmental professional to identify *recognized environmental conditions* are listed in Section 10.0.

#### 4.5 HISTORICAL USE INFORMATION ON ADJOINING PROPERTIES

Nearby property usage could potentially impact the surface and subsurface conditions at a subject property. Developing a history of past uses or occupancies can provide an indication of the potential for *recognized environmental conditions* associated with the subject property. Historical information specified in Section 11.0 of this report was reviewed to assess off-site activities. CODA's findings are presented in the following table:

## Discussion

Based on reviewed historical sources, adjacent properties were initially undeveloped land and agricultural land. Agricultural use generally ceased by the mid-1950s, when commercial/light industrial development of the surrounding properties began.

Review of city directories indicated the surrounding properties were historically used as commercial and industrial facilities.

An assessment as to whether or not historical adjoining land use was considered to present a suspect *recognized environmental condition* to the subject property was based on whether or not the property or current and past occupants were listed on the regulatory databases reviewed (Section 4.1), information obtained from prior reports (Section 4.6) and CODA's area reconnaissance observations (Section 2.5). Based on information obtained by CODA's and as presented in the above-referenced sections, prior historical surrounding land usage is not considered a suspect *recognized environmental condition* to the subject property.

#### 4.6 REVIEW OF PREVIOUS REPORTS

The client provided no previous environmental reports. All reports reviewed by CODA, including reports provided by the subject property owner, were previously discussed in Section 4.1.

### 5.0 SUBJECT PROPERTY RECONNAISSANCE

#### 5.1 METHODOLOGY AND LIMITING CONDITIONS

CODA visually and physically observed accessible areas of the subject property. The periphery of the subject property was visually and/or physically observed, as well as the periphery of structures on the subject property. The subject property was viewed from adjacent public thoroughfares. In the interiors of structures, CODA observed accessible common areas expected to be used by occupants or the public, as well as maintenance and repair areas. CODA also observed a representative sample of tenant spaces. No limitations imposed by physical obstructions or other limiting conditions were observed.

#### 5.2 GENERAL SUBJECT PROPERTY SETTING

The subject property reconnaissance was performed on September 30, 2021 by Kurt Martin, a professional experienced in environmental site assessments, in an attempt to identify apparent visual indications of present or past activities that have or could have contaminated the subject property. CODA was unaccompanied during the subject property reconnaissance. A Site Plan has been included in the appendices.

The current use of the subject property was discussed in Section 2.3. A description of structures, roads, and other improvements on the subject property, if any, was presented in Section 2.4.

## 6.0 INTERVIEWS

ASTM E1527-13 requires that a reasonable attempt be made to interview past and present owners, operators, and occupants who are likely to have material information about uses and conditions that could present a suspect *recognized environmental condition* to the subject property. ASTM E1527-13 requires that the owner or its representative be asked to identify a person with good knowledge of the uses and physical characteristics of the subject property who is defined as the Key Site Manager. The interviews were conducted in person, by telephone, or in writing and are discussed in the following table.

Name/ Company	Title/ Position	Comments
Mr. Roy Ferrari / SRDC, Inc.	Owner / Key Site Manager	CODA interviewed the Key Site Manager. Information provided is included in relevant sections of this report. No reports of environmental liens, AULs, or governmental notification relating to past or recurrent violations of environmental laws with respect to the subject property were reported to CODA during these interviews.
Mr. Marten Mercado / SRDC, Inc.	Foreman	Mr. Marten provided information regarding on-site operations.

Records of communication for the interviews conducted are provided in Appendix E.

## 7.0 FINDINGS AND OPINIONS

Based on the information obtained by CODA to date, the following summarizes CODA's findings and opinions of the impact on the subject property of known or suspect *recognized environmental conditions* and the environmental professional's rationale for concluding that a condition is currently a *recognized environmental condition*, a *controlled recognized environmental condition*, a *historical recognized environmental condition*, a *de minimis* condition, or not a *recognized environmental condition*.

- CODA did not identify *recognized environmental conditions*, *controlled recognized environmental conditions*, *historical recognized environmental conditions*, or *de minimis environmental conditions* associated with the subject property or surrounding land use with the following exceptions:

The property previously contained one 1,000-gallon and two 7,500-gallon diesel USTs. The three tanks were removed on August 10, 1989, under permit No. C 44598. Harris Feeding Co., under the former property address, was identified as a LUST site. The information and reports obtained from the State Water Resources Control Board GeoTracker website indicates this release occurred on the subject property. After excavation, investigation, and groundwater sampling activities were completed, the SCVWD and RWQCB provided case closure letters on August 19, 1991, and September 4, 1991, respectively. Both agencies agreed that no further investigation or cleanup of hydrocarbon contamination related to the former tanks was necessary.

## 8.0 CONCLUSIONS AND RECOMMENDATIONS

CODA has performed a Phase I ESA of the concrete recycling facility located at 1300 Berryessa Road, San Jose, Santa Clara County, CA in general conformance with the scope and limitations of ASTM Practice E1527-13. Exceptions to, or deletions from, this practice are described in Section 9.0 of this report.

- Based upon the information obtained, as reflected in this report, this assessment has revealed no evidence of *recognized environmental conditions* or *controlled recognized environmental conditions* in connection with the subject property. No further assessment is recommended.
- Based on the reviewed information and LUST Case Closure letters prepared by the SCVWD and RWQCB, it appears the former on-site USTs were properly removed from the subject property and all elevated levels of TPH and BTEX were remediated with only residual levels of toluene remaining in the shallow subsurface soils and no groundwater impacts remaining. CODA considers the former USTs and any residual hydrocarbons in soil impacts as a *historical recognized environmental condition*. No further investigation is recommended.

## 9.0 DATA GAPS AND DEVIATIONS

Data gaps are defined as a lack of or inability to obtain information required by ASTM E1527-13 despite good faith efforts. Significant data gaps that affected the ability of the environmental

professional to identify *recognized environmental conditions* were not identified. Deviations or deletions from the scope of work defined by ASTM E1527-13 were not intentionally made.

## 10.0 ADDITIONAL (Non-ASTM) SERVICES

In accordance with the scope of work presented in the proposal, CODA has conducted certain additional environmental services as presented in this section of the report.

### 10.1 ASBESTOS

A limited visual asbestos survey of the subject property was performed on September 30, 2021 by Kurt Martin. This survey consisted of a walk-through of the two small on-site sheds used as an office and a break area. On-site personnel provided access to the areas observed by CODA. No asbestos Operations and Maintenance (O&M) program was provided or reported to exist for the subject property.

The limited asbestos survey scope of work was intended to identify the potential presence of major classes of accessible ACM at the subject property and addresses very limited objectives relating to the characterization of asbestos within the project. Estimation and determination of exact quantities and locations of these materials at the subject property was beyond the scope of this survey. These data alone are not appropriate for planning specific response actions or for health hazard assessment, nor are they sufficient for renovation or demolition activities. In the event renovation or demolition activities are planned, a comprehensive asbestos survey would be required prior to initiation of such activities.

The subject property structures consisted of two small on-site sheds used as an office and a break area. According to the reviewed historical resources and previous reports, the subject property improvements were constructed in 2002. Suspect ACM observed were limited to wall and ceiling systems (including wallboard and joint compound). The suspect ACM was observed by CODA to be in good condition and non-friable.

The EPA has no existing bans on most asbestos-containing material (ACM) or uses. The EPA does not track the manufacture, processing, or distribution in commerce of ACM. EPA asbestos regulations currently in place ban the use of asbestos in certain consumer products. The banned products include corrugated paper, rollboard, commercial paper, specialty paper, flooring felt, new uses of asbestos, spray-applied surfacing ACM, sprayed-on application to buildings, structures, pipes, and conduits (unless the material is encapsulated), and wet-applied/pre-formed asbestos pipe insulation, and pre-formed asbestos block insulation on boilers and hot water tanks.

Notwithstanding date of construction or likelihood of asbestos, the National Emission Standard for Hazardous Air Pollutants (NESHAP) regulations consider certain building materials that have not been thoroughly tested to be suspect ACM regardless. Such materials number in excess of 30,000 products, but those commonly encountered in modern building systems include flooring materials, mastics, sealants, finish textures, ceiling tiles, non-fiberglass thermal and other insulation, roofing components, and fireproofing. NESHAP regulations require that all ACM be identified prior to potential disturbance of suspect ACM such as demolition or renovation activities. The limited asbestos survey performed as part of this project was not intended to

meet the performance standard established under NESHAP regulations for demolition and renovation.

Revisions to regulations issued by Occupational Safety and Health Administration (OSHA) require that all thermal system insulation, surfacing materials, and resilient flooring materials installed prior to 1981 be considered Presumed Asbestos-Containing Materials (PACM) and treated accordingly. In order to rebut the designation as PACM, OSHA requires that these materials be surveyed, sampled, and assessed in accordance with AHERA. Based on the year of construction of the subject property, the designation of PACM at the subject property does not apply.

Based on the good condition and age of the suspect ACM identified, asbestos is not considered to be a *business environmental risk* to the subject property. However, the asbestos survey was not comprehensive and should not be relied upon in preparation of renovation or demolition projects. Prior to demolition/renovation activities or other activities that could potentially disturb suspect ACM, additional sampling and analysis of the materials using protocols specified in AHERA (40 CFR 763) should be performed. Alternatively, the material can be assumed to contain asbestos and treated accordingly. Future activities that involve the disturbance or removal of confirmed or suspect ACM are required to be conducted in accordance with NESHAP and other applicable local, state, and federal regulations.

## 10.2 RADON

Radon (Rn<sup>222</sup>) is a naturally occurring inert, colorless, odorless radioactive gas derived from the decay of radium (R<sup>226</sup>). Radium occurs in geologic formations containing uranium, granite, shale, phosphate, or pitchblende and was commercially used in luminescent products. Radium decays into reactive, radioactive daughter particles that attach themselves to other particles such as dust and are a lung cancer risk. Radon can move through permeable rocks and soils and can eventually seep into buildings. The movement of radon into buildings is controlled largely by the soil permeability under a foundation and access to the interior of buildings through openings in the foundation.

According to the *EDR-Radius Map with GeoCheck* and the *EPA Map of Radon Zones* for the Santa Clara County area, the subject property was located in EPA Radon Zone 2 (average indoor level greater than or equal to 2 picoCuries (pCi/L) per liter and less than or equal to 4 pCi/L. Based upon published information and non-residential site usage, does not appear to present a *business environmental risk* to the subject property.

## 10.3 MOLD

A limited survey for moisture intrusion and visible fungal growth (i.e., "*mold survey*") of the subject property was performed by CODA's field observer Kurt Martin on September 30, 2021. The objective of this *mold survey* was to observe and report on the apparent presence of, or potential for, moisture intrusion and visible fungal growth in readily accessible representative areas of the subject property to the extent feasible within the process described in CODA's authorized scope. As defined by the authorized scope, the degree of thoroughness of this *mold survey* was intended to represent a commercially prudent and reasonable inquiry that balanced the competing goals of limiting time and cost with the reduction of uncertainty about unknown conditions. This *mold survey* was not intended to be comprehensive in all or most building

systems and was not intended to eliminate the risk of moisture intrusion or fungal growth. No limited survey can wholly eliminate uncertainty regarding the potential for moisture intrusion or fungal growth.

Mr. Marten Mercado was interviewed in an attempt to gain information indicative of moisture intrusion or fungal growth. CODA was informed by Mr. Mercado that he had not observed moisture intrusion or fungal growth issues. CODA was not provided prior reports pertinent to the scope of this mold survey.

CODA's field observer walked the outside perimeter of the buildings at the subject property to make exterior visual observations. Areas observed included the ground surface and exterior walls. Additional exterior areas may have also been observed as judged by the field observer to merit inclusion. The individual structures were selected based on information gained from the interviews, document review, and topographic and proximity and configuration of storm water drainage features and areas of accumulation.

Additionally, CODA's field observer made visual observations of the interiors of the subject property improvements. Those observations included readily accessible common areas including the office and breakroom. In general, interior areas selected for observation included cabinets under kitchen sinks along window frames and perimeter walls and wall penetrations, and ceilings beneath cooling equipment. These named areas were included as locations where moisture infiltration and fungal growth commonly occur and were typically evident. Additional interior areas may have also been observed as judged by the field observer to merit inclusion.

Localized indicators of interior excessive moisture, water-affected building materials, visible fungal growth, or other conditions were not observed. Provided that future maintenance includes timely and pro-active identification of moisture intrusion and vigorous response to fungal growth and tenant complaints and cleaning, repair, or replacement of affected building material in accordance with an accepted standard industry practice, mold growth at the subject property is not considered to constitute a *business environmental risk*.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in bold italics are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2021 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/22/2021 has revealed that there are 2

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 7 RCRA-LQG sites within approximately 0.25 miles of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 04/23/2021 has revealed that there are 23 CA ENVIROSTOR sites within approximately 1 mile of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 24 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 09/30/2017 has revealed that there is 1 2020 COR ACTION site within approximately 0.25 miles of the target property.

CA CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

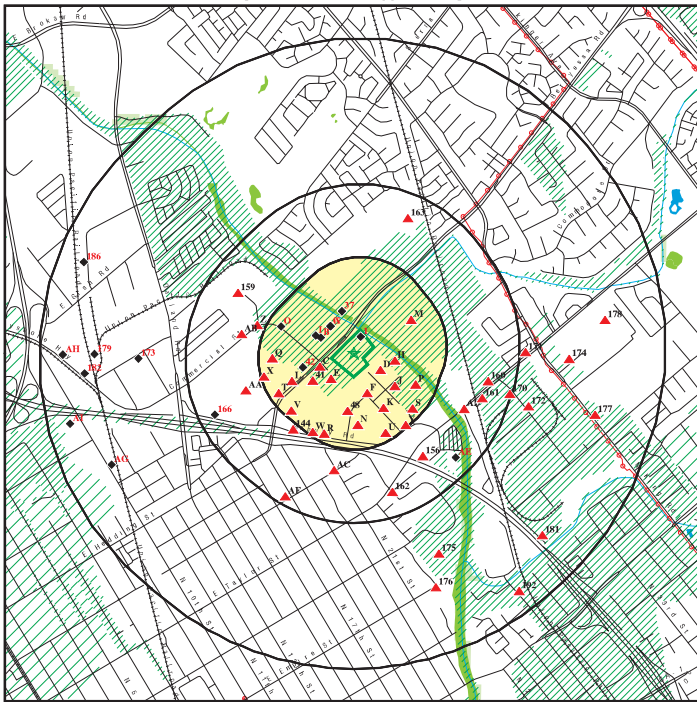

A review of the CA CERS list, as provided by EDR, and dated 04/19/2021 has revealed that there is 1 CA CERS site within approximately 0.001 miles of the target property.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

 California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.  
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.  
 US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

If within parameters, mixed in batch for neutralization. Batches limited to 200 gallons max size.

Eval Notes:	Unit #2 (Batch Treatment) Unit is a batch treatment system that consists of one 640 gallon conical bottom tank (shared usage with CA unit 1) and a sludge press with an affiliated analysis "hold" tank. Unit is used to precipitate metals via pH adjustment and addition of flocculate/precipitant. Unit receives waste from the ferrocchloride resist etch lines which feed to a single vaulted tank as well from plating room rinse waters as well as plating room wastes from acid and caustic rinses. -Plate room acid and caustic commingle in sump in plate room sump and are subsequently sent through a series of ion exchange bottles prior to being sent to the system. Tank is not equipped with overflow device and is within a containment area that is determined to be undersized for the tank (640 gal tank, 450 gal containment). Company has instituted a size restriction on batch size of 250 gallons and has marked the tank with a high liquid mark. These procedures are documented in SOP [Truncated]

Eval Notes:	Unit #3 (Cyanide Evaporator) Unit is a batch treatment system which accepts and evaporates liquid, low level metal bearing wastes from etch processing on the molybdenum and Tungsten lines which utilized potassium ferricyanide. Cyanide in receiving tank was tested in 2014 for toxicity via Fish bioassay (fathead minnow) and total cyanide. No fish mortality in fish bioassay and ND for total cyanide. WASTE IS NOT HAZARDOUS DUE TO CYANIDE ALTHOUGH ROUTINE ONSITE TESTING SHOWS THAT <1PPM CYANIDE MAY BE FOUND IN SOLUTION. Evaporated water is routed to hold tank, tested prior to discharge to ensure meets sewer requirements. Sludge is removed as needed (every 2 years or so) and managed as hazardous waste (including D003 waste code). Reviewed the following documents: Operating instructions and operating logs Closure plan/loss estimate Potities and Procedures EPO908 and EPO910 which serve as waste analysis plan Treatment system inspection logs

 Eval Notes: No violations were noted upon inspection of the Permit By Rule batch treatment system. Also note, the Conditionally Authorized (CA) pH neutralization unit was reviewed and no violations were noted. It was discovered the CA unit was not an active program record and will be activated today with an exemption from billing as billing is for the highest tiered permit only when a facility is operating multiple treatment units.

 Eval Notes: Under Review: Cyanide Evaporator - 600 gallons/mos. The permit by rule treatment authorization for the cyanide waste rinses from cleaning, etching, plating, and the cyanide scrubber is under review. The facility evaporates cyanide and metal bearing solutions then pumps distant through Anion resins filters. The cyanide sump is typically pumped out every 6 months. Resin bottles are replaced as needed. Evaporation of aqueous waste with cyanide is currently not an

 Violation Date: 10-15-2015  
 Citation: 2014-0057-DWQ - Industrial General Permit  
 Violation Description: SW - Deficient BMP Implementation  
 Violation Notes: Our inspections found violations of Permit Section X.H requirements for housekeeping, material handling and waste management spill and leak prevention and response, preventative maintenance, erosion and sediment control practices, and advanced treatment BMPs, as discussed below. We are concerned about the potential for discharge of polluted stormwater near the asphalt plant and from the process water pond, and that is also discussed below. The violations we observed resulted, and had the potential to result, in the discharge of sediment to storm drains, high-pH stormwater runoff, and materials with aquatic toxicity. Thus, it is important for the Facility to return to compliance.

 Potential Media Affect: Aquifer used for drinking water supply, Soil  
 Potential Contaminants of Concern: Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline, Waste Oil / Motor / Hydraulic / Lubricating  
 Site History: Regulatory closure received on January 1997 from SCVWD with residual concentrations of TPH, Benzene and MTBE following removal of a 550 gallon gasoline UST on July 1985. A 1,000 gallon diesel UST was subsequently installed in the same location as the previous gasoline UST. On February 2006 the 1,000 gallon diesel UST was removed and soil samples collected from tank excavation showed the following contaminants:TPHmo 3,300 ppm, TPHg 57ppm, Benzene .0075 ppm and MTBE .0078 ppm at 10 1/2 ftb. Work plan with proposed scope of work including removal of petroleum hydrocarbon impacted soil, soil sampling and grab groundwater sampling was received by LOP and approved in letter dated February 17, 2009. Subsurface investigation has not taken place to date. The responsible party and its consultant have not uploaded or posted any site investigation, remediation and monitoring work plans and reports on GeoTracker as of 5/8/2012

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include: Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violation Notes: HRB Baler Area - Observed pools and small streams of used oil and water solution on the ground throughout the entire area with more significant accumulation in the ground's low lying cracks and pot holes. Also observed used oil and water solution actively spilling onto the ground from truck beds. Maintenance Shop - Observed used oil sludge emanating from the southeast corner of the lubricating oil storage shed near the pumps and onto the ground. The sludge contamination on the ground is approximately 2 feet wide and 4 feet long. Maintain the facility in a manner that will minimize the unplanned release of used oil to the environment. Ensure that any spills are immediately collected and managed as hazardous waste.

Violation Notes: (1) Observed two large Gaylord boxes of waste non-PCB ballasts (electronic and magnetic). Per facility employees, the non-PCB ballasts (magnetic and electronic) are not managed as hazardous waste. DTSC has determined that non-PCB ballasts (magnetic and electronic) do not meet the definition of "electronic device" and are subject to a hazardous waste determination. Determine if each type of ballast collected meets hazardous waste criteria (e.g. toxicity; regulated metal content). Provide documentation of hazardous waste determinations to HMCD for review. (2) Observed a 55 gallon drum full of small compressed gas cylinders and liquefied petroleum gas camping cylinders and severely rusted compressed gas cylinders (labels unable to be read) in the compressed gas storage area. Per facility employees the cylinders are dropped off by customers and the facility has no use for them. A waste [22CCR 66261.2] and hazardous waste determination must be conducted on the unusable [Truncated]

Violation Notes: 4,000 gallon used cutting oil and "oil water" tank has 3 fill hoses that lay inside fill ports on top of the tank and are not permanently attached. The tank does not have any audible and/or visual alarm or high liquid level pump cut-off device. Note that a communication or fast response system is not currently practical for this tank, given the layout of the facility, unless procedures are amended to specify that filling will only be done manually, with two employees: one to monitor fill level of the tank and one to operate the pump, with a direct line of communication between these employees. (b) The owner or operator shall use appropriate controls and practices to prevent spills and overflows from tank or secondary containment systems. These include at a minimum: (1) spill prevention controls (e.g., check valves, dry discount couplings); (2) overflow prevention controls (e.g., level sensing devices, high level alarms, automatic feed cutoff, or bypass to a standby tank); and (3) maintenance of sufficient freeboard in uncovered tanks to prevent overtopping by wave or wind action or by precipitation. Uncovered tanks shall be operated to ensure at least 60 centimeters (2 feet) of freeboard, unless the tank is equipped with a containment structure (e.g., standby tank with a capacity that equals or exceeds the volume of the top 60 centimeters (2 feet) of the tank).

Violation Description: Failure to promptly correct visible discharges and promptly remove any accumulations of oil in diked areas.

Violation Notes: Observed liquid diesel accumulating in a catch container underneath the diesel tank's dispenser nozzle when the tank was not currently being used. Fill pipes placed in fill ports of 4,000 gallon used cutting oil "only water" tank are not permanently affixed and hang loosely inside these ports. Observed heavy staining along the side of the tank and on the ground beneath one of the fill pipes where it has released oil. It is unclear if employees stand on top of the tank to remove this flexible piping, or pull down on the piping from the ground, but heavy staining indicates that releases are not immediately addressed.

 Violation Description: Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.  
 Violation Notes: Returned to compliance on 09/17/2014. Facility failed to determine if the wastewater from the ceramic tumbler, dry dust from sheet metal sanding/deburring/blasting, and sludge from speed grain machine is hazardous waste. A hazardous waste determination is required for all wastes by using generator (facility) knowledge or by conducting a laboratory analysis for California Title 22 Regulated Metals. It was unknown at the time of inspection how the sludge from tumbling and speed grain is being managed. Provide this agency with evidence that the sludge material is either non-hazardous waste or conduct a Total Threshold Limit Concentration Analysis (TTLC test) at a state certified laboratory for the Title 22 Regulated Metals. Contact this agency for more information on the requirements of this analysis.

 Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31  
 Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.  
 Violation Notes: Returned to compliance on 01/20/2020. Facility is not operating in a manner to minimize possibility of an unplanned release of hazardous waste to the soil or surface water. Observed evidence of fine metal particles consisting of an aluminum, stainless steel, and/or hard rolled steel migrating from the deburr room to the outside environment (soil). Some of these metals will meet hazardous waste criteria as evidenced by analytical testing performed on the grainer sludge. Operations that increase the risk of fine metals entering the environment include: strong fan providing airflow across entire deburr area, failure to use downdraft tables that are present but not powered, and failure to keep the door to the outside shut.

Activities that generate waste include: Deburring (grinding, tumbling, media blasting, manual deburr), Graining, Filtering (downflow for laser), and Equipment oil changes. Additionally, oil water from oil compressor has been collected in the past. The following wastes are managed in the following ways: Metal fines from deburring - municipal trash Graining sludge - managed as hazardous waste Downflow filter - to be determined Metal waste (including fines) from laser cutting machine - recycled as scrap metal Waste storage area is reported to be inspected at least weekly.

 It was also noted during the inspection with Sam Demarco (Assembly Supervisor) that parts are cleaned with Windex. Sam also indicated no other chemicals are used such as Acetone or Isopropyl Alcohol. The blue rags are used to clean up oils and are serviced by a commercial laundry. The white cotton rags are put in the trash after use. Acetone was observed on work benches around the shop but no acetone contaminated wipes or rags were observed. Sam indicated this was not allowed and discussed today as inadequate training, and partial due to language barrier. Please note, wastes with Acetone, a F003 federally regulated waste, may not be disposed of to the municipal trash as a solvent contaminated wiping. This waste stream must be managed as hazardous waste. Also noted was dry methods for sanding and deburring metals, the dust from deburring is swept up in the deburring room.  This is a follow-up inspection to violation G010 on 7/24/14 and the waste determination for the grainer waste. Results indicate grainer waste is hazardous for metal concentrations of Chromium and Nickel and is considered a toxic hazardous waste. Chromium metal fines and sludges are hazardous waste if over 2,500 parts per million. Nickel metal fines and sludges are hazardous waste if over 2,000 parts per million. Begin managing the waste sludge from the grainer machine, tumbling wastewater and sludge, and the dry metal fines as hazardous waste. Your hazardous waste permit will be modified and active for

(1,500,000 ppm) and 23,000 ppb of 1,4-dioxane in the groundwater, Soil Description: Extremely high concentrations of VOCs and 1,4-dioxane in the soil underneath the facility. The extent of soil and groundwater pollution has been fully defined. In January 2008 the Source Area Feasibility Study was submitted to the RWQCB. This study evaluated the feasibility of several remedial technologies and concluded that in-situ biological remediation using in-situ bioreactors (ISBRs) was the preferred remedy for the source area. Cleanup actions taken at the Site include 1) removal of all underground storage tanks and associated soil, 2) operation of a steam injection and vapor extraction system, 3) operation of a groundwater extraction system using wells and trenches, 4) operation of an in-situ bioremediation system in May 2013. The HVAC system at the office building has been modified to mitigate the VOCs that were detected in indoor air testing conducted in April 2015. Indoor air samples collected in August 2015 and March 2016 indicate that the potential risk has been mitigated by operating the HVAC. Additional indoor air testing is required.

from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.  
 California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.  
 US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.  
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 HAZARDOUS WASTE BIENNIAL REPORTER  
 ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include: Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Surrounding land uses include a Chevron gasoline storage facility directly south of the site, an auto recycling facility to the east, an industrial park to the north, and a truck warehouse and truck maintenance shop to the west. The site is completely paved and graded to control run-off. The topography of the area is generally flat. The Clean Harbors San Jose facility is a permitted offsite hazardous waste storage and treatment facility. The hazardous waste management operations have been at this location since 1974, previously under the names of Solvent Services Inc. and Safety Kleen Corp. Clean Harbors accepts aqueous acids and bases, laboratory packs, aqueous organic solutions, and solid wastes with organics. The facility accepts over 5 million gallons of waste per year, mostly industrial wastes with the exception of explosive, ra
